Under Francis II. further restrictions were added: an edict of 1803 prohibited the Jews from dealing in flour and grain; and an edict of 1804 required that Jews should not be permitted to buy any cattle in the markets, unless they could prove that they needed it for the purposes of retail trade as butchers or feeders, or could show a written order from a butcher for whom they acted as agents. When the Reichstag of Kremsir proclaimed freedom of religion the Catholic clergy protested, and the cities and villages where Jews had not been before tolerated also opposed the new policy. The city of Sternberg, whence Jews had been expelled in 1562, passed a resolution that it would never allow a Jew to settle there ("Allg. Zeit. des Jud." 1849, p. 506). In the village of Raitz as late as 1861 the mayor

Present Constitution.

would not allow a Jewish family to settle. In other cities where Jews had been living from times immemorial, the population arose against them when they left the ghetto and opened stores in the part of the city formerly not open to them. This was the case in Trebitsch, Pirnitz, Strassnitz, and Olmütz in 1850 ("Allg. Zeit. des Jud." 1850, pp. 296, 314, 339, 359). But after the proclamation of the constitution of Dec. 20, 1867, the old restrictions were entirely removed, and the Jewish population shifted from its former habitations to the cities, especially to the larger ones from which it had been excluded; so that when, in accordance with the law of March 21, 1890, the new congregational districts were formed by the minister of worship (June 15, 1891), of the previous fifty-two congregations twelve were dissolved, while ten new ones were formed, among which are the largest, namely, Brünn, Olmütz, and Mährisch Ostrau. A peculiarity of Moravia is the fact that it still has (1904) twenty-five Jewish settlements which are regular townships, as they used to be up to 1848, when almost every Jewish settlement was governed as a political community ("Jüdisches Volksblatt," Vienna, June 24, 1904). These communities have been required since 1884 to have separate boards for religious and municipal affairs (D'Elvert, *l.c.* p. 207); their members are those living within the old ghetto confines, so that in many instances the community counts more Christians than Jews, while the majority of the latter live in "the Christian city." The "Landesmassafonds" (to which fines and other revenues were later added) for assisting poor congregations which through excessive special taxes fell into debt, is now used exclusively for the assistance of needy congregations and congregational officials. It was handed over to the Jews in 1868, and is administered by a board of eleven members, chosen by the congregations. It amounted when first given over to the Jews, to 911,846 florins, and in 1903, to 2,201,404 kronen ($440,000). A convention of rabbis, teachers, and congregational officers, called together by the government in the city of Brünn Oct. 30, 1868, to consider the question of religious instruction and especially that of preparatory theological education, did not reach any definite results ("Allg. Zeit. des Jud." 1868, pp. 939 *et seq.*).

Another peculiar Moravian institution was that of the Landesrabbiner, which, according to the "Generalordnung" of 1754, existed "at all times" in Nikolsburg. The "Landesrabbiner" was nominated by the six representatives of the congregations—those situated in each of the six districts ("Kreis") sending one elector—and appointed by the government. Those known to have held the office are: Judah Loew ben Bezaleel, Yom-Ṭob Lipmann Heller, Menahem Mendel Krochmal, Gershon Ashkenazi, David Oppenheimer, Gabriel Eskeles, his son Issachar Berush Eskeles, who however, held the office merely nominally, as he was in the banking business in Vienna. After him the office was held by Aaron Lemberger (Lwow; 1753–57); he lived in conflict with the local rabbi Gershon Pollitzer, who succeeded him as "Landesrabbiner" (1758–72); Schmelke Horowitz, called Samuel Herschel Lewi (1774–78); Gershon Chajes (1780–89); Mordecai Benet (1789–1829); Nehemias Trebitsch (1832–42); Samson Raphael Hirsch (1847–51). Hirsch was the last regularly elected "Landesrabbiner." After his resignation Abraham Placzek was appointed by the government as temporary "Landesrabbiner," which office he held until his death in 1884. During his last years his son Baruch Placzek was made his assistant. An attempt to provide for the office of the "Landesrabbiner" in the law regulating the affairs of the Jews of Austria March 21, 1890, failed, but the minister declared that the present law had not abolished the office. Still it was not revived, although the present (1904) incumbent, Baruch Placzek, is given that title by the government. His recent application to have Solomon Funk of Boskowitz appointed as his successor was not granted ("Oesterreichische Wochenschrift," 1904, p. 190).

Distinguished Rabbis.

Many famous rabbis occupied the rabbinical seat in Nikolsburg and in other cities of Moravia, among whom may be mentioned, apart from those already noted, Shabbethai Kohen, Nathan Adler, and Eleazar Loew, who made Moravia a seat of Talmudic learning; a number of Talmudic authors are natives of the province or have lived there, as Eliezer Nin of Nikolsburg, Samuel Loew of Boskowitz, Naphtali Hirsch Spitz, and others. The modern Haskalah movement had some devotees there, as Joseph Fleisch in Rausnitz; and the science of Judaism had also a number of representatives, among whom may be mentioned: Leopold Loew, Ad. Jellinek, Moritz Steinschneider, Isaac Hirsch Weiss, Nehemias Bruell, and David Kaufmann. A printing-office opened in Brünn during the latter part of the eighteenth century by a convert named Neumann did not produce anything remarkable.

While in the seventeenth and the eighteenth century complaints were constantly made that the strictest rules against the increase of the Jewish population were without avail, the Jewish population decreased in the ten years from 1890 to 1900 from 45,524 to 44,255, though the general population of the province during the same time increased by 160,000.

Bibliography: Dudik, *Maehrens Allgemeine Geschichte*, Brünn, 1860–89; D'Elvert, *Zur Geschichte der Juden in Mähren und Oesterreichisch-Schlesien*, Brünn, 1895; Willibald Müller, *Beiträge zur Geschichte der Mährischen Judenschaft*, Olmütz, 1903; Abraham Trebitsch, *Ḳorot ha-'Ittim*, Brünn, 1801; Löw, *Das Mährische Landesrabbinat seit Hundert Jahren*, in *Gesammelte Schriften*, vol. ii., pp. 165 *et seq.*, Szegedin, 1890; Benjamin Fränkel, in *Ḳobeẓ 'al Yad* of the Meḳiẓe Nirdamim, Berlin; Von Scari, *Systematische Darstellung der in Betreff der Juden in Mähren . . . Erlassenen Gesetze . . .*, Brünn, 1835.

President of Central Conference of American Rabbis; Rabbi of Temple Emanu-El, New York.

JACOB VOORSANGER, D.D.,
Rabbi of the Congregation Emanu-El, San Francisco, Cal.; Professor of Semitic Languages and Literatures, University of California, Berkeley, Cal.

EDWARD J. WHEELER, M.A.,
Editor of "The Literary Digest," New York; Author of "Stories in Rhyme," etc.

FOREIGN BOARD OF CONSULTING EDITORS

ISRAEL ABRAHAMS, M.A.,
Coeditor of "The Jewish Quarterly Review"; Author of "Jewish Life in the Middle Ages," etc.; Reader in Talmudic, Cambridge University, England.

M. BRANN, Ph.D.,
Professor in the Jewish Theological Seminary, Breslau, Germany; Editor of "Monatsschrift für Geschichte und Wissenschaft des Judenthums."

H. BRODY, Ph.D.,
Rabbi, Nachod, Bohemia, Austria; Coeditor of "Zeitschrift für Hebräische Bibliographie."

ABRAHAM DANON,
Principal of the Jewish Theological Seminary, Constantinople, Turkey.

HARTWIG DERENBOURG, Ph.D.,
Professor of Literal Arabic at the Special School of Oriental Languages, Paris; Member of the Institut de France.

S. M. DUBNOW,
Author of "Istoriya Yevreyev," Wilna, Russia.

MICHAEL FRIEDLÄNDER, Ph.D.,
Principal of Jews' College, London, England; Author of "The Jewish Religion," etc.

IGNAZ GOLDZIHER, Ph.D.,
Professor of Semitic Philology, University of Budapest, Hungary.

M. GÜDEMANN, Ph.D.,
Chief Rabbi of Vienna, Austria.

BARON DAVID GÜNZBURG,
St. Petersburg, Russia.

A. DE HARKAVY, Ph.D.,
Chief of the Hebrew Department of the Imperial Public Library, St. Petersburg, Russia.

ZADOC KAHN,
Chief Rabbi of France; Honorary President of the Alliance Israélite Universelle; Officer of the Legion of Honor, Paris, France.

M. KAYSERLING, Ph.D.,
Rabbi, Budapest, Hungary; Corresponding Member of the Royal Academy of History, Madrid, Spain.

MORITZ LAZARUS, Ph.D.
(Deceased),
Late Professor Emeritus of Psychology, University of Berlin; Meran, Austria.

ANATOLE LEROY-BEAULIEU,
Member of the French Institute; Professor at the Free School of Political Science, Paris, France; Author of "Israël chez les Nations."

ISRAEL LÉVI,
Professor in the Jewish Theological Seminary; Editor of "Revue des Etudes Juives," Paris, France.

EUDE LOLLI, D.D.
(Deceased),
Late Chief Rabbi of Padua; Late Professor of Hebrew at the University, Padua, Italy.

IMMANUEL LÖW, Ph.D.
Chief Rabbi of Szegedin, Hungary; Author of "Die Aramäischen Pflanzennamen."

S. H. MARGULIES, Ph.D.,
Principal of the Jewish Theological Seminary; Chief Rabbi of Florence, Italy.

H. OORT, D.D.,
Professor of Hebrew Language and Archeology at the State University, Leyden, Holland.

ABBÉ PIETRO PERREAU,
Formerly Librarian of the Reale Biblioteca Palatina, Parma, Italy.

MARTIN PHILIPPSON, Ph.D.,
Formerly Professor of History at the Universities of Bonn and Brussels; President of the Deutsch-Israelitischer Gemeindebund, Berlin, Germany.

SAMUEL POZNANSKI, Ph.D.,
Rabbi in Warsaw, Russia.

E. SCHWARZFELD, LL.D.,
Secretary-General of the Jewish Colonization Association, Paris, France.

LUDWIG STEIN, Ph.D.,
Professor of Philosophy, University of Bern, Switzerland; Editor of "Archiv für Geschichte der Philosophie," etc.

HERMANN L. STRACK, Ph.D.,
Professor of Old Testament Exegesis and Semitic Languages, University of Berlin, Germany.

CHARLES TAYLOR, D.D., LL.D.,
Master of St. John's College, Cambridge, England; Editor of "Sayings of the Jewish Fathers," etc.

SYSTEMS OF TRANSLITERATION AND OF CITATION OF PROPER NAMES*

A.—Rules for the Transliteration of Hebrew and Aramaic.

1. All important names which occur in the Bible are cited as found in the authorized King James version; *e.g.*, *Moses*, not Mosheh; *Isaac*, not Yiẓḥaḳ; *Saul*, not Sha'ul or Shaül; *Solomon*, not Shelomoh, etc.

2. The spellings of names that have gained currency in English books on Jewish subjects, or that have become familiar to English readers, are generally retained; cross-references are given when topics are treated under forms transliterated according to the system tabulated below.

3. Hebrew subject-headings are transcribed according to the scheme of transliteration; cross-references are made as in the case of personal names.

4. The following system of transliteration has been used for Hebrew and Aramaic:

א *Not noted at the beginning or the end of a word; otherwise ' or by dieresis; e.g., pe'er or Meïr.*

ב *b*	ז *z*	ל *l*	פּ (*with dagesh*), *p*	שׁ *sh*
ג *g*	ח *ḥ*	מ *m*	פ (*without dagesh*), *f*	שׂ *s*
ד *d*	ט *ṭ*	נ *n*	צ *ẓ*	ת *t*
ה *h*	י *y*	ס *s*	ק *ḳ*	
ו *w*	כ *k*	ע ʻ	ר *r*	

NOTE: The presence of dagesh lene is not noted except in the case of פ. Dagesh forte is indicated by doubling the letter.

5. The vowels have been transcribed as follows:

◌ָ (ḳameẓ) *a*	◌ֻ *u*	◌ַ *a*	◌ֶ *e*	וֹ *o*
◌ָ (ḳameẓ ḥatuf) *o*				
◌ֵ *e*	◌ֱ *e*	◌ֳ *o*	◌ִי *i*	
◌ִ *i*	◌ְ *e*	◌ֲ *a*	וּ *u*	

The so-called "Continental" pronunciation of the English vowels is implied.

6. The Hebrew article is transcribed as *ha*, followed by a hyphen, without doubling the following letter. [Not *hak-Kohen* or *hak-Cohen*, nor *Rosh ha-shshanah.*]

B.—Rules for the Transliteration of Arabic.

1. All Arabic names and words, except such as have become familiar to English readers in other forms, as *Mohammed*, *Koran*, *mosque*, are transliterated according to the following system:

أ *See* א *above*	خ *kh*	ش *sh*	غ *gh*	ن *n*
ب *b*	د *d*	ص *ṣ*	ف *f*	ه *h*
ت *t*	ذ *dh*	ض *ḍ*	ق *ḳ*	و *w*
ث *th*	ر *r*	ط *ṭ*	ك *k*	ي *y*
ج *j*	ز *z*	ظ *ẓ*	ل *l*	
ح *ḥ*	س *s*	ع ʻ	م *m*	

2. Only the three vowels—a, i, u—are represented:

◌َ *a*	◌ِ *i*	◌ُ *u*

No account has been taken of the *imalah; i* has not been written *e*, nor *u* written *o*.

---

* In all other matters of orthography the spelling preferred by the STANDARD DICTIONARY has usually been followed. Typographical exigencies have rendered occasional deviations from these systems necessary.

3. The Arabic article is invariably written *al*, no account being taken of the assimilation of the *l* to the following letter; *e.g.*, *Abu al-Salt*, not *Abu-l-Salt; Nafis al-Daulah*, not *Nafis ad-Daulah*. The article is joined by a hyphen to the following word.

4. At the end of words the feminine termination is written *ah;* but when followed by a genitive, *at ; e.g.*, *Risalah dhat al-Kursiyy*, but *Hi'at al-Aflak*.

5. No account is taken of the overhanging vowels which distinguish the cases; *e.g.*, *'Amr*, not *'Amru* or *'Amrun; Ya'ḳub*, not *Ya'ḳubun;* or in a title, *Kitab al-Amanat wal-I'tiḳadat*.

C.—Rules for the Transliteration of Russian.

All Russian names and words, except such as have become familiar to English readers in other forms, as *Czar*, *Alexander*, *deciatine*, *Moscow*, are transliterated according to the following system:

А а	*a*	Н н	*n*	Щ щ	*shch*
Б б	*b*	О о	*o*	Ъ ъ	mute
В в	*v*	П п	*p*	Ы ы	*y*
Г г	*h, v,* or *g*	Р р	*r*	Ь ь	half mute
Д д	*d*	С с	*s*	Ѣ ѣ	*ye*
Е е	*e* and *ye* at the beginning.	Т т	*t*	Э э	*e*
Ж ж	*zh*	У у	*u*	Ю ю	*yu*
З з	*z*	Ф ф	*f*	Я я	*ya*
И и І і	*i*	Х х	*kh*	Ѳ ѳ	*F*
К к	*k*	Ц ц	*tz*	Ѵ ѵ	*œ*
Л л	*l*	Ч ч	*ch*	Й й	*i*
М м	*m*	Ш ш	*sh*		

Rules for the Citation of Proper Names, Personal and Otherwise.

1. Whenever possible, an author is cited under his most specific name; *e.g.*, Moses Nigrin under *Nigrin;* Moses Zacuto under *Zacuto;* Moses Rieti under *Rieti;* all the Ḳimḥis (or Ḳamḥis) under *Ḳimḥi;* Israel ben Joseph Drohobiczer under *Drohobiczer*. Cross-references are freely made from any other form to the most specific one; *e.g.*, to Moses *Vidal* from Moses *Narboni;* to Solomon Nathan *Vidal* from Menahem *Me'iri;* to Samuel *Kansi* from Samuel Astruc *Dascola;* to Jedaiah *Penini* from both *Bedersi* and *En Bonet;* to *John* of Avignon from Moses de *Roquemaure*.

2. When a person is not referred to as above, he is cited under his own personal name followed by his official or other title; or, where he has borne no such title, by "of" followed by the place of his birth or residence: *e.g.*, *Johanan* ha-Sandlar; *Samuel* ha-Nagid; *Judah* he-Ḥasid; *Gershom* of Metz; *Isaac* of Corbeil.

3. Names containing the words *d'*, *de*, *da*, *di*, *van*, *von*, *y*, *of*, *ben*, *ha-*, *ibn** are arranged under the letter of the name following this word; *e.g.*, de Pomis under *Pomis*, de Barrios under *Barrios*, Jacob d'Illescas under *Illescas*. The order of topics is illustrated by the following examples:

Abraham of Augsburg
Abraham of Avila
Abraham ben Azriel
Abraham de Balmes
Abraham ben Baruch
Abraham of Beja
Abraham ben Benjamin Aaron
Abraham ben Benjamin Zeeb
Abraham Benveniste

---

* When IBN has come to be a specific part of a name, as IBN EZRA, such name is treated in its alphabetical place under "I."

NOTE TO THE READER.

Subjects on which further information is afforded elsewhere in this work are indicated by the use of capitals and small capitals in the text; as, ABBA ARIKA; PUMBEDITA; VOCALIZATION.

Journalist, New York City.

S.............Isidore Singer, Ph.D.,
MANAGING EDITOR, New York City.

S. D..........Simon Debré,
Paris, France.

S. J...........S. Janovsky,
Counselor at Law, St. Petersburg, Russia.

S. J. L.......S. J. Levinson,
Brooklyn, N. Y.

S. K..........S. Kahn,
Rabbi, Nîmes, France.

S. Kr........Samuel Krauss, Ph.D.,
Professor, Normal College, Budapest, Hungary.

S. M.........S. Mendelsohn, Ph.D.,
Rabbi, Wilmington, N. C.

S. Man......S. Mannheimer, B.L.,
Instructor, Hebrew Union College, Cincinnati, Ohio.

S. Mdl.......S. Mandl, Ph.D.,
Rabbi, Neutitschin, Moravia, Austria.

S. O..........Schulim Ochser, Ph.D.,
New York City.

S. Pe.........S. Penn,
Odessa, Russia.

S. de R......Seymour de Ricci,
Paris, France.

S. S..........Solomon Schechter, M.A., Litt.D.,
President of the Faculty of the Jewish Theological Seminary of America, New York City.

S. Sa.........Sigismund Salfeld, Ph.D.,
Rabbi, Mayence, Hesse, Germany.

S. S. W......Stephen S. Wise, Ph.D.,
Rabbi, Portland, Ore.

S. We........Samuel Wessel,
Rabbi, Sarajevo, Bosnia, Austria.

T............. Crawford Howell Toy, D.D., LL.D.,
Professor of Hebrew, Harvard University, Cambridge, Mass.

T. K..........Theodor Kroner, Ph.D.,
Rabbi, Stuttgart, Württemberg, Germany.

T. R..........Théodore Reinach,
Docteur ès Lettres; formerly President of the Société des Etudes Juives; Paris, France.

T. Se.........Thomas Seltzer,
Philadelphia, Pa.

U. C.........Umberto Cassuto,
Editor of "La Rivista Israelitica," Florence, Italy.

V. C.........Vittore Castiglione,
Chief Rabbi, Rome, Italy.

V. E.........Victor Rousseau Emanuel,
Laurel, Md.

W. B.........Wilhelm Bacher, Ph.D.,
Professor, Jewish Theological Seminary, Budapest, Hungary.

THE

JEWISH ENCYCLOPEDIA

MORAWCZYK: Family of Polish scholars of the sixteenth and seventeenth centuries coming originally from Moravia.

Jehiel Michael Morawczyk: Commentator; died in Lublin 1593. He translated into Hebrew a German work known as the "Wiener Gezerah" and published it under the title "Gezerat Oestreich" (Cracow, 1582). Another work of his is entitled "Seder Berakot" (*ib.* 1582). But his principal publication is a commentary on Abot, compiled from the commentaries of Rashi, Bertinoro, Isaac Abravanel, R. Eliezer ben Nathan, and others. It is called the "Minḥah Ḥadashah" and has been published three times—Lublin, 1576; Cracow, 1576; Frankfort-on-the-Main, 1722.

BIBLIOGRAPHY: Fuenn, *Keneset Yisrael*, p. 525; Steinschneider, *Cat. Bodl.* col. 1276; Fürst, *Bibl. Jud.* ii. 389; Benjacob, *Oẓar ha-Sefarim*, p. 95, No. 96.

Moses ben Aaron Morawczyk: Pedagogue; lived at the beginning of the seventeenth century. He was schoolmaster at Bisenz, Moravia, for a time, and in 1610 went to Lublin, where he continued teaching. He wrote two books of instruction for both pupil and teacher—"Keẓad Seder Mishnah" and "Keẓad Seder 'Abodah" (Lublin, 1635).

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 1764; Fürst, *Bibl. Jud.* ii. 390; Benjacob, *Oẓar ha-Sefarim*, p. 239, No. 116.

Moses ben Eliezer Morawczyk: Darshan; rabbi of Lissa, Poland, where he died in 1705. He had planned the writing of a great work to be called "Mishkan Shiloh," as a sample of which he published a homily on Genesis and Exodus under the title "Bissarti Ẓedeḳ" (Amsterdam, 1686). He never accomplished the desired task, however.

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 1800; Fürst, *Bibl. Jud.* ii. 390; Benjacob, *Oẓar ha-Sefarim*, p. 89, No. 680.

E. C. S. J. L.

MORBIDITY: Tendency to disease. The ratio of sickness among the Jews has not yet been satisfactorily studied, although the ratio of deaths—the mortality—among them, and of the various diseases that cause such deaths, has been fairly well investigated in various countries. The physical organization of the Jews has been considerably influenced by their religion through the strict dietary laws, sanitary regulations, etc., which are part and parcel of the faith. It is further influenced by the peculiar sociological conditions under which the bulk of them live in the eastern European ghettos, and by the facts that they are mostly townfolk, are largely engaged in mercantile pursuits, are not addicted to the abuse of alcoholic beverages, and are generally devoted to their families. All these conditions, according to present knowledge of the causation of diseases, exercise a determining influence on the liability to many of the latter. In fact, when Glatter investigated the morbidity of the Hungarians ("Das Racenmoment in Seinem Einfluss auf Erkrankungen," in Casper's "Vierteljahrsschrift für Gerichtliche Medicin," 1864, xxv. 38–49) he found the following proportions of ill persons in the county of Pest:

Rate of Sickness.

Race.	Percentage of Population.	Percentage of Sick.	Race.	Percentage of Population.	Percentage of Sick.
Magyars..........	53.4	45.9	Servians	2.8	1.9
Germans..........	22.4	29.0	Jews.............	3.2	11.6
Slavonians........	18.2	12.6			

These figures, if they are to be relied upon, show an exceptional morbidity for the Jews as compared with their non-Jewish neighbors, Servians excepted; but there are no available data wherewith to confirm or to deny their accuracy because the Jewish sick-benefit societies in various countries have not published the statistics of their operations. The only available method of estimating the morbidity of the Jews is a consideration of the causes of death recorded in various publications.

Contagious Diseases.

The most important diseases are those classed as contagious and infectious. As is well known, they are most frequently met with in overcrowded communities, where the people live under economic and social privations and amid insanitary conditions. The medieval and even the modern ghettos are especially the locations where the conditions would seem to be most favorable to the spread of contagious diseases; but, as a matter of fact, all available statistics point strongly against the correctness of such a contention. While it is known that the Black Death in the Middle Ages did not entirely spare the Jews, as is supposed by some, historical evidence, it must be conceded, strongly tends to show that they, as compared with their neighbors, were attacked by the disease to a much less extent (see Black Death). In more modern times it has been observed, as remarked above, that although most Jews live under adverse sanitary and hygienic conditions, they are not more liable—indeed, in many places they are even less liable—than their neighbors to attacks of contagious diseases. Thus, according to Fracastor, in an epidemic of typhoid fever in 1505 Jews were wholly exempt; and, according to Rau, the same immunity was observed at Langeons in 1824 (Rau, "Ueber die Behandlung des Typhus," in "Heidelberger Klinische Annalen," 1826, ii.). Körösi's extensive statistics for Budapest, Hungary, show the mortality from typhoid fever during the period 1886–90 to have been as follows per 100,000 population:

Catholics	66
Lutherans	76
Calvinists	49
Other Protestants	61
Jews	46

In Posen Cohn reports ("Sterblichkeitsverhältnisse der Stadt Posen," in "Vierteljahrsschrift für Gerichtliche Medicin," 1869, p. 292) that from 1856 to 1865 the proportion of deaths from typhoid fever in 1,000 deaths from all causes was: Catholics, 9.96; Protestants, 9.40; and Jews, 5.26.

In the United States Billings ("Report on Vital Statistics of the Jews") records 57 deaths as due to typhoid fever in 2,062 deaths from all causes—a rate of 2,764 per 100,000, as against 3,216 for the general population of the country. Statistics for the city of New York show that the mortality from typhoid during the six years ending May 31, 1890, was as follows per 100,000 population, the cases being classified according to the birthplace of the mother:

English	43.77
Germans	28.01
Italians	26.16
Irish	25.56
French	18.29
Bohemians	18.04
Americans (whites)	17.40
Hungarians (mostly Jews)	12.36
Russians and Poles (mostly Jews)	9.19

Both of these sets of statistics confirm Körösi's observations that the death-rate from typhoid fever among the Jews is lower than among their non-Jewish neighbors.

Influenza ("la grippe") appears to be more frequently a cause of death among the Jews than among non-Jews in Prussia. The mortality from the disease among the Jews in 1890–94 was 1,786 per 100,000, as against only 1,445 per 100,000 among the general population. Whether this high mortality indicates a greater tendency on the part of the Jews in Prussia to contract influenza or a more frequent fatal issue of the disease among them can not be determined from the official statistics (see H. Singer, "Allgemeine und Specielle Krankheitslehre der Juden," pp. 73–74, Leipsic, 1894).

Smallpox is a very contagious disease, from which the Jews appear to suffer less than others. In Posen the mortality from it among children during the period 1856–65 was, according to Cohn (*l.c.* p. 284), as follows per 1,000 deaths due to all causes:

Catholics	31.3
Protestants	22.6
Jews	9.0

Körösi shows that in Budapest, during the epidemic of smallpox in 1886 and 1887, the mortality per 100,000 population was:

Catholics	106
Lutherans	81
Calvinists	74
Other Protestants	77
Jews	33

This can easily be explained by the fact that the Jews are great believers in the efficacy of vaccination as a preventive of smallpox, and that they readily submit to it. This was assigned as the cause of the almost complete absence of this disease among the Jews of New York city in the epidemic of smallpox during the period 1900–3.

In connection with the contagious diseases of children, the subjoined table, compiled from Körösi's figures, is of interest:

Mortality (per 100,000 Children Under Ten Years) of Children Under Five Years of Age from Contagious Diseases in Budapest During the Period 1886–90.

	Diphtheria.	Croup.	Scarlet Fever.	Measles.	Whooping-Cough.
Catholics	559	265	283	183	97
Protestants	509	286	310	146	83
Jews	345	215	316	118	69

Among Children.

It is seen that the children of Jews succumb less frequently than those of non-Jews to diphtheria, croup, measles, and whooping-cough; but that they more often die from scarlet fever. An analysis of the figures recorded in the annual reports of the board of health of New York city showed that during the three years 1897, 1898, and 1899 the mortality from diphtheria and croup in the four wards which are largely inhabited by Jews (the seventh, tenth, eleventh, and thirteenth) was 59.55 per 100,000 as against 64.20 for the general population of the city. The figures for scarlet fever and measles were not so favorable for the Jews. The mortality from the former disease was 21.15 among the Jews and 21.69 among the general population; from measles, among Jews 34.14, and among the general population 24.17 (see M. Fishberg, "Health and Sanitation of the Immigrant Jewish Population of New York City," p. 27, New York, 1902). That the Jews are not everywhere less liable to diphtheria and croup is testified to by Billings ("Report on Vital Statistics of the Jews in the United States," pp. 13–15); also by Stokvis, who reports that in Amsterdam from 1856 to 1862 the mortality from diphtheria and croup among the children of Jews was 13.7 per cent and among those of the non-Jewish poor only 4.04 per cent, whereas it was 5.88 per cent among the rest of the children of the city. Glatter also found in Pest that in 1863 the Jews showed a mortality from diphtheria of 4.2 per cent, while the Christians showed only 2.6 per cent. A low mortality from measles among Jewish children has been reported by Lombroso for Verona, Italy, as compared with the Catholic population of that city. He attributes it to the frequent epidemics in the foundling asylums, which are filled almost exclusively with non-Jewish children.

Jews are also less liable to tuberculosis and cholera, as has been shown by considerable evidence.

Leprosy is another contagious disease which, as Biblical evidence tends to show, was very prevalent among the Jews in antiquity, but is now uncommon among them (see CHOLERA; CONSUMPTION; LEPROSY).

Diseases of Respiratory Organs.

From diseases of the respiratory organs the Jews, according to Billings, suffer more than the general population of the United States, as is seen from the following figures per 1,000 total deaths from all causes:

	Men.	*Women.*
Jews	164.95	129.90
General population of the United States	155.13	135.45

As these figures include croup, however, which properly belongs to the group of contagious diseases, no reliable conclusion can be formed.

Of the acute respiratory diseases, pneumonia is the most important, and a consideration of its frequency will give a clue as to the whole class of diseases. In New York city during the six years ending May 31, 1890, the mortality from this disease was as follows per 100,000 population, the cases being classified according to the birthplace of the subject's mother:

Italians	455.89	Russians and Poles (mostly Jews)	170.17
Bohemians	350.29		
Irish	343.99		

In Budapest Körösi also notes a lower mortality from pneumonia among Jews, as is shown by the following table of deaths per 100,000 population:

Catholics	405	Jews	186
Protestants	307		

In Verona, Italy, according to Lombroso, the mortality from pneumonia among the Jews was 8 to 9 per cent as against 50 per cent among the Catholic population of that city. The proportion of deaths from this disease in those wards in New York which are largely inhabited by Jews is less than in the other parts of the city.

The lesser liability of the Jews to pneumonia may be ascribed to various conditions. One explanation which has been offered is that their peculiar indoor occupations do not expose them to the inclemency of the weather and to frequent chilling of the body. Besides, it must be remembered that alcoholism is an important factor in the etiology and prognosis of pneumonia. Chronic drunkards are more liable to be attacked by the disease, and when attacked the prognosis is more grave than in moderate drinkers or total abstainers. The Jews, not being addicted to the abuse of alcoholic beverages, are thus favorably circumstanced as regards liability to pneumonia, and when attacked are more likely than others to recover.

Of the other diseases of the respiratory organs the Jews are known to be very liable to chronic bronchitis, pulmonary emphysema, and asthma (see "Discussion sur la Pathologie de la Race Juive" in "Bulletin de l'Académie de Médecine de Paris," Sept. 8, 1891). This also can be ascribed to the fact that they are mostly townfolk and to the indoor occupations in which they are chiefly engaged.

Heart-Disease.

According to Lombroso, the Jews of Verona show a very large mortality from heart-disease. Nine per cent of the total number of deaths among the Jews were due to this cause; while among the Catholic population only 4 per cent of deaths from heart-disease were observed. Lombroso explains this phenomenon by the fact that in Verona the Jews live in tall buildings, often on the seventh and eighth floors; and he tersely remarks that they thus have "all the disadvantages of mountaineers without any of the hygienic benefits of a mountain climate." The Jews also have among them a larger proportion of old persons; and, as Lombroso remarks, heart-disease is the "privilege" of old age. Finally, as other factors must be considered their passionate temperament and the anxious struggle for existence to which they are exposed by reason of constant persecution. That this contention has a firm basis is proved by the fact that, as Lombroso points out, the Jewish women are affected with heart-disease to a much less extent than the men. In Budapest Körösi found that the Jews suffered from heart-disease to about the same extent as the non-Jewish population. The mortality from diseases of the circulatory system in that city during the period 1886–90 was as follows per 100,000 population:

Lutherans	198	Other Protestants	104
Catholics	134	Jews	106
Calvinists	100		

In the United States Billings' statistics confirm Lombroso's observations. Among 60,630 Jews the mortality from diseases of the circulatory system per 1,000 total deaths of which the cause is known was as follows:

	Men.	*Women.*
Jews	77.33	89.69
General population of the United States	39.90	39.51

It is thus seen that the mortality among the American Jews from diseases of the circulatory system is double that of the general population of the United States.

Considering the fact that articular rheumatism is an important etiological factor in organic heart-disease, it is of interest to state that this disease also is very frequent among the American Jews. The death-rate from rheumatism per 100,000 deaths from all causes, according to Billings, was 679 among the Jews, while according to the Census Reports for 1900 it was only 488 among the general population of the United States. These figures do not afford much support to the theory that the Jews suffer less from acute pulmonary diseases because, by reason of their indoor occupations, they are less exposed to the inclemency of the weather. If this theory were well founded, rheumatism, a disease much favored by exposure, should also be infrequent among them.

Chronic rheumatism is very commonly observed among the Jews, while gout is quite infrequent, although Lagneau, Lancereaux, Féré, and other French physicians assert the contrary. These observers state that the nervous diathesis of the Jews manifests itself in a very striking manner in various pathological conditions such as gout, lithemia, chronic rheumatism, psoriasis, diabetes, gall-stones, nephrolithiasis—in fact, in all the conditions which French physicians class under the terms "arthritisme" and "herpetisme" (see "Bulletin de l'Académie de Médecine de Paris," Sept. 8, 1891; C. Féré, "La Famille Neuropathique," p. 105, Paris, 1894).

Arteriosclerosis is another condition frequently observed among the Jews. It may be attributed to their excessive activity in business pursuits with its concomitant care, anxiety, and worry. But it must be confessed that among the poorer classes of Jews (and they are in the majority) it is not so often encountered as some physicians believe. In general, it may be stated that this condition is only another manifestation of the early physical decay of the average Jew, who, although precocious intellectually, displays a strong tendency to grow old prematurely: "A man is as old as his arteries."

Intermittent claudication, a disease recently described by neurologists, which has its origin largely in the constriction of the arteries of the lower limbs in nervous individuals suffering from arteriosclerosis, is more frequently observed in Jews than in non-Jews. Physicians in Russia especially have reported many cases among the Jews of that country. Higier found among 18 cases that 17 were Jews ("Deutsche Zeitschrift für Nervenheilkunde," 1901, xix.). Non-Jews in Russia and Poland are rarely found to be affected with this disease. W. Erb observed that a large proportion of his patients were of Russian-Jewish origin, 14 out of 45 being Jews ("Münchener Medicinische Wochenschrift," 1904, No. 21, p. 905). The cause of this disease is unknown; it occurs mostly in males between 20 and 40 years of age, and generally in individuals in the higher walks of life (H. Idelson, "Ueber Intermittierende Hinken," in "St. Petersburger Medizinische Wochenschrift," 1903, No. 5).

Varicose veins are very common among the Jews, especially among the women. This may be attributed to their indolent habits, deficient muscular development, and, in the women, frequent pregnancies. The results of varicose veins in the legs are very often seen in surgical clinics frequented by Jews—eczema and ulcers of the legs, which heal with great difficulty.

Hemorrhoids.

Another manifestation of varicose veins is hemorrhoids, which are more common to Jews than to any other people. In fact, in eastern Europe "the Jew with hemorrhoids" is proverbial; and among the Ḥasidim in Galicia and Poland a Jew without hemorrhoids is considered a curiosity. Physicians who have had experience among the Jews testify that it is rare to find a Jew who has passed middle age without having his hemorrhoidal veins more or less enlarged. The Jews of eastern Europe attribute this condition to the habit of sitting during the greater part of the day on the hard benches of the bet ha-midrash while studying the Talmud, and to constipation of the bowels, from which they commonly suffer. While hemorrhoids are only very rarely observed in young people of other nations, this can not be said of the Jews. Among the latter, individuals under twenty-five years of age have quite often to be treated for hemorrhoids.

Hemophilia is stated by many physicians to be more frequently met with among Jews than among non-Jews. It is mostly observed in Jewish boys, and very rarely in girls. Perhaps it is because circumcision reveals it in boys that it is considered so frequent among Jews; though statistics also point to its frequency among them (see N. Rothschild, "Ueber das Alter der Hämophilie," Munich, 1882; Grandidier, "Die Hämophilie," Leipsic, 1877; Julius Moses, "Die Blutkrankheit," Greifswald, 1892). The disease appears to have been well known to the Jews in ancient times, since there is an ordinance in the Talmud that in case two children of the same mother die as a result of circumcision a third child born to her shall not be circumcised. The reason given is that in some families the blood does not clot readily, and any wound inflicted may prove fatal.

As regards diseases of the nervous system, the Jews suffer more than others from hysteria and neurasthenia and from the functional neuroses generally. From the organic nervous diseases they suffer only as frequently as, and according to some observers even less often than, non-Jews (see Nervous Diseases). Mental diseases are met with among the Jews from two to four times more often than among their non-Jewish neighbors. The same is the case with idiocy, which is very common (see Idiocy; Insanity).

Infantile Diarrhea.

Diarrheal diseases are the most general of the gastro-intestinal diseases of children. Occurring as they do mostly among the poor who live amid insanitary conditions, in overcrowded dwellings, it might reasonably be expected that Jewish children in the large cities of Europe and America would suffer severely from them. But statistics show quite the contrary. In Budapest Körösi reports the mortality from infantile diarrhea during the period 1886–90 to have been as follows per 100,000 infants under five years:

Catholics	4,143	Other Protestants	3,498
Lutherans	3,762	Jews	1,442
Calvinists	3,293		

Mortality from this disease among Jewish infants is thus seen to be only about one-third that of the Christian infants of the same city. The same has been observed in the United States. In the city of New York, where the immigrant Jews live in the most overcrowded districts, Fishberg has calculated, from the reports of the Department of Health, that during 1897, 1898, and 1899 the annual mortality in the entire city from diarrheal diseases was 125.54 per 100,000 population; whereas in the four wards largely inhabited by Jews it was only 106.79, notwithstanding the insanitary surroundings and overcrowding in ill-ventilated tenements. Similar conditions are presented in the statistics of the Eleventh Census. The mortality from diarrheal diseases among the different races inhabiting New York city during the six years ending May 31, 1890, was as follows per 100,000 population:

Bohemians	766.73	Irish	237.64
Italians	425.58	Russians and Poles (mostly Jews)	195.55
Americans (white)	398.34	General population	316.85
Hungarians	328.07		
Germans	281.36		

In London, where the sanitary and hygienic surroundings of the Jews in the East End are not better than those of the East Side of New York, the same conditions have been observed: the Jewish infants suffer from diarrheal diseases to a much less extent than others of the same social status. Physicians testified to this effect before the Royal Alien Immigration Commission, and stated that the lower mortality of Jewish children was in great measure due to their greater power of resistance to contagious diseases and to the gastro-intestinal diseases of infancy.

Rickets, Atrophy, and Scrofula.

The reasons for the lower mortality of Jewish infants from diarrheal diseases, notwithstanding the insanitary surroundings under which they are reared, are to be found in the devotion of the Jewish woman as a mother. The care bestowed on her children by a Jewish mother, even when laboring under severe stress of poverty and privation, is proverbial. The anxiety displayed by the parents, even in cases of slight illness among their children, is well known to every physician who practises among them. The artificial feeding of infants is very rare among Jewesses, and among healthy ones is almost unknown. The result is that diarrheal diseases, which mostly attack children who are artificially fed, find few subjects among Jewish infants. Another result of this condition is the excellent general health of the latter, when compared with infants of the poor of other races. This can best be estimated by a consideration of the mortality among children from rickets, atrophy, and scrofula. Körösi calculated the mortality of children under three years of age from the first two diseases and for those under ten years of age from the last-named disease per 100,000 children, to be as follows:

Class of Population.	Between 2 and 3 Years Old.		3 to 10 Years Old.
	Rickets.	Atrophy.	Scrofula.
Catholics	131	620	70
Lutherans	122	533	45
Calvinists	68	596	87
Other Protestants	92	568	69
Jews	103	242	20

Billings found that the mortality among the American Jews from scrofula and tabes to be 1.04 per 1,000 deaths due to all causes as against 6.74 for the general population of the United States. All of this tends to show superior health and vitality among Jewish children as compared with those of other races of the same economic and sociologic condition. This was confirmed in a striking manner by the evidence given before the Inter-Departmental Committee on Physical Deterioration in London, England, in 1904. Dr. Hall stated that in Leeds he found 50 per cent of the children in a poor-school afflicted with rickets, but only a percentage of 8 in a school attended by children of the better classes. In a school of poor Jewish children he found only 7 per cent. It has been affirmed by Drs. Eustace Smith, Eichholz, and others that this superiority of the Jewish children in England, in spite of their inferior sanitary and hygienic surroundings and their overcrowded dwellings, is due to the fact that Jewish mothers bestow more care upon their children during infancy and childhood, and also because it is exceptional to find a Jewish mother acting as the breadwinner (see "Jew. Chron." Aug. 19, 1904).

Of the gastro-intestinal diseases of adults Billings' statistics of American Jews show that the mortality was as follows per 1,000 total deaths:

	Men.	*Women.*
Jews	60.60	82.48
General population	47.12	44.02

Diseases of Digestive Organs.

These figures show a greater frequency of this class of diseases as a cause of death among Jews. It appears also that cancer is more liable to attack the gastro-intestinal tract in Jews than in non-Jews. Nearly 45 per cent of all cases of cancer occur in the stomach, intestines, liver, pancreas, rectum, etc., as against 23 per cent among non-Jewish patients (see Jew. Encyc. iii. 529-531, *s.v.* Cancer). In Italy also Lombroso reports that diseases of the digestive organs are more frequently causes of death in Jews than in the Catholic population of that country; and the same thing has been observed by Glatter in Hungary. Lombroso attributes these conditions to overcrowding in badly ventilated dwellings, and also to the fatty foods which the Italian Jews are wont to eat and which are unsuitable for people living in warm climates. Hepatitis has also been a very frequent cause of death among the Jews of Verona, according to Lombroso. It must, however, be mentioned that cirrhosis of the liver is very rarely seen among the Jews generally. This is best explained by the infrequency of alcoholism and of syphilis, which are the most important factors in the etiology of cirrhosis.

Nervous dyspepsia is very common among the Jews. Javorski ("Wiener Medizinische Wochenschrift," 1880, Nos. 49-52) called attention to the frequency of hyperchlorhydria among the Polish Jews in Galicia, and attributed it to their peculiar diet. Physicians who practise among Jews know that derangements of the function of digestion are quite often met with, particularly on Sunday, due to the ingestion, during the Sabbath, of food which has been prepared on Friday and kept in the oven for from twelve to twenty-four hours ("sholent"; see Jew. Encyc. iv. 256, *s.v.* Cookery in Eastern Europe). The chronic diseases of the stomach are to be attributed to the fact that the Jew generally, owing to his deep absorption in business pursuits, rarely has regular meal-times and takes very little time to masticate his food. Among the Russian Jews excessive tea-drinking, a habit acquired in their native country, is much to blame for the frequent occurrence of the various forms of chronic indigestion. It should be mentioned, however, that chronic alcoholic gastritis is, for obvious reasons, quite rare.

Diseases of Urino-Genital System.

The diseases of the urino-genital system appear to be less frequent among the Jews than among their non-Jewish neighbors. From Billings' statistics it is found that the mortality from diseases of the urino-genital system among 60,630 American Jews and Jewesses was as follows:

Class of Population.	Men.	Women.
Jews	33.44	27.84
General population of the United States (1880)	22.44	10.77
Population of cities in the United States	38.13	32.88
Population of Massachusetts (1888)	42.77	27.21

As is well known, this group of diseases is more frequent among townfolk; and as the Jews who are here under consideration live almost exclusively in cities, they must be compared with people living under similar conditions. It appears that when contrasted with the general population of the United States, the Jews show a higher mortality; but when compared with the city dwellers, the mortality among them is much smaller than that among others. This is confirmed by a consideration of the census figures for the six years ending May 31, 1890, in which the mortality from diseases of the urinary system is given for the city of New York as follows, per 100,000 population, the cases being classified according to the birthplace of the mother:

Irish	272.45	Italians	73.38
English	206.13	Hungarians (mostly Jews)	51.68
Bohemians	154.85	Russians and Poles (mostly Jews)	48.34
French	150.65		
Germans	141.78		
Americans (white)	124.14		

The lowest mortality is thus seen to be recorded among the Hungarians, Russians, and Poles, who were almost exclusively Jews. The best reason for this is furnished by the fact that the lowest mortality from alcoholism during the same period in New York city was also observed among the Jews—1 in 100,000 population, as against 31 among the Irish, 10 among the Germans, and 9 among Americans. Körösi's statistics for Budapest confirm this view. During the period 1886-90 the mortality from Bright's disease per 100,000 population was as follows:

Catholics	67	Other Protestants	63
Lutherans	68	Jews	39
Calvinists	56		

It is thus seen that the lowest mortality from Bright's disease was observed among the Jews. The best explanation of this is evidently the rarity of the abuse by them of alcoholic beverages.

Of the other diseases of the organs of generation, syphilis is one from which the Jews suffer but little as compared with their Gentile neighbors. Jonathan Hutchinson states that such is the case in London, England, where at the Metropolitan Free Hospital, in the Jews' quarter, in 1854 the proportion of Jews to Christians among the outdoor patients was nearly as 1 to 3, yet the ratio of cases of syphilis among the former to those among the latter was only as 1 to 15. Jacobs also reports that under Cohen's service at the Metropolitan Free Hospital during 1882 and 1883 the percentage of syphilis was as follows:

	Jews.	Non-Jews.
Men	17.8	62.0
Women	20.0	62.6
Children (congenital syphilis), per cent of total number of cases	3.3	15.8

This shows a larger percentage of syphilis among the non-Jews. This relative immunity of the Jews from syphilis has been observed in other countries (see J. K. Proksch, "Gesch. der Venerischen Krankheiten," 1895, i. 125), and has been attributed to circumcision (see Wunderbar, "Biblisch-Talmudische Medizin," p. 26, Riga, 1850; Collin, "Die Beschneidung der Israeliten," p. 9, Leipsic, 1842).

In Chicago E. A. Fishkin has observed that among the patients of the dispensary of the United Hebrew Charities the proportion of syphilis was only 0.9 per cent of the total number of patients afflicted with skin-diseases, as against 11.8 per cent among the general population of the United States (according to the returns of the American Dermatological Association); but the cases observed were those of individuals younger than forty, and three were minors ("Jour. American Medical Association," Aug. 23, 1902).

Of the diseases of the eye, the Jews suffer more than others from trachoma (granular lids), follicular conjunctivitis, glaucoma, and, according to some authorities, retinitis pigmentosa. This last is a hereditary disease of the eye characterized by the deposition of pigment in the retina, which leads to contraction of the field of vision, and ultimately to total blindness. Its frequency among the Jews is attributed to consanguineous marriages (see R. Liebreich, "Abkunft aus Ehen unter Blutvervandte als Grund von Retinitis Pigmentosa," 1860, in "Deutsche Klinik," No. 6). Of the disturbances of vision, myopia, astigmatism, and color-blindness, as well as blindness, are known to be more frequent among the Jews than among others (see Blindness; Eye—Pathology).

Diseases of the Skin.

Of the diseases of the skin, eczema is said by Hardy to be more common among the Jews than among others; but many other dermatologists with extensive experience among the Jews assert the contrary ("Bulletin Médical," 1891, p. 851). Fishkin found that among the immigrant Jews in Chicago, the proportion of eczema among his total number of cases of skin-diseases was 34.5 per cent as against 29.8 per cent among the general population of the United States (according to the statistics of the American Dermatological Association), which shows that the Jews are more liable to the disease ("Jour. American Medical Association," Aug. 23, 1902).

Parasitic diseases of the skin and scalp are said to be more common among the Jews in eastern Europe than among their non-Jewish neighbors. This is particularly emphasized in reference to scabies and favus ("plica Polonica" and "plica Judaica," for instance). In the United States this is not observed to be the fact when the immigrant Jews are compared with others of the same social status. These diseases being generally observed among the poor and degraded, a reason is found for their frequency among the eastern European Jews. In western Europe and in America, where the social and economic status of the Jews is superior, parasitic diseases of the skin are as uncommon among them as among others.

Psoriasis is also said to be more frequently met with among the Jews than among others. Among the patients of the dispensary of the United Hebrew Charities in Chicago, Fishkin has observed especially that psoriasis, which is rarely seen in non-Jewish children, is more commonly met with among those of the Jews. Another disease of the skin often seen in Jewish children is impetigo, which also can be explained from the insanitary conditions under which many Jews live. On the other hand, the syphilitic dermatoses are uncommon, which fact accords with the infrequency of syphilis among them.

A survey of the evidence shows that the morbidity and mortality of the Jews are not due to any biostatic characteristics of a purely anatomical or physiological nature. The Jews are more nervous, have a larger proportion of insane, etc., from social causes, not because the structure of their nervous systems is in any way peculiar anatomically or physiologically. They are less liable to certain contagious diseases, but not because of some physiological immunity of their tissues. All their pathological characteristics can be shown to be due to the peculiar social and economic conditions under which they live. In the ghettos of eastern Europe, where the Jews are more or less isolated from their Gentile neighbors, their morbidity and mortality differ perceptibly from those of the rest of the population. These differences are usually due to their avoidance of alcoholic excesses and to their devotion as husbands and wives or as parents; some of the most important factors in the production of pathological processes in civilized communities being thus eliminated. The dietary laws, which the Orthodox Jews of eastern Europe rigidly observe, have a beneficial influence, while the Sabbath, which affords them a complete mental and physical rest, and which they do not spend in the barroom and in dissipation as others are apt to spend it, has a good effect on their physical condition, affording them recuperation after the week's work, and thus rendering them less liable to sickness. The fact that the Jews are mostly townfolk, engaged in indoor and domestic occupations, renders them more liable to certain chronic diseases, while the fact that a large proportion of them is engaged in mercantile pursuits, in occupations which do not necessitate frequent exposure to the vicissitudes of the weather, and is not employed in dangerous trades, has an important bearing on the question of their morbidity.

MORDECAI (מרדכי; probably = "belonging to Marduk," a Babylonian divinity).—**Biblical Data:** Chief minister of Ahasuerus and one of the principal personages of the Book of Esther. He was the son of Jair, a Benjamite, and a cousin of Esther, whom he adopted as his daughter. He had previously been carried into captivity together with Jeconiah by Nebuchadnezzar, King of Babylon (Esth. ii. 5–7, 15). Living at Shushan, the Persian capital, and sitting constantly at the gate of the king's palace, Mordecai discovers a plot of two eunuchs against the king. Having informed the king through Esther of the conspiracy, Mordecai brings about the execution of the two conspirators, and the event is recorded in the royal chronicles (*ib.* ii. 21–23). Mordecai arouses the anger of Haman by constantly refusing to bow before him. The latter in revenge procures from the king a decree ordering the destruction of all the Jews in the Persian kingdom (*ib.* iii. 2–14). As soon as Mordecai hears of Haman's proceedings he rends his clothes, puts on sackcloth with ashes, and cries "with a loud and a bitter cry." Then, at the request of Esther, whom he has informed of the decree through Hathach, one of the king's chamberlains, he institutes at Shushan a general fast for three days (*ib.* iv. 1, 7–8, 16–17).

On a subsequent night the king, being unable to sleep, commands that the royal records be brought to him. On their being read he is reminded that he was rescued from death by Mordecai and has never rewarded the latter for his service. The king consequently orders that Mordecai be dressed in royal garments and that with great pomp Haman conduct him, seated on the royal horse, through the city (*ib.* vi. 1–11). Haman is executed, and Mordecai is raised by the king to the high rank of chief minister. He is also made by Esther superintendent over Haman's house, which the king gives her. Through the intervention of Esther, Mordecai obtains from the king the revocation of the royal decree ordering the extermination of the Jews; and a new edict is issued permitting the Jews to exterminate the population of those places in which they might be attacked. Mordecai is shown special favor by the king, *e.g.*, by the presentation of apparel and a golden crown (*ib.* viii. 2, 7–15). After the energetic self-defense of the Jews Mordecai's fame becomes wide-spread, and the king makes him his viceroy. Mordecai then establishes the festival of Purim, to be celebrated on the fourteenth and fifteenth days of Adar as a memorial of the deliverance of the Jews from their enemies (*ib.* ix. 4–23, x. 3; see Esther; Haman; Purim).

S. M. Sel.

——**In Rabbinical Literature:** The name "Mordecai" (מרדכי) is explained by the Rabbis as a compound of מירא דכיא, the Aramaic form of מר דרור (= "pure myrrh"). Mordecai is identified with the bearer of that name who, according to Ezra ii. 2 and Neh. vii. 7, returned with Zerubbabel from the Captivity; and as in both passages "Mordecai" is followed by "Bilshan," the Rabbis consider that "Mordecai" and "Bilshan" were the names of one man, the latter name having been given him on account of his knowledge of many languages. According to another opinion (deriving מלאכי from מלך), Mordecai is identical with the prophet Malachi, the latter name having been given to him after he became viceroy. But all the Rabbis agree that Mordecai was a prophet and that he prophesied in the second year of Darius (Meg. 10b, 15a; Ḥul. 139b).

Benjamite and Jew.

Targum Sheni (to Esth. ii. 5) traces the complete genealogy of Mordecai back to Benjamin through Shimei (identifying this Shimei with Shimei, son of Gera: comp. II Sam. xvi. 5-6, 13; I Kings ii. 8, 36-46), Jonathan, and Saul. Still the discrepancy in Esth. ii. 5, which makes Mordecai a descendant of both Judah and Benjamin, puzzled the Rabbis considerably, and various explanations of it are given, among others the following: (1) Mordecai, was on his father's side a descendant of Benjamin, and on his mother's a descendant of Judah. (2) He was a Benjamite; but his birth was caused through David, who was of Judah; for had David followed the advice of Abishai and killed Shimei (comp. II Sam. xvi. 7), Mordecai would never have come into existence. (3) Mordecai was the only Jew who did not come to the feast prepared by Ahasuerus; moreover, he endeavored to restrain the other Jews from coming to it. (4) The word יהודי must be read יחידי, meaning "one who declares God to be one" (Meg. 12b; Esther R. ii. 5; Midr. Megillah, in Jellinek, "B. H." i. 22). Another theory makes Mordecai and Haman cupbearers at the feast (Meg. 12a).

According to Targum Sheni (to Esth. ii. 6), Mordecai, after having been carried away by Nebuchadnezzar, returned to Jerusalem, and was again deported by Nebuchadnezzar in the second captivity (comp. II Kings xxiv. 14 *et seq.*; xxv. 11, 21). Mordecai was a member of the Great Sanhedrin which sat in the chamber of square hewn stones ("lishkat ha-gazit"), and each member of which knew all the seventy languages. In this capacity he resolved difficult problems concerning ritual observances, on account of which he was called by the Rabbis "Pethahiah" (Sheḳ. v. 2; Men. 64b-65a). It was owing to his knowledge of languages that Mordecai was able to discover the plot of the two eunuchs (see Biblical Data above), who conversed in the language of Tarshish, their native country, thinking that no one would understand it (Meg. 13b; comp. Targum Sheni to Esth. ii. 22).

Later, when, unlike the Persian courtiers, Mordecai omitted to bow before Haman, the latter, not wishing to appear disconcerted, feigned to have received his salutation. He consequently turned round and, advancing toward Mordecai, said: "And peace be upon thee," as though in reply to Mordecai's greeting. Mordecai thereupon said to him, "There is no peace, saith the Lord, unto the wicked" (Isa. xlviii. 22), which answer particularly aroused Haman's anger (Midr. Abba Gorion, ed. Buber, iii., Wilna, 1886). The courtiers asked Mordecai why he refused to bow before Haman, when Jacob, Mordecai's ancestor, had bowed before Esau, Haman's ancestor (Gen. xxxiii. 3). Mordecai replied that this took place before Benjamin, from whom he (Mordecai) was descended, was born (Targum Sheni to Esth. iii. 3).

Mordecai and Haman.

After the fatal decree had been signed and copies had been prepared for transmission to all the provinces of the Persian empire (comp. Esth. iii. 12-15), Haman left the palace in a joyous mood, and then met Mordecai. Just then the latter saw three children coming from school, whom he asked to tell him what passages they had read with their master. The children recited three different Biblical verses, each containing a prophecy that all machinations against the Hebrews would come to naught. Mordecai began to laugh, and, when Haman inquired the cause of his laughter, he answered that the children brought him good tidings (Midr. Abba Gorion *l.c.*; Esth. R. iii.).

Mordecai was definitely informed of the king's decree by Elijah, or, according to other opinions, by Moses or by the Holy Spirit, in order that he might pray to God for the deliverance of Israel (Esth. R. *l.c.*; Targum to Esth. iv. 1; Targum Sheni iv., where Mordecai's prayer and exhortation to repentance are given at great length). Mordecai then dreamed his prophetic dream (see Esther, Apocryphal Book of), which he told to Hathach (Esther R. iv. 7).

When Mordecai saw Haman approaching him with the royal horse and garments, he thought that he was coming to kill him. He therefore told the pupils who surrounded him to depart and leave him alone to his fate; but they refused to do so, whereupon Mordecai, having wrapped himself in his ṭallit, began to pray. Meanwhile Haman came up and sat down with the pupils to await the termination of the prayer. Haman asked Mordecai's pupils what was the subject of their study, and they told him it was the laws of "ḳemiẓah," that is, the handful of meal which the priest takes from a meal-offering to burn on the altar. According to another statement, the pupils were studying the laws of the omer; and when Haman asked them whether it was a measure of gold or of silver they told him it was a measure of barley. Haman said: "Your handful of meal or your little measure of barley overcame my ten thousand talents of silver" (comp. Esth. iii. 9).

Mordecai at first could not believe that Haman was in earnest when he informed him of the honor which he was about to do him. But when Haman convinced him of his seriousness, Mordecai told him that it would not become him (Mordecai), who had been till then humbled in the dust, to put on royal garments. Haman then washed Mordecai, shaved his hair, anointed him with perfumes, and presented to him the meal which Esther had sent. Mordecai, owing to his three days' fast, was not strong enough to mount the horse, and Haman had to offer his back to Mordecai as a stepping-stone. While Mordecai was being conducted through the streets of Shushan, 27,000 youths, sent for the purpose from the royal

Triumphal Procession.

palace, each holding in one hand a golden jar and in the other a golden cup, marched before him; and the Jews on seeing them joined the procession. Mordecai, however, did not become elated by his great honor, but returned to his home and resumed his sackcloth and fasting (Meg. 16a; Esth. R. vi.; Midr. Abba Gorion vi.; Targum Sheni vi.).

According to Targum Sheni (vii. 8), it was Mordecai whom the king appointed to superintend the execution of Haman; and Mordecai took Haman from the king's gate to lead him to the gallows. Haman implored Mordecai not to kill him, or at least not to hang him like an ordinary criminal, and begged to have his head cut off with a sword; but Mordecai remained inflexible.

According to R. Jose the Galilean, the psalms which are styled "Hallel" were composed and sung by Mordecai and Esther after the Jews had been delivered from Haman (Pes. 117a). The Rabbis conclude from Esth. x. 3 that after Mordecai became viceroy some of the Sanhedrin abandoned him (Meg. 16b).

W. B. M. Sel.

MORDECAI: An American family of German origin, the founder of which settled in the United States in the second half of the eighteenth century. Several of its members took part in the military affairs of the nation. Of these members the most prominent were:

Alfred Mordecai: American soldier; officer in the United States army; son of Jacob Mordecai; born in Warrenton, N. C., Jan. 3, 1804; died in Philadelphia Oct. 23, 1887. He entered the United States Military Academy at West Point June 24, 1819, and was graduated, the first in his class, July 1, 1823, with the rank of brevet second lieutenant in the engineer corps. He served for several years as assistant professor of natural philosophy and engineering at West Point. From 1825 to 1828 he was the assistant engineer in charge of the construction of Forts Monroe and Calhoun, Va. On May 30, 1832, he was made captain of ordnance, and spent the following year in Europe. In 1842 he was appointed assistant to the chief ordnance, officer in Washington, D. C. He served as a member of the Board of Ordnance from 1839 to 1860. In 1840 he was a member of a commission that visited the chief arsenals and cannon-foundries in Europe, and two years later was appointed assistant inspector of arsenals. He was brevetted major on May 30, 1848, for meritorious services during the war with Mexico. Major Mordecai was a member of a military commission to visit the "Crimea and theater of war in Europe" (1855–56), and his observations, particularly on military organization and ordnance, were published by order of Congress (Washington, 1860). He was in charge of some of the largest arsenals in the United States: Washington, D. C., in 1833 and again in 1844-55; Frankford, Pa., 1836; and Watervliet, 1857-61.

At the beginning of the Civil war Mordecai resigned from the army (May 5, 1861). From 1863 to 1866 he was a railway engineer in Mexico; and in 1867 he was made secretary and treasurer of the Pennsylvania Canal Company, in which position he continued until his death. He wrote extensively on military subjects and was the author of a "Digest of Military Laws" (Washington, 1833); "Ordnance Manual for the Use of Officers of the United States Army" (1841; second edition, 1850); "Reports of Experiments on Gunpowder" (1845–49); "Artillery for the United States Land Service, as Devised and Arranged by the Ordnance Board," with plates (1849).

Bibliography: Francis B. Heitman, *Historical Register and Dictionary of the United States Army*, vol. i., p. 724, Washington, 1903; Appleton's *Cyclopedia of American Biography*, 1888, vol. iv., p. 389.

Alfred Mordecai: American soldier; officer in the United States army; son of Alfred Mordecai; born in Philadelphia June 30, 1840. He was graduated from the Military Academy at West Point June 24, 1861, and was brevetted second lieutenant of topographical engineers. Later, at the outbreak of the Civil war, he was selected as an aid to General Howard; he served at the first battle of Bull Run, and subsequently was transferred to the ordnance department. He was promoted first lieutenant on March 3, 1863, and captain on June 1, 1863; and was brevetted major in September, 1863, for gallant services at the siege of Fort Wagner, S. C. Two years later he was brevetted lieutenant-colonel for distinguished services on the field and in the ordnance department. Mordecai is one of the best-known ordnance officers in the United States army. He was twice instructor of gunnery at West Point; was in command of the arsenal at Leavenworth, Kans., and of New York Arsenal, Governors Island; twice in command of Watervliet Arsenal (1881–86 and 1898–99); superintendent of the armory at Springfield, Mass.; and in command of the arsenal at Benicia, Cal. Colonel Mordecai is now (1904) inspector of ordnance, being attached to the Ordnance Office in Washington, D. C.

Jacob Mordecai: American educator; son of Moses Mordecai; born in Philadelphia April 11, 1762; died in Richmond, Va., Sept. 4, 1838. After having been employed in the office of David Franks, who was a commissary for the exchange of British prisoners, at the close of the Revolutionary war Mordecai removed to Warrenton, N. C., where, finding that his commercial ventures were not a success, he established (in Jan., 1809) a seminary for young ladies. In a few years the school became well known throughout the South, the most prominent families sending their daughters there to be educated. Jacob Mordecai was one of the first of his race in America to become interested in pedagogics; he adhered closely to the ideas of Maria Edgeworth.

In this adherence Mordecai was no doubt influenced by his daughter **Rachel Mordecai,** who for many years carried on a correspondence with the noted English novelist. Owing to advancing years and the arduous nature of his calling, he discontinued the seminary, and left Warrenton for the suburbs of Richmond, where he remained until his death.

Bibliography: Gratz Mordecai, *Notice of Jacob Mordecai*, in *Pub. Am. Jew. Hist. Soc.* 1897, vol. vi., pp. 39–48.

Moses Mordecai: American trader; founder of the Mordecai family in America; born in Bonn, Germany, in 1707; died in Philadelphia May 28, 1781. He went to America about 1750 and settled in Philadelphia, where he engaged in the brokerage business. On Oct. 25, 1765, Mordecai signed the celebrated Non-Importation Agreement, by which the merchants refused to import goods until the repeal of the Stamp Act. In 1777, after the outbreak of the Revolution, he signed an agreement to take the colonial paper currency sanctioned by the king, instead of gold and silver.

MORDECAI ASTRUC: French liturgical poet; lived at Carpentras about the end of the seventeenth century. He was the author of several liturgical poems printed in "Seder ha-Tamid," a collection of prayers used at Carpentras, Isle, Avignon, and Cavaillon (Avignon, 1760). His prayer of thanksgiving beginning "Ish hayah be-tam lebabo" is well known for the occasion which gave rise to it. In 1682 a Jew of Carpentras was murdered, and the populace attacked the Jews' quarters, serious rioting being prevented only by the prompt interference of the authorities. The community thereupon constituted the day on which the disturbance occurred (the 9th of Nisan) a feast-day in memory of the rescue, and Mordecai's poem was read in the synagogue.

A. A. Pe.

MORDECAI DATO (BEN JUDAH): Italian payyeṭan; lived in Ferrara in the sixteenth century. The name "Dato" is the Italian equivalent of "Nathan." He added some notes, under the title "Hagahot," to Samuel Gallico's "'Asis Rimmonim" (Venice, 1601). Azariah dei Rossi ("Me'or 'Enayim," ch. xliii.) ascribes to him a book entitled "Migdal Dawid," dealing with the coming of the Messiah. Dato wrote many piyyuṭim which exist in manuscript. One for the eve of Sabbath has been incorporated in the Italian ritual.

MORDECAI EN CRESCAS D'ORANGE. See Crescas, Mordecai En, of Orange.

MORDECAI B. HILLEL B. HILLEL: German halakist of the thirteenth century; died as a martyr at Nuremberg Aug. 1, 1298. Mordecai belonged to one of the most prominent families of scholars in Germany, his grandfather Hillel being on the mother's side a grandson of Eliezer b. Joel ha-Levi, who again was a grandson of Eliezer b. Nathan. Little is otherwise known of his family. His wife Selda and his five children perished with him. About 1291 Mordecai seems to have sojourned at Goslar, where a certain Moses Tako—not the well-known anti-Maimonist—seems to have disputed his right of residence. Although the suit was decided in Mordecai's favor, it was conducted with such bitterness that it was probably for this reason that Mordecai left Goslar and settled at Nuremberg. His principal teacher was Meïr b. Baruch of Rothenburg, of whose older pupils Mordecai was one, and in whose presence Mordecai pronounced independent decisions. Mordecai quotes the tosafot, responsa, and compendiums of his teacher, together with many of his oral and written communications. Aside from Meïr must be mentioned as Mordecai's teachers Perez b. Elijah of Corbeille, Ephraim b. Nathan, Jacob ha-Levi of Speyer (probably identical with Jacob b. Moses ha-Levi), Abraham b. Baruch (Meïr of Rothenburg's brother), and Dan, probably identical with Dan Ashkenazi.

His Code.

Mordecai is generally known as the author of the great legal code "Sefer ha-Mordekai," commonly called briefly "Mordekai," or designated as the "Great" or "Long Mordekai" ("Mordekai ha-Gadol," "Mordekai he-'Aruk") as distinguished from Samuel Schlettstadt's "Small Mordekai" ("Mordekai ha-Ḳaṭon"). The "Mordekai" is met with in the form of glosses to Alfasi's "Halakot" in various manuscripts, and also as an appendix to the "Halakot" in many editions. This connection with Alfasi is, however, merely an external one, single sentences, sometimes even single words, of the "Halakot" serving as catchwords introducing the relevant material found in Yerushalmi, the French and German tosafot, the codices and compendiums. Mordecai's range of reading in halakic literature was phenomenal. There were few noteworthy works dealing with halakic subjects and antedating the middle of the thirteenth century which he did not know and draw upon. As regards the German and French authors, he knew not only all the works that are still extant, but many for which he is now the only source. He quotes about 350 authorities, whose works and written or verbal communications form the substance of his book.

The "Mordekai" is in the first place a compilation, intended to furnish halakic material. At the time of its composition there was great need for such a work. The results of the tosafist schools, whose last representatives were Mordecai's teachers, were ready to be summed up and judged. The condition of the German Jews of the time was such that they were forced to a life of constant wandering, and were in danger of losing, together with their worldly goods, their spiritual possessions if they remained

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

hidden in numerous folios. It would be erroneous, however, to designate the "Mordekai" as a mere compilation. It not only contains much that is original with the author—although in many passages there are omissions of the names of authorities, due to copyist and editor—but the foreign material also is often introduced in a form which refutes the assertion that the author did not intend to contribute anything of his own. The "Mordekai" contains passages showing that the author had the ability as well as the intention to present in clear, systematic form, in the manner of a codifier, the results of long discussions (see the examples in Weiss, "Dor," p. 82). The fact that the larger part of the "Mordekai" lacks system and form may be explained on the following grounds: The book, as the early critics pointed out, was not issued in its final form by the author. He collected the material for his great work, but could not combine or arrange it himself: this task being undertaken by his pupils, partly during his lifetime and partly after his death. This fact explains not only the evident confusion of the text, but also its most peculiar history.

The Two Editions of "Mordekai."

Within two generations after Mordecai's death there were two entirely different recensions of his work, respectively designated by the authorities of the fifteenth century as the "Rhenish" and the "Austrian" versions. These were not merely two different copies of the "Mordekai" containing variants—such existed of each of the two editions—but two materially different compendiums. The Rhenish "Mordekai" furnished the text for the printed editions, and circulated during the Middle Ages not only in the Rhine countries, but also in eastern Germany, France, Italy, and Spain. The Austrian "Mordekai" is preserved in manuscript in the libraries of Budapest and Vienna. It exerted, as its name indicates, a great influence on the halakic observances of Austria, Moravia, Bohemia, Styria, Hungary, and the neighboring German provinces, as, for example, Saxony. The following points of difference between these two editions may be noted: The material is differently distributed, entire passages frequently being found in different sections and even in different treatises. The two editions are contrasted, too, in the method of treating the material. In the Rhenish "Mordekai" there is the endeavor to cut down and abbreviate, the printed work constituting only one-third of the matter found in the manuscripts of the Austrian "Mordekai" at Budapest and Vienna. Quotations and extracts from the different tosafot collections especially are missing in the printed book, whereas they are included in the manuscripts. The two versions, furthermore, differ greatly in their quotations from the authorities. Rhenish and French scholars are the chief authorities in the Rhenish version; but they are omitted in the Austrian, which substitutes Austrian authorities, Isaac Or Zarua', Abigdor ha-Kohen, and his father-in-law, Ḥayyim b. Moses, being especially frequently drawn upon. The Rhenish "Mordekai" is notable for its rigorous views. Opinions which interpret the Law leniently, especially those that disagree with the then obtaining practises, are either omitted entirely or are given in brief quotations and in a form which shows that they are not authoritative. The Austrian "Mordekai" gives these passages frankly and in detail. The conciseness and scrupulousness of the Rhenish version lead to the conclusion that the Austrian "Mordekai," as found in the manuscripts, represents the original form of the work, or at least most closely approaches that form which Mordecai intended to give to his book.

About sixty years after Mordecai's death Samuel b. Aaron of Schlettstadt wrote his "Haggahot Mordekai," glosses to the "Mordekai," consisting chiefly of extracts made by him from the Austrian version in order to supplement the Rhenish; and the text, which was already very corrupt and confused, was still further impaired by these glosses, as text and glosses were frequently confounded. While the "haggahot" are at least derived from the "Mordekai," there are passages in the printed text which have no relation whatever to that work. The "Small Halakot" ("Halakot Ḳeṭannot"), which figures in the editions as a part of the "Mordekai," is Schlettstadt's work, while the "Mordekai" to Mo'ed Ḳaṭan includes a complete work of Meïr b. Baruch of Rothenburg, and other extraneous elements have been introduced in different passages of the "Mordekai."

Diffusion of the "Mordekai."

In consequence of the persecutions in Germany during the fourteenth century and of the resulting decline of Talmudic studies, a work of the nature of the "Mordekai" naturally soon became authoritative. The high reputation enjoyed by it is evident from the works of Schlettstadt, which either deal with or are modeled upon it. The great authorities of Germany of the fifteenth century, as Jacob b. Moses ha-Levi (מהר"יל), Israel of Krems, Isserlein, Jacob Weil, Israel of Brünn, and Joseph Colon, the greatest Italian Talmudist of that century, were great admirers of Mordecai, whose work they assiduously studied and whose authority they recognized. The first treatise of the Talmud that was printed (Soncino, 1482) included the "Mordekai" in addition to Rashi, the tosafot, and Maimonides. In Caro's and Isserles' codes Mordecai is among the authorities most frequently quoted. Isserles even lectured on the "Mordekai" in his yeshibah, many of his responsa being devoted to the questions of his pupils and friends regarding difficult passages of the book. In Italy and Poland, where the "Mordekai" was especially studied, a whole "Mordekai" literature came into existence. A large number of extracts, indexes, glosses, novellæ, and commentaries are still extant, the most important of these works being Joseph Ottolenghi's index, Baruch b. David's "Gedullat Mordekai," emendations of the text, and Mordecai Benet's commentary.

Mordecai wrote also responsa, which, however, do not seem to have been preserved. S. Kohn ascribes to him the authorship of "Haggahot Maimuni"; but the ascription lacks support. It is noteworthy that Mordecai inclined toward poetry and grammar, a predilection that was rare in Germany at his time. A seliḥah by him, on the martyrdom of a proselyte, was published by Kohn ("Mordechai ben

Hillel," Appendix, i.). But although Mordecai used Hebrew fluently and skilfully, he had no real poetical talent. A metrical poem of his on the Hebrew vowels—one of the few of this kind produced by the German Jews—was also published for the first time by Kohn (*l.c.*). The poem is obscure, the author apparently intending to speak in riddles. Mordecai wrote also a treatise in verse on the examination of slaughtered animals and on permitted and forbidden foods, which appeared under the title "Hilkot Sheḥiṭah u-Bediḳah we-Hilkot Issur we-Hetter" (Venice, 1550 ?). From the nature of the case the author could not confine himself to Biblical Hebrew; but his language is correct and fluent.

MORDECAI B. ISAAC OF CARPENTRAS: French Talmudist; flourished in the thirteenth and fourteenth centuries. Mordecai lived in Carpentras (department of Vaucluse) at the time of the religious struggles (1303-6), and corresponded with Abba Mari of Lunel, who speaks of him very highly. Zunz and Neubauer identify him with Mordecai b. Isaac Ezobi; this, however, can not be correct, because the latter lived between 1303 and 1306 in Carcassonne, and not in Carpentras. Gross identifies him with Mordecai b. Isaac Ḳimḥi, father of Isaac Ḳimḥi, called "Mestre Petit de Nyons." He is designated by Isaac de Lattes as "Gaon," and in "Ḳore ha-Dorot" he is styled "Ornament of Judaism." He is often quoted in the manuscript responsa collection of Solomon ben Adret's ("R. E. J." xii. 81–90) under the name "Mordecai b. Isaac."

H. R. M. Sc.

MORDECAI BEN JOSEPH OF AVIGNON: Provençal Talmudist; flourished in the middle of the thirteenth century; a contemporary of the Dominican Pablo Christiani, a former pupil of Eliezer of Tarascon. Mordecai, as the most prominent Jew in Provence, suffered the most from Pablo's attacks. Prior to 1274 Pablo secured an order from the pope to the effect that the Jews in southern France should wear humiliating badges on their clothing. The Provençal Jews, who had hitherto been exempt from these badges, opposed this decree, and Mordecai ben Joseph and a certain Israel were in consequence imprisoned by the inquisitors. They secured their freedom only by the payment of a large sum of money. Mordecai and Solomon of Tarascon were sent as delegates to the royal court in order to secure the repeal of this odious law; and they succeeded. Charles I., King of the Two Sicilies, and Count of Provence, on March 26, 1276, issued a severe decree against the inquisitors who insisted that the Jews should wear badges. As Pablo was now dead the decree was not opposed by the inquisitors.

Ibn Verga, who relates this event in his "Shebeṭ Yehudah," says that Mordecai was imprisoned after his embassy to the royal court, which, according to Gross, is improbable and not in agreement with the facts given in the introduction to "Maḥaziḳ ha-Emunah." Mordecai may be identified with **Mordecai ben Josiphiah,** who with other rabbis of the last third of the thirteenth century signed a ritual decree at Carpentras (Renan-Neubauer, "Les Rabbins Français," p. 518; Gross, "Gallia Judaica," p. 607).

Mordecai was the author of the following works: (1) "Maḥaziḳ ha-Emunah," a polemical writing against the above-mentioned Pablo Christiani; (2) "Sefer Eber min ha-Ḥai," on Gen. ix. 4; (3) "Issur we-Hetter," a halakic work; (4) "Bet She'arim," on the laws concerning marriage contracts; and (5) "Sha'are Nedarim," on the halakot concerning vows.

All these works, with the exception of the first, which is extant in manuscript (Vatican MS. 271), are no longer in existence, and are known only by quotations made by Isaac de Lattes in his "Sha'are Ẓiyyon" (p. 74) and by Gedaliah ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 54b).

MORDECAI BEN JUDAH (MORDUSCH): Polish ritualist; lived at Lamkumsh; died 1584. He edited the Maḥzor with the commentary of Abraham Abigdor, to which he added notes of his own (Lublin, 1567); in the same way he edited the latter's seliḥot (Cracow, 1584). Two other editions of the seliḥot appeared, revised and enlarged by his son-in-law Hirsch Sundels (Prague, 1587, and Lublin, 1643).

D. S. J. L.

MORDECAI BEN JUDAH (ARYEH LÖB) ASHKENAZI: Dutch ritualist; lived in Amsterdam in the early part of the seventeenth century. He was a disciple of Abraham Rovigo, whose commentary to the Zohar, "Eshel Abraham," he arranged and corrected. It was published, with the text, at Fürth in 1701; his preface to it, entitled "Haḳdamat Eshel Abraham," was published in the preceding year. He wrote also "Miḳweh Yisrael," a treatise on circumcision in Judæo-German, which appeared in 1710 with David of Lida's "Sod Adonai" appended.

MORDECAI BEN JUDAH HA-LEVI: Chief rabbi of Cairo, Egypt; preacher and Biblical commentator; flourished in the seventeenth century; died at Jerusalem. He was the author of "Darke No'am" (Venice, 1698), responsa on the four parts of the Shulḥan 'Aruk, namely: 13 on the Oraḥ Ḥayyim; 13 on the Yoreh De'ah; 68 on the Eben ha-'Ezer; and 57 on the Ḥoshen Mishpaṭ. It was prefaced and edited by his son Abraham ha-Levi. Mordecai left, besides, four works which are still unpublished: "'Abodat ha-Ḳodesh," a commentary on the Pentateuch, according to the commentaries of Rashi and Naḥmanides; "Miḳra'e Ḳodesh," sermons for holy days; "Toledot Adam," sermons for the ceremonies of circumcision, bar miẓwah, and marriage; and "Sof Adam," funeral orations.

MORDECAI HA-KOHEN OF SAFED: Cabalist and scholar; flourished in the second half of the sixteenth century. He was a pupil of the famous cabalist Israel de Curiel, and a contemporary of R. Joseph di Trani. The latter mentions him in his responsa (ii., No. 106). Mordecai wrote an allegoric-cabalistic commentary on the Pentateuch, entitled "Sifte Kohen" (Venice, 1605; Wandsbeck, 1690).

MORDECAI MOKIAḤ (called also **Mordecai of Eisenstadt**): Shabbethaian prophet and false Messiah; born in Alsace about 1650; died at Presburg May 18, 1729. The death of Shabbethai Ẓebi (1676) seems to have encouraged his followers, who claimed that he had returned to his heavenly abode and would come back in three years to finish his Messianic task. This doctrine was preached by Mordecai, who, through his ascetic life, his eloquence, and his commanding appearance, won many followers. Italian cabalists, among them Benjamin Cohen, rabbi of Reggio, called him to Italy about 1678, where he for a time was very popular. Some cause—perhaps fear of the Inquisition—forced him to leave Italy, where he had begun to announce himself as the Messiah. He traveled as a preacher through Austria, Germany, and Poland, and finally returned to Hungary, where he seems to have lived a quiet life, as nothing further is known of him. His son, **Judah Löb Mokiaḥ**, an eminent Talmudist, died in Presburg Dec. 7, 1742; the latter's sons were David BERLIN and Isaiah BERLIN, known also as "Isaiah Pick."

D.

MORDECAI BEN NAPHTALI HIRSCH KREMSIR: Polish commentator; died in Cracow 1670. He was a disciple of Shabbethai Sheftel. His most important work is a commentary to Targum Jonathan and Targum Yerushalmi—"Ḳeṭoret ha-Sammim" (Amsterdam, 1671). He wrote also "Ḳinah," an elegy on the 120,000 Polish martyrs of 1648 (Lublin, 1650), and "Ḳeṭoret ha-Mizbeaḥ," a commentary on the haggadot in Berakot (*ib.* 1660).

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 1671; Fürst, *Bibl. Jud.* ii. 208; Landshuth, *'Ammude ha-'Abodah*, p. 200.

W. B. S. J. L.

MORDECAI NATHAN, MAESTRO: French physician; lived at Avignon in the middle of the fifteenth century. He corresponded with Joseph Colon, who highly praises his medical skill and addresses him by the title מורי, a term which, according to some authorities (Carmoly, "Histoire des Médecins Juifs," p. 126), meant "master," but which, according to others (Gross, in "Monatsschrift," 1880, p. 518), was merely a title of respect.

Mordecai is doubtless identical with the mathematician Mordecai Nadi (Wolf, "Bibl. Hebr." iv. 904), with the astronomer Mordecai Nathan (Renan-Neubauer, "Les Ecrivains Juifs Français," p. 581), and with Maestro Mordecai Todros Nathan of Avignon, for whom Nathanael b. Nehemiah Caspi of Largentière copied in 1454 at Arles, France, Alfasi's book on casuistics and other Talmudic works. He has been erroneously confounded with Isaac Nathan, author of the celebrated concordance.

BIBLIOGRAPHY: Renan-Neubauer, *Les Rabbins Français*, p. 533; idem, *Les Ecrivains Juifs Français*, pp. 415, 580-582, 756; Gross, *Gallia Judaica*, p. 10.

G. S. K.

MORDECAI BEN NATHAN BEN ELIAKIM BEN ISAAC OF STRASBURG: French commentator; lived at Corbeil about the end of the thirteenth century. He was the author of a commentary on the "Sefer Miẓwot ha-Ḳaṭon (SeMaḲ)," published in the Constantinople edition.

BIBLIOGRAPHY: Gross, *Gallia Judaica*, p. 572, No. 6.

E. C. J. S. R.

MORDECAI BEN NISSAN HA-ZAḲEN: Karaite scholar; lived at Krasnoi-Ostrog, Poland, in the seventeenth and eighteenth centuries. He studied under Joseph ben Samuel, ḥazzan of Kalisz, and David ben Shalom ha-Zaḳen, and at an early age became proficient both in rabbinical and in Karaite literature. Mordecai is chiefly known through his work "Dod Mordekai" (Vienna, 1830), written in answer to four questions addressed in 1698 to David ben Shalom ha-Zaken by Jacob Trugland, professor of theology at the University of Leyden. These four questions were: (1) Is the Karaite sect identical with that which existed at the time of the Second Temple under the name "Sadducees," or did it originate with Anan, as the Rabbinites assert? (2) Was Aquila, the proselyte, to whom Menahem Ḳala'i had addressed letters, identical with the Greek translator or with the author of the Targum? (3) Is the "Moreh Aharon" identical with the "Sefer ha-Miẓwot" of Aaron ben Elijah of Nicomedia; if not, who was its author? (4) Has the Karaite Bible any variants from the Rabbinite Bible, and what is the prevailing belief among the Karaites with regard to the time of the introduction of vowels and accents?

Mordecai divided his work into twelve chapters, each of which bears the name of a Jewish tribe. To the first question he answered that, although the Karaite sect is not identical with that of the Sadducees, it nevertheless existed at the time of the Second Temple. He divided the history of the Karaites into three epochs: the first beginning with the formation of a separate congregation without any external distinction from other congregations, in the time of Simeon ben Sheṭaḥ; the second beginning with Anan, who made an open stand against the Talmudists; and the third beginning with the fourteenth century, when the first traces of the decline of Karaism began to be felt. The second question is left unanswered. The name "Menahem," he says, is nowhere to be met with except in the "Mibḥar," and there is, therefore, no information concerning his personality. As to the author of the Targum, Mordecai knows him only through the Rabbinite authorities. The third question is answered satisfactorily, and Mordecai gives by the way information of the Karaite works found in Poland. The Karaite Bible, he says, in answer to the fourth question, does not vary from that of the Rabbinites; and the vowels and accents are believed to have been transmitted to Moses on Mount Sinai. Here Mordecai cites Azariah dei Rossi and displays a vast knowledge of rabbinical literature.

In addition, Mordecai wrote: "Sefer Ma'amar Mordekai," a commentary on the "Mibḥar" of Aaron ben Joseph; "Derek ha-Yam," dissertation on a passage of the "Mibḥar" to Gen. ix. 21; "Kelalim Yafim," an elementary Hebrew grammar; "Yad Adonai," the subject of which is not known; "Lebush Malḳut," on the differences between the Rabbinites and the Karaites; liturgical poems, some of which have been inserted in the Karaite ritual.

MORDECAI ẒEMAḤ B. GERSHON (SONCIN). See SONCIN.

MORDO, LAZARE: Physician and honorary rabbi of Corfu; born 1744; died 1823; studied at Venice and Padua. In 1814 he was appointed chief physician of the island of Corfu, and he was esteemed both by the government and by the entire population for his learning and philanthropy. At his death the eminent Corfiote poet Delviniotti composed a beautiful elegy in his honor.

Lazare Mordo left numerous works in manuscript; his "Nozioni Miscellanee Interno a Corcira" (Corfu, 1809) was dedicated to his friend Emanule Theotoky, president of the Senate, in which he gives the names of Corfu physicians who had preceded him, including several Jews.

D. M. FR.—M. C.

MORENO (MORENU): According to the interpretation of Moses ibn Ḥabib, a proper name, which was adopted as a family name by Spanish-Portuguese Jews. It frequently occurs in connection with "Paz," "Shalom," and "Henriquez." Families bearing this name were living in the seventeenth century in Bayonne, London, Amsterdam, and Hamburg; and others which have adopted it still exist in Turkey.

David Shalom Moreno: Son of **Abraham Shalom Moreno;** the latter died at Bayonne in 1684 and was called also **Luis de Paz.** David was celebrated for his wisdom and Talmudic learning.

Gabriel Moreno: Member of the Academia de los Floridos, founded in Amsterdam 1685.

Jacob Isaac Morenu: Physician in Amsterdam; died there June 21, 1667. In Oct., 1663, he gave his approbation to the little book "Orthographia Castellana" by Abraham da Fonseca. His grave is marked by a noble monument, upon which is a coat of arms consisting of a helmet surmounted by a count's coronet.

Jacob Israel Moreno: Lived in Amsterdam; mentioned as the writer of a sonnet.

Moses Moreno Henriquez: Representative of Ḥakam Daniel Belillos in the Maskil el Dal philanthropic society in Amsterdam, to which Gabriel Moreno and the brothers Isaac and Jacob, sons of **Mattathias Moreno,** also belonged.

D. M. K.

MORENU (lit. "our teacher"): Term used since the middle of the fourteenth century as a title for rabbis and Talmudists; and the abbreviation מ"ה"ר (= מורנו הרב רבי) was placed before the name of the scholar in question. Thus the abbreviation מהרם ("MaHaRaM") stands for "Morenu ha-Rab R. Meïr," or "R. Moses," and "MaHaRiL" for "Morenu ha-Rab R. Jacob Levi." This title was first used in Germany, and after R. Meïr b. Baruk ha-Levi, rabbi of Vienna (1360-90), had revived the ancient custom of ordination ("semikah"), every one ordained as rabbi received the degree of morenu. The first who bore this title were, according to David Gans, R. Shalom of Austria, rabbi of Wiener-Neustadt, and R. Jacob Mölln (MaHaRiL). It can not be determined definitely why a special title was applied to rabbis, or why the term "morenu" was chosen. Isaac Abravanel says in his commentary on Abot v. 1 that the German rabbis conferred the title of morenu upon their scholarly pupils as an equivalent for the degree of doctor granted by the universities. Zunz thinks ("Z. G." pp. 185 *et seq.*) that the title was intended to add to the rabbinical dignity, for the title of rabbi had lost its significance of "scholar" or "master," since it had become customary to bestow it, perhaps in opposition to the Karaites, upon every Rabbinite Jew, even though he was not a scholar. The candidate for the degree of morenu receives it upon successfully passing an examination in the Talmud and the "posḳim." He is then called upon by this title to read the lesson from the Torah, and since the degree testifies to his rabbinical and Talmudic scholarship, he is thereby empowered to decide questions of religious law, to perform marriages, and to grant divorces. Formerly the title of morenu was conferred only upon married men—so that Jonathan Eybeschütz was prevented from granting it to Moses Mendelssohn while the latter was unmarried ("Kerem Ḥemed," iii. 225)—and the dignity was generally conferred upon the candidates on the day of their marriage (Ephraim Luntschütz, "'Olelot Efrayim," on aphorism 366), but it is now given to unmarried men as well. Every ordained rabbi has the power to grant it; and it occasionally happens that it is conferred as an honorary title in recognition of services rendered to a community, even though the recipient may not be distinguished for Jewish learning. See MAR.

W. B. J. Z. L.

MORESHETH-GATH (מורשת גת = "possession of Gath"): City in Palestine, apparently the native place of the prophet Micah; mentioned in connection with Lachish, Achzib, Mareshah, and other towns of the lowland ("shefelah") of Judah (Mic. i. 13-15). Jerome ("Onomasticon," *s.v.* "Morasthi," and prologue to his commentary on Micah) places this city at a short distance east of Eleutheropolis, and states that in his time it was still a village of moderate size, containing a church built over Micah's tomb. Robinson ("Researches," ii. 423) concludes that it must have been near Mareshah, while Thomson ("The Land and Book," ii. 360) thinks these two towns are identical. The text of Micah (*l.c.*), however, clearly differentiates them.

Among the Jewish commentators, only Ibn Ezra and David Ḳimḥi consider Moresheth-gath as the name of a place; the Targum of Jonathan (to Mic. i. 14) and later commentators, among them Rashi, translate these two words by "those who caused you to inherit Gath," meaning the family of David. Wellhausen detaches "Moresheth" from "Gath," rendering the passage in Micah (*l.c.*) by "Thou must let go Moresheth, O Gath."

S. M. SEL.

MORGENLAND, ALTES UND NEUES: Monthly magazine published in Basel, Switzerland. It was edited by Samuel Preiswerk and appeared for six years (1838-44). Its contents were exclusively exegetical in character; indeed, the periodical was designed "for the friends of Holy Writ."

G. A. M. F.

MORGENSTERN, KARL: German landscape-painter; born at Frankfort-on-the-Main Oct. 25, 1812; died there Jan. 10, 1893. He received his education in art in the Munich Academy of Arts, and in 1834 visited the Bavarian highlands and Italy.

Of his paintings the following may be mentioned: "Ansicht von Neapel"; "Bai von Bajae"; "Meerbusen von Villafranca bei Nizza" (1843; now in Städel's Museum).

MORGENSTERN, LINA (*née* **Bauer**): German authoress and communal worker; born in Breslau Nov. 25, 1830. The Revolution of 1848 led her to interest herself in the political and social situation. In 1854 she married Theodor Morgenstern of Kalisz, and the young couple moved to Berlin, where Morgenstern established a manufacturing house. When, in 1859, the women's society for the promotion of Froebel kindergartens was founded, Mrs. Morgenstern became one of the first members of its board of directors. In 1860 she published "Das Paradies der Kindheit," the first German text-book of Froebel's method, which has reached its fifth edition. At the same time she published "Aus der Storchstrasse" and "Die Plauderstunden." From 1861 to 1866 she was president of a women's society which supported eight kindergartens, a seminary, and a children's nursery-school, besides conducting mothers' meetings. In 1866 she retired from this position to found the society for instituting popular kitchens, to which she still (1904) devotes her activity as honorary president and director of the local board. Its system of kitchens serves as a model both in Germany and abroad.

Multifarious Activity.

In 1868 Mrs. Morgenstern founded the Children's School Union, which is still in existence, and in 1869 an academy for the higher education of young ladies. In 1873 she founded the Berlin Housekeepers' Union, of which she is still director. This society has conducted a cooking-school since 1878 (for which Mrs. Morgenstern has written all the text-books), a free employment agency, a premium fund for worthy servants, an old-age pension fund, etc. In 1881 she founded a society for the rescue and education of girls discharged from prison, which was changed in 1887 into a society for the bringing up of poor girls. In 1887 Mrs. Morgenstern began giving courses in sanitary housekeeping and nursing the sick. In 1895 she became a member of the board of directors of the German societies for the preservation of peace, and she is now vice-president of the Alliance des Femmes pour la Paix. In 1896 she convened the first international woman's congress at Berlin, at which 1,800 delegates were present from all parts of the world.

Mrs. Morgenstern has published, besides a number of novels and the writings which have been mentioned above, the following works, all printed in Berlin: "Die Volksküchen" (4th ed., 1882); "Der Beruf des Weibes" (1869); "Kochrezepte der Berliner Volksküche" (4th ed., 1883); "Universalkochbuch für Gesunde und Kranke" (1881); "Friedrich Fröbel's Leben und Wirken" (1882); "Die Menschliche Ernährung und die Kulturhistorische Entwickelung der Kochkunst" (1882); "Frauen des 19. Jahrhunderts" (1888); and "Die Frauenarbeit in Deutschland" (1893). Since 1874 she has also published "Die Deutsche Hausfrauen Zeitung," and from 1888 to 1894 she issued a monthly magazine for young girls.

In 1900 Mrs. Morgenstern celebrated her seventieth birthday, receiving many tokens of regard and of recognition of her activities and beneficent works.

S.

MORGULIS, MICHAEL (MIKHAIL GRIGORYEVICH): Russian jurist and author; born at Berdychev March 25, 1837. His parents, who were well-to-do people, gave him a good education, and during his early training in the ḥeder he displayed remarkable ability. Entering the rabbinical school at Jitomir, he proved himself a very apt student; and as a senior he wrote a defense of the school, the modern policy of which had been attacked by the Orthodox party. This first literary production of Morgulis was sent to the Ministry of Public Education. Graduating in 1861, he wished to enter the university, but having been educated in a government school, he was obliged to become a government rabbi. Thanks to the powerful support of Pirogov, who saw much promise in Morgulis, he was enabled after three years to enter the University of Kiev. In 1864 he registered for the law course, and while still in the university published occasional articles ("Zadiki-Chudotvortzy," "Drevnyaya i Novaya Kaballa," etc.). In 1867 he published a collection of his more important articles, such as "Frank i Frankisty," "Ocherk Ugolovnavo Sudoproizvodstva u Drevnikh Yevreyev," and in 1869 presented his thesis "O Pravye Naslyedovaniya po Moiseyevui Talmudicheskomu Zakonodatelstvu."

In the same year Morgulis moved to Odessa and at once took an active part in the communal life of that city. Among the organizations with which he has been connected are the Society for the Promotion of Culture, the Agricultural Fund, the Palestinian Society, and the Rabbinical Commission. No important communal affair is disposed of without his advice; and he is considered an authority on legal matters concerning the Jews of Russia. For the last twenty-seven years he has been at the head of the Jewish industrial school Tzud; and it was due to his efforts that a model farm for educational purposes was established in connection with the Odessa orphan asylum. Morgulis occupies a prominent position among the jurists of Odessa. He was for a long time secretary of the local lawyers' organization.

Morgulis' collection of articles, published in 1889 and reprinted from a number of periodicals, deals with many sides of Russo-Jewish life. Special mention should be made of his article on the history of education among the Jews in Russia, and of those entitled "Samoosvobozhdeniye i Samootrecheniye," in "Yevrei Obzor," 1884-85; "Kagal i Magdeburgskoye Pravo," in "Den," 1871, *s.v.*; "Korobochny Sbor," in "Yevreiska Bibliotheca," St. Petersburg, 1878, and of a lengthy report written by him, at the instance of the Society for the Promotion of Culture Among the Jews of Russia, for the Palen commission then investigating the Jewish question.

H. R. J. G. L.

MORIAH (מריה, מוריה): **1.** A district in Palestine containing several mountains, on one of which Abraham was commanded by God to sacrifice his son Isaac (Gen. xxii. 2). **2.** A mountain at Jerusalem on which Ornan the Jebusite had a thrashing-floor and on which Solomon later built the Temple (II Chron. iii. 1). It is very likely that the Chronicler identified the mountain of the Temple with that of the sacrifice of Isaac, as he points out that Solomon built the Temple on a mountain of a highly sacred character, since Abraham had several centuries previously built there an altar on which the 'Aḳedah took place. Shortly before the erection of Solomon's Temple an altar had been built there by David (comp. II Sam. xxiv. 25). The Rabbis positively identified these two places as the same, naming Jerusalem "land of Moriah" (Gen. *l.c.*) on account of the Mount Moriah situated therein.

As to the meaning of the name, the Rabbis advanced various interpretations, *e.g.*: "the teaching-place" (מורה), in allusion to the Temple as the seat of the Sanhedrin; "the place of fear" (מורא), the Temple causing fear to the heathen; "the place of myrrh" (מור; comp. הר המור, Cant. iv. 6), referring to the myrrh and other spices which were burned on the altar (Yer. Ber. iv. 5; Ta'an. 16a; Pesiḳ. R. 40 [ed. Friedmann, p. 167b]; Gen. R. lv. 9; Tan., Wayera, 45). It is apparently after the last-named interpretation that the Targums of Onḳelos and pseudo-Jonathan (to Gen. *l.c.*) render ארץ המריה by ארעא דפולחנא (= "land of worship"; comp. Rashi *ad loc.*). The Samaritan text has המוראה, which is rendered by the Samaritan Targum חזיתה (= "vision"), a reading which agrees with Gen. xxii. 8, 14. In the Peshiṭta the Moriah of Genesis is rendered by "the land of the Amorites," while that of II Chron. iii. 1 is cited as "Moriah"; in the Septuagint the former is *τὴν γῆν τὴν ὑψηλήν* (= ארץ הרמה); the latter, *'Αμωρία.*

Modern scholars who distinguish between these two places advance different theories as to the meaning of the word "Moriah." Wellhausen reads in Gen. *l.c.* ארץ חמרים (= "the land of the Hamorites"), *i.e.*, Shechem (see Gen. xxxiv.; Judges ix. 28); Tuch identifies it with the Moreh of Gen. xii. 6, also near Shechem. Both theories agree with the Samaritan tradition that the sacrifice of Isaac took place on Mount Gerizim near Shechem ("Z. D. P.

V." vi. 198, vii. 133; comp. Cheyne and Black, "Encyc. Bibl." *s.v.*, and Ed. King in "Hebraica," ii. 93).

MORITZ, ALBERT: American naval engineer; born at Cincinnati, Ohio, June 8, 1860. He was educated at the College of the City of New York, graduating in 1877; in that year he was appointed to the United States Naval Academy at Annapolis, from which he graduated in 1881. In 1883 he became commissioned assistant engineer; in 1894 passed assistant engineer; in 1889 lieutenant; and in 1903 lieutenant-commander. At present (1904) he holds the position of chief engineer of the U. S. S. "Alabama." In 1900 he was commended for gallant conduct while serving with the U. S. S. "Yosemite," which was wrecked in a typhoon off Guam, in the Pacific.

MOROCCO (called among the Arabs **Al-Maghrib al-Aḳṣa** = "the extreme west"): Sultanate in northwestern Africa. In antiquity it formed a considerable part of Mauritania. The latter was originally an independent kingdom, but in the year 42 of the common era it was made a Roman province and divided into Mauritania Tingitana, in the west, corresponding approximately to the Morocco of to-day, and Mauritania Cæsariensis, in the east, corresponding to the greater part of the modern Algeria. Mauritania, as indeed the whole of northern Africa, appears to have been settled by Jewish colonists even before the destruction of the Temple. Indefinite and fabulous traditions concerning such early settlements have been handed down among the Berber Jews of the Atlas and Rif mountains, the district of Sus, and the oasis of Tafilet and many other oases of the western regions. These Jews may be regarded as the descendants of those early settlers. The Jewish colonists of Borion assign their first settlement in the country to the time of Solomon, claiming that he himself built their synagogue, which in the sixth century was transformed into a church by Emperor Justinian (Neubauer, "Where Are the Ten Tribes?" in "J. Q. R." i. 23). Davidson, who traveled through the Atlas region and became acquainted with the Jews there, says they claim that their ancestors all left Jerusalem before its destruction and did not go as exiles to Babylon, and that they pretend never to have heard of Jesus of Nazareth (Andrée, "Zur Volkskunde der Juden," p. 197). These traditions are to some extent supported by the existence of Hebrew inscriptions in the province of Fez ("Ha-Lebanon," iii. 110; Neubauer, *l.c.*), in Volubilis, in the extreme west of Mauritania near what was afterward called "Fez" (Schürer, "Gesch." iii. 26; P. Berger, in "Bulletin Archéologique du Comité des Travaux Historiques et Scientifiques," No. i., pp. 64 *et seq.*, Paris, 1892), in Al-Ḥamada, in the southern part of the province of Tafilet (Horowitz, "Marokko," p. 205, Leipsic, 1887; Henry S. Morais, "The Daggatouns," p. 9, Philadelphia, 1882), and, it is claimed (Morais, *l.c.*), in Tementit (comp. Jew. Encyc. iv. 562, *s.v.* Diaspora).

Traditions of Early Settlement.

Under the Romans.

When the Jews began to spread over the Roman empire after the dissolution of the Jewish state (70), many of them doubtless settled in Mauritania, which province the Romans wished to civilize. These settlers engaged in agriculture, cattle-raising, and trades. They were divided into bodies akin to tribes, governed by their respective heads, and had to pay the Romans a capitation-tax of 2 shekels. Marcus Fischer ("Toledot Yeshurun: Gesch. der Juden Unter Regierung Mohadis und Imam Edris," Prague, 1817), and, following him, D. Cazès ("Essai sur l'Histoire des Israélites de Tunisie," pp. 28 *et seq.*, Paris, 1889) have much more to say concerning these newcomers, their relations to the old inhabitants, their religious and civil life, their habits and customs, basing their statements on the verbal communications of "native historians." As Fischer, however, does not give his sources in detail, his information can be used only with caution. It is not known whether the Jews of Mauritania were in communication with their coreligionists in Palestine and Babylon; but, since the Talmud has some acquaintance with the customs of the Mauritanians (Yeb. 63b), such a communication does not seem wholly improbable.

Under the dominion of the Romans and (after 429) of the Vandals the Mauritanian Jews increased and prospered to such a degree that Church councils of Africa found it necessary to take a stand against them. The Justinian edict of persecution for northern Africa, issued after the Vandal rule had been overthrown and Mauritania had come under the dominion of the Byzantines (534), was directed against the Jews as well as the Arians, the Donatists, and other dissenters (E. Mercier, "Histoire de l'Afrique Septentrionale," i. 167, Paris, 1888). In the seventh century the Jewish population of Mauritania received as a further accession from Spain those who wished to escape west-Gothic legislation. At the end of the same century, at the time of the great Arabian conquests in northwestern Africa, there were in Mauritania, according to the Arab historians, many powerful Berber tribes which professed Judaism. It would be very interesting to know, although difficult to decide, whether these tribes were originally of Jewish race and had become assimilated with the Berbers in language, habits, mode of life—in short, in everything except religion—or whether they were native Berbers who in the course of centuries had been converted by Jewish settlers. However this may have been, they at any rate shared the lot of their non-Semitic brethren in the Berber territory, and, like them, fought against the Arab conquerors.

Berber Jews.

It was the Berber Jewess Dahiyah, or Damia, known as Kahinah, who aroused her people in the Aures, the eastern spurs of the Atlas, to a last although fruitless resistance to the Arab general Ḥasan ibn Nu'man, and herself died (703) the death of a heroine (Ibn Khaldun, i. 207 *et seq.*, iii. 193 *et seq.*; Mercier, *l.c.* i. 212 *et seq.*; August Müller, "Der Islam im Morgen- und Abendland," i. 420). As in the Hellenic lands of Christendom, so also in Mauritania, Judaism involuntarily prepared the way for Islam; and the conversion of the Berbers to Islam took place so much the more easily. Many Jewish tribes of the Berbers also accepted Islam, some being forced thereto, others persuaded by the fact that the enemy had been successful. Nevertheless many Jewish Berber tribes have survived to the present day in their old habitations in the mountains of Morocco and in the oases of the desert, although as regards customs and mode and views of life they have been greatly influenced by Islam. In language and external appearance they are wholly Berber. In recent times (1857) a Moroccan Jew, Mordecai Abu Surur, has given information concerning such a Jewish Berber tribe known as the DAGGATUN, whose members are very numerous and spread over the whole desert, although residing chiefly among the Tuaregs in the oasis of Ajaj. According to their own traditions, these Daggatun have lived in the Sahara since the end of the seventh century, when they were driven out of Tementit, their early home and the former capital of the Jewish Berbers, because they would not accept Islam. There is said to be a similar tribe called the Maḥajri more toward the east (Horowitz, "Marokko," p. 59, Leipsic, 1887; comp. JEW. ENCYC. iv. 410, *s.v.* DAGGATUN).

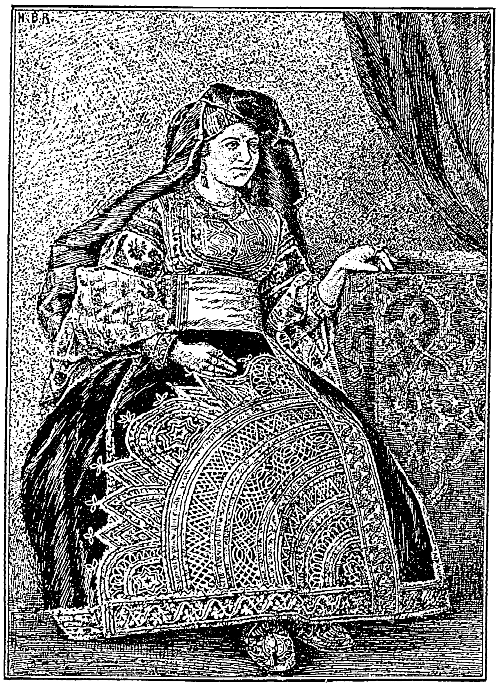
Under the Idrisids.

When, at the end of the seventh century, Morocco came under the dominion of the Arabs, or of the Arabian califate of Bagdad, another incursion of Arab Jews into Morocco took place. The Moroccan Jews, like all other Jews in the Islamic empire, were subject to the Pact of Omar. The dependence of Morocco upon the califate of Bagdad ceased in the year 788, when, under the Imam Idris, the dynasty of the Idrisids, the descendants of Ali, was founded and proclaimed its independent rule over Morocco. The Jews undertook a political rôle in the history of the subjection of Morocco to Idris, the founder of this dynasty. After he had conquered Tangier and Volubilis, he wished to induce the Jewish tribes, which were inclined to remain faithful to the calif of Bagdad, to join his army. To make them more pliant to his wishes he caused them to be attacked and robbed in some of their cities, as in Temesna, Chella, and Magada, whereupon the Jews of Tadla, Fazaz, and Shauwiyah joined Idris' army under their general Benjamin ben Joshaphat ben Abiezer. After the combined army had met with some successes, the Jews withdrew, because they were horrified at the spilling of blood among those of their own tribesmen who were hostile to Idris and also because they had been made suspicious by an officer in Idris' army who wished to revenge himself upon Idris for adultery committed with his wife. The victorious Idris, however, took revenge by again falling upon them in their cities. After an unsuccessful resistance they had to conclude a peace with him, according to which they were required to pay an annual capitation-tax and to provide twenty-four virgins annually for Idris' harem. Later traditions attribute even still greater indignities inflicted on the Jewesses of Morocco by the lust of Idris (Marcus Fischer, *l.c.* pp. 32 *et seq.*). Idris II., successor of Idris I., allowed the Jews to settle in a special quarter of his capital, Fez (founded 808), in return for a tax of 30,000 dinars; in one of the many versions of the narrative of the founding of the city a Jew is mentioned (see FEZ). Moreover, at the end of the seventh century, under Idris I., Jews could settle in different cities of the realm by paying the above-mentioned capitation-tax ("Rauḍ al-Ḳarṭas," translated by A. Beaumier: "Histoire des Souverains du Maghreb," p. 55, Paris, 1860).

Intellectual Activity.

The position of the Jews was on the whole favorable under the later Idrisids; under the Aghlabites, who overthrew the Idrisids in 986; under the Zirids, who drove out the Aghlabites; as also under the Almoravids, who, under Yusuf ibn Tashfin, seized the government in 1062 and who provided many Jews with new homes, through the foundation in 1062 of their new residential city Marrakesh (Morocco). Indeed, in the period from 900 to about 1150 an activity in the intellectual life of the Jewish communities may be traced in many Moroccan cities. The most important community was that of Fez, to which JUDAH IBN ḲURAISH sent an open letter in regard to the study of the Talmud, and with which the geonim Sherira and Hai ben Sherira carried on a halakic correspondence (Zunz, "Ritus," p. 53; comp. also Harkavy, "Teshubot ha-Ge'onim," No. 47, p. 24; No. 386, p. 200). Here in Fez the father of the gaon SAMUEL IBN ḤOFNI was active as a Talmud scholar and ab bet din (Zunz, *l.c.* p. 191; Steinschneider, "Hebr. Bibl." xx. 132). Here, in the tenth century, were born the philologists DUNASH BEN LABRAṬ and Judah ben David ḤAYYUJ (*c.* 950) and, in the year 1013, in a village near Fez, the halakist Isaac Alfasi; all these were educated in Fez. Here the writings of Saadia appear to have been studied; for two scholars of Fez—Abudani and David—brought thence Saadia's "Yeẓirah" commentary to Kairwan for Jacob ben Nissim (see "Orient, Lit." 1845, vi. 563), who had not previously known of the work. Segelmesa, like Fez, had an academy, whose rosh bet din at one time was Joseph ben Amram. The latter sent his learned pupils to one of the academies of Babylon in order to obtain legal decisions (see Harkavy, *l.c.* Nos. 68, 283, pp. 38 *et seq.*). It was also in Segelmesa that Solomon ben Nathan in the eleventh or twelfth century wrote his siddur in Arabic with a philosophical introduction (Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 896–899), the dependence of which work upon that of Saadia leads to the conclusion that the latter's influence had taken root in Africa at an early period (Zunz, *l.c.* pp. 27–54). Abraham ibn Ezra in an elegy on the trials of the Jews in Spain and in the northern part of Africa appears to have extolled Segelmesa with good reason as a city of wise men and of Talmudic learning (Neubauer, in "Isr. Letterbode," vi. 32; Jacob Egers, "Divan des Abraham ibn Ezra," p. 69, No. 169, Berlin, 1886). In the same poem Dra'a (Drah) appears as a seat of Jewish learning, together with Ceuta and Mequinez. From Dra'a a certain Mar Dunash addressed halakic questions to Isaac Alfasi (see Harkavy, *l.c.* No. 443, p. 235). Harkavy remarks (*l.c.* p. 392) that if this Dunash is identical with the Dunash living in Seville, who is mentioned by Joseph ibn Migash, he, as well as Alfasi, must have emigrated from northern Africa to the south of Spain. The Jews of Morocco were of course chiefly Rabbinites, although in Dra'a and Fez there were a few Karaites (Neubauer, "Where Are the Ten Tribes?" in "J. Q. R." i. 110).



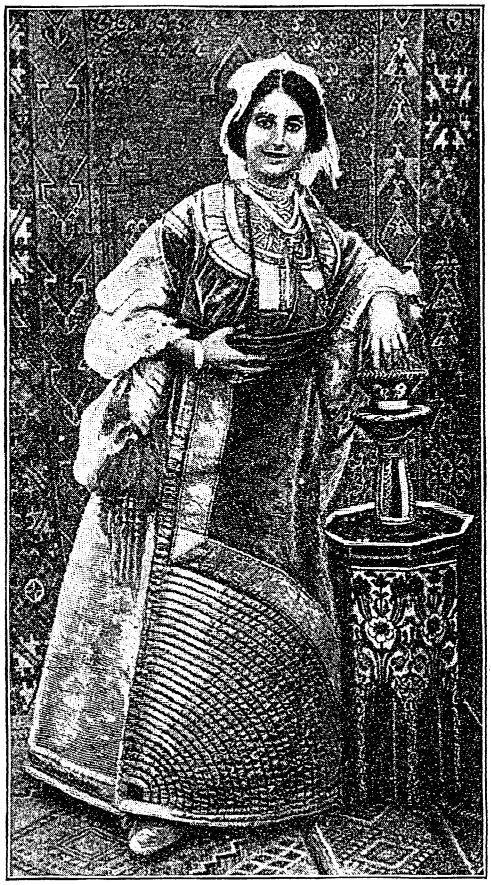
Moroccan Jewess.
(From a photograph.)

Under the Almohades.

The tolerance enjoyed by the tribute-paying Jews and Christians in the cities of Morocco came to an end under the intolerant dynasty of the stern Almohades, who came into power in 1146. Non-Mohammedans were to be tolerated no longer; Jews and Christians were compelled either to accept Islam or to leave the country. Here, as in other parts of northern Africa, many Jews who shrank from emigrating pretended to embrace Islam. Maimonides, who was staying in Fez with his father, is said to have written to the communities to comfort and encourage his brethren and fellow believers in this sore time of oppression (see Ibn Verga, "Shebeṭ Yehudah," ed. Wiener, p. 50). In the above-mentioned elegy of Abraham ibn Ezra, which appears to have been written at the commencement of the period of the Almohades, and which is found in a Yemen siddur among the ḳinot prescribed for the Ninth of Ab, the Moroccan cities Ceuta, Mequinez, Dra'a, Fez, and Segelmesa are especially emphasized as being exposed to great persecution. Joseph ha-Kohen ("'Emeḳ ha-Baka," ed. Wiener, p. 20) relates that no remnant of Israel was left from Tangier to Mehedia. Moreover, the later Almohades were no longer content with the repetition of a mere formula of belief in the unity of God and in the prophetic calling of Mohammed. Abu Yusuf Ya'ḳub al-Manṣur, the third Almohadic prince, suspecting the sincerity of the supposedly converted Jews, compelled them to wear distinguishing garments, with a very noticeable yellow cloth for a head-covering; from that time forward the clothing of the Jews formed an important subject in the legal regulations concerning them (see Badge). The reign of the Almohades on the whole (1146–1269) exercised a most disastrous and enduring influence on the position of the Moroccan Jews. Already branded externally, by their clothing, as unbelievers, they furthermore became the objects of universal scorn and of violent despotic caprice; and out of this condition they have not succeeded in raising themselves, even down to the present day.

Immigration of Spanish and Portuguese Jews.

After the Almohades the Merinids ruled in Morocco until they were overthrown by the Saadites in the fifteenth century. During the murderous scenes which were enacted in 1391 in Seville and were repeated in a large part of Spain and then across the sea in Majorca, the Spanish Jews were glad to seize the first opportunity to emigrate to the northern coast of Africa in order to escape the alternate evils, death or the acceptance of Christianity. A hundred years later, when the Jews were driven out of Spain (1492) and Portugal (1496), the sudden inroad upon Morocco and the whole of northern Africa was repeated on a very much larger scale. This unexpected flood of Spanish immigrants, which soon caused overcrowding in the larger cities of Morocco, aroused uneasiness both among the Mohammedans, who feared an increase in the price of necessities, and among the Jews already settled there, who had hitherto barely succeeded in gaining a livelihood by following handicrafts and in petty commerce. In addition to this unfriendly reception, the newcomers had to endure much from both great and small rulers eager for booty, as well as from the rough Moorish population (see Ibn Verga, *l.c.* pp. 185 *et seq.*). In Sale in 1442 many Jewesses were outraged; and in Alcazar-kebir the Jews were robbed of all they possessed. Many died of hunger or fell a prey to lions; some returned to Spain (*ib.* p. 226); most fled to Fez, where new trials awaited them. A terrible conflagration occurred in the Jewish quarter of that city, from which the historian of these events, Abraham ben Solomon of Torrutiel, then eleven years of age, escaped (see his "Sefer ha-Ḳabbalah" in Neubauer, "M. J. C." i. 112 *et seq.*). A famine broke out soon after the fire, during which more than 20,000 Jews died in and around Fez. Notwithstanding these untoward events, the secret Jews or Maranos who were left in Spain and Portugal and who were determined to remain true to their faith under all circumstances so little feared the dangers and trials of removing to a foreign country that Emanuel the Great, King of Portugal (1495–1521), felt obliged to forbid the Jews to emigrate, especially to territory under the dominion of the Moors, without express royal permission. This prohibition was contained in two ordinances dated respectively April 20 and April 24, 1499. Nevertheless with the aid of money and the exercise of shrewdness many Maranos succeeded in escaping to Africa. A certain Gonçalo of Loulé was heavily fined because he secretly transported Neo-Christians from Algarvé to Al-Araish on the coast of Morocco (Kayserling, "Gesch. der Juden in Portugal," pp. 143 *et seq.*, Berlin, 1865).



Jewess of Tangier, Morocco.
(From a photograph in the possession of Maurice Herrmann, New York.)

Relation of Portuguese Jews.

A new group of Maranos was brought to Morocco through the definite establishment of the Inquisition in Portugal under Pope Paul III. in 1536 (*ib.* p. 217). But in spite of all the suffering which Portugal had brought upon the Jews, there yet remained enough patriotism in the hearts of her rejected Jewish sons to cause them to help their former oppressors to preserve their old possessions on the Moroccan coast and to gain new ones. Through the strategy of a Jewish physician the Portuguese in 1508 succeeded in conquering the old seaport town of Saffee, which had a large number of Jewish inhabitants and which, chiefly through them, had become an important commercial center (*ib.* pp. 155 *et seq.*). Two years later the same city, upon the reconquest of which the Moors had been steadily intent, was besieged by a large Moorish army. Thereupon two Portuguese Jews, Isaac Bencemero and a certain Ismail, brought assistance to the besieged with two ships manned by coreligionists and equipped at their own cost (*ib.*; see Bencemero, Isaac). In Saffee the Jews were allowed to live as such by Emanuel's permission; also in Arzilla (after 1533), which had long been a Portuguese possession. In the quarrels which afterward took place between the Moors and the governors of Azamur (1526), Abraham ben Zamaira and Abraham Cazan, the most influential Jew in Azamur (1528), served the Portuguese as negotiators (*ib.* p. 161). The Jews Abraham and Samuel Cabeça of Morocco also had dealings with the Portuguese generals. When, in 1578, the young king Sebastian with almost his whole army met death, and Portugal saw the end of her glory, at Alcazar-kebir, the few nobles who remained were taken captive and sold to the Jews in Fez and Morocco. The Jews received the Portuguese knights, their former countrymen, into their houses very hospitably and let many of them go free on the promise that they would send back their ransom from Portugal (*ib.* p. 260). The numerous newly immigrated Jews, whose descendants have faithfully adhered to the, use of their Spanish dialect down to the present day, and who far surpassed the older Jewish inhabitants of Morocco in education and in intellectual acquirements, come into the foreground in the following period of the history of Judaism in Morocco. With their skill in European commerce, in arts and handicrafts, much of which had hitherto been unknown to the Moors, and with their wealth, they contributed largely to the great rise and development of the Moroccan kingdom under the sherifs of Tafilet, who began to rule in 1550 (see G. B. Ramusio in Leo Africanus, "The History and Description of Africa," ed. R. Brown, iii. 1004, London, 1896).

Messianic Hopes.

In the middle of the seventeenth century the Jews in Morocco were powerfully affected by the Messianic movement which Shabbethai Ẓebi had brought about especially in the Orient. In 1666 the coming of the Messiah was expected here as everywhere else in Israel. For several years the fast-day commemorating the destruction of Jerusalem was celebrated as a day of feasting. Prayer-houses were changed into drinking-saloons; all mourning was turned into joy. The warning written by Jacob Sasportas, who had been rabbi in Sale for some time, against the Messianic pretensions of Shabbethai Ẓebi was intercepted by Ibn Saadon, a zealous adherent of Shabbethai in Sale (Grätz, "Gesch." x. 231). The governor of Sale persecuted the Jews of that city because they too plainly showed their hopes in a speedy redemption (*ib.* p. 216), so that many were obliged to emigrate (Jacob Sasportas, "Ẓiẓat Nobel," p. 8b). But neither this expulsion nor the apostasy of Shabbethai Ẓebi to Islam appears to have influenced the Messianic beliefs of the Jews in Sale; for, as is related by a French traveler who left Paris July 31, 1670, to visit the "Caribbee Islands in America," but was taken captive and brought to Sale by two Moorish privateers, a Dutch ship from Amsterdam came to Sale while he was there, having on board Dutch Jews who proclaimed that the long-looked-for Messiah would be born in Holland at the beginning of the ensuing year (1672). "The Jews, hearing of this good news, made a second Feast of Tabernacles, and held a general rejoicing and treating for eight days together" (T. B. Teller, "The Travels of the Sieur Mouette in the Kingdom of Fez and Morocco," in "A New Collection of Voyages and Travels into Several Parts of the World," ii. 11).

Gate Leading to the Mellaḥ of Damnat, Morocco.
(From a photograph.)

This contemporary narrative gives the following account of the position of the Jews: "In every town they have a cheque [sheikh] or chief of their own, either chosen by them or appointed by the king; and this cheque raises the taxes which every house pays the king. They seldom go alone into the country, because the Arabs and barbarians generally cut the throats of Jews; and there is scarcely ever justice done to them in that country. If they talk much in their own defense before a governor—for every one pleads his own cause in Barbary without counselors or lawyers—he makes his guards buffet them. When they bury any of their number, the boys beat and throw stones at them, spit in their faces, and give them a thousand curses. Among themselves they exercise wonderful charity toward their poor, never suffering them to beg, their cheque taxing every family according to its ability to pay."

Under Muley Arshid and Muley Ismail.

This picture was drawn during the rule of Muley Arshid (Al-Rashid), with whom a new collateral line of the dynasty of the Alids, the Filali sherifs, had come to the throne. The Jews suffered much during the great conquests of Muley Arshid, who united the separate parts of Morocco into one single state, and wished to add to it all the northwestern lands of Africa. According to Chénier, when Arshid took the city of Morocco (1670), at the desire of the inhabitants he caused the Jewish councilor and governor of the ruling prince Abu Bekr, together with the latter and his whole family, to be publicly burned, in order to inspire terror among the Jews (Chénier, "Recherches Historiques sur les Maures et Histoire de l'Empire de Maroc," ii. 351, Paris, 1787). He also tore down the synagogues of the city, expelled many Jews from Sus, and on the whole treated them very tyrannically. His demands on the Jews in the way of taxes were enormous; he had them collected by Joshua ben Ḥamoshet, a rich Jew, to whom he was under obligations for various services and whom he appointed chief over the Jews. He even ordered the Jews to supply wine to the Christian slaves, as he found that it made them work better (Teller, *l.c.* p. 25). To-day the preparation, from figs, grapes, or dates, of the brandy used in the inns is still exclusively in the hands of the Jews.

Muley Arshid's successor was his brother Muley Ismail (1672), known as one of the most cruel of tyrants. On his accession he appointed his Jewish favorite and adviser Joseph Toledani, son of Daniel Toledani, Muley Arshid's councilor, to be his minister, in which capacity Joseph concluded a peace between Morocco and Holland. Under Ismail's rule the ruined synagogues were rebuilt. He oppressed the Jews with heavy taxes, and invented all kinds of devices for robbing his subjects. One day he threatened to compel them to accept Islam if their Messiah did not come within a definite time. The Jews understood the hint and satisfied his pious zeal with a very large sum of money (Chénier, "The Present State of the Empire of Morocco," i. 354, London, 1788; comp. Jost, "Gesch. der Israeliten," viii. 42 *et seq.*). The Jews, who served as tax-collectors on the whole coast, used to give Ismail yearly a golden riding-outfit as a "present," as an inducement to keep them in office, and a hen and a dozen chickens fashioned in gold as a tax for the whole Jewish community (Chénier, *l.c.* i. 326). Ismail had another way of securing money: for a certain sum he would sell to an aspirant for honors the position and wealth of one of his favorites. In one such transaction Maimaran, who was chief ruler over the Jews of the realm, feared a rival in Moses ibn 'Aṭṭar, and offered the sultan a certain sum for his head. Ismail then let Moses ibn 'Aṭṭar know how much had been offered for his head, whereupon Ibn 'Aṭṭar offered double the sum for the head of his opponent. The sultan took the money from both, called them fools, and reconciled them to each other, whereupon Ibn 'Aṭṭar married a daughter of Maimaran, and shared with him the Jewish rulership. The same Moses ibn 'Aṭṭar was Moorish plenipotentiary in the making of a compact with Great Britain in the year 1721.

Berber Jews from the Atlas Mountains.
(From a photograph.)

In the Eighteenth Century.

The condition of the Jews was unchanged under Muley Mohammed (1757–89), who distinguished himself by his attempt to introduce European culture into his kingdom. His eldest son, Muley Ali, governor of Fez, courageously opposed his father's suggestion to impose a tax upon that city in favor of his other brothers, which tax was to be paid by the Jewish community "since the Jews as unbelievers deserve no pity." He stated that the Jews of Fez were already so poor that they were unable to bear the present tax and that he was not willing to increase still further their excessive misery (Chénier, *l.c.* ii. 341). His minister was the Jew Elijah ha-Levi, who had at one time fallen into disgrace and had been given as a slave to a smuggler of Tunis, but had been restored to favor (Jost, *l.c.* viii. 45). The accession to the throne of Muley Yazid, on the death of Sidi Mohammed (1789), led to a terrible massacre of the Moroccan Jews, they having refused him their support in his fight with his brother for the succession. As a punishment the richer Jews of Tetuan, at his entry into the city, were tied to the tails of horses and dragged through the city. Here and in the city of Morocco many were killed in other ways or robbed, and Jewesses were outraged. The Spanish consul, Solomon Ḥazzan, was executed for alleged treachery, and the Jews of Tangier, Arzilla, and Alcazar were condemned to pay a large sum of money. Elijah, the minister of the former king, who had always opposed Yazid in the council, quickly embraced Islam to avoid having his head cut off; but he died soon after, tormented with bitter remorse for this change of religion. The cruelty of the persecutors reached its climax in Fez. In Rabat also, as in Mequinez (where a certain R. Mordecai died as a martyr to his faith), the Jews were ill-treated. In Mogador strife arose between the Jews and the city judge on the one hand, and the Moorish citizens on the other; the dispute was over the question of Jewish garb. Finally the Jews were ordered to pay 100,000 piasters and three shiploads of gunpowder; and most of them were arrested and beaten daily until the payment was made. Many fled beforehand to Gibraltar or other places; some died as martyrs; and some accepted Islam (Jost, *l.c.* viii. 44 *et seq.*). The sanguinary events of the year 1790 have been poetically described in two ḳinot for the Ninth of Ab, by Jacob ben Joseph al-Maliḥ and by David ben Aaron ibn Ḥusain (see D. Kaufmann in "Z. D. M. G." l. 238 *et seq.*; "R. E. J." xxxvii. 120 *et seq.*).

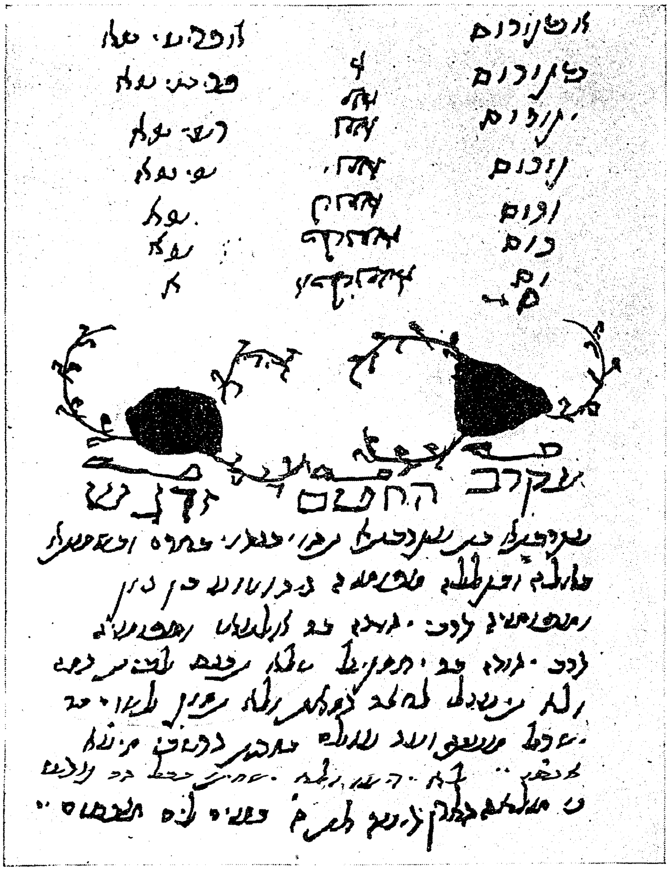
From the second half of this century various accounts of travels exist which give information concerning the external position of the Jews. Chénier, for example (*l.c.* i. 157), describes them as follows:

> "The Jews possess neither lands nor gardens, nor can they enjoy their fruits in tranquillity. They must wear only black, and are obliged when they pass near mosques, or through streets in which there are sanctuaries, to walk barefoot. The lowest among the Moors imagines he has a right to ill-treat a Jew, nor dares the latter defend himself, because the Koran, and the judge are always in favor of the Mohammedan. Notwithstanding this state of oppression, the Jews have many advantages over the Moors: they better understand the spirit of trade; they act as agents and brokers, and they profit by their own cunning and by the ignorance of the Moors. In their commercial bargains many of them buy up the commodities of the country to sell again. Some have European correspondents; others are mechanics, such as goldsmiths, tailors, gunsmiths, millers, and masons. More industrious and artful, and better informed than the Moors, the Jews are employed by the emperor

in receiving the customs, in coining money, and in all affairs and intercourse which the monarch has with the European merchants, as well as in all his negotiations with the various European governments."

Jewish Statesmen.

There were, indeed, quite a number of such Jewish officials, negotiators, treasurers, councilors, and administrators at the Moroccan court, whom the European is inclined to call "ministers," but whom in reality the ruler used merely as intermediaries in extorting money from the people, and dismissed as soon as their usefulness in this direction was at an end. They were especially Jews from Spain, whose wealth, education, and statesmanship paved their way to the court here, as formerly in Spain. One of the first of such ministers was Shumel al-Barensi, at the beginning of the sixteenth century in Fez, who opened the "state career" to a long succession of coreligionists ending in the nineteenth century with Masado ben Leaho, prime minister and representative councilor of the emperor in foreign affairs. It would be erroneous to suppose that these Jewish dignitaries of the state succeeded in raising the position and the influence of their fellow believers, or that they even attempted to do so. They were usually very glad if they themselves were able to remain in office to the end of their lives.



Cabalistic Charm Against Scorpions Used by Moroccan Jews.

(From Leared, "Morocco and the Moors.")

Moroccan Jews were employed also as ambassadors to foreign courts, *e.g.*, at the beginning of the seventeenth century Pacheco in the Netherlands; Shumel al-Farrashi at the same place in 1610; after 1675 Joseph Toledani, who, as stated above, concluded peace with Holland; his son Ḥayyim in England in 1750; a Jew in Denmark; in 1780 Jacob ben Abraham Benider, sent as minister from Morocco to King George III.; in 1794 a Jew named Sumbal and in 1828 Meïr Cohen Macnin, sent as Moroccan ambassadors to the English court (Picciotti, "Sketches of Anglo-Jewish History," p. 173, London, 1875; Meakin, "The Moors," London, 1902).

In the Nineteenth Century.

The nineteenth century, which brought emancipation to the Jews of most lands, left those of Morocco on the whole in their old state of sad monotony and stagnation. Every new war in which Morocco became involved in that century with any foreign country sacrificed the Jews of one district or another of the sultanate to the general depression and discontent which an unsuccessful war usually calls forth in political and commercial life. The war with France in 1844 brought new misery and ill treatment upon the Moroccan Jews, especially upon those of Mogador (Jost, "Neuere Gesch. der Israeliten," ii. 220, Berlin, 1846). When the war with Spain broke out (Sept. 22, 1859) the Moors had nothing more fitting to do than to plunder the houses of friendly Jewish families in Tetuan (H. Iliowizi, "Through Morocco to Minnesota," 1888, p. 49). Most of the Jews saved their lives only by flight; about 400 were killed. A like result followed the conflict with Spain in 1853 in consequence of the violent acts of the cliff-dwellers in Melilla. In the year 1863 Sir Moses Montefiore and the Board of Deputies of British Jews received a telegram from Morocco asking for help for nine or ten Jews who were imprisoned at Saffee on suspicion of having killed a Spaniard. Two others, although innocent, had already been executed at the instigation of the Spanish consul; one of them publicly in Tangier, the other at Saffee. Thereupon Sir Moses, supported by the English government, undertook a journey to Morocco to demand the liberation of the imprisoned Jews and, as he said in a letter to the sultan, to

Montefiore's Journey to Morocco.

move the latter "to give the most positive orders that the Jews and Christians, dwelling in all parts of Your Majesty's dominions, shall be perfectly protected, and that no person shall molest them in any manner whatsoever in anything which concerns their safety and tranquillity; and that they may be placed in the enjoyment of the same advantages as all other subjects of Your Majesty," etc. Montefiore was successful in both attempts. The prisoners were liberated; and on Feb. 15, 1864, the sultan published an edict granting equal rights of justice to the Jews ("Diaries of Sir Moses and Lady Montefiore," ii. 145 *et seq.*, London, 1890; see also the account of the journey by Dr. Thomas Hodgkin, the physician who accompanied Montefiore, entitled "Narrative of a Journey to Morocco," London, 1866). This edict of emancipation was confirmed by Mohammed's son and successor, Muley Ḥasan (1873), on his accession to the throne, and again on Sept. 18, 1880, after the conference in Madrid. Such edicts and promises of a similar nature made from time to time to the Alliance Israélite Universelle, even if they are seriously intended, are, however, absolutely useless, since they are not carried into effect by the local magistrates, and if they were they would cause the old, deeply rooted hatred of the fanatical population to burst forth into flames. Thus, for example, the sultan Sulaiman (1795–1822) decreed that the Jews of Fez might wear shoes; but so many Jews were killed in broad daylight in the streets of that city that they themselves asked the sultan to repeal the edict. According to a statistical report of the Alliance Israélite Universelle for the years 1864–80 no less than 307 Jews were murdered in the city and district of Morocco, which crimes, although brought to the attention of the magistracy upon every occasion, remained unpunished (see "Bulletin de l'Alliance Israélite Universelle," No. 2, p. 17, Paris, 1880). The ideas of law and justice which make such conditions possible are expressed in the Moroccan proverb, "One may kill as many as seven Jews without being punished."

Dangers of the Jewish Position.

A change of ruler in Morocco has always meant a time of great danger to the Jews. Even at the latest of such changes, on the death of Muley Ḥasan, who had been very considerate toward Jews, disturbances broke out in the interior which more than once greatly endangered the lives of the Jews. Many wholesale murders and plunderings of the Jews have followed upon their support of an unsuccessful pretender to the throne or upon some other lack of political foresight. An equally decisive influence in the passive character of the history of the Moroccan Jews is exerted by the conflagrations, famines, and epidemics which claim their numerous victims in every decade, and against which the inhabitants, waiting in fatalistic inactivity, have not yet thought of opposing organized preventive measures. In Fez alone 65,000 persons succumbed during the latest visitation of the plague, in 1799. On such occasions the Moslem condescends to ask the Jewish rabbi to pray in public; Jews and Moslems then go together through the streets, calling on God to spare their lives. Like common needs, so also common superstitions bind Jews and Moors together. In the mountains of Ashron is a Jewish saint to whose sanctuary on the summit of a steep peak infertile women of both races make pilgrimages, inflicting self-castigation the while (Chénier, *l.c.* i. 154). In other respects such a thing as peaceful, social intercourse does not seem to exist between Moslems and Jews in Morocco; and the hatred of the former toward the latter has been handed down through generations in many legal limitations, the principal ones of which Edmund de Amicis ("Morocco, Its People and Places," p. 248) enumerates thus:

> "They can not bear witness before a judge, and must prostrate themselves on the ground before any tribunal; they can not possess lands or houses outside their own quarter; they must not raise their hands against a Mussulman, even in self-defense, except in the case of being assaulted under their own roofs; they can only wear dark colors; they must carry their dead to the cemetery at a run; they must ask the Sultan's leave to marry; they must be within their own quarter at sunset; they must pay the Moorish guard who stands sentinel at the gates of the Mellah; and they must present rich gifts to the Sultan on the four great festivals of Islam, and on every occasion of birth or matrimony in the imperial family."

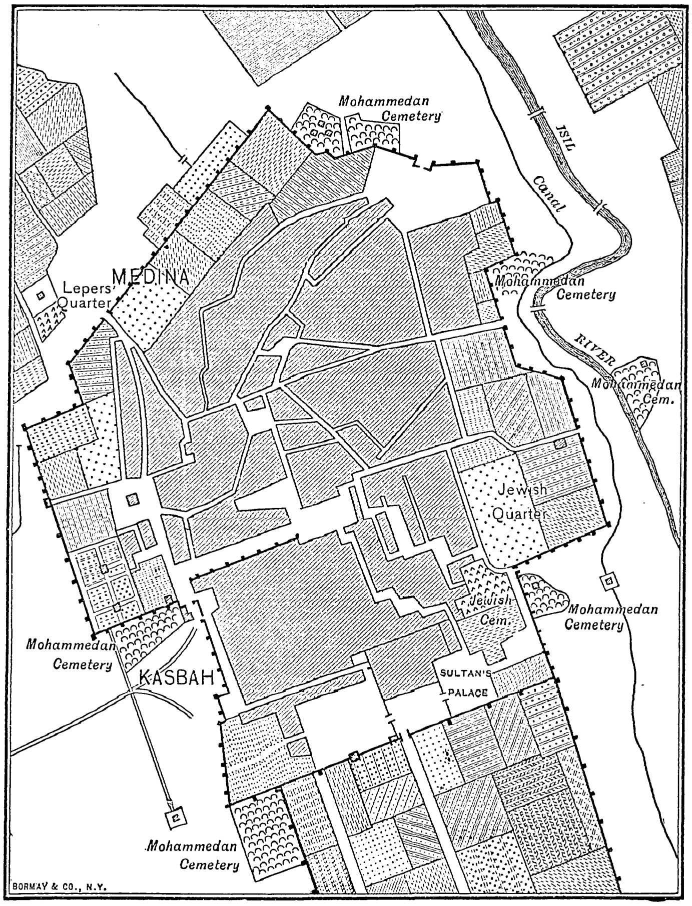
System of Naturalization and Protection.

A certain number of Jews are excepted from these numerous restrictions, namely: (1) those who have become naturalized by residence in European states and as citizens of those states stand under the protection of their embassies; (2) those who are agents of European officials and merchants and hence stand under the protection of the government to which the latter belong. It is interesting to note that it was the above-mentioned Moses ibn 'Aṭṭar, the favorite of Muley Ismail, who, in the contract concluded by him with England in 1721, laid the foundation for the system of protection which not only became the basis of all peaceful intercourse between the European states and Morocco, but meant for some Jews the only possibility of an existence secure against the unjust laws of the land, and for all the hope of an improvement in their position. France also acquired by contract the right of protection in 1767. In 1860 there were 103 Jews among 463 persons who were under the protection of some foreign government; the distribution according to countries being as follows ("Bulletin de l'Alliance Israélite Universelle," 1880, i. 32):

Country.	Number Protected.	Number of Jews.	Country.	Number Protected.	Number of Jews.
Austria-Hungary.	10	6	Italy............	85	36
Belgium.........	9	2	Netherlands......	2	0
Brazil..........	2	0	Portugal.........	59	0
Denmark.........	4	4	Spain............	120	0
France..........	100	25	United States....	42	26
Germany.........	30	4			
			Total........	463	103

The naturalization and protection of Jews by foreign states is a thorn in the flesh to the Moroccan government. It tries to prevent the former by putting great difficulties in the way of Jewish emigration, especially in the case of Jewish women, and it seeks to evade the latter by simply paying no attention to it; so that the Madrid Conference (in 1888) had to deal with the question of protected Jews. Moreover, the Moroccan government indemnifies itself for this restriction of its despotism in the case of Jews living on the coast by its treatment of Jews in the interior; and the number of the former could not be increased without the greatest danger to the latter.

There is yet another way for the Jews to escape restrictions, and that is by embracing Islam. Jewish criminals and those suspected of offenses of any sort have from ancient times endeavored to escape punishment in this way. Sometimes such converts have attained honorable positions. But even to-day marriages of Moors with them are avoided; and in other respects they are viewed with suspicion, and exist as a separate class. Moreover, the Moor allows no jesting in regard to the acceptance of Islam. If a Jew in jest exchanges his black shoes for yellow ones, he is regarded as converted. Disavowal is of no avail. For example, in 1820 a drunken Jew entered a mosque and was persuaded to acknowledge the Prophet. The next day, having become sober, he repented his deed and went to the governor to explain the matter to him. The sultan was informed of the Jew's recantation, and immediately came his answer per courier: "On the arrival of the courier behead the Jew and send his head to me." Half an hour after the messenger's arrival the head of the Jew was in a leathern pouch on its way to court (Meakin, in "J. Q. R." iv. 376; see also Fleischer in "Z. D. M. G." xviii. 329).



Plan of the Modern City of Morocco Showing Location of Jewish Quarter.

Intellectual Condition.

Concerning the intellectual life of the Moroccan Jews Samuel Romanelli, a merchant and an acute observer who traveled in Morocco in 1790, and who in 1792 published in Berlin an instructive description of his journey under the title "Massa' ba-'Arab" declares of the Jews that the lack of books and of information concerning the outer world has sunk their minds in a swamp of folly and childishness so that they regard everything which is new and unknown to them as a marvel. He remarks: "The sciences appear monstrous to them; and their ignorance takes pleasure in the statement that science has driven many into heretical confusion. In short, the manly strength of the wise men has been conquered, and they have become weak-minded women" (part ii., Appendix; Winter and Wünsche, "Die Jüdische Litteratur," iii. 463). It is true that the many seeds of intelligence and learning which were transplanted thither from Spain and Portugal after the end of the fourteenth century found no suitable soil. Although the incoming rabbis elevated the cities of Fez, Mequinez, and Rabat to centers of Jewish learning, they produced only what was mediocre, following the old, beaten path of Biblical and Talmudic exegesis—Halakah and homiletics.

Leading Families.

The most important of the immigrant families of scholars were the following: (1) The Azulais in Fez, especially the cabalistic writer Abraham Azulai (born here 1570), who in consequence of political disturbances emigrated to Palestine, and whose cabalistic work "Ḥesed le-Abraham" (Amsterdam, 1685) contains interesting information concerning the condition of the Moroccan Jewry; the rabbi of the same name, Abraham Azulai, known as a worker of miracles (born in Morocco; died 1745); and the learned Ḥayyim Joseph David Azulai, who resided in Morocco for some time in 1773 (comp. Jew. Encyc. ii. 375 *et seq.*). (2) The 'Aṭṭar family, which existed from the fourteenth to the eighteenth century; it had numerous representatives in Morocco, such as Abraham ben Jacob, cabalist and Talmudist at the beginning of the seventeenth century; Judah ben Jacob (1670–1740), rabbi in Fez, jointly with Abraham ibn Danan, Ḥayyim David Serero, Samuel ibn Zimrah, Meïr Ẓaba‘, Jacob ibn Ẓur, and others; Ḥayyim, rabbi of Sale toward the end of the seventeenth century, who, on account of a rebellion, went to Mequinez; Ḥayyim's equally learned son Moses, born in Mequinez, and probably identical with the above-mentioned statesman in the service of Muley Ismail; his son Ḥayyim ben Moses (born in Sale 1696; died in Jerusalem 1743), one of the most important exegetical writers and rabbis of Morocco; Shem-Ṭob ibn ‘Aṭṭar, Talmudist and philanthropist; died in Fez 1700; his son Moses, father-in-law of Ḥayyim ben Moses ibn ‘Aṭṭar; distinguished for his philanthropy as well as for his learning; founder of schools for poor children in Fez, which he supported out of his own means (see Jew. Encyc. ii. 290 *et seq.*). Finally should be mentioned Jacob ibn ‘Aṭṭar, secretary of Mohammed X., and who knew English, French, Spanish, and Italian (Meakin, *l.c.*). Related to the ‘Aṭṭars was (3) the De Avila family, which had likewise come to Morocco from Spain. Its most important representatives were: Moses ben Isaac (a rich philanthropist who at the end of the seventeenth century founded a yeshibah in Mequinez for Ḥayyim ibn ‘Aṭṭar, who had come from Sale; many rabbis studied at this institution); his son Samuel (b. 1687; succeeded his father as rabbi in Mequinez; later, in consequence of a Jewish expulsion, he went to Sale; he was the author of "Ozen Shemuel" [Amsterdam, 1725], a collection of sermons, and of funeral orations which contain biographical material concerning some of his Moroccan contemporaries); Eliezer ben Samuel (1714–61), rabbi in Rabat and author of rabbinical works; Samuel ben Solomon, Talmudist in the eighteenth century, author of novellæ.

Scholars and Rabbis.

Other scholars and rabbis who deserve mention are: Samuel Ẓarfati (d. 1713); Elijah Ẓarfati, ab bet din and rabbi of Fez, and author of decisions; Shem-Ṭob Gabbai, pupil of Ḥayyim ibn ‘Aṭṭar in Jerusalem; Jacob ibn Ẓur, author of "‘Et Sofer"; Samuel ibn al-Baz, rabbi in Fez, and author of "‘Oz we-Hadar," a commentary on ‘Abodah Zarah, etc. (see Azulai, "Shem ha-Gedolim," *passim*).

According to Iliowizi (*l.c.* p. 50), the Tetuan Jews claim the following authors as natives of their city: Isaac ben Hananiah Arobas, author of "Emet we-Emunah" (Venice, 1672), on the 613 commandments and prohibitions, on the thirteen articles of faith, on the liturgy, etc. (Benjacob, "Oẓar ha-Sefarim," p. 44—also translated into Italian; Ḥasdai Almosnino, rabbi of Tetuan, author of "Mishmeret ha-Ḳodesh" (Leghorn, 1825), supercommentary on Rashi's commentary on the Pentateuch, and of "Ḥesed El" (*ib.* 1826), notes on the Bible and Talmud (Benjacob, *l.c.* p. 379); Menahem Attia, author of "Ner ha-Ma‘arabi," sermons (in MS.); Jacob Ben-Malka, author of "Sefer ha-Ma‘arabi," responsa; Isaac Bengnalid, author of "Wa-Yomer Yiẓḥaḳ" (in MS.); Jacob Ḥalfon, who wrote "Neged Melakim" and "Yanuḳa debe Rab" (both in MS.); I. Marracho, cabalist, who wrote on the Zohar (in MS.). There lived besides in Tetuan the Coriat family, the chief representatives of which were Judah, known as the author of "Ma‘or wa-Shemesh" (Leghorn, 1838), and who lived at the beginning of the eighteenth century, and Abraham, the author of "Zeh Sefer Zekut Abot" (Leghorn, 1813), a collection of responsa (see Jew. Encyc. iv. 273), which contains interesting material concerning the religious life of the Jews of Morocco. Abraham was the author of a collection of sermons also.

Education.

At present the Bible and Talmud are studied in the ḥadarim and yeshibot; the Jews of Morocco, however, are more occupied with the Cabala; many earn their livings only by writing amulets. The Alliance Israélite Universelle has tried to pave the way for French civilization among the Jews by founding schools in Fez (1883), Mogador (1888), Tangier (1864), Tetuan (1862), and Casa Blanca (1897). The establishment of girls' schools in Tangier (1879), Tetuan (1868 and 1897), and Mogador, by the Alliance Israélite Universelle and the Anglo-Jewish Association, gives a clear insight into the most necessary educational needs of the Jewish population of Morocco. The Moroccan Jewesses are generally uneducated, being, as a rule, unable either to read or to write; they are described as being childish and fond of ornaments. On the other hand, they are distinguished for their unusual beauty, this being perhaps the only point upon which all travelers are agreed. The most beautiful Jewesses are said to live in Mequinez, so that a woman of extraordinary beauty is termed "Meḳnasiyyah" (E. Réclus, "Nouvelle Géographie Universelle," p. 697, Paris, 1886). E. de Amicis (*l.c.* p. 19) describes the beauty of the Moroccan Jewesses thus: "The beauty of the Jewesses of Morocco has a character of its own, unknown in other countries. It is an opulent and splendid beauty, with large black eyes, broad, low forehead, full red lips, and statuesque form." The Jewesses of Morocco have been suspected by Chénier and, after him, by other travelers of not being very conscientious in regard to womanly virtue. A more careful investigation, however, shows that this aspersion is unfounded (see Horowitz, *l.c.* p. 53).

The Jews of Morocco are pious and faithful to the Law, but are very superstitious. Their ritual is substantially Sephardic, although they have many peculiar customs, concerning which Benjamin II. has given a detailed account in his book of travels, "Mass'e Yisrael" (pp. 124 *et seq.*, Lyck, 1859; comp. Zunz, "Ritus," pp. 53 *et seq.*). The most remarkable of these is the custom, still prevalent, of employing professional mourning-women to sing the old lamentations (ḳinot) in case of death, just as their mourning ceremonies in general still bear the stamp of barbaric wildness and originality.

Statistics.

In the interior of the country several districts (*e.g.*, of the Berber tribes Beni Metir, Beni Megild, Beni Wagha'in, A'it Yusi, Zemmur Shilh, and Za'ir) are said to have no Jewish inhabitants. Likewise the sacred city of Zarhon is forbidden to Jews as to all non-Moslems (Meakin, in "J. Q. R." iv. 378 *et seq.*). A list of

Hebrew settlements and the rivers upon which they were situated was made at Mequinez in 1728, with the purpose of definitely establishing their Hebrew orthography for use in Jewish divorce documents. This was published from a manuscript by Neubauer in "R. E. J." v. 249, and was translated by M. Schwab (*ib.* xxxv. 306). It gives a large number of cities which were then inhabited by Jews. Excepting in Tangier, Arzilla, Casa Blanca, Mazagan, and Saffee, the Jews live exclusively in their Mellah, or Jews' quarter.

To determine the number of Jewish inhabitants in a land where no statistics are kept and where wide stretches of territory are wholly unexplored is extremely difficult, and any estimate must rest upon the hazardous calculations of travelers. The total population is variously reckoned from 5,000,000 to 10,000,000. Chénier, who after 1767 lived for several years as French consul in Morocco, estimated the Jewish population at one-twelfth of its former number, which, according to his calculation, amounted to about 30,000 families, or 150,000 souls; that is to say, he placed it at 12,500 persons (the great decrease he attributed to emigration and conversion to Islam, due at least in part to persecutions). Estimates of the present number of Jews vary from 30,000 to 350,000. Gräberg di Hemsö ("Il Specchio . . . dell' Imperio di Marocco," Genoa, 1834) gives 339,500; Alexander ("The Jews," p. 17), 340,000; Horowitz ("Marokko"), 250,000; Maltzan ("Drei Jahre im Nordwesten von Africa," iv. 17), 200,000; "The Statesman's Year Book" (1904), 150,000; "Bulletin de l'Alliance Israélite Universelle" (1880, p. 31) and the Geographical Society of Marseilles ("Bulletin," 1885) give 100,000; Rohlfs (in A. Petermann's "Mittheilungen," p. 212, Gotha, 1883) has 62,800; *idem*, according to the statement of Reclus ("Nouvelle Géographie Universelle," p. 698, Paris, 1886), gives about 30,000. This last number is probably nearest the truth.

J. M. Sc.

Moroccan Jews Apt Linguists.

The Moroccan Jews are divided into two distinct classes: (1) the descendants of the first settlers (of whose arrival nothing certain is known), who reside chiefly in the Atlas and hilly districts; and (2) the descendants of those who at a later period took refuge in Morocco when they fled from Spain and Portugal. These absorbed their coreligionists upon the coast, and have formed there a progressive colony, amenable to European influences and many of them speaking Spanish, while those of the interior, whose mother tongue is Berber, reject all modern ideas and scorn Western education, even when offered to them by the Alliance Israélite Universelle, which maintains excellent schools on the coast and in Fez. All of them speak a corrupt Arabic, since trade brings them in contact with both races, but they write it in Hebrew characters. The proportion who speak both Berber and Spanish is very small indeed; but, as elsewhere, the Jews of the ports have shown themselves apt linguists, and many have mastered both English and French; the facilities afforded by the schools have led to a great proficiency in the latter language.

Under these circumstances the Jews have risen to important positions in the business world, as also in the employment of the foreign legations and consulates. In Mogador the principal trade has fallen into their hands; and there is probably no business concern in the country with which they are not connected through some position or other. Two families have made themselves so useful to France and Great Britain respectively that the citizenship of those countries has been secured to them by treaty. Many others enjoy the protection from Moorish injustice which foreign service secures, either as official employees or as the brokers ("semsars") of mercantile houses, of whom the native authorities recognize two for each wholesale firm in each town. These positions are so much sought after, on account of the immunity from unjust exactions which they assure to their holders, that they are as frequently bought as filled for business purposes—a system fraught with gross abuses and anomalies.

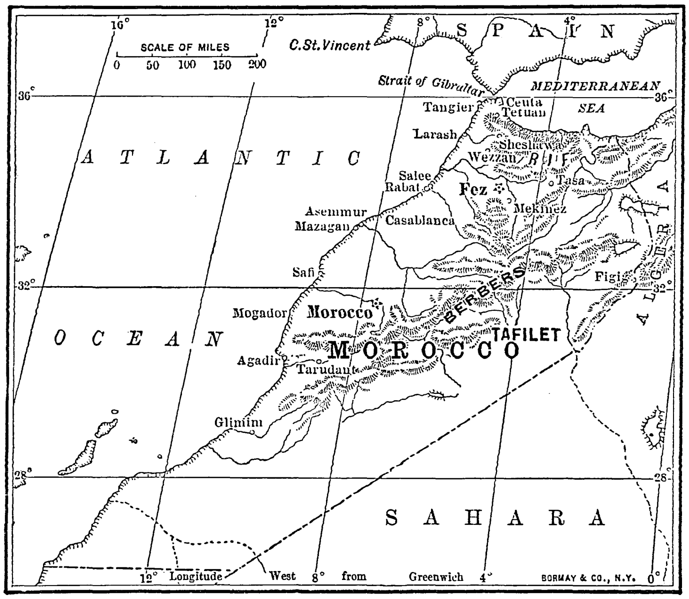
Indignities to Jews.

Nowhere in Morocco without such protection does the Jew receive common justice. From the cradle to the grave he is despised and vituperated, an apology being necessary even for an allusion to him in polite society. Every possible indignity is heaped upon him, and he enjoys neither social nor civil equality with his neighbors; they tolerate him only because he renders himself indispensable, and knows how, under the most unfavorable of circumstances, to amass wealth, which he is always ready to put out at exorbitant interest, and of which he may be ultimately despoiled by powerful officials. He is known as a "dhimmi" (plural, "dhimmiyyah"), or tributary, since he is only tolerated on that basis, and special contributions are wrung from him on every possible occasion.

The Mellah.

In most of the towns of Morocco the Jews are forced to congregate in the Mellah = "place of salt"—sometimes called in derision "Massus" = "saltless"—in which they are confined at night by gates beyond which many of the women never pass. Those Jews who do so must needs walk barefoot, even riding being forbidden to them within the walls. Certain streets approaching mosques and shrines are interdicted altogether. Outside the walls Jews may ride any animals but horses, which are considered far too noble for such despised individuals. In order that they may never be mistaken for their "betters," a dark-colored gabardine, with black skull-cap and slippers, is compulsory for the men. The women, however, may dress as they like, which in some cities means, in the streets, placing a sheet over their heads to hide their faces in the Moorish fashion, and in others following closely the style adopted by their neighbors when indoors.

In the Atlas district, if a village has not a Jewish quarter, there is generally a companion village at a stone's throw and devoted to the "tributaries," who are the pedlers, the craftsmen, and the muleteers, if not the farriers, of the district. The condition of the Jews of such villages is even worse than of those in the towns; for it lies between that of serfs and that of slaves. Some are under the binding protection of the local sheik; others pertain to private individuals, who have practically the right to sell them. They are not only compelled to do much without payment, but are imposed upon at every turn. They may not marry or remove their families till they have received permission from their so-called protectors; and without this protection they would not be safe for a day. Yet a few dollars has sometimes been considered sufficient blood-money for one of these unfortunates. On the other hand, outsiders are permitted to do them no injury, which would be considered as inflicted upon their protector ("kasi"), who makes the duty of avenging such injury a point of honor. Disputes of this nature between powerful men lead frequently to intertribal quarrels.



Map of Morocco Showing Chief Towns Where Jews Reside.

Jews as Serfs.

In traveling it is sufficient for the protégé, to insure his safety, to bear some article belonging to his master, written documents being scarce, with few to understand them. Yet there are districts in the Atlas where the Jews are forced to go armed, and to take part in the tribal fights. The treatment of individual serfs depends entirely upon the temper or pleasure of their masters, for their chances of redress for injury are practically nil; so that their position is in some respects even worse than that of the negro slaves, who, being Mohammedans, may benefit at law from certain rights denied to those who spurn their prophet. Centuries of this oppression have naturally had a very deleterious effect upon the characters of the victims, who are cringing, cowardly creatures, never daring to answer back, and seldom even standing erect—a people demanding the utmost pity.

Synagogues Are Neglected.

The synagogues are for the most part despicable, dirty, poor, and neglected, but not more so than the dwellings of the worshipers, which reek with impurities and are generally tumble-down and poverty-stricken, except in the case of more or less protected city families. Many of the synagogues are only private houses fitted up for purposes of worship, and the scrolls of the Law are the only articles of value on the premises. Light is supplied by the rudest of oil-lamps or a wick floating in a large tumbler of water. Frequently even the women's gallery is absent, and the house of prayer serves also as a store, a living-room, and even a place of business. The teaching of youths is conducted there or in the street in a primitive manner by meanly clad rabbis, whose learning is of the shallowest, but who eke out a living as shoḥeṭim and mohelim.

The morals of these people, save in the matter of drunkenness, are certainly above those of their Moslem neighbors, and in consequence they are remarkably free from the diseases which their neighbors bring upon themselves. This is to some extent accounted for by the almost equally prejudicial system of child marriages which prevails in the interior, where they usually take place at the ages of six to eight. The little bride comes home to the house of her husband's parents, and her changed condition is made known by the kerchief with which henceforth her hair must be hidden. At twelve she may become a mother; but her husband, usually her senior by a few years, may by this time have become tired of her, and, if he can afford it, may put her away and take another. Bigamy is not common; and the descendants of the families expelled from Spain permit it only when the first wife consents.

D. B. M.

MOROSINI, GIULIO (SAMUEL BEN NAḤMIAS B. DAVID B. ISAAC B. DAVID BA'AL TESHUBAH): Italian convert from Judaism to Christianity; born at Venice 1612; died in 1687. He was descended from a wealthy family which traced its ancestry back to Nehemiah. His great-grandfather left Spain on the expulsion of the Jews by Ferdinand the Catholic, and went successively to Albania and Salonica. His grandfather Isaac later settled in Venice; and the boy Samuel was a pupil of the rabbi of that city, Leon of Modena. In 1649 Samuel was present at a disputation held in Venice between two Jews (one of whom had become a Christian) and relating to the "seventy weeks" of Daniel. He then, together with his brother Joseph, decided to embrace Christianity, and was baptized Nov. 22 of the same year, his godfather being Angelo Morosini, whose name he took. His wife refused to change her faith.

Samuel went to Rome under Alexander VII., intending to become a Capuchin monk, but was dissuaded by the pope. Clement IX. appointed him Hebrew "scrittore" of the Vatican Library; and he taught that language in the Propaganda. He was the author of a work entitled "Dereḳ Emunah" (Rome, 1683). It has as frontispiece a portrait of the author at the age of seventy-two, and is preceded by a sketch of his life.

T. I. G.

MORPURGO: Austro-Italian family, originally from Marburg, Styria.

Carlo Morpurgo: Italian writer; born June 20, 1841, at Cairo, Egypt. He has published the following works: "Mosaico Poetico"; "Caio Marzio Coriolano"; "Scene Romane"; "Un Incontro Fatale."

BIBLIOGRAPHY: De Gubernatis, *Dizionario.*

Emilio Morpurgo: Italian economist and deputy; secretary-general in the Ministry of Agriculture; born at Padua in 1836; died there Feb. 15, 1885. Of his works the following deserve special mention: "Saggi Statistici ed Economici sul Veneto"; "La Statistica e le Scienze Sociale"; "Il Dazio sul Macinato"; "L'Istruzione Tecnica in Italia"; "La Legislazione Rurale"; "La Finanza"; "Marco Forscarini e la Repubblica Venezia nel Secolo XVIII."; "La Democrazia e la Scuola."

BIBLIOGRAPHY: *Il Vessillo Israelitico*, 1885, p. 85.

Giuseppe Lazzaro Morpurgo: Italian economist; born at Triest in 1762; died there Aug. 11, 1835. He founded in Triest the first Austrian life-insurance company, under the name "Assecurazioni Generali," now one of the greatest insurance companies of the world. He wrote Hebrew poetry of some merit, and took, as president of the Jewish community of Triest, an active part in Jewish affairs.

Rahel Morpurgo: Italian poetess; cousin of S. D. Luzzatto; born at Triest in 1790; died there Sept., 1871. At the age of twelve she was able to read in Hebrew Baḥya's "Ḥobot ha-Lebabot," and at fourteen the Talmud. At the age of eighteen she began to write poetry. A complete collection of her Hebrew poems and letters was edited by Vittorio Castiglione under the title "'Ugab Raḥel" (Cracow, 1890), on the occasion of the centenary of her birth.

S. V. C.

MORPURGO, SAMSON BEN JOSHUA MOSES: Italian rabbi, physician, and liturgist; born at Gradiska, Austria, in 1681; died at Ancona April 12, 1740. When a boy of seven he was taken by his father to Venice, where he received his elementary education. He then studied in the University of Padua, and graduated as doctor of medicine. In 1704 Morpurgo published in Venice his "'Eẓ ha-Da'at," a philosophical commentary on Jedaiah Bedersi's "Beḥinat ha-'Olam." At the end of this work was printed a satire upon the cabalists by Jacob Frances, on account of which Morpurgo was persecuted by the rabbis of Padua. At the same time he devoted himself to the study of the Talmud and rabbinics, and in 1709 he obtained a rabbi's diploma from Leon Briel, chief rabbi of Mantua (Preface to Morpurgo's "Shemesh Ẓedaḳah"). Soon afterward he was associated in the rabbinate of Ancona with Joseph Fiametta, whose son-in-law he subsequently became. After Fiametta's death (1721) Morpurgo was sole rabbi of Ancona; and he continued in office till his death.

Morpurgo enjoyed much consideration as a distinguished rabbi; his objections to certain rabbinical decrees are to be found in De Rossi, "Bibliotheca Antichristiana," p. 63; and an approbation of his, of 1716, was inserted by Lampronti in his "Paḥad Yiẓḥaḳ," i. 35b, *s.v.* אונס. He corresponded with Abraham Segre and Moses Ḥagiz concerning Moses Ḥayyim Luzzatto (see "Kerem Ḥemed," iii. 149). Morpurgo proved a skilful physician during an epidemic of influenza at Ancona in 1730; and in recognition of his services he was presented with a testimonial by Benedict IV., who was Archbishop of Ancona.

Morpurgo left a number of responsa on the four parts of the Shulḥan 'Aruk, which were published, with notes and preface, by his son Moses Ḥayyim Shabbethai (Venice, 1743). He was also the author of a prayer beginning "Anna ha-El ha-Gadol ha-Gibbor weha-Nora," to be recited by persons visiting the cemetery.

W. B. M. SEL.

MORRELL (MOREL), SIR. See SOLOMON B. SAMUEL OF FALAISE.

MORRISON, LEWIS: American actor; born at Jamaica, W. I., 1845. Morrison served for four years as officer in the United States army during the Civil war. After being mustered out, he went on the stage, appearing in 1865 with Lawrence Barrett at the Varieties Theater, New Orleans. Subsequently he played "Iago" to Salvini's "Othello," and supported Edwin Forrest, Edwin Booth, and Charlotte Cushman. Some years ago he formed a company and produced "Faust" with considerable success. In recent years his leading character has been *Mephistopheles*. His wife was Florence Roberts; his daughter **Rosabel** is an actress.

A. E. MS.

MORSE, GODFREY: American lawyer; brother of Leopold MORSE; born at Wachenheim, in Rhenish Bavaria, May 19, 1846; he removed to America in Sept., 1854, and went to Boston, where he attended the Brimmer Grammar School, the English High School, and the Public Latin School. He was graduated from Harvard College with the degree of B.A. in 1870, and from the Harvard Law School in 1872, receiving the degree of

LL.B. In 1890 Tufts College conferred on him the honorary degree of M.A. Morse taught English literature for a short time in the Evening High School, Boston; he was admitted to practise law before the Supreme Judicial Court of Massachusetts, July 22, 1873, the United States Circuit Court Oct. 2, 1874, and the Supreme Court of the United States Feb. 3, 1879.

From 1876 to 1878 Morse was a member of the School Committee of the city of Boston; from 1882 to 1883 he served as member of the common council; and he was elected president of that council on June 18, 1883. During the years 1882, 1883, and 1884 he was assistant counsel of the United States in the Court of Commissioners of Alabama Claims. In 1887 he was elected a member of the board of trustees of the Boston Dental College; and in Sept., 1896, was chosen delegate to the National Democratic Convention, which met at Indianapolis. From 1897 to 1898 Morse was chairman of the Massachusetts State Committee of the National Democratic (Gold) party, as well as chairman of the Boston City Committee of the same party; he is (1904) president of the Leopold Morse Home for Infirm Hebrews and Orphanage, vice-president of the Boston Home for Incurables, vice-president of the Elysium Club, president of the Purim Association, and a director and trustee of a large number of other charitable organizations. A.

MORSE, LEOPOLD: American congressman; merchant; born at Wachenheim, Rhenish Bavaria, Aug. 15, 1831; died in Boston, Mass., Dec. 15, 1892. He attended the school of his native town until he was thirteen years old. Five years later he emigrated to the United States (1849) and took up his residence at Tamworth, N. H., where he went to school for a short time. Soon afterward he removed to New Bedford, Mass., where he started in the retail clothing business in a store on Water street. In 1851 he moved to Boston and resided there until his death. In that city he laid the foundation of a very large and successful business.

Morse was five times elected to the House of Representatives of the United States Congress, winning his election each time as a Democrat in a district having a supposedly Republican majority. He was a delegate to the Democratic National Conventions held in 1872 and 1876.

Morse founded the Boston Home for Infirm Hebrews and Orphanage, situated in Mattapan, a suburb of Boston (the first Jewish institution of the kind in New England), the name of which was changed after his death, by an act of the legislature of Massachusetts, to the "Leopold Morse Home for Infirm Hebrews and Orphanage." A.

MORTALITY: Death-rate. The bulk of the Jews are known to live in the most overcrowded and unsanitary sections of cities in Europe and America, and would, a priori, be expected to show a higher rate of mortality than their non-Jewish neighbors. But, paradoxical as it may at first appear, wherever statistics are available it is conclusively shown that their death-rates are much lower than those of the races and peoples among whom they dwell, notwithstanding the fact that the latter live generally under better sanitary, hygienic, and social conditions. The mortality of infants depends in a great measure on the social and sanitary environment; yet most of the available data indicate a very low infant mortality among Jews as compared with the surrounding non-Jews. J. G. Hoffmann ("Betrachtungen über den Zustand der Juden im Preussischen Staat," in "Sammlung Kleiner Schriften Staatswissenschaftlichen Inhalts," pp. 330 *et seq.*, Berlin, 1843) was the first to point out that such is the case in Prussia. From his figures it is seen that while among Christians nearly one-fifth of all the legitimate children (including still-births) die before they reach their fifth year, the mortality of both legitimate and illegitimate children of Jewish extraction is less than one-sixth of the number of births. It must be remembered that the death-rate of illegitimate children is very high, and that these are included in the statistics of the Jews, but are excluded from those of the Christians. The number of illegitimates among Jews is, however, very small. The same author also points out that 174 out of every 1,000 Christian children in Prussia (1822–40) died before they reached the end of the first year of their existence, while the death-rate among the Jewish infants was only 129 in 1,000. In the same manner it is shown by F. J. Neumann ("Die Sterblichkeit Ehelicher und Unehelicher Kinder, Insbesondere Innerhalb der Jüdischen Bevölkerung in Baden," in "Jahrbücher für Gesetzgebung, Verwaltung, und Volkswirthschaft," 1877, i. 151–164) in Baden that the infant mortality was much lower among the Jews than among the rest of the population, as may be seen from the following table:

Mortality of Children.

INFANT MORTALITY IN BADEN.

Period of Life.	Protestants.		Catholics.		Jews.	
	1864 to 1870.	1871 to 1873.	1864 to 1870.	1871 to 1873.	1864 to 1870.	1871 to 1873.
First week	2.95	2.80	4.37	4.21	2.43	2.32
Second week	2.25	2.07	2.75	2.62	1.79	1.33
Third week	1.90	2.01	2.68	2.61	1.63	1.29
Fourth week	1.16	1.06	1.40	1.28	0.87	0.81
First month	8.26	7.93	11.21	10.71	6.73	5.73
First half-year	19.54	19.40	22.99	22.79	15.00	13.89
First year	25.69	25.25	28.83	28.46	16.88	17.61

From these figures it is evident that the infant mortality among the Jews was from 8 to 10 per cent lower than among the Christians, and that the chances of surviving the first, the so-called "critical," year were much greater among the Jewish children. The same author elicited also, from the mortality statistics of Baden for 1882, that the death-rate, including still-births, was 22 per cent among the Jews, as against 28 per cent among the Protestants, and 31 per cent among the Catholics.

The following was the infant mortality of Posen in 100 total deaths: During the first year of life: Catholics, 33.14; Protestants, 31.35; Jews, 23.12. During the first ten years of life: Catholics, 56.33; Protestants, 53; Jews, 45.12 ("Sterblichkeitsverhältnisse der Stadt Posen," in "Vierteljahreschrift für

Gerichtliche Medicin," 1869, pp. 269–280). In Magdeburg Bergman ("Die Sterblichkeitsverhältnisse der Stadt Magdeburg," 1858, p. 94) records that from 1827 to 1856 the mortality during the first year of life, excluding still-births, was as follows: Among the Jewish boys 14, among the Christian boys 24; among the Jewish girls 13, and among the Christian girls 21.

In Amsterdam the mortality of children under five years of age was 8.85 per cent among the Jews and 11.52 per cent among the Christian population. In Frankfort-on-the-Main, also, the mortality of Jewish children under the age of five was not one-half so high as that of the Christians. Glatter has shown that in Vienna the mortality of infants during the first five months of life was as follows: First month: Jews 8.3, Christians 16.1; second and third months: Jews 15.0, Christians 17.7; fourth and fifth months: Jews 45.6, Christians 52.8.

In Germany and England.

Wolff reports that among Christians 591 legitimate children out of 1,000 reach the fourteenth year of life, while among the Jews 802 reach this age ("Ueber die Kindersterblichkeit," Erfurt, 1874). Mayer shows that in Fürth during a period of ten years the Jews lost by death 10 in 100 children from one to five years old, while the Christians lost 14 ("Ueber die Lebenserwartung der Israelitischen Bevölkerung Gegenüber der Christlichen," in "Deutsche Zeitschrift für die Statistik," 1863, xxi. 2). In France Neufville found conditions to be the same. During the first five years of life 12.9 in 100 children of Jews die; of 100 children of Christians 24.1 die. In Italy Lombroso shows that in Verona the infant mortality of the Catholics is nearly double that of the Jews. In his work, "London Pauperism," Stallard says that the mortality among Jewish children from one to five years of age is only 10 per cent, while among the Christians it reaches 14 per cent. J. M. Rhodes, at the meeting of the British Medical Association in 1892, presented figures showing that the infant mortality in Manchester, England, reached 198 per 1,000; but in the district of Cheetham, which is largely inhabited by Jews, the death-rate was only 124—less than two-thirds of the average for all the districts of the city. The same has been shown to be true of London by various expert witnesses in their testimony before the Royal Alien Immigration Commission.

A. Ruppin reports that in Prussia in 1882 the proportion per 1,000 children (including still-births) that survived the first year of life was as shown in the following table:

	Boys.	Girls.	Deaths per 1,000 Births, Both Sexes.
Protestants.........	753	789	229
Catholics...........	758	793	223
Jews...............	814	843	171

In Bulgaria, according to H. Rimalovsky ("Zur Statistik der Bulgarischen Juden," in Nossig, "Jüdische Statistik," pp. 316–321, Berlin, 1903), the mortality of children per 1,000 population was as follows:

MORTALITY OF CHILDREN IN BULGARIA.

	Ages in Years.			
	Less than 1.	1 to 5.	5 to 10.	10 to 15.
Jews................	6.9	12.0	1.4	0.5
Greek Catholics......	6.2	12.0	2.2	1.1
Mohammedans......	4.6	16.0	17.0	1.2
Armenians..........	9.0	15.0	1.5	0.7

In Bulgaria and Poland.

This shows that during the first year of life the mortality of Jewish infants is higher than that of the non-Jewish children (excepting Armenian); but that in succeeding years the death-rate of the Jews is lower. In Poland also it has been found that during the first year of life the mortality of Jewish infants is higher than among the Catholic population of that country. Thus according to Leo Wengierow ("Die Juden im Königreich Polen," in Nossig, *l.c.* pp. 293–310) the death-rate per 1,000 births during the first year of life among the Catholics was 140, and among the Jews 143. This appeared rather strange to Wengierow, considering the fact that love for their offspring is very highly developed in Jewish parents as compared with the Catholic population of Poland. He, however, shows that the cause of this high mortality is to be sought in the distribution of deaths according to sex, which shows the following significant results: Against 100 girls of Catholic parentage 107 boys die; against 100 girls of Jewish parentage 132 boys die. More boys are born to Jews than to non-Jews (see BIRTHS); and the mortality of males is also larger among Jewish infants. Wengierow attributes this to the lack of antiseptic precautions during the ritual circumcision of Jewish boys. This is a rather far-fetched conclusion, not sustained by statistics of septic infection of boys due to circumcision.

The same conditions have been found to prevail in Galicia. Kitz presents figures showing that during 1882 the death-rates of children under five years of age were as follows: Roman Catholics, 51 per cent; Protestants, 53.6 per cent; and Jews, 56.6 per cent. For Bukowina, Schimmer's statistics are:

MORTALITY OF CHILDREN IN BUKOWINA.

Age.	Jews.		Non-Jews.	
	Boys.	Girls.	Boys.	Girls.
One year and under.	41.9	35.2	40.6	34.9
First to fifth year....	18.2	20.5	14.8	15.8
Fifth to tenth "	3.5	4.2	4.4	4.7

The cause assigned for the great mortality of Jewish children in Galicia and Bukowina is that the proportion of illegitimacy is very large among the Jews in these countries, and the death-rate of Jewish illegitimate children in general is much higher than that of legitimate children. But the apparent frequency of illegitimacy among these Jews is due to the practise of omitting civil registration of marriages among them in the small towns, as has been pointed out by Kitz and Schimmer (see BIRTHS).

In Russia. In Russia the infant mortality of the Jews in the Pale of Settlement is much lower than that of the Christians. According to the figures of the census of 1897 (see "Voskhod," March, 1904, pp. 116–117) the age distribution per 100 total deaths was as follows:

Age.	Christians.	Jews.	Age.	Christians.	Jews.
Under 1 year.....	40.91	25.68	30 to 40 years....	3.63	4.93
1 to 5 years.....	21.10	22.06	40 to 50 "	3.91	4.93
5 to 10 "	4.88	4.81	50 to 60 "	4.75	6.78
10 to 15 "	1.92	2.64	60 to 70 "	5.94	7.99
15 to 20 "	1.82	3.00	70 to 80 "	5.00	7.34
20 to 30 "	3.85	6.01	80 to 90 "	2.11	3.84

This table shows that during the first year of life only 25.68 per cent of Jews die, as against 40.91 per cent of Christians. From 1 to 10 years of age the death-rate is about the same for Jews and Christians. After the age of ten the percentage of deaths is perceptibly larger among the Jews.

The low mortality of Jewish infants in the Pale of Settlement is also seen from the following table, which gives the number of deaths during the first year of life per 100 births:

DEATHS OF INFANTS IN PALE OF SETTLEMENT.

Months.	Deaths per 100 Births.	
	Christians.	Jews.
Under 1 month........................	7.23	2.74
1 to 3 months........................	5.73	2.28
3 to 6 "	5.60	2.63
6 to 12 "	7.40	5.56
To 1 year..............................	25.96	13.21

All these observations are confirmed by vital statistics of the Jews in the United States. From the reports of the census of 1890 it is seen that the mortality among children of the Russian and Polish Jews in America is lower than that of any other race or nationality, as may be seen from the following table:

MORTALITY OF CHILDREN UNDER FIFTEEN YEARS OF AGE IN THE UNITED STATES.

Birthplace of Mother.	Mortality per 1,000.	Birthplace of Mother.	Mortality per 1,000.
Bohemia...............	82.57	Hungary................	47.21
Italy....................	76.41	France..................	47.01
United States...........	54.01	Germany................	46.97
Ireland.................	50.87	Russia and Poland (mostly Jews)..............	28.67
England and Wales....	50.53		

The fact is well established by other statistical evidence that the districts mostly inhabited by the immigrant Jews in New York, Philadelphia, Boston, Chicago, etc., show the lowest mortality of infants and children, and this in spite of the fact that these districts are the most overcrowded and insanitary in those cities. This low mortality of Jewish children is best illustrated by the life-tables prepared by John S. Billings in his "Report on the Vital Statistics of the Jews in the United States" (Washington, 1890; reprinted in JEW. ENCYC. v. 307). From these tables it is found that, according to the birth-rate statistics of males and females among the Jews in Massachusetts, in 100,000 infants 50,684 would be males and 49,316 females. At the end of the fifth year 41,731 male children would be alive, and by the end of about seventy-one years one-half of them would have died. Comparing these with the general population of Massachusetts, where 51,253 children out of every 100,000 are males, only 36,727 would reach the end of their fifth year, and one-half of these would have died at the end of about the forty-seventh year.

The general rate of mortality of the Jews has also been observed in various countries to be lower than that of their Gentile neighbors.

The following are earlier data with regard to the comparative mortality of Jews and others, mainly derived from Legoyt and Lagneau:

DEATH-RATE PER THOUSAND.

Country.	Epoch.	Jewish.	General.	Reference.
Algeria	1857–72	27.7	39.3	Lagneau, p. 832.
"	1873–76	24.3	29.5	*Ib.*
Austria	1851–57	21.0	23.5	Schimmer, "Statistik," p. 129.
"	1861–70	21.4	32.5	*Ib.*
Baden	1857–63	18.0	25.3	"Dict. des Sciences Medicales," *s.v.*
France.....	1855–59	17.6	23.9	Legoyt, "Immunités," p. 116.
Prussia	1831–49	22.9	31.0	Hoffmann, *l.c.*
"	1849–61	23.4	36.6	Legoyt, *l.c.* p. 109.
Russia	1852–59	28.0	33.8	*Ib.* p. 97.
"	1867–70	28.5	34.4	*Ib.* p. 94.
Saxony.....	1850	24.4	31.0	"Revue Scientifique," 1881, p. 622.
Tuscany ...	1861	23.4	29.5	Legoyt, *l.c.* p. 116.

General Death-Rate. The vital statistics of Prussia, which are fairly complete and satisfactory, show the lower death-rate among Jews in a very striking manner. In that country, according to figures in Mullhall's "Dictionary of Statistics," the annual death-rate has been found to be per 1,000 population as follows:

Years.	Christians.		Jews.	
	Males.	Females.	Males.	Females.
1822–40.............	28.7	27.0	22.1	19.1
1841–66.............	30.2	28.2	19.8	17.9

and from Arthur Ruppin's recent compilation the mortality has been found to be as follows:

Years.	Among Jews.	Among Christians.
1878–82...............	17.53	25.23
1888–92...............	15.71	23.26
1893–97...............	14.73	21.84

From these figures it is clear that while the general mortality rates increased during the period 1822–66, that of the Jews decreased; the decrease continuing to such an extent that in 1897 the rate was only 14.73 per 1,000 population. Among the Christian population a decrease manifested itself between 1878 and 1897, but it was not so large as that among the Jews. The mortality of 14.73 per 1,000 of the Jews in Prussia is considered by Ruppin "so low that it has not been reached in any country in the world, and is the ideal of hygienic and sanitary achievement to which all may strive." It is remarkable that this low mortality mostly occurs among children under fifteen years of age, the number of deaths among whom is much smaller with the Jews than with the Christians. The mortality of persons over fifteen years of age is only a little less among the Jews than among the Christians; and during the five years 1893 to 1897 it was even 0.4 per 1,000 larger, as may be seen from the following table:

Years.	Among Jews.		Among Christians.	
	Under 15 Years.	15 Years and Over.	Under 15 Years.	15 Years and Over.
1878–82	7.40	10.13	13.41	11.82
1888–92	5.06	10.65	12.17	11.09
1893–97	3.96	10.77	11.47	10.37

Hungary also possesses good records of vital statistics, and there it is found that the mortality of the Jews is much below that of their non-Jewish neighbors. Lombroso's figures show that the rate of mortality of Christians under fifty years of age in that country is 14 in 1,000, while that of the Jews is only 10. Körösi shows the same for Budapest for all deaths. For 1885 to 1893 his figures are:

Roman Catholics	722 deaths per 10,000.
Lutherans	788 " " "
Calvinists	559 " " "
Other Protestants	625 " " "
Jews	376 " " "

From 1886 to 1890 the mortality per 1,000 of the population in Budapest was, according to Körösi, as follows:

Age.	Catholics.	Lutherans.	Calvinists.	Jews.
Under 5 years	160	145	135	76
5 to 10 years	17	15	16	9
10 to 30 "	11	10	10	6
30 to 50 "	21	22	18	11

In Austrian Galicia the available data tend to confirm the low general mortality of the Jews, notwithstanding the poor economic and social conditions under which they find themselves and in spite of the high infant mortality. V. Kitz ("Die Bewegung der Bevölkerung in Galizien i. J. 1882 mit Rücksicht auf Konfessionen," in "Statistische Monatsschrift," 1883, p. 550) shows the mortality per 1,000 population to be as follows: Roman Catholics, 33.2; Greek Catholics, 42.0; Protestants, 29.1; Jews, 29.4.

In Algiers Legoyt ("De la Vitalité de la Race Juive," in "Jour. de la Société Statistique de Paris," 1865, vi.) records that there occurred one death among 22.5 Europeans, and only one death among 35.8 Jews. According to Boudin ("Géographie Médicale," ii. 216) the mortality in Algiers in 1844 and 1845 per 1,000 population was 57.7 among the Europeans and only 33.9 among the Jews.

In Bulgaria.

In Bulgaria, where the general mortality during the period 1893–99 was 26 per 1,000 population, the number of deaths according to religious belief was as follows: Jews, 22; Greek Catholics, 24; Mohammedans, 27; Armenians, 44. In general the mortality among the Jews was 22 and among others 28 per 1,000 population. A point worthy of notice in connection with the mortality in Bulgaria is that the Armenians, who, like the Jews, live mostly in cities, show the highest mortality rate, while the Jews, in spite of being townfolk, show the lowest (H. Rimalovsky, "Die Jüdische Bevölkerung in Bulgarien," in Nossig, "Jüdische Statistik," p. 316).

The mortality of the Jews in Warsaw, Poland, is also less than that of the Christian population, notwithstanding the fact that the infant mortality is very great among the Jews. According to Wengierow (*l.c.*), it appears that in 1889 in 1,000 population the mortality was: 28.1 Christians and only 17.9 Jews. The same is the case with the Jewish population of Russia. According to the census of 1897, the mortality in the Pale of Settlement was 26.3 per 1,000 among the Christians, while among the Jews it was only 16.3 ("Voskhod," March, 1904, p. 127).

In the United States.

From various statistics of the Jews in the United States of America the same phenomena are to be observed. In spite of the fact that the immigrant Jews live there in the congested tenement districts of cities, their rate of mortality is much below that of the other races and peoples in the same locality. From Billings' statistics of 60,330 Jews living in the United States on Dec. 31, 1889, it has been elicited that the average annual mortality was only 7.11 per 1,000 population, which is "little more than half the annual death-rate among other persons of the same social class and condition of living in this country" ("Vital Statistics of the Jews in the United States," p. 10). In the "Report of Vital Statistics of New York City for 1890" it is shown that during the six years ending May 31, 1890, the mortality was as follows:

Birthplace of Mother.	Mortality per 1,000 Population.	Birthplace of Mother.	Mortality per 1,000 Population.
Bohemia	43.57	Germany	24.27
Italy	35.29	France	23.28
Ireland	32.51	Hungary	22.43
United States	32.43	Russia and Poland (mostly Jews)	14.85
England and Wales.	27.67		

The Russian and Polish Jews are thus shown to have the lowest mortality. Moreover, their low death-rate, as the census report points out, does not fully appear in these figures, because a considerable number of those whose mothers were born in Hungary and Germany are Jews with a low death-rate, and if it were possible to eliminate them, the death-rates of the Germans and Hungarians would stand at much higher figures. Then, again, among those registered as Russians and Poles were a certain number of Christians. If these could be separated into a special group, the mortality of the Jews would be shown to be much lower. To verify these figures Fishberg has analyzed the mortality figures for the Seventh, Tenth, Eleventh, and Thirteenth wards of New York city, which are inhabited by over 80 per cent of Jews. He found that during 1899 the death-rate per 1,000 population was as follows: in the Seventh Ward, 18.16; in the Tenth, 14.23; in the Eleventh, 16.78; and in the Thirteenth, 14.52. The Seventh Ward, which has a very large population of non-Jews (probably 40 per cent), shows the highest mortality; and the Tenth, which has the smallest proportion of non-Jews, only 14.23. This is confirmed by vital statistics in Chicago, which "has a large population of Jews, among whom the death-rate is low. A curious illustration of this is found in a comparison of the vital statistics of two of the river wards. In the old Seventh Ward the death-rate is only 11.99 per 1,000, while in the neighboring ward it is 45.9 per cent higher. The sanitary conditions of both wards are as bad as possible; but in the ward with a low death-rate the Jews live" (Robert Hunter, "Tenement Conditions in Chicago," 1891, p. 158). Similar statistics are available for Boston and other cities in the United States.

Causes of Low Mortality.

The causes of the low mortality of the Jews are various. In some countries it is to be seen that it mainly depends on the low mortality of children under ten years of age. In such cases it may be attributed to the great care taken by Jewish mothers in rearing their offspring; to the fact that Jewesses in eastern Europe only rarely work in factories or even at home (excepting at household duties), and so have more time to devote to their children; and also to the fact that Jewesses, excepting in cases of illness, almost invariably nurse their children at the breast. But that the cause of the low general mortality of the Jews can not invariably be attributed to the low mortality during infancy and childhood may be seen from the statistics for Poland, Galicia, Bukowina, and Prussia, where the mortality among Jewish children is equal or even larger than that among the Christians in these countries, and yet the general average mortality at all ages is much lower with the Jews than with non-Jews. It must be mentioned that illegitimate children of Jewish extraction have a much higher mortality than non-Jewish children of this class, which goes to show that the low mortality in other cases is wholly due to the greater care taken by Jewish mothers in rearing their children.

In eastern Europe the Jews do not engage in dangerous trades, such as mining, etc.; thus a large number are not exposed to death. A larger proportion of Jews are merchants, small traders, etc., and these are known to be a long-lived class. A careful scrutiny of the diseases to which the Jews are more or less liable (see MORBIDITY) shows that the Jews are less liable to succumb to some of the most frequent diseases which contribute largely to swell the rate of mortality among others, such as consumption, pneumonia, etc. All these can be referred to social causes, among which the rarity of alcoholism and syphilis is of most importance. The complete rest enjoyed by the Orthodox Jew on the Sabbath may also be a notable factor in warding off disease and death in the case of many.

That the low mortality of the Jews is to be ascribed mainly to social causes is confirmed by the fact that the death-rates of the Jews are smallest in countries where they live isolated from their non-Jewish neighbors, pursuing their mode of life according to their traditions and belief. On the other hand, wherever the Jews commingle and assimilate with their Gentile neighbors, adopting their mode of life, their death-rate increases. This is best shown in the vital statistics of American Jews, the death-rate of the native-born being 9.16 per cent as against only 7.61 in the foreign-born. This may be ascribed to the fact that alcoholism, syphilis, etc., are more frequent among the former, that they also engage more often in dangerous trades, and that their wives more frequently work in factories, etc., after marriage.

MORTARA CASE: A case of forcible abduction in which a child named Edgar Mortara was violently removed from the custody of his parents by papal guards in Bologna on June 23, 1858. The details of the case, which created a sensation in both Europe and America, are not fully known because the matter was never brought before an impartial court of justice. The following, however, seems to be the most probable version:

Anna Morisi, a servant-girl at one time in the employ of the Mortara family, confessed to a priest that about four years before the abduction, when the child Edgar was very ill, she had secretly baptized him in order to save his soul if he should die. For some time she had concealed the fact, but her conscience gave her no rest, and so she was driven to make this confession. The priest to whom she confessed reported the matter to Rome, and the Congregation of the Inquisition gave orders that the child be taken forcibly from his parents and that he be educated as a Christian. While the Church deprecated forcible baptism, it held that the sacrosanct character of the sacrament, if duly performed, made the recipient ipso facto a member of the Christian communion. A force of papal soldiers commanded by a Swiss officer went to the house of the Mortara family June 23, 1858, at ten o'clock at night, and showed an order for the arrest of Edgar Mortara. The parents thought that there was a mistake, and said that Edgar was but a child of six years. They were told in reply that the order presented was one of the Holy Office, and must be complied with, so the child was taken from them. Their attempt to obtain his release on the ground that Anna Morisi had acted out of spite—a statement which was supported by the fact that the girl had kept the matter secret for four years—quite apart from the assertion of the parents that the child had never been seriously ill, was of no avail. In those days, when the papal government opposed all reasonable demands for reform, the sentiment of Europe was rather hostile to it, and this outrage provoked universal indignation.

The Jewish congregations of Sardinia invoked the aid of their government, a great number of German rabbis headed by Ludwig Philippson sent a petition to the pope, English Jews held a mass-meeting, and Sir Moses Montefiore went to Rome to petition the pope for the release of the child. Catholic sovereigns, such as Francis Joseph of Austria and Napoleon III. of France, wrote personal letters to the pope, advising him not to defy the public opinion of Europe. William, at that time Prince Regent of Prussia and later Emperor of Germany, replied to a Jewish society that he was much in sympathy with its demand, but that he could not intercede in the case because as a Protestant his intercession would be misinterpreted. All was without avail; Montefiore was not received in audience; and the petition of the German rabbis was not answered.

Vain Attempts at Recovery.

The pope when he received the Roman congregation in annual audience on Feb. 2, 1859, upbraided its members for having made a European affair of the case. He threatened them with reprisals, and is said to have declared that he "snapped his fingers at the whole world."

In 1859, after Bologna had been annexed to the kingdom of Sardinia, the parents made another effort to obtain possession of their child, again without avail, for he had been taken to Rome; and when in 1870 Rome became the capital of Italy another effort was made, but again without result. Edgar Mortara, then eighteen years old, had declared his intention of remaining a Catholic. He was educated in a convent, and often was paraded in the ghetto for the purpose of annoying the Jews. Later young Mortara entered the Augustine order, adopting the convent name Pius; he has preached before the Vatican Council, has often been sent as a missionary to various German cities, as Munich, Mayence, and Breslau, and has preached also before the Italian congregations in the Catholic churches of New York.

His father, who died in 1871, became the target for clerical rancor. He was accused of having thrown a servant-girl out of the window, and was compelled to spend a long time in prison before he was finally discharged ("Vessillo Israelitico," 1872, p. 213). Edgar's mother died in Florence Oct. 17, 1895, and her son went from Switzerland to attend the funeral. He caused to be published in a Catholic paper a request to his friends to pray for his dead mother and for his afflicted family. After he had taken orders he was permitted to freely come in contact with the members of his family, and was seen recently with them in Milan in a kasher restaurant ("Vessillo Israelitico," 1904, p. 294).

The Mortara case undoubtedly contributed in some measure to the downfall of the Papal States, and it is reported on good authority that Pius IX., whose name the young convert adopted, said to him in 1867, "I have bought thee, my son, for the Church at a very high price" ("Oh, se tu sapessi, quanto mi costi"; "Vessillo Israelitico," 1896, p. 308).

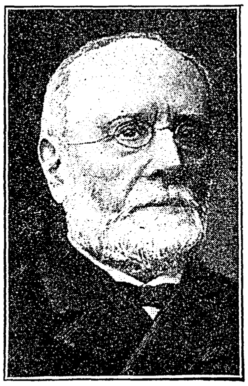
This case certainly gave the strongest impetus to the formation of the Alliance Israélite Universelle. It is worthy of notice that there was some discord in the almost universal indignation which this outrage had produced among the Jews. Ignatz Deutsch, court banker at Vienna, wrote a circular to Orthodox rabbis requesting them not to join the movement of protest in the Mortara case, and also to the Austrian minister of education, Count von Thun, declaring that this movement was supported by the "Neologen," who used it for political purposes as henchmen of the demagogues (Israel Levi Kohn, "Zur Gesch. der Jüdischen Tartüffe," pp. 42 *et seq.*, Leipsic, 1864).

The case was made the subject of a drama by H. M. Moos, *Mortara, or the Pope and His Inquisitors*, Cincinnati, 1860.

D.

MORTARA, EDGAR. See MORTARA CASE.

MORTARA, MARCO: Italian rabbi and scholar; born at Viadana May 7, 1815; died at Mantua Feb. 2, 1894. Having graduated from the rabbinical college of Padua in 1836, he was called as rabbi to Mantua in 1842, and occupied this position until his death. He was very conservative in his religious views and opposed the abolition of the second day of the holy days which had been planned by some of the liberal members of his congregation (Eleazar Horowitz, Responsa, No. 131, Vienna, 1870). As a true disciple of S. D. Luzzatto he was a strong opponent of Cabala, which involved him in a heated controversy with Elijah BENAMOZEGH. In his will he wrote his epitaph, containing merely biographical data, and expressed the wish that no sermon should be preached at his funeral and no eulogy published in the papers. Besides many sermons and articles, published in German, Hebrew, French, and Italian periodicals, he wrote



Marco Mortara.

text-books for religious instruction, essays on religious questions of the day, apologetic essays, and bibliographical works, among which is of special importance a list of all names pertaining to Jewish history in Italy under the title "Mazkeret Ḥakme Italiya: Indice Alfabetico dei Rabbini e Scrittori Israeliti di Cose Giudaiche in Italia," Padua, 1887.

Bibliography: *Vessillo Israelitico*, 1894, pp. 59-62; *Corriere Israelitico*, xxii. 217, 224-226; a list of Mortara's works, *Elenco degli Scritti del R. Marco Mortara*, is given in *Vessillo Israelitico*, 1886, pp. 188-190, and in Lippe's *Bibliographisches Lexicon*, s.v.

S. D.

MORTEIRA (MORTERA), SAUL LEVI: Dutch rabbi of Portuguese descent; born about 1596 at Venice; died at Amsterdam Feb. 10, 1660. In a Spanish poem Daniel Levi de Barrios speaks of him as being a native of Germany ("de Alemania natural"). When in 1616 Morteira escorted the body of the physician Elijah Montalto from France to Amsterdam, the Sephardic congregation Bet Ya'aḳob elected him ḥakam in succession to Moses ben Aroyo (see Jew. Encyc. i. 537b, *s.v.* Amsterdam).

Morteira was the founder of the congregational school Keter Torah, in the highest class of which he taught Talmud and Jewish philosophy. He had also to preach three times a month, and received an annual remuneration of 600 guilders and 100 baskets of turf. Among his most distinguished pupils were Baruch Spinoza and Moses Zacuto. Morteira and Isaac Aboab (Manasseh ben Israel was at that time in England) were the members of the bet din which pronounced the decree of excommunication ("ḥerem") against Spinoza (July 27, 1656).

Some of Morteira's pupils published "Gibe'at Sha'ul" (Amsterdam, 1645), a collection of fifty sermons on the Pentateuch, selected from 500 "derashot" written by Morteira. Morteira wrote in Spanish "Tractado de la Verdad de la Ley" (translated into Hebrew by Isaac Gomez de Gosa under the title "Torat Mosheh," in 66 chapters), apologetics of Judaism and attacks against Christianity. This work (excerpts from which are given in Basnage, "Histoire de la Religion des Juifs") and other writings of Morteira, on immortality, revelation, etc., are still in manuscript.

D. S. Man.

MORTGAGE or **HYPOTHEC:** Written document for securing a debt upon property, possession of which is not necessarily delivered to the creditor. The Greek word *ὑποθήκη* (hypothec) passed into the language of the Mishnah in the form איפותיקי, which afterward, with the omission of the first י, was corrupted, by men unacquainted with Greek, into "apoteḳe," a combination of Hebrew and Aramaic meaning "on this do stand," that is, "this is your security."

The hypothec differs from the deed of pledge (see Pledge), which accompanies the delivery to the creditor of possession of the pledged land. But some medieval authorities (see gloss on "Yad," Malweh, xviii.) held that, nothing appearing to the contrary, a hypothec, like a pledge of land, is accompanied by possession, so that the proceeds go toward payment of the debt.

Hypothecation is treated very sparingly in the Mishnah (Giṭ. iv. 4) and Baraita (Giṭ. 41a; B. Ḳ. 11b, 34b; B. B. 44b). Considering that a bond ("sheṭar ḥob") operated as a blanket mortgage on all the lands and slaves of the debtor, there was no great call for a hypothec, except to restrict the creditor's remedy.

Land is the most fitting subject for a mortgage, being bound by a simple bond; bondmen also are subjects, not only for that reason, but because the bondman "has a voice." Realizing that he is hypothecated, he is apt to make the fact known. But an ox has no "voice"; neither has any other chattel; and therefore it can not be hypothecated so as to affect the title of subsequent purchasers or pledgees. And though the lack of a voice is the original reason of this invalidity, it was held afterward that even knowledge of the chattel mortgage on the part of, or express notice to, the purchasers or pledgees does not affect them.

The principal question arising over a hypothec is this: Is the property therein named the only fund for payment of the debt? It is thus put in Giṭ. 41a: "If a man has mortgaged his field to his neighbor for debt (or to his wife for her jointure), saying to him, 'Collect your demand from this,' and a flood washes the field away, the creditor (or wife) may levy on other property of the debtor, unless there is an express provision that outside of the mortgaged land there is no responsibility." Of course a cause of losing the security much more frequent than a flood was the failure of title in the mortgagor; and this was treated in like manner.

Where the owner, after mortgaging his land to wife or creditor, sells it, the land "is sold," subject to the mortgage only so far that if the mortgagee can not find any other property of the debtor to satisfy his claim, he can levy on the mortgaged land and take it from the purchaser. Maimonides sets up a distinction or exception against a "permanent sale," on the meaning whereof his glossarists do not agree, while others (see RMA on Ḥoshen Mishpaṭ, 117, 1) do not recognize the exception at all.

At any rate, if the creditor takes possession of the mortgaged land or other thing, he can not, while in possession, pursue his remedy against other property of the debtor.

R. Simeon ben Gamaliel, moreover, in a baraita, maintains that while a creditor might, a wife should not (having accepted a hypothec) levy on other property of the husband in any case; because when a woman at marriage takes her ketubah, she, having received a named security, does not contemplate carrying on lawsuit after lawsuit to secure her jointure.

Where a master hypothecates his slave, and then manumits him, the manumission takes precedence over the mortgage; but even if the mortgage in so many words limits the remedy to the proceeds of the slave, the master must pay the debt if he can, by reason of the wrong done to the mortgagee by the act of manumission. According to another opinion, in order to avoid strife and scandal, the mortgagee is compelled to join in the manumission, and the bondman should give him a bond for the amount still due to him.

BIBLIOGRAPHY: *Yad, Malweh*, xviii.; *Shulhan 'Aruk, Hoshen Mishpat*, 117 (§§ 118, 119, 120, though classed under *Hypothec*, treat of a kindred subject).

W. B. L. N. D.

MORTON, EDWARD: English journalist and playwright; born 1858. For many years he was dramatic critic on the "Referee" and other London papers. He is the author of: "Travellers' Tales" (1892); "Man and Beast" (with preface by I. Zangwill; 1893); "Miss Impudence," a one-act comedy produced at Terry's Theatre, London, in 1892; and the book of "San Toy, or the Emperor's Own," played at Daly's London and New York theaters in 1899.

BIBLIOGRAPHY: *Who's Who*, 1904.

J. E. Ms.

MORTON, MARTHA: American playwright; born Oct. 10, 1865, in New York city; educated in the public schools and at the Normal College. Among her contributions to the drama may be mentioned: "Helene," played by Clara Morris; "The Refugee's Daughter" (1886), played by Cora Tanner; "The Merchant," written in prize play competition for the "New York World," and produced at the Union Square Theater, New York city, in 1888, and later by A. M. Palmer at Madison Square Theater with Viola Allen, Nelson Wheatcroft, and William Faversham in the leading rôles. Others of her plays were: "Geoffry Middleton" (1890); "Brother John" (1892); "His Wife's Father" (1893); "A Fool of Fortune" (1895); "Uncle Dick" (1896); "A Bachelor's Romance" (1895), which ran for eight years in the United States, and was also produced in England by John Hare (1897); "Her Lord and Master" (1899); "The Diplomat" (1902); "A Four-Leaf Clover" (1903); "The Truth-Tellers" (1903); and three plays written for William H. Crane. In Aug., 1897, she married Hermann Conheim of New York city.

A. F. H. V.

MORWITZ, EDWARD: American physician and journalist; born at Danzig, Prussia, June 11, 1815; settled in Philadelphia 1850; died there Dec. 13, 1893. He was given a thorough Jewish education in Danzig, then studied Oriental languages at Halle, but eventually devoted himself to the study of medicine, in which he graduated at the University of Berlin in 1840; he remained there as assistant demonstrator of anatomy until 1843. In that year, after a tour of the Continent, he established himself at Konitz, where he supplemented his practise as a physician by writing a history of medicine, published in two volumes, in 1848–49. Having taken part in the revolutionary movement of that period, Morwitz was compelled to emigrate. He invented a breech-loading mechanism for field-guns, and after an unsuccessful effort to exploit it in England and the United States, he settled in Philadelphia and resumed the practise of his profession. He took an active interest in political affairs, and after gradually becoming identified with the local German newspaper, the "Philadelphia Demokrat," as a contributor, he became its owner in 1853, and relinquished the medical profession for that of journalism. In 1855 the daily issue of his newspaper was supplemented by a weekly, which attained a wide circulation as "Die Vereinigte Staaten Zeitung," and by a Sunday edition named "Die Neue Welt" (the publication of the latter still continues). For a time he also issued a weekly periodical in English, called "The Pennsylvanian." As publisher and editor of these journals Dr. Morwitz soon gained a position of influence in the councils of the Democratic party of Pennsylvania, and became recognized as a leading "war Democrat" during the Civil war. At this period he was instrumental in reestablishing the dispensary of the German Society, which had been closed for years; in 1862 he led in the organization of the German Press Association of Pennsylvania, and in 1870 he instituted a movement in aid of the German cause in the Franco-Prussian war, which resulted in a large fund being raised for the purpose. Establishing a number of German newspapers in various cities of Pennsylvania, and one, the "Morgen Journal," in New York city, he finally developed the business into a "Newspaper Union," in which numerous journals in English were included, and through which he eventually attained the control of over 300 periodicals.

Dr. Morwitz was a member of various Jewish charity organizations in Philadelphia, but his most considerable share in Jewish communal affairs was as publisher of "The Jewish Record," which he took up in 1875, a few months after its establishment, and whose publication he continued for nearly eleven years, almost constantly at a financial loss. He was succeeded after his death by his only son, **Joseph Morwitz.**

A. L. E. L.

MOSCAT, JOSEPH. See MILHAU, JOSEPH BEN MOSES.

MOSCATO, JUDAH ARYEH (LEONE): Italian rabbi, poet, and philosopher of the sixteenth century; born at Osimo, near Ancona; died at Mantua before 1594. After the expulsion of the Jews from the Pontifical States by Paul IV. in 1554, Judah went to the home of his kinsman Minzi Beretaro at Mantua, where he enjoyed the society and instruction of the foremost Jews of his time, the brothers Moses, David, and Judah Provençal and Azariah dei Rossi. In 1587 he became chief rabbi of Mantua. Moscato was a true child of the Renaissance, well versed in the classical languages and literatures and in sympathy with their spirit. Like many of his contemporaries, he believed that the ancient civilization and all the languages of culture were derived from Judaism and that it was the duty of the Jews to acquire these branches of knowledge, of which they had once been masters. He was widely read, especially in philosophy; and again like his contemporaries, although an admirer of Judah ha-Levi and Maimonides, he was an enthusiastic student of the Cabala.

He published, under the title "Nefuẓot Yehudah" (Venice, 1588; Lemberg, 1859), fifty-two sermons, which inaugurated a new epoch in homiletic literature. Most of these were delivered in Hebrew or in Italian; and while they observe the rules of rhetoric they deal with their subjects naturally and without forced exegesis. His other printed work, "Ḳol Yehudah" (Venice, 1594), was the first commentary on the "Cuzari" of Judah ha-Levi. Since this fact would at once secure for it a wide circulation, the rabbis Cividali and Saraval of Mantua urged him to publish it. It appeared posthumously, and since then has always been printed together with the "Cuzari." Moscato wrote poetry also, especially elegies on the deaths of friends and scholars, including one on the death of Joseph Caro. Three of his elegies, on the death of Duchess Margherita of Savoy (d. 1574), have recently become known.

G. I. E.

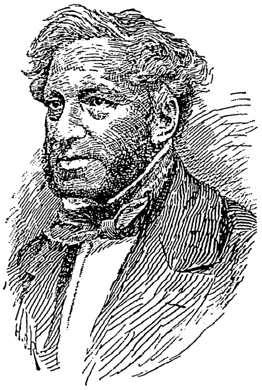
MOSCHELES, FELIX: English artist; born in London Feb. 8, 1833; studied painting in Paris and Antwerp, and exhibited his first pictures in those cities. Later he was an exhibitor at the London Academy, Grosvenor, and New galleries. He has been very active in the cause of international arbitration and peace, and was chairman of the International Peace Association.

Moscheles edited Felix Mendelssohn's letters to his father, and is the author of "In Bohemia with Du Maurier," and "The Fragments of an Autobiography," 1904.

BIBLIOGRAPHY: *Who's Who*, 1904.

J.

MOSCHELES, IGNAZ: Austrian pianist; born at Prague May 30, 1794; died at Leipsic March 10, 1870. After a short course with Zadrahka and Horzelsky, his talent in 1804 attracted the attention of Dionys Weber, director of the Prague Conservatorium, who educated him in the pianoforte works of Bach, Handel, Mozart, and Clementi. His progress was so rapid that in 1808 he played in public a concerto of his own composition. Shortly afterward, in consequence of the death of his father, Moscheles was thrown upon his own resources and went to Vienna, where he supported himself as a pianoforte teacher and player, and pursued his studies under Albrechtsberger (counterpoint) and Salieri (composition). He soon became one of the most popular teachers in Vienna and was on friendly terms with Meyerbeer, Hummel, and Beethoven, the pianoforte arrangement of whose opera "Fidelio" he assisted in preparing.



Ignaz Moscheles.

Moscheles' career as a virtuoso may be said to have begun with the production of his "Variationen über den Alexandermarsch," op. 32, in 1815, a work which met with brilliant success. He became the founder of a distinct school of pianoforte-playing characterized by original methods of tone-production, and hence he has been justly called the greatest pianist from the time of Hummel to the advent of Chopin. In 1816 he began a series of tours which extended over a period of ten years. In 1822 he composed the duo "Hommage à Händel" for J. B. Cramer's concert in London. In the following year he returned to London, and in 1824 he gave piano lessons to Felix Mendelssohn, then a boy of fifteen.

Shortly after his marriage to Charlotte Embden at Hamburg, in 1825, he settled in London, and he remained for ten years in England. In 1832 he was elected one of the directors of the London Philharmonic Society, the musical leader of which he became upon the resignation of Sir Henry Bishop in 1845. At the invitation of Mendelssohn, Moscheles in the following year accepted the first professorship in the pianoforte department of the newly established Conservatorium at Leipsic, with which institution he continued permanently identified until the close of his life.

Among the numerous works of Moscheles are: "Concerto in G Minor," op. 60; "Concerto Pathétique," op. 93; three "Allegri di Bravura," op. 51; 24 "Etudes," op. 70; "Charakteristische Studien," op. 95.

Moscheles translated into English Schindler's biography of Beethoven (2 vols., London, 1841). Moscheles' wife wrote a life of him and published his letters and diaries ("Aus Moscheles' Leben," 2 vols., Leipsic, 1872; transl. into English). Mendelssohn's correspondence with Moscheles was published (1888) in German and English.

MOSCHIDES, TOBIAS. See COHN, TOBIAS.

MOSCONI, JUDAH LEON BEN MOSES: Bulgarian scholar and Talmudist; born at Ocrida 1328. Owing to the wars which agitated Bulgaria in the fourteenth century, Mosconi left his native country about 1360. He traveled in all the three continents of the Old World. He was in Chios and Cyprus, in Negropont (where he became the pupil of Shemariah b. Elijah al-Iḳriṭi), in Laodicea, and later in Egypt (where he studied under Obadiah Miẓri, to whom he owed "the greatest part of his learning"). He was afterward in Morocco, in Italy, and in France. In Perpignan he made the acquaintance of several scholars, among them Moses Narboni and David Bongoron.

Mosconi was well versed in philosophical works, both Hebrew and Arabic; but, having a predilection for metaphysics, he occupied himself particularly with Ibn Ezra's commentary on the Pentateuch, on which he wrote a supercommentary. Most of the thirty supercommentaries on Ibn Ezra which Mosconi examined during his wanderings were, in his opinion, worthless. According to Mosconi, Ibn Ezra wrote his commentary on the Prophets and Hagiographa before that on the Pentateuch, which he wrote eleven years before his death.

Mosconi insisted on the necessity of studying grammar; and he blamed the commentators who neglected it. In his commentary he quotes the other works of Ibn Ezra, those of Samuel ben Hophni, Saadia's Arabic translation of the Pentateuch, Maimonides' commentary on the "Aphorisms" of Hippocrates, Averroes, and the other Arabian philosophers. Simultaneously with his supercommentary, Mosconi began to write other treatises, *e.g.*: "'En Gedi," an explanation of certain metaphysical passages disseminated in different works; "Reaḥ Niḥoaḥ," a treatise on sacrifices; "Ṭa'ame ha-Mibṭa," on grammar—all these works being left unfinished on account of the persecutions which he underwent. Mosconi's preface to his commentary, in which he gives this information, was published by Berliner in "Oẓar Ṭob" (1878, pp. 1–10). Mosconi also revised the "Yosippon" and wrote a preface to it (published by Berliner, *l.c.* pp. 17–23). Steinschneider ("Hebr. Bibl." xiv. 90) thinks that the Moses Mosconi mentioned by Moses Bagi in his "Ohel Mosheh" as having written against the Karaite Aaron b. Elijah is identical with Judah Leon Mosconi, whose name was incorrectly given by Bagi.

Bibliography: Berliner, in *Magazin*, iii. 41-51; Steinschneider, *ib.* pp. 94-100, 140-153, 190-206; idem, *Hebr. Bibl.* xiv. 90, xix. 57 *et seq.*; Gross, *Gallia Judaica*, p. 469.

MOSCOW: Russian city; capital of the government of the same name. Jews began to appear in Moscow in early times, but only as individuals; for instance, as farmers of the taxes which the Russian princes paid to the Tatars. A Jew named Leo was physician to the court at Moscow in 1490. From the beginning of the sixteenth century to the middle of the seventeenth Jews were excluded from the city on account of religious enmity toward them. It is known that Ivan the Terrible refused the request (1549) of the Duke of Lithuania that Jews might visit Moscow for commercial purposes; and it was agreed at the election of Ladislaus in 1610 that Jews should not be allowed to enter the city. This agreement is met with in more recent Russo-Polish treaties, which leads to the belief that, notwithstanding the prohibition, Jews had continued to visit Moscow. Toward the end of the seventeenth century the city contained a more or less prosperous group of Jews, whose presence some writers have attributed to the influence of the Jewish court physician Stephan von Gaden. In 1676 Czar Feodor Alekseyevich forbade them to remain; and this prohibition was continued in the succeeding reigns.

Conditions underwent a change in the reign of Catherine II. With the separation of White Russia from Poland and its addition to Russia proper (1772), the numerous Jewish populations of White Russia came under Russian rule. They were indeed the first Russo-Jewish subjects. Jewish merchants from White Russia, particularly from the town of Shklov, began to arrive in Moscow, but they remained only for short periods. Moscow was then outside of the Pale of Settlement; and the petition of the Jews for admission to the Moscow merchant gild was rejected. The well-known Jewish merchant Notkin, however, was at that time engaged in important commercial affairs at both capitals. With the further addition to Russia of Polish territories Jews from other governments came to Moscow. All these temporary visitors were permitted to stay only in a certain house, known as the "Jewish Inn." This was located in a building near the Church of Boris and Glyeb, and consequently was named later "Glyebovskoye." It formed a sort of ghetto. The gates were locked at nightfall, and no one was allowed to pass out after dark.

The "Jewish Inn."

Beginning with the second decade of the nineteenth century the Jewish population of Moscow began to increase. Merchants and their clerks as well as young artisans were permitted to remain in the city temporarily, on condition that they dwelt exclusively at the Jewish inn. All visitors were questioned at the city gates. Christians were admitted freely; but Jews were passed through accompanied by a guard, and frequent tribute was levied upon them by various functionaries. In the following decade Moscow received a group of permanent Jewish settlers. From the year 1827, during the reign of Nicholas I., the Jews were compelled to serve for twenty-five years in the army. Many such Jewish soldiers were sent to Moscow. During the early years of their service there they were engaged in active duty; but later they settled with their wives and families in the town (a privilege not accorded to the inhabitants of the inn), and engaged in business and handicrafts. They established several houses of prayer bearing the respective names of the regiments in which they served, *e.g.*, "Arakcheyevskaya" and "Mezhevaya." They had no rabbi, however, even the position of government rabbi, established under Nicholas, remaining vacant. The records of deaths were kept by the police, while marriages, divorces, and births were registered by the regimental officers. About this time a separate Jewish cemetery was established. Until then the Jewish dead had been buried just beyond the boundary of the Christian cemeteries, most frequently in the Dorogomilovskoye Cemetery.

Privileged Classes.

In the reign of Alexander II. the Jewish population of Moscow increased still further. The ghetto was abolished; certain classes of Jews (artisans, merchants, and persons possessed of a higher education) were given the privilege of unrestricted residence, and many such established themselves in the city. Moreover, the local authorities assumed, for selfish reasons, a more favorable attitude toward those Jews who lived in Moscow without having the right to do so; so that in 1871 the Jewish inhabitants numbered about 8,000. The early supremacy of the veteran soldiers in communal affairs passed over to the more intelligent classes. At this time were founded the first Jewish charitable institutions. About 1868 the congregation had a rabbi named Berlin. The community was, however, not yet officially recognized. It was not until 1871, when

Official Recognition of the Community.

the rabbinate was occupied by S. Minor, that the recognition of the government was obtained and the Jewish population saw the beginning of a new life. In 1872 there was opened in a rented building a synagogue with a choir, and with this was established an orphan asylum school and, subsequently, a technical department. In addition there was a considerable number of unofficial charitable and educational institutions, the most active of which was the bikkur ḥolim.

The community now grew rapidly. In 1890 the Jewish population numbered more than 20,000, and it was more prosperous, although there was still a considerable number of needy persons. All this was suddenly changed when Sergei Alexandrovich, brother of the reigning czar, Alexander III., became governor of Moscow (Feb., 1891). An imperial decree was promulgated (March 28, 1891) ordering the expulsion from the city and government of Moscow of all Jewish artisans, brewers, and distillers. A certain number of these was sent out on the 14th of every month until June 14, 1892. On Oct. 15, 1892, another decree was issued ordering the expulsion of the Jewish soldiers who had served under Nicholas, and of their descendants, with the exception of those who had joined some artisan gild. The expulsion was carried into effect under the guidance of the governor-general, the mayor, Alekseyev, and the chief of police, Vlasovski. The authorities abused their prerogative and excluded, contrary to law, other classes of Jews also. Persons who had been born in Moscow and who knew no other place of residence were obliged to go in search of a new home. Thousands of Jews became impoverished, and several hundreds adopted Christianity.

The Jewish community had before this built a synagogue on a plot of ground owned by it. The city authorities had given oral permission for the opening of the building, which had taken place in May, 1891. Later the community was informed that the synagogue had been opened contrary to law, and it was given the alternative of selling it within six months or transforming it into a charitable institution by remodeling the building so as to leave no traces of a synagogue. When Rabbi Minor and the venerable elder Schneider petitioned the emperor to revoke this order their request was refused. Minor was permanently banished from Moscow and deprived of his rabbinical title, while Schneider was excluded for a period of two years. The affairs of the community were placed in charge of the assistant rabbi; but soon he and the other officials of the synagogue, having no acknowledged right to reside in Moscow, were also banished. Together with the synagogue the schools connected with it were also closed. Notwithstanding the expenditure of almost 100,000 rubles for the remodeling of the synagogue building, the city authorities will not allow it to be used, and it is now (1904) unoccupied. The Jewish communal organization was abolished and about 20,000 Jews were expelled from the city in April, 1891.

Synagogue.

Religious services are now held in several prayer-houses (there is a prayer-hall in the house of the millionaire L. Polyakov); and for lack of proper accommodations many Jews find themselves obliged to celebrate the holy days in neighboring towns. Since 1893 the position of rabbi has been filled by A. I. Mase. His assistant was R. Löb Kahn, who died in 1903. There are no official charitable organizations in Moscow; but there is a ḥeder for fifty boys, and the community cares for its poor and sick. Its expenditures are not great, amounting to only 30,000 rubles annually. Not long ago all Jews studying pharmacy and obstetrics were forbidden to live in Moscow. Against the law, the Jewish members of the merchant gild of Moscow are deprived of the right (granted in 1899) to take part in the election of officers of the gild and in sessions of its representatives. Quite recently (1904) the governor-general and commandant of the Moscow military forces, the grand duke Sergei Alecksandrovitch, forbade the Jewish soldiers in the Moscow district to wear fringes ("ẓiẓit"). The Jewish population in Moscow consists (1904) of 4,106 permanent residents and 264 temporary settlers.

MOSE. See PERIODICALS.

MOSELY, ALFRED: English financier; born at Clifton 1855. He was educated at the Bristol Grammar School, and afterward went to South Africa, where he became one of the earliest settlers in Kimberley. He equipped at his own expense the Princess Christian Base Hospital near Cape Town for the relief of the sick and wounded during the South-African war. In 1902 he conducted an industrial commission from England to the United States to study the cause of American trade prosperity, and in 1903 he headed a similar commission to study American methods of education. He was made a C.M.G. in 1900.

MOSEN (MOSES), JULIUS: German poet; born at Marieney, Saxony, July 3, 1803; died at Oldenburg Oct. 10, 1867. He was educated at Plauen, and studied law at the University of Jena; but the death of his father interrupted his studies, and, after traveling in Italy, he returned to his birthplace and entered the office of a lawyer. In 1831 he became judge of the patrimonial court of justice at Kohren, near Frohburg; and after its suppression in 1834 he practised law in Dresden. In 1844 he accepted the post of dramatic writer to the Court Theater at Oldenburg. About this time his health gave way; in a few years he was completely paralyzed, and he was pensioned shortly after 1850; but he continued his literary activity in spite of his infirmities. He wrote: "Das Lied vom Ritter Wahn" (Leipsic, 1831); "Gedichte" (*ib.* 1836, 2d ed. 1843); and the following novels: "Georg Venlot" (*ib.* 1831); "Novellen" (*ib.* 1837); "Der Kongress von Verona" (Berlin, 1842); "Bilder im Moose" (Leipsic, 1846). Mosen's plays are mainly historical, chief among them being: "Heinrich der Finkler" (Leipsic, 1836); "Cola Rienzi," "Die Bräute von Florenz," "Wendelin und Helene," "Kaiser Otto III." (collectively published under the title "Theater," Stuttgart, 1842); "Don Johann von Oesterreich"; "Herzog Bernhard" (Leipsic, 1855); and "Der Sohn des Fürsten" (Oldenburg, 1858). His collected works were published in eight volumes in Oldenburg in 1863; and a new edition in six volumes, with a biography, was prepared by his son and published in Leipsic in 1880.

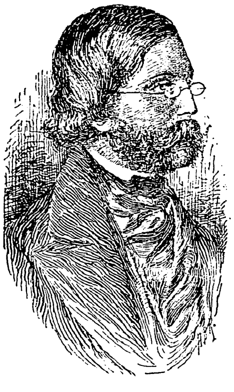
S.

MOSENTHAL, SOLOMON HERMANN VON: Austrian dramatist and poet; born at Cassel, Hesse-Nassau, Germany, Jan. 14, 1821; died at Vienna Feb. 17, 1877. He attended the gymnasium at Cassel and the Polytechnicum in Carlsruhe. He soon withdrew, however, and in 1841 went to Vienna as private teacher in the house of Moritz von Goldschmidt. In 1846 his "Der Hollander Michel," a dramatized folk-story, was produced; and this was succeeded in the following year by his three-act drama "Die Sklavin." Neither of these had any enduring success. Two years later (Dec. 18, 1849) the production of his poetical drama "Cäcilia von Albano" received the cordial approval of public and critics alike, and opened for him the doors of the Burgtheater. Its success was still further heightened on its publication in Budapest in 1851. His next production, "Deborah" (Budapest, 1849; Presburg, 1875, 6th ed. 1890), was translated into the principal modern languages. In English it became famous under the title of "Leah, the Forsaken." It was first produced at the royal theater in Berlin in 1850.



Solomon Hermann Mosenthal.

In the meantime Mosenthal had, early in 1850, secured a position as librarian at the Ministry of Education. In the same year his play based on the novel "Ein Deutsches Dichterleben" by Otto Müller, was produced at the Burgtheater. It was founded on the story of the life of the poet Bürger. His next production was "Der Sonnenwendhof," Leipsic, 1857 (3d ed. 1875; fifteen years after his death a Low German version by Anny Schäfer, under the title "Auf'm Sunnwendhof," was published in Munich in 1892 and included in the "Münchener Theater-Bibliothek"). There followed in succession: "Das Gefangene Bild," Stuttgart, 1858; "Düweke," Leipsic, 1860; "Die Deutschen Komödianten," *ib.* 1863; "Pietra," tragedy, *ib.* 1865; "Der Schultz von Altenbüren," *ib.* 1868; "Isabella Orsini," 1870, of which an English translation by E. Vincent was published at Vienna in 1875; "Maryna," historical drama, Presburg, 1870; "Die Sirene," comedy, 1875. Mosenthal also wrote the following librettos: for Otto Nicolai, "Die Lustigen Weiber von Windsor," Vienna, 1871 (reprinted 1888); for Kretschmer, "Die Folkunger," Dresden, 1874; for Brüll, "Das Goldene Kreuz," Berlin, 1875; for Carl Goldmark, "Die Königin von Saba," Vienna, 1888; and "Die Kinder der Heide," music by Anton Rubinstein.

A volume of his poems was published at Vienna as early as 1847. A complete edition was issued in 1866. He also wrote a novel, "Jephtha's Tochter," which was included in the "Neuer Deutscher Novellenschatz," No. 2, Munich, 1884. A collected edition of his writings, for the arrangement of which he had left instructions, was published in six volumes at Stuttgart in 1878; with a portrait.

MOSER (plural, **Moserim**): An informer, denunciator, or delator; synonyms are "masor" (abstract, "mesirah"), "delator" (דילטור), and "malshin" (abstract, "malshinut"), from the last of which are derived the Portuguese "malsim," and also the Spanish "malsin," together with the adjective "malsinar" and the abstract nouns "malsindad" and "malsineria." Nothing was more severely punished by the Jews than talebearing; and no one was held in greater contempt than the informer. On account of the fact that his deeds frequently caused mischief and even entailed death and destruction, the sages of the Talmud compared the "moser" to a serpent.

In Talmudic Times.

The Jews suffered much during the persecutions under Hadrian through informers in their own ranks; especially teachers of the Law were betrayed by the delators. Simeon ben Yoḥai, having criticized the Roman government, was denounced; and he saved his life only by hasty flight. A certain Eleazar b. Simon is said to have denounced to the Romans Jews who were engaged in freebooting expeditions against them. According to Talmudic law, the delator was punished with death; and although in general the jurisdiction of the Jewish courts in criminal cases ceased with the destruction of the Jewish commonwealth, in the case of informers the penalty remained in force, those convicted being punished the more severely because they deliberately increased the danger which constantly threatened the people.

There are frequent notices of denunciations among the Jews in countries under Arabic rule. A certain Ḥalfah ibn al-A'jab and his son Ḥayyim denounced Isaac Alfasi, who was thereupon obliged in 1088 to flee from his home in northern Africa and to seek refuge in Spain (Abraham ibn Daud, "Sefer ha-Ḳabbalah," ed. Neubauer, p. 75). According to Maimonides ("Yad," Ḥobel u-Maziḳ), in the cities of the West, *i.e.*, of Morocco, conviction for delation was of daily occurrence, the offenders being declared outlaws and being delivered to non-Jews for the infliction of the death-penalty. Denunciations occurred just as frequently among the Jews of Spain, so that the word "malsin" was

In Spain.

adopted into the Spanish language (see above). The great Talmudist of Lucena, Joseph ibn Migas, caused an informer to be stoned before the close of a certain Day of Atonement which fell on a Sabbath (Judah b. Asher, "Zikron Yehudah," p. 55b). Isaac b. Sheshet at the end of the fourteenth century could therefore assert that from olden times it had been law and custom in the Jewish communities of Aragon, Valencia, Catalonia, Castile, and Navarre to put informers out of the world; and even as late as 1432 the representatives of the Castilian communities could with truth allege in the statutes which they had drawn up that it was the custom throughout Israel to put to death one who at any time or any place dared to act the part of informer.

Execution of an Informer.

In Barcelona a descendant of a wealthy and respected family who had lost his fortune turned informer. In vain was he warned and threatened with an informer's death. He was probably favored by the authorities and encouraged to continue in his nefarious conduct; and he was not to be enticed from his chosen path. His own family wished to get rid of him, and insisted on his being prosecuted. Rabbi Jonah of Gerona (nephew of Jonah b. Abraham Gerondi) and Solomon ben Adret of Barcelona, because of the insistence of King Pedro III. of Aragon, found themselves forced to let justice take its course and to deliver the informer to the king. The latter ordered his execution, which took place in the year 1280 in the square before the Monjuich, the Jewish cemetery in Barcelona, the arteries of both arms being opened (Solomon ben Adret's Responsa in "J. Q. R." viii. 228).

Asher ben Jehiel pronounced the death-penalty upon an unknown man in Seville who had obtained the favor of some person of high degree and had maliciously accused certain coreligionists as well as whole congregations before the infanta D. Pedro, uncle and guardian of the young king Alfonso XI. (Asher ben Jehiel, Responsa, xvii. 1, 8). Just as little hesitation had Asher's son, and with him the members of the Jewish tribunal at Toledo, Joseph ibn Crispin, Joseph ben Joseph ibn Naḥmias, and Moses ben Abraham ibn Naḥmias, in pronouncing the sentence of death upon the much-dreaded Joseph ben Samuel, who, on account of his denunciations, had already been condemned to death during the lifetime of Asher ben Jehiel, but upon whom the sentence had not been carried out on account of the king's minority (Judah b. Asher, *l.c.* p. 55a).

Regulations Against Informers.

In the statutes signed by the communities of Catalonia and Valencia Sept. 25, 1354, the extermination of informers was made a public duty, in the accomplishment of which every one was required to render his utmost assistance ("He-Ḥaluẓ," i. 22 *et seq.*). This resolution was also adopted by the representative of the Jews of Majorca, where, as a result of the representations of the leader of the community, King Sancho in 1319 issued an order banishing forever from the island all Jews who were proved to be informers or disturbers of the peace ("Boletin Acad. Hist." xxxvi. 133, 143). The Jewish community of Tudela, the largest in Navarre, in March, 1363, passed a resolution (which was renewed fifty years later for a further period of fifty years) to proceed against informers with all possible severity. Any person, whether Jew or Jewess, who should be convicted of being a calumniator of or informer against the congregation or any of its members was to be excommunicated in all the synagogues of the city for a period of fifty years, during which time he or she was not to be tolerated within the city. The informer was also to pay into the public treasury a fine of 1,000 gold maravedis (Kayserling, "Gesch. der Juden in Spanien," i. 76 *et seq.*, 206 *et seq.*). The execution of a death-sentence pronounced by a Jewish court could take place only with the king's consent and through the royal alguazil (hangman).

The execution of Joseph Pichon (receiver-general of taxes, who was accused of being an informer), for which the sanction of King John I. of Castile had been obtained on his coronation-day, Aug. 21, 1379, was of incalculable importance for the Jews of Spain, and was the main reason why the Jews of Castile were deprived of jurisdiction in criminal cases. The measure passed in 1363, which remained in force for only a few decades, did not contribute much toward frightening informers. On the contrary, they multiplied to such an extent that in the statutes adopted at the meeting of communal representatives convened by the court rabbi Abraham Benveniste at Valladolid in May, 1432, a whole chapter was devoted to informers.

Jurisdiction over Informers.

It was due to Benveniste, who stood in high favor with the then all-powerful Alvaro de Luna, that King John II. again conceded to the Jews the right to decide criminal cases. In the last-mentioned statutes it was stipulated that each case of talebearing through which a Jew or a Jewess might have suffered injury was to be punished with ten days' imprisonment and a fine of 100 maravedis, if no Christian was present when the delation took place. The fine was to be doubled if the crime had been committed in the presence of a Christian. When one was convicted of informing, he was branded on the forehead with a red-hot iron; if he were convicted of treason three times on the testimony of two trustworthy witnesses, the court rabbi was required to bring about his execution at the hands of the royal alguazil. Did the informer escape, so that he could be neither killed nor branded, he was proclaimed in all places as a traitor, completely excommunicated from the community of Israel, and stigmatized as "blood-shedder" or "villain" (see the statute in "Jahrbuch für die Gesch. der Juden und des Judenthums," iv. 307). In northern Africa, as in Castile, the law was visited upon informers in all its severity. Simon ben Ẓemaḥ Duran and his son Solomon passed sentence of death unhesitatingly upon moserim.

In Germany.

Worse than in Spain were the conditions in German countries, where the governments protected the informers. The expulsion of the Jews from Augsburg, Nuremberg, and Ratisbon, and the persecutions in Posen, Frankfort-on-the-Main, and Worms are traceable to informers. A certain Hirschel Meyer, through his denunciations, caused his coreligionists much trouble previous to their expulsion from Vienna in 1670.

The practise of giving malicious information lasted longest in Poland, where moserim, with the approval of the government, were punished by having the tongue or ears cut off. In Posen a Jewish informer is said to have been sentenced to death, in accordance with the verdict of a Jewish court, so late as the last decades of the eighteenth century (Perles, "Gesch. der Juden in Posen," in "Monatsschrift," xiv. 166). The informer who escaped punishment was excommunicated; and he then sought refuge in baptism. The number of those who, after baptism, appeared as accusers of their former coreligionists, and who, like Nicolaus Donin, Joshua al-Lorki, and Pfefferkorn, brought unspeakable suffering upon them, is very large.

J. M. K.

MOSER, MOSES: German merchant known as a friend of Heine; born 1796; died at Berlin Aug. 15, 1838. He was educated for a business career, and was for a time an assistant of the banker Moses Friedländer in Berlin. Afterward he became the confidential cashier of Moritz Robert there. Moser had considerable mathematical talent; and he also studied philology. With Gans and Zunz he helped to found the Verein für Kultur und Wissenschaft des Judenthums. He thus became friendly with Heine, who had a high opinion of his ability and character, and called him "a living appendix to Nathan der Weise." Many of Heine's most intimate letters were addressed to Moser, who was his closest friend up to the year 1830.

S. J.

MOSES.—Biblical Data: The birth of Moses occurred at a time when Pharaoh had commanded that all male children born to Hebrew captives should be thrown into the Nile (Ex. ii.; comp. i.). Jochebed, the wife of the Levite Amram, bore a son, and kept the child concealed for three months. When she could keep him hidden no longer, rather than deliver him to death she set him adrift on the Nile in an ark of bulrushes. The daughter of Pharaoh, coming opportunely to the river to bathe, discovered the babe, was attracted to him, adopted him as her son, and named him "Moses." Thus it came about that the future deliverer of Israel was reared as the son of an Egyptian princess (Ex. ii. 1–10).

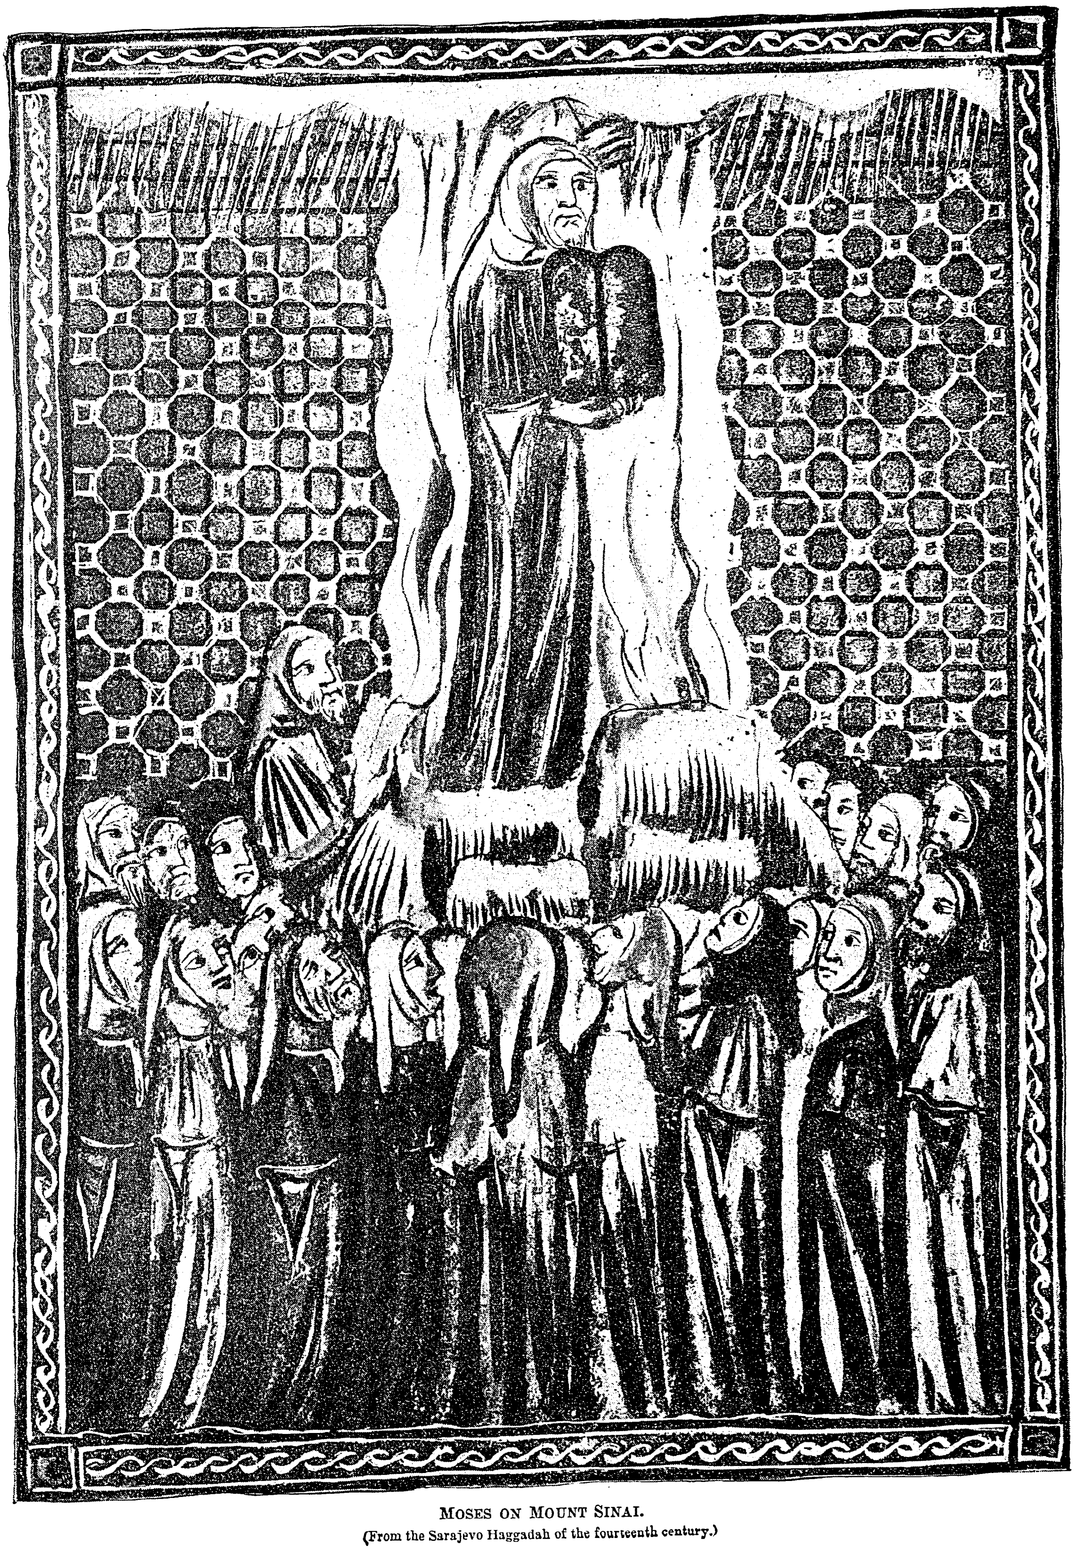
When Moses was grown to manhood, he went one day to see how it fared with his brethren, bondmen to the Egyptians. Seeing an Egyptian maltreating a Hebrew, he killed the Egyptian and hid his body in the sand, supposing that no one who would be disposed to reveal the matter knew of it. The next day, seeing two Hebrews quarreling, he endeavored to separate them, whereupon the Hebrew who was wronging his brother taunted Moses with slaying the Egyptian. Moses soon discovered from a higher source that the affair was known, and that Pharaoh was likely to put him to death for it; he therefore made his escape to the Sinaitic Peninsula and settled with Hobab, or Jethro, priest of Midian, whose daughter Zipporah he in due time married. There he sojourned forty years, following the occupation of a shepherd, during which time his son Gershom was born (Ex. ii. 11–22).

One day, as Moses led his flock to Mount Horeb, he saw a bush burning but without being consumed. When he turned aside to look more closely at the marvel, Yhwh spoke to him from the bush and commissioned him to return to Egypt and deliver his brethren from their bondage (Ex. iii. 1–10). According to Ex. iii. 13 *et seq.*, it was at this time that the name of Yhwh was revealed, though it is frequently used throughout the patriarchal narratives, from the second chapter of Genesis on. Armed with this new name and with certain signs which he could give in attestation of his mission, he returned to Egypt (Ex. iv. 1–9, 20). On the way he was met by Yhwh, who would have killed him; but Zipporah, Moses' wife, circumcised her son and Yhwh's anger abated (Ex. iv. 24–26). Moses was met and assisted on his arrival in Egypt by his elder brother, Aaron, and readily gained a hearing with his oppressed brethren (Ex. iv. 27–31). It was a more difficult matter, however, to persuade Pharaoh to let the Hebrews depart. Indeed, this was not accomplished until, through the agency of Moses, ten plagues had come upon the Egyptians (Ex. vii.–xii.). These plagues culminated in the slaying of the Egyptian first-born (Ex. xii. 29), whereupon such terror seized the Egyptians that they urged the Hebrews to leave.

In the Wilderness.

The children of Israel, with their flocks and herds, started toward the eastern border at the southern part of the Isthmus of Suez. The long procession moved slowly, and found it necessary to encamp three times before passing the Egyptian frontier at the Bitter Lakes. Meanwhile Pharaoh had repented and was in pursuit of them with a large army (Ex. xiv. 5–9). Shut in between this army and the Red Sea, or the Bitter Lakes, which were then connected with it, the Israelites despaired, but Yhwh divided the waters of the sea so that they passed safely across; when the Egyptians attempted to follow, He permitted the waters to return upon them and drown them (Ex. xiv. 10–31). Moses led the Hebrews to Sinai, or Horeb, where Jethro celebrated their coming by a great sacrifice in the presence of Moses, Aaron, and the elders of Israel (Ex. xviii.). At Horeb, or Sinai, Yhwh welcomed Moses upon the sacred mountain and talked with him face to face (Ex. xix.). He gave him the Ten Commandments and the Law and entered into a covenant with Israel through him. This covenant bound Yhwh to be Israel's God, if Israel would keep His commandments (Ex. xix. *et seq.*).

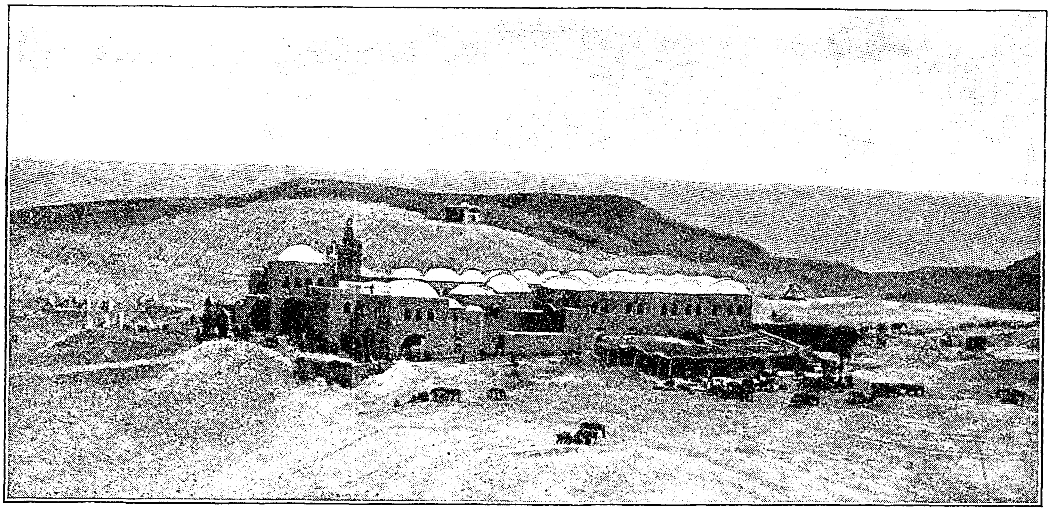
Moses and the Israelites sojourned at Sinai about a year (comp. Num. x. 11), and Moses had frequent communications from Yhwh. As a result of these



Moses on Mount Sinai.
(From the Sarajevo Haggadah of the fourteenth century.)

the Tabernacle, according to the last chapters of Exodus, was constructed, the priestly law ordained, the plan of encampment arranged both for the Levites and the non-priestly tribes (comp. Num. i. 50–ii. 34), and the Tabernacle consecrated. While at Sinai Joshua had become general of the armies of Israel and the special minister, or assistant, of Moses (Ex. xvii. 9). From Sinai Moses led the people to Kadesh, whence the spies were sent to Canaan. Upon the return of the spies the people were so discouraged by their report that they refused to go forward, and were condemned to remain in the wilderness until that generation had passed away (Num. xiii.–xiv.).

After the lapse of thirty-eight years Moses led the people eastward. Having gained friendly permission to do so, they passed through the territory of Esau (where Aaron died, on Mount Hor; Num. xx. 22–29), and then, by a similar arrangement, through the land of Moab. But Sihon, king of the Amorites, whose capital was at Heshbon, refused permission, and was conquered by Moses, who allotted his territory to the tribes of Reuben and Gad. Og, King of Bashan, was similarly overthrown (comp. Num. xxi.), and his territory assigned to the half-tribe of Manasseh.



Traditional Tomb of Moses: Scene During a Pilgrimage.
(From a photograph by the American Colony, Jerusalem.)

Death of Moses.

After all this was accomplished Moses was warned that he would not be permitted to lead Israel across the Jordan, but would die on the eastern side (Num. xx. 12). He therefore assembled the tribes and delivered to them a parting address, which forms the Book of Deuteronomy. In this address it is commonly supposed that he recapitulated the Law, reminding them of its most important features. When this was finished, and he had pronounced a blessing upon the people, he went up Mount Nebo to the top of Pisgah, looked over the country spread out before him, and died, at the age of one hundred and twenty. Yhwh Himself buried him in an unknown grave (Deut. xxxiv.). Moses was thus the human instrument in the creation of the Israelitish nation; he communicated to it all its laws. More meek than any other man (Num. xii. 3), he enjoyed unique privileges, for "there hath not arisen a prophet since in Israel like unto Moses, whom the Lord knew face to face" (Deut. xxxiv. 10).

J. G. A. B.

——**In Rabbinical Literature:** Of all Biblical personages Moses has been chosen most frequently as the subject of later legends; and his life has been recounted in full detail in the poetic haggadah. As liberator, lawgiver, and leader of a people which was transformed by him from an unorganized horde into a nation, he occupies a more important place in popular legend than the Patriarchs and all the other national heroes. His many-sided activity also offered more abundant scope for imaginative embellishment. A cycle of legends has been woven around nearly every trait of his character and every event of his life; and groups of the most different and often contradictory stories have been connected with his career. It would be interesting to investigate the origin of the different cycles, and the relation of the several cycles to one another and to the original source, if there was one. The present article attempts to give, without claiming completeness, a picture of the character of Moses according to Jewish legend and a narrative of the most important incidents of his life.

(The following special abbreviations of book-titles are used: "D. Y." = "Dibre ha-Yamim le-Mosheh Rabbenu," in Jellinek, "B. H." ii.; "S. Y." = "Sefer ha-Yashar"; "M. W." = "Midrash Wayosha'," in Jellinek, *l.c.*)

Moses' influence and activity reach back to the days of the Creation. Heaven and earth were created only for his sake (Lev. R. xxxvi. 4). The account of the creation of the water on the second day (Gen. i. 6–8), therefore, does not close with the usual formula, "And God saw that it was good," because God foresaw that Moses would suffer through water (Gen. R. iv. 8). Although Noah was not worthy to be saved from the Flood, yet he was saved because Moses was destined to descend from him (*ib.* xxvi. 15).

The Beginnings.

The angels which Jacob in his nocturnal vision saw ascending to and descending from heaven (Gen. vii. 12) were really Moses and Aaron (Gen. R. lxviii. 16). The birth of Moses as the liberator of the people of Israel was foretold to Pharaoh by his soothsayers, in consequence of which he issued the cruel command to cast all the male children into the river (Ex. i. 22). Later on Miriam also foretold to her father, Amram, that a son would be born to him who would liberate Israel from the yoke of Egypt (Soṭah 11b, 12a; Meg. 14a; Ex. R. i. 24; "S. Y.," Shemot, pp. 111a, 112b; comp. Josephus, "Ant." ii. 9, § 3). Moses was born on Adar 7 (Meg. 13b) in the year 2377 after the creation of the world (Book of Jubilees, xlvii. 1). He was born circumcised (Soṭah 12a), and was able to walk immediately after his birth (Yalḳ., Wayelek, 940); but according to another story he was circumcised on the eighth day after birth (Pirḳe R. El. xlviii.). A peculiar and glorious light filled the entire house at his birth (*ib.*; "S. Y." p. 112b), indicating that he was worthy of the gift of prophecy (Soṭah *l.c.*). He spoke with his father and mother on the day of his birth, and prophesied at the age of three (Midr. Peṭirat Mosheh, in Jellinek, "B. H." i. 128). His mother kept his birth secret for three months, when Pharaoh was informed that she had borne a son. The mother put the child into a casket, which she hid among the reeds of the sea before the king's officers came to her (Jubilees, *l.c.* 47; "D. Y." in Jellinek, "B. H." ii. 3; "S. Y." p. 112b). For seven days his mother went to him at night to nurse him, his sister Miriam protecting him from the birds by day (Jubilees, *l.c.* 4).

Pharaoh's Daughter.

Then God sent a fierce heat upon Egypt ("D. Y." *l.c.*), and Pharaoh's daughter Bithiah (comp. I. Chron. iv. 18; Tarmut [Thermutis], according to Josephus, *l.c.* and Jubilees, *l.c.*), who was afflicted with leprosy, went to bathe in the river. Hearing a child cry, she beheld a casket in the reeds. She caused it to be brought to her, and on touching it was cured of her leprosy (Ex. R. i. 27). For this reason she was kindly disposed toward the child. When she opened the casket she was astonished at his beauty (Philo, "Vita Mosis," ii.), and saw the Shekinah with him (Ex. R. i. 28). Noticing that the child was circumcised, she knew that the parents must have been Hebrews (Soṭah 12b). Gabriel struck Moses, so as to make him cry and arouse the pity of the princess (Ex. R. i. 28). She wished to save the child; but as her maids told her she must not transgress her father's commands, she set him down again (Midr. Abkir, in Yalḳ., Ex. 166). Then Gabriel threw all her maids down (Soṭah 12b; Ex. R. i. 27); and God filled Bithiah with compassion (Yalḳ., *l.c.*), and caused the child to find favor in her eyes ("M. W." in Jellinek, *l.c.* i. 41). Thereupon she took the child up, saved him, and loved him much (Ex. R. *l.c.*). This was on the sixth day of the month of Siwan (Soṭah 12b); according to another version, on Nisan 21 (*ib.*). When the soothsayers told Pharaoh that the redeemer of Israel had been born and thrown into the water, the cruel edict ordering that the children be thrown into the river was repealed (Ex. R. i. 29; Soṭah *l.c.*). Thus the casting away of Moses saved Israel from further persecution. According to another version (Gen. R. xcvii. 5), 600,000 children had already been thrown into the river, but all were saved because of Moses.

Bithiah, Pharaoh's daughter, took up the child to nurse him; but he refused the breast ("M. W." *l.c.*). Then she gave him to other Egyptian women to nurse, but he refused to take nourishment from any of them (Josephus, *l.c.* ii. 9, § 5; "S. Y." p. 112b; Soṭah 12b; "D. Y." p. 3).

His Bringing up.

The mouth which was destined to speak with God might not take unclean milk (Soṭah *l.c.*; "D. Y." *l.c.*); Bithiah therefore gave him to his mother to nurse. Another legend says that he did not take any milk from the breast (Yalḳ., Wayelek, 940). Bithiah then adopted him as her son ("S. Y." p. 113b). Aside from the name "Moses," which Bithiah gave to him (Ex. ii. 10), he had seven (Lev. R. i. 3), or according to other stories ten, other names given to him by his mother, his father, his brother Aaron, his sister Miriam, his nurse, his grandfather Kehat, and Israel ("D. Y." p. 3; "S. Y." p. 112b; Meg. 13a). These names were: Jared, Abi Gedor, Ḥeber, Abi Soko, Jekuthiel, Abi Zanoah, and Shemaiah ("Shama' Yah" = "God has heard"), the last one being given to him by Israel. He was also called "Heman" ([*i.e.*, נאמן; Num. xii. 7] B. B. 15a).

Moses was a very large child at the age of three (Ex. R. i. 32; comp. Josephus, *l.c.*; Philo, *l.c.*); and it was at this time that, sitting at the king's table in the presence of several princes and counselors, he took the crown from Pharaoh's head and placed it on his own ("D. Y." *l.c.*; for another version see "M. W." *l.c.*). The princes were horrified at the boy's act; and the soothsayer said that this was the same boy who, in accordance with their former predictions, would destroy the kingdom of Pharaoh and liberate Israel (Josephus, *l.c.*; "M. W." *l.c.*). Balaam and Jethro were at that time also among the king's counselors (Soṭah 11a; Sanh. 106). Balaam advised the king to kill the boy at once; but Jethro (according to "D. Y." *l.c.*, it was Gabriel in the guise of one of the king's counselors) said that the boy should first be examined, to see whether he had sense enough to have done such an act intentionally.

Removes Pharaoh's Crown.

All agreed with this advice. A shining piece of gold, or a precious stone, together with a live coal, was placed on a plate before the boy, to see which of the two he would choose. The angel Gabriel then guided his hand to the coal, which he took up and put into his mouth. This burned his tongue, causing him to stutter (comp. Ex. iv. 10); but it saved his life ("M. W." *l.c.*; "D. Y." *l.c.*; "S. Y." *l.c.*; Ex. R. i. 31).

Moses remained in Pharaoh's house fifteen years longer ("D. Y." *l.c.*; "M. W." *l.c.*). According to the Book of Jubilees (*l.c.*), he learned the writing of the Assyrians (the "Ketab Ashurit"; the square script ?) from his father, Amram. During his sojourn in the king's palace he often went to his brethren, the slaves of Pharaoh, sharing their sad lot. He helped any one who bore a too heavy burden or was too weak for his work. He reminded Pharaoh that a slave was entitled to some rest, and begged him to grant the Israelites one free day in the week. Pharaoh acceded to this request, and Moses accordingly instituted the seventh day, the Sabbath, as a day of rest for the Israelites (Ex. R. i. 32; "S. Y." p. 115a).

Flees from Egypt.

Moses did not commit murder in killing the Egyptian (Ex. ii. 12); for the latter merited death because he had forced an Israelitish woman to commit adultery with him (Ex. R. i. 33). Moses was at that time eighteen years of age ("D. Y." *l.c.*; "M. W." *l.c.*; "S. Y." *l.c.*). According to another version, Moses was then twenty, or possibly forty, years of age (Ex. R. i. 32, 35). These divergent opinions regarding his age at the time when he killed the Egyptian are based upon different estimates of the length of his stay in the royal palace (Yalḳ., Shemot, 167; Gen. R. xi.), both of them assuming that he fled from Egypt immediately after the slaying (Ex. ii. 15). Dathan and Abiram were bitter enemies of Moses, insulting him and saying he should not act as if he were a member of the royal house, since he was the son not of Batya, but of Jochebed. Previous to this they had slandered him before Pharaoh. Pharaoh had forgiven Moses everything else, but would not forgive him for killing the Egyptian. He delivered him to the executioner, who chose a very sharp sword with which to kill Moses; but the latter's neck became like a marble pillar, dulling the edge of the sword ("M. W." *l.c.*). Meanwhile the angel Michael descended from heaven, and took the form of the executioner, giving the latter the shape of Moses and so killing him. He then took up Moses and carried him beyond the frontier of Egypt for a distance of three, or, according to another account, of forty, days ("D. Y." *l.c.*; "S. Y." p. 115b). According to another legend, the angel took the shape of Moses, and allowed himself to be caught, thus giving the real Moses an opportunity to escape (Mek., Yitro, 1 [ed. Weiss, 66a]; Ex. R. i. 36).

The fugitive Moses went to the camp of King Nikanos, or Kikanos, of Ethiopia, who was at that time besieging his own capital, which had been traitorously seized by Balaam and his sons and made impregnable by them through magic. Moses joined the army of Nikanos, and the king and all his generals took a fancy to him, because he was courageous as a lion and his face gleamed like the sun ("S. Y." p. 116a; comp. B. B. 75a). When Moses had spent nine years with the army King Nikanos died, and the Hebrew was made general. He took the city, driving out Balaam and his sons Jannes and Jambres, and was proclaimed king by the Ethiopians. He was obliged, in deference to the wishes of the people, to marry Nikanos' widow, Adoniya (comp. Num. xii.), with whom he did not, however, cohabit ("D. Y." *l.c.*; "S. Y." p. 116b). Miriam and Aaron spoke against Moses on account of the Cushite (Ethiopian) woman whom he had married. He was twenty-seven years of age when he became king; and he ruled over Ethiopia for forty years, during which he considerably increased the power of the country. After forty years his wife, Queen Adoniya, accused him before the princes and generals of not having cohabited with her during the many years of their marriage, and of never having worshiped the Ethiopian gods. She called upon the princes not to suffer a stranger among them as king, but to make her son by Nikanos, Munahas or Munakaros, king. The princes complied with her wishes, but dismissed Moses in peace, giving him great treasures. Moses, who was at this time sixty-seven years old, went from Ethiopia to Midian (*ib.*).

King in Ethiopia.

According to Josephus' account of this story (see Moses in Hellenistic Literature), after Moses' marriage to the daughter of the Ethiopian king, he did not become King of Ethiopia, but led his troops back to Egypt, where he remained. The Egyptians and even Pharaoh himself were envious of his glorious deeds, fearing also that he might use his power to gain dominion over Egypt. They therefore sought how they might assassinate him; and Moses, learning of the plot, fled to Midian. This narrative of Josephus' agrees with two haggadic accounts, according to which Moses fled from Egypt direct to Midian, not staying in Ethiopia at all. These accounts are as follows: (1) Moses lived for twenty years in Pharaoh's house; he then went to Midian, where he remained for sixty years, when, as a man of eighty, he undertook the mission of liberating Israel (Yalḳ., Shemot, 167). (2) Moses lived for forty years in Pharaoh's house; thence he went to Midian, where he stayed for forty years until his mission was entrusted to him (Gen. R. xi.; comp. Sifre, Deut. xxxiv. 7).

Relations with Jethro.

On his arrival at Midian Moses told his whole story to Jethro, who recognized him as the man destined to destroy the Egyptians. He therefore took Moses prisoner in order to deliver him to Pharaoh ("D. Y." *l.c.*). According to another legend, Jethro took him for an Ethiopian fugitive, and intended to deliver him to the Ethiopians ("S. Y." *l.c.*). He kept him prisoner for seven ("D. Y." *l.c.*) or ten ("S. Y." *l.c.*) years. Both of these legends are based on another legend according to which Moses was seventy-seven years of age when Jethro liberated him. According to the legend ("D. Y." *l.c.*) which says that he went to Nikanos' camp at the age of thirty, and ruled over Ethiopia for forty years, he was only seven years in Jethro's hands ($30 + 40 + 7 = 77$). According to the other legend ("S. Y." *l.c.*) he was eighteen years old when he fled from Egypt; he remained for nine years in the camp of Nikanos; and was king over Ethiopia for forty years. Hence he must have been Jethro's captive for ten years, or till his seventy-seventh year.

Moses was imprisoned in a deep dungeon in Jethro's house, and received as food only small portions of bread and water. He would have died of hunger had not Zipporah, to whom Moses had before his captivity made an offer of marriage by the well, devised a plan by which she no longer went out to pasture the sheep, but remained at home to attend to the household, being thereby enabled to supply Moses with food without her father's knowledge. After ten (or seven) years Zipporah reminded her father that he had at one time cast a man into the dungeon, who must have died long ago; but if he were still living he must be a just man whom God had kept alive by a miracle. Jethro went to the dungeon and called Moses, who answered immediately. As Jethro found Moses praying, he really believed that he had been saved by a miracle, and liberated him. Jethro had planted in his garden a marvelous rod, which had been created on the sixth day of the Creation, on Friday afternoon, and had been given to Adam. This curious rod had been handed down through Enoch, Shem, Abraham, Isaac, and Jacob to Joseph, at whose death it came into the possession of Pharaoh's court. Jethro, who saw it there, stole it and planted it in his garden. On the rod were engraved the name of God (Yhwh) and the initials of the ten plagues destined for Egypt. Jethro asked every one who wished to marry one of his daughters to pull up the rod; but no suitor had yet succeeded in doing so. Moses, on being set at liberty, walked in the garden, saw the rod, and read the inscription. He easily pulled it out of the ground and used it for a staff (see Aaron's Rod). Jethro thereby recognized Moses as the deliverer of Israel, and gave him the virtuous Zipporah as wife, together with much money ("S. Y.," "D. Y.," and "M. W." *l.c.*). Jethro stipulated that the first-born son of the marriage should adopt Jethro's pagan belief, while all the other children might be reared as Jews; and Moses agreed thereto (Mek., Yitro, 1 [ed. Weiss, p. 65b]).

The Circumcision of Gershom.

According to "M. W." *l.c.*, one-half of the children of this marriage were to belong to Judaism and one-half to paganism. When therefore his son Gershom—who subsequently became the father of Jonathan—was born, Moses, under his agreement with Jethro, could not circumcise him ("S. Y." *l.c.*). Moses, therefore, went with his wife and child (another version says that both of his sons were then already born) to Egypt. On the way he met Satan, or Mastema, as he is called in the Book of Jubilees (xlviii. 2), in the guise of a serpent, which proceeded to swallow Moses, and had ingested the upper part of his body, when he stopped. Zipporah seeing this, concluded that the serpent's action was due to the fact that her son had not been circumcised (Ned. 31b-32a; Ex. R. v.), whereupon she circumcised him and smeared some of the blood on Moses' feet. A voice ("bat ḳol") was then heard commanding the serpent to disgorge the half-swallowed Moses, which it immediately did. When Moses came into Egypt he met his old enemies Dathan and Abiram, and when they asked him what he was seeking in Egypt, he immediately returned to Midian ("M. W." *l.c.*).

As the shepherd of his father-in-law he drove his sheep far into the desert (Ex. iii. 1), in order to prevent the sheep from grazing in fields not belonging to Jethro (Ex. R. i. 3). Here God appeared to him and addressed him for seven consecutive days (*ib.* iii. 20). Moses, however, refused to listen, because he would not allow himself to be disturbed in the work for which he was paid. Then God caused the flaming bush to appear (Ex. iii. 2–3), in order to divert Moses' attention from his work. The under-shepherds with Moses saw nothing of the marvelous spectacle, which Moses alone beheld (Ex. R. ii. 8). Moses then interrupted his work, and stepped nearer the bush to investigate (*ib.* ii. 11). As Moses was at this time entirely inexperienced in prophecy, God, in calling him, imitated the voice of Amram, so as not to frighten him. Moses, who thought that his father, Amram, was appearing to him, said: "What does my father wish?" God answered: "I am the God of thy father" (Ex. iii. 6), and gave him the mission to save Israel (*ib.*).

At the Burning Bush.

Moses hesitated to accept the mission (comp. Ex. iii. 11) chiefly because he feared that his elder brother, Aaron, who until then had been the only prophet in Israel, might feel slighted if his younger brother became the savior of the people; whereupon God assured him that Aaron would be glad of it (Ex. R. iii. 21–22). According to another version (*ib.* xv. 15), Moses said to God: "Thou hast promised Jacob that Thou Thyself wouldest liberate Israel [comp. Gen. xlvi. 4], not appointing a mediator." God answered: "I myself will save them; but go thou first and announce to My children that I will do so." Moses consented, and went to his father-in-law, Jethro (Ex. iv. 18), to obtain permission to leave Midian (Ned. 65a; Ex. R. iv. 1–4), for he had promised not to leave Midian without his sanction. Moses departed with his wife and children, and met Aaron (comp. Ex. iv. 27), who told him it was not right to take them into Egypt, since the attempt was being made to lead the Israelites out of that country. He therefore sent his wife and children back to Midian ("S. Y." p. 123a; Mek., Yitro, 1 [ed. Weiss, p. 65b]). When they went to Pharaoh, Moses went ahead, Aaron following, because Moses was more highly regarded in Egypt (Ex. R. ix. 3); otherwise Aaron and Moses were equally prominent and respected (Mek., Bo, 1 [ed. Weiss, p. 1a]). At the entrance to the Egyptian royal palace were two leopards, which would not allow any one to approach unless their guards quieted them; but when Moses came they played with him and fawned upon him as if they were his dogs ("D. Y." *l.c.*; "S. Y." *l.c.*). According to another version, there were guards at every entrance. Gabriel, however, introduced Moses and Aaron into the interior of the palace without being seen (Yalḳ., Shemot, 175). As Moses' appearance before Pharaoh resulted only in increasing the tasks of the children of Israel (comp. Ex. v.), Moses returned to Midian; and, according to one version, he took his wife and children back at the same time (Ex. R. v. 23).

After staying six months in Midian he returned to Egypt (*ib.*), where he was subjected to many insults and injuries at the hands of Dathan and Abiram (*ib.* v. 24). This, together with the fear that he had aggravated the condition of the children of Israel, confused his mind so that he uttered disrespectful words to God (Ex. v. 22).

Before Pharaoh.

Justice ("Middat ha-Din") wished to punish him for this; but as God knew that Moses' sorrow for Israel had induced these words he allowed Mercy ("Middat ha-Raḥamim") to prevail (*ib.* vi. 1). As Moses feared that Middat ha-Din might prevent the redemption of Israel, since it was unworthy of being redeemed, God swore to him to redeem the people for Moses' sake (*ib.* vi. 3–5, xv. 4). Moses in treating with Pharaoh always showed to him the respect due to a king (*ib.* vii. 2). Moses was really the one selected to perform all the miracles; but as he himself was doubtful of his success (*ib.* vi. 12) some of them were assigned to Aaron (*ib.* 1). According to another version, Aaron and not Moses undertook to send the plagues and to perform all the miracles connected with the water and the dust. Because the water had saved Moses, and the dust had been useful to him in concealing the body of the Egyptian (*ib.* ii. 12), it was not fitting that they should be the instruments of evil in Moses' hand (*ib.* ix. 9, x. 5, xx. 1). When Moses announced the last plague, he would not state the exact time of its appearance, midnight, saying merely "ka-ḥaẓot" = "about midnight" (*ib.* xi. 4), because he thought the people might make a mistake in the time and would then call him a liar (Ber. 3b, 4a). On the night of the Exodus, when Moses had killed his paschal lamb, all the winds of the world were blowing through paradise, carrying away its perfumes and imparting them to Moses' lamb so that the odor of it could be detected at a distance of forty days (Ex. R. xix. 6). During this night all the first-born, including the female first-born, were killed, with the exception of Pharaoh's daughter Batya, who had adopted Moses. Although she was a first-born child, she was saved through Moses' prayer ("S. Y." p. 125b). During the Exodus while all the people thought only of taking the gold and silver of the Egyptians, Moses endeavored to carry away boards for use in the construction of the future Temple (comp. Gen. R. xciv. 4 and Jew. Encyc. vii. 24, *s.v.* Jacob) and to remove Joseph's coffin (Ex. R. xviii. 8). Serah, Asher's daughter, told Moses that the coffin had been lowered into the Nile; whereupon Moses went to the bank of the river and cried: "Come up, Joseph" (according to another version, he wrote the name of God on a slip of paper, which he threw into the Nile), when the coffin immediately rose to the surface (Soṭah 13a; Ex. R. xx. 17; "D. Y." *l.c.*; "S. Y." p. 126). Another legend says that Joseph's coffin was among the royal tombs, the Egyptians guarding it with dogs whose barking could be heard throughout Egypt; but Moses silenced the dogs and took the coffin out (Soṭah *l.c.*; Ex. R. *l.c.*; comp. Joseph in Rabbinical Literature).

At the Exodus.

On arriving at the Red Sea Moses said to God when commanded by Him to cleave the water: "Thou hast made it a law of nature that the sea shall never be dry," whereupon God replied that at the Creation He had made an agreement with the sea as to the separation of its waters at this time (Ex. R. xxi. 16; comp. "M. W." p. 38). When the Israelites saw Pharaoh and his army drown in the Red Sea (Ex. xiv. 30–31) they wished to return to Egypt and set up a kingdom there; but Moses prevented them, urging them on by force. He also removed the idols which the Israelites had brought with them from Egypt (Ex. R. xxiv. 2).

The giving of the tables of the Law and of the Torah in general to Moses is a favorite subject for legends. In contrast to the pithy sentence of R. Jose (Suk. 5a) to the effect that Moses never ascended into heaven, there are many haggadot which describe in detail how Moses made his ascension and received the Torah there. Moses went up in a cloud which entirely enveloped him (Yoma 4a). As he could not penetrate the cloud, God took hold of him and placed him within it (*ib.* 4b). When he reached heaven the angels asked God: "What does this man, born of woman, desire among us?" God replied that Moses had come to receive the Torah, whereupon the angels claimed that God ought to give the Torah to them and not to men. Then God told Moses to answer them. Moses was afraid that the angels might burn him with the breath of their mouths; but God told him to take hold of the throne of glory. Moses then proved to the angels that the Torah was not suited to them, since they had no passions to be subdued by it. The angels thereupon became very friendly with Moses, each one of them giving him something. The angel of death confided to him the fact that incense would prevent the plague (Shab. 88b–89a; Ex. R. xxviii.). Moses subsequently caused Aaron to employ this preventive (Num. xvii. 11–13). Moses, following the custom of the angels, ate nothing during his forty days' sojourn in heaven (B. M. 87b), feeding only on the splendor of the Shekinah. He distinguished day from night by the fact that God instructed him by day in the Scripture, and by night in the Mishnah (Ex. R. xlvii. 9). God taught him also everything which every student would discover in the course of time (*ib.* i.). When Moses first learned the Torah he soon forgot it; it was then bestowed upon him as a gift and he did not again forget it (Ned. 35a).

Receives the Torah.

The Torah was intended originally only for Moses and his descendants; but he was liberal enough to give it to the people of Israel, and God approved the gift (Ned. 38a). According to another version, God gave the Torah to the Israelites for Moses' sake (Ex. R. xlvii. 14). Moses' burnt tongue was healed when he received the Law (Deut. R. i. 1). As Moses was writing down the Torah, he, on reaching the passage "Let us make man" (Gen. i. 26), said to God, "Why dost thou give the Minim the opportunity of construing these words to mean a plurality of gods?" whereupon God replied: "Let those err that will" (Gen. R. viii. 7). When Moses saw God write the words "erek appayim" (= "long-suffering"; Ex. xxxiv. 6), and asked whether God was long-suffering toward the pious only, God answered, "Toward sinners also." When Moses said that sinners ought to perish, God answered, "You yourself will soon ask me to be long-suffering toward sinners" (Sanh. 111a). This happened soon after Israel had made the golden calf (*ib.*). Before Moses ascended to heaven he said that he would descend on the forenoon of the forty-first day. On that day Satan confused the world so that it appeared to be afternoon to the Israelites. Satan told them that Moses had died, and was thus prevented from punctually fulfilling his promise. He showed them a form resembling Moses suspended in the air, whereupon the people made the golden calf (Shab. 89a; Ex. R. lxi.). When, in consequence of this, Moses was obliged to descend from heaven (Ex. xxxii. 7), he saw the angels of destruction, who were ready to

Worship of the Golden Calf.

destroy him. He was afraid of them; for he had lost his power over the angels when the people made the golden calf. God, however, protected him (Ex. R. xli. 12). When Moses came down with the tables and saw the calf (Ex. xxxii. 15–20), he said to himself: "If I now give to the people the tables, on which the interdiction against idolatry is written (Ex. xx. 2–5), they will deserve death for having made and worshiped the golden calf." In compassion for the Israelites he broke the tables, in order that they might not be held responsible for having transgressed the command against idolatry (Ab. R. N. ii.). Moses now began to pray for the people, showing thereby his heroic, unselfish love for them. Gathering from the words "Let me" (Ex. xxxii. 10) that Israel's fate depended on him and his prayer, he began to defend them (Ber. 32a; Meg. 24a). He said that Israel, having been sojourning in Egypt, where idolatry flourished, had become accustomed to this kind of worship, and could not easily be brought to desist from it (Yalḳ., Ki Tissa, 397). Moreover, God Himself had afforded the people the means of making the golden calf, since he had given them much gold and silver (Ber. *l.c.*). Furthermore, God had not forbidden Israel to practise idolatry, for the singular and not the plural was used in Ex. xx. 2–5, referring, therefore, only to Moses (Ex. R. xlvii. 14).

Moses and Israel.

Moses refused God's offer to make him the ancestor of a great people (Ex. xxxii. 10), since he was afraid that it would be said that the leader of Israel had sought his own glory and advantage and not that of the people. He, in fact, delivered himself to death for the people (Ber. *l.c.*). For love of the Israelites he went so far as to count himself among the sinners (comp. Isa. liii. 12), saying to God: "This calf might be an assistant God and help in ruling the world." When God reproved him with having himself gone astray and with believing in the golden calf, he said: "Lord, why doth thy wrath wax hot against thy people" (Ex. xxxii. 11; Num. R. ii. 14; Deut. R. i. 2). Moses atoned for the sin of making the calf; he even atoned for all the sins of humanity down to his time, freeing men from their burden of sin (Yalḳ., Ki Tissa, 388, from the Tanna debe Eliyahu; this, as well as the interpretation of Isa. liii. as referring to Moses [Soṭah 14a], must be either ascribed to Christian influence or regarded as a polemic against the Christian interpretations referring to Jesus). Moses loved the people (Men. 65a, b), showing his affection on every occasion. During the battle with Amalek he sat on a stone, and not on a cushion which he could easily have procured, because, Israel being at that time in trouble, he intended to show thereby that he suffered with them (Ta'an. 11a). When he begged God, before his death, to recall the oath that he (Moses) should never enter Palestine, God replied, "If I recall this oath I will also recall the oath never to destroy Israel," whereupon Moses said: "Rather let Moses and a thousand like him perish than that one of the people of Israel should perish" (Midr. Peṭirat Mosheh, in Jellinek, "B. H." i. 121). Moses requested that the Shekinah might rest in Israel only in order that Israel might thereby be distinguished among all peoples (Ber. 7a); that if they sinned and were penitent, their intentional sins might be regarded merely as trespasses (Yoma 36b); and that when Israel should suffer under the yoke of the nations, God would protect the pious and the saints of Israel (B. B. 8a). All the injuries and slanders heaped upon Moses by the people did not lessen his love for them.

The words "They looked after Moses" (Ex. xxxiii. 8) are differently interpreted. According to one opinion the people praised Moses, saying: "Hail to the mother who has borne him; all the days of his life God speaks with him; and he is dedicated to the service of God." According to another opinion they reproached and reviled him: they accused him of committing adultery with another man's wife; and every man became jealous and forbade his wife to speak to Moses. They said: "See how fat and strong he has grown; he eats and drinks what belongs to the Jews, and everything that he has is taken from the people. Shall a man who has managed the building of the Tabernacle not become rich?" (Sanh. 110a; Ḳid. 33b; Ex. R. li. 4; Sheḳ. v. 13). Yet Moses was the most conscientious of superintendents (Ber. 44a), and although he had been given sole charge of the work, he always caused his accounts to be examined by others (Ex. R. li. 1). He was always among the workmen, showing them how to do the work.

In the Tabernacle.

When everything was prepared Moses set up the Tabernacle alone (Ex. R. lii. 3). He fastened the ceiling of the tent over it, as he was the only one able to do so, being ten ells tall (Shab. 92a). During the seven days of the dedication he took the Tabernacle apart every day and set it up again without any help. When all was completed he gave a detailed account of the various expenses (Ex. R. li. 4). During the seven days of the dedication, or, according to another account, during the forty years of the wandering in the desert, Moses officiated as high priest. He was also king during this entire period. When he demanded these two offices for his descendants God told him that the office of king was destined for David and his house, while the office of high priest was reserved for Aaron and his descendants (Ex. R. ii. 13; Lev. R. xi. 6; Zeb. 102a).

All the different cycles of legends agree in saying that Moses was very wealthy, probably on the basis of Num. xvi. 15 (comp. Ned. 35a, where this interpretation is regarded as uncertain); they differ, however, as to the source of his wealth. According to one, he derived it from the presents and treasures given to him by the Ethiopians when they took the crown away from him ("D. Y." *l.c.*). According to another, Jethro gave him a large sum of money as dowry when he married Zipporah ("M. W." *l.c.*). Still another story relates that Moses received a large part of the booty captured from Pharaoh and, later, from Sihon and Og (Lev. R. xxviii. 4). In contrast to these versions, according to which Moses gained his wealth by natural means, there are two other versions according to which Moses became wealthy by a miracle. One of these narratives says that Moses became rich through the breaking of the tables, which were made of sapphires (Ned. 35a); and the other that God showed him in his tent a pit filled with these precious stones (Yalḳ., Ki Tissa, 39b).

Personal Qualities.

Moses was also distinguished for his strength and beauty. He was, as stated above, ten ells tall and very powerful. In the battle against Og, Moses was the only one able to kill that king (Ber. 54b; see Og in Rabbinical Literature). His face was surrounded by a halo (comp. Ex. xxxiv. 29-35); this was given to him in reward for having hidden his face on first meeting God in the burning bush (*ib.* iii. 2-6; Ber. 7a), or he derived it from the cave in the cleft of the rock (comp. Ex. xxxiii. 22) or from the tables, which he grasped while God was holding one side and the angels the other. Another legend says that a drop of the marvelous ink with which he wrote down the Torah remained on the pen; and when he touched his head with the pen he received his halo (Ex. R. xlvii. 11).

Moses was called the "father of wisdom" on account of his great sagacity (Meg. 13a; Lev. R. i. 15). He possessed forty-nine of the fifty divisions of wisdom (R. H. 21b; Ned. 35a). The question why the pious sometimes have bad luck while the sinners are fortunate was solved for him (Ber. 7a). He wished to know also how good deeds are rewarded in the future world, but this was not revealed to him (Yalḳ., Ki Tissa, 395). Piety was not burdensome to him (Ber. 33b). His prayers were immediately answered (Gen. R. lx. 4). He was so prominent a figure that his authority was equal to that of an entire sanhedrin of seventy-one members (Sanh. 16b), or even of the whole of Israel (Mek., Beshallaḥ, Shir, 1 [ed. Weiss, p. 41a]).

His Prophetic Powers.

Aside from the Pentateuch, Moses wrote also the Book of Job and some Psalms. He also introduced many regulations and institutions (Shab. 30a; comp. Ber. 54; Ta'an. 27; Meg. 4; Yeb. 79; Mak. 24). On account of the excellence of his prophecy he is called "the father," "the head," "the master," and "the chosen of the Prophets" (Lev. R. i. 3; Esth. R. i.; Ex. R. xxi. 4; Gen. R. lxxvi. 1). While all the other prophets ceased to prophesy after a time, Moses continued to talk with God and to prophesy throughout his life (Ex. R. ii. 12); and while all the other prophets beheld their visions as through nine spectacles ("espaḳlarya") or through dim ones, Moses beheld his as through one clear, finely ground glass (Yeb. 49b; Lev. R. i. 14). Balaam surpassed him in prophecy in two respects: (1) Balaam always knew when God was about to speak with him, while Moses did not know beforehand when God would speak with him; and (2) Balaam could speak with God whenever he wished, which Moses could not do. According to another tradition (Num. R. xiv. 34), however, Moses also could speak with God as often as he wished. The fact that God would speak with him unawares induced Moses to give up domestic life, and to live separated from his wife (Shab. 87a).

Moses' modesty is illustrated by many fine examples in the Haggadah (comp. Num. xii. 3). When God pointed to R. Akiba and his scholarship, Moses said: "If Thou hast such a man, why dost Thou reveal the Torah through me?" (Men. 29b; see also Akiba). When Moses descended from heaven Satan came to ask him where the Torah was which God had given to him. Moses said: "Who am I? Am I worthy to receive the Torah from God?" When God asked him why he denied that the Torah had been given to him, he replied: "How can I claim anything which belongs to Thee and is Thy darling?" Then God said to him: "As thou art so modest and humble, the Torah shall be called after thee, the 'Torah of Moses'" (Shab. 89a; comp. Mal. iii. 22). Moses' modesty never allowed him to put himself forward (*e.g.*, in liberating Israel, in dividing the sea, and subsequently also in connection with the Tabernacle) until God said to him: "How long wilt thou count thyself so lowly? The time is ready for thee; thou art the man for it" (Lev. R. i. 15). When Moses had made a mistake, or had forgotten something, he was not ashamed to admit it (Zeb. 101a). In his prayers he always referred to the merits of others, although everything was granted to him on account of his own merit (Ber. 10b). Whenever the cup is handed to him during the banquet of the pious in the other world, that he may say grace over the meal, he declares: "I am not worthy to say grace, as I have not deserved to enter the land of Israel" (Pes. 119b). The fact that Moses, the foremost leader of Israel, who ceaselessly prayed for it and partook of its sorrows (Num. R. xviii. 5), and on whose account the manna was showered down from heaven and the protecting clouds and the marvelous well returned after the death of Aaron and Miriam (Ta'an. 9a), should not be allowed to share in Israel's joys and enter the promised land ("M. W." *l.c.*), was a problem that puzzled the Haggadah, for which it tried to find various explanations.

Can Not Enter the Promised Land.

Moses was anxious to enter the promised land solely because many of the commandments given by God could be observed only there, and he was desirous of fulfilling all the commandments. God, however, said that He looked upon Moses as having fulfilled all the commandments, and would therefore duly reward him therefor (Soṭah 14a). Moses prayed in vain to be permitted to go into the promised land if only for a little while; for God had decreed that he should not enter the country either alive or dead. According to one opinion, this decree was in punishment for the words addressed by him to God: "Wherefore hast thou so evil entreated this people?" (Ex. v. 22; Ex. R. v. 27). According to another version, this punishment was inflicted upon him for having once silently renounced his nationality. When Moses had helped the daughters of Jethro at the well, they took him home, letting him wait outside while they went into the house and told their father that an Egyptian had protected them (Ex. ii. 19). Moses, who overheard this conversation, did not correct them, concealing the fact that he was a Hebrew ("M. W." *l.c.*). There is still another explanation, to the effect that it would not have redounded to the glory of Moses if he who had led 600,000 persons out of Egypt had been the only one to enter Palestine, while the entire people were destined to die in the desert (comp. Num. xiv. 28–37). Again, Moses had to die with the generation which he took out of Egypt, in order that he might be able to lead them again in the future world (Num. R. xix. 6). Denying all these reasons, another explanation, based on Scripture, is that Moses and Aaron were not permitted to enter the promised land because they did not have the proper confidence in God in calling water from the rock (Num. xx. 12). Moses asked that this error should be noted down in the Torah (Num. xx. 12) in order that no other errors or faults should be ascribed to him (Num. R. *l.c.*). This story of his lack of true confidence in God when calling forth the water is elaborated with many details in the legends.

Moses Strikes the Rock.

Moses was careful not to provoke the people during the forty years of wandering in the desert, because God had sworn that none of the generation which had left Egypt should behold the promised land (Deut. i. 35). When he went to call forth the water he did not know exactly from which rock it would come. The people became impatient and said that there was no difference between the rocks, and that he ought to be able to call forth water from any one of them. Vexed, he replied, "Ye rebels!" (Num. xx. 10) or, according to the Midrash, "fools!" (מורים = μῶροι). God therefore said to him: "As thou art clever, thou shalt not enter the land together with fools." According to another legend, Moses became angry because some of the people said that, since he had been a herdsman with Jethro, he knew, like all herdsmen, where to find water in the desert, and that now he was merely trying to deceive the people and to make them believe that he had miraculously called water from the rock (Midr. Peṭirat Aharon, in Jellinek, *l.c.* i. 93 *et seq.*; Num. R. xix. 5; Yalḳ., Ḥuḳḳat, 763).

At Aaron's Death.

When Moses heard that Aaron also had to die he grieved and wept so much as to occasion his own death (Midr. Peṭirat Aharon, *l.c.*). This story, as well as the reference to his early death (Yoma 87a), was probably based on Deut. xxxiv. 7, according to which he retained all his faculties and his full strength down to his end; but they contradict the many other versions of his death (see below). When Moses took Aaron up the mountain where the latter was to die, and announced his death to him, he comforted him, saying: "You, my brother, will die and leave your office to your children; but when I die a stranger will inherit my office. When you die you will leave me to look after your burial; when I die I shall leave no brother, no sister, and no son to bury me" (Midr. Peṭirat Aharon, *l.c.*; Num. R. xix. 11; Yalḳ., Num. 763, 787)—for Moses' sons died before him (comp. the note in "Zayit Ra'anan" to Yalḳ., Num. 787). When Moses witnessed the quiet and peaceful death of Aaron he desired a similar death for himself (*ib.*). After Aaron's death Moses was accused by the people of having killed him through jealousy; but God cleared him from this suspicion by a miracle (Yalḳ., Num. 764).

When Moses was about to take vengeance on Midian before his death (comp. Num. xxxi.) he did not himself take part in the war, because he had at one time sojourned in Midian and had received benefits in that country (Num. R. xxii. 4). When Zimri brought the Midianitish woman Cozbi before Moses (Num. xxv. 6), asking that he might marry her, and Moses refused his request, Zimri reproached him with having himself married the Midianitish woman Zipporah (Sanh. 82a). Later, also, Moses was reproached for this marriage, the Rabbis saying that on account of it he became the ancestor of Jonathan, the priest of Micah's idol (Judges xviii. 30; B. B. 109b). God revealed to Moses before his death all the coming generations, their leaders and sages, as well as the saints and sinners. When Moses beheld Saul and his sons die by the sword he grieved that the first king of Israel should come to such a sad end (Lev. R. xxvi. 7). When God showed him hell he began to be afraid of it; but God promised him that he should not go thither (Num. R. xxiii. 4). He beheld paradise also. A detailed description of Moses' wanderings through paradise and hell is found in the apocalypse "Gedullat Mosheh" (Salonica, 1727; see Jew. Encyc. i. 679).

Death of Moses.

The different legends agree in saying that Moses died on Adar 7, the day on which he was born, at the age of 120 years (Meg. 13b; Mek., Beshallaḥ, Wayassa', 5 [ed. Weiss, p. 60a]; comp. Josephus, *l.c.* iv. 8, § 49), the angel of death not being present (B. B. 17a). But the earlier and the later legends differ considerably in the description and the details of this event. The earlier ones present the hero's death as a worthy close to his life. It takes place in a miraculous way; and the hero meets it quietly and resignedly. He ascends Mount Abarim accompanied by the elders of the people, and Joshua and Eleazar; and while he is talking with them a cloud suddenly surrounds him and he disappears. He was prompted by modesty to say in the Torah that he died a natural death, in order that people should not say that God had taken him alive into heaven on account of his piety (Josephus, *l.c.*). The event is described somewhat differently, but equally simply, in Sifre, Deut. 305 (ed. Friedmann, p. 129b). For the statement that Moses did not die at all, compare Soṭah 13b. "When the angel of death, being sent by God to Moses, appeared before him and said, 'Give me your soul,' Moses scolded him, saying, 'You have not even the right to appear where I am sitting; how dare you say to me that I shall give you my soul?' The angel of death took this answer back to God. And when God said to the angel the second time, 'Bring Me the soul of Moses,' he went to the place where Moses had been, but the latter had left. Then he went to the sea to look for Moses there. The sea said that it had not seen Moses since the time when he had led the children of Israel through it. Then he went to the mountains and valleys, which told him that God had concealed Moses, keeping him for the life in the future world, and no creature knew where he was."

This simple story of the old midrash follows the Bible closely, making the mountains and valleys the speakers because, according to Deut. xxxiv. 1–5, Moses died on the mountain and was buried in the valley. In the later legends the death of Moses is recounted more fantastically, with many marvelous details. But instead of the hero being glorified, as was certainly intended by these details, he is unconsciously lowered by some traits ascribed to him. He appears weak and fearsome, not displaying that grandeur of soul which he might reasonably have been expected to exhibit at his death.

Wishes to Avoid Death.

When God said to Moses that he must die Moses replied: "Must I die now, after all the trouble I have had with the people? I have beheld their sufferings; why should I not also behold their joys? Thou hast written in the Torah: 'At his day thou shalt give him his hire' [Deut. xxiv. 15]; why dost thou not give me the reward of my toil?" (Yalḳ., Deut. 940; Midr. Peṭirat Mosheh, in Jellinek, *l.c.* i. 115-129). God assured him that he should receive his reward in the future world. Moses then asked why he must die at all, whereupon God enumerated some of the sins for which he had deserved death, one of them being the murder of the Egyptian (Ex. ii. 12; Midr. Peṭirat Mosheh, *l.c.*). According to another version, Moses had to die so that he might not be taken for a god (*ib.*). Moses then began to become excited (Yalḳ., Wa'ethanan, 814), saying he would live like the beasts of the field and the birds, which get their daily food only for the sake of remaining alive (Yalḳ., Deut. 940). He desired to renounce the entry into the promised land and remain with the tribes of Reuben and Gad in the country east of the Jordan, if only he might remain alive. God said that this could not be done, since the people would leave Joshua and return to him (Midr. Peṭirat Mosheh, *l.c.*). Moses then begged that one of his children or one of the children of his brother Aaron might succeed him (*ib.* and Num. R. xxi. 15). God answered that his children had not devoted themselves to the Law, whereas Joshua had served Moses faithfully and had learned from him; he therefore deserved to succeed his teacher (*ib.*). Then Moses said: "Perhaps I must die only because the time has come for Joshua to enter upon his office as the leader of Israel. If Joshua shall now become the leader, I will treat him as my teacher and will serve him, if only I may stay alive." Moses then began to serve Joshua and give him the honor due to a master from his pupil. He continued to do this for thirty-seven days, from the first of Shebaṭ to the seventh of Adar. On the latter day he conducted Joshua to the tent of the assembly. But when he saw Joshua go in while he himself had to remain outside, he became jealous, and said that it was a hundred times better to die than to suffer once such pangs of jealousy. Then the treasures of wisdom were taken away from Moses and given to Joshua (comp. Soṭah 13b). A voice ("bat ḳol") was heard to say, "Learn from Joshua!" Joshua delivered a speech of which Moses understood nothing. Then, when the people asked that Moses should complete the Torah, he replied, "I do not know how to answer you," and tottered and fell. He then said: "Lord of the world, until now I desired to live; but now I am willing to die." As the angel of death was afraid to take his soul, God Himself, accompanied by Gabriel, Michael, and Zagziel, the former teacher of Moses, descended to get it. Moses blessed the people, begged their forgiveness for any injuries he might have done them, and took leave of them with the assurance that he would see them again at the resurrection of the dead. Gabriel arranged the couch, Michael spread a silken cover over it, and Zagziel put a silken pillow under Moses' head. At God's command Moses crossed his hands over his breast and closed his eyes, and God took his soul away with a kiss. Then heaven and earth and the starry world began to weep for Moses (Midr. Peṭirat Mosheh, *l.c.*; Yalḳ., Deut. 940; Deut. R. xi. 6). Although Moses died in the territory of the tribe of Reuben, he was buried in that of Gad at a spot four miles distant from the place of his death. He was carried this distance by the Shekinah, while the angels said to him that he had practised God's justice (Deut. xxxiii. 22). At the same time the bat ḳol cried out in the camp of the people: "Moses, the great teacher of Israel, is dead!" (Soṭah 13b).

God Himself buried Moses (Soṭah 14a; Sanh. 39a) in a grave which had been prepared for him in the dusk of Friday, the sixth day of the Creation (Pes. 54a). This tomb is opposite Beth-peor (Deut. xxxiv. 6), in atonement for the sin which Israel committed with the idol Peor (Soṭah 14a). Yet it can not be discovered; for to a person standing on the mountain it seems to be in the valley; and if one goes down into the valley, it appears to be on the mountain (*ib.*).

W. B. J. Z. L.

——**Critical View**: In 1753 Jean Astruc, a French physician, published at Brussels a little book in which he advanced the theory that Moses had employed certain documents in composing the Book of Genesis. This work was thought by its author to establish the Mosaic authorship of Genesis upon a more secure basis, but it contained the key which, in the hands of a long line of critics, has led to the modern view that the Pentateuch originated from four great documents, all of which were written some centuries after Moses (see PENTATEUCH, CRITICAL VIEW). The oldest of these documents, known as J or the Jahvist, contains in its present state no account of the early life of Moses, but presents him first as a fugitive in the land of Midian. Nearly all the after-events of the life of Moses, enumerated above, are, however, given by J, who has a definite and interesting point of view.

Moses in the Jahvist.

Critics differ as to whether Aaron had any place in the original narrative of J or not, Dillmann and Bacon assigning to him an important rôle, while Wellhausen, Stade, Carpenter, and Harford-Battersby hold that such passages as Ex. iv. 13-14 are later interpolations. Be this as it may, J represents Moses as holding the unique position of importance. For example, in J's description of the plagues he pictures Moses as announcing the plague; then he tells how YHWH sent it, usually through some natural agency (comp. Ex. viii. 20-24, the flies; x. 13, 19, the locusts). Similarly, J tells that YHWH "caused the sea to go back by a strong east wind all the night, and made the sea dry land" (Ex. xiv. 21). Thus he explains the passage of the Red Sea.

It is J who represents Moses as alone enjoying the privilege of intercourse with Yhwh face to face. He gives the account of the burning bush (Ex. iii. 2); he relates that Moses, Aaron, Nadab, and Abihu, with seventy of the elders of Israel, went up into the mountain, and that Aaron and the seventy beheld Yhwh from afar off and ate and drank in His presence, but that Moses alone went near unto Yhwh (Ex. xxiv. 1-2, 9-11). In Ex. xxxiv. 5 Yhwh descended in a cloud and stood to talk with Moses. In J the basis of Yhwh's covenant are the ten "words" contained in Ex. xxxiv. J, too, in Num. xiv. 11-17, 19-24 presents one of the most noble pictures of Moses. Yhwh was angry, and declared that He would destroy Israel and make of Moses a great nation, but the unselfish leader pleaded against his own interests for the forgiveness of the nation which had so often thwarted him, and the prayer prevailed.

Moses in the Elohist.

The second prophetic document in point of age, known as E or the Elohist, contains the account of Moses' birth and exposure on the Nile, together with the incidents which led to his flight to Midian. Aaron and Miriam also played a part in the original E narrative. E gives especial attention to the part of Jethro in initiating Moses into the worship of Yhwh and in the organization of legal procedure (Ex. xviii. 12 *et seq.*). According to E, before the Exodus the Hebrews dwelt in the midst of the Egyptians (not in Goshen, as in J); and E asserts that on the advice of Moses the Hebrews borrowed freely of the Egyptians just before leaving. E pictures Moses as raising the fateful rod when he would have any plague come, at which sign the plague came. At the Red Sea also Moses lifted this rod and the waters parted. In the E narrative Moses had a "tent of meeting" pitched at a distance from the camp, to which he resorted, accompanied only by Joshua, his minister, and there he talked with Yhwh face to face (Ex. xxxiii. 8-11). E makes the basis of the covenant which Moses mediated to be the code in Ex. xx. 24-xxiii. 19. This covenant, however, was not communicated at the tent of meeting, but on the top of the sacred mountain, which E calls "Horeb" and J calls "Sinai." E's narrative contains the chief events of the life of Moses already given. His portrait is dignified and noble, though lacking in the touches of highest heroism which make the picture of J superb.

In the Priestly Code.

The writer of the Priestly Code (P), like the two older prophetic writers, includes in his account the chief events in the life of Moses, but in accord with his usual habit tells these events in a few chronicle-like words in order to make them the setting of his history of the sacred institutions. P declares that Amram was the father of Moses, and Jochebed his mother (Ex. vi. 20), and gives to Aaron a prominence much greater than in the older narratives. Moses is a god to Pharaoh, and Aaron is Moses' prophet (Ex. vii. 1). In accord with this view, in P's account of the Egyptian plagues Moses communicates in each case a command to Aaron, who then stretches out the sacred rod to invoke the affliction. Thus Aaron is associated with Moses at almost every point. P increases everywhere the miraculous element. In his account the simple driving back of the waters of the Red Sea by the east wind becomes an astounding miracle (comp. Ex. xiv. 22). P traces to Moses the sacred institutions; the Levitical law was communicated by Yhwh to Moses; Moses received on the mount the pattern of the Tabernacle, which was constructed under his direction; even the duties of the Levites were arranged by him (see Levites, Critical View).

The Deuteronomist (D) adds nothing to the knowledge of the character of Moses. The account of the second giving of the Law in Moab, and various notes which expound and interpret the older narratives, constitute the whole Pentateuchal product of this writer.

Moses and Sargon.

The cuneiform library of Assurbanipal has furnished a legend of the birth of Sargon of Agade (a Babylonian king who, according to Nabonidos, ruled about 3800 B.C.) which is strikingly parallel to the story of the secret birth of Moses and of his exposure on the Nile. The legend runs:

> "Sargon, the powerful king, King of Agade am I. My mother was of low degree; my father I did not know. The brother of my father dwelt in the mountain. My city was Azupirani, which is situated on the bank of the Euphrates. My humble mother conceived me; in secret she bore me. She placed me in a boat of reeds; with bitumen my door she closed. She entrusted me to the river, which did not overwhelm me. The river bore me along; to Akki the irrigator it carried me. Akki the irrigator in goodness . . . brought me to land. Akki the irrigator as his son brought me up. Akki the irrigator his gardener appointed me. While I was gardener, Ishtar loved me . . . four years I ruled the kingdom."

The parallelism between this narrative and the story of the exposure of Moses is thought by many scholars to be too close to be accidental.

Name.

The name משֶׁה is explained in Ex. ii. 12 (E) as though it were of Hebrew origin, and from מָשָׁה ("to draw out"). If this were its real etymology, the name would mean "deliverer," "savior" (comp. Ps. xviii. 17, Hebr.). As an Egyptian princess could not have spoken Hebrew, this etymology has been generally abandoned. A second one dates from the time of Josephus ("Ant." ii. 9, § 6; "Contra Ap." i., § 31), and is built on the Greek form of the name Μωυσῆς. This, Josephus claims, is derived from Egyptian "mo" (water) and "uses" (saved)—a theory to which Jablonski gave a quasi-scientific character by comparing the Coptic "mo" (water) and "ushe" (rescued). An Egyptian name with such a meaning would, however, be formed differently (see "Z. D. M. G." xxv. 141). The etymology now generally received regards it as from the Egyptian "mesh" (child), often used as a part of a theophorous name. This view was suggested by Lepsius, and has been accepted by Ebers, Dillmann, Gesenius, and Buhl, by Briggs, Brown, and Driver in their lexicon, and by others. Guthe ("Gesch. des Volkes Israel," p. 20) also regards it as a fragment of a theophorous name. W. Max Müller has objected that the vowel in "mesh" is short, while that in "Moses" is long, and that the sibilants are not those which the philological law would require. Accordingly Cheyne ("Encyc. Bibl.") proposes a Semitic origin, regarding the name as that of a North-Arabian tribe. One is inclined to return to the Biblical account and accept the etymology of E. If it may be supposed that the part of the narrative which attributes the naming to Pharaoh's daughter is inaccurate, the name may well be good Semitic, meaning "deliverer." Possibly it was not a name given in infancy, but an epithet which came to him as the result of his work.

Founder of the Israelitish Nation.

It is clear from the different representations of three of the great Pentateuchal documents that some allowance must be made for traditional accretion in the narratives of the life of Moses. But modern scholars with much unanimity of opinion regard Moses as a great historical character, the emancipator of Israel, the mediator of the covenant with YHWH, and the real founder of the Israelitish nation. Though few of the laws can be traced back to him, it is believed that he gave to Israel, by his covenant with YHWH, and by his legal decisions at Kadesh, the beginnings of religious law, and so became the founder of the legal system which prophets and priests developed as time passed on. It is true that Winckler ("Gesch. Israels," ii. 86 *et seq.*, Leipsic, 1900) regards Moses as a YHWH-Tammuz myth, that Cheyne ("Encyc. Bibl.") regards him as a personified clan, and that two other scholars, Renan ("Hist. of the People of Israel," i. 135 *et seq.*) and Stade ("Gesch. des Volkes Israel," pp. 129 *et seq.*), regard his historicity as possible only. The great majority of modern scholars, however, though differing in details, hold not only to the reality of Moses as a historical character, but to the reality of his magnificent work as stated. This is the position of Wellhausen ("I. J. G." pp. 13 *et seq.*), W. R. Smith ("Old Test. in the Jewish Church," 2d ed., pp. 333 *et seq.*), Kittel ("Hist. of the Hebrews," i. 238 *et seq.*), Cornill ("Hist. of the People of Israel," pp. 41 *et seq.*), Budde ("Religion of Israel to the Exile," pp. 12 *et seq.*), Guthe ("Gesch. des Volkes Israel," pp. 19 *et seq.*), A. B. Davidson ("Theology of the Old Test." p. 110), McCurdy ("History, Prophecy, and the Monuments," ii. 92 *et seq.*), Kent ("Hist. of the Hebrew People," i. 36 *et seq.*), Barton ("Sketch of Semitic Origins," pp. 272, 291 *et seq.*), J. P. Peters ("The Old Test. and the New Scholarship," pp. 116 *et seq.*, and "The Religion of Moses," in "Jour. Bib. Lit." 1901, xx. 101 *et seq.*), Paton ("Early Hist. of Syria and Palestine," pp. 137 *et seq.*), and H. P. Smith ("Old Test. History," pp. 55-65). Such a consensus of opinion is significant. See PENTATEUCH.

J. G. A. B.

——**In Hellenistic Literature:** While the Pentateuch represents Moses as the greatest of all prophets, to whom the Lord made Himself known face to face (Deut. xxxiv. 10; comp. Num. xii. 7), and who, when descending Mount Sinai, had a halo about his head which so filled the people with awe that they could not look at him (Ex. xxxiv. 29), yet there is no attempt made to lift him above the ordinary man in his nature. He lived for forty days and forty nights on the mount without eating and drinking (Deut. ix. 9), but this was owing to the power God lent him while he received the Law; he died and was buried like any other mortal (*ib.* xxxiv. 5-6). Owing to the contact of the Jews with the Greeks in Alexandria, Moses was made the subject of many legends, and in many respects lifted to supernatural heights.

Ben Sira was probably the first to compare him with the angels—a suggestion from Ex. xxxiv. 29 (Ecclus. xlv. 2; the Hebrew text reads "ke-elohim," while the Greek reads ἄγιοι = "saints"). Especially favorable to the accretion of legends or fictions around the life of Moses was the fact that he was born in Egypt and brought up by the daughter of the king. This suggested that "he was learned in all the wisdom of the Egyptians" (Acts vii. 22). But the Jewish men of letters who lived in Alexandria were by no means satisfied with the idea that Moses acquired the wisdom of the Egyptians; they claimed for him the merit of having given to Egypt, Phenicia, and Hellas all their culture. He taught the Jews the letters, and they then became the teachers of the Phenicians and, indirectly, of the Greeks, says Eupolemus (Eusebius, "Præparatio Evangelica," ix. 26). Artapanus, in his history of the Jews, went so far as to identify Moses with Tot-Hermes (the Egyptian messenger and scribe of the gods, who invented the letters, the various arts of peace and of war, as well as philosophy), and with the Greek Musæus, "the teacher of Orpheus." He even ascribed to him the division of the land into its thirty-six districts, with their various forms of worship. As the foster-mother of Moses, Artapanus names Merris, the wife of Chenephres, King of Upper Egypt; being childless, she pretended to have given birth to him and brought him up as her own child.

"Jealousy of Moses' excellent qualities induced Chenephres to send him with unskilled troops on a military expedition to Ethiopia, where he won great victories. After having built the city of Hermopolis, he taught the people the value of the ibis as a protection against the serpents, making the bird the sacred guardian spirit of the city; then he introduced circumcision. After his return to Memphis, Moses taught the people the value of oxen for agriculture, and the consecration of the same by Moses gave rise to the cult of Apis. Finally, after having escaped another plot by killing the assailant sent by the king, Moses fled to Arabia, where he married the daughter of Raguel, the ruler of the district. Chenephres in the meantime died from elephantiasis [comp. Ex. R. i. and Targ. Yer. to Ex. ii. 23]—a disease with which he was the first to be afflicted—because he had ordered that the Jews should wear garments that would distinguish them from the Egyptians and thereby expose them to maltreatment [this is characteristic of the age in which it was written]. The sufferings of Israel then caused God to appear to Moses in a flame bursting forth from the earth [not from the bush !], and to tell him to march against Egypt for the rescue of his people. Accordingly he went to Egypt to deliberate with his brother Aaron about the plan of warfare, but was put into prison. At night, however, the doors of the prison opened of their own accord, while the guards died or fell asleep. Going to the royal palace and finding the doors open there and the guards sunk in sleep, he went straight to the king, and when scoffingly asked by the latter for the name of the God who sent him, he whispered the Ineffable Name into his ear, whereupon the king became speechless and as one dead. Then Moses wrote the name upon a tablet and sealed it up, and a priest who made sport of it died in convulsions. After this Moses performed all the wonders, striking land and people with plagues until the king let the Jews go. In remembrance of the rod with which Moses performed his miracles every Isis temple in Egypt has preserved a rod—Isis symbolizing the earth which Moses struck with his rod" (Eusebius, *l.c.* ix. 27).

The record closes with a description of the personality of Moses: "He was eighty-nine years old when he delivered the Jews; tall and ruddy, with long white hair, and dignified."

Fantastic and grotesque as these stories are, they are scarcely inventions of Artapanus only. Long contact of the Jews of Alexandria with Egyptian men of letters in a time of syncretism, when all mythology was being submitted to a rationalizing process, naturally produced such fables (see Freudenthal, "Hellenistische Studien," 1875, pp. 153–174), and they have found a place in the Palestinian as well as in the Hellenistic haggadah, in Josephus, Philo ("De Vita Moysis"), and the Alexandrian dramatist Ezekiel (Eusebius, *l.c.* ix. 28), as well as in the Midrash (Ex. R. i.–ii.; Tan., Shemot), the Targum, and the "Sefer ha-Yashar," or the older "Chronicles of Jerahmeel" (xliv.–l.).

Most elaborate is the haggadah from which Josephus drew his story ("Ant." ii. 9, § 2–ii. 10, § 2):

> "Egyptian priests skilled in prophesying foretold the birth of a Hebrew who would bring misfortune on Egypt, and thus caused Pharaoh's edict to have every new-born male child drowned in the river" (comp. Sanh. 101b; Ex. R. i.; Targ. Yer. to Ex. i. 14; see JANNES AND JAMBRES). "Amram in his distress at the fate of every new-born child prays to God and receives a revelation" (see AMRAM; MIRIAM). "Thermutis was the name of the princess who saw Moses in the water-cradle and conceived a love for him on account of his striking beauty. The child, however, refused to suckle from any other breast but that of his mother." "Moses excelled all by his tall stature and beauty of countenance as well as by his quickness of apprehension." "Thermutis, being without child, brought him up as her own son, and one day when she presented him to her father as her own child, and heir to the throne—a gift she had received from the river-god—Pharaoh took the child on his lap and placed his diadem upon its head; whereupon it cast it down on the ground and trampled upon it. This was taken as an evil omen by the king, and the priestly soothsayer, finding Moses to be the one who would bring upon the kingdom the misfortune predicted for it, wished to slay him, but Thermutis succeeded in saving his life" (comp. Ezekiel in Eusebius, *l.c.* ix. 29; "Chronicles of Jerahmeel," xliv. 8; Yalḳ. i. 166). "An attack on Egypt by the Ethiopians caused all to look to Moses for aid, and the king asked his daughter to permit him to go forth as general of an army to Ethiopia. Moses took the short road along the desert, deemed impassable on account of its many flying serpents ('serafim'), and provided himself with numerous baskets filled with ibises, the destroyers of serpents, by the help of which he removed the dangers of the desert. He thus took the Ethiopians by surprise and defeated them, driving them back to Merve, a fortified city. While he was besieging the city, Therbis, the daughter of the king, saw him upon the walls, fell in love with him, and proposed to him to become his wife. He accepted the offer under the condition that the city should *surrender to him; finally he married her*" (comp. "Chronicles of Jerahmeel," xlv.–xlvi.; Yalḳ. i. 168).

This is obviously a midrashic tale connected with Num. xii. 1, but disavowed at a later stage (see Sifre, Num. 99, and Targ. *ad loc.*).

Philo also shows familiarity with these legends; he refers to the beauty of the babe Moses (*l.c.* i. 3) and mentions the fact that the princess, being childless, contrived to make Moses appear as her own child (i. 4–5). Moses' education in science, art, and philosophy, however, is ascribed to Egyptian masters (i. 6); he was grieved by the sufferings of his Hebrew brethren, many of whom died an untimely death and did not have even seemly burial (i. 7); his prophetic powers were attested at the Red Sea when the Egyptian dead were cast up by the waves and were actually seen by the Israelites, as Moses had announced (iii. 34, with reference to Ex. xiv. 13, 30).

The end of the great lawgiver especially was surrounded with legends. "While, after having taken leave of the people, he was going to embrace Eleazar and Joshua on Mount Nebo, a cloud suddenly stood over him, and he disappeared, though he wrote in Scripture that he died, which was done from fear that people might say that because of his extraordinary virtue he had been turned into a divinity" ("Ant." iv. 8, § 48). Philo says: "He was entombed not by mortal hands, but by immortal powers, so that he was not placed in the tomb of his forefathers, having obtained a peculiar memorial [*i.e.*, grave] which no man ever saw" ("De Vita Moysis," iii. 39). Later on, the belief became current that Moses did not die, but was taken up to heaven like Elijah. This seems to have been the chief content of the apocryphon entitled "Assumptio Moysis," preserved only in fragmentary form (comp. Charles, "The Assumption of Moses," 1897, Introduction; Deut. R. xi.; Jellinek, "B. H." i. 115–129, vi. 71–78; M. R. James, "Apocrypha Anecdota," pp. 166–173, Cambridge, 1893).

Moses' Pre-existence.

No sooner was the view maintained that Moses was translated to heaven than the idea was suggested that his soul was different from that of other men. Like the Messiah, he is said to have been preexistent; he is thus represented in "Assumptio Moysis" (i. 12–14); so too "He was prepared before the foundation of the world to be the mediator of God's covenant, and as he was Israel's intercessor with God during life [xi. 11, 17], so is he to be the intercessor in all the future." While his death was an ordinary one (i. 15, x. 14), "no place received his body"; "his sepulcher is from the rising of the sun to the setting thereof, and from the south to the confines of the north; all the world is his sepulcher" (xi. 5–8). Philo also calls Moses "the mediator and reconciler of the world" (*ib.* iii. 19). Especially in Essene circles was Moses apotheosized: "Next to God," says Josephus ("B. J." ii. 8, § 9), "they honor the name of their legislator, and if any one blasphemes him he meets with capital punishment" (comp. "Ant." iii. 15, § 3). Against such excessive adoration of a human being a reaction set in among the Rabbis, who declared that no man ever ascended to heaven (Suk. 5a).

MOSES, ASSUMPTION OF. See APOCALYPTIC LITERATURE.

MOSES, BLESSING OF.—Biblical Data: Name given to the chapter in Deuteronomy (xxxiii.) containing the prophetic utterances of Moses concerning the destiny of the twelve tribes, which he had led to the boundary of Palestine. Moses begins with praise of YHWH, who had revealed Himself to His beloved nation, and then passes on to the blessing of the different tribes. He mentions first the tribes of the south, beginning with Reuben and Judah, and then those of the north, Dan, Naphtali, and Asher.

In regard to Reuben there is only a prayer: "Let Reuben live, and not die; and let not his men be few" (verse 6). Simeon seems to be omitted, but this is explained by Josh. xix. 1: "Their [the children of Simeon] inheritance was within the inheritance of the children of Judah." For Judah, Moses prays that the Lord may hear his voice, and aid him against his enemies (verse 7). Next comes a lengthy laudation of Levi. After a reference to himself with the words "Who said unto his father and to his mother, I have not seen him" (comp. Ex. xxxii. 26-30), Moses declares that this tribe shall be the teachers of the Law and the priestly representatives of Israel before Yhwh. Benjamin is next blessed as the beloved of Yhwh, "whom the Lord shall cover . . . all the day long" (verse 12). By far the greatest attention is given to the tribe of Joseph; its land shall be enriched with all blessings, and it shall enjoy "the precious things of heaven" as well as the good-will of him that dwelleth "in the bush"; its blessing concludes with a comparison of its strength to the strength of the ox and of the horns of the "re'em" (verses 13-17, Hebr.; comp. Josh. xviii.). The Mount of Tabor and the sandy shore and seacoast figure forth the happiness of the tribes of Issachar and Zebulun (verses 18-19). Gad is as strong as a lion; he selected the land which was to be the last home of the legislator of Israel (verses 20-21; comp. Num. xxxii.).

The prophet then mentions the northern and the last three tribes of Israel. Dan is the lion which leaps from Bashan (verse 22; see Judges xviii. 1-3, 27, 29; Josh. xix. 47-48). Naphtali, whose possessions are to the west and the south, is filled with the blessing of the Lord (comp. Josh. xix. 32-39). Last of all comes Asher, who will "dip his foot in oil" and "whose shoes are of iron and brass" (verses 24-25). Here the prophet returns to the opening words of the blessing, praising Yhwh and proclaiming the glory and honor of Israel.

J. S. O.

The Work of Various Authors.

——**Critical View:** The blessing of Moses, like Jacob's blessing, contains only a few benedictions, most of the verses describing the condition of the tribes at the time of the author. Like the text of Jacob's blessing, the text of these verses is not intact: the beginning (verses 2 and 3) has suffered much mutilation; and even with the help of the versions it is impossible to fill the gap. Perhaps the introduction and the conclusion were not written by the author of the blessing itself. Steuernagel, in his commentary on Deuteronomy, points out that the transition from verse 5 to verse 6 and from verse 25 to verse 26 is very abrupt, and that the contents of the introduction and the conclusion are of an entirely different nature from that of the other verses. Verses 26 *et seq.* seem to connect with verse 5; and the assumption is natural that the benedictory verses were later insertions into the psalm. Verses 9 and 10 presumably were also the work of a later author.

At all events there can be no doubt that originally these verses were not components of the Deuteronomic source. It is more probable that the Elohist embodied them in his work. A corroborative fact is that the blessing unquestionably originated in the Northern Kingdom: to this verses 7 and 17 bear testimony. In the latter, Ephraim is evidently considered to have produced the line of kings; and in the former, the testimony of which is more valuable, the wish is expressed not that the remaining tribes return to Judah, but that the latter return to Israel. Though verse 7 presupposes the separation of the two kingdoms, with a time of distress for Judah, it does not provide the means for a determination of its exact date.

It is difficult to establish the connection of the blessing of Moses with that of Jacob. Most authorities maintain that the former depended directly upon the latter; and their chief argument is based on the passage on Joseph, part of which is contained also in Jacob's blessing. But there can hardly be a doubt that the passage on Joseph in Jacob's blessing was amplified from the material contained in the blessing of Moses. Otherwise a similar argument might be based upon the same arrangement in each blessing of the tribes of Zebulun and Issachar, and upon other points of agreement which, however, indicate a similarity of the matter rather than any direct connection. At all events, there are striking differences between the two blessings.

Compared with Jacob's Blessing.

However that may be, it is certain that the blessing of Moses is of later date than the kernel of Jacob's blessing. While in the latter Simeon and Levi (comp. Gen. xxxiv.) are censured on account of their sin and are threatened with dispersion in Israel (Gen. xlix. 5-7), the blessing of Moses does not mention Simeon at all; and in it Levi appears as the tribe of priests, although not yet assured of the sacerdotal office, nor respected for holding it. Rather he meets with persecutions, and these probably from the persons who dispute his right to the priesthood (Deut. xxxiii. 8 *et seq.*). While in Jacob's blessing Reuben is threatened with the loss of his birthright, the wish is expressed in the other blessing: "May Reuben live, and not die; and may not his men be few." This is a clear indication that Reuben before this time had sunk into a state of absolute insignificance. And while again the passage on Joseph in the one designates a period in which this tribe successfully defended itself against its enemies, the corresponding passage in the other (Gen. xlix. 22 *et seq.*) points to a time when Ephraim maintained his power undiminished and defeated his enemies on all sides: "His [Joseph's] glory is like the firstling of his bullock, and his horns are like the horns of unicorns: with them he shall push the people together to the ends of the earth" (Deut. xxxiii. 17). This verse certainly refers to a later time than the Syrian wars under Ahab. It more probably refers to the time of Jeroboam II., who was more successful than any of his predecessors in defeating Israel's enemies. It is likely that the passage on Gad alludes to the same period, in which this tribe successfully withstood the Syrians.

Dillmann's statement (in his Commentary on Numbers and Deuteronomy, p. 415) that the blessing of Judah points to the period immediately after the separation of the two kingdoms is hardly correct. He bases his opinion on the fact that the praise of Levi and Benjamin, together with what is said about Judah and Joseph, could apply only to this period. Steuernagel suggests that the allusion might be to the victory of the Edomites (II Kings xiv. 7), which perhaps put a stop to the distress caused Judah by Edom. Perhaps, also, the allusion might be to the situation described in II Kings xii. 18 *et seq.* At all events, without stretching a point, such passages as those on Benjamin and Levi may be assumed to refer to the beginning of the eighth century B.C., and the passage on Joseph hardly presupposes the period of Jeroboam I. Hence Reuss ("Gesch. der Heiligen Schriften des Alten Testaments," p. 213), Cornill ("Einleitung in das Alte Testament," p. 72), and others are justified in considering the blessing of Moses to have originated in the eighth century B.C. In any case, none of the verses indicates the authorship of Moses; this tradition is not implied in any feature of the blessing itself, and is merely referred to in the introductory and closing verses (xxxi. 30, xxxii. 44a), which are intended to furnish a setting to the poem and to establish the connection between its various sections.

Probable Date of Origin.

MOSES, CHILDREN OF (בני משה; Arabic, "Banu Musa"): The legendary descendants of Moses who dwell beyond the mythical River SAMBAṬION. The pathetic conception of the Jewish exiles weeping by the waters of Babylon, and refusing to sing the songs of Zion in a strange land, as pictured in Ps. cxxxvii., has been developed in Jewish legend as follows: Resting for the first time on their arrival at Babylon, part of the Jewish exiles began to eat and drink, while others wept and mourned. King Nebuchadnezzar thereupon asked the latter: "Why do you sit here and lament?" and, calling the tribe of Levi (the children of Moses), he said: "Get ye ready; while we eat and drink, ye shall play upon your harps before us, as ye have played before your God in the Temple." Then they looked at one another, thinking: "Is it not enough that by our sins we have caused His sanctuary to be destroyed, but shall we now play upon our harps before this dwarf?" Then they hung their harps upon the willows, bit off the tips of their fingers, and, pointing to their hands, said: "We lost our fingers when we were in chains; how can we play?" It is to this that the Psalmist refers in Ps. cxxxvii. 1-4. In recognition of their self-abnegation God swore: "If I forget thee, O Jerusalem, let my right hand forget her cunning" (Pesiḳ. R. on Isa. xlix. 14 [ed. Friedmann, p. 144]; Midr. Teh. to Ps. cxxxvii. [ed. Buber, p. 524, Wilna, 1891]).

In Babylon.

Since the descendants of Moses are called Levites as early as I Chron. xxiii. 14, and since, furthermore, according to Ex. xxxiv. 10, God promised Moses to do "marvels" unto him, it is easy to see how the "children of Moses" ("Bene Mosheh") were identified with the Levites who are glorified in the midrash cited above and how the history of these Levites appeared henceforth in the best-known traditions as the early accounts of the Bene Mosheh. This promise given to Moses is glossed as follows in the so-called Targum of Jonathan: "From thee shall proceed hosts of the pious, and I shall exalt them above all thy people when they shall go in captivity to the waters of Babylon; I will remove them thence and make them to dwell beyond the River Sambaṭion" (comp. also Num. R. xli.).

Beyond Sambaṭion.

Poetic justice demanded for the heroic past of the Bene Mosheh and for the merits of their great ancestor Moses a larger recompense than the mere promise of God not to forget Jerusalem and to bring them home with the other exiles, as the two midrashim state. Hence was evolved the gradual tendency to represent the life and position of the Bene Mosheh as perfect, and to localize their dwelling-place beyond the mythical Sambaṭion in the vicinity of the Four, or Ten, Lost Tribes. According to the position assigned to that river, they are said to live either in the east, possibly in Persia, or in the west, somewhere in Africa. The Arabic theologian Al-Shahrastani (1086-1153) says (in his "Kitab al-Milal," ed. Cureton, i. 168; Germ. transl. by Haarbrücker, i. 255) that the Jewish heresiarch ISHAḲ B. YA'ḲUB OBADIAH ABU 'ISA AL-ISFAHANI, when defeated in the reign of the calif 'Abd al-Malik ibn Marwan (684-705), went as a missionary to the Banu Musa, who lived "beyond the desert." Al-Ḳazwini, an Arabic geographer of the thirteenth century, says, quoting a Jewish tradition, that the descendants of Moses fled in the time of Nebuchadnezzar to Jabarsa, a city in the extreme east, where no one was able to reach them or to ascertain their numbers (see his "Cosmography," ed. Wüstenfeld, ii. 17, Göttingen, 1848). According to another tradition (*ib.*), the Bene Mosheh are identical with the people praised in the Koran (sura vii. 159) as being "righteous among the people of Moses"; and Mohammed is said to have paid a visit by night to their country, which was distant six years' journey and was separated from the rest of the world by a torrent which is still only on the Sabbath.

Mohammed's account of the Bene Mosheh is, according to the same tradition, Utopian. They have no government, for their moral perfection makes it unnecessary; and they live by tilling the soil in a kind of communism. Their houses are all alike, that there may be no room for envy; and they bury their dead beside the door-posts, that the thought of death may ever be present. They rejoice in death, since they are certain that their brethren died believing in God; and they mourn every birth, since they do not know whether the new-born child will continue among the faithful. There is no illness among them, since they commit no sin; for they say that illness is merely a punishment for sin; nor are there any wild animals among them (comp. Epstein, "Eldad ha-Dani," pp. 15 *et seq.*, Presburg, 1891).

ELDAD HA-DANI subsequently became the chief source for the history of the Bene Mosheh. What he really appears to have recounted of this and similar matters is given in the responsum containing the

Eldad ha-Dani.

question addressed by the inhabitants of Kairwan to the gaon Ẓemaḥ b. Ḥayyim of Sura (882–887) and his answer regarding the veracity of Eldad, who was staying with them at that time (first printed at Mantua, 1475–80; Jellinek, "B. H." ii. 102; Epstein, *l.c.* pp. 5 *et seq.*; D. H. Müller, "Die Rezensionen und Versionen des Eldad Had-Dani," in "Denkschriften der K. Academie der Wissenschaften, Phil.-Hist. Classe," xii. 16 *et seq.*, Vienna, 1892). According to this account, the Bene Mosheh, after mutilating themselves as described in the midrash, were carried, together with their wives, children, and cattle, by a cloud to Havilah, the ancient land of gold. A fearful storm arose that night, and they suddenly found themselves surrounded by a mighty torrent called Sambaṭion, which rolls along stones and sand, but rests on the Sabbath, when it is covered by an impenetrable fog. Ever since that time the Bene Mosheh have lived secluded from the world, engaged in agriculture and in recounting the story of the destruction of the Temple. No wild or unclean animals of any kind disturb them. The gaon confirms this account by referring to the midrash.

Place of Exile.

In view of the corrupt condition of the text, it is doubtful as to where, in Eldad's opinion, the Danites and the Sambaṭion were. Epstein assumes that southern Arabia or Abyssinia was the region, but equally tenable arguments might be brought forward in favor of the Atlas Mountains.

Saadia Gaon explains the superscription to Ps. xc., "A Prayer of Moses," to mean a prayer by or for the sons of Moses ("Tefillah le-Mosheh Kemo li-Bene Mosheh"; see Neubauer, "'Inyane 'Aseret ha-Shebaṭim," in "Sammelband Kleiner Beiträge aus Handschriften," iv. 10, Berlin, 1888). A Spanish astronomer of the twelfth century, Abraham bar Ḥiyya, expresses himself more clearly on the subject in his "Megillat ha-Megalleh," in which he says that the Jewish tradition knows only seventy nations, while the Christians recognize seventy-two. In his opinion the Christian tradition correctly includes the Bene Mosheh as one nation in its list, since their ancestor had received the divine promise (Ex. xxxii. 10) that at the advent of the Messiah they would equal any of the other nations in numbers (Neubauer, *l.c.*).

Mode of Life.

In the various revisions of Eldad ha-Dani (see Müller, *l.c.* pp. 62 *et seq.*) the life of the Bene Mosheh appears as idealized as in Al-Ḳazwini's account. They live in magnificent houses in the midst of a country which stretches a three months' journey on each side, and is irrigated by six rivers that flow into one lake. Their fertile fields yield harvests twice a year, and their cattle reproduce twice. There is complete social equality, and neither slavery nor servitude exists among them, nor are there any thieves, robbers, or evil spirits. Boys pasture the flocks, and the houses are not closed at night. The Bene Mosheh are pious believers; and as they speak only Hebrew, their Talmud is written entirely in pure Hebrew, and all the halakic traditions in it are ascribed to Joshua, who received them from Moses, and the latter from God. Under such conditions it is not surprising that the inhabitants of this Utopia reached an age of 100 or 120 years, and beheld their third and fourth generations.

In some of the versions the Bene Mosheh are called "Shebeṭ Yanus," or, in the Arabic version, "Al-Sibṭ al-Harib" = "the fleeing tribe" (see Müller, *l.c.* p. 35), because they fled that they might remain faithful to God, although Menahem Man b. Solomon (18th cent.) asserted in his history "She'erit Yisrael" that they practised idolatry for a time, but then sought refuge with God again (see Epstein, *l.c.* p. 73).

Connection with Lost Tribes.

According to Abraham Jagel (16th cent.), the Bene Mosheh dwell with the Rechabites and the tribes of Zebulun, Dan, Naphtali, and Asher on one side of the Sambaṭion, which flows somewhere between the Nile and the Euphrates, while Reuben, Gad, and one-half of Manasseh lie on the other bank ("Bet Ya'ar ha-Lebanon," MS. Oxford; comp. Neubauer, *l.c.* pp. 37 *et seq.*). Elijah of Pesaro, a Talmudist and philosopher of the sixteenth century, says in a letter that the Bene Mosheh lived in India on an island in the River Sambaṭion (Neubauer, *l.c.* p. 37).

News from the Children of Moses.

In the seventeenth century the people of Jerusalem were said to have received a letter from the Bene Mosheh, which was confirmed as authentic in 1647 by several rabbis of that city. An alleged copy was in the possession of R. Nathan Spira (died at Reggio in 1666), and it remained in the communal archives of the city, where the bibliographer Ḥayyim David Azulai saw it. Abraham Solomon Zalman, a messenger from Jerusalem, made a copy at Reggio in 1832, which he took home with him; and from this transcript the traveler Jacob Saphir published the letter in his book of travels, "Eben Sappir" (i. 97 *et seq.*, Lyck, 1866), together with the following remarkable history connected with it: In 1646 the Palestinian messenger Baruch Gad was traveling through Media and Persia collecting money for the Holy Land. Attacked and plundered by robbers, he wandered for ten days in the desert until he sank down, exhausted by hunger and thirst. Suddenly he saw a powerful man approaching him, who addressed him in Hebrew, and asked his origin, whereupon Baruch answered in the words of the prophet Jonah: "I am a Hebrew." When the stranger asked what religion he professed, he replied: "Hear, O Israel, the Eternal is our God; the Eternal is One." Thereupon the stranger joyfully introduced himself as a Naphtalite named Malkiel, and gave him meat and drink. After giving him an amulet to protect him, the stranger set off to acquaint his own tribe and the others with the arrival of the messenger and his news of their coreligionists in the Diaspora, and to inform them of the contents of the letter from Palestine. Malkiel also went to the Bene Mosheh beyond the Sambaṭion, who heard of the pitiful condition of the Palestinians with tears of sorrow, and gave him a letter for Baruch to carry to Jerusalem. Malkiel then accompanied Baruch to the frontier of the territory of the Naphtalites, where he gave him the letter of the Bene Mosheh together with princely gifts, which the messenger brought safely to Jerusalem.

The letter, signed by the king Ahitub b. Azariah, the prince Jehozadak b. Uzzah, and the elder Uriel b. Abiasaph, describes the life and circumstances of the Bene Mosheh, with little variation from the account of Eldad. The Bene Mosheh began their letter by regretting that in their isolation they were separated forever from their coreligionists in the holy land of Palestine, and that only the western wall of the Temple remained, from which the Shekinah had not yet departed. Since, through an Arab who had been sold to them as a slave, they had heard of the ceaseless oppression suffered by their Jewish brethren and by the Jewish religion in strange lands, they appreciated their own independence all the more. After a description of their condition and an exhortation to believe in God and to be patient under affliction, the letter closed with the regret that neither they nor the neighboring four tribes were able to help the Palestinians, since, although they themselves might cross the Sambaṭion, the four tribes were forbidden to leave their territories.

Jacob Saphir himself strongly doubted the authenticity of this letter, as it was not written in ancient Hebrew, such as one might expect from the Bene Mosheh, and the story was too reminiscent of Eldad ha-Dani's forgery.

Search for the Bene Mosheh.

A curious instance of the unbounded credulity of the Palestinians is the "Letter of the Ashkenazic Rabbis and Scholars in Palestine to the Bene Mosheh and the Ten Tribes," written by an Ashkenazic rabbi of Safed. This letter is said to have been sent to the Bene Mosheh in 1831, with a request for contributions and an invitation to settle in Palestine (comp. Neubauer, *l.c.* pp. 52 *et seq.*).

More recently the Utopia of the Bene Mosheh has been made the subject of a Hebrew poem by the poet Naphtali Herz Imber (comp. his "Barḳai," pp. 116 *et seq.*) and of a Judæo-German poem by A. M. Scharkanski (see his "Idische Nigunim," pp. 29 *et seq.*).

MOSES BEN AARON (called also **Moses Lwow; Moses Lemberg** or **Lemberger**): Moravian and German rabbi; born at Lemberg about 1705; died at Nikolsburg, Moravia, Dec. 28, 1757. After having studied in the yeshibah of Nikolsburg, Moses, then a youth of twenty, was appointed rabbi of Leipnik, Moravia. A few years later, when the elders of the community of Berlin were looking for a successor to Michael Ḥasid, the chief rabbi of Berlin, who had recently died, an order of Frederick William I. (Jan. 24, 1729) enjoined them to appoint Moses b. Aaron as their rabbi. The elders protested against the royal decree, arguing that Moses was too young for such a prominent position, and demanding at least time for an investigation as to his qualifications. Nevertheless, the royal decree was repeated Feb. 2 following, and the elders accordingly sent Moses a contract for four years. But Moses' position at Berlin was untenable, for, with the exception of two, the elders were united against him. Scarcely a year had passed when his opponents succeeded, by the payment of 4,500 marks into the royal treasury, in obtaining from the king his dismissal. Moses was then called to the rabbinate of Frankfort-on-the-Oder; having previously obtained permission of the king (Aug. 28 and Nov. 6, 1730), conditional upon the annual payment of 300 marks to the chief rabbi of Berlin, he accepted the position and remained there until Aug., 1743. In that year he returned to Leipnik, where he remained until he was appointed (1753) "Landesrabbiner" of Moravia.

MOSES BEN ABRAHAM ABINU: Christian convert to Judaism; printer and author; born at Nikolsburg; died at Amsterdam in 1733 or 1734. According to Wolf ("Bibl. Hebr." iii., No. 1510b), Moses ben Abraham was a native of Prague, and was circumcised at Amsterdam. In 1686–87 he worked for two printers of Amsterdam, but from 1690 to 1694 seems to have owned a printing establishment and to have printed several Hebrew books, including his own (according to Benjacob, "Oẓar ha-Sefarim," p. 217) Judæo-German translation of Hannover's "Yewen Meẓulah." In 1709 Moses established a printing-office at Halle, Germany, where in 1712 he printed his "Tela'ot Mosheh" (or "Weltbeschreibung"), a Judæo-German work on the Ten Tribes, having collected the material from a number of sources, particularly from Abraham Farissol and Gedaliah ibn Yaḥya. He continued printing in Halle until 1714, in which year he printed "Tefillat Mosheh," a prayer-book, and Berechiah Baruch's "Zera' Berak." Owing to anti-Christian passages in these two works, his printing-office was closed by royal order, he was imprisoned, and his books were confiscated. His coreligionists, however, helped him to escape to Amsterdam, where he printed in the same year (1714) the treatise Rosh ha-Shanah (see Halle-on-the-Saale, Typography). His children also became printers in Amsterdam.

MOSES BEN ABRAHAM HA-ḲADOSH ("the martyr" of the Ẓebi family): Lithuanian rabbi; born probably at Brest-Litovsk in the beginning of the seventeenth century; died at Grodno April 28, 1681. On the maternal side he was a grandson of R. Höschel of Brest-Litovsk, in whose yeshibah he first studied. When Moses reached a mature age he established there a yeshibah of his own. In 1673 he became chief rabbi and head of the yeshibah of Grodno, and in 1679 he took part in the Lithuanian Council at Khomsk. In 1680 he was requested to accept the rabbinate and the office of rosh yeshibah of Cracow, but he declined.

Moses was the author of a work entitled "Tif'eret le-Mosheh," novellæ and comments on the Shulḥan

'Aruk, Yoreh De'ah, published by his grandson Solomon b. Ḥayyim, Berlin, 1776. Many other writings of Moses are scattered through different works.

MOSES BEN ABRAHAM OF NÎMES (מקרית יערים): Liturgical poet and astronomer; lived at Avignon in the second half of the fifteenth century. He was the author of a liturgical poem composed at Avignon in 1462 (published, with the religious controversy of Jehiel of Paris, at Thorn in 1873). Moses also translated from the Latin into Hebrew, at the request of Maestro Crescas Nathan, the astronomical tables of Alfonso, King of Castile. The work, divided into twenty-seven chapters, is still extant in manuscript (Munich MS. No. 126, 1).

Bibliography: Steinschneider, *Hebr. Uebers.* p. 619; Renan-Neubauer, *Les Ecrivains Juifs Français*, p. 435; Gross, *Gallia Judaica*, p. 398.

G. I. Br.

MOSES BEN ABRAHAM OF PONTOISE: Tosafist; lived in the twelfth century. He was a disciple of Jacob Tam, with whom he carried on an active scientific correspondence, and was one of the members of the assembly presided over by him. Moses was the author of a number of liturgical poems, several of which are still extant in manuscript (Neubauer, "Cat. Bodl." No. 1083; "Cat. Halberstam," No. 353). He wrote also, partly under the direction of R. Tam, some frequently quoted tosafot on various Talmudical treatises. His Mishnah commentary is mentioned in Samson of Sens' commentary on Terumot xi. 9 (comp. the tosafot on Temurah 4a). The cabalist Ḥayyim ben Bezaleel (d. 1588) claims to have possessed a manuscript containing this commentary, some citations from which he gives in his "Or ha-Ḥayyim." Moses is mentioned in many works as a commentator of the Pentateuch.

Bibliography: Zunz, *Z. G.* p. 74; Grätz, *Gesch.* vi. 216; Gross, *Gallia Judaica*, p. 444; Renan, *Les Rabbins Français*, p. 446.

MOSES BEN ABRAHAM PROVENÇAL: Rabbi of Mantua about the middle of the sixteenth century. In opposition to the opinion of Meïr Katzenellenbogen of Padua and of others, he gave his approbation to the first edition of the Zohar, which was printed in Mantua, 1558, with the approval of the Inquisition. The cabalist Moses Basula and Isaac ben Immanuel de Lattes gave their approbations with his. He was also the author of a treatise on "two lines which approach but never meet" (in Hebrew, Sabbionetta, 1548; in Italian, Mantua, 1550), and of a responsum on a case of divorce (Padua, 1566).

Bibliography: Grätz, *Gesch.* ix. 383; Zunz, *Z. G.* pp. 361, 362.

MOSES AÇAN (ḤAZZAN) DE ZARAGUA: Spanish poet; born in Catalonia; perhaps the Moses Açan who lived in Cuenca, and who, when King Alfonso X. (the Wise) was staying there in 1271, brought him the news of the conspiracy of the infante Philip with the grandees of Castile. Moses Açan composed a poem in Catalonian on the game of chess, which begins with an account of the creation of the world. In it he condemns gaming and, as especially injurious, card-playing. This poem, which was translated into Castilian about 1350, is in manuscript in the Escorial.

S. M. K.

MOSES, ADOLPH: American rabbi; born at Kletchevo, Prussian Poland, May 3, 1840; died at Louisville, Ky., Jan. 7, 1902. He was a son of Israel Baruch Moses, from whom he received his early Talmudic training. For three years he attended the yeshibah and then went to Schrimm and Militsch in Silesia, where he continued his Jewish studies. Afterward he entered the university and the rabbinical seminary at Breslau. While still a student at the seminary his sympathies were drawn toward the Italian struggle for liberty, and in 1859 he enlisted in Garibaldi's army. In the following year he returned to Breslau, but at the outbreak of the first Polish insurrection in 1863 he joined the revolutionary forces, serving as a commissioned officer in that struggle until it was suppressed, when he was imprisoned by the Russians. His experiences of prison life are incorporated in his novel "Luser Segermacher" (translated into English by Mrs. A. de V. Chandron). Upon his release Moses returned to Germany, and at Frankfort-on-the Main he studied under Abraham Geiger, whose Reform tendencies he followed. For two years he taught in the academy at Seegnitz, Bavaria. In 1870 he received a call to the rabbinate of Montgomery, Ala., and in the next year was elected rabbi at Mobile, Ala.

At Mobile, Moses remained for ten years, until 1881, when he responded to a call from the community of Louisville, Ky. This post he held until his death. Moses was specially interested in the education of the blind, and served for many years as commissioner of the Kentucky institutions for the blind. Toward the end of his life he studied medicine and received the degree of doctor of medicine from the University of Louisville. Moses was a frequent contributor to the Jewish press and was the editor, in conjunction with his brother Isaac S. Moses and Emil G. Hirsch, of the weekly "Zeitgeist" (1880–82). He was the author of "Nadab and Abihu" (1890) and "The Religion of Moses" (Louisville, 1894). A memorial volume containing a biography of him and a number of his essays and sermons was published by H. G. Enelow (Louisville, 1903).

MOSES BEN AMRAM HA-PARSI. See Musa of Tiflis.

MOSES OF ARLES: French scholar of the second half of the tenth century. Moses is the earliest scholar of the city of Arles of whom there is any definite knowledge. The only writing of his that has been preserved is on a halakic question concerning a civil case submitted to Kalonymus (see "Mordekai," Shebu'ot, vii.; comp. "Teshubot Ge'onim Ḳadmonim," ed. D. Cassel, No. 107, Berlin, 1848), probably the synagogal poet Kalonymus of Lucca, not, as Zunz ("Literaturgesch." p. 250) holds, Kalonymus ben Shabbethai of the eleventh century. Moses' son also, Judah ben Moses of Arles, was a rabbinical authority.

Bibliography: Gross, *Zur Gesch. der Juden in Arles*, in *Monatsschrift*, xxvii. 249; idem, *Gallia Judaica*, p. 79.

MOSES B. ASHER: Masorite; father of Aaron; generally called Ben Asher; lived at Tiberias in the second half of the ninth century. His father, Asher, was a great-grandson of Asher the Great (or the Elder), one of the earliest Masorites of Tiberias known by name (comp. the genealogy in Baer and Strack, "Diḳduḳe ha-Te'amim," p. 79). Pinsker ("Liḳḳuṭe Ḳadmoniyyot," i. 32) and Grätz (in "Monatsschrift," 1871, pp. 1-12, 44-59) have assumed that Moses b. Asher and his son were Karaites; but it is much more probable that they both adhered to rabbinic Judaism (see Geiger's "Jüd. Zeit." x. 79-90; Baer and Strack, *l.c.* p. xiii.). In the Karaite synagogue at Cairo there is a codex of the prophetical books which was completed, according to the colophon, by Moses b. Asher at Tiberias in 895 (827 years after the destruction of Jerusalem; comp. Jacob Saphir, "Eben Sappir," i. 14, ii. 186 *et seq.*), and which contains two paragraphs of Masoretic passages united and ascribed to Aaron b. Moses b. Asher (§§ 3 and 70 in Baer and Strack's "Diḳduḳe ha-Te'amim," p. xvi.).

MOSES OF BAALBEK. See Meshwi al-'Ukbari.

MOSES B. BENJAMIN HA-SOFER OF ROME: Liturgical poet of the twelfth century; he wrote several piyyuṭim for the Passover and the Feast of Weeks, as well as for some of the special Sabbaths. His piyyuṭim differ in style and composition from those of preceding payyeṭanim.

Bibliography: Berliner, *Gesch. der Juden in Rom*, ii. 29, Frankfort-on-the-Main, 1893; Zunz, *Literaturgesch.* pp. 455-457, 651.
W. B. J. Z. L.

MOSES B. BENJAMIN WOLF: Polish physician; flourished at Kalisz in the second half of the seventeenth century. He wrote in Yiddish two medical works: (1) "Yerushat Mosheh" (Frankfort-on-the-Main, 1677); and (2) "Yarim Mosheh" (*ib.* and Amsterdam, 1679), in continuation of the preceding work.

Bibliography: Steinschneider, *Cat. Bodl.* col. 6436; *Serapeum*, ix. 348; Fürst, *Bibl. Jud.* ii. 164; Benjacob, *Oẓar ha-Sefarim*, p. 230, Wilna, 1880.
H. R. A. S. W.

MOSES BOTAREL (called also **Moses Bonyak Botarel of Cisneros**): Spanish scholar; lived in the fourteenth and fifteenth centuries. He was a pupil of Jacob Sefardi (the Spaniard), who instructed him in the Cabala. He studied also medicine and philosophy; the latter he regarded as a divine science which teaches the same doctrines as the Cabala, using a different language and different terms to designate the same objects. He extols Aristotle as a sage, applying to him the Talmudic sentence, "A wise man is better than a prophet"; and he censures his contemporaries for keeping aloof from the divine teachings of philosophy. Yet despite his reverence for this science, which he pretended to have mastered, Moses Botarel was in many respects a man of very limited intellect. He believed in the efficacy of amulets and cameos, and declared that he was able to combine the names of God for magical purposes, so that he was generally considered a sorcerer. He asserted that by means of fasting, ablution, and invocation of the names of God and of the angels prophetic dreams could be induced. He also believed, or endeavored to make others believe, that the prophet Elijah had appeared to him and appointed him as Messiah. In this rôle he addressed a circular letter to all the rabbis, asserting that he was able to solve all perplexities, and asking them to send all doubtful questions to him. In this letter (printed by Dukes in "Orient, Lit." 1850, p. 825) Botarel refers to himself as a well-known and prominent rabbi, a saint, and the most pious of the pious. Many persons believed in his miracles, including the philosopher Ḥasdai Crescas.

Botarel was one of those who attended the disputation at Tortosa (1413-14), and he is said to have written a polemic against Geronimo de Santa Fé. In 1409, at the request of the Christian scholar Maestro Juan, Botarel composed a commentary on the "Sefer Yeẓirah." In the preface he excuses himself for having revealed the divine mysteries of this work to Maestro Juan by quoting the saying of the sages that a non-Jew who studies the Torah is equal to a high priest. In his commentary he quotes earlier cabalistic works, including some ascribed to the old authorities, such as the amora R. Ashi. It is interesting to note that he does not quote the Zohar. Botarel's commentary on the "Sefer Yeẓirah" was printed at Mantua in 1562, with the text and with other commentaries; it was republished at Zolkiev, 1745; Grodno, 1806; and Wilna, 1820.

This Moses Botarel must not be confounded with **Moses b. Leon Botarel,** who lived at Constantinople in the sixteenth century and wrote the "'En Mishpaṭ," containing predictions and being a free paraphrase of a Latin work of Michael Nostradamus.

MOSES CORDOVERO. See Remak.

MOSES OF CRETE: Pseudo-Messiah of the middle of the fifth century. In spite of Ashi's efforts to restrain within limits the expectation of the coming of the Messiah, a belief was spread that the Messiah would come in the eighty-fifth jubilee (about 440–470; comp. 'Ab. Zarah 9a, b), and the Jews of that period were full of suppressed excitement. At this time there appeared in Crete an enthusiast whose previous name is not known but who adopted the name of Moses. This pseudo-Messiah traveled through the whole island in a year, and was successful in convincing the Jewish congregations that he was the expected Messiah. The Jews of Crete accordingly awaited eagerly the moment when they would be led out of the captivity; in the meantime they neglected their affairs and abandoned their property. On the appointed day the false Messiah, followed by the whole Jewish population of Crete, marched toward the sea. When they had arrived at a certain promontory Moses commanded them to throw themselves down, as the water would be divided before them. The Jews obeyed, and many of them lost their lives in the sea while others were rescued by mariners. Moses is said never to have been seen again (Socrates, "Historia Ecclesiastica," vii. 36).

E. C. M. Sel.

MOSES BEN DANIEL OF ROHATYN: Galician author of the end of the seventeenth century. He was the author of "Sugyot ha-Talmud," a methodology of the Talmud and its commentaries (Zolkiev, 1693). According to the preface, the author was a resident of Zolkiev, and his work met with the approval of contemporary scholars. It is divided into forty paragraphs and deals especially with the discursive terminology of the Talmud. As the author asserts, it is based upon the teachings of those scholars whose pupil he had been. The work was translated into Latin by H. I. v. Bashuysen, and was published in the Latin translation of Joshua Levi b. Joseph's "Halikot 'Olam" (pp. 363 *et seq.*, Hanover, 1714).

Bibliography: Steinschneider, *Jewish Literature*, p. 219; idem, *Cat. Bodl.* col. 1798.
H. R. M. Sc.

MOSES HA-DARSHAN: French exegete; lived at Narbonne about the middle of the eleventh century. According to a manuscript in the possession of the Alliance Israélite Universelle containing those parts of Abraham Zacuto's "Sefer Yuḥasin" that are omitted in Samuel Shullam's edition (see Isidore Loeb, "Joseph Haccohen et les Chroniqueurs Juifs," in "R. E. J." xvi. 227), Moses was descended from a Narbonne family distinguished for its erudition, his great-grandfather, Abun, his grandfather, Moses ben Abun, and his father, Jacob ben Moses ben Abun (called "ha-Nabi"; see Jew. Encyc. vii. 39), all having been presidents of the Narbonne yeshibah. Moses himself held this position, and after his death it was occupied by his brother Levi (see R. Tam, "Sefer ha-Yashar," ed. Vienna, No. 620, p. 74).

As Haggadist.

Though Moses ha-Darshan was considered a rabbinical authority (R. Tam, *l.c.*; Abraham ben Isaac, "Sefer ha-Eshkol," ed. Auerbach, i. 143, Halberstadt, 1865), he owes his reputation principally to the fact that together with Tobiah ben Eliezer he was the most prominent representative of midrashic-symbolic Bible exegesis ("derash") in the eleventh century. His work on the Bible, probably sometimes called "Yesod," and known only by quotations found mostly in Rashi's commentaries, contained extracts from earlier haggadic works as well as midrashic explanations of his own. Often the latter were not in harmony with the spirit of the rabbinical Midrash and even contained Christian theological conceptions. Probably the non-preservation of the work was due to an excess of the foreign element in its composition, causing it to be regarded with disfavor. Moreover, as has recently been ascertained by Epstein, it was not a systematically arranged work, but merely a collection of notes made by Moses. For this reason, apparently, it did not have a fixed title, and therefore it is quoted under various names by different authors (see A. Berliner, "Eine Wiederaufgefundene Handschrift," in "Monatsschrift," 1884, p. 221; Zunz, "G. V." 2d ed., p. 302, note E).

The Midrash Bereshit Rabbah Major or Bereshit Rabbah Rabbati, known through quotations by Raymund Martin in his "Pugio Fidei," has many haggadot and haggadic ideas which recall very strongly Moses ha-Darshan's teachings; it is claimed by Zunz (*l.c.* p. 302) that the midrash was actually the work of Moses. A. Epstein, however, is of the opinion that the final compiler of the midrash, certainly not Moses ha-Darshan, took from the "Yesod" whatever he considered appropriate for his purpose, especially from Moses' midrashic interpretation of the Creation (see A. Epstein, "Bereshit Rabbati," in Berliner's "Magazin," xv. 70). In a similar way the "Yesod" influenced the Midrash Bemidbar Rabbah and the Midrash Tadshe, which latter, in a haggadic-symbolic manner, endeavors to show the parallelism between the world, mankind, and the Tabernacle (Zunz, "G. V." p. 292; Jellinek, "B. H." vol. iii., pp. xxxiii. *et seq.*). Concerning the Midrash Tadshe, Epstein goes so far as to assume that Moses ha-Darshan was its author ("Beiträge zur Jüdischen Alterthumskunde," p. xi.). Moses ha-Darshan explained some obscure expressions in certain piyyuṭim (Zunz, "Ritus," p. 199; Ziemlich, "Das Machsor von Nürnberg," in Berliner's "Magazin," xiii. 184). He is credited also with a midrash on the Ten Commandments and with a "widdui."

His Pupils.

Moses' son was Judah ha-Darshan ben Moses; probably the Joseph he-Ḥasid mentioned in Samuel ben Jacob ibn Jama''s additions to the "'Aruk" of Nathan ben Jehiel (see S. Buber in "Grätz Jubelschrift," p. 34, *s.v.* ארם) was a son of Judah ha-Darshan. It is certain that Nathan ben Jehiel was a pupil of Moses, whose explanations of Talmudical words and passages he cites. Both Abraham Zacuto ("Sefer

Yuḥasin") and the above-mentioned manuscript of the Alliance Israélite Universelle ascribe to Moses three more pupils—Moses 'Anaw, Moses ben Joseph ben Merwan Levi, and Abraham ben Isaac (author of the "Sefer ha-Eshkol"). A. Epstein credits Moses with another pupil, a certain R. Shemaiah, who is quoted sometimes in Bereshit Rabbah Rabbati and in Numbers Rabbah as explaining sayings of Moses ha-Darshan's (*l.c.* pp. 74 *et seq.*; comp. p. ii.). He also suggests (*l.c.*) the identity of this Shemaiah with Shemaiah of Soissons, author of a midrash on Parashat Terumah (published by Berliner in "Monatsschrift," xiii. 224 *et seq.*), whose cosmological conceptions seem to have been influenced by Moses ha-Darshan.

MOSES BEN ENOCH: Founder of Talmud study in Spain; died about 965. He was one of the four scholars that went from Sura, the seat of a once flourishing but then declining Talmud academy, in order to collect contributions for that school. During a voyage from Bari, on the coast of Italy, they were captured by the Moorish-Spanish admiral Ibn Rumaḥis, who, according to the legend, became enamored of the beautiful young wife of Moses. In distress she asked her husband in Hebrew whether those who were drowned in the sea could look forward to resurrection, and when he answered, in the words of the psalm, "The Lord saith, I will bring again from Bashan, I will bring them again from the depths of the sea," she cast herself into the waters and was drowned. Moses was taken to Cordova with his little son Enoch, where he was redeemed by the Jewish community, about 945 or 948. While there he went to the schoolhouse, took his seat in a corner, and listened quietly to the Talmudic discourse of the judge and rabbi, Nathan, not a very learned man. Some of the stranger's remarks attracted attention, and his detailed explanation of the passage quoted by Nathan and his ready answers to all questions addressed to him astonished the whole assembly. Nathan, therefore, on that very day voluntarily resigned his office and confessed himself Moses' pupil. The wealthy community of Cordova showed Moses much honor and immediately elected him rabbi. Ḥasdai ibn Shaprut, rejoicing at this event, induced the calif 'Abd al-Raḥman to order Ibn Rumaḥis to forego the higher ransom which he, in consequence, was demanding for Moses. Moses organized an important school at Cordova, which was independent of the gaonate and was attended by many pupils; and through him Cordova became the seat of Jewish scholarship.

MOSES OF EVREUX: French tosafist, and author of a siddur ("Semaḳ" No. 154); flourished in the first half of the thirteenth century. Moses is generally supposed to have been the son of Yom-Ṭob, referred to in Elijah Mizraḥi's responsa (No. 82); but Gross identifies him with Moses ben Shneor, the teacher of the author of "Sefer ha-Gan," a commentary on the Pentateuch. Moses was the older brother and teacher of the tosafist Samuel of Evreux (Tos. to Beẓah 21b, to 'Er. 6b, and to Soṭah 22a). The "Tosafot of Evreux," much used by tosafists, was his work. He is quoted in the tosafot on Berakot, and his name is frequently written ר"ם (Tos. to Soṭah 22a; "Shiṭṭah Meḳubbeẓet" on B. Ḳ. 3a *et passim*). His tosafot are called also "Shiṭṭah of Evreux" ("Teshubot Mahram," No. 608). Moses wrote his tosafot on the margin of a copy of Isaac Alfasi, whose authority he invoked (Tos. to Ber. 26b).

MOSES ḤARIF II. (PHINEHAS MOSES BEN ISRAEL): Chief rabbi of Lemberg, where he died Sept. 17, 1702. Moses was a grandson of Moses Ḥarif I. ben Solomon, and appears to have been born at Lemberg. He was the first chief rabbi of both communities of Lemberg—urban and suburban. He was an active member of the Council of Four Lands, over which he sometimes presided, as is indicated by his signature occurring first under approbations given at the fair of Yaroslav in 1697. Moses contributed notes and a supplement to the "Seder Giṭṭin" of his grandfather Moses Ḥarif I., adding also extracts from other works on the same subject. He is quoted by Margulies in the "Ṭib Giṭṭin," and by other writers.

MOSES ḤASID: Austrian ethical writer; lived at Prague in the seventeenth and eighteenth centuries. He was the author of a "Ẓawwa'ah," containing ethical instructions (Prague, 1717), a portion of which, under the title "Iggeret ha-Musar," was published by Hirsch ben Meïr as an appendix to Moses Alshech's commentary on the Prophets (Frankfort-on-the-Main, 1720).

MOSES BEN ISAAC: Austrian author; lived at Bisenz, Moravia, in the latter half of the sixteenth century. He was the author of: "Darash Mosheh" (Cracow, 1595), explanation of 256 quaint Talmudical haggadot in "'En Ya'aḳob," published by Isaac Prossnitz; "He ha-Yedi'ah" (*ib.*), a prayer on the Messianic redemption, in 2,150 words, all beginning with the letter "alef"; "'Ammude 'Abodah" (*ib.*), on the education of children and on asceticism.

MOSES BEN ISAAC BONEMS: Polish rabbi; born at Cracow; died at Lublin Nov. 25, 1668. He was a great-grandson of Moses Isserles, and later became the son-in-law of Samuel Eliezer Edels. He was successively rabbi at Lyuboml (Volhynia) and Lublin. In the approbations to works given by the members of the Council of Four Lands at the Gramnitza fair April 6, 1664, Moses signed first. He was the author of novellæ on the Talmud, published with the "Ḥiddushe Halakot," last recension ("Mahdura Batra"), of R. Samuel Edels (Lublin, 1670).

MOSES BEN ISAAC HANESSIAH: English grammarian and lexicographer of the late twelfth and early thirteenth centuries. His mother probably was a Jewess named Comitissa, of Cambridge, whence the name "Hanessiah." In his youth he wrote a work (now lost) on Hebrew grammar entitled "Leshon Limmudim"; it is referred to in his "Sefer ha-Shoham," or "Onyx Book," the title of which is an anagram of his name. The latter work (part of which was published at Oxford in 1882) shows some knowledge of Arabic and of the works of Joseph Ḳimḥi.

The tombstone of a Rabbi Moses, son of Rabbi Isaac, was found at Ludgate, London, in the time of Elizabeth; Stowe, in his "Survey," stated that it came from the Jewish cemetery in Jewin street at the time of the barons' revolt against John in 1215. If this is his tombstone Moses ben Isaac must have died before that date.

MOSES B. ISAAC JUDAH LIMA. See Lima, Moses b. Isaac Judah.

MOSES ISAAC JUDAH LÖB BEN NAPHTALI HIRZ (called also **Löb Zunz** and **Judah Liwa**): Rabbi and cabalist; born at Frankfort-on-the-Main; died at Pinczow, Russian Poland, in 1682 (in 1662 according to Wolf, "Bibl. Hebr." iii., No. 1362c). He was a pupil of Aaron Samuel Kaidanover in Talmud and of Jacob Temerles in Cabala. In 1669 he was rabbi of Holleschau, Moravia, as appears from his approbation to the "Sifra di-Ẓeni'uta de-Ya'aḳob" (Amsterdam, 1669) of his former teacher, Jacob Temerles. It is not known how long he was in Holleschau nor where he had been before going thither, but two other approbations show that in 1675 he was still there. Thence he was called to the rabbinate of Pinczow, where he remained until his death. Many rabbis applied to him for approbations of their works. Offenbach Manuscript No. 18 contains writings of and upon Moses Isaac Judah Löb, there called "Löb Zunz."

MOSES ISAAC OF KELMY: Russian preacher, known as the "Kelmer maggid"; born in Slonim, government of Grodno, 1828; died in Lida, government of Wilna, Nov. 9, 1899. At the age of ten he lost his father, and he was brought up by his maternal grandfather, Eliezer Brisker, who was a good rabbinical scholar. Young Moses Isaac was diligent in his studies, and at the age of fifteen made his first attempt at preaching in one of the batte midrashot of his native town. He continued studying rabbinical literature, even after his marriage at the age of eighteen. Three years later he became a pupil of R. Israel Lipkin, who recognized his talent for preaching and encouraged him to make it his profession.

Moses' biographers do not agree as to the dates and places of his preacherships. According to Eisenstadt, who claims to have obtained the information indirectly from the son of the famous preacher, Moses Isaac went to Kelmy (hence his surname) in 1850, to Sagaren in 1853, to Osmiany, government of Wilna, in 1858, and was in Minsk from 1860 to 1863. He then went to Slonim, whence he removed to Grodno in 1881. Two years before his death he settled with his son, Ben Zion Darshan, in Lida. He suffered much from sickness in the last ten years of his life, but continued to preach and to attract large audiences until shortly before his death.

Moses Isaac officiated mostly as a traveling preacher ("maggid"); and his powerful sermons, which were characterized by enthusiastic devotion and great sincerity, won for him a remarkable position among the "maggidim" of Russia, which he maintained for nearly half a century. He preached not only religion, but also practical ethics; and his boldness in denouncing unrighteous men and measures brought upon him persecution and even personal attacks. His striking sentences, the vivid imagery of his exhortations, and the singular parables with which his discourses were illustrated, added to the peculiar sing-song in which his sermons were delivered, gave rise to much ridicule, but also tended to increase his popularity. His arrival in a city was always an important event among the religious members of the community. He was instrumental in founding societies for religious, charitable, and communal purposes, his preaching preparing his audiences for such institutions; and, generally, he exerted an influence far beyond that of any other strictly Orthodox maggid of his time. His ultra-Orthodoxy made him very much hated by the Maskilim, in the writings of whom he is often ridiculed (compare "Allgemeine Zeitung des Judenthums," 1861, p. 186, and J. L. Gordon's poem "Ḳozo shel Yud"). He was the author of "Tokaḥat Ḥayyim," a collection of sermons, Wilna, 1897.

MOSES BEN ISAAC LEONI: Italian scholar and Talmudist; born at Urbino Nov. 30, 1566; died in 1641. At the age of thirteen Moses became the pupil of Jedidiah of Rimini: the date of his birth and the date of the engagement of Jedidiah as his teacher (Nov. 8, 1579) appear at the head of one of his manuscripts. No. 2317 in Neubauer's "Cat. Bodl. Hebr. MSS." comprises the following works by him: observations and decisions on the treatise Ḥullin; notes on Alfasi to Pesaḥim; notes on the haggadot of the Talmud collected in the "'En Ya'aḳob"; observations on various sayings of Isaac Arama. A responsum of his is found at the end of the "Shelom ha-Bayit" of Menahem Cazes. Moses wrote also a demonstration of the equality of the angles in a triangle to two right angles, accompanied by a letter to Isaac Finzi.

MOSES BEN ISAAC (GAJO) OF RIETI: Italian physician, philosopher, and poet; born at Rieti in 1388; died at Rome about 1460. After having received instruction in Talmud and Hebrew literature from his father, he devoted himself to the study of medicine and philosophy. He remained at Rieti practising medicine until after the death of his father, which occurred about 1422. In 1436 Moses was at Perugia; and a school founded by him at Narni was mentioned in 1452. During the pontificate of Eugene IV. he went to Rome, where he officiated as rabbi. While there he wrote to the Jewish communities of Italy asking them to contribute to the payment of the taxes imposed upon the Jews of Rome for the privilege of the free exercise of their religion. Pope Pius II. appointed Moses his physician.

His "Divine Comedy."

Moses began writing very early. Fascinated by Dante's "Divina Commedia," when he was only twenty-one years of age he conceived the idea of imitating it in Hebrew; this idea he carried out seven years later in a work entitled "Miḳdash Me'aṭ." In this poem the "Dante Ebreo," as he was called, showed himself an innovator by successfully introducing into Hebrew poetry the "terza rima." The "Miḳdash Me'aṭ" is divided into two parts: the first, entitled אולם, comprises five cantos; the second, called היכל, comprises eight. In the first part, after having excused his brevity and given some information regarding himself, the poet reviews the thirteen Maimonidean articles of belief; the number and division of the sciences according to Alfarabi, Ghazali, Averroes, and Maimonides; the "Isagoge" of Porphyry and Ibn Roshd's commentary upon it, with notes on the latter by Levi ben Gershon; the categories of Aristotle, with Ibn Roshd's commentary and Levi ben Gershon's notes.

In the second part the poet enters the "Sanctuary" ("Hekal"), the abode of the souls of the Patriarchs, the Prophets, the doctors of the Law, and the martyrs. Thence he passes to the "Abode of the Suppliants" ("Me'on ha-Sho'alim"), where he addresses a prayer to God. Then he enters the "City of God" ("'Ir Elohim"; *i.e.*, Holy Scripture), through which he reaches the "Ships of the Soul" ("Aniyot ha-Nefesh"), represented by Mishnah and Talmud. Afterward he passes in review the Tannaim, Amoraim, Geonim, and the scholars. To this part, which gives interesting information for the history of Jewish literature, Moses added historical and literary notes, in which he sometimes cites the works of those whom he mentions in his poem, and gives his reasons for having omitted to mention certain others. He omitted Levi ben Gershon, Moses Narboni, and Isaac Albalag because of their conception of the Deity, with which he could not agree; the omission of Emanuel of Rome is on account of the latter's love-songs; and that of Mostin di Erera is due to his attacks on the Cabala.

Its Popularity.

The "Miḳdash Me'aṭ" enjoyed great popularity among the Italian Jews. The second song in the second part, the "Abode of the Suppliants," was recited as a liturgical poem in the synagogues. It has been translated many times into Italian, in both prose and verse—by Eliezer Maẓliaḥ ben Abraham Cohen (Venice, 1585), the poetess Deborah Ascarelli (Venice, 1601-2), Samuel de Castel Nuovo (Venice, 1609), and by many others; these translations are still extant in manuscript. The text of the whole work was published by J. Goldenthal (Vienna, 1851).

Moses was the author of another poem, which was probably composed before the "Miḳdash Me'aṭ," and copies of which are still preserved in manuscript in the principal European libraries; it is entitled "Iggeret Ya'ar ha-Lebanon," and contains explanatory descriptions of the ornaments and vessels which were used in the Temple.

In his later years Moses abandoned poetry and devoted himself to philosophy and apologetics. He wrote six works in this province: (1) A philosophical-theological work, apologetic in tendency, written in Italian and divided into three parts. The first part discusses the natural philosophy of Aristotle; the second is a treatise upon God; the third, of which only a fragment has been preserved, covers Jewish history from the beginning to the time of the author (Steinschneider, "Cat. Leyden," pp. 350, 404). (2) An apologetic work, in sixty-two chapters, directed against a friar who preached anti-Jewish sermons at Rome (Neubauer, "Cat. Bodl. Hebr. MSS." No. 818, 2). According to Vogelstein and Rieger's "Gesch. der Juden in Rom" (ii. 73), the friar referred to was Giannozzo Manetti, the secretary of Nicholas V. and Calixtus IV. (Moses of Rieti became prominent also through a controversy he sustained with several Jewish converts in the presence of Sigismund Malatesta of Rimini.) (3) Notes on Levi ben Gershon's commentaries on Averroes (Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 1373, 1389, 1955). (4) Notes on Moses Narboni's commentary on Ghazali's "Maḳaṣid al-Falasifah" (Steinschneider, "Cat. Munich," Nos. 110, 121). (5) Notes on Averroes' commentary on the "Isagoge" of Porphyry (De Rossi MSS., Parma; Nos. 458, 1, 12,009, 1). (6) A commentary on the aphorisms of Hippocrates (*ib.* 1365, 4; Steinschneider, "Cat. Leyden," p. 239). Moses' last production was an elegy ("ḳinah") on his wife Zilla (Zippora, Sarah), who died at the age of seventy after fifty-two years of married life.

MOSES, ISAAC S.: American rabbi; born Dec. 8, 1847, at Santomischel, Posen. He was educated at Santomischel, Gleiwitz, and Breslau. The rabbinical diploma was conferred upon him by R. Salomon Rosenthal (Jaroczyn) and Dr. Bernhard Felsenthal (Chicago). He went to America and became rabbi successively at Quincy, Ill. (1879), Milwaukee, Wis. (1879-88), Chicago, Ill. (1888-1900), and New York city, Congregation Ahawath Chesed (in 1901). He has published the following works: "The Pentateuch" (1881); "The Historical Books of the Bible" (1884); "The Ethics of the Hebrew Scriptures" (1889); "The Sabbath School Hymnal" (1894 and 1904); and "Hymns for Jewish Worship" (1904). He edited "Der Zeitgeist" (Milwaukee) from 1880 to 1882, and the "Tefillah le-Mosheh" (1886) and the "Union Prayer-Book" (1892). His published sermons include "Man and Humanity" (1886), "The Message of the Age" (1890), and "On the Heights" (1892).

A. D.

MOSES BEN ISAIAH HA-KOHEN: Polish rabbi of the seventeenth and eighteenth centuries. He was a pupil of Solomon Luria, and was successively rabbi of Miedzyboz, Brody, and Przemysl. Fürst ("Bibl. Jud." iii. 120) and Benjacob ("Oẓar ha-Sefarim," p. 86) identify Moses ben Isaiah with Moses Wengrow, the author of "Berit Maṭṭeh Mosheh," a commentary on the Pesaḥ Haggadah, with novellæ on the treatise Zebaḥim (Berlin, 1701). The works of which Moses b. Isaiah is incontestably the author are "Pene Mosheh," commentary on the haggadah of eighteen treatises of both the Babylonian and the Jerusalem Talmud (Wilmersdorf, 1716), and "Ḳaran 'Or," homilies, in which he explains in fifty different ways the words of Ex. xxxiv. 30, 35 (Zolkiev, 1721). He left also a number of unpublished works, including "Mattenat Ḥelḳo," halakic novellæ, and "Darash Mosheh," homiletic commentary on the Pentateuch.

MOSES ISRAEL: Oriental rabbi; born at Jerusalem in the latter half of the seventeenth century; died at Alexandria about 1740. Sent out to collect alms for the poor of Safed (*c.* 1710), he visited Rhodes, where the congregation elected him rabbi (1715), and urged him to promise that he would never leave the position. After he had ministered there for twelve years, such serious troubles arose that Moses Israel obtained from the rabbinate of Constantinople release from his vow ("Mas'at Mosheh," part i., Yoreh De'ah, No. 8), left Rhodes, and traveled through Italy, Holland, and other countries, in the interest of the poor of Palestine. Again, at Alexandria, on his way back, he was elected rabbi; there he seems to have lived for the remainder of his life. He wrote numerous responsa, two collections of which, under the title "Mas'at Mosheh," he published at Constantinople (1734-35), while a third volume was published there posthumously by his son Abraham (1742). Of his sons, two—**Abraham,** author of "Amarot Ṭehorot," notes on Ṭur Eben ha-'Ezer (Leghorn, 1786), and **Elijah,** author of "Ḳol Eliyahu," responsa (*ib.* 1792), and of numerous other works—were rabbis in Alexandria, the latter from 1773 to 1784. Elijah was succeeded by his nephew **Moses ben Abraham Israel** (1784-1802), and the latter by his cousin **Jedidiah ben Elijah Israel** (1802-27).

PAGE FROM THE FIRST EDITION OF THE "SEMAG," ROME (?) BEFORE 1480.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

of the thirteenth century; descendant of a family of distinguished scholars. He is usually cited by the abbreviation ר"ם מקוצי. The correct rendering of the word מקוצי—"from Coucy"—was discovered by Zunz. Moses' maternal grandfather was Ḥayyim ben Hananeel ha-Kohen of Paris. Nothing is known of Moses' life before he settled in Paris to study under JUDAH BEN ISAAC, the great French tosafist. He received instruction also from a certain Joseph (Tos. Yeshanim to Yoma 11a, 70b), who can not be positively identified, but who may have been either the poet JOSEPH OF CHARTRES, mentioned in the "SeMaG" (Prohibition No. 113), or the tosafist JOSEPH BEN BARUCH. Moses mentions occasionally Simson ben Abraham of Sens and BARUCH BEN ISAAC of Worms, author of the "Sefer ha-Terumah"; it is usually believed, especially of the latter, that they were his teachers, although he does not expressly call them such. In 1235 Moses traveled in France, and in 1236 in Spain, lecturing publicly in the synagogues on the prescriptions of the Mosaic law and admonishing his audiences to observe them, at the same time, however, emphasizing the truth that mere observance of the oral law to the neglect of justice and brotherly consideration toward others, irrespective of faith or race, can not be counted as meritorious ("SeMaG," Prohibition No. 64; Commandments Nos. 7 and 74). In Spain he found that a number of Jews had married Christians and Mohammedans, and he succeeded in bringing about their divorce (Prohibition No. 112; Commandment No. 3, end). He knew the French, Spanish, and Arabic languages, and was an eloquent speaker; hence he was called "ha-darshan" (the preacher; see "Catalogus Librorum Manuscriptorum Bibliothecæ Senatoriæ Civitatis Lipsiensis," p. 203, No. xvii.). In 1240 Moses was one of the four rabbis who, in a public disputation in Paris, were required to defend the Talmud against the accusations of Donin; R. Jehiel, however, was the only speaker among them. In 1250 Moses finished his "Sefer Miẓwot," afterward called "Sefer Miẓwot ha-Gadol" (abbreviated "SeMaG") in order to discriminate it from an extract arranged by Isaac of Corbeil and called "Sefer Miẓwot ha-Ḳaton" (abbreviated "SeMaḲ").

Travels in Spain.

The "SeMaG."

The "SeMaG" of Moses of Coucy deals with the 365 prohibitions and the 248 commandments of the Mosaic law, separately expounding each of them according to the Talmudic tradition and the decisions of the Rabbis. The relation of this code to those of the Spanish and Franco-German schools, and especially to Maimonides' initial work "Sefer ha-Miẓwot," has been fully discussed in JEW. ENCYC. vii. 643, *s.v.* LAW, CODIFICATION OF. The "SeMaG" is written with much clearness and is a rich source for the history of halakic literature, as it quotes numerous rabbinical authors and works of the past. It aroused much enthusiasm when it first became known, and has been always held in high respect, as is evidenced by the number of its editions, commentaries, and compilations. The first edition appeared before 1480, and copies exist in at least the four libraries of Breslau, Frankfort-on-the-Main, Oxford, and the Sulzberger library (see JEW. ENCYC. vi. 578, *s.v.* INCUNABULA). The second edition was printed at Soncino in 1488 by Gershon ben Moses Soncino—the first book printed in his office. Subsequent editions appeared as follows: Venice, 1522; with Isaac Stein's and Elijah Mizraḥi's commentaries, *ib.* 1547; with Isaac Stein's, Elijah Mizraḥi's, and Solomon Luria's commentaries, and Judah Najjara's annotations, Leghorn, 1808; an edition by Sebastian Münster under the title "Miẓwot lo Ta'aseh u-Miẓwot 'Aseh," with a Latin translation of the commandments and prohibitions, Basel, 1533. Elijah Mizraḥi's additions were printed also separately (Constantinople, 1520); Joseph Kremenetz likewise wrote a commentary on the "SeMaG," under the title "Bi'ure SeMaG" (Venice, 1605); and Samuel Galante wrote a compendium under the title "Netibot ha-'Olam" (Lemberg, 1807). For subsequent editions, commentaries, and compendiums see Steinschneider, "Cat. Bodl." col. 1796; Zedner, "Cat. Hebr. Books Brit. Mus." p. 569; Benjacob, "Oẓar ha-Sefarim," p. 362. Almost every great Jewish library has some manuscripts of the work.

Other Works.

Moses of Coucy is the author of a commentary on the tractate Yoma entitled "Tosefot Yeshanim," or "Old Tosafot." Its comments are distinguished for their brevity and clearness, and are a rich source for the tosafot of his teacher Judah Sir Leon of Paris. They were printed for the first time in Frankfort-on-the-Main, 1721, and are contained in the newer Talmud editions (see Steinschneider, "Cat. Bodl." p. 213, No. 8). His commentary on the Pentateuch seems to have been very short and to have had the title "Peshaṭim." It is quoted in several Pentateuch commentaries, that of Judah ben Eliezer, entitled "Minḥat Yehudah," making the most frequent use of it. A penitential prayer by Moses, which he wished to be recited kneeling (Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 551, 1118), came into wide use during his lifetime (Zunz, "Literaturgesch." p. 479).

Among Moses' pupils were his two nephews, Isaac ben Ḥayyim (author of a commentary on the Pentateuch) and the tosafist Perez ben Elijah of Corbeil. It is an old error that Mordecai ben Hillel Ashkenazi was a pupil of Moses of Coucy (Steinschneider, *l.c.*; S. Kohn, "Mordechai ben Hillel," p. 38, Breslau, 1878). It has been said, though with but little probability, that Meïr of Rothenburg was a pupil of Moses of Coucy (S. Kohn, *l.c.* p. 143).

W. B. M. Sc.

MOSES BEN JACOB OF RUSSIA: Born in Schadow, near Schavli, Lithuania, 1449; died in the first quarter of the sixteenth century, in the Crimea, probably in Kaffa. That he was called "Ashkenazi" suggests that he was of German origin; his son-in-law was Abraham Ẓarfati. Moses lived for a number of years in Kiev, where he wrote polemical criticisms on the work of the Karaite writer Abraham ben Elijah in the form of marginal notes on the latter's "Gan Eden." According to Afendopolo, Moses suffered in the sack of the city of Kiev by the Tatars, who plundered his house and carried away his notes on the "Gan Eden." Moses' book finally found its way to Feodosia (Kaffa), where it was bought by a Karaite for twenty silver pieces. Several Karaite residents of Troki went to Constantinople, where they obtained a copy of the marginal notes. Moses himself escaped to Lutsk. From Lutsk he went to Troki, Lithuania, to collect money for the ransom of his children, held captive by the Tatars. At the time of the expulsion of the Jews from Lithuania in the reign of Alexander Jagellon, Moses, as is evident from an introductory poem to his prayer-book, was in Kiev and went thence to the Crimea. Although he lived long enough to see the return of his coreligionists under Alexander, Moses did not find peace. In the epilogue to his "Oẓar Neḥmad" he states: "When I was fifty-seven years old, in the time of our Prince Alexander, in the year 1506, I saw the misery that had been caused by the great Tatar invasion [1482] of the Khan Mohammed, who besieged the city of Lida [province of Wilna], and I, who was born in Schadow and had come to Lida to study the words of God, was captured with others and taken by the Tatars to their capital [Solchat], where I was ransomed by our Rabbinite and Karaite brethren." From that time on Moses seems to have remained in the Crimea, in Solchat and Kaffa, where he wrote various works, including his commentary on Ibn Ezra (1515). See Kiev.

MOSES, JOSEPH ḤAYYIM ELIJAH: Cabalist and Talmudist; grandson of a chief rabbi of Bagdad; one of the leaders of the Jewish community there (1904). He is the author of the following works, all published at Bagdad between 1870 and 1900: "Rab Pe'alim"; "Ben Ish Ḥai"; "Ben Yehoyadah"; "Adderet Eliyahu"; and "Rab Berakot." Jews residing in India and in the Far East refer to him questions of ritual.

J. N. E. B. E.

MOSES B. JOSEPH ḤAZZAN. See Moses b. Yom-Ṭob.

MOSES BEN JOSEPH HA-KOHEN: Liturgical poet of the latter part of the twelfth century; perhaps the Moses ben Joseph who aided the oppressed Jews in the Rhenish provinces in 1196. He wrote a seliḥah entitled "Arba'ah Abot Neziḳin," in which the four monarchies which oppressed Israel are represented under the figures of four animals—the bear, the lion, the panther, and the swine.

Bibliography: Zunz, *Literaturgesch.* p. 315.

W. B. J. Z. L.

MOSES BEN JOSEPH BEN MERWAN HA-LEVI: French Talmudist; flourished about the middle of the twelfth century. He was a nephew and pupil of Isaac ben Merwan ha-Levi, and a prominent Talmudist and rabbi; his colleagues addressed him as "Great scholar, Nasi R. Moses," and his ritual decisions and Talmudic comments are often quoted. He directed the yeshibah at Narbonne, several of his pupils subsequently achieving fame. Abraham ben David of Posquières and Zerahiah Gerondi were among his pupils. He was in continuous correspondence with his younger colleague Abraham ben Isaac, ab bet din, who was his pupil and who by preference sought Moses' advice in difficult casuistic questions. Jacob ben Moses of Bagnols quotes a document relating to a divorce drawn up at Narbonne in 1134 and signed by the "great rabbi Moses ben Joseph and by Eliezer ben Zechariah." Gross identifies this Moses ben Joseph with Moses ben Joseph Merwan. If this identification is correct, Moses was one of the foremost cabalists of southern France, as Jacob's words in the passage cited indicate, although Moses is not otherwise known as a mystic.

Bibliography: Gross, *Gallia Judaica*, p. 413.

MOSES B. JOSEPH OF ROME: Liturgical poet and rabbinical authority of the thirteenth century. One of his liturgical poems has been included in the German ritual.

Bibliography: Zunz, *Literaturgesch.* p. 346; Berliner, *Gesch. der Juden in Rom*, i. 39.

S. J. Z. L.

MOSES BEN JOSHUA OF NARBONNE (MAESTRO VIDAL BLASOM): French philosopher and physician; born at Perpignan at the end of the thirteenth century; died after 1362. His education in philosophy began at the age of thirteen, under his father, and continued under Moses and Abraham Caslari. He studied medicine also, which he practised later with much success; and he became well versed in Biblical and rabbinical literature. The desire for learning took him to Spain, where he is successively met with at Toledo, Soria, and Valencia. Moses ben Joshua underwent many sufferings during the persecutions consequent upon the Black Death. When he was at Cervera an infuriated mob rushed upon the Jewish community, and he had to take refuge in flight, leaving behind him all he possessed, including his books.

Moses was an enthusiastic admirer of Averroes, to whose works he devoted his main scientific activity. He was the author of: "Perush mi-Millot ha-Higgayon," on the terminology of Maimonides' "Guide of the Perplexed" (Munich MS. No. 289); "Ma'amar Alexander be-Sekel," supercommentary on Averroes' commentary on Alexander of Aphrodisias' work on the intellect ("Cat. Leipsic," p. 308); commentary on Averroes' "middle" commentary on Aristotle's "Physics" (Paris, Bibliothèque Nationale, MS. No. 967); commentary on Averroes' paraphrase of the "Organon" (Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 1350, 1360); commentary on the fourth part of Avicenna's "Canon" (*ib.* Nos. 2107, 2121); commentary on Ghazali's "Maḳaṣid al-Falasifah," which had been translated from the

Arabic into Hebrew, under the title "Kawwanat ha-Pilusufim," by Isaac Albalag, Judah Natan, and an anonymous writer (Rome, Casanatensis, No. 1, vi. 6); "Iggeret 'Al-Shi'ur Ḳomah," a mystical letter on the "Shi'ur Ḳomah," attributed to the high priest Ishmael, who lived in the last years of the Second Temple (Neubauer, *l.c.* No. 2250, 6); commentary on Lamentations (*ib.* 359, 4); commentary on Averroes' treatise on the hylic intellect and the possibility of conjunction (Paris, Bibliothèque Nationale, MSS. Nos. 918, 9; 947, 5; 957, 1); "Shelemut ha-Nefesh," collection of Aristotle's and Averroes' writings on the soul (*ib.* 988, 1); commentary on Averroes' dissertation on physics and on the treatise "De Substantia Orbis" (*ib.* 988, 2); "Ketab Ḥai ben Yaḳẓan," commentary on the philosophical novel of Ibn Ṭufail ("Cat. Leipsic," p. 326); "Oraḥ Ḥayyim," a treatise on medicine (Bibliothèque Nationale, No. 1200); "Ma'amar bi-Beḥirah," treatise on free will, written in refutation of Abner of Burgos' fatalistic "Iggeret ha-Gezerah," and published in the collection "Dibre Ḥakamim" (Metz, 1849); commentary on the "Guide of the Perplexed," published by Jacob Goldenthal (Vienna, 1852); commentary on Averroes' commentary on the "De Cœlo et Mundo"; treatise on metaphysics; "Pirḳe Mosheh," philosophical aphorisms; "Iggeret Meyuḥedet," on Ibn Ezra's commentary on Gen. xi. 2. The last four works are no longer in existence and are known only through quotations.

J. I. Br.

MOSES JUDAH LÖB B. SAMUEL: Russian rabbi and author; born in Turetz, government of Minsk; died at Minsk in 1889. He was a son-in-law of Rabbi David Tebele of Minsk, whom he succeeded in the rabbinate of that city, holding the position for thirty years. He and his brother-in-law R. Saul Ḥayyim prepared for the press the book "Bet Dawid," with many novellæ of R. Moses. Of his own works are known "Mille di-Berakot" and "Mille di-Neziḳin," treatises relating to the laws of blessings and the recovery of damages, and some responsa which remain in manuscript.

He left two sons, **Jacob**, rabbi of Minsk, and **Samuel.**

Bibliography: Benzion Eisenstadt, *Rabbane Minsk*, p. 60.

H. R. N. T. L.

MOSES (MESHARSHEYA) KAHANA BEN JACOB: Gaon of Sura from 832 to 843; son of the gaon (801–815) Jacob ha-Kohen ben Mordecai. Moses is reputed to have been a student of the Cabala and to have used amulets, charms, etc. (Hai ben Sherira, "Ṭa'am Zeḳenim," p. 566). Opinions of his on inheritance are preserved in a responsum contained in Harkavy's "Teshubot ha-Ge'onim" (No. 389). From this responsum, as Harkavy supposes (*l.c.* p. 378), Alfasi (on Ket. iv.), R. Hananeel (Tos. Ket. 54a, *s.v.* ושמואל), and Isaac ben Abba Mari ("Sefer ha-'Iṭṭur," ed. Venice, p. 78a) drew their conclusions concerning Moses Kahana's opinions.

Another responsum by Moses, also contained in Harkavy's "Teshubot ha-Ge'onim" (No. 432), discusses the question whether an untanned skin may be used for a scroll of the Law when there is no tanner or parchment-maker in the town to prepare it properly. Moses Kahana was the only gaon who allowed the use of such an untanned skin (comp. "Sefer ha-Eshkol," ed. Halberstadt, ii. 37); and it is said that many communities of Babylonia took advantage of his decision.

Upon Moses' death dissensions arose over the appointment of the next gaon, and after the office had remained vacant for half a year Kohen Ẓedeḳ ben Abimai was appointed.

Bibliography: Grätz, *Gesch.* v. 198; Abraham ibn Daud, *Sefer ha-Ḳabbalah*, in Neubauer, *M. J. C.* i. 65; Letter of Sherira Gaon, *ib.* i. 39, 189; Weiss, *Dor*, iv. 28, 42; Halevy, *Dorot ha-Rishonim*, iii. 242 *et seq.*

W. B. M. Sc.

MOSES KALFO (כלפא): Italian scholar; lived at the beginning of the eleventh century at Bari, where he taught at the yeshibah. He is known through lexicographical explanations cited by Nathan ben Jehiel, author of the "'Aruk" (*s.v.* קנבי, קרש, and תחיה). Nathan ben Jehiel probably studied under him for some time.

Bibliography: Mortara, *Indice*, p. 9; Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 358, 362; Weiss, *Dor*, iv. 308, note 9; Carmoly, in *Revue Orientale*, ii. 116.

S. S. M. Sc.

MOSES B. KALONYMUS. See Kalonymus.

MOSES KAPSALI. See Capsali.

MOSES OF KIEV: Russian Talmudist; lived in the first half of the twelfth century. Moses seems to have been in western Europe in consequence of the expulsion of the Jews from Kiev in 1124 (comp. Firkowitz in "Ha-Karmel," ii. 407). It is not impossible that he was a pupil of Jacob b. Meïr Tam, whom he seems to have known (see Tam's "Sefer ha-Yashar," No. 522, p. 29a, where Epstein reads correctly משה instead of משלם). From Russia Moses carried on a correspondence with Samuel ben Ali, the head of the Babylonian academy, and through Moses Western scholars learned of an important legal decision of the Geonim which had been communicated to him by Samuel (Responsa of Meïr b. Baruch of Rothenburg, ed. Bloch, No. 494). Another responsum from Samuel to Moses is found in the manuscript "Yiḥuse Tanna'im wa-Amora'im," whose author is probably Judah b. Kalonymus of Speyer. Whether or not this Moses is identical with ר' משה רוסי ("Rabbi Moses the Russian"), whom the author of "Sefer ha-Shoham" mentions, is doubtful.

Bibliography: Epstein, *Das Talmudische Lexicon*, etc., in *Monatsschrift*, xxxix. 511 (also printed separately); *idem*, in *Monatsschrift*, xl. 134.

W. B. L. G.

MOSES HA-KOHEN: Rabbi of Salonica in the first half of the eighteenth century; author of a collection of responsa entitled "Kehunnat 'Olam" (Constantinople, 1740), followed by novellæ on the Ṭur Yoreh De'ah (Fürst, "Bibl. Jud." ii. 399).

W. B. M. Sel.

MOSES HA-KOHEN OF CORFU: Greek Talmudist and liturgical poet; flourished at the end of the sixteenth century. He was the author of

"Yashir Mosheh" (Mantua, 1612), consisting of (1) a versification of the Book of Esther and of the midrashic legends connected with it, recited by the Jews of Corfu on Shabbat Zakor (see an example in "Orient, Lit." iv. 486), and of (2) "Mi-Kamokah," recited on Yom Kippur. It seems that Moses was either rabbi or head of the yeshibah of Corfu, for David Maẓah, the editor of the "Yashir Mosheh," says, in the introduction to that work, that he was a pupil of Moses ha-Kohen. He says also that Moses composed a great number of other liturgical poems, and a commentary on the Targum entitled "Patshegen Ketab ha-Dat."

Bibliography: Dukes, in *Orient, Lit.* v. 452; Fürst, *Bibl. Jud.* i. 188; Landshuth, *'Ammude ha-'Abodah*, p. 258; Steinschneider, *Cat. Bodl.* col. 1845; idem, *Jewish Literature*, pp. 233, 244.

W. B. M. Sel.

MOSES KOHEN B. ELIEZER. See Coblenz.

MOSES HA-KOHEN OF LUNEL: French Talmudist; flourished about 1200. Moses was one of the rabbis who criticized Maimonides' writings. He wrote a series of strictures on the "Mishneh Torah," which are preserved in the Bodleian Library (MS. No. 617). Simon ben Ẓemaḥ Duran mentions in his glosses a Moses ha-Kohen whom Gross ("Gallia Judaica," p. 285) identifies with Moses of Lunel (Renan-Neubauer, "Les Rabbins Français," p. 511).

s. s. A. Pe.

MOSES OF LEON. See Leon, Moses de.

MOSES HA-LEVI ALḲABIẒ: Prominent rabbi of the first half of the sixteenth century; father of Solomon Alḳabiẓ. About 1530 he officiated as dayyan at Safed. He seems also to have studied the Cabala, since Isaac ibn Shoshan of Safed wrote a cabalistic work for him.

Bibliography: Zunz, *Z. G.* p. 439; Conforte, *Ḳore ha-Dorot*, p. 34a.

E. C. J. Z. L.

MOSES HA-LEVI HA-NAZIR: Palestinian rabbi of the seventeenth century. He was the father of Joseph ha-Levi and son-in-law of the Talmudist Abraham ibn Hananiah, rabbi of Hebron and pupil of Joseph di Trani. Moses ha-Nazir is known through responsa included partly in the collection of his son ("Maṭṭeh Yosef," Constantinople, 1717–26) and partly in that of Ḥasdai ha-Kohen Peraḥyah ("Torat Ḥesed," Salonica, 1733). Shababo, Joseph ha-Levi's son-in-law, says in the preface to "Maṭṭeh Yosef" (part ii.) that he still had in his possession a manuscript by Moses ha-Levi ha-Nazir, namely, a collection of responsa entitled "Mayim Ḥayyim," on which Moses and his father-in-law had worked together. He possessed also another work, written by Moses alone, entitled "Yede Mosheh," notes on Ṭur Ḥoshen Mishpaṭ.

Ḥasdai ha-Kohen Peraḥiah (*l.c.* No. 17) mentions Moses as a messenger from the Holy Land. This accounts for the fact that he is met with in many places—in Constantinople and in Greece, especially in Morea (*l.c.* No. 14). Responsum No. 206 (*l.c.*), as also No. 6 in the second part of "Maṭṭeh Yosef," dated Constantinople, 1670, bears the signature "Ḥayyim Moses ha-Levi."

Bibliography: Azulai, *Shem ha-Gedolim*, p. 136.

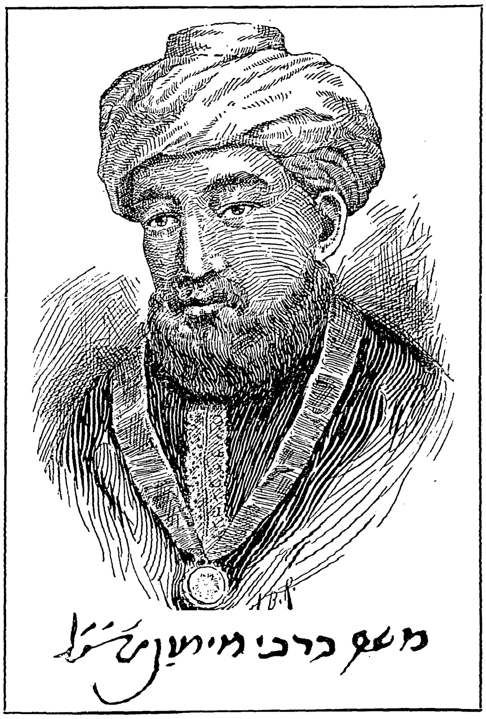
MOSES LIMA BEN ISAAC. See Lima, Moses b. Isaac Judah.



Traditional Portrait of Moses ben Maimon, with Autograph.

MOSES BEN MAIMON (RaMBaM; usually called MAIMONIDES): Talmudist, philosopher, astronomer, and physician; born at Cordova March 30, 1135; died at Cairo Dec. 13, 1204; known in Arabic literature as **Abu 'Imran Musa ben Maimun ibn 'Abd Allah.** The history of the "second Moses," as Maimonides came to be called, is overlaid with fable. According to some of his biographers, he evinced in boyhood a marked disinclination for study. This, however, is highly improbable, for the works produced by him in his early manhood show that their author had not passed his youth in idleness. Moses ben Maimon, or Maimonides, received his rabbinical instruction at the hands of his father, Maimon, himself a scholar of high merit, and was placed at an early age under the guidance of the most distinguished Arabic masters, who initiated him in all the branches of the learning of that time. Moses was only thirteen years old when Cordova fell into the hands of the fanatical Almohades, and Maimon and all his coreligionists there were compelled to choose between Islam and exile. Maimon and his family chose the latter course, and for twelve years led a nomadic life, wandering hither and thither in Spain. In 1160 they settled at Fez, where, unknown to the authorities, they hoped to pass as Moslems. This dual life, however, became increasingly dangerous. Maimonides' reputation was steadily growing, and the authorities began to inquire into the religious disposition of this highly gifted young man. He was even charged by an informer with the crime of having relapsed from Islam, and, but for the intercession of a Moslem friend, the poet and theologian Abu al-ʿArab al-Mu'ishah, he would have shared the fate of his friend Judah ibn Shoshan, who had shortly before been executed on a similar charge. These circumstances caused the members of Maimonides' family to leave Fez. In 1165 they embarked, went to Acre, to Jerusalem, and then to Fostat (Cairo), where they settled.

In Egypt.

During the first years of his residence in Egypt Maimonides experienced many misfortunes. After the death of Maimon, Moses' brother David supported the family by trading in precious stones. David perished at sea, and with him was lost not only his own fortune, but large sums that had been entrusted to him by other traders. These events affected Maimonides' health, and he went through a long sickness. Compelled now to work for a living, and considering it a sin to earn a livelihood from religion, he adopted the medical profession. After several years of practise Maimonides' authority in medical matters was firmly established, and he was appointed private physician to Saladin's vizier Al-Ḳaḍi al-Faḍil al-Baisami, who recommended him to the royal family and bestowed upon him many distinctions. According to the Arabic historian Al-Ḳiṭṭi, Maimonides declined a similar position offered to him by "the King of the Franks in Ascalon" (Richard I. of England). The method adopted by Maimonides in his professional practise was to begin with a simple treatment, endeavoring to cure by a prescribed diet before administering drugs. Speaking of his medical career in a letter addressed to his pupil Joseph ibn 'Aḳnin, Maimonides says: "You know how difficult this profession is for one who is conscientious and exact, and who states only that which he can support by argument or authority." In another letter, addressed to Samuel ibn Tibbon, he describes his arduous professional duties, which occupy him the whole day and very often a great part of the night. Nevertheless, Maimonides' powerful genius and indefatigable industry enabled him, amid his numerous occupations, to produce monumental works, answer hundreds of questions on various subjects addressed to him from various parts of the world, and administer the affairs of the community of Cairo, in which, soon after his arrival, he took a leading part, apparently becoming its recognized official head by 1177.

Philosophical Works.

Between the years 1158 and 1190 Maimonides produced, besides several minor writings (see the list of works below), a commentary on the Mishnah entitled "Kitab al-Siraj," a book on the precepts, "Kitab al-Fara'iḍ," the code Mishneh Torah (called by Maimonides' admirers "Yad ha-Ḥazaḳah"), and the philosophical work "Dalalat al-Ḥa'irin" ("Moreh Nebukim"). The first three works are the chief concern of the supplementary article following, while here is outlined the philosophical system expounded in the introductions to the Mishnah of Pirḳe Abot and of Ḥeleḳ, in the first book of the "Yad ha-Ḥazaḳah," entitled "Sefer ha-Madda'," and especially in the "Dalalat al-Ḥa'irin," which became of extraordinary importance, not only for the rational development of Judaism, but for the history of philosophy in the Middle Ages. The object of the work last mentioned is explained by Maimonides in the following terms:

> "I have composed this work neither for the common people, nor for beginners, nor for those who occupy themselves only with the Law as it is handed down without concerning themselves with its principles. The design of this work is rather to promote the true understanding of the real spirit of the Law, to guide those religious persons who, adhering to the Torah, have studied philosophy and are embarrassed by the contradictions between the teachings of philosophy and the literal sense of the Torah."

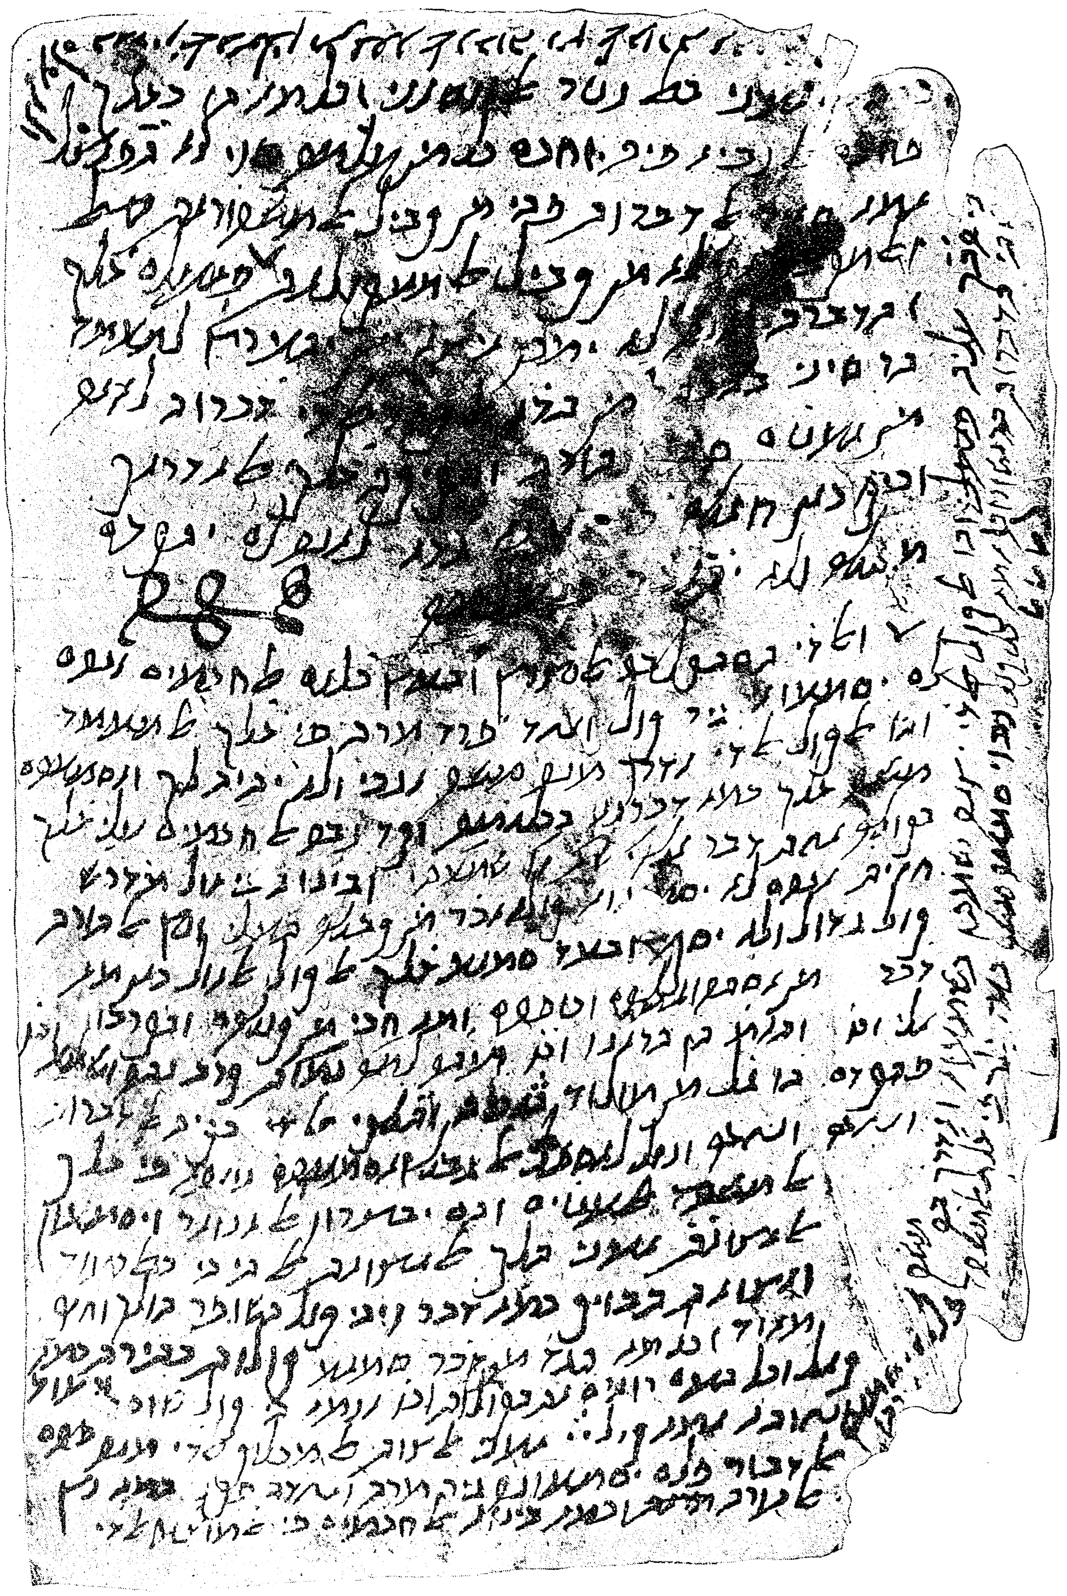
Philosophy and Religion.

According to Maimonides, there is no contradiction between the truths which God has revealed and the truths which the human mind, a power derived from God, has discovered. In fact, with few exceptions, all the principles of metaphysics (and these are, for him, those of Aristotle as propounded by the Arabic Peripatetics Al-Farabi and Ibn Sina) are embodied in Bible and Talmud. He is firmly convinced that, besides the written revelation, the great prophets received orally revelations of a philosophical character, which were transmitted by tradition to posterity, but which were lost in consequence of the long periods of suffering and persecution the Jews experienced. The supposed conflict between religion and philosophy originated in a misinterpretation of the anthropomorphisms and in the superficial readings of Scripture, which are to the inner or allegorical interpretations what silver is to gold. Maimonides' predecessors, Saadia, Baḥya, and Judah ha-Levi, in treating of anthropomorphism, contented themselves with the statement that any term under consideration must be regarded as a metaphor. Maimonides, however, set up the incorporeality of God as a dogma, and placed any person who denied this doctrine upon a level with an idolater; he devoted much of the first part of the "Moreh Nebukim" to the interpretation of the Biblical anthropomorphisms, endeavoring to define the meaning of each and to identify it with some transcendental metaphysical expression. Some of them are explained by him as perfect homonyms, denoting two or more absolutely distinct things; others, as imperfect homonyms, employed in some instances figuratively and in others homonymously.

The Divine Attributes.

From the anthropomorphisms Maimonides passes to the much-discussed question of the divine attributes. As in the case of the anthropomorphisms, it was, according to him, the misinterpretation of certain Biblical passages that caused some to admit divine attributes. Against this admission Moses argues (1) that an attribute expresses some quality or property which is not inherent in the object described, in this case being an "accident," or (2) that it denotes a property consistent with the essence of the object described; in the latter case the fact of the coexistence of such an attribute would, if applied to God, denote a plurality in the divine essence.

Maimonides divides all the positive attributes into five classes: (1) Those that include all the essential



HOLOGRAPH (?) DRAFT OF THE "DALALAT AL-ḤA'IRIN" OF MAIMONIDES, ARABIC IN HEBREW CHARACTERS.

(From the Cairo Genizah.)

properties of an object. This class of attributes can not be applied to God, because, as all philosophers agree, God can not be defined, inasmuch as definition can be established only by giving genus and differentia. (2) Those that include only a part of the essential properties. Neither can these attributes be applied to God, who, being incorporeal, has no parts. (3) Those that indicate a quality. These are also inapplicable to God, who, having no soul, is not subject to psychical analysis. (4) Those that indicate the relation of one object to another. At first thought it would seem that this class of attributes might be employed in reference to God, because, having no connection with His essence, they do not imply any multiplicity or variety in Him; but on closer examination their inadmissibility becomes evident. A relation can be imagined only between two things of the same species, but not between two things of different species, though they may belong to the same class. For example, between wisdom and sweetness, meekness and bitterness, there can be no relation, although in their general signification they come under the head of "quality." How, then, could there be any relation between God and His creatures, considering the great difference between them? the creature having only a possible existence, while His existence is absolute. (5) Those that refer to the actions of the object described. Attributes of this kind, inasmuch as they are distinct from the essence of the thing and do not imply that different elements must be contained in the substance of the agent, are most appropriate to the description of the Creator. Indeed, with the exception of the Tetragrammaton, all the divine names are explained by Maimonides as descriptive of His actions. As to His essence, the only way to describe it is negatively. For instance, He is not non-existent, nor non-eternal, nor impotent, etc. These assertions do not involve any incorrect notions or assume any deficiency, while if positive essential attributes are admitted it may be assumed that other things coexisted with Him from eternity.

Maimonides completes his study of the attributes by demonstrating that the philosophical principle that God is the "intellectus" (אלעקל), the "ens intelligens" (אלעקל אלפאעל), and the "ens intelligibile" (אלמעקול), does not imply a plurality in His essence, because in matters of the intellect the "agens" (which acts in the formation of the notions), the action, and the object of the action, are identical. Indeed, following the theory of Alexander of Aphrodisias, Maimonides considers that the intellect is a mere disposition, receiving notions by impulse from without, and that consequently ideas are at the same time subject, action, and object.

Motekallamin.

The last chapters of the first part of the "Moreh" are devoted to a criticism of the theories of the Motekallamin (see Arabic Philosophy). These theories are embodied in twelve propositions, from which they derived seven arguments in support of the doctrine of "creatio ex nihilo." This once established, they asserted, as a logical consequence, that there is a Creator; then they demonstrated that this Creator must be one, and from His unity deduced His incorporeality. Maimonides exposes the weakness of these propositions, which he regards as founded not on a basis of positive facts, but on mere fiction. Contrary to the Aristotelian principle that the whole universe is "one" organized body, every part of which has an active, individual relation to the whole, the Motekallamin deny the existence of any law, organization, or unity in the universe. For them the various parts of the universe are independent of one another; they all consist of equal elements; they are not composed of substance and properties, but of atoms and accidents (see Atomism); the law of causality is ignored; man's actions are not the result of will and design, but are mere accidents. Maimonides criticizes especially the tenth proposition of the Motekallamin, according to which everything that is conceivable by imagination is admissible: *e.g.*, that the terrestrial globe should become the all-encompassing sphere, or that this sphere should become the terrestrial globe.

Proofs of the Existence of God.

The second part of the "Moreh" opens with the enumeration of the twenty-six propositions through which are proved the existence, the unity, and the incorporeality of the Primal Cause. For the existence of the Primal Cause there are four proofs: (1) no motion can take place without an agent producing it, and the series of causes leading to a certain motion is finite; (2) since some things both receive and impart motion, while other things are set in motion without imparting it, there must exist a being that imparts motion without being itself set in motion; (3) as existing beings are partly permanent and partly transient, there must be a being whose existence is permanent; (4) nothing can pass from a state of potentiality into that of actuality without the intervention of an agent; this agent requires for its own transition from potentiality to actuality the help of another agent, and the latter, again, of another; and so on until one arrives at an agent that is constant and admits of no potentiality whatever.

The unity of God is proved by the following arguments: (1) Two gods can not be assumed, for they would necessarily have one element in common by virtue of which they would be gods, and another element by which they would be distinguished from each other; further, neither of them could have an independent existence, but both would themselves have to be created. (2) The whole existing world is "one" organic body, the parts of which are interdependent. The sublunary world is dependent upon the forces proceeding from the spheres, so that the whole universe is a macrocosm, and thus the effect must be due to one cause. The incorporeality of God can be proved by the preceding arguments and by the principle that every corporeal object consists of matter and form, and that every compound requires an agent to effect its combination.

As there is no disagreement between the principles of Aristotle and the teachings of Scripture as to God, or the Primal Cause, so there is none between their systems of natural philosophy. As "Primum Motum" of this world there are, according to Aris-

Aristotelian Principles.

totle, the heavenly spheres, each of which possesses a soul, the principle of motion, and is endowed with an intellect. They move in various senses through unmoved immaterial beings, or Intelligences, which are the cause of their existence and their motion in the best possible way, namely, a uniform rotary motion. The first Intelligence, which is the agent of motion for the uppermost or the all-encompassing sphere, is a direct emanation of the Primal Cause; the others emanated one from the other. There were altogether nine spheres, namely, the all-encompassing sphere, that of the fixed stars, and those of the seven planets; nine Intelligences correspond to the nine spheres; a tenth Intelligence, which is attached to the lowest sphere, the one nearest to the center, the sphere of the moon, is the Active Intellect. This last causes the transition of man's intellect from a state of potentiality to that of actuality.

The earth, which is spherical, reposes unmoved at the center of the world, and any changes that happen thereon are due to the revolutions of the spheres, which, as animated and intellectual beings, are acting in full consciousness. God does not act by means of direct contact. When, for instance, He destroys anything with fire, the fire is set in motion through the movements of the spheres, and the spheres by the Intelligences.

All these theories are, according to Maimonides, supported both by Holy Writ and by post-Biblical Jewish literature. That the spheres are animated and intellectual beings is clearly expressed by the Psalmist. "The heavens declare the glory of God" (Ps. xix. 2 [A. V. 1]) can not be taken as a mere figure of speech. The angels mentioned in the Bible are identical with the Intelligences. There is, however, one point on which Maimonides differs from his master. According to Aristotle, these spheres, as well as the Intelligences, coexisted with the Primal Cause, while Maimonides holds that the spheres and the Intelligences were created by the will of God. Maimonides asserts that he was prompted to reject the doctrine of the eternity of matter not because certain passages in Scripture confirm the "creatio ex nihilo," for such passages could easily be explained in a manner that would leave them in harmony with the former doctrine, but because there are better arguments for the "creatio ex nihilo" than for the eternity of the universe.

Denies Eternity of Matter.

Moreover, Aristotle himself was well aware that he had not proved his thesis. The adherents of the doctrine of the eternity of the universe rely on the following seven arguments, partly founded on the properties of nature and partly on those of the Primal Cause: (1) Motion is eternal, for if it had a beginning there must have been motion when it came into existence, because transition from non-existence to existence—that is, from potentiality into actuality—always implies motion. (2) The first substance underlying the four elements must be eternal. "To become" implies taking on form; but first substance means a formless substance; hence it has never "become." (3) As the spheres are indestructible because they do not contain opposing elements, which is evidenced by their circular motion, they must be without a beginning. (4) Suppose the universe had a beginning; then either its creation was possible, or necessary, or its previous existence was impossible; but if it was necessary, it could never have been non-existent; if impossible, it could never have come into existence; and if possible, then there must have been a subject with attributes involving the possibility. (5) The assumption that God has produced a thing at a certain fixed time would imply that He has changed from the condition of a potential creator to that of an actual creator. (6) The supposition that the world was created would mean that God's will had undergone a change, or that He must be imperfect, for either God did not will previously to create the world, or, if He did, He had not the power. (7) The universe being the result of God's wisdom, it must, like the latter, be eternal.

Against these arguments Maimonides argues that though the properties of nature are thus at present, when the universe is in actual existence and fully developed, it does not follow that things possessed them at the moment when they were produced; it is even more than probable that these properties themselves came into existence from absolute non-existence. Still less conclusive are the arguments based upon the properties of the Primal Cause, for it is impossible to obtain a correct notion of the heavenly spheres and their Intelligences; the incorrectness of the views of Aristotle on the subject has been proved by Ptolemy, although the system of that astronomer is likewise far from being faultless.

Reconciliation of Bible and Aristotle.

However, Maimonides is fully aware that he did not give positive proofs for the "creatio ex nihilo," and he warns his pupil Joseph ibn 'Aḳnin, to whom the "Moreh" was dedicated, to beware of the opposite doctrine; for if, as Aristotle taught, everything in the universe is the result of fixed laws, if nature does not change, and if there is nothing supernatural, it would be absurd to believe in miracles, in prophecy, and in revelation. But as Maimonides recognizes the authority of Aristotle in all matters concerning the sublunary world, he proceeds to show that the Biblical account of the creation of the nether world is in perfect accord with Aristotelian views. Explaining its language as allegorical and the terms employed as homonyms, he summarizes the first chapter of Genesis thus: God created the universe by producing on the first day the "reshit," or Intelligences, from which the spheres derived their existence and motion and thus became the source of the existence of the entire universe. This universe consisted at first of chaos and the four elements; but, through the influence of the spheres and more directly through the action of light and darkness, its form was developed. In the five subsequent days came into existence the minerals, plants, animals, and the intellectual beings. The seventh day, on which the universe was for the first time ruled by the natural laws that still continue in operation, was blessed by God, who designed it to proclaim the "creatio ex nihilo." The account of Adam's sin is interpreted by Maimonides as an allegorical exposition of the relation between sensation, intellect, and moral faculty; the three sons of Adam are an allusion to the three elements in man—the vegetable, the animal, and the intellectual.

With the doctrine of "creatio ex nihilo" prophecy becomes possible; but what are the requisites of prophecy? Maimonides cites three different opinions on the subject: (1) the opinion of those who believe that any man, whether wise or stupid, young or old, provided he be to some extent morally good, can be inspired by God with the spirit of prophecy and entrusted with a mission; (2) the opinion of the philosophers who, considering prophecy the highest expression of mental development, assert that it can be attained by study only; and (3) his own opinion, which he considers to be the view of Scripture. He agrees with the philosophers in regarding the prophetic faculty as natural to man and in accordance with the laws of nature; in holding that any man whose physical, mental, and moral faculties are in perfect condition may become a prophet; but he holds also that, with all these qualifications, man may still, by divine, miraculous interference, be prevented from prophesying.

The Requisites of Prophecy.

The last chapters of the second part of the work are devoted to the explanation of the Biblical prophecies and visions, showing the part taken therein by imagination, which is, according to Maimonides, an essential element in prophecy.

After having given, in the first seven chapters of the third and last part of the "Moreh," the exposition of the vision of Ezekiel, which he explains as an allegorical description of the sublunary world, the spheres, and the Intelligences, Maimonides endeavors to show that evil has no positive existence, but is a privation of a certain capacity and does not proceed from God; when, therefore, evils are mentioned in Scripture as sent by God, the Scriptural expressions must be explained allegorically. Indeed, says Maimonides, all existing evils, with the exception of some which have their origin in the laws of production and destruction and which are rather an expression of God's mercy, since by them the species are perpetuated, are created by men themselves.

Origin of Evil.

The question of evil is closely connected with that of Divine Providence. As is well known, Aristotle asserted that humanity as a whole, but not the individual, is guided and protected by Divine Providence. The reason which led Aristotle to adopt this view is that Providence implies omniscience, while, according to him, God's knowledge is limited to universals, for if He had knowledge of particulars He would be subject to constant changes. Maimonides rejects this theory and endeavors to show that belief in God's omniscience is not in opposition to belief in His unity and immutability. "God," he says, "perceives future events before they happen, and His perception never fails. Therefore no new ideas can present themselves to Him. He knows that a certain individual will be born at a certain time, will exist for a certain period, and will then cease to exist. The coming into existence of this individual is for God no new fact; nothing has happened that He was unaware of, for He knew this individual, such as he now is, before his birth." As to the objections advanced by the Peripatetics to the belief in God's omniscience—namely, that it is inconceivable that God's essence should remain indivisible considering the multiplicity of knowledge of which it is made up; that His intelligence should embrace the infinite; that events should maintain their character of contingency in spite of the fact that they are foreseen by the Supreme Being—these objections, according to Maimonides, are based on an error. Misled by the use of the term "knowledge," men believe that whatever is requisite for their knowledge is requisite for God's knowledge also.

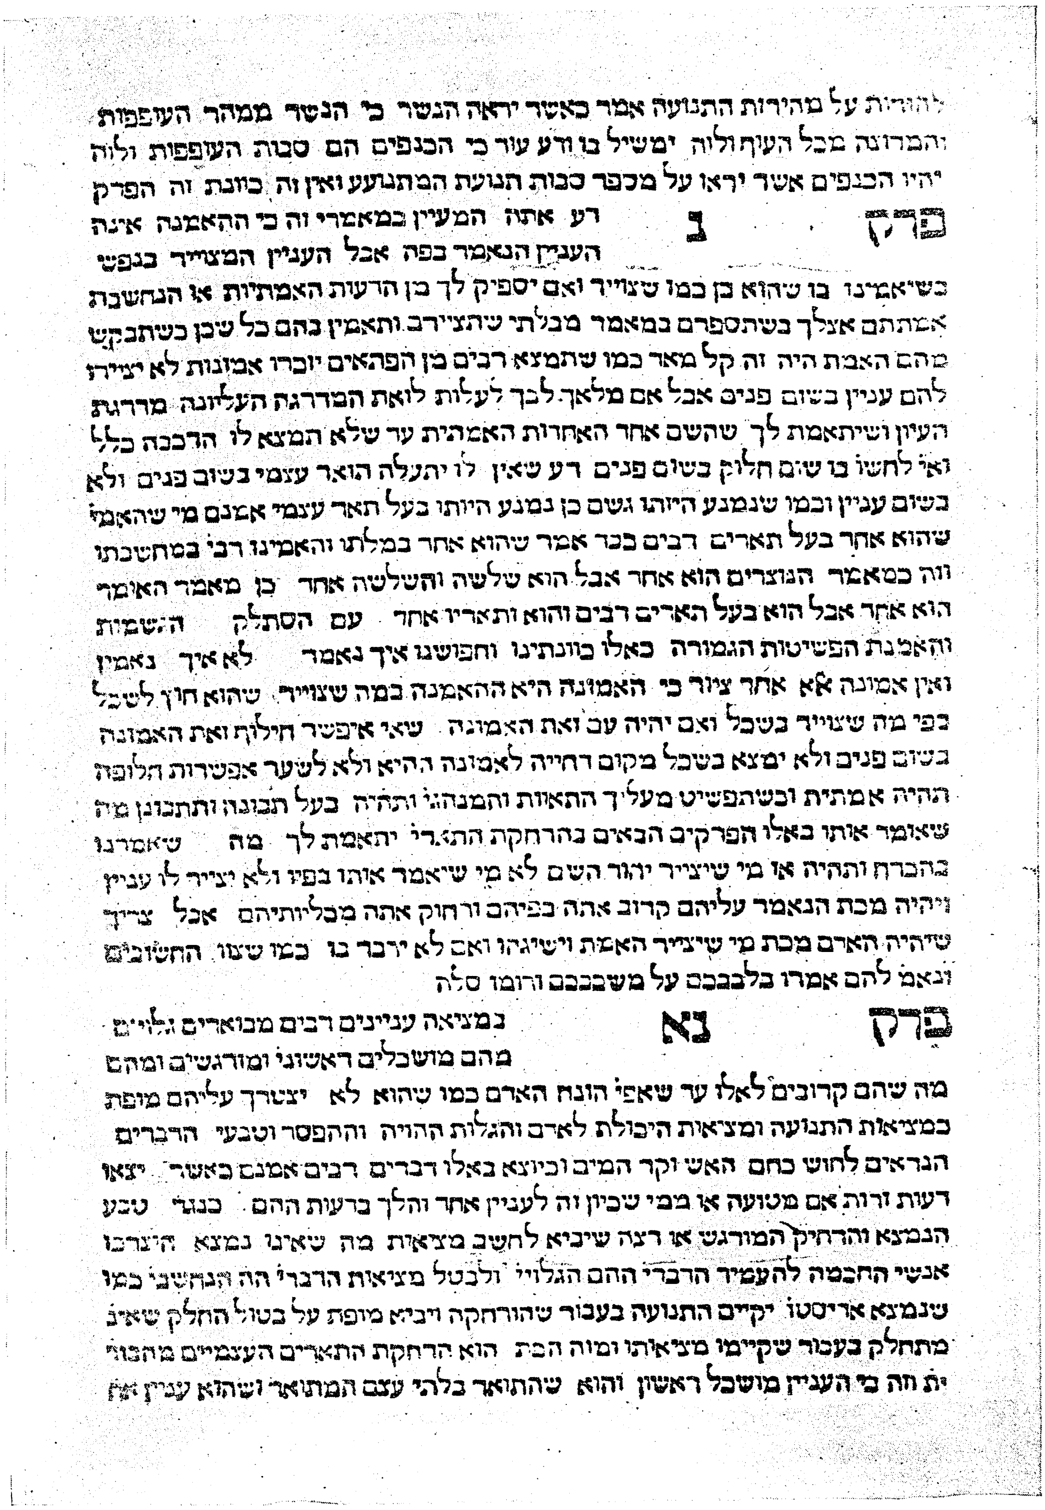
God's Providence and Omniscience.

The fact is, no comparison whatever is possible between human knowledge and God's knowledge, the latter being absolutely incomprehensible to human intelligence. But omniscience implies predestination; how, then, can man's will assert itself freely? Does not the very fact of God's knowledge compel man to act in accordance with it? To refute this objection Maimonides endeavors to show that "the fact that God knows things while they are in a state of possibility—when their existence belongs to the future—does not change the nature of 'possible' in any way; that remains unchanged; and the knowledge of the realization of one of several possibilities does not affect that realization."

The discussion of the question of Divine Providence is followed by another question: What is the purpose of the divine precepts? According to Maimonides, ethics and religion are indissolubly linked together, and all the precepts aim either directly or indirectly at morality. As in the "Yad ha-Ḥazaḳah," he divides the laws of the Pentateuch into fourteen groups, and discusses the principal object of each group and the special object of each law. Thus, for instance, the object of the laws concerning the sacrifices lies in the accompanying prayers and devotions; as to the sacrifices themselves, they were only a concession to the idolatrous habits of the people.

The Object of the Commandments.

As in metaphysics, Maimonides closely follows Aristotle's ethical system, which he expounds in his introduction and commentary to Abot, in various passages of the "Sefer ha-Miẓwot," and in his "Yad ha-Ḥazaḳah," especially in the "Hilkot De'ot" and the "Hilkot Teshubah." According to Maimonides, the final aim of the creation of this world is man; that of man is happiness. This happiness can not consist in the activity which he has in common with other animals, but in the exercise of his intellect, which leads to the cognition of truth. The highest cognition is that of God and His unity; consequently the "summum bonum" is the knowledge of God through philosophy. The first necessity in the pursuit of the "summum bonum" is to subdue sensuality and to render the body subservient to reason. In order that man should be considered the aim and end of the creation of this world he must be perfect morally and intellectually. Virtue and vice have their source in the five faculties of the soul: the nutritive, the sensitive, the imaginative, the appetitive, and the deliberative. The soul is to



להורות על מהירות התנועה אמר כאשר יראה הנשר כי הנשר ממהר העופפות
והמרוצה מכל העוף ולזה ימשיל בו ודע עוד כי הכנפים הם סבות העופפות ולזה
יהיו הכנפים אשר יראו על מספר סבות תנועת המתנועע ואין זה כוונת זה הפרק

פרק נ

דע אתה המעיין במאמרי זה כי האמונה אינה
העניין הנאמר בפה אבל העניין המצוייר בנפש
כשיאמינו בו שהוא כן כמו שצוייר ואם יספיק לך מן הדעות האמתיות או הנחשבת
אמתתם אצלך בשתספרם במאמר מבלתי שתציירם ותאמין בהם כל שכן כשתבקש
מהם האמת היה זה קל מאד כמו שתמצא רבים מן הפתאים יזכרו אמונות לא יציירו
להם עניין בשום פנים אבל אם מלאך לבך לעלות לזאת המדרגה העליונה מדרגת
העיון ושיתאמת לך שהשם אחד האחדות האמתית עד שלא תמצא לו הרכבה כלל
ולא לחשוב בו שום חלוק בשום פנים דע שאין לו יתעלה תואר עצמי בשום פנים ולא
בשום עניין וכמו שנמנע היותו גשם כן נמנע היותו בעל תאר עצמי אמנם מי שיאמי'
שהוא אחד בעל תארים רבים כבר אמר שהוא אחד במלתו והאמינו רבי' במחשבתו
וזה כמאמר הנוצרים הוא אחד אבל הוא שלשה והשלשה אחד כן מאמר האומר
הוא אחד אבל הוא בעל תארים רבים והוא ותאריו אחד עם הסתלק הגשמות
והאמנת הפשיטות הגמורה כאלו כוונתינו וחפושנו איך נאמר לא איך נאמין
ואין אמונה אלא אחר ציור כי האמונה היא ההאמנה במה שצוייר שהוא חוץ לשכל
כפי מה שצוייר בשכל ואם יהיה עם זאת האמונה שאי אפשר חילוף זאת האמונה
בשום פנים ולא ימצא בשכל מקום דחייה לאמונה ההיא ולא לשער אפשרות חלופה
תהיה אמתית וכשתפשיט מעליך התאוות והמנהגי' ותהיה בעל תבונה ותתבונן מה
שאומר אותו באלו הפרקים הבאים בהרחקת התארי' יתאמת לך מה שאמרנו
בהכרח ותהיה אז מי שיצייר יחוד השם לא מי שיאמר אותו בפיו ולא יצייר לו עניין
ויהיה מכת הנאמר עליהם קרוב אתה בפיהם ורחוק אתה מכליותיהם אבל צריך
שיהיה האדם מכת מי שיצייר האמת וישיגהו ואם לא ידבר בו כמו שצוו החשובים
ונאמ' להם אמרו בלבבכם על משכבכם ודומו סלה

פרק נא

נמציאה עניינים רבים מבוארים גלויים
מהם מושכלים ראשוני' ומורגשים ומהם
מה שהם קרובים לאלו עד שאפי' הונח האדם כמו שהוא לא יצטרך עליהם מופת
כמציאות התנועה ומציאות היכולת לאדם והגלות ההויה וההפסד וטבעי הדברים
הנראים לחוש כחם האש וקר המים וכיוצא באלו דברים רבים אמנם כאשר יצאו
דעות זרות אם מטועה או ממי שכיון זה לעניין אחד והלך בדעות ההם כנגד טבע
הנמצא והרחיק המורגש או רצה שיביא לחשב מציאות מה שאינו נמצא הוצרכו
אנשי החכמה להעמיד הדברי' ההם הגלויי' ולבטל מציאות הדברי' ההם הנחשבי' כמו
שנמצא אריסטו' יקיים התנועה בעבור שהורחקה ויביא מופת על בטול החלק שאינ'
מתחלק בעבור שקיימו מציאותו ומזה הכת הוא הרחקת התארים העצמיים מהבור'
ית' וזה כי העניין מושכל ראשון והוא שהתואר בלתי עצם המתואר ושהוא עניין אחר

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

intellect what matter is to form: it is susceptible to both good and evil, according to the choice made by the deliberative faculty.

Ethical Views.

Human excellence is either of the appetitive faculty (moral virtues) or of the deliberative faculty (intellectual virtues). The vices of the appetitive faculty are the opposite of the appetitive virtues; for instance, cowardice and rashness are the opposite extremes of courage, and both are vices. Virtue is a proficiency in willing what is approved by reason, developed from the state of a natural potentiality by action. The development of virtue requires exercise and intelligence. Ethical virtue is that permanent direction of the will which maintains the mean of conduct, as determined by the reason of the intelligent. Courage is the mean between cowardice and temerity; temperance, the mean between inordinate desire and stupid indifference.

In the field of personal ethics Maimonides established rules deduced from the teachings of the Bible and of the Rabbis. These rules deal with man's obligations to himself and to his fellow men. To the former belongs the obligation to keep oneself in health by regular living, by seeking medical advice in sickness, by cleanliness, by earning a livelihood, etc. The conditions essential to the soundness of the soul are contentment, and moderation in joy and grief. Pity is a generous quality of the soul; to develop this sentiment the Law forbade cruelty to animals. Mutual love and sociability are necessary to men. The sentiment of justice prescribed by the Law consists in respecting the property and honor of others, even though they be one's slaves.

Objections to the "Moreh."

The "Moreh" was completed by Maimonides at the age of fifty-two. It was the climax of his literary career in the field of Judaism. After having in his previous works systematized all the Biblical and rabbinical laws and ceremonies and drawn up the thirteen Articles of Faith in which every Israelite is bound to believe, he shows, in the "Moreh," that Judaism is the very expression of human intelligence and that there is nothing in Scripture or rabbinical literature, if properly explained, that contradicts true philosophy. As might be expected, the adversaries of Maimonides' code declared war against the "Moreh." His views concerning angels, prophecy, and miracles, and especially his assertion that he would have had no difficulty in reconciling the Biblical account of the Creation with the doctrine of the eternity of the universe, had the Aristotelian proofs for it been conclusive, provoked the indignation of the orthodox. Maimonides' theory of the unity of souls (comp. Alexander of Aphrodisias) was declared by them to be an outright denial of the immortality of the soul.

Maimonides disdained these attacks and continued his laborious life, enriching medical literature with some valuable works and enlightening his admirers and disciples upon a multitude of questions. Among these was an inquiry concerning astrology, addressed to him from Marseilles. In his answer Maimonides says that, in his opinion, man should believe only what can be supported either by rational proof, by the evidence of the senses, or by trustworthy authority. He affirms that he has studied astrology and that it does not deserve to be described as a science. The supposition that the fate of a man could be dependent upon the constellations is ridiculed by him; he argues that such a theory would rob life of purpose and would make man a slave of destiny.

With the completion of the "Moreh," Maimonides was at the zenith of his glory. He had the satisfaction of seeing his work translated into Hebrew and received with great admiration by enlightened Jews; even Mohammedans studied it and admired the genius of its author. The renowned Arabic physician and theologian 'Abd al-Laṭif of Bagdad confessed that his wish to visit Cairo was prompted by the desire to make the acquaintance of three men, among whom was Musa ibn Maimun. The latter's greatness as a physician was no less recognized, and the Arabic poet and cadi Al-Sa'id ibn Surat al-Mulk sang it in ecstatic verse, which, translated into English, reads as follows:

> Galen's art heals only the body,
> But Abu Imram's [Maimonides'] the body and the soul.
> With his wisdom he could heal the sickness of ignorance.
> If the moon would submit to his art,
> He would deliver her of her spots at the time of full moon,
> Cure her of her periodic defects,
> And at the time of her conjunction save her from waning.

His Death.

The last years of Maimonides' life were marked by increasing physical ailments; he died in his seventieth year, mourned by many congregations in various parts of the world. In Fostat both Jews and Mohammedans observed public mourning for three days. In Jerusalem a general fast was appointed; a portion of the "Tokaḥah" was read, and the history of the capture of the Ark of the Covenant by the Philistines. His body was taken to Tiberias, and his tomb became a place of pilgrimage.

With the death of Maimonides the "Moreh" became the occasion for a long and bitter fight between conservative and liberal Jews in France and Spain. So bitter, indeed, was the contest that fierce invectives were speedily followed by anathemas and counter-anathemas, issued from both camps. Finally, about 1234, the dispute was referred to the Christian authorities, who ordered Maimonides' works to be burned. However, in spite of the strenuous opposition of the orthodox, perhaps because of this opposition, the "Moreh" became the "guide" of enlightened Jews for many generations, and its study produced philosophers like Spinoza, Solomon Maimon, and Moses Mendelssohn. Nor was its fame confined to the narrow pale of Judaism; as early as the thirteenth century portions of it were translated into Latin, and many Christian scholastics, like Albertus Magnus, Duns Scotus, Alexander of Hales, etc., drew from this inexhaustible well of learning.

The following is a classified list of Maimonides' works:

Philosophy and Theology: "Dalalat al-Ḥa'irin." Translated into Hebrew by Samuel ibn Tibbon, in 1204, under the title "Moreh Nebukim."

Works on Philosophy and Theology.

The Hebrew translation was first published somewhere in Italy before 1480; since then it has been frequently published with commentaries. Another Hebrew translation, by Al-Ḥarizi, was published by Schlossberg (vol. i., London, 1851; vols. ii. and iii., Vienna, 1874 and 1879). There are two Latin translations of the "Moreh," by Aug. Justinianus (Paris, 1520) and by Buxtorf, Junior (Basel, 1629); the earlier is based on the Hebrew version of Al-Ḥarizi and is a mere copy of an older Latin translation; the later is based on that of Ibn Tibbon. The Arabic original, with a French translation entitled "Guide des Egarés," was published by Salomon Munk (3 vols., Paris, 1856–66). The work was translated twice into Italian, by Jedidiah ben Moses of Recanati (1580) and by D. J. Maroni (1870). The first part was translated into German by Fürstenthal (Krotoschin, 1839); the second, by M. E. Stein (Vienna, 1864); and the third, by Scheyer (Frankfort-on-the-Main, 1838). Part iii. was translated into English, under the title "The Reasons of the Laws of Moses," by Townley (London, 1827). A complete English translation, in three volumes, was published by M. Friedländer (London, 1889).

"Maḳalah fi-Ṣina‘at al-Manṭiḳ," on the terminology of logic, in fourteen chapters; written at the age of sixteen. It was translated into Hebrew by Moses ibn Tibbon under the title "Millot ha-Higgayon," and was first published, with two anonymous commentaries, at Venice in 1552; it has since passed through fourteen editions. A Latin translation was published by Sebastian Münster (Basel, 1527); German translations were made by M. S. Neumann (Venice, 1822) and Heilberg (Breslau, 1828). Among the numerous commentaries written on this work the most noteworthy is that of Moses Mendelssohn.

"Maḳalah fi al-Tauḥid," an essay on the unity of God. Translated into Hebrew by Isaac ben Nathan, in the fourteenth century, under the title "Ma'amar ha-Yiḥud."

"Maḳalah fi al-Sa‘adah," an essay, in two chapters, on felicity (Paris, Bibliothèque Nationale, No. 7193). Published for the first time in Hebrew, under the title "Peraḳim be-Haẓlaḥah," in 1567.

An essay on forced conversions. Translated anonymously into Hebrew under the title "Iggeret ha-Shemad," or "Ma'amar Ḳiddush ha-Shem." It sets forth (1) the extent to which a Jew may yield and the extent to which he must resist when under compulsion to embrace another religion, and maintains (2) that Mohammedanism is not a heathenish religion. Maimonides wrote this essay in reply to a certain rabbi who asserted that compulsory converts to Islam, though they may secretly observe all the Jewish precepts, can not be considered as Israelites. It is generally held that in this case Maimonides preached "pro domo sua," he and his family having been themselves forced to embrace Islam. This, however, is contested by some scholars, who, on very good grounds, even doubt Maimonides' authorship of this essay. The "Iggeret ha-Shemad" was published by A. Geiger in his monograph on Maimonides (Breslau, 1850).

Letter to Rabbi Jacob al-Fayyumi, on the critical condition of the Jews in Yemen (1172). It was translated into Hebrew by Samuel ibn Tibbon, Abraham ibn Ḥisdai, and Nathan ha-Ma‘arabi. Ibn Tibbon's translation was published under the title "Iggeret Teman" (Vienna, 1857); that of Nathan ha-Ma‘arabi, under the title "Petaḥ Tiḳwah" (1629); that of Abraham ibn Ḥisdai is still extant in manuscript.

An essay on resurrection. Translated into Hebrew by Samuel ibn Tibbon and published under the title "Ma'amar Teḥiyyot ha-Metim" (1629). A Latin translation, still extant in manuscript, was made by Mithridates.

Works on Halakah.

Halakah: Commentaries on the Mishnah, entitled "Kitab al-Siraj." They were translated into Hebrew by several scholars: on Berakot, Peah, Demai, Shebu‘ot, by Judah al-Ḥarizi; the remainder of Seder Zera‘im and Seder Mo‘ed, by Joseph ben Isaac ibn al-Fu‘al; Seder Nashim, by Jacob ben Moses of Huesca; Seder Neziḳin—with the exception of Abot, which was translated by Samuel ibn Tibbon—by Solomon ben Jacob of Saragossa; Seder Ḳodashim, by Nethaneel ben Joseph of Saragossa; Seder Ṭohorot, by an anonymous scholar; various other parts, by Israel Israeli. The Hebrew translations were first published at Naples (1492). Of the original were published: the general introduction and the prefaces to seder v. and vi., and to the treatise Menaḥot, with a Latin translation by Pococke (Oxford, 1654); the introduction to Abot ("Shemonah Peraḳim"), with a German translation by M. Wolf (Leipsic, 1863); the Seder Ṭohorot, with a Hebrew translation by Joseph Derenbourg (Berlin, 1886–92); various treatises, some with Hebrew and some with German translations, published as university dissertations in the last twenty years. The Hebrew translations were rendered into Latin by Surenhusius; into Spanish by Reuben ben Naḥman Abi Saglo.

"Kitab al-Fara'iḍ." Twice translated into Hebrew, first by Moses ibn Tibbon, and then by Solomon ben Joseph ibn Ayyub. Ibn Tibbon's translation was printed first in Italy and then in Lisbon in 1497, and frequently since. Part of the original, with a German translation, was published by M. Peritz (Breslau, 1882), and a complete edition, with a French translation entitled "Le Livre des Préceptes," by Moses Bloch (Paris, 1888).

Commentary on Ḥullin and on nearly all of three sections—Mo‘ed, Nashim, and Neziḳin. Of these commentaries, which Maimonides cites in the introduction to the Mishnah, only that on Rosh ha-Shanah is known; it was edited by J. Brill in the periodical "Ha-Lebanon" (viii. 199 *et seq.*).

"Mishneh Torah," or "Yad ha-Ḥazaḳah." The earliest edition appeared in Italy about 1480; the second at Soncino, 1490; the third at Constantinople, 1509; the fourth, fifth, sixth, and seventh editions at Venice, 1524, 1550, 1550–51, and 1574–75; the eighth at Amsterdam, 1702–3; the most recent and complete edition is that of Leipsic, 1862. Parts of an Arabic translation of the "Mishneh Torah" and an Arabic commentary on the "Sefer ha-Madda‘" are still extant in manuscript. Extracts from the "Mishneh Torah" were translated into

English by H. Bernard and E. Soloweyczik (London, 1863).

Halakot, extracted from the Talmud of Jerusalem: cited by Maimonides in his commentary on Tamid (v., *infra*).

Scientific Works.

Astronomy and Medicine: An essay on the Jewish calendar, based on astronomical principles. It is divided into two parts: on the "Molad" (conjunction of the moon), and on the "Teḳufah" (seasons of the year). It was translated into Hebrew by an anonymous writer and was inserted in the "Dibre Ḥakamim" of Eliezer of Tunis (Metz, 1849), and also in "Ḳobeẓ Teshubot Rambam" (Leipsic, 1859).

"Fi al-Jama'ah," on sexual intercourse, in three parts, dedicated to Malik al-Mustafir, Sultan of Hamat and nephew of Saladin. It was twice translated into Hebrew: under the title "Ma'amar 'al Ribbui ha-Tashmish," by Zeraḥiah ben Isaac, and under the title "Ma'amar ha-Mashgel" (anonymous). Both original and translations, as well as a Latin version, are extant in various manuscripts.

"Al-Sumum wal-Mutaḥarriz Min al-Adwiyyah al-Ḳitalah" (also called "Al-Maḳalah al-Faḍiliyyah"), on various poisons and their antidotes, in two volumes. Translated into Hebrew, under the title "Ha-Ma'amar ha-Nikbad," or "Ha-Ma'amar be-Teri'aḳ," by Moses ibn Tibbon; extant in various manuscripts. A Latin translation of this work was made by Armengaud Blasius of Montpellier. A French translation from the Hebrew version was made by M. Rabbinowicz under the title "Traité des Poisons" (Paris, 1865), and a German translation by M. Steinschneider entitled "Gifte und Ihre Heilungen" (Berlin, 1873).

"Fi al-Bawaṣir," on hemorrhoids, in seven chapters. Translated into Hebrew under the title "Ha-Ma'amar bi-Refu'at ha-Ṭeḥorim," and into Spanish under the title "Sobre los Milagros." Original and translations are found in manuscript.

"Fuṣul Musa," an imitation of the aphorisms of Hippocrates. Translated into Hebrew by Zeraḥiah ben Isaac and by Nathan ha-Me'ati ("Pirḳe Mosheh," Lemberg, 1804; Wilna, 1888). A Latin translation was published in 1489.

"Maḳalah fi al-Rabw," on asthma. Translated into Hebrew by Samuel ben Benveniste and Joseph Shatibi.

Commentary on Hippocrates' aphorisms. Extracted from the commentary of Galen; translated into Hebrew by Moses ibn Tibbon and anonymously.

Essays on hygiene, or consultations with Malik al-Faḍl, son of Saladin. Translated into Hebrew by Moses ibn Tibbon, and published first in "Kerem Ḥemed" (iii. 9–31), and later by Jacob Safir ha-Levi (Jerusalem, 1885). A Latin translation was published at Venice (1514, 1518, 1521) and Leyden (1531). Another Latin translation was made from the Hebrew by John of Capua; a German translation was published by D. Winternitz (Venice, 1843).

"Maḳalah fi Biyan al-A'raḍ," on the case of the Prince of Rikka. Translated into Hebrew anonymously under the title "Teshubot 'al She'elot Peraṭiyyot." A Latin translation was published in 1519 under the title "De Causis Accidentium Apparentium."

Correspondence.

Maimonides' correspondence and some consultations appeared at first without place or date, and later, under the title "Teshubot She'elot we-Iggarot," at Constantinople (1520). His responsa were translated from the Arabic into Hebrew by Mordecai Tammah, and published at Amsterdam, 1765, under the title "Pe'er ha-Dor," and at Leipsic, 1859, under the title "Ḳobeẓ Teshubot Rambam."

J. I. Br.

Maimonides as Halakist: The fundamental purpose of all the halakic works of Maimonides was to bring system and order into the tremendous mass of traditional law and to promote the knowledge thereof by presenting it in a comparatively clear and brief form. This self-imposed task was the necessary consequence of his views regarding the mission and the purpose of the Jews and their relation to the revealed law; for in his eyes the Law, which the Jew was bound to follow, was not confined to the written code, but, in accordance with the traditional view (see Oral Law) adopted by Maimonides, embraced oral explanations, regulations, and provisions that had been given to Moses. These precepts and regulations were of equal validity with the written law, as were all those which scholars had deduced from the Bible by rules of logic or hermeneutics. There were, moreover, precepts set forth by prophets and sages which had no connection with the written law, although they were accepted by the entire people and were obligatory (Commentary on the Mishnah, Introduction). A necessary condition for the observance of the Law was a knowledge of it, and the Jew was obliged to enter upon scientific studies that he might rightly understand the truths contained in the Torah and attain spiritual perfection; thus he was unable to devote his entire time to the investigation of the commandments of the Law.

Object of the Precepts.

A fixed code, therefore, became necessary if each man was to know the Law and its precepts, and in it the rules and regulations must be contained with pregnant brevity. The Mishnah of Judah ha-Nasi had once been such a code, but it then had no commentary, and the Talmud, designed to fill this want, fell short of its object. The treatment of the Mishnah in the Talmud was often unintelligible, as when it asserted that a given mishnah contained this or that when such was not stated in the Mishnah itself, or that one mishnah was incomplete, while another required correction. Nor was the general plan of the Talmud as a commentary satisfactory, for it frequently explained a mishnah by discussions which were too detailed and too involved, while the language employed was unintelligible to the majority. It was often impossible to interpret a mishnah except by statements scattered through two or more treatises, so that a thorough knowledge of the entire Talmud, which few could attain, was necessary to determine the exact ruling of the mishnah in practical matters. It was impossible, moreover, to regard even the mishnaic code as complete, since it did not contain the many rules and regulations which were developed and elaborated in the later Talmudic period; and the Jewish people consequently lacked the body of law which was so requisite (Letter to Ibn 'Aḳnin, in the collection of responsa and letters of Maimonides, p. 30b, Leipsic, 1859).

Commentary and Code.

Maimonides set himself the task of meeting this want. This he sought to do by commenting on the Mishnah and making it available as a code, from which decisions of practical bearing might be deduced without the necessity of working through many involved disquisitions (Introduction). He planned also a new and more comprehensive body of law which, based upon the written Torah, should contain all that a faithful Jew must know, so that he need not spend his entire time in Talmudic controversies and disputations (Letter to Ibn 'Aḳnin, *l.c.* p. 31b). The two methods of commentary and codification were, in the opinion of Maimonides, the only ones open to every author to follow, the model of the one being the Talmud and of the other the Mishnah (Responsa, No. 140, Leipsic, 1859). It thus becomes possible to distinguish between the commentatorial and the codificatory contributions of Maimonides to the religious law.

Commentatorial Activity: In a survey of the activity of Maimonides as a commentator only his gloss on the Mishnah comes under consideration, for while it is true that Maimonides wrote commentaries on the Talmud, especially on the three orders of Mo'ed, Nashim, and Neziḳin, as well as on the treatise Ḥullin (Introduction), they have all been lost, while the gloss on Rosh ha-Shanah (ed. Brill, Paris, 1865) is of doubtful authenticity. These are of importance in this connection only in so far as it must be assumed that many decisions in the works of Maimonides that apparently contradict the meaning of the Talmud were probably based on divergent interpretations which he had adopted in his lost Talmudic treatises. Very different is it with his commentary on the Mishnah, which has been preserved in its entirety, and in which may be seen the combination of gigantic plan and detailed method that Maimonides adopted. In his mishnaic gloss Maimonides was for the most part a commentator, seeking to expound the Mishnah to those who studied it and giving them the general rules by which they might understand its true meaning. These principles, which afford a correct interpretation of many passages of the Mishnah, are scattered through his commentary, and he urges the reader to impress them on his memory that there may be no need of repeating them (Commentary on the Mishnah, B. B. v. 2 and Nazir ix.).

Commentary on the Mishnah.

The gloss itself was designed to enable the layman to understand the Mishnah, since he could not work through the involved disquisitions of the Talmud, and was in many cases unable even to understand the language (comp. "Yad," Preface). And even Talmudic scholars might receive great aid from the commentary, since it removed the difficulties of many mishnaic passages and explained them correctly; for numerous passages in the Mishnah were not understood even by the Geonim and leading authorities (Commentary on the Mishnah, 'Ab. Zarah v. 8 and Ket. i. 6). The entire mishnaic order Ḳodashim was unintelligible alike to scholars and laymen, since the great majority had little knowledge of the laws relating to sacrifice, so that his commentary on this portion of the Mishnah was designed to be of assistance to teacher and pupil alike (Introduction to Ḳodashim). In addition to this purely commentatorial service, the gloss was designed to give rulings in religious law of practical importance, which the layman would be entirely unable to deduce from the Talmud, while even to an expert their deduction would be difficult and precarious. After Maimonides' explanation of the meaning of each mishnaic passage, therefore, he states how the practical halakic decision is determined.

Practical Purpose.

Wishing his commentary to serve for instruction both in religious and in moral matters, he frequently omitted a detailed discussion of the view of a tanna where it was not accepted practically (comp. Frankel, "Hodegetica," p. 324). He did not limit himself, consequently, to an explanation of the Mishnah and a statement of the definitive halakic decisions, but rather seized every opportunity to expose abuses, superstitions, and errors, even in cases where his remarks have only a slight connection with the content of the Mishnah, or, indeed, none at all (comp. his polemic against those who wrote amulets, in the Commentary on the Mishnah, Soṭah vii. 8, and against those who used learning as a means of gain, *ib.* Ned. iv. 3 and Bek. iv. 6).

In the majority of cases Maimonides gave the Talmudic interpretation of a mishnah with the omission of all subtle explanations and disquisitions, and to that extent his commentary serves as an introduction to the Talmud, inasmuch as, after the reader or the student has acquired, with the help of this gloss, a knowledge of the Mishnah and is acquainted with the results of Talmudic exposition contained in it, he is able successfully to venture on the sea of the Talmud itself (Introduction). He did not, however, follow Talmudic interpretations everywhere, for in many places where the mishnaic exegesis of the Talmud did not seem to him to be correct, regardless of its authority he stated his own views (comp. Schorr in "He-Ḥaluẓ," 1860, v. 43–49). This he did even in cases where another view of the Halakah as regards practical decisions resulted from his interpretation (Schorr, *ib.*; comp. Lipmann Heller, "Tosafot Yom-Ṭob," on Naz. iv. 4 and Sheb. iv. 10). In passages in which the Talmud gave two contradictory mishnaic explanations, one of which was received as valid for a halakic decision while the other was rejected, he, apparently, did not hesitate to accept the latter (comp. his interpretation of B. Ḳ. x. 8 and Gemara *ib.*).

Attitude Toward Predecessors.

Maimonides likewise employed the works of his predecessors, although he cited them but seldom, since he deemed it superfluous to mention the name of his authority in every instance. Thus he says in the preface to the eight chapters which he prefixed to his commentary on Abot: "I have not invented this explanation, or myself framed these assertions, but I have taken them from the words of the wise and gathered them from the works of others. Though I do not name them, I do not claim, by my silence, the learning of others as my own, for I have just admitted that much is taken from other sources." He was, however, entirely independent with regard to his precursors, and he frequently refuted the explanations of the Geonim, stating in the letter to 'Aḳnin (p. 31b) that many errors in his commentary were due to his adherence to his predecessors, including Rabbi Nissim.

Maimonides interpreted the language of the Mishnah according to the rules of Hebrew and Aramaic grammar, and employed the "'Aruk" in his explanations of words, although he often fell into the error of regarding Greek loan-words in the Mishnah as Hebrew and explaining them accordingly (comp. Weiss, "Mishpaṭ Leshon ha-Mishnah," p. 11, Vienna, 1867). Toward a better interpretation, he frequently cited the principles of other sciences, such as mathematics and physics, while he attained his object of bringing system and order into the mass of tradition by detailing, before each important discussion, the general principles upon which it rested. Maimonides provided several treatises and orders with prefaces, and prefixed to his entire commentary a general introduction, in which he discussed the origin, plan, and arrangement of the Mishnah and gave an account of the transmission of the oral law. In this introduction and in his preface to the "Yad," as well as in his letters and in numerous scattered notes in his commentary, Maimonides gave coherent and comprehensive information regarding the origin of the Mishnah, the Tosefta, the halakic midrashim, and both Talmuds, in which he evinced a knowledge of literary history superior to that of all his predecessors.

As a commentator Maimonides attained but half his aim, although he had reduced his interpretation of the halakic code to the smallest possible compass. He was, therefore, obliged to plan a new and more comprehensive system of law. It was by no means necessary, however, in his opinion, that this should follow the older mishnaic code; it should rather be arranged according to its subject-matter. All legal regulations, consequently, were to be divided into groups, but before the precepts could be classified it was necessary to enumerate them and to determine what regulations were to be considered as commandments. Many a passage in the Torah which is a commandment or a prohibition in form is not one in reality. Some ordinances, Maimonides declared, are mere foundations for other laws and can not be regarded as independent.

"Sefer ha-Mizwot."

In the enumeration of all the commandments of the Torah, which, according to tradition, numbered 613, great confusion existed before the time of Maimonides, since no principle of classification was established, and consequently the various systems conflicted in many respects. As a sort of introduction to his new code, Maimonides prefixed to it a work containing a dry list of all the commandments of the Torah. In the "Sefer ha-Mizwot" he systematized the commandments by deducing them from fourteen self-evident principles, enumerating the 613 commandments on this basis. This work was generally accepted, and formed the foundation of the majority of subsequent lists. It must be admitted, however, that Maimonides himself frequently deviated from his own rule and cited individual commandments which, according to his system, could not be regarded as precepts, a point to which attention was called as early as the time of Naḥmanides (Weiss, *l.c.* pp. 197–199). See COMMANDMENTS, THE 613.

Codificatory Activity: After establishing the list of all the injunctions of the Torah in his "Sefer ha-Mizwot," Maimonides proceeded to write his great work, the "Mishneh Torah," on which he labored for ten successive years. In this book he planned a complete legal system which should give in a brief but clear form the final decision in the case of each law, so that, by the omission of long discussions and demonstrations, every regulation, law, and custom of religious life might be learned without any other manual. He named the work, therefore, the "Mishneh Torah," or the "Second Law," since it was only necessary to read first the written Torah and then this work in order to acquire the entire body of the so-called "oral law." The book contains all definitions of the Law together with all traditional explanations, statutes, and regulations, as well as the traditions and explanations of the Geonim and the customs which were given, introduced, or recognized from the time of Moses to the conclusion of the Talmud (Preface to the "Mishneh Torah"). It includes also the ethical ideas, the moral teachings, and the doctrinal principles which were traditional or which had been established by the sages or adopted by general consent.

The "Mishneh Torah."

In the "Mishneh Torah" the commandments of the Law are divided into fourteen coherent groups. This forms the first complete classification of the Mosaic and rabbinical laws; each group constitutes a book, and each book is subdivided into sections, chapters, and paragraphs.

The first book, called "Madda'" (Knowledge), treats of the articles of faith and such essential verities as the unity of God and His incorporeality; it deals also with the study of the Law and the prohibition against idolatry. The second book contains the precepts which must be observed at all times if the love due to God is to be remembered continually; wherefore it bears the name of "Ahabah" (Love). The third book discusses those laws which are limited to certain times, such as the Sabbath and the festivals, and is therefore termed "Zemannim" (Times). The fourth book, "Nashim" (Women), treats of marriage laws. The fifth book contains laws concerning forbidden sexual relations and forbidden foods, and as Israel was distinguished by these commandments from the other nations and was hallowed thereby, it bears the name of "Ḳedushshah" (Holiness). The sixth book is concerned with the law regarding vows and oaths, and since he who makes a vow is separated by his vow from others, this section is called "Hafla'ah" (Separation). The seventh book, "Zera'im" (Seeds), treats of the laws and precepts connected with agriculture. The eighth book, "'Abodah" (Divine Service), is concerned with regulations pertaining to the Temple and its worship and the offerings of the community. The ninth book, "Ḳorbanot" (Offerings), contains laws for offerings, excepting those of the whole community. The tenth book, "Ṭohorah" (Cleanness), discusses the rules of cleanness and uncleanness. The eleventh book, "Neziḳin" (Injuries), is concerned with criminal law. The twelfth book, "Ḳinyan" (Acquisition), is devoted to purchase and sale; the thirteenth, "Mishpaṭim" (Rights), to civil law; and the fourteenth, "Shofeṭim" (Judges), to the prescriptions concerning the magistrates, the Sanhedrin, the king, and the judges, as well as the duties which they must fulfil and the prerogatives which they enjoy.

His Sources.

The utmost brevity was sought by Maimonides in his "Mishneh Torah," as in his commentary on the Mishnah, and he therefore continued his method of avoiding citation, thinking it sufficient to name in the preface the works he had used, and the sages, links in the chain of tradition, who had transmitted the Law from Moses (Preface to his "Sefer ha-Miẓwot"). In addition to the Babylonian Talmud, he drew upon the Jerusalem Talmud, the halakic midrashim, and the Sifra, Sifre, and Mekilta. Therein he surpassed all his predecessors, none of whom made so extensive a use of the Jerusalem Talmud and the halakic midrashim; he occasionally preferred these works to the Babylonian Talmud (comp. Malachi ha-Kohen in "Yad Mal'aki," p. 184b; Weiss, *l.c.* p. 232). These Talmudic and midrashic works form the basis of most of the material contained in this book without special mention of the sources (Responsa, No. 140).

One of the chief authorities of Maimonides was the written Torah itself, and there are many regulations and laws contained in his work which are not mentioned in Talmudic or midrashic works, but which were deduced by him through independent interpretations of the Bible (comp. Abraham de Boton, "Leḥem Mishneh" on "Yesode ha-Torah," ix. 1; "Yad Mal'aki," Rule 4; Weiss, *l.c.* p. 231, Note 234). The maxims and decisions of the Geonim are frequently presented with the introductory phrase "The Geonim have decided" or "There is a regulation of the Geonim," while the opinions of Isaac Alfasi and Joseph ibn Migas are prefaced by the words "My teachers have decided" (comp. "Yad," She'elah, v. § 6; "Yad Mal'aki," Rule 32). Maimonides likewise refers to Spanish, French, and Palestinian authorities, although he does not name them, nor is it known to whom he refers. He furthermore drew from Gentile sources, and a great part of his researches on the calendar, contained in "Yad," Ḳiddush ha-Ḥodesh, was based upon Greek theories and reckonings. Since these rules rested upon sound argument, he thought that it made no difference whether an author was a prophet or a Gentile (*ib.* xvii. 25). In a like spirit he adopted principles of Greek philosophy in the first book of the "Mishneh Torah," although no authority for these teachings was to be found in Talmudic or midrashic literature.

Omissions.

Maimonides did not surrender his originality or his independent judgment even when his views were in conflict with those of all his authorities, for it was impossible, in his opinion, to renounce one's own reasons or to reject recognized truths because of some conflicting statements in the Talmud or the Midrash. Thus he made a ruling on his own authority and based upon his medical knowledge without being able to establish it by any statement of the older authorities ("Yad," Sheḥitah, viii. 23; comp. Responsa, No. 37, addressed to the scholars of Lunel). He likewise omitted many regulations contained in the Talmud and Mishnah because they did not coincide with his views—*e. g.*, those precepts which depended on superstitious views or on the belief in demons—and in a similar spirit he passed over much that was forbidden in the Talmud as injurious to health, since his medical knowledge led him to consider these things harmless.

In his choice of language, also, Maimonides deviated from custom, being averse to the Talmudic Aramaic, with its mixture of many elements drawn from other languages, since it was known only to those who were specially interested in it and had acquired it solely for the pursuit of Talmudic studies (Preface to the "Mishneh Torah"). He therefore preferred to write in the later Hebrew of the Mishnah, which was his precedent also for his brevity, his avoidance of discussions, and his scanty citations of the sources from which he had drawn his laws and his decisions.

This great work of Maimonides was bitterly attacked as soon as it appeared, and from every side its author was assailed with questions and refutations. Many attacked the work from mere envy and because of their failure to understand certain things in it, and accused the author of wishing to destroy all study of the Talmud (Responsa, No. 140). He had, on the other hand, many sincere opponents, one of the most important being Abraham ben David of Posquières. These antagonists were especially bitter against the new methods which he had employed, and the very peculiarities which he had regarded as merits in his work failed to please his opponents simply because they were innovations. Thus they reproached him because he wrote in

Opposition of RABaD.

Hebrew instead of in the customary Talmudic idiom (comp. RABaD on "Yad," Shebu'ot, vi. 9); because he departed from the Talmudic order and introduced a division and arrangement of his own (RABaD on "Yad," Nedarim, iii. 5, and on "Yad," Shofar, ii. 8); because he dared to decide according to the Tosefta and the Jerusalem Talmud as against the Babylonian (RABaD on "Yad," Ma'aser Sheni, i. 8).

Maimonides' Reply.

Especially sharp was the blame heaped upon Maimonides because he neglected to cite his sources; this was considered an evidence of his superciliousness (RABaD, in his notes on the preface of Maimonides), since it made it difficult, if not absolutely impossible, for scholars to verify his statements, and compelled them to follow his decisions absolutely (*ib.*). Maimonides, of course, defended himself. He had not composed this work for glory; he desired only to supply the necessary but lacking code (Letter to 'Aḳnin, p. 30b), for there was danger lest pupils, weary of the difficult study, might go astray in decisions of practical importance (Letter to Rabbi Jonathan of Lunel, in which he thanks the latter for certain corrections; Responsa, No. 49). It had never been his intention, furthermore, to abolish Talmudic studies, nor had he ever said that there was no need of the "Halakot" of Alfasi, for he himself had lectured to his pupils on the Gemara and, at their request, upon Alfasi's work (Responsa, No. 140). His omission of his sources was due solely to his desire for brevity, although he regretted that he had not written a supplementary work citing his authorities for those halakot whose sources were not evident from the context. He would, however, should circumstances permit, atone for this error, however toilsome it might be to write such a supplement (Responsa, No. 140). RABaD was forced to acknowledge, despite his attacks and refutations, that the work of Maimonides was a magnificent contribution (note on "Yad," Kilayim, vi. 2), nor did he hesitate to praise him and approve his views in many passages, citing and commenting upon the sources (comp. Weiss, *l.c.* p. 259).

Influence of the "Yad."

Thus the work of Maimonides, notwithstanding the sharp attacks upon it, soon won general recognition as an authority of the first importance for ritual decisions. A decision might not be rendered in opposition to a view of Maimonides, even though the latter apparently militated against the sense of a Talmudic passage, for in such cases the presumption was that the words of the Talmud were incorrectly interpreted ("Yad Mal'aki," Rule 26, p. 186, cited in the name of several authorities). One must, in like manner, follow Maimonides even when the latter opposed his teachers, since he surely knew their views, and if he decided against them he must have disapproved their interpretation (*ib.* Rule 27, cited in the name of Samuel of Modena). Even when later authorities, like Asher ben Jehiel, decided against Maimonides, it became a rule of the Oriental Jews to follow the latter, although the European Jews, especially the Ashkenazim, preferred the opinions of Asheri in such cases (*ib.* Rule 36, p. 190). But the hope which Maimonides expressed in his letter to 'Aḳnin, that in time to come his work and his alone would be accepted, has been only half fulfilled. His "Mishneh Torah" was indeed very popular, but there was no cessation in the study of other works, with which his own had to endure comparison.

The object which Maimonides had sought in his "Mishneh Torah," the facilitation of the study of the Talmud through brevity and system, was not attained. His words and expressions were regarded as so precisely and accurately selected that they were themselves treated as carefully as the Talmud itself, and became material for interpretation and exegesis ("Yad Mal'aki," Rule 3). In this manner every word and every sentence of the "Mishneh Torah" was made the object of repeated commentaries and casuistic hermeneutics. As it had been hitherto impossible to deduce any decision from the Mishnah without a knowledge of the involved discussions and interpretations of the Talmud, so now no ruling of full validity in practise can be inferred from the "Mishneh Torah" unless due regard is paid to the commentaries upon this work, as well as to their discussions, investigations, and comparisons with other codes.

MOSES MEÏR KAMANKER. See Kamanker, Moses Meïr.

MOSES BEN MENAHEM (PRÄGER): Cabalist of Prague; disciple of R. David Oppenheim; lived in the seventeenth and eighteenth centuries. He wrote: "Wa-Yaḳhel Mosheh," cabalistic treatises on various passages of the Zohar, with a double commentary ("Masweh Mosheh" and "Tiḳḳune ha-Parzufim"; Dessau, 1699; Zolkiev, 1741-75); "Zera' Ḳodesh," on asceticism in a cabalistic sense (to this is appended the story of a young man in Nikolsburg who was possessed by an evil spirit, which Moses ben Menahem drove out [Fürth, 1696 and, with this story omitted, 1712]). This story was published in Amsterdam, in 1696, in Judæo-German. Another edition of "Zera' Ḳodesh," with the "Bat Melek" of Simeon ben David Abiob, was published in Venice in 1712.

D. S. Man.

MOSES MIZORODI BEN JUDAH MARULI: Karaite scholar; lived at Constantinople in the second half of the sixteenth century. He was a younger contemporary of Judah Poki, on whose "Sha'ar Yehudah" he wrote a eulogy. Moses was a prolific writer; but, with the exception of a fragment from his commentary on the Pentateuch entitled "Yemin Mosheh," which is still extant in manuscript (St. Petersburg, Firkovich collection, No. 98), none of his works has survived. Simḥah Luzki, in his "Oraḥ Ẓaddiḳim," gives the titles of the following writings by Moses: "Ebel Mosheh," on Lamentations; "Bene Mosheh," homilies; "Dibre Mosheh," sermons; "'Ene Mosheh," commentary on Proverbs; "Yashir Mosheh," on the Song of Moses; "Yede Mosheh," on Ruth; "Yemin Mosheh," commentary on the Pentateuch; "Darosh Darash Mosheh," a sermon; "Miẓwat Mosheh," on the calendar; "Perush," commentary on Aaron ben Joseph the Elder's "Haḳdamat Aẓulah."

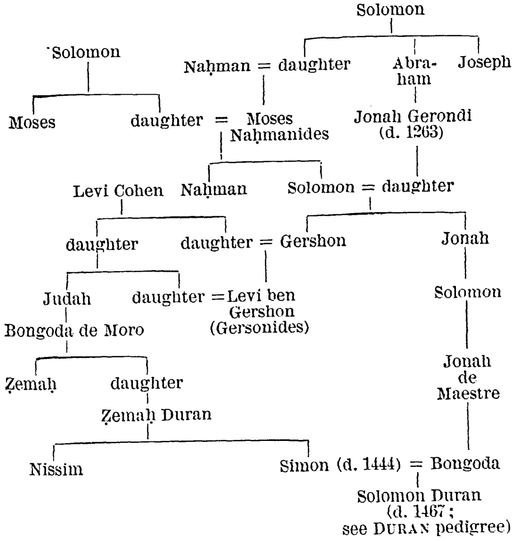
Bibliography: Jost, *Gesch. des Judenthums und Seiner Sekten*, ii. 324; Fürst, *Gesch. des Karäert.* iii. 323; Neubauer, *Aus Petersburger Bibliothek*, p. 62; Gottlober, *Biḳḳoret le-Toledot ha-Ḳara'im*, p. 204.

J. I. Br.

MOSES BEN NAḤMAN GERONDI (RaMBaN; known also as Naḥmanides and Bonastruc da Porta): Spanish Talmudist, exegete, and physician; born at Gerona (whence his name "Gerondi") in 1194 (Gans, "Ẓemaḥ Dawid," p. 50, Warsaw, 1890); died in Palestine about 1270. He was the grandson of Isaac ben Reuben of Barcelona (Simeon ben Ẓemaḥ Duran, Responsa, i., § 72) and cousin of Jonah Gerondi; his brother was Benveniste da Porta, the bailie of Barcelona (Jacobs, "Sources," p. 130). Among his teachers in Talmud were Judah ben Yaḳar and Meïr ben Nathan of Trinquetaille, and he is said to have been instructed in Cabala by his countryman Azriel. Besides rabbinics, Moses studied medicine, which later he practised as a means of livelihood; he also acquired an extensive knowledge of philosophy. He was not far beyond the age of puberty when his name began to be counted among the Talmudical authorities of his time. In his sixteenth year he commenced to compose compendiums of some parts of the rabbinical law, following the methods of Isaac Alfasi; and in a work entitled "Milḥamot Adonai" he defended Alfasi's Talmudical decisions against the criticisms of Zeraḥiah ha-Levi of Gerona. These writings, distinguished by great acumen and profundity, reveal that conservative tendency which became a distinguishing characteristic of Moses' later works—an unbounded respect for the earlier authorities. To him the wisdom of the ancients was unquestionable, and their utterances were to be neither doubted nor criticized. This reverence for authority Moses extended even to the Geonim and their immediate disciples, up to Alfasi. "We bow," he says, "before them, and even when the reason for their words is not quite evident to us, we submit to them" ("Asifat Zeḳenim" to Ketubot).

Precocious Development.

Family Relations of Moses b. Naḥman.



Bibliography: Steinschneider, *Cat. Bodl.* cols. 2303-2310.

J.

Moses' adherence to the words of the earlier authorities, which becomes more accentuated in his later productions, is due as much to his natural piety and the influence of the northern French school upon his early training as to his conviction that at that time compromises were inopportune. Indeed, the rapid progress made by Greco-Arabic philosophy among the Jews of Spain and Provence after the appearance of the "Moreh Nebukim" gave rise to a tendency to allegorize Biblical narratives and to refuse credit to the miraculous element in the Talmud. Against this tendency Moses strove, and, as usual in such cases, went to the other extreme, not even allowing the utterances of the immediate disciples of the Geonim to be questioned. With these ultra-conservative ideas it was natural that in the struggle between Maimonists and anti-Maimonists Moses' sympathies should go with the latter.

Attitude Toward Maimonides.

Called upon, about 1238, for support by Solomon of Montpellier, who had been excommunicated by the Maimonists, Moses addressed a letter to the communities of Aragon, Navarre, and Castile, in which Solomon's adversaries were severely handled. However, the great respect he professed for Maimonides (though he did not share the latter's views), reenforced by innate gentleness of character, kept him from allying himself with the anti-Maimonist party and led him to assume the rôle of a conciliator. In a letter addressed to the French rabbis he draws attention to the virtues of Maimonides and points out that the "Yad" not only shows no leniency in interpreting the prohibitions, but even betrays, in many cases, a positive stringency. As to the "Guide," it was intended not for those of unshaken belief, but for those who had been led astray by the works of Aristotle and Galen. "If," he says, "you were of the opinion that it was your duty to denounce it [the "Guide"] as heretical, why does a portion of your flock recede from the decision as if it regretted the step? Is it right in such important matters to act capriciously, to applaud the one to-day and the other to-morrow?" To conciliate both parties Moses proposed that the ban against the philosophical portion of the "Yad" should be revoked, but that the ban against the study of the "Guide" and against those who rejected Talmudical interpretation of the Bible should be maintained and even strengthened. This compromise, which would have ended the struggle, was rejected by both parties in spite of Moses' great authority.

Views on the Taryag.

The respect for authority which prompted Moses to defend Alfasi also caused him to undertake the defense of Simeon Ḳayyara, author of the "Halakot Gedolot," against the criticisms formulated by Maimonides in his "Book of Precepts." In the latter defense, written at a more mature age, the author shows himself less intolerant than in the "Milḥamot," and abandons Maimonides where fully convinced that the latter is wrong. "Notwithstanding," he says in the introduction, "my desire to follow the earlier authorities and to assert and maintain their views, I do not consider myself a 'donkey carrying books.' I will explain their methods and appreciate their value, but when their views can not be supported by me, I will plead, though in all modesty, my right to judge according to the light of my eyes." It is noteworthy that, notwithstanding his conservatism, he considers the saying of R. Simlai (see COMMANDMENTS) upon which the belief that there are 613 commandments is based to be merely homiletical.

Views on Marriage and Mourning.

After having given the earlier part of his life to his Talmudical works (see below), Moses devoted himself to writings of a homiletic-exegetic and devotional character. To these belong the "Iggeret ha-Ḳodesh" and the "Torat ha-Adam." In the former, which deals with the holiness and significance of marriage, Moses criticizes Maimonides for stigmatizing as a disgrace to man certain of the desires implanted in the human body. In Moses' opinion, the body with all its functions being the work of God, none of its impulses can be regarded as intrinsically objectionable. In the "Torat ha-Adam," which deals with mourning rites, burial customs, etc., Naḥmanides sharply criticizes the philosophers who strove to render man indifferent to both pleasure and pain. This, he declares, is against the Law, which commands man to rejoice on the day of joy and weep on the day of mourning. The last chapter, entitled "Sha'ar ha-Gemul," discusses reward and punishment, resurrection, and kindred subjects. It derides the presumption of the philosophers who pretend to a knowledge of the essence of God and of His angels, while even the composition of their own bodies is a mystery to them.

For Naḥmanides, revelation is the best guide in all these questions; but as he is not, he says, a despiser of wisdom, one who would systematically refuse to resort to speculation for the corroboration of faith, he purposes to discuss them rationally. As God is immanently just, there must be reward and punishment. This reward and punishment must take place in another world, for the good and evil of this world are relative and transitory. Besides the animal soul, which is derived from the "Supreme Powers" and is common to all creatures, man possesses a special soul. This special soul, which is a direct emanation from God, existed before the creation of the world. Through the medium of man it enters the material life; and at the dissolution of its medium it either returns to its original source or enters the body of another man. This belief is, according to Moses, the basis of the levirate marriage, the child of which inherits not only the name of the brother of his fleshly father, but also his soul, and thus continues its existence on the earth. The resurrection spoken of by the Rabbis, which will take place after the coming of the Messiah, is referred by Moses to the body, which may, through the influence of the soul, transform itself into so pure an essence that it will become eternal.

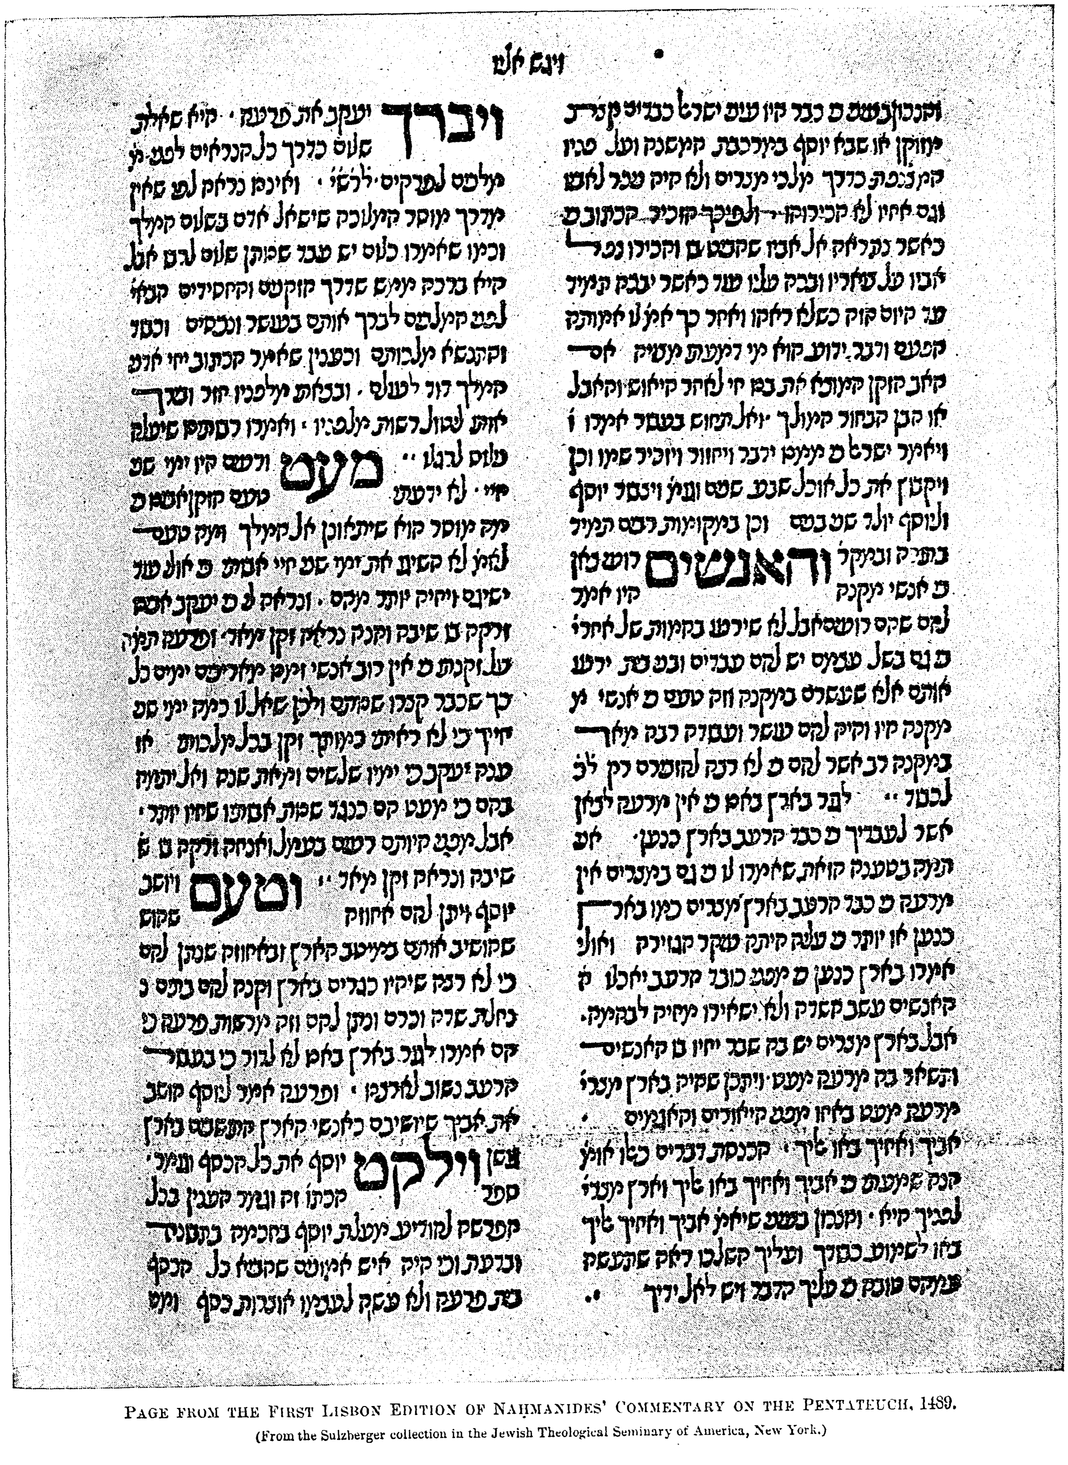
Commentary on the Pentateuch.

A better insight into Moses' theological system is afforded by his commentary on the Pentateuch, which is justly considered to be his chef-d'œuvre. It was his last work, to the composition of which, he says in the introduction, he was prompted by three motives: (1) to satisfy the minds of students of the Law and stimulate their interest by a critical examination of the text; (2) to justify the ways of God and discover the hidden meanings of the words of Scripture, "for in the Torah are hidden every wonder and every mystery, and in her treasures is sealed every beauty of wisdom"; (3) to soothe the minds of the students of the Law by simple explanations and pleasant words when they read the appointed sections of the Pentateuch on Sabbaths and festivals. To attain these ends Moses brought into play his peculiar genius, his warm and tender disposition, and his mystical visions. His exposition, rendered in a most attractive style and intermingled with haggadic and cabalistic interpretations, is based upon careful philology and original study of the Bible. As in his preceding works, he vehemently attacks the Greek philosophers, especially Aristotle, and frequently criticizes Maimonides' Biblical interpretations. Thus he cites Maimonides' interpretation of Gen. xviii. 8, asserting that it is contrary to the evident meaning of the Biblical words and that it is sinful even to hear it.

While Maimonides endeavored to reduce the miracles of the Bible to the level of natural phenomena, Moses emphasized them, declaring that "no man can share in the Torah of our teacher Moses unless he believes that all our affairs, whether they concern masses or individuals, are miraculously controlled, and that nothing can be attributed to nature or the order of the world." Next to belief in miracles Moses places three other beliefs, which are, according to him, the foundations of Judaism, namely, the belief in creation out of nothing, in the omniscience of God, and in divine providence.

Attitude Toward Abraham ibn Ezra.

Though in his commentary Moses occasionally criticizes Maimonides' views, paying him nevertheless at the same time the greatest respect, he shows himself a decided adversary of Abraham ibn Ezra, against whom he often uses expressions that are not in keeping with his usual modesty and serenity of temper. He is especially bitter against him for deriding the Cabala, which he, Moses, considers to be a primitive divine tradition, even going so far as to affirm that the



Page from the First Lisbon Edition of Nahmanides' Commentary on the Pentateuch, 1489.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

whole text of the Torah is a succession of mystical names of God. Yet, notwithstanding his great veneration for the Cabala, he uses it with moderation in his Biblical exposition, and in his introduction advises the reader not to meditate over the mystical hints scattered through his works, for "one can not penetrate into the mysteries of the Cabala by independent thought and reflection."

Moses' share in the development of the Cabala, though universally recognized, was rather moral than literal; he sanctioned it by the great authority of his name, but not by any contributive activity. Even the name of cabalist can hardly be applied to him, for he professed the dogma of "creatio ex nihilo" and insisted that attributes can be ascribed to God. The characteristic features of Moses' commentary are the lessons which he draws from the various Biblical narratives, in which he sees adumbrations of the history of man. Thus the account of the six days of Creation constitutes a prophecy of the events of the following six thousand years, and the seventh day is typical of the Messianic millennium. Jacob and Esau are the prototypes of Israel and Rome, and the battle of Moses and Joshua with the Amalekites is a prophecy of the war which Elijah and the Messiah ben Joseph will wage against Edom (Rome) before the arrival of the Messiah ben David, which was fixed by the commentator for the year 1358.

Disputation at Barcelona, 1263.

Moses, first as rabbi of Gerona and later as chief rabbi of Catalonia, seems to have led a quiet and happy life, surrounded by his family and numerous pupils, and enjoying a universal reputation. When well advanced in years, however, this peaceful and ordered life was interrupted by an event which compelled him to leave his family and his native country and wander in foreign lands. This was the religious disputation he was called upon to sustain, in 1263, in the presence of King James of Aragon, with the apostate Pablo Christiani. The latter, failing to make proselytes among the Jews of Provence, to whom he had been sent by his general Raymond de Penyaforte, requested King James to order Moses to take part in a public disputation. Relying upon the reserve his adversary would be forced to maintain through fear of wounding the feelings of the Christian dignitaries, Pablo assured the king that he could prove the Messianic claims of Jesus from the Talmud and other rabbinical writings. Moses complied with the order of the king, but stipulated that complete freedom of speech should be granted, and for four days (July 20-24) debated with Pablo Christiani in the presence of the king, the court, and many ecclesiastical dignitaries.

The subjects discussed were three: (1) whether the Messiah had appeared; (2) whether the Messiah announced by the Prophets was to be considered as divine or as a man born of human parents; and (3) whether the Jews or the Christians were in possession of the true faith. From the start Moses disarmed his antagonist, whose arguments were based upon haggadic passages, by declaring that the Jew is bound to believe in the truth of the Bible, but in the exposition of the Talmud only in regard to points of religious practise; and that he is at liberty to reject the haggadic interpretations, which are only sermons expressing the individual opinions of the preacher, and do not possess authoritative weight. Then he went on to show that the Prophets regarded the Messiah as a man of flesh and blood, and not as a divinity, and that their promises of a reign of universal peace and justice had not yet been fulfilled. On the contrary, since the appearance of Jesus, the world had been filled with violence and injustice, and among all denominations the Christians were the most warlike.

Views on the Messiah.

Further, the question of the Messiah is of less dogmatic importance to the Jews than the Christians imagine. The reason given by him for this bold statement, in which he was certainly sincere, since he repeats it in his treatise on redemption entitled "Ḳeẓ ha-Ge'ullah," is that it is more meritorious for the Jews to observe the precepts under a Christian ruler, while in exile and suffering humiliation and abuse, than under the rule of the Messiah, when every one would perforce act in accordance with the Law. As the disputation turned in favor of Moses the Jews of Barcelona, fearing the resentment of the Dominicans, entreated him to discontinue; but the king, whom Naḥmanides had acquainted with the apprehensions of the Jews, desired him to proceed. The controversy was therefore resumed, and concluded in a complete victory for Moses, who was dismissed by the king with a gift of three hundred maravedis as a mark of his respect.

The Dominicans, nevertheless, claimed the victory, and Moses felt constrained to publish the controversy. From this publication Pablo selected certain passages which he construed as blasphemies against Christianity and denounced to his general Raymond de Penyaforte. A capital charge was then instituted, and a formal complaint against the work and its author was lodged with the king. James was obliged to entertain the charge, but, mistrusting the Dominican court, called an extraordinary commission, and ordered that the proceedings be conducted in his presence. Moses admitted that he had stated many things against Christianity, but he had written nothing which he had not used in his disputation in the presence of the king, who had granted him freedom of speech. The justice of his defense was recognized by the king and the commission, but to satisfy the Dominicans Moses was sentenced to exile for two years and his pamphlet was condemned to be burned. He was also fined, but this was remitted as a favor to Benveniste de Porta, Naḥmanides' brother (Jacobs, "Sources," p. 130). The Dominicans, however, found this punishment too mild and, through Pope Clement IV., they seem to have succeeded in turning the two years' exile into perpetual banishment.

In the Holy Land.

Moses left Aragon and sojourned for three years somewhere in Castile or in southern France. In 1267 he emigrated to Palestine, and, after a short stay in Jerusalem, settled at Acre, where he was very active in spreading Jewish learning, which was at that time very much neglected in the Holy Land. He gathered a circle of pupils around him, and people came in crowds, even from the district of the Euphrates, to hear him. Karaites, too, are said to have attended his lectures, among them being Aaron ben Joseph the Elder, who later became one of the greatest Karaite authorities. It was to arouse the interest of the Palestinian Jews in the exposition of the Bible that Moses wrote the greatest of his works, the above-mentioned commentary on the Pentateuch. Although surrounded by friends and pupils, Moses keenly felt the pangs of exile. "I left my family, I forsook my house. There, with my sons and daughters, the sweet, dear children I brought up at my knees, I left also my soul. My heart and my eyes will dwell with them forever."

During his three years' stay in Palestine Naḥmanides maintained a correspondence with his native land, by means of which he endeavored to bring about a closer connection between Judea and Spain. Shortly after his arrival in Jerusalem he addressed a letter to his son Naḥman, in which he described the desolation of the Holy City, where there were at that time only two Jewish inhabitants—two brothers, dyers by trade. In a later letter from Acre he counsels his son to cultivate humility, which he considers to be the first of virtues. In another, addressed to his second son, who occupied an official position at the Castilian court, Moses recommends the recitation of the daily prayers and warns above all against immorality. Moses died after having passed the age of seventy, and his remains were interred at Haifa, by the grave of Jehiel of Paris.

Talmudic Activity.

Moses' activity in the domain of the Talmud and Halakah was very extensive. He wrote glosses, or novellæ, on the whole Talmud in the style of the French tosafists and made compendiums of various branches of the Halakah after the model of Isaac Alfasi. Those of his novellæ, or glosses, which have been published embrace the following Talmudical treatises: Baba Batra (Venice, 1523); Shabbat and Yebamot (Hamburg, 1740); Makkot (Leghorn, 1745, with Abraham Meldola's "Shib'ah 'Enayim"); Ḳiddushin (Salonica, 1759); Giṭṭin (Sulzbach, 1762); Ketubot (Metz, 1764); Niddah (Sulzbach, 1765); 'Abodah Zarah (Leghorn, 1780, under the title "Ma'ase Ẓaddiḳim"); Ḥullin (*ib.* 1810, in "Mizbeaḥ Kapparah"). Under the title "Sefer ha-Leḳuṭot" have been published novellæ on various parts of Berakot, Mo'ed, and Shebu'ot (Salonica, 1791).

Naḥmanides' known halakic works are: "Mishpeṭe ha-Ḥerem," the laws concerning excommunication, reproduced in "Kol Bo"; "Hilkot Bediḳah," on the examination of the lungs of slaughtered animals, cited by Simeon ben Ẓemaḥ Duran in his "Yabin Shemu'ah"; "Torat ha-Adam," on the laws of mourning and burial ceremonies, in thirty chapters, the last of which, entitled "Sha'ar ha-Gemul," deals with eschatology (Constantinople, 1519, and frequently reprinted). To the Talmudic and halakic works belong also Moses' writings in the defense of Simeon Ḳayyara and Alfasi. These are: "Milḥamot Adonai," defending Alfasi against the criticisms of Zerahiah ha-Levi of Gerona (published with the "Alfasi," Venice, 1552; frequently reprinted; separate edition, Berlin, 1759); "Sefer ha-Zekut," in defense of Alfasi against the criticisms of Abraham ben David (RABaD; printed with Abraham Meldola's "Shib'ah 'Enayim," Leghorn, 1745; under the title "Maḥaseh u-Magen," Venice, 1808); "Hassagot" (Constantinople, 1510; frequently reprinted), in defense of Simeon Ḳayyara against the criticisms of Maimonides' "Sefer ha-Miẓwot." Moses wrote also: "Iggeret ha-Ḳodesh," on the holiness of marriage (with the "Sefer ha-Musar" and in many separate editions); "Derashah," sermon delivered in the presence of the King of Castile (Prague, 1597, and under the title "Torat Adonai Temimah," ed. Jellinek, Leipsic, 1853); "Sefer ha-Ge'ulah," or "Sefer Ḳeẓ ha-Ge'ulah," on the time of the arrival of the Messiah (in Azariah dei Rossi's "Me'or 'Enayim Imre Binah," ch. xliii., and frequently reprinted); "Iggeret ha-Musa," ethical letter addressed to his son (in the "Sefer ha-Yir'ah," or "Iggeret ha-Teshubah," of Jonah Gerondi); "Iggeret ha-Ḥemdah," letter addressed to the French rabbis in defense of Maimonides (with the "Ta'alumot Ḥokmah" of Joseph Delmedigo); "Wikkuaḥ," religious controversy with Pablo Christiani (in the "Milḥamot Ḥobah," Constantinople, 1710; with a Latin translation by Wagenseil, Nuremberg, 1681; revised Hebrew version by M. Steinschneider, Stettin, 1860); "Perush Shir ha-Shirim," a commentary on Canticles (Altona, 1764; Berlin, 1764; Johannesburg, 1857; the authorship of this is questionable, since the enumeration of the commandments given in iv. 11 conflicts with that given by Moses in the "Hassagot"); "Perush Iyyob," commentary on Job, incorporated in the "Biblia Rabbinica" (Venice, 1517; Amsterdam, 1724–1727); "Bi'ur," or "Perush 'al ha-Torah," commentary on the Pentateuch (published in Italy before 1480; frequently reprinted). The last-mentioned work has been the subject of many commentaries; the mystical part has been annotated by Isaac of Acco in his "Me'irat 'Enayim," by Shem-Ṭob ibn Gaon in his "Keter Shem-Ṭob," by Menahem Popers ha-Kohen, and by Joseph Caro; general commentaries on it were written by Isaac Aboab and (recently) by Moses Katzenellenbogen, dayyan of Meseritz. Criticisms of Moses (in defense of Rashi) have been written by Elijah Mizraḥi; of Mizraḥi (in defense of Moses) by Samuel Ẓarfati.

The following cabalistic works have been ascribed to Moses, but the correctness of the ascription is doubtful: "Ha-Emunah weha-Biṭṭaḥon," or "Sha'ar Emunah," in twenty-six chapters, a cabalistic treatment of the prayers, of natural law, of the Decalogue, and of the divine attributes (included in the "Arze ha-Lebanon," Venice, 1601); "Perush Sefer Yeẓirah," a commentary on the "Book of Creation" (Mantua, 1562, and often reprinted); "Bi'ur le-Sefer ha-Rimmon," cited by Moses Botarel in his commentary on the "Book of Creation"; "'Eden Gan Elohim." Moses was also the author of some liturgical poems and prayers, the most renowned of which is the "Me-Rosh me-Ḳadme 'Olamim," which was incorporated in the Maḥzor of Montpellier. It was translated into German by Sachs and into English by Henry Lucas.

MOSES OF PALERMO: Sicilian translator from the Arabic into Latin; lived in the second half of the thirteenth century. According to a document preserved in the municipal archives of Naples and reproduced by Amari in his "Guerra del Vespro Siciliano" (ii. 407), Charles of Anjou charged (1277) Maestro Matteo Siciliaco to teach Moses of Palermo the Latin language in order that Moses might translate a collection of medical works preserved in Castel dell' Novo at Naples, the residence of Charles of Anjou. Moses is known also as the translator, from Arabic into Latin, of the work of pseudo-Hippocrates entitled "Liber de Curationibus Infirmitatum Equorum"; the translation was published, with two old Italian elaborations, by Pietro Delpratto under the title "Trattati di Mascalcia Attribuiti ad Ippocrate Tradotti dell' Arabo in Latino da Maestro Moise da Palermo" (Bologna, 1865).

Bibliography: Steinschneider, *Hebr. Bibl.* x. 8; idem, *Hebr. Uebers.* p. 985.

S. I. Br.

MOSES OF PARIS: Exegete; lived in the middle of the twelfth century. According to Gross, he is identical with Moses ben Jehiel ben Mattathiah, the head of the Jewish community of Paris, of whom the Maḥzor Vitry (No. 280) tells the story that he defended the Jews of Paris against the charge of putting converted Jews under spells by throwing dust behind themselves after an interment. He stated to the king that this was simply done in conformity with the funeral custom of plucking grass and casting it behind oneself while reciting, "And they of the city shall flourish like grass of the earth" (Ps. lxxii. 16), thereby testifying to the belief in resurrection of the dead; this explanation satisfied the king. A Moses of Paris is mentioned as being in England in 1204 (Jacobs, "Jews of Angevin England," pp. 225, 229).

Moses was the author of a commentary on the Bible, quoted by his disciple Gabriel in his additions to the commentaries of Rashi and RaSHBaM (Breslau Seminary MS. No. 103). Citations from Moses' commentary are found in many exegetical works of his time, especially in "Pa'neaḥ Raza" and in the writings of Joseph ha-Meḳanne, who contests Moses' explanation of Deuteronomy xxiii. 20, according to which the prohibition against lending money at interest applies only to Jews.

K. I. Br.

MOSES OF PAVIA (surnamed **Gaon**): Italian scholar of the eleventh century. According to Kaufmann, he is identical with the teacher Moses of Pavia, who, about 900 C.E., left that city for the north of Italy on account of a quarrel with Amittai b. Shephatiah. He is cited as a gaon in all the treatises on "ṭerefot" of the German and French medieval schools, although his name does not occur in the "'Aruk," from which this reference is said to be derived. According to the "Miḳdash Me'aṭ," a poem by Moses de Rieti, Moses of Pavia died a martyr's death, apparently in 1096. In the printed Tosafot (to Ḥul. 47a, *s.v.* היינו) he is usually confused with Moses of Pontoise.

G. I. E.

MOSES SAERTELES (SAERTELS) B. ISSACHAR HA-LEVI: Exegete; lived at Prague in the first half of the seventeenth century. His name (סערטלש) is a matronymic from "Sarah." He published the Pentateuch and the Five Rolls, with glosses and notes in Judæo-German, under the title "Be'er Mosheh" (Prague, 1605; frequently reprinted), which was highly esteemed by Ezekiel Landau. As a supplement to it he appended "Leḳaḥ Ṭob," glosses and notes, in German, to the Prophets and the Hagiographa.

MOSES BEN SAMUEL BEN ASHER: French Talmudist; flourished at Perpignan in the thirteenth and fourteenth centuries. Both Moses and his father possessed great influence in Perpignan, and obtained from James I., King of Majorca, permission for the Jews who had been expelled from France in 1306 to settle at Perpignan. Moses was a close friend of Abba Mari of Lunel, to whose son Meshullam he gave his daughter in marriage; he corresponded with Abba Mari during the Montpellier controversy (1303-6). Moses, being more liberal than his friend and of a conciliatory nature, did not share his views. He informed Abba Mari that Solomon ben Adret's letters had divided the Jews of Perpignan into three different groups, two of which blamed Abba Mari for the whole disagreement. Moses had defended him as well as he could, but requested from him more information concerning the letters he had sent to Solomon b. Adret. After Abba Mari had given him the necessary explanation, Moses endeavored to calm the opposing parties. He wrote to the same effect to Don Profiat Gracian of Barcelona, who, instigated by Solomon ben Adret, attempted to win Moses over to their side.

G. M. SEL.

MOSES B. SAMUEL OF ROQUEMAURE (רוקאמברא): Physician and translator of the fourteenth century; lived at Avignon, Toledo, and Seville. At Toledo he wrote a poem, before 1358, satirizing the eccentric philosophical writer Shemariah of Negropont, who posed as Messiah and prophet while in Castile. Moses next went to Seville, where he was baptized, taking the name of **Juan d'Avignon.** There he translated (1360) Bernard de Gordon's "Lilium Medicinæ" from the Latin into Hebrew, under the title "Peraḥ ha-Refu'ot."

MOSES, SASON MORDECAI: Turkish cabalist and Talmudist; lived in Bagdad, where he died in the early part of the nineteenth century. He wrote: "Ḳol Sason," on ethics (Leghorn, 1859; Bagdad, 1891); "Dabar be-'Itto," commentary on the Pentateuch and Talmud (2 vols., *ib.* 1862–64); "Mizmor le-Asaf," on the ritual (*ib.* 1864); "Imre Sason," on ethics (Bagdad, 1891); "Tehillah le-Dawid," a commentary (*ib.* 1892). A large number of his manuscripts were destroyed by a fire that occurred in his house in 1853.

MOSES BEN SHNEOR. See MOSES OF EVREUX.

MOSES, SILAS MEYER: President of the Bank of Bombay; second son of M. S. Moses; born in Bombay Nov. 23, 1845. He was educated in that city, and, being related to the Sassoon family, went at an early age to China in connection with the business of David Sassoon & Co. In 1880 he left China and returned to his native city, becoming manager of the bank there. On the death of his uncle Solomon D. Sassoon (1894) he succeeded him as a director of the bank and likewise as a member of the Bombay Port Trust. He was also on the committee of the Bombay Chamber of Commerce. In 1897 he was unanimously elected to the position of president of the bank, being the first member of the Jewish community to attain that position. He was appointed by Lord Sandhurst member of the legislative council of the presidency of Bombay.

MOSES BEN SIMḤAH OF LUTSK (called also **ha-'Anaw** ["the modest"] and **he-Ḥasid** ["the pious"]): Karaite scholar of the first half of the eighteenth century; father of Simḥah Isaac, author of the "Oraḥ Ẓaddiḳim." Moses of Lutsk wrote a work entitled "Torat Mosheh"; it is divided into four parts and contains liturgical poems and prayers, as well as a number of sermons.

MOSES OF SMOLENSK: Russian engraver of the twelfth century. In a collection of documents published by Professor Kunik of the Russian Academy of Sciences and relating to business transactions between the people of northwestern Russia and those of the city of Riga, there is a document, dated 1284, containing the decision in a suit, concerning a bell, between a Russian and a German. It bears the signature of Feodor, Duke of Smolensk, to which is added, "Moses, engraver of Feodor, made this seal." The document does not state that this Moses was a Jew, but it may be safely concluded that he was, for the name "Moses" was not in use among the Russian Christians of that time; as Kunik points out, the Russians knew nothing of the art of engraving seals and coins. The Russian historian Solovyev arrives at a similar conclusion in regard to Ephraim Moisich ("Moisich" = "son of Moses"), since the name "Moses" was not common among the Russians, although "Ephraim" was (see JEW. ENCYC. i. 569, *s.v.* ANBAL).

MOSES SOFER. See SCHREIBER, MOSES.

MOSES (LEVI) B. SOLOMON OF BEAUCAIRE: French writer; lived at Salon in the early part of the fourteenth century. He was the teacher of Kalonymus b. Kalonymus of Arles, who called him "the learned scholar," "the ornament of sages." He translated into Hebrew Averroes' greater commentary on Aristotle's "Metaphysics"; this translation, however, is ascribed also to Moses b. Solomon of Salerno ("Catalogue des Manuscrits Hébreux et Samaritains de la Bibliothèque Imperiale," 1866, p. 257, Nos. 887–890). The first four books of his translation were copied in 1342 by Asher b. Abraham Kohen of Lunel. Moses of Beaucaire wrote also a refutation of Joseph Caspi's "Sefer ha-Sod," in collaboration with ABBA MARI BEN ELIGDOR; and he summarized Averroes' commentary on Aristotle's "Physics."

MOSES B. SOLOMON D'ESCOLA. See GERONDI, MOSES B. SOLOMON D'ESCOLA.

MOSES BEN SOLOMON HA-KOHEN ASHKENAZI: German tosafist; lived at Mayence in the twelfth century. It appears, however, that Moses was a native of France ("Or Zarua'," ii., No. 34). He was a pupil of R. Isaac ha-Zaḳen (Solomon Luria, Responsa, No. 29); he seems to have studied also under Jacob Tam ("Mordekai," Yeb., No. 79; B. M., No. 393) and, at Mayence, under Eliezer b. Nathan ("Ẓofnat Pa'neaḥ," p. 126d). Among his pupils were R. Baruch of Mayence, R. Eleazar of Worms, and Eliezer b. Joel ha-Levi ("Mordekai," Ket., Nos. 152, 162; B. Ḳ., No. 125; "Roḳeaḥ," Nos. 182, 418, 421). His responsa are mentioned in "Mordekai" (B. M., No. 9), and his "Sefer ha-Dinin" is quoted by Asher b. Jehiel ("Pesaḳim," Ḳid. i., No. 20).

MOSES BEN SOLOMON OF SALERNO: Italian philosopher and commentator of the thirteenth century. Between 1240 and 1250 he wrote a commentary on Maimonides' "Moreh Nebukim," which he afterward revised in part; only a small portion of the work, with annotations by his son Isaiah, is still extant (MSS. Bodleian, Oppenheimer Cat., No. 1163; London, Beth ha-Midrash MS., No. 517; Munich MSS., Nos. 69, 378, p. 687; De Rossi MSS., Parma, Nos. 106, 107, 1; St. Petersburg, Firkovich collection, No. 482). His work is mainly a paraphrase, the technical terms being translated into Italian. He knew Latin also, and in that language read the "Moreh" for Nicalao da Giovenazzo, probably Nicolo Paglia, Nobile di Giovenazzo.

BIBLIOGRAPHY: Steinschneider, *Hebr. Uebers.* p. 433.

MOSES BEN TODROS: Spanish rabbi; lived about 1150. He was for many years nasi of Narbonne, and was both prominent as a scholar and well known for his charity. Because of his unassuming disposition he is always spoken of as "he-'anaw" = "the modest one." His name appears among the signatories to the famous appeal for permission to use an ordinary manuscript of the Torah at the public reading of the Law during divine service in case one written according to the regulations should be unobtainable. His son **Levi** is highly lauded by Al-Ḥarizi as a philanthropist.

MOSES DI TRANI. See TRANI.

MOSES URI B. JOSEPH HA-LEVI: Rabbi at Emden and one of the founders of the Spanish-Portuguese community at Amsterdam; born 1544, probably at Wittmund; died after 1622 in Emden. In 1593 a vessel of Maranos, under the leadership of Jacob Tirado, was driven out of its course to Emden, and Tirado, seeing from a Hebrew inscription on a house that Jews lived in the city, found his way to the home of Moses Uri ha-Levi. Tirado explained who he was and requested that he and his companions be received into Judaism. Moses Uri advised him to go to Amsterdam, and promised to follow with his family. Moses Uri then removed to Amsterdam, where he circumcised the Maranos and established a house of prayer, he himself becoming their rabbi and his son Aaron their ḥazzan (see JEW. ENCYC. i. 537, *s.v.* AMSTERDAM). Moses and Aaron are reported to have circumcised 2,500 Maranos. The grandson of Moses Uri, **Uri Phoebus b. Aaron ha-Levi** (b. 1623; d. in Amsterdam 1715), was the owner of a printing-press in Amsterdam, where he was established from 1658 to 1689; afterward, from 1693 to 1705, he printed at Zolkiev, Galicia.

MOSES WALLICH. See WALLICH.

MOSES OF WORMS: Legendary rabbi of the eleventh century; reputed to have been the greatest magician and necromancer of his time (Tritheim, "Annales Hirsaugienses," i. 203). There is a legend that Archbishop Eberhard of Treves issued on April 15, 1066, an edict that those Jews who refused to be baptized on the Saturday preceding Easter must leave the country. The same legend says that Eberhard prepared himself on that Saturday for a general baptism of the Jews, but that the latter by magic brought about his sudden death just before the time appointed for baptism. Tritheim (*l.c.*) declares that the Jews of Treves had applied to R. Moses of Worms, who, having made a wax figure of the archbishop, kindled it while reciting certain incantations.

MOSES IBN YAḤYA. See YAḤYA, MOSES IBN.

MOSES BEN YOM-ṬOB (known also as **Moses ha-Naḳdan**): English Masorite and grammarian. He is quoted by Moses ben Isaac as his teacher ("Sefer ha-Shoham," ed. Collins, p. 37), and is referred to in the Berlin manuscripts of his work as "Moses ben Yom-Ṭob of London." He wrote "Darke ha-Niḳḳud weha-Neginot," rules of punctuation and accentuation of the Masorah, which was first printed by Jacob ben Ḥayyim in the Bomberg rabbinic Bible, and has been repeated in all subsequent rabbinic Bibles. It was published separately by Hirsch ben Menahem (Wilna, 1822) and by Frensdorff (Frankfort-on-the-Main, 1854), who calls the author "Moses ben Joseph Ḥazzan." It is practically the standard work on Hebrew punctuation in the Middle Ages. In it Moses quotes Rashi, Abraham ibn Ezra, and Solomon Parḥon.

MOSES ZARAH EIDLITZ. See EIDLITZ, MOSES ZARAH.

MOSES ZEEB WOLF BEN ELIEZER: Lithuanian rabbi of the beginning of the nineteenth century; born at Grodno; died at Byelostok. He was at first head of the yeshibah at Grodno; then, in 1813, he was called to the rabbinate of Tiktin, where he remained until 1824, in which year he was invited to the rabbinate of Byelostok. He was rabbi of that city until his death. Moses Zeeb Wolf was the author of: (1) "Mar'ot ha-Ẓobe'ot" (Grodno, 1810), novellæ and notes on the seventeenth chapter of the Shulḥan 'Aruk, Eben ha-'Ezer, containing the laws concerning the "'agunah"; (2) "Aguddat Ezob" (Byelostok, 1824), homilies for holy days and certain Sabbaths, followed by "Allon Bakut," nine funeral orations; (3) novellæ on the four parts of the Shulḥan 'Aruk (only those on Oraḥ Ḥayyim were published, by his son David; Warsaw, 1858); (4) responsa, three volumes of which apply to the Shulḥan 'Aruk—Oraḥ Ḥayyim, Yoreh De'ah, and Eben ha-'Ezer (Wilna, 1886).

MOSESSOHN, AARON BEN MOSES: German rabbi; born probably in Glogau; died at Ansbach, Bavaria, 1780; was a descendant of the Ẓebi family (see Brüll's "Jahrb." i. 87-122). In 1763 he was elected rabbi of Berlin, having previously been rabbi of Dessau. Mendelssohn put his name on the title-page of a thanksgiving sermon which Mosessohn had written after the peace of Hubertsburg in 1763. The sermon appeared under the title "Aaron Mosessohn's Friedenspredigt ins Deutscheübersetzt von R. S. K." Berlin, 1763. It was reprinted in Mendelssohn's "Gesammelte Schriften," vi. 407-415, and translated into Hebrew in "Ha-Me'assef," 1789, pp. 14-24.

Aaron edited "He-'Aruk mi-ShaK" (Berlin, 1767), the commentary of his great-grandfather Shabbethai Cohen on the Shulḥan 'Aruk, Yoreh De'ah, to which he added notes of his own. About 1771 he accepted the rabbinate of Schwabach, with which the office of chief rabbi of the principality of Ansbach was united. Upon his recommendation the congregation of Berlin conferred upon Mendelssohn honorary membership, April 3, 1771.

MOSESSOHN (MARKEL), MIRIAM (*née* **WIERSBOLOWSKY**)**:** Russian-Hebrew authoress; born at Kovno 1841. At the age of thirteen she removed with her parents to Suwalki, where she continued her Hebrew studies under the Hebraist Paradiesthal, devoting herself at the same time to the German and French languages and literatures. She then translated German novels into Hebrew, her first attempt being a translation of Philippson's "Der Flüchtling aus Jerusalem" (in manuscript). Family troubles, however, prevented her from devoting herself entirely to this class of work, and only one book of hers was published, namely, "Ha-Yehudim be-Angliya," i. (Warsaw, 1869), a translation in pure and elegant Hebrew of Francolm's "Die Juden und die Kreuzfahrer," etc.

H. R. A. S. W.

MOSLER, HENRY: American genre painter; born in New York city June 6, 1841. He was taken to Cincinnati when a child and began to study art at the age of ten. In 1863 he went to Düsseldorf, where he studied drawing under Professor Mucke and painting under Kindler. He next spent six months with Hebert in Paris. In 1866 he returned to Cincinnati, where he devoted his time to portraits and small genre pictures. In 1874 he went to Europe again and spent the following twenty years in Munich and Paris. During this period he executed many large canvasses and received numerous awards, the first, in 1874, being a medal from the Royal Academy at Munich. In 1879 he exhibited "The Return of the Prodigal Son" at the Paris Salon; this picture was awarded an "honorable mention" and was afterward purchased by the French government for the Luxemburg gallery, being the first work so purchased from an American artist.

Mosler received also the gold medal of the Paris Salon, 1888, the silver medal of the Exposition Universelle, Paris, 1889, the Archduke Carl Ludwig of Austria's gold medal, 1893, the Thomas B. Clarke prize, National Academy of Design, New York, 1896, etc. He was made chevalier de la Legion d'Honneur and officier de l'Académie in 1892, and associate of the National Academy of Design, New York, in 1895.

Some of Mosler's paintings are in the museums of Sydney, N. S. W., and Grenoble, France, and in Philadelphia (Pennsylvania Academy of the Fine Arts) and Cincinnati, Ohio. Some are in private collections, as "The Wedding Feast," purchased by Jacob H. Schiff of New York (1898), and "Invoking God's Blessing," bought by Henry Seligman (1900).

A. F. N. L.

MOSS, LUCIEN: American philanthropist; born at Philadelphia May 25, 1831; died there April 19, 1895; eldest son of Eliezer L., and grandson of John Moss. He received his education at New Haven, Conn., and Philadelphia, and became a machinist for the firm of Morris & Taws, Philadelphia, for whom he superintended the erection of sugar-mills in Porto Rico; later he founded the firm of Wiler & Moss, brass-workers. In 1878 he retired from business. The remaining years of his life were passed quietly in Philadelphia, where he interested himself in philanthropic work. He was associated with all the important Hebrew charitable societies there, and was a member of the boards of the Society for the Prevention of Cruelty to Animals and of the Society for the Prevention of Cruelty to Children. He left the bulk of his moderate fortune to the Jewish Hospital Association of Philadelphia, for the founding and endowing of the Lucien Moss Home for Incurables of the Jewish Faith.

A. F. T. H.

MOSS, MARY: American authoress; born at Chestnut Hill, Philadelphia, Pa., Sept. 24, 1864. Since 1902 she has been a prolific contributor of fiction and essays to the magazines. Her Jewish novel "Julian Meldola" appeared in "Lippincott's Magazine" for March, 1903, and she has contributed sketches on the Yiddish theater to the Philadelphia press. Besides two other novels, "A Sequence in Hearts" and "Fruit Out of Season" (*ib.* Oct., 1902), she has contributed short stories and essays to the "Atlantic Monthly," "McClure's Magazine," "The Bookman," "Ainslee's Magazine," and "Scribner's Magazine."

Bibliography: *The Bookman*, Nov., 1903.

A.

MOSSE, BENJAMIN: Rabbi of Avignon, France; born at Nîmes Dec. 8, 1832; died at Marseilles July 24, 1892. Mosse was the founder of the monthly periodical "La Famille de Jacob." He was the author of: "Un Ange du Ciel sur la Terre," poems; "Droits et Devoirs de l'Homme" (14 editions); "Manuel d'Instruction Civique"; "Gustave ou la Propriété et le Travail"; "Elévations Religieuses et Morales"; "Traduction Littérale et Juxtalinéaire des Psaumes, Précédée d'une Grammaire," etc.; "Les Femmes de l'Antiquité Judaïque"; "Don Pedro II., Empereur du Brésil." He also translated Abravanel's "Rosh Amanah" (Avignon, 1884).

S. J. Ka.

MOSSE, MARKUS: German physician; born Aug. 3, 1808, at Grätz, in the province of Posen; died there Nov. 10, 1865. On account of his eminent ability and popularity he was elected, while still young, a councilor in his native town, and made president of the Jewish community. The Revolution of 1848 in Poland, which had a purely national character, brought about a change in his life. Unlike his coreligionists, who either held themselves aloof or else fought on the German side, Mosse took sides with the Polish rebels, the so-called "Sensenmänner." He was wounded, taken captive, and condemned to imprisonment. His participation in the contest neither gained for him the recognition of his partizans nor brought him contentment; and more than once he regretted his action.

During the rest of his life Mosse lived quietly in Grätz, engaged in the practise of his profession. Various benevolent institutions in Grätz are connected with his name, as the Dr. M. Mosse Hospital, which is open to all irrespective of religious distinction.

S. J. Fri.

MOSSE, RUDOLF: German publisher and philanthropist; son of Dr. Markus Moses; born May 8, 1843, at Grätz, Posen. He began his career as an apprentice in the book-printing establishment of Merzbach at Posen, publisher of the "Ostdeutsche Zeitung," and mastered the technique of printing in Leipsic, Berlin, and other cities. Advertising was not at all developed in Germany at that time, and it was in this direction that Mosse at the age of twenty-four saw his opportunity; he organized an advertising agency at Berlin, which finally extended itself to most of the larger cities of Germany, Austria, and Switzerland. His success was phenomenal. It was through his initiative that advertising supplements were added to "Kladderadatsch," "Fliegenden Blätter," "Gartenlaube," "Ueber Land und Meer," etc. Mosse is associated with the publication of the "Berliner Tageblatt" (since 1870), the "Deutsche Montagsblatt" (1877–88), the "Deutsche Reichsblatt" (1881–94), the "Berliner Morgenzeitung" (since 1889), and the "Allgemeine Zeitung des Judenthums" (since 1890). Among other publications of his are the "Bäder Almanach" (since 1882) and the "Deutsche Reichsadressbuch" (established in 1897). His printing establishment, founded in 1872, is one of the largest of its kind.

Mosse is known also for his philanthropic work. In 1892 he established a fund ("Unterstützungskasse") for his employees (numbering more than 500) with a capital of 100,000 marks, and in 1895 another fund of 1,000,000 marks for the same purpose. He built a hospital in his native town, Grätz, founded an educational institution for (100) children in Wilhelmsdorf, near Berlin, with an endowment of about 3,000,000 marks, aided in the foundation of the Emperor and Empress Frederick Hospital in Berlin, and contributed liberally toward various literary and artistic enterprises. He represented the Jewish community of Berlin for ten years and now (1904) represents the Reform congregation there. Since 1884 his brother **Emil Mosse** (b. Feb. 1, 1854) has been his partner in business.

MOSTAR: Capital of the district of Mostar, in the province of Bosnia and Herzegovina, Austria. It had in 1895 a total population of 14,370, of whom 164 were Jews. The first Jews settled at Mostar in 1850 and founded a community six years later. Up to the Austrian occupation of Bosnia and Herzegovina in 1878 only Sephardic Jews lived in Mostar, but thereafter Ashkenazic Jews from Austria-Hungary joined them. The community rents a building for the purposes of a synagogue and maintains a cemetery. It has no rabbi, its religious affairs being administered by the official who has charge of religious instruction in the city schools. The Jews of Mostar are not excluded from state or municipal offices. The Ashkenazim and Sephardim are numerically about equal; they live in complete harmony with each other and with the members of other denominations.

D. S. We.

MOSUL (Arabic, **Mauṣil**): Town of Asiatic Turkey; situated 220 miles northwest of Bagdad, on the right bank of the Tigris; capital of the province of the same name. Jews settled at Mosul, or rather in the ancient Nineveh (a suburb of which probably stood on the site of the present Mosul), on the left bank of the Tigris, when Shalmaneser, King of Assyria (730–712 B.C.), conquered Samaria. In 1165 Benjamin of Tudela found 7,000 Jews at Mosul, living under the protection of the house of Attabek. The head of the community was R. Zakkai ha-Nasi, who claimed to be a descendant of David. About 1171, David, chief rabbi of Mosul, obtained from the calif a firman permitting him to visit all the holy places (Luncz, "Jerusalem," 1899, p. 25). In 1289 the head of the flourishing community was the exilarch R. David ben Daniel, who also claimed to be a descendant of David. He, together with eleven members of the local rabbinical college, signed a letter threatening with excommunication Solomon Petit of Acre, the opponent of Maimonides (Grätz, "Gesch." 3d ed., vii. 166).

Little is known of the Jews at Mosul after 1289. In 1848 the traveler Benjamin II. found 450 Jewish families there (Benjamin II., "Mas'e Yisrael," p. 34).

In 1903 there were 1,100 Jews in a total population of 45,000. The affairs of the community are directed by the chief rabbi, Ḥakam Jacob, assisted by a court composed of three members. The community is not organized as such, levying no taxes; nor are there any benevolent societies. Although Benjamin II. says that in 1848 the Jews of Mosul were engaged in commerce and were in comfortable circumstances, they have since then been reduced by persecution and forced to live by peddling. At the instance of the Alliance Israélite Universelle, since 1875 the Ottoman government has consented to allow a Jew to have a seat in the municipal council of Mosul (Solomon Sasson in 1903), an arrangement adopted also in the other large cities of Kurdistan. Another Jew, 'Abd al-'Aziz, is a member of the supreme court.

There are two synagogues: the Large Synagogue, which is very ancient, and the Bet ha-Midrash, founded in 1875, which serves also as a school (250 pupils). Benjamin of Tudela says that in his time the tombs of the prophets Obadiah, Nahum, and Jonah existed at Mosul; and the natives say that beside the tomb of the last-named a bush springs up every year, recalling the "ḳiḳayon" of Jonah.

Thirty hours by horse to the north of Mosul is the village of **Bar Tanura,** inhabited exclusively by Jews, who claim that their ancestors have lived there since the return from Babylon, and who support themselves by manual labor. In 1893 this peaceable community was pillaged by Kurds from the mountains, who killed two Jews and wounded others. The remainder fled to the neighboring villages, and did not dare return to their homes until assured of the protection of the Vali of Mosul, which they secured through a letter from Moses ha-Levi, chief rabbi of Turkey.

In 1884 Siouffi, the French vice-consul at Mosul, sent to the Alliance Israélite Universelle the following statistical table in regard to the Jewish population in the province of Mosul, excepting that at Kerkuk, Koi-Sanjak, Ravenduz, and Sulaimaniye:

Place.	No. of Jews.	Occupations.
Akra	250	Merchants, druggists, goldsmiths, dyers, weavers, farmers.
Barach	20	Merchants, dyers, weavers, farmers.
Bet-Nuri	60	Dyers, druggists, weavers.
Brifke-Suara Spendar	305	Merchants, weavers, farmers.
Charafan	305	Dyers, weavers, farmers.
Choch and Gondoc	107	Merchants, druggists, dyers, farmers.
Dehoc	205	Merchants, weavers, farmers.
Erbil	730	Merchants, money-changers, druggists, goldsmiths, shoemakers, farmers.
Nafkir	365	Dyers, weavers, farmers.
Nervei	40	Merchants, druggists, dyers, weavers.
Rigan and Muzuriye	350	Dyers, weavers, farmers.
Sandur	250	Merchants, weavers, farmers.
Zakho	510	Merchants, druggists, ferrymen.
Zibar and Surdjie	310	Druggists, dyers, weavers, farmers.
Total	3,807

D. M. Fr.

MOSZKOWSKI, MORITZ: German pianist and composer; born Aug. 23, 1854, at Breslau, where he received his early musical education. After a further course of musical training at Dresden and at the Neue Akademie der Tonkunst at Berlin, he acted for several years as teacher in the last-mentioned institution. He then gave concerts in Berlin, and in 1873 made a successful tour through Germany and visited Russia and France. An accident to his arm compelled him to abandon public performances for several years, during which he produced some of his best compositions. In 1897 Moszkowski removed to Paris. The influence of Chopin is very marked in his works. Some of his pianoforte productions, such as the serenade "Aus Aller Herren Ländern" and the "Spanish Dances," have had great vogue. His opera "Bobadil," first performed at the Royal Opera-House, Berlin, in 1892, was favorably received, the ballet-music being especially pleasing. Among his other productions may be mentioned the symphonic poem "Jeanne d'Arc"; a pianoforte concerto in E major; two orchestral suites; "Phantastischer Zug," for orchestra; a violin concerto; and a number of pianoforte compositions.

S. J. So.

MOTAL, ABRAHAM BEN JACOB OF SALONICA: Turkish rabbi of the seventeenth century; born about 1568; died in 1658. He was a pupil of R. Samuel Ḥayyun, author of the responsa collection "Bene Shemuel," and probably of R. Solomon b. Abraham Kohen (MaHaRSHaK) also. As the director of the yeshibah of the old Lisbon community of Salonica he gathered about him a large number of devoted pupils, many of whom subsequently became well-known rabbis, among them Aaron ben Isaac Lapapa, author of "Bene Aharon."

Motal was the author of many responsa and decisions, which were included in other works, *e.g.*, in the "Bene Shemuel," in the collection of decisions by R. Ḥayyim Shabbethai (part i., Salonica, 1713; part ii., *ib.* 1715; part iii., *ib.* 1718) and the same scholar's responsa (*ib.* 1651), and in "Bene Aharon." Motal wrote also the following independent works: "Sefer Torat ha-Nazir" (Salonica, 1821), novellæ to the treatise Nazir, and on the rules to be observed by a Nazarite; and "Magen Abraham," on the regulations concerning bills of divorce and on the manner of writing masculine and feminine proper names in them (this work is mentioned by Ḥayyim Benveniste in "Keneset ha-Gedolah" to Eben ha-'Ezer, ch. 125, note to "Bet Yosef," No. 25; and ch. 128, note to "Bet Yosef," No. 3).

W. B. J. Z. L.

MOTAL, BENJAMIN B. ABRAHAM OF CONSTANTINOPLE: Turkish scholar of the first half of the seventeenth century. He is said to have been an exceptional grammarian and to have written certain grammatical works, of which, however, nothing has been preserved. He edited the collection "Tummat Yesharim," containing: (1) "Ohole Tam," responsa and decisions by Jacob Tam ibn Yaḥya; (2) "Derek Tamim," glosses and critical notes to Alfasi's halakot and commentaries; (3) "Siyyuma de-Pisḳa," glosses to responsum 12 of "Ohole Tam"; (4) "Temim De'im," by Abraham b. David; (5) "Ma'amar Kol De'i," by Elijah ha-Levi; and (6) "Kelale Shemuel," by Samuel Sirillo, in addition to notes and emendations to Sifra and Abot de-Rabbi Natan, together with a preface by himself (4 parts, Venice, 1622).

MOTAZILITES; MOTEKALLAMIN. See ARABIC PHILOSOPHY.

MOTH. See INSECTS.

MOTHER (Hebrew, "em"; Aramaic, "imma").—**Biblical Data:** Although the father was considered the head of the family among the Hebrews of old, and the mother therefore occupied an inferior position legally and ritually, yet in the ethical relation involving the reverence due to her from the children she stood on the same plane as the father; disrespect for her entailed the same punishment as disrespect for the father (comp. Ex. xxi. 15, 17; Lev. xx. 9; Deut. xxvii. 16). In the Decalogue it is commanded to honor the mother as well as the father (Ex. xx. 12; Deut. v. 16); and in Lev. xix. 2 the people are enjoined to fear both parents. In the home life and training the mother is of equal importance with the father (Deut. xxi. 18, 19; I Kings xix. 20; Jer. xvi. 7; Prov. xxx. 17). When a particularly tender relation is pictured by the Biblical writers, a mother's love is often employed to symbolize the thought. Thus Isaac's marriage to Rebekah is said to comfort him for the loss of his mother (Gen. xxiv. 67). When Jeremiah describes the grief into which the calamitous events of his time have cast the people, he employs the figure of a mother weeping for her children: "A voice was heard in Ramah, lamentation, and bitter weeping; Rachel weeping for her children; she refuseth to be comforted for her children, because they are not" (Jer. xxxi. 14 [R. V. 15]); and when the prophet of the Exile wishes to delineate God as the comforter of His people, he says: "As one whom his mother comforteth, so will I comfort you" (Isa. lxvi. 13). In the Book of Lamentations the acme of destitution is presented by the picture of young children and sucklings swooning in the streets, and saying to their mothers, "Where is corn and wine?" (Lam. ii. 11, 12); and when the Psalmist describes his utter wo, he laments: "As one mourning for his mother I was bowed down with grief" (Ps. xxxv. 14, Hebr.).

The Praise of the Good Woman.

It is, however, in the Book of Proverbs that the high place which the mother occupied in the Hebrew's estimation is specially indicated. Her teachings are constantly enjoined as being of equal weight with those of the father. The first verse after the introduction to the book reads: "Hear, O my son, the instruction of thy father; and neglect not the teaching of thy mother" (Prov. i. 8, Hebr.; comp. *ib.* vi. 20; x. 1; xv. 20; xix. 26; xx. 20; xxiii. 22, 25; xxx. 17). Especial attention may be directed to Prov. xxxi. 1, where the wise words attributed to King Lemuel are said to have been taught him by his mother. The queen mother was a personage of great importance in ancient Israel, as appears from the fact that in the history of the Kings the mother's name receives particular mention in the set phrase "and the name of his mother was . . ." (I Kings xi. 26; xiv. 21, 31; xv. 2, 10; xxii. 42; II Kings viii. 26; xiv. 2; xv. 2, 33; xviii. 2; xxi. 1, 19; xxii. 1; xxiii. 31, 36; xxiv. 8, 18; comp. also I Kings i. 11; ii. 13, 20, 22).

The word "em" has other meanings in the Bible; *e.g.*, "ancestress" (comp. Gen. iii. 20); a "people" (Isa. l. 1; Ezek. xix. 2, 10), the designation of one of the tribes whereof a mixed population was composed; thus Ezekiel (xvi. 3) calls the "mother" of Jerusalem a Hittite.

——**In Apocryphal and Rabbinical Literature:** Ben Sira declares that "he that provoketh his mother is cursed of the Lord" (Sirach [Ecclus.] iii. 16); and reference need only be made to the heroic mother of the seven sons whose martyrdom is described in IV Macc. xv. to indicate the temper of Jewish motherhood in trying days.

The estimation in which the mother was held in Talmudic times among the Jews is clear from the dying injunction of Rabbi Judah ha-Nasi to his sons:

Judah ha-Nasi's Injunction to His Sons.

"Be careful of the honor due your mother; let the lamp be lit in its place, the table be set in its place, the couch be spread in its place" (Ket. 103a); and it was the same rabbi who interpreted so ingenuously the two commands, "Honor thy father and thy mother" (Ex. xx. 12), and "Ye shall fear every man his mother, and his father" (Lev. xix. 2 [A. V. 3]). In the one command the father is mentioned first; in the other, the mother. Said Rabbi Judah: "God knows that a child honors the mother more than the father because she soothes it with gentle words; therefore in the command to honor the parents the father is mentioned first. God knows likewise that the child fears the father more than the mother because he teaches it the Law; therefore in the injunction to fear the parents the mother is mentioned first" (Ḳid. 30b, 31a; comp., however, Bacher, "Ag. Tan." i. 113, note 1, where it is claimed that Rabbi Eliezer ben Hyrcanus should be credited with this explanation, according to Mek., Yitro, 8).

Among the beautiful examples of filial devotion may be mentioned the treatment of his mother by Rabbi Ṭarfon (Yer. Peah 15c; Yer. Ḳid. 61b; Ḳid. 31b). Note also the high praise accorded by the Rabbis to the heathen Dama ben Netina of Ashkelon for his respectful attitude toward his mother under most trying circumstances (Yer. Peah *l.c.*; Yer. Ḳid. *l.c.*; Pesiḳ. R. 23, toward end). In the home life of the Jewish people, notably in the rearing and education of young children, the mother's place and influence have been always supreme (see Abrahams, "Jewish Life in the Middle Ages," pp. 133, 344, 347).

W. B. D. P.

MOṬOṬ, SAMUEL BEN SA'ADIAS IBN: Spanish commentator and translator; lived in the second half of the fourteenth century in Guadalajara, where he probably was born. The spelling of the name, מטוט or מוטוט, is uncertain. Wolf ("Bibl. Hebr." iii. 1113) is uncertain whether to read it "Moṭoṭ" or "Miṭṭoṭ." The first form, though not yet explained, is now usually accepted (see Steinschneider, "Hebr. Bibl." xv. 16).

Samuel is best known for his "Megillat Setarim" (Venice, 1554), a commentary on Abraham ibn Ezra's commentary on the Pentateuch. The work soon became very rare, and was subsequently published in abridged form by Jekuthiel Lazi in "Margaliyyot Ṭobah," a collective edition of commentaries on Ibn Ezra's commentary on the Pentateuch. A better revision than the Venice edition is preserved in some manuscripts (see Schiller-Szinessy, "Catalogue of the Hebrew Manuscripts Preserved in the University Library, Cambridge," Nos. 49, 50; J. Goldenthal, "Die Neuerworbenen Handschriftlichen Hebräischen Werke der K. K. Hofbibliothek zu Wien," vi. 98, Vienna, 1851), Cambridge MS. No. 49, written about 1380, probably in Guadalajara, containing the fullest and in many respects the best revision. In this supercommentary Ibn Moṭoṭ displays a profound knowledge of the Talmud, the Cabala, and philosophy. While in astronomy and astrology he follows Ibn Ezra as his principal authority, he accepts rather Naḥmanides' views in regard to Talmudical and cabalistic problems. He defends Ibn Ezra's commentary against the accusation of having thought and spoken of rabbinical authorities without sufficient respect. Ibn Moṭoṭ himself, however, had a low opinion of Ibn Ezra's orthodoxy and Talmudical knowledge on the whole, for, as he thinks, Ibn Ezra did not go very deeply into mysticism (Schiller-Szinessy, *l.c.* p. 138). He quotes in this work Aristotle and his Arabic commentators, also cabalists, scientists, philosophers, astronomers, and linguists, as Abraham ibn Daud, Maimonides, Joseph Ḳimḥi, Naḥmanides, Isaac Israeli, and Joseph ibn Waḳar. It is also a very rich source of information with regard to Abraham ibn Ezra's numerous works, to which it contains many references.

His Works.

Ibn Moṭoṭ wrote also: (1) a cabalistic commentary on the whole Pentateuch, although only the portion on Exodus has been preserved (Neubauer, "Cat. Bodl. Hebr. MSS." No. 286; Goldenthal, *l.c.* p. 7); (2) "Sefer Tehillot Adonai" (Neubauer, *l.c.* No. 1648; Benjacob, "Oẓar ha-Sefarim," pp. 62–112), a cabalistic commentary on the daily prayers and the Haggadah, a portion being printed as a supplement to Menahem Recanati's "Perush ha-Tefillot" (Constantinople, 1543–44); (3) "Meshobeb Netibot" (after Isa. lviii. 22), a cabalistic commentary on the "Sefer Yeẓirah," written in 1370 at Guadalajara, and of which many manuscripts exist (see Neubauer, *l.c.* Nos. 1594, 2, and 1647, 5; Paris MSS. Nos. 769, 124, 9, and 842, 2; Steinschneider, "Cat. Bodl." col. 2456; *idem*, "Hebr. Bibl." vii. 113, xv. 16). The last-mentioned commentary is divided into three parts, each of which contains six chapters. The first part, which is the introduction, deals with numbers, mankind, intelligence, etc. The second part contains the commentary proper; and the third part consists of various theses on subjects dealt with in the "Sefer Yeẓirah." As a whole, according to Steinschneider, the book represents a mixture of philosophy, astronomy, and Cabala which is characteristic of the age in which the author lived. The first four chapters of this commentary, containing a Hebrew translation, from the Arabic, of "Al-Ḥada'iḳ" by Baṭalyusi, have been published, together with Ibn Tibbon's translation of the same work, by D. Kaufmann in "Die Spuren des Al-Batlajusis in der Jüdischen Religionsphilosophie," pp. 17 *et seq.*, Budapest, 1880. A commentary on Baḥya ben Asher's commentary on the Pentateuch, a fragment of which is preserved in Neubauer (*l.c.* No. 1647, 1) and in Goldenthal (*l.c.*), is attributed to Ibn Moṭoṭ; but it is not certain that he is its author.

In 1392 Ibn Moṭoṭ translated Abraham ibn Daud's "Al-'Aḳidah Al-Rafi'ah" into Hebrew under the title "Emunah Nissa'ah" for Isaac ben Sheshet, rabbi of Barcelona, later of Algiers. The only manuscript of this translation (Mantua MS. No. 81) was first referred to by Luzzatto ("Orient, Lit." xii. 506). Ibn Moṭoṭ's translation, however, was soon replaced by that of Solomon Ibn Labi, made at the end of the fourteenth century in Aragon, and known and printed under the title "Emunah Ramah," ed. S. Weil, Frankfort-on-the-Main, 1852. Ibn Moṭoṭ's translation, although on the whole less correct, may still be used, according to Steinschneider, for correcting some of the errors of Ibn Labi's translation. As a translator Ibn Moṭoṭ displays an elegant style, and likes to choose such Hebrew words as by their sounds correspond with the Arabic.

Bibliography: In addition to the references given in the article, Steinschneider, *Cat. Bodl.* cols. 2455 *et seq.*; idem, *Hebr. Uebers.* pp. 287, 370, 449; idem, *Jewish Literature*, p. 115.

E. C. M. Sc.

MOṬOṬ, SIMEON BEN MOSES BEN SIMEON: Jewish mathematician of the fifteenth century; probably lived in Lombardy. No Jewish author mentions him, nor is anything known of his life. That he lived in the middle of the fifteenth century has been concluded from the fact that, according to De Rossi Parma MS. No. 205, 3, end, he dedicates his treatise on algebra to his two friends Judah ben Joseph ben Abigdor and Mordecai ben Abraham Finzi, who (the latter as rabbi and mathematician) flourished in Mantua from about 1445 to 1473 (see Steinschneider, "Zur Gesch. der Uebersetzungen aus dem Indischen ins Arabische," etc., in "Z. D. M. G." xxv. 405). As regards the correct reading of the name מטוט, or מוטוט (as, for instance, Munich MS. No. 36, 23 has it), one is confronted with the same uncertainty as in the name of the commentator and translator Samuel ben Sa'adias ibn Moṭoṭ. Steinschneider suggests that מטוט or טוט may be the name of a place ("Hebr. Bibl." xv. 16; see also H. Schapira, "Mishnat ha-Middot," in "Zeitschrift für Mathematik und Physik," Supplement, p. 9, Leipsic, 1880).

Two small works by Moṭoṭ have been preserved. One is a treatise on algebra, entitled "Sefer ha-Alzibra," or "Kelale me-Ḥeshbon ha-Aljibra" (De Rossi Parma MS. No. 205, 3; other manuscripts are mentioned in Steinschneider, "Die Handschriften-Verzeichnisse der Königlichen Bibliothek zu Berlin," ii. 57, No. 79, 14; Biscioni, "Bibliothecæ Ebraicæ Græcæ Florentinæ Catalogus," ii. 525, No. 46; comp. in addition Benjacob, "Oẓar ha-Sefarim," p. 36, No. 686). In the dedication mentioned above, Moṭoṭ claims to have studied several mathematical works written by Christians and to have found among them one containing theorems without demonstrations. This book he chose as his basic work and translated it, supplying the demonstrations from other mathematical sources, and adding some theorems of his own. The title of this original work is not known.

The other of Moṭoṭ's works, entitled "Bi'ur ha-Rabbi Shim'on Moṭoṭ [מוטוט] 'al Yeẓirat Shene Ḳawwim Shelo Nifgashu," deals with the problem of the asymptotes (Steinschneider, "Cat. Munich," No. 36, 23; Krafft, "Die Handschriftlichen Hebr. Werke der K. K. Hofbibliothek zu Wien," p. 89, No. lxxv.; Goldenthal, "Die Neuerworbenen Handschriftlichen Hebräischen Werke der K. K. Hofbibliothek zu Wien," p. 79). This work consists of two parts, the first being an introduction to the real solution of the problem. The lack of mathematical technical terms in Hebrew, which Moṭoṭ, however, failed to supply, sometimes renders the discussion difficult and verbose; but this does not detract from the clear style and uniformity of the work, which are indeed remarkable.

According to G. Sacerdote, the problem of the asymptotes was suggested to Moṭoṭ by reading Maimonides' "Moreh Nebukim," where (French ed. by Munk, i. 73; p. 410, French) the hyperbolic curve and the asymptote are spoken of. Whether Moṭoṭ knew of Efodi's commentary on this passage, which deals with the same problem, is uncertain, and at any rate improbable; for Moṭoṭ's solution is evidently original. About one hundred years later Moses Provençal, the mathematician and rabbi of Mantua, again took up this problem and discussed it in Moṭoṭ's manner, not claiming any originality for himself, but nevertheless failing to give Moṭoṭ's work as his source (Provençal's short treatise on the subject is contained in "Moreh Nebukim," ed. Sabbionetta, 1553, and was translated into Latin by Baroccius in 1586; see Steinschneider, "Hebr. Uebers," p. 426).

Moṭoṭ, although he exerted scarcely any influence on the development of the science of mathematics at large, deserves all credit for having invented the pure equations of the third and fourth degrees and the derived equations of the second degree, and for having solved the difficult problem of the asymptotes. His two works have been translated into French and fully discussed by Gustav Sacerdote ("Le Livre de l'Algèbre et le Problème des Asymptotes de Simon Motot," in "R. E. J." xxvii. 91 *et seq.*, xxviii. 228 *et seq.*, xxix. 111 *et seq.*, from which source the data for the present article have been taken).

MOTTA, EMANUEL DE LA: Early settler in South Carolina; born in the Spanish West Indies Jan. 5, 1761; died May 15, 1821. His family is said to have fled to the New World to escape Spanish persecution. Emanuel was educated at Charleston, S. C., and soon became one of its best-known citizens. His name is prominently connected with freemasonry in the South. He is supposed to have served in the Revolutionary war and in the War of 1812. After the Revolution he lived at Savannah, Ga., where he helped to reestablish the "old congregation" in 1786. In 1790 he was one of the incorporators of the Congregation Mickva Israel, for which he officiated as ḥazzan gratuitously for many years.

A. L. Hü.

MOTTA, JACOB DE LA: American physician; son of Emanuel de la Motta; born about 1789; died at Charleston, S. C., Feb. 13, 1845. He studied medicine, and was made a member of the South Carolina Medical Society in 1810. He became surgeon in the United States army and served in that capacity during the War of 1812. After the war Motta went to Charleston, and some years later to Savannah, Ga.; in the latter city he was chiefly instrumental in erecting a synagogue, in which he acted gratuitously as preacher for several years. Subsequently he returned to Charleston, where he became one of its leading physicians, and where he took an active part in communal affairs.

In 1816, in New York, he delivered the eulogy on Gershom Mendes Seixas, and in 1820 delivered a discourse at the consecration of the synagogue of the Mickva Israel congregation at Savannah; this discourse attracted the attention of Jefferson and Madison, both of whom wrote appreciative letters to its author. When Harrison became president (1841) he appointed Motta receiver-general for his district, an office which he filled with great credit.

MOURNERS OF ZION. See ABELE ZION.

MOURNING (אבל, אבלות): Manifestation of sorrow and grief over the loss, by death or otherwise, of a relative, a friend, an honored leader or prophet, or over a national calamity.—**Biblical Data:** It is recorded that Abraham mourned for Sarah (his wife) and wept for her (Gen. xxiii. 2). Jacob mourned "many days" for the supposed death of Joseph. David lamented for Absalom, in spite of the latter's ill conduct. The mourning for an only son was profound (Amos viii. 10). The days of mourning for parents were generally observed (Gen. xxvii. 41). Joseph mourned seven days for his father (*ib.* l. 10), while the mourning of the captive Gentile woman lasted thirty days (Deut. xxi. 13), showing that the Gentile period of mourning for a parent exceeded that of the Hebrews.

Mourning Period.

The death of a person who had been esteemed and honored in life was publicly lamented by the people as a tribute of respect. Jacob was thus honored in Egypt when he died; the Egyptians organized an elaborate public funeral, and their mourning for him lasted seventy days (Gen. l. 3). Among the Hebrews a public mourning never exceeded thirty days, even in the case of their greatest prophet, Moses (Deut. xxxiv. 8).

The mourning for a national defeat or other public calamity was confined to the day the news of the misfortune was received. For an exceptionally great and epoch-marking calamity, as the destruction of the Temple on the 9th of Ab, every anniversary of the event was observed as a day of mourning.

The manner of mourning differed according to the degree of the loss and distress connected with it. The Gentile captive mourned for her parents by remaining within the house, weeping, cutting off her hair, and paring her nails, abundant hair and long nails being considered marks of feminine beauty; whereas among men, during mourning, the hair and nails were allowed to grow. Mourning was also marked by throwing dust on the head (Josh. vii. 6), by wearing sackcloth, sitting in ashes, lacerating the flesh, and tearing out the hair of the head and face (Jer. xvi. 6). Such self-mutilation, however, was forbidden by Moses (Lev. xxi. 5; Deut. xiv. 1). Other forms of mourning are indicated in Ezek. xxiv. 17, as (1) crying, (2) removing the head-dress, (3) removing the shoes, (4) covering the lips as a guard of silence, (5) eating "the bread of mourners" (Hos. ix. 4).

To express his sorrow for the death of Saul and Jonathan and the defeat of Israel, David rent his clothes, wept, and fasted all day (II Sam. i. 11, 12). David's lament on that occasion is one of the gems of Hebrew poetry. Seven days' mourning for the dead appears to have been usual among the Jews (comp. Ecclus. [Sirach] xxii. 12).

——**In Rabbinical Literature:** According to the Talmud, the seven days of mourning were observed even before the Flood. The seven days of grace granted to the wicked generation of the Flood (Gen. vii. 4) were to allow the period of mourning for Methuselah to expire (Sanh. 108b; Gen. R. xxxii. 10). An inference is drawn from the verse in Amos (viii. 10), "I will turn your feasts into mourning"—the principal feasts, like those of Passover and Sukkot, continue seven days; so also do the mourning days (M. Ḳ. 20a). Another reason for the number seven is that it is a tenth of man's allotted span of threescore and ten ("Sefat Emet," xix., quoted in Levensohn, "Meḳore Minhagim," § 97).

The mourning proper, according to the Talmud, is divided into four periods. The first three days are given to weeping and lamentation; the deceased is eulogized up to the seventh day, the mourner keeping within the house; the somber garb of mourning is worn up to the thirtieth day, and personal adornment is neglected; in the case of mourning for a parent, the pursuit of amusement and entertainment is abandoned up to the end of the year.

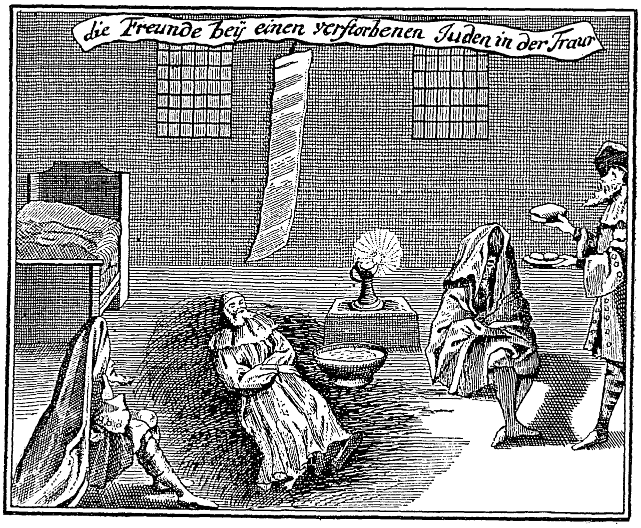
Mourning is represented as a sword raised over the mourner's shoulders during the first three days; it approaches him from the corner of the room up to the end of seven days; it passes him on the street up to the end of thirty days; it is likely to strike any one of the family during the whole year (M. Ḳ. 27b; Yer. M. Ḳ. iii. 7; comp. Shulḥan 'Aruk, Yoreh De'ah, 394, 4).

Excessive mourning is discouraged, as it would imply that "the mourner is possessed of more pity than the Almighty." "One who persists in mourning overmuch for his dead will mourn for another death" (M. Ḳ. 27b). The prolongation of mourning to twelve months probably originated with the instruction given by Judah ha-Nasi I., that his disciples should close the yeshibah and observe full mourning for thirty days; that to the end of twelve months the yeshibah should be closed during one-half of the day and that the other half should be devoted to eulogies of the dead nasi (Ket. 103b). There is also an allusion in the Zohar to the belief that while the soul of a righteous person clings to his body for the first thirty days before entering heaven, the soul of an ordinary person clings to the body for twelve months (Zohar, Wayaḳhel, pp. 398, 419, ed. Wilna, 1882). The full year of mourning is now observed only for parents.

Limitations to Grief.

The mourning garments worn by a widow (Gen. xxxviii. 14) were probably black (comp. II Sam. xiv. 2). R. Yannai contrasted the black garment of a mourner with the white garment of a bridegroom (Shab. 114a). Naḥmanides quotes R. Isaac ibn Ghayyat on the custom of wearing black ("Torat ha-Adam," p. 27d, ed. Venice, 1595). Asheri says "one may mourn for his father-in-law by wearing black for twelve months; one may mourn so for a mere friend, as did David for Abner" ("Rabbenu Asher," Rule 27, No. 9). In Russia, Poland, and Galicia the Jews discarded black for mourning in order to avoid seeming to ape the Christian custom. The only outward sign of mourning observed there is the "keri'ah" (rent) in the garment (there are numerous references in the Bible to rending the garments as a sign of grief). The rent must be at least a handbreadth (4 inches) long, and it is usually made in the lapel of the coat. In case of a parent's death the mourner must rend all the clothes worn by him during the mourning period. In ancient times it was customary to mourn for a parent, a principal teacher, or a nasi by exposing both shoulders through the upper garments; for a ḥakam (chief rabbi) the right shoulder was exposed, for the ab bet din the left shoulder. This custom had already become obsolete in the Middle Ages.

Mourning Habit and "Keri'ah."



die Freunde beÿ einen verſtorbenen Juden in der Traur

Friends Giving Mourners Bread of Affliction.

(From Kirchner, "Jüdisches Ceremoniel," 1726.)

Full mourning is limited to the following occasions: the death of a (1) father, (2) mother, (3) son, (4) daughter, (5) brother, (6) sister, (7) wife or husband (comp. Lev. xxi. 2, 3). The Rabbis included a half-brother and half-sister. Mourning need not be observed for a child that has lived less than thirty days. The ceremonies observed in mourning for a kinsman are as follows: The time between death and the burial is called "aninut" (= "deep grief"), during which the mourner must not eat in the same house with the dead, and, except on Sabbath or on a holy day, must not eat in company, nor eat meat, nor drink wine. On returning from the burial "Shib'ah" commences—the seven days during which the mourner is confined to the house, in which he sits on the floor or on a low bench, devoting his time to reading the Book of Job. He is excused from rising when an elder, or even a nasi, passes. The lamentation while sitting may have been derived from Neh. i. 4.

Ceremonies.

The first meal after the funeral is prepared by a neighbor; it is called "se'udat habra'ah" (= "meal of consolation"). It usually consists of bread with eggs or lentils (B. B. 16a), the latter being a symbol of death. The mourner occupies the front seat in the room when the consolers come to visit him, as indicated in Job xxix. 25, the Talmudic interpretation of which is "as one comforted by mourners" (Ket. 69b). "Silence is the price of consolation in a house of mourning" (Ber. 6b). Aaron "held his peace" when apprised of the death of his sons Nadab and Abihu (Lev. x. 3). Hence the conversation is limited to praises of the deceased. The mourner, however, speaks first, and it is provided that he pronounce the benediction, "Praised be the Almighty, the righteous Judge." The visitors must not make observations reflecting on Providence, as, for instance, "What can you do?" On leaving, the visitors say, "May the Almighty comfort you among all mourners for Zion and Jerusalem."

The things prohibited to mourners during Shib'ah are: (1) manual labor or business transactions; (2) bathing or anointing the body; (3) wearing shoes or sandals; (4) reading the Torah or studying (the reading of the Book of Job or the Lamentations excepted); (5) cohabitation; (6) lying on the bed when it is in its usual horizontal position (hence it was necessary to take down the canopy and fold up the lower supports so that one end of the bed might touch the ground); (7) washing and preparing garments; (8) cutting the hair. The last two prohibitions are in force up to the end of thirty days, while music and all forms of recreation are usually excluded for the whole year, especially when the mourning is for a parent. Marrying is prohibited during the first thirty days; in the case of mourning for husband or wife this prohibition extends to a year. The prohibition against working during Shib'ah is modified where the mourner is dependent on his daily earnings; in such a case he may resume his work in private after three days.

Mourners' Ordinance.

Many exceptions to these regulations are enumerated in Yoreh De'ah, 380–383. The Sabbath excludes public mourning, but is counted in the Shib'ah. A holy day suspends the Shib'ah when the latter has begun at least one hour before the holy day; otherwise the Shib'ah is postponed until after the holy day. The holy days also deduct seven days from the thirty days of mourning ("Sheloshim"), and where the Shib'ah expires immediately before the holy days begin, the thirty days of mourning are entirely suspended. The Feast of Tabernacles causes fourteen days to be deducted from the thirty days, if the Shib'ah begins at least one hour before the holy days. See Burial; Funeral Rites; Jahrzeit; Ḳaddish.

A. J. D. E.

MOUSE (Hebr. "'akbar"): An animal enumerated among the unclean "creeping things" in Lev. xi. 29. In I Sam. vi., where the reference is to the mice sent as a plague upon the Philistines to ravage their fields, "'akbar" may denote specifically the field-mouse, while elsewhere the term probably includes the whole family of small rodents, as the rat, marmot, jerboa, etc. In Isa. lxvi. 17 eating the mouse is placed in the same category with eating swine's flesh. For the legendary action of mice in the destruction of Sennacherib's army see Herodotus, ii. 141.

In the Talmud the term "'akbar" apparently includes also the rat (comp. B. M. 97a, where the case is mentioned of a cat being killed by 'akbarim). A distinction is made between house-, field-, and water-mice (Ḥul. 126b, 127a, and parallels), as also between black, gray, and white ones (Pes. 10b). The mouse is an object of disgust (Suk. 36b). It is of malicious nature, since it causes destruction (to cloth and wood) without any profit to itself (Hor. 13a). Even a human corpse is not safe from it (Shab. 151b and parallels). Hence its many enemies, *e.g.*, the cat, the fox, the hedgehog, the weasel, and man (B. Ḳ. 80a). But no mouse robs another one (Pes. 10b). Eating of anything which a mouse has gnawed weakens the memory; hence the cat, which eats the mice themselves, does not recognize its master (Hor. 13a). Mice often carry away bright objects, as coins, rings, etc.; and a miser who buries his money is called a "mouse lying upon its denarii" (Sanh. 29b). Another proverb which is cited in connection with the mouse is: "Not the mouse is the thief, but the hole" (*i.e.*, the receiver of stolen goods; 'Er. 30a).

MOVABLE PROPERTY. See Property.

MSTISLAVL: District town in the government of Moghilef, Russia. A Jewish community existed here in the sixteenth century. There is reason to believe that the community was poor; for the synagogal decorations, consisting of a silver crown and two engraved tablets with silver bells, were pawned with a Christian (1639). In 1897 the Mstislavl Jews numbered about 5,600 in a total population of 8,467. They included 950 artisans and 112 day-laborers. The Jewish children are given instruction in the Talmud Torah; and 75 attend the city school. There are organizations in Mstislavl for the visitation of the sick and for affording pecuniary assistance to the needy.

MUDAWWAR, ABU AL-BAYAN IBN AL- (surnamed **al-Sadid**): Karaite court physician to the last Egyptian Fatimite califs and later to Saladin, who pensioned him when he was sixty-three years old; born 1101; died at Cairo 1184. During the twenty years of his retirement his house was crowded with pupils; but he refused to see patients at their homes unless they were his friends. One day he was sent for by the emir Ibn Munḳidh, who, on his arrival from Yemen, had fallen sick; but he refused to go until requested to do so by Al-Ḳaḍi al-Faḍil, the private secretary of Saladin.

According to Ibn Abi Uṣaibi'a, Ibn al-Mudawwar left works on medical subjects, but they are no longer extant.

Bibliography: Ibn Abi Uṣaibi'a, *Kitab 'Uyun al-Anba fi Tabaḳat al-Aṭibba*, ed. Aug. Müller, ii. 115, Königsberg, 1884; Carmoly, in *Revue Orientale*, i. 404.

MUDAWWAR, ELIAS IBN AL-: Arabic poet and physician; lived at Ronda, probably in the first half of the twelfth century (the year 1184 which Jacobs gives in his "Sources," p. 179, as the date of death, refers to another physician of the same name). He was especially known by the Arab historians as a poet; and Al-Makkari relates the following anecdote of him: There was at Ronda another Jewish physician with whom Elias used to quarrel, as is generally the case between members of the same profession. One day Elias, having become master of a secret concerning his rival, which if made public might ruin him, sent him in Arabic the following distich: "Do not blame me; for no friendship can exist between two members of the same profession. Look at the two moons [that is to say, the sun and moon]: is there any light when a collision occurs between them?"

MÜHLFELD, LUCIEN: French novelist and dramatic critic; born at Paris Aug. 4, 1870; died there Dec. 1, 1902. After completing his studies at the Lycée Condorcet he entered the University of Paris, where he took the licentiate degrees in literature and law. He then engaged in literary work as a contributor to various periodicals. He became successively dramatic critic for the "Revue d'Art Dramatique," the "Revue Blanche," and the "Echo de Paris." From 1890 to 1895 he was assistant librarian at the University of Paris; but he gave up that position to devote himself entirely to literature. He was the author of "Le Mauvais Desir" (1890), "La Carrière d'André Tourette" (1900), and "L'Associée" (1902)—all three novels dealing with Parisian life. His two critical works, "La Fin d'une Art" (1890) and "Le Mondę où l'on Imprime" (1897), never became popular. He wrote also (with M. Pierre Veber) a one-act play entitled "Dix Ans Après" (produced at the Odéon in 1897).

MÜHLHAUSEN, YOM-ṬOB LIPMANN. See Lipmann-Mülhausen, Yom-Ṭob ben Solomon.

MUHR, ABRAHAM: German philanthropist; born at Berlin April 7, 1781; died at Breslau June 12, 1847. In addition to a thorough course in Hebrew literature, he received a substantial secular education. In 1806 he went to Plesse, Prussian Silesia, as a teacher in the family of F. Skutsch, whose office he afterward entered as a bookkeeper, subsequently establishing a business of his own. Prospering, he took an increasing interest in all that concerned his coreligionists. He strove energetically to secure the emancipation of the Jews in Germany, and with that object in view contributed many articles to the periodical press. The respect in which he was held by the authorities secured the success of many of his efforts to improve the condition of his brethren and to obtain for them a greater measure of consideration. To him is due the credit for having obtained for Jews the right to trade as apothecaries. He went to Berlin when the Landtag of 1847 gave evidence of a disposition to concede the emancipation of the Jews, and personally influenced a large number of the deputies. He did not live, however, to witness the outcome of the session. The esteem in which he was held by the citizens of Plesse is indicated by the fact that he was for many years president of the city council. Shortly before his death he was elected "Stadtrath" by an almost unanimous vote.

Bibliography: *Jahrbuch für Israeliten*, Breslau, 1847.

s. M. Co.

MUHR, JULIUS: German genre painter; born at Plesse, Silesia, June 21, 1819; died at Munich in 1865. He studied first at the Academy of Berlin, and afterward (1838) entered the Munich Academy of Arts, where Cornelius became his instructor. From 1847 to 1852 he worked with Kaulbach on the wall-paintings in the vestibule of the Neues Museum in Berlin. Muhr went to Rome in 1853, where he painted a "Mass in the Sistine Chapel" for Bishop Lichnowsky. Thereafter, until 1858, when he settled in Munich, he spent every winter in Rome. Of his paintings the following may be mentioned: "A Siesta of Monks"; "A Monk Playing"; "A Gipsy Family"; "A Struggle with Gipsies"; "Job's Friends"; and "Pifferari."

s. F. C.

MUHR, SIMON: American merchant, manufacturer, and philanthropist; eldest son of Henry Muhr; born at Hürben, Bavaria, April 19, 1845; died in Philadelphia Feb. 9, 1895. Muhr was vice-president of the Jewish Hospital, director of the Foster Home, and was identified with other charities in Philadelphia. He was active in aiding Russian immigrants and in assisting their infant colony at Alliance, N. J. In 1891 he represented Pennsylvania as a member of the Chicago World's Fair Commission. He left a large portion of his estate to Jewish and other charities, including the sum of about $100,000 to the city of Philadelphia as a perpetual foundation for scholarships to enable the best-fitted graduates of the high schools to pursue advanced studies. There are eight Simon Muhr scholarship students, four male and four female, each of whom receives $400 per annum for four years. While the majority of these attend universities, artistic studies are not excluded.

A. M. Su.

MÜHSAM, SAMUEL: Austrian rabbi; born at Landsberg, Prussian Silesia, May 22, 1831. He received his education at the gymnasium at Oppeln and the universities of Breslau and Vienna (Ph.D., Leipsic, 1864). The following year he became rabbi at Postelberg, Bohemia, where he remained till 1870, when he went in a similar capacity to Znaim, Moravia, becoming also teacher of French at the Realschule. In 1872 he was called to Bisenz, Moravia; and since 1877 he has occupied the rabbinate of Graz, Styria.

Mühsam is the author of: "Juden und Judenthum bei Altrömischen Schriftstellern," Prague, 1864; "Ueber Essen und Trinken der Alten Hebräer," Vienna, 1866; "Ueber die Magie bei den Alten," Prague, 1867; and "Das Feuer in Bibel und Talmud," Vienna, 1869.

s. F. T. H.

MUḲADDASI, ABU AL-FARAJ HARUN BEN AL-FARAJ AL-. See Aaron of Jerusalem.

MULBERRY: The berry-like fruit of the black or common mulberry (*Morus nigra*). It is not mentioned in the Hebrew Old Testament, although in II Sam. v. 23–24 "beka'im" is erroneously explained as "mulberry-trees" by the Rabbis and some commentators (Luther and others; Löw, "Aramäische Pflanzennamen," pp. 71, 209, 236). But the "blood" of the mulberry, its blood-red juice, is mentioned in I Macc. vi. 34. This of course does not prove that the tree was not cultivated much earlier in Palestine. Its name in post-Biblical Hebrew is "tut" (Ma'as. i. 2), which has been preserved in the modern Arabic "tut shami." The tree is cultivated on account of its black, juicy berry, which greatly resembles the blackberry and is very refreshing. The juice is made into a popular wine (comp. Post, "Flora of Western Palestine," p. 729; Anderlind, in "Z. D. P. V." xi. 81 *et seq.*). The white mulberry (*Morus alba*) was introduced into Palestine long after the commencement of the common era.

E. G. H. I. Be.

MULDER, SAMUEL ISRAEL (formerly **Scherjver**): Dutch educationist; born at Amsterdam June 20, 1792; died there Dec. 29, 1862. He was educated by his father and by David Friedrichsfeld, and then studied with his brother-in-law H. A. Wagenaar. His friends were Lehmans, Somerhausen, and Ullman, all of them members of the circle Tongeleth, who applied themselves to the study of the Hebrew language. Mulder composed at this time a Hebrew romance, "Beruria," and a psalm (see Delitzsch, "Zur Geschichte der Jüdischen Poesie," Leipsic, 1836).

Mulder was also a member of "Tot Nut en Beschaving," in the works of which many of his essays appeared. In 1812 Mulder became a Sabbath-school teacher; in 1817, a sworn translator at the tribunal; in 1835, inspector of religious schools; and in 1849, secretary of the Amsterdam congregation. From 1826 Mulder was regent (director) of the theological seminary Sa'adat Baḥurim, which was reformed by him and which became in 1836 an institution subsidized by the state. Mulder was nominated its regent-secretary for life.

Mulder's reputation is chiefly due to his translation of the Bible, especially of the Pentateuch, Psalms, and Proverbs, which appeared in 1824 and has often been reprinted; it was the first translation into Dutch from the Hebrew. In collaboration with Lehmans he published (1825–31) the dictionary entitled "Nederlandsch-Hebreeuwsch Handwoordenboek" (2 vols.). In 1843 he began his "Bijbel voor de Israelietische Jeugd," which he finished in 1854 (17 vols.; translated into English by Perez of Philadelphia). Besides he published many books on the study of Hebrew, *e.g.*: "Chronologisch Handboekje," 1836; "Rudimenta" (a revision of Lehman), 1840; "Aardrijkskunde van het Heilig. Land," 1840; "Leesboekje," 1846; "Moreh Derek," 1861. Most of his essays and contributions to periodicals he collected in his "Verspreide Lettervruchten," 1844.

In 1843 the University of Giessen conferred upon Mulder the degree of Ph.D., and in 1860 he was decorated with the Order of the Netherlands Lion.

S. E. Sl.

MULE: A hybrid between the ass and horse. The Hebrew term is "pered"; feminine, "pirdah." (For "rekesh," which some render by "mule," see Horse.) "Yemim" (Gen. xxxvi. 24), which Targ. Yer., Arabic version, and Greek Venetus translate by "mules," is generally admitted to mean "hot springs"; so Vulgate, "aquæ calidæ." The mule is first mentioned in the time of David. It was used as a riding-animal for kings (I Kings i. 33, 38, 44), for the royal household at large (II Sam. xiii. 29), and in war (II Sam. xviii. 9; comp. Isa. lxvi. 20; Zech. xiv. 15). It formed part of the royal stud (I Kings xviii. 5); and among the tribute paid to Solomon by subject tribes were included mules (*ib.* x. 25). The mule is also referred to as a beast of burden (II Kings v. 17; comp. Josephus, "Vita," § 26). Togarmah (Armenia) was the staple market for mules (Ezek. xxvii. 14). The Jews were prevented from breeding the mule themselves by the prohibition of Lev. xix. 19 (comp. Philo, ii. 307). Still it was a favorite animal with them, as it still is in the East, on account of its sure-footedness, hardiness, and endurance; and among the stock brought on the return from Babylon are mentioned 245 mules (Ezra ii. 66; comp. Josephus, *l.c.*).

Besides the Biblical names (Ḥul. 79a) there occur in the Talmud the terms "mula" (comp. Latin "mula"; Shab. 52a) and "kudanta" (*ib.* 110b); for "yemim" see Ḥul. 7b (comp. Gen. R. xcii. 2). A distinction is made between the issue of a stallion and a she-ass and that of an ass and a mare; the former has a thicker voice, longer ears, and a shorter tail (Ḥul. 79a). The mule was one of the last things created (Pes. 54a). The she-mule, having no womb, can not propagate (Bek. 8b; Shab. 67a); a barren spouse is therefore called "kudna 'aḳarah" (B. B. 91a). The mule is less hardy than the ass, and ages early ('Er. 56a); still it is a favorite beast of burden (Pes. 119a). The bite of a white she-mule was considered dangerous (Ḥul. 7b), while its excrements were used for medicinal purposes (Shab. 110b). The mule may be yoked neither with the horse nor with the ass (Kil. i. 6).

E. G. H.-S. S. I. M. C.

MÜLHAUSEN: City in Alsace. Its Jewish community is of comparatively recent foundation. In 1784 there were no Jews in Mülhausen, and only since 1798, when the city was incorporated into France, have Jews been tolerated there. In 1830 the congregation, comprising seventy-six families, elected its first rabbi, Moses David Bernheim, who died in 1832 and was the first to be buried in the cemetery which the community had just acquired. In 1849 the community, which had then considerably increased, built a new temple with a seating capacity of 400.

In 1892 an organ was erected, which is played on Saturdays and feast-days, but not on Yom Kippur. In 1873 all the dead in the old cemetery were transferred to a new one outside of the city. The community of Mülhausen possesses an infirmary, founded in 1867, in which the aged of both sexes from Upper Alsace are cared for, mostly gratuitously; the annual expenses amount to 20,000 francs, the city of Mülhausen contributing annually about 5,000 francs. The ground on which the infirmary is built was donated by the father of Capt. Alfred Dreyfus. At present (1904) the institution shelters 27 aged persons: 15 women and 12 men.

In 1842 the Philanthropic Society of the Upper Rhine took into consideration the desirability of founding a school of arts and handicrafts, in which poor Jewish children might be gratuitously supported and might learn trades, so that they would not be forced to become pedlers and petty traders. This school, for which the community offered a location, was established at Mülhausen. Since its foundation 540 pupils have studied there, a large number of whom have since become its patrons and have attained to distinguished positions. In 1903 it contained 39 students, whose ages ranged from fourteen to seventeen. The school has been recognized as an institution of public utility by the government, and the city of Mülhausen contributes an annual subsidy of 5,000 francs. The remainder of the expenditure, which amounts to 18,000 francs annually, is met almost exclusively by members of the Jewish community of Mülhausen.

The successor of the above-mentioned Bernheim in the rabbinate was Samuel Dreyfus, author of several articles published in the "Semaine Israélite" and "L'Univers Israélite"; died in 1870. He was followed in 1873 by Rabbi Solomon Moock, chaplain in the army of the Rhine. After his death in 1898 the rabbinate was filled by Felix Blum, author of "Le Synhedrin de Jerusalem" who is still in office.

The following Jewish organizations exist in the city: two large societies (one numbering 145, the other 171, members) for mutual support (they also contribute several thousand francs yearly for the support of the poor and for the education of children of indigent parents); a women's society (325 members), which devotes all its funds to charitable purposes; a fund for the assistance of the poor of the community (expenditures 10,600 francs); a society which distributes food to needy families once a week; a society for Jewish history and literature, in connection with which lectures are delivered on subjects relating to Judaism; a society of "Meṭaharim" and another of "Ḳabranim" (ḥebra ḳaddisha). Religious instruction is furnished in the higher schools by the rabbi, in the common schools by three male instructors and two female teachers.

The Jews of Mülhausen number 2,400 in a total population of 89,118.

D. F. B.

MÜLLER, DAVID HEINRICH: Austrian Orientalist; born July 6, 1846, at Buczacz, Galicia. He studied in Vienna, Leipsic, Strasburg, and Berlin, and became professor of Oriental languages in Vienna University in 1885. He is also professor of Hebrew and religious philosophy at the Vienna Israelitisch-Theologische Lehranstalt.

Müller has published the following works: "Kitab al-Farḳ von Al-Assma'i" (Vienna, 1876); "Südarabische Studien" (*ib.* 1877); "Die Burgen und Schlösser Südarabiens" (2 parts, *ib.* 1879–81); (with Mordtmann) "Sabäische Denkmäler" (*ib.* 1883); "Siegfried Langer's Reiseberichte aus Syrien und Arabien und die von Ihm Gesammelten Inschriften" (Leipsic, 1883); "Zur Vergleichenden Semitischen Sprachforschung" (Leyden, 1884); "Die Keilinschrift von Aschrut-Darga" (Vienna, 1886–1887); "Zur Gesch. der Semitischen Zischlaute" (*ib.* 1888); "Epigraphische Denkmäler aus Arabien" (*ib.* 1889); "Die Rezensionen und Versionen des Eldad ha-Dani" (*ib.* 1892); "Die Altsemitischen Inschriften von Sendschirli" (*ib.* 1892); "Epigraphische Denkmäler aus Abbessinien" (1894); "Ezechiel-Studien" (1895); "Die Propheten in Ihrer Ursprünglichen Form" (1896), an arrangement of the text of the Prophets by which he intended to show the original meter, "Die Haggada von Serajevo" (1898), an important account of the illustrations of the Haggadah (both with Schlosser); "Südarabische Alterthümer" (1898); "Palmyrenische Inschriften" (1898); "Strophenbau und Responsion" (1898); "Die Gesetze Hammurabi's und Ihre Verhältnis zur Mosaische Gesetzgebung" (Vienna, 1903). He also edited Hamadani's "Geographie der Arabischen Halbinsel" (2 vols., Leyden, 1884–91) and parts of Ṭabari's "Annals" (*ib.* 1888–89). An account of his voyage to Constantinople and the Orient appeared in 1878 in Vienna. In 1897–98 he went to South Arabia and Socotra as head of an archeological expedition sent by the Kaiserliche Akademie der Wessenschaften of Vienna; he published the results of some of his linguistic researches as vols. 4 and 6 of "Die Südarabische Expedition."

Müller is one of the editors of the "Wiener Zeitschrift für die Kunde des Morgenlandes," one of the directors of the Orientalisches Institut, and member of the Vienna Academy of Science.

S.

MÜLLER, GABRIEL: Dayyan at Mattersdorf, Hungary; born Oct. 3, 1836, at Nadas. He received much of his education in his father's (Ḥayyim Müller's) yeshibah, and in 1860 was appointed dayyan of the community of Mattersdorf. He is the author of the following works: "Birkat ha-Miẓwot," laws relating to the benedictions (Vienna, 1871); "Shi'ure Miẓwot," on weights and measures in the Talmud (Presburg, 1880); "Oẓar Agadot," a collection of haggadic passages from the Talmud (in 4 parts, *ib.* 1876, 1882, 1888; Paks, 1901); "Ma'gele Ẓedeḳ," ethical reflections (Paks, 1896).

S. L. V.

MÜLLER, JOEL: German rabbi and Talmudist; born 1827 at Ungarisch-Ostra, Moravia; died at Berlin Nov. 6, 1895. He received a thorough Talmudic training and succeeded his father as rabbi of his native town. His next rabbinate was that of Leipa, Bohemia; some of the sermons which he preached there have been published—"Die Spenden der Mutterfreude" (1868) and a collection of sermons on "Bibelbilder" (1869). Later he preached in Berlin.

From Leipa Müller went to Vienna, and became teacher of religion in a "Realschule." This he resigned to become professor of Talmud at the Berlin Lehranstalt für die Wissenschaft des Judenthums.

In 1878 Müller published in Vienna an edition of the "Masseket Soferim," and in the same year "Ḥilluf Minhagim"; the latter, which is a work of great value, first appeared in the Hebrew periodical "Ha-Shaḥar." Müller's treatment of the early responsa literature was especially excellent. In 1881 his "Teshubot Ḥakme Ẓarefat we-Lotir" appeared; in 1886, "Briefe und Responsen aus der Vorgaonäischen Jüdischen Literatur"; in 1888, "Teshubot Geone Mizraḥ u-Ma'arab"; and in 1893, "Die Responsen des R. Meschullam, Sohn des R. Kalonymus." Müller's chief contribution to the responsa literature is his "Mafteaḥ" to the responsa of the Geonim—a summary of the contents of the various publications comprising the answers of the Geonim to questions submitted to them (Berlin, 1891). One of his latest works was an edition of the "Halakot Pesuḳot." After his death his edition of Saadia's halakic writings appeared as vol. ix of the "Œuvres Complètes de R. Saadia ben Iosef al-Fayyoûmî."

Müller's "Jüdische Hochschulen" (1885) and "Jüdische Moral im Nachtalmudischen Zeitalter" contain some of his sermons.

MUNAH. See ACCENTS IN HEBREW.

MUNAJJA, ABU AL-FARAJ IBN ṢADAKAH (known also as **Ibn al-Sha'ir**): Samaritan writer; lived in the twelfth century, probably at Damascus. His father was a renowned poet (whence the son's name of Ibn al-Sha'ir). Munajja was the author of various commentaries on the Pentateuch, which are cited by many Samaritan writers as standard works. He wrote also a polemical work entitled "Al-Jinth wa-Masa'il al-Khilaf fima bain Millatai al-Yahud wa-bain al-Samirah," in which he attacked both the Karaites and the Rabbinites, especially Saadia Gaon. Of this work, which comprised two or more volumes, only the second part is extant (Berlin MSS., No. 523). It is divided into twenty-three chapters, dealing with various Biblical commandments in the interpretation of which the Samaritans differ from the Rabbinites. "All the interpretations of the Rabbis," says Munajja, "conflict with the Law and tend to the abolition of its prescriptions, while those of our ancestors were in harmony with the Law and aimed at the enforcement of its prescriptions" (p. 72b). Munajja's son **Ṣadaḳah** also became an able writer; he was physician to Sultan Malik al-Ashraf.

J. I. BR.

MÜNDEN: Town in the province of Hanover, Prussia. Its Jews are first mentioned in the sixteenth century. When Duke Heinrich the Younger excluded all Jews from the territory of Brunswick (1557), the Jews of Münden were permitted to remain. During the Thirty Years' war the Jewish population of Münden increased, and in Oct., 1626, the citizens addressed a petition to Tilly, requesting that "the confounded Jews [who had joined his troops] and sutlers should be restrained from selling beverages and other things, since this is solely the right of the citizens." In a petition dated Nov. 28 of the same year the council of Münden complains that the Jews have not yet been expelled from the city, that they take away the sustenance of the citizens, and that a Jew is employed to collect toll on all goods arriving by wagon or by ship. Tilly answered that "the Jews who go to lodge at Münden may be expelled only if they do not subsist on their own purse"; continuing, "we suffer the Jews to remain with our army in order that they may furnish it cheaply with provisions and other necessities." On Aug. 10, 1627, the council of Münden again requested Commissary-General von Lerchenfeld to expel the "very harmful Jews."

The Jews of Münden had to pay the town treasury one thaler for the burial of an adult and 18 groschen for that of a child. On July 17, 1711, the swineherd Jürgen Hammermann reported that the "amtmann" had forbidden him, on pain of punishment, to graze his swine on the Jewish burial-ground, whereupon the magistrate, who considered this interdiction an attack upon the rights of the city, immediately sent a protest to the court. The Jews of Münden were obliged to furnish a silver spoon weighing two ounces, called the "Jews' spoon," as a prize for the best marksman at the "Schützenfest" instituted by Duke Julius in 1588; and this obligation was still in force in the nineteenth century. At the time of the Seven Years' war, when Münden was taken by the French, the magistrate was called upon (1757) either to make an agreement with the Jewish army contractor ("Proviant-Jude") in regard to the establishment of the French hospital in that city, or to pay the sum of 11,000 thaler. The city thereupon made an agreement with the Jew for the payment of 7,266 thaler, 24 Mariengroschen. At that time the Jews together with the other citizens of Münden suffered violence at the hands of the French soldiery. At the time of the Westphalian rule there were living in the canton of Münden eighteen Jewish families which belonged to the syndicate of Cassel. The son of Heinemann of Münden served as a volunteer in the body-guard of King Jerome. The well-known scholar Raphael Fürstenthal lived for a time at Münden as tutor in the family of I. Levi, and Mendel Steinhart, later consistorial councilor, also lived in the city before he went as district rabbi to Hildesheim; his wife, Hendel, was the daughter of Ḥazzan Löb of Münden.

The synagogue of Münden was built in 1834, and was restored after a fire in 1878. Among the teachers who have officiated at Münden may be mentioned S. Mauer, author of "Israelitischer Kinderfreund," "Harfenklänge," etc.; and Th. Wertheim, appointed in 1895 teacher at the Jewish public school. The community, which belongs to the district rabbinate of Hildesheim, numbered 110 souls in 1903.

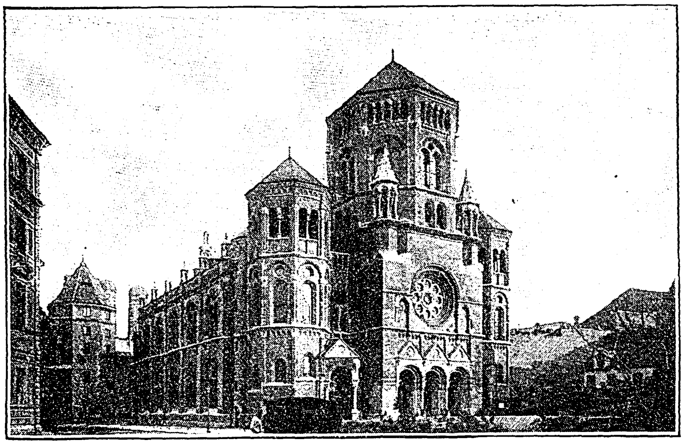
D. A. LEW.

MUNICH: Capital of Bavaria, Germany. It has (1904) a total population of 499,959, including 8,739 Jews. When Jews first went there is not known, but since by 1158 Duke Henry the Lion had made it an important commercial center, the presence there of Jewish merchants in the twelfth century may safely be assumed. The first authentic reference to a Jew of Munich is dated 1229, when Abraham de Munichen acted as a witness to the sale of a house in Ratisbon. According to other documents, Ludwig I. (1174–1231) permitted the Jews to build a synagogue (1210) and acquire a cemetery (1225). The Jews' street soon developed into a ghetto, beyond which the Jews were not permitted to live until 1440; the ghetto contained, besides the synagogue, a communal house, a ritual bath, a slaughter-house, and a hospital. By the second half of the thirteenth century the community had increased to

200. If the documents are authentic, the Jews of Munich loaned money to Duke Otto I. (1120–83) to build Landshuth, and received in return special privileges, which were confirmed by Ludwig I., who in 1230 granted them the right to elect the so-called "Jews' judge."

Blood Accusation.

The accusation of ritual murder caused suffering to the Jews of Munich as to their coreligionists elsewhere. The persecution of 1248 was not very serious, but they suffered more in 1285, when, being charged with the purchase and murder of a Christian child, they were attacked by a mob (Oct. 12). The Jews fled to the synagogue, which was set on fire, and 180 perished in the flames. The names of 68 of these martyrs were inscribed in the death-list of the Memor-Book of Nuremberg, written in 1296. An investigation ordered by King Rudolph revealed the innocence of the accused; the prisoners were released by royal command, and their accusers were punished. Ludwig the Strict (1228–94) permitted the Jews, who gradually returned to Munich, to rebuild the synagogue in 1287; but their social and legal status did not improve, and on July 21, 1315, on the ground that their influence was detrimental to the welfare of the Christians, the next Ludwig materially restricted their privileges, which had been modeled on those of the community of Augsburg, a community that occupied a favored position in the Middle Ages. After Feb. 3, 1342, an additional tax of a golden penny (see Opferpfennig) was imposed upon them, while additional restrictions were contained in the new municipal law of 1347 regulating Jewish affairs.



Synagogue at Munich.
(From a photograph.)

In the Fourteenth Century.

New calamities threatening the Jews in 1345 were averted by Emperor Ludwig. As he had protected the Jews in other places, so now he assisted them at Munich, where he suppressed a riot. At the time of the Black Death (1348–49) the community of Munich ceased for a while to exist as such, but those who had escaped the general slaughter soon formed a new one; this increased in numbers when Duke Stephen promised (Feb. 26, 1363) to leave the Jews of Upper Bavaria in undisturbed possession of their rights and privileges. Other princes also appeared favorable to the Jews. Thus Duke Frederick of Bavaria (Jan. 24, 1375) granted the Jews of Munich and of other places in Upper Bavaria the privilege of paying no higher toll than the Christians. In the last quarter of the fourteenth century the community was relatively small. A letter of the communal directors dated 1381 and addressed to the congregation of Strasburg states that the community had intended to build a new synagogue and a "hekdesh" (poorhouse and hospital), but had been prevented by the flight of a member with a large part of its funds. "Master Jacob the Jew" was physician to Duke Stephen III., who assumed the government of Upper Bavaria on March 24, 1376. When the debts owing to the Jews were annulled or reduced under the emperors Wenzel, Rupert, and Sigismund, the Jews of Munich lost a considerable part of their fortune. In 1413 they were again persecuted, on the charge of desecrating the host. The number of victims on this occasion is not known, but it is authentically stated that the people were so wrought up against the Jews that they were not easily pacified. Although the populace made it difficult for the Jews to remain at Munich, Dukes Ernst and Wilhelm treated them humanely and justly, assigning them on March 29, 1416, at an annual rental of four Hungarian gulden, a plot of ground for a cemetery, and granting them "all rights and privileges enjoyed by the Jews elsewhere in Germany." This favor does not seem to have increased their prosperity or restored their former influence, however, for when Duke Albert III. taxed his Jews in 1432 in order to repair the damages sustained in the Hussite war, he was disappointed by the meager returns, amounting to only 200 gulden.

Expelled in 1442.

Yet the clergy continued to excite the populace against them, thus leading (1442) Duke Albert to expel the Jews from Munich and from forty other places in Upper Bavaria. The property of the Jews was then seized by the duke, and their synagogue, which stood on the ground now covered by the south wing of the Munich police court, was presented to his physician Johann Hartlieb, who changed it to the Marienkirche.

Most of the Jews expelled from Upper Bavaria were received by Duke Henry in Lower Bavaria, who hoped to get golden eggs from these "chickens." These hopes were not fulfilled, and his successor, Ludwig IX., expelled the Jews (Oct. 5, 1450). Henceforth they were not permitted to trade in the country, or even to enter it. A century later, on Dec. 23, 1551, another decree of expulsion was issued. The law of 1553 classes them among the "dangerous, frivolous, and suspicious persons" who must be prevented from dwelling in the country or carrying on trade and industry in it. Jews obliged to pass through Bavaria had to procure a passport, for which they paid toll and convoy-money and the humiliating Leibzoll. An imperial privilege granted to the duke in 1566 declared contracts between Jews and Bavarian subjects void, thereby putting an end to all trade relations with the Christians. On March 12, 1715, the elector Max Emanuel ordered the deportation of the few Jews who, in spite of oppression and restriction, still remained in the country. In 1733 all current passports were recalled, and a new "Leibzoll" and convoy-tax introduced. These conditions continued under the elector Maximilian III. (1745-77), although the contracts made with Jews in foreign countries were declared to be valid in Bavaria. The Jews were furthermore excluded from all trades, military service, and merchant gilds, were denied entrance to the public baths, and were still forbidden to settle in Bavaria.

In the Eighteenth Century.

A change for the better, due, perhaps, to Austrian influence, came in the last quarter of the eighteenth century, during the period of intellectual progress. On the introduction of new rules of exchange in 1785, made necessary by unfavorable financial conditions, the ministry at Munich took into consideration the status of the Bavarian Jews, and the bills drafted by the provisional government and the chief judge of Munich between 1785 and 1791 produced a considerable improvement in their position. The financial difficulties of the government rendered it necessary to be more lenient toward them. Those who possessed sufficient property to engage in industry were permitted to settle; the "Leibzoll" was repealed; and only a tax on patents of commerce was imposed. After Montgelas, the liberal president of the ministry, had succeeded in obtaining for them monopolies in certain commodities, and after some Jews had been ennobled while others received official recognition from the state, the community of Munich increased more rapidly, although in 1800 it numbered only thirty-one families, and had neither synagogue nor cemetery of its own. Its growth received a further impulse from the promises of civic liberty in 1813. The government permitted it to acquire a cemetery in 1818, and to build a synagogue in 1824. This synagogue was dedicated on April 11, 1827, and was replaced sixty years later by another and a finer edifice.

The following rabbis have officiated since the community was reorganized: Ezekiel Hessel (1805-1824); Hirsch Aub (1825-71; d. June 2, 1875); Dr. Joseph Perles (1871-94); Dr. Cosmann Werner (since 1895); Dr. I. Finkelscherer (associate rabbi and teacher of religion).

The ultra-Orthodox members of the community, who, because the principal synagogue contains an organ, do not attend it, formed the Congregation Ohel Jacob and built a separate synagogue, which was dedicated in 1892. As Bavarian law does not permit a secession from the official community, however, this newly established congregation, which numbered eighty members in 1904, still belongs to the older body. By a tacit agreement of the two parties three or four of the eighteen members of the board of directors of the community are taken from the Orthodox party and constitute the committee on ritual. The rabbi of the new congregation, Dr. Heinrich Ehrentreu (1904), is an official of the older congregation and acts as chief rabbi at certain ritual functions. The Congregation Ohel Jacob, which bears the official title of "Verein zur Förderung der Jüdischen Wissenschaft," supports a bet ha-midrash in addition to its synagogue, and receives from the community an annual subvention of 2,000 marks.

Institutions.

Besides some fifty foundations for the benefit of orphans, the poor, lying-in patients, artisans, students, scholars, etc., there are the following philanthropic societies: a society for the prevention of mendicancy; a loan-society; a society for the promotion of learning and labor; a ladies' club; a society for dowries; a fresh-air society; a ḥebra ḳaddisha; a union of Jewish benevolent societies; an intelligence bureau; branches of the Alliance Israélite Universelle, of the Esra society for the aid of German Jews, and a Jewish ladies' home; an orphan asylum; a poor-fund, managed by the community; a society for Jewish history and literature; and the Munich lodge of the I. O. B. B.

The following Jews of Munich have distinguished themselves in public life or in the fields of science and art: the banker Joseph von Hirsch, and his son Baron Maurice de Hirsch; Raphael Nathan Rabbinovicz (author of the "Diḳduḳe Soferim"; d. 1888); Dr. Eugen Merzbacher (numismatist; d. 1903); Max Grünbaum (Orientalist); Leo Graetz (physicist); Heinrich Harburger and Theodor Loewenfeld (professors of law); Richard Willstädter (professor of chemistry); Hermann Levi (musical conductor; the foremost interpreter of Wagner); Hugo Reichenberger ("Hofkapellmeister"); Solomon Hirschfelder, Toby E. Rosenthal, Prof. Benno Becker, Hans Borchart, and Friedrich Wahle (painters); Hugo Kaufmann (sculptor). Besides some Jews who were prominent members of the municipal government, Dr. Sigmund von Henle, and Karl Maison (d. 1896), delegate to the Landtag, may be mentioned. The German poet Michael Beer lived and died (1833) at Munich; Max Lilienthal was born there (d. 1882, at Cincinnati, Ohio); and the historian H. Graetz died (1891) there.

D. S. Sa.

MUNIUS, MOSES: French rabbi; said to be a descendant of Löwe ben Bezaleel; born 1760 at Mutzig; died May, 1842, at Rixheim. On finishing his studies at the famous yeshibah of Prague he was appointed principal of a Talmudic school at Strasburg, where he remained for twenty years. He lived for some time subsequently at Mutzig, filling the office of syndic. When the rabbi of that community, the pious Simon Cohen, later chief rabbi of Colmar, was arrested by order of Schneider, the notorious indicter of the Revolutionary tribunal of Strasburg, Munius is said to have appealed to the latter in behalf of the rabbi, regardless of the danger he was thereby incurring. Schneider promised to release Cohen, but could not carry out his promise, as he himself was arrested and taken to Paris (1794), where he was condemned to death. Munius soon after accepted the rabbinate of Rixheim, where he died. Some works in manuscript left by him evidence his great Talmudic scholarship The grandson of Munius has become secretary of the consistory of Colmar.

S. I. Lev.

MUNK, EDUARD: German philologist; born Jan. 14, 1803, at Gross Glogau; died there May 3, 1871; cousin of Salomon Munk. He studied from 1822 to 1825 at Breslau and Berlin, and was a favorite disciple of August Böckh. Munk was active as teacher, officiating from 1827 to 1848 at the Royal Wilhelmsschule at Breslau, and from 1850 to 1857 intermittently at the gymnasium of Glogau, and afterward as a private tutor. In 1862 he received the title of professor.

Munk was a profound student of classical literature. Though, without any prospects of a university professorship, on account of his religion he nevertheless devoted all his life exclusively to study, the result of which he gave to the world in numerous works. The best-known of these are: "Die Metrik der Griechen und Römer" (Glogau, 1834); "De Fabulis Atellanis" (Leipsic, 1840); "Gesch. der Griechischen Literatur" (Berlin, 1849–50; 3d ed. by Volkmann, 1879–80); "Die Natürliche Ordnung der Platonischen Schriften" (Berlin, 1857); and "Gesch. der Römischen Literatur" (*ib.* 1858–61; 2d ed. by Seyffert, 2 vols., 1875–77). Some of Munk's works have been translated into English, Spanish, and Russian. Munk was an earnest student of Judaism and a faithful Jew.

S. I. War.

MUNK, HERMANN: German physiologist; born at Posen Feb. 3, 1839; brother of Immanuel Munk; educated at the universities of Berlin and Göttingen (M.D. 1859). In 1860 he settled as a physician in Berlin, and he was admitted to the medical faculty of the university two years later, becoming assistant professor in 1869. In 1876 he was appointed professor of physiology at the veterinary college. In 1880 he was elected member of the Prussian Academy of Science, and in 1897 honorary professor at the university.

Munk is well known for his researches on the functions of the gray matter of the cerebral cortex. Among his many essays in the medical journals may be mentioned: "Ueber Ei- und Samenbildung und Befruchtung bei den Nematoden," in "Zeitschrift für Wissenschaftliche Zoologie," ix. 1859; "Abhandlungen zur Allgemeinen Nervenphysiologie," in Du Bois' "Archiv," 1860 *et seq.*; "Ueber Kataphorie und Galvanische Einführung in den Organismus," *ib.* 1873; "Ueber Herz- und Kehlkopfnerven," *ib.* 1878–94; "Ueber Bewegung und Milchsecretion," *ib.* 1883; "Ueber die Schilddrüse," in "Sitzungsberichte der Berliner Akademie der Wissenschaften," 1887–88, and in Virchow's "Archiv," 1897 *et seq.*; "Weitere Abhandlungen zur Physiologie der Grosshirnrinde," in "Festschrift für Virchow," 1891, in "Sitzungsberichte der Berliner Akademie der Wissenschaften," 1892 *et seq.*, and in Virchow's "Archiv," 1894–95.

Of his works may be mentioned: "Untersuchungen über das Wesen der Nervenerregung," Leipsic, 1868; "Die Elektrischen und Bewegungserscheinungen am Blatte der Dionæa Muscipula," *ib.* 1876; "Ueber die Functionen der Grosshirnrinde. Gesammelte Mitteilungen aus den Jahren 1877–80," Berlin, 1881; "Ueber die Functionen der Grosshirnrinde. Gesammelte Mitteilungen aus den Jahren 1877–89," *ib.* 1890.

S. F. T. H.

MUNK, IMMANUEL: German physiologist; born at Posen May 20, 1852; died in Berlin Aug. 1, 1900; brother of Hermann Munk. He studied medicine at the universities of Berlin, Breslau, and Strasburg, receiving his diploma in 1873. Establishing himself as a physician in Berlin, he became privat-docent in physiology at the university of that city in 1883, received the title of professor in 1895, in which year he was also appointed department chief in the physiological laboratory, and was elected assistant professor in 1899.

Munk wrote many essays for the medical journals, especially on nutrition, assimilation, resorption, and urinal secretion. From 1897 he was editor of the "Zentralblatt für Physiologie."

Among his works may be mentioned: "Physiologie des Menschen und der Säugethiere," Berlin, 1882 (5th ed. 1899); together with Uffelmann, "Die Ernährung des Gesunden und Kranken Menschen," Vienna and Leipsic, 1887 (3d ed. conjointly with C. A. Ewald, 1895); "Einzelernährung und Massenernährung," in Weyl's "Handbuch der Hygiene," Jena, 1893.

Bibliography: Pagel, *Biog. Lex.*

S. F. T. H.

MUNK, SALOMON: French Orientalist; born at Gross Glogau May 14, 1803; died in Paris Feb. 5, 1867. He received his first instruction in Hebrew from his father, an official of the Jewish community; and on the latter's death he joined the Talmud class of R. Jacob Joseph Oettinger. At the age of fourteen he was able to officiate as "ba'al ḳore" (reader of the Torah) in the synagogue of the Malbish 'Arummim society at Gross Glogau. In 1820 he went to Berlin, where he came into friendly relations with Leopold Zunz and with the philologist E. W. Zumpt, studying Latin and Greek with E.

Gans. Two years later he entered the Joachimsthaler Gymnasium, supporting himself at the same time by tutoring. In 1824 he entered the University of Berlin, attending the lectures of Böckh, Hegel, and especially of Bopp. As no Jews were at that time eligible for government positions in Prussia, Munk left the university without taking a degree, deciding to go to France. However, he first spent one term at the University of Bonn, studying Arabic with Freytag and Sanskrit with Lassen. On passing through Weimar he visited Goethe, who notes that fact in his journal. In 1828 he went to Paris with the assistance of the young poet Michael Beer, the brother of Meyerbeer. Here also, as in Berlin, he at first supported himself by tutoring, among his pupils being Alphonse and Gustave de Rothschild. In 1838 he was appointed cataloguer of Hebrew, Chaldaic, Syriac, and Arabic manuscripts in the Bibliothèque Nationale de Paris.

At Paris.

Munk now devoted himself to the study of the Judæo-Arabic literature of the Middle Ages and to the works of Maimonides, more especially the latter's "Moreh Nebukim." He went direct to the Arabic original, supplementing the texts he found at the Bibliothèque from texts he had copied at Oxford. At the same time he made a thorough study of Aristotle, who is constantly quoted by Maimonides. In this way he gathered the necessary material for his edition of the Arabic text of the "Moreh," with translation and annotations, which he published in three large volumes, long after he had become blind (1856, 1861, 1866). He had lost his eyesight in 1850 while in the course of cataloguing the Sanskrit and Hebrew manuscripts in the possession of the library.

Journey to Egypt.

Munk accompanied Montefiore and Crémieux to Egypt in connection with the Damascus Affair; and it was due to his knowledge of Arabic (although some claim that the credit is due L. Loewe) that the word "justice" was substituted for "mercy" in the firman of Mohammed Ali which exculpated the accused from the charge of ritual murder. It was also largely due to his efforts that schools modeled on European methods of instruction were established by the Egyptian Jews. At Cairo he purchased a considerable number of Arabic and Hebrew manuscripts on behalf of the Bibliothèque Nationale. On his return Munk was elected secretary of the Consistoire Central des Israélites de France; on Dec. 3, 1858, he was elected a member of the Académie des Inscriptions et Belles-Lettres; and a few years later he was appointed professor of Hebrew at the Collège de France, in succession to Renan.

His Works.

Munk's works, apart from his edition of the "Moreh," include the following: "Reflexions sur le Culte des Anciens Hébreux," in vol. iv. of the Bible of S. Cahen; "Notice sur R. Saadia Gaon et sur une Version Persane d'Isaie" (*ib.* vol. ix.); "Palestine, Description Géographique, Historique et Archéologique," in "L'Univers Pittoresque," 1845 (translated into German by M. A. Levy, 1871–72); "Mélanges de Philosophie Arabe et Juive," 1859; "Notice sur Abul Walid Merwan ibn Djanah et d'Autres Grammairiens Hébreux du X. et du XI. Siècle," 1850–51 (crowned by the Institut with the "Prix Volney"); "Rapport sur les Progrès des Etudes Sémitiques en France de 1840–1866," in the "Recueil de Rapports" of the Exposition of 1867. Between 1834 and 1838 he contributed to the "Temps" articles on Biblical, Hebrew, and Sanskrit literature. Mention must also be made of his interpretations of Phenician inscriptions at Marseilles and on the sarcophagus of Eshmun'azar, King of Sidon, which he deciphered after losing his sight; of his discovery of the Arabic manuscript of Al-Biruni's description of India, written in the first part of the eleventh century; and of his letter to F. Arago, of the Academy of Sciences, relating to a question on the history of astronomy, which gave rise to a controversy between Biot and Sédillot.

Bibliography: Manuscripts of 200 of Munk's German letters, deposited in the Seminary of Breslau, 44 of which have been published by M. Brann in *Jahrbuch für Jüdische Geschichte und Literatur*, 1899, ii. 148–203 (with biographical notice); M. Schwab, *Salomon Munk*, Paris, 1900.

s. M. S.

MUNKÁCSY, BERNHARD: Hungarian philologist and ethnologist; born at Nagy-Varad (Grosswardein) March 12, 1860; educated in his native city and at Budapest. He is a descendant of a famous rabbinical family, among his ancestors having been R. Joseph Stathagen, R. Joseph Lasch Lerner, Gabriel Banth, and Ezekiel Banth. Munkácsy's university studies were devoted to a scientific investigation of the Hungarian language under the guidance of Budenz, Vámbéry, and Simonyi. In 1880 he and Ignatz Kunos, despite many hardships, visited the Moldavo-Csángó colonies of Magyars on the Szereth.

Linguistic Studies.

This trip laid the foundation of Munkácsy's linguistic studies and proved to be the first of a series of travels. He made a modest beginning of his philological work in 1879 in the "Magyar Nyelvőr" (Hungarian Speech-Warden) and the "Nyelvtudományi Közlemények" (Linguistic Contributions). Two years later the Hungarian Academy of Sciences awarded the prize to his "A Moldvai-Csángók Nyelvjárása" (Moldavo-Csángó Language), conferring a like distinction on his "Török Kölcsönszók" (Turkish Loan-Words) in 1882, and on his "Votyák Tanulmányok" (Votyak Studies) in 1884. In the latter year he received the degree of Ph.D., and in 1885 entered upon his important travels in the regions of the Kama and Volga to investigate the languages of the Votyaks and Tchuvashs. The results of these trips were embodied in his "Votják Népköltészeti Hagyományok" (Popular Poetry of the Votyaks) in 1887, and in his "Lexicon Linguæ Votjacorum" (1888–96), which received a prize from the Academy. Even before the publication of the latter work he traveled, with a subvention from the Academy and the Russian government, through the northern regions of the Ural, visiting Ob, Lozva, Szoszva, Konda, Gelym, and Tavda, with special reference to ethnography. Five volumes, devoted to the language and popular poetry of the Voguls, have already appeared as the results of this journey.

30

In recognition of his services to science, Munkácsy was elected a corresponding member of the Hungarian Academy of Sciences in 1890; and in the same year the Jewish community of Budapest chose him as inspector of religious instruction in all the schools of the capital. In this position he contributed greatly to the improvement of the instruction in religion by outlining a systematic course of study and by founding specifically Jewish schools. Since 1892 Munkácsy has been vice-president of the Hungarian Ethnographical Society, having become a member of the Société Ougrienne at Helsingfors in the previous year. He has been the editor of "Ethnographia" since 1893, and in 1900 he and Ignatz Kunos founded the "Keleti Szemle," in which his "Kaukasische Einflüsse in den Finnisch-Magyarischen Sprachen," "Aeltere Berichte über das Heidenthum der Vogulen und Ostjaken," and "Verschiedenheit in den Arischen Lehnwörtern der Finnisch-Magyarischen Sprachen" have appeared.

S. L. V.

MÜNSTER, SEBASTIAN: German Hebraist and cosmographer; born 1489 at Ingelheim; died at Basel May 23, 1552. He was educated at Heidelberg and Tübingen, and became a Protestant and teacher of Hebrew at the University of Basel in 1529. Münster studied under Elijah Levita, whose grammatical works he edited and translated (1525 *et seq.*). He also reedited Reuchlin's "Rudimenta Hebraica." After publishing several sections, he issued a complete Hebrew Bible in 1536, with German translation. This was the first complete edition of the Hebrew text by a Christian. He published also a Chaldaic (1527) and a rabbinical (1542) grammar—the materials for the former derived from the "'Aruk," the latter of elementary character; a Jewish calendar (1527); an edition and translation of "Yosippon" (1529-41); and a list of the 613 commandments from the "SeMaG" (1533). He was the first to translate any part of the New Testament into Hebrew, publishing the Gospel of St. Matthew in that language in 1537. All of these works were printed at Basel in a very clear type.

T. J.

MÜNSTERBURG, HUGO: American psychologist; born at Danzig, Prussia, June 1, 1863. After being trained at the gymnasium of his native city he studied philosophy at Leipsic (Ph.D. 1885) and medicine at Heidelberg (M.D. 1887). Devoting himself to psychological studies, he became assistant professor in psychology at the University of Freiburg in 1891, and the next year was elected professor of psychology at Harvard University, Cambridge, Mass. In 1898 he was president of the Psychological Association of America, and in 1902 was selected to accompany Prince Henry of Prussia over much of his tour in the United States. Münsterburg has contributed many papers on psychological subjects to specialist journals, and has published: "Psychology and Life" (Boston, 1899); "Grundzüge der Psychologie" (vol. i., Leipsic, 1900); "American Traits" (Boston, 1902); "Die Amerikaner" (2 vols., Berlin, 1904; translated into English, New York, 1904).

A. J.

MÜNZ, BERNHARD: Austrian writer; born Feb. 1, 1856, at Leipnik, Moravia; educated at the University of Vienna (Ph.D. 1877). After leaving that university he continued his philosophical studies at Munich. In 1889 he became amanuensis in the library of the Jewish community of Vienna, of which he has been director since 1900. He has published the following: "Die Keime der Erkenntnisstheorie in der Vorsophistischen Periode der Griechischen Philosophie" (Vienna, 1880); "Die Erkenntniss- und Sensationstheorie des Protagoras" (*ib.* 1881); "Die Vorsokratische Ethik" (Halle, 1882); "Protagoras und Kein Ende" (*ib.* 1883); "Lebens- und Weltfragen" (Vienna, 1886); "Jacob Frohschammer, der Philosoph der Weltphantasie" (Breslau, 1894); "Briefe von und über Frohschammer" (Leipsic, 1897); "P. Simon Rettenbacher" (Vienna, 1898); "Adolph Pichler" (Leipsic, 1899); "Moriz Lazarus" (Berlin, 1900); "Hieronymus Lorm" (Vienna, 1901); "M. E. delle Grazie als Dichterin und Denkerin" (*ib.* 1902); "Goethe als Erzieher" (*ib.* 1904). S.

MÜNZ (MINZ), MOSES: Hungarian rabbi; born about 1750 in Podolia; died 1831 at Alt-Ofen. For several years he lived at Brody, Galicia, where he acquired a great reputation as a Talmudical scholar. Highly recommended by Ezekiel Landau, he was called in 1790 to the chief rabbinate of Alt-Ofen, which had been vacant since the death of Nathan Günsburger in 1781. He held this post until his death.

Münz's learning spread "the reputation of the congregation far beyond the confines of Hungary. Numerous religious questions were submitted to him from all parts of the Austrian monarchy" (see Jew. Encyc. i. 472, *s.v.* Alt-Ofen). He was a brother-in-law of Moses Joshua Heschel, author of "Yam ha-Talmud," and was related by marriage to Moses Sofer, who mentions him in his responsa on Eben ha-'Ezer (No. 122). Ezekiel Landau also refers to him in "Noda' bi-Yehudah." When in 1794 Mordecai Benet warned against the use of phylacteries covered with double leathern straps, Münz charged Benet with ignorance, and proved that the use of such phylacteries was legal. He was supported in this contention by Phinehas Hurwitz of Frankfort-on-the-Main, Hirsch Levin of Berlin, and Meshullam Tysmienitz of Presburg; later it became known that Elijah Wilna had expressed the same opinion. Münz induced Aaron Choṛin to write to Benet in defense of this view, but Chorin received no answer.

When Chorin, in 1803, published his "'Emeḳ ha-Shaweh" with a cordial approbation by Moses Münz, Benet denounced it as heretical. Two years later the Arad congregation, after Benet's accusation, asked Münz's opinion upon the book; he declared (Aug. 8, 1805) that the author was to blame for certain statements in the first part, entitled "Rosh Amanah," which were apt to mislead the public, and which centuries ago had aroused serious disputes. He, however, reaffirmed that the book contained no heresies, and showed a draft of this declaration to Chorin. Later on, urged by the Orthodox

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

party, Münz summoned Chorin before a rabbinical tribunal at Alt-Ofen; but on the second day of its session (Sept. 1, 1805) the former failed to appear, and he did not join in the sentence of condemnation of the book pronounced by his two colleagues (see Jew. Encyc. iv. 43, *s.v.* Chorin).

As Münz had in 1811 allowed the Jewish soldiers to eat pulse on Pesaḥ, Eliezer Liebermann, author of "Or Nogah," considered him a liberal, and applied to him for an indorsement of the Reform temple at Hamburg. Münz did not reply; but he wrote to Chorin an anonymous letter in which he decidedly condemned Reform. Nevertheless Chorin, in his "Ḳin'at ha-Emet" (April 7, 1818), expressed his hearty approval of the movement; but, intimidated by a letter from Münz, who threatened him with deposition, he recanted (Feb. 19, 1819).

Münz wrote: "Derashah" (with German transl. by Mordecai Rechnitz, Alt-Ofen, 1814), delivered on the day of the peace proclamation of Francis I.; responsa (with additions by his son Joseph Isaac, Prague, 1827); annotations to "Peri Ya'aḳob" (Alt-Ofen, 1830), halakic novellæ written by Jacob ben Moses.

MÜNZENBERG. See Hanau.

MURÁNYI, ARMIN: Hungarian lawyer and journalist; born at Asszonyfa (County Raab), May 8, 1841; died at Budapest April 30, 1902. After studying medicine for three years at Vienna, he took up law, and received his degree at Budapest in 1866. As Jews were not allowed to practise law in Hungary at that time, Murányi was obliged to obtain special permission from the king to open (in 1867) a law-office at Györ (Raab). He soon became the most popular lawyer in Trans-Danubia. In 1880 he went to Budapest, where he devoted himself to the pursuit of literature.

Murányi was the founder and, under the pen-name of "Andrea," the editor of the weekly "Magyar Háziasszony" (= "The Hungarian Housewife"). He founded also the daily "Nemzeti Ujság" (= "National Journal"), and edited the "Képes Családi Lap" (= "Illustrated Family Paper") from 1887 to 1899. As a member of the committee of the Ḥebra Ḳaddisha and of the municipal school commission of Budapest Murányi rendered great services to philanthropy and education. His name is also connected with the development of Bártfa (Bartfeld), the health resort.

S. L. V.

MURCIA: Capital of the former kingdom of Murcia, where Jews were living as early as the period of Moorish rule. When King James of Aragon was besieging the city, he negotiated with its inhabitants through an embassy which included the Jew Astruc, the king's secretary and interpreter. Don Alfonso the Wise granted the Jews of Murcia the same privileges as were enjoyed by their coreligionists at Toledo and Seville. Their cases were brought, like those of the Christians, before the municipal courts, excepting cases between Jews, which were decided by their own judges. The Jews of Murcia were engaged in commerce and industry, and addressed to Solomon ibn Adret of Barcelona the question whether it was permissible, from a religious point of view, to deal in the skins of rabbits, hares, and bears (Responsa, No. 489).

In spite of the persecution of 1391, which claimed its victims at Murcia as in other places, the community was still a large one in 1474, and paid considerable taxes. Jews were not permitted to live in the city itself, but had their ghetto by the gate De Orihuela, where they remained until the general expulsion in 1492.

S. M. K.

MURDER. See Homicide.

MURVIEDRO: City in the old kingdom of Valencia. Its Jewish community had special privileges, and a plot of ground was assigned to it in 1327 for a cemetery. During the rebellion of the Unionists in 1348, the Jews of Murviedro were plundered and many of the defenseless ones killed; but during the general slaughter of 1391 Murviedro was the only place in the kingdom where the Jews were spared. The community, however, had been so reduced that in 1431 it could pay a tax of only 100 sueldos. Yusuf ibn Shaprut was a very prominent person at Murviedro in the last third of the thirteenth century. In 1271 he was exempted from all taxes; two years later he rented the baths of the city, and was presented with real estate by the king; and in 1277 he was appointed bayle.

S. M. K.

MUSA, ḤAYYIM IBN: Spanish controversialist, physician, and Biblical commentator; born at Bejar, not far from Salamanca, about 1390; died in 1460. According to Abraham Zacuto ("Yuḥasin," ed. Filipowski, p. 229), Ibn Musa was also a payṭan, but nothing is known of any liturgical production of his. Owing to his medical skill he had access to the princely courts of Spain, where he frequently disputed concerning religious matters both with ecclesiastics and with lay scholars. In his time, before the establishment of the Inquisition, disputations were held with greater ease, each disputant having more freedom to express his ideas, a fact frequently shown by the episodes related in his work.

Ibn Musa was the author of "Magen wa-Romaḥ," published by David Kaufmann in "Bet Talmud," ii. 117–125 (see below). He also translated from Arabic into Hebrew one of Al-Jazzar's medical works (Parma De Rossi MS. No. 339) and wrote a commentary on the Book of Isaiah; it is stated that he commentated other Biblical books also.

The "Magen wa-Romaḥ," written in 1456, is a pamphlet in the form of a letter addressed to his son Judah when the author was sick and purporting to refute those who, basing their opinion on those of Hillel (Sanh. 99a), deny the arrival of the Messiah. He complains of those who base their premises on the philosophers, by doing which they give a false interpretation to Biblical passages and to the sayings of the Rabbis. This work is an apology for Judaism against the attacks of Christians. Knowing that those who attacked Judaism drew the material for their arguments from Nicolaus de Lyra, it is the latter whom Ibn Musa vigorously refutes. Besides, seeing that scanty results have hitherto been obtained from disputations, each party considering itself to be right, Ibn Musa establishes rules for Jewish disputants, which, if observed, will certainly lead them to a successful issue. The number of these rules is twelve, of which the first three may be mentioned here: (1) The Jewish disputant must strictly observe the literal interpretation of the Biblical passages, and must not be drawn into allegorical interpretation, which is particularly the subject of speculation by Christian disputants. (2) The Jewish disputant must declare beforehand that neither the Targum nor the Septuagint is to be considered as an authority; they are regarded as sources by Christians only. (3) Haggadic interpretation must be openly declared to be of no importance for the establishment of religious doctrine.

J. M. SEL.

MUSA OF TIFLIS or **AL-TIFLISI** (called also **Abu 'Imran Meshwi al-Za'farani**): Karaite founder of a new sect in the beginning of the ninth century; a native of Za'faran, a town of Persia; hence his name "Al-Za'farani." He later removed to Tiflis, after which city he was also called.

Musa's sect is variously known as the **Abu 'Imranites** (Hadassi, "Eshkol ha-Kofer," alphabet 98), the **Meshwites** (Japheth b. 'Ali, in his commentary on the Twelve Minor Prophets), and the **Tiflisites** (*idem*, Commentary on Ex. xii. 2; Joseph Bagi, in "Iggeret Ḳiryah Ne'emanah"). While adopting several Karaite doctrines—such as the prohibitions against marrying a niece, against eating the flesh of a pregnant beast and its embryo, as also the beginning on Sunday to count the fifty days between Passover and Pentecost (thus fixing the incidence of the latter festival on Sunday)—Musa deviated in many important points from the teachings of that sect; so that he is considered by them as an apostate, and his religion as a heresy against which they invoke the divine punishment. The chief tenets of his new religion are (1) that God, after creating the world, departed, leaving it to be directed by itself, and (2), in common with the 'Ibadites and Mujabbarites, disbelief in the resurrection of the dead (Japheth b. 'Ali, in Dukes, "Mittheilungen," p. 30). He deviated from the Karaites in certain points concerning ritual law also; for instance, he reckoned the first day of the month not from the appearance of the new moon, but from the disappearance of the old one; and he regarded the prohibition against eating fat as applying to the fat of sacrifices only and as not being effective in captivity (Hadassi, *l.c.*).

Pinsker and Grätz identify Musa al-Tiflisi with the Biblical commentator Moses ben Amram ha-Parsi quoted by Abraham ibn Ezra in his commentary on Ex. xii. 5 and on Amos vii. 2. The former reference relates to Moses ben Amram's opinion that only the first Passover sacrifice in Egypt had to be a lamb, and that after the Exodus the sacrifice might be made with a calf instead, an interpretation refuted by Ibn Ezra. Grätz even thinks that "Ben Amram" should be corrected to "Abu Amram"; but Fürst with more reason is of opinion that the Moses ha-Parsi of Ibn Ezra was a different person from Musa al-Tiflisi, who was not thought worthy to be quoted (comp. Hadassi, *l.c.*). According to Geiger, the Abu 'Imran al-Za'farani who is mentioned by Japheth b. 'Ali is identical with the Judah ha-Parsi cited by Abraham ibn Ezra (Commentary on Ex. xii. 2; Lev. xxv. 19; Num. iii. 29); but Pinsker and Grätz conclude that Judah ha-Parsi is identical with Judah of Hamadan or Yudghan. Steinschneider ("Jewish Literature," p. 118), confusing three persons, thinks that Moses ben Amram ha-Parsi, Judah ha-Parsi, and Musa, the subject of this article, were one and the same man (comp. S. Munk in Jost's "Annalen," 1841, p. 77).

S. M. SEL.

MUSA IBN ṬUBI (ABU 'IMRAN MUSA IBN ṬUBI AL-ISHBILI), or **MOSES BEN TOBIAH**: Spanish-Arabic poet; flourished in Seville in the first half of the fourteenth century. He was the author of an Arabic poem of didactic character, entitled "Al-Sab'aniyyah" (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2095, 4). This poem was later translated into Hebrew, under the title "Batte ha-Nefesh," by Solomon da Piera; and both the original and the translation were published by Hirschfeld in the "Annual Report of the Montefiore College," 1893–94.

MUSAF: Additional offering or prayer. Besides the regular morning and afternoon sacrifices offered in the Temple, the Law provided for additional offerings to be brought on Sabbaths, New Moons, the three festivals, New-Year, and the Day of Atonement (Num. xxviii.-xxix.; see SACRIFICES). These were called "the additional sacrifices," and were brought after the regular morning offering (Yoma 33a). The Musaf or additional prayer was introduced to take the place of these sacrifices (Ber. 26b; see PRAYER).

The earlier tannaim, regarding the Musaf service as an integral part of the communal prayers, were of the opinion that it should be read only when one worships with the community (or with the representatives of the community, "be-ḥeber 'ir") (Ber. 30a; Yer. Ber. iv. 6). The later rabbis, however, made the Musaf service obligatory upon every individual, and attached to it the same importance as to the regular morning service (Ber. 30b; Shulḥan 'Aruk, Oraḥ Ḥayyim, 286, 2).

It is customary to read the Musaf prayer soon after the reading of the lesson from the Torah for the day, which follows the morning prayer; but it may also be read at any time during the day, although he who out of negligence postpones it to later than the seventh hour of the day is regarded as a sinner ("poshea'"; Ber. 26a, 28a; Meg. 20b; Maimonides, "Yad," Tefillah, iii. 5; Oraḥ Ḥayyim, 286, 1). While it is not permitted to eat a full meal before Musaf, one may taste some fruit or bread after reciting the Ḳiddush (Ber. 28b; "Yad," *l.c.* vi. 4; comp. "Kesef Mishneh" *ad loc.*; Oraḥ Ḥayyim, 286, 3).

The Ritual.

As in all other cases, in the tefillah for Musaf the first three and the last three benedictions are constant. Between these is inserted another benediction in which the selection from Numbers setting forth the additional sacrifice for the day is included (in the Sephardic ritual this is included only in the Musaf prayers for Sabbath and New Moon; comp. R. H. 35a). In the Musaf for the New-Year three series of benedictions are added, which are known by special names, "Malkiyot," "Zikronot," and "Shofarot." The chief characteristic of the Musaf tefillah is the emphasis which is laid upon the restoration of the Temple and of the sacrificial cult.

The Musaf as well as the morning prayer is most frequently repeated in full by the ḥazzan (R. H. 34b; "Yad," *l.c.* ix. 13; Oraḥ Ḥayyim, 286, 2, Isserles' gloss). In some congregations, however, especially among the Sephardim, the ḥazzan begins the first three benedictions aloud with the congregation; the middle benediction is then recited in silence; and then the ḥazzan reads the last three benedictions aloud with the congregation. Such variation, however, is not made on holy days. The Priestly Blessing is given by the kohanim at the conclusion of the Musaf service (see BLESSING, PRIESTLY).

Variations.

The Musaf service is introduced by the recital of "half Ḳaddish" by the ḥazzan. The Musaf tefillah for the Sabbath, after the three regular benedictions, commences with a composition the initial letters of the first twenty-two words of which run in the inverted order of the Hebrew alphabet (comp. Maḥzor Vitry, ed. Hurwitz, p. 99, where a peculiar reason is given for this; in the Sephardic ritual this prayer reads somewhat differently; comp. Dembitz, "Jewish Services in Synagogue and Home," p. 149). The selection from Num. xxviii. 9-10 is then read; and the blessing is concluded with a short prayer for those who observe the Sabbath, followed by the prayer commencing with the invocation "Our God and the God of our fathers," common to all the services of the day.

On New Moons the Musaf contains a prayer expressing regret for the discontinuance of the sacrificial cult and hope for its restoration, the quotation from Num. xxviii. 11, and a prayer for a blessed and happy month. The first prayer is much changed when New Moon falls on a Sabbath, and there are also some variations in the last, while the quotations from Numbers for both Sabbath and New Moon are read.

The Musaf prayer for the three festivals and for Ḥol ha-Mo'ed begins, after the first two selections of the regular festival "Shemoneh 'Esreh," with the prayer "But on account of our sins," etc., in which the Exile is ascribed to the sinfulness of Israel and God is invoked to gather the scattered remnant of Israel to the Holy Land, to restore the glory of Zion, and to reestablish the Temple and its service, so that the worshipers may be enabled to bring the sacrifices prescribed by the Law. Here the passages setting forth the additional sacrifices for the day are inserted in the German ritual; and after these another prayer, in which the custom of making a pilgrimage to Jerusalem on the festivals is referred to, is read. The service concludes with the regular prayer for the blessings of the festival ("Wehassi'enu"), with which every "Shemoneh 'Esreh" read on the festivals ends.

Musaf Rosh ha-Shanah.

The Musaf tefillah for the New-Year is the longest in the liturgy. It begins in the regular form, as the morning prayer of that day; then the prayer "But on account of our sins," as on the festivals, and the selection from Numbers relating to the additional offering of the day, are recited. After this, "'Alenu" is said, and then ten passages from the Bible—three from the Pentateuch, three from the Psalms, three from the Prophets, and the Shema'—all of which speak of God as king, are read. Then comes a prayer for the establishment of God's kingdom upon earth; and this concludes the first benediction, which is called "Malkiyot." The second benediction commences with an apostrophe to God sitting in judgment over all His creatures and "remembering" their deeds. In it are included selections from the Bible in which God is referred to as "remembering" His creatures, and it concludes with a prayer that God will remember His people favorably on that day and count for them the sacrifice of Isaac. This benediction is called "Zikronot." The third benediction commences with a description of the revelation at Sinai, and includes Biblical passages in which "shofar" is mentioned. It concludes with a prayer for the gathering of the exiles to Palestine, and for the rebuilding of the Temple, when the trumpets will be blown at sacrifices on all holy days; it is called "Shofarot." During the repetition of the prayers by the ḥazzan the shofar is sounded at the end of each of the three benedictions (R. H. 32a, b; "Yad," Shofar, iii. 7-10; Oraḥ Ḥayyim, 591, 2). In olden times only "'Alenu" and the last part of the first benediction were read by the congregation, the ḥazzan being relied on for the rest (comp. "Seder R. Amram" [Warsaw, 1865], p. 46a, b; Maḥzor Vitry, p. 370; Dembitz, *l.c.* p. 162 and note 5).

The Musaf tefillah for the Day of Atonement begins in the same way as that for the New-Year; but after the Biblical selection in which the additional sacrifices for the day are given a prayer for the forgiveness of sins is recited. The "Widdui" forms a part of the Musaf service, as it does in the other "Shemoneh 'Esrehs" of the day.

"Ṭal" and "Geshem."

The Musaf service of the first day of Passover and of Shemini 'Aẓeret are known by special names: the former as "Ṭal" (= "dew"), because prayers for dew are recited during the repetition of the first two benedictions by the ḥazzan; the latter as "Geshem" (= "rain"), because prayers for rain are recited at the same juncture. During the festival of Sukkot, "Hosha'anot" are said at the conclusion of the Musaf service. The Ashkenazic ritual contains the "Azharot" for Shabu'ot in the Musaf service (the Sephardim read them during the Minḥah service). The Musaf service for the Day of Atonement includes, besides many piyyuṭim and seliḥot, a recital of the description of procedure of the service for the day in Temple times ("'Abodah"). Both on New-Year and on the Day of Atonement the famous piyyuṭ "U-netanneh Toḳef" is recited before the Musaf "Ḳedushah" in Ashkenazic congregations. The "Ḳedushah" for the Musaf service is much more elaborate than the regular one, retaining, however, all the original elements.

In Reform congregations the Musaf prayers are considerably modified and sometimes are entirely abolished (see Reform).

MUSARNIKES (lit. "Moralists"); Name colloquially applied in Russia to the followers of R. Israel Lipkin (Salanter) in the study of religio-ethical works and in the practise of severely strict morality. Although he was probably the keenest-minded pilpulist of his time, Lipkin early recognized the inadequacy of the intellectual exercise afforded by Talmudic studies; and he revolted against the apotheosis of dry learning which results in the neglect of the emotional side of religion. Soon after he settled in Wilna, about 1842, he established a society (Ḥebrat Musar) for the study of works on religious morals; and to its influence is attributed the republication in that city in 1844 of Ibn Gabirol's "Tiḳḳun Middot ha-Nefesh," Moses Ḥayyim Luzzatto's "Mesillat Yesharim," and Mendel Levin's "Ḥeshbon ha-Nefesh." The society soon had several branches.

R. Israel Lipkin in Kovno.

When Lipkin removed to Kovno in 1848 he organized there a similar society on a larger scale, and the study of ethical works assumed the proportions of a regular movement which threatened to split the community like the Ḥasidic movement a century before. R. Sundel of Salant, R. Samuel Lubtser of Wilna, and R. Alexander Moses Lapides of Rossieny were the best-known of Lipkin's supporters. The strongest opponents of the movement were the rabbi of Kovno, Aryeh Löb Shapira, Joshua Heschel, rabbi of Yanova, and Isaiah, rabbi of Salant. But the commanding influence of Lipkin's personality overcame all opposition; and the "musar" movement gradually developed without producing the evil results which had been predicted by its earlier opponents. Meanwhile the more noted among Lipkin's pupils continued in various localities the work of their master. R. Jacob Joseph, later chief rabbi of the Russian Orthodox congregations of New York, instituted the practise of the Musarnikes in Vilon and later in Yurburg (Georgenberg); and Simḥah Süssel, who returned to his native city of Kelm in the government of Grodno in 1872, established there a "musar stübel," or separate house for the study of ethical works and for the peculiar and ecstatic forms of devotion practised by the Musarnikes. Süssel, who later went to Kovno and was considered one of the leaders of the movement, did not possess Lipkin's practical knowledge of the world, and did not interest himself, like the latter, in the spread of morality and integrity among the masses. He was almost a recluse; and under his influence moral studies began to degenerate into pilpulistic, *i.e.*, hair-splitting, self-analysis, and into extreme forms of asceticism. Later he became the head of a yeshibah in Slobodka (Willempul), a suburb of Kovno.

R. Isaac Blaser.

The leadership of the Musarnikes of Kovno then passed into the hands of R. Isaac Blaser, who went thither from St. Petersburg in 1879, and who took charge of the Lachman endowment for the education of rabbis. An attempt to induce the "perushim," or mature students and candidates for the rabbinate, who were the beneficiaries of that endowment, to join the Musarnikes, was resented by many influential rabbis, including Isaac Elhanan Spektor of Kovno; and it would seem that only the high character and great learning of Blaser shielded him from becoming involved in a public scandal. Blaser afterward established a yeshibah in Lubtch, in the government of Minsk, where "baḥurim," or younger students, who joined the Musarnikes in the yeshibah of Slobodka and similar institutions, would after marriage continue as perushim to prepare themselves to be "moralist" rabbis. The "Kolel Lubts," or collective center for receiving contributions for the support of such students, under whose jurisdiction moralist perushim were and still are assisted in Novogrudek, Lida, Shavel, Dwinsk, Setel, Slutsk, and various other communities in Lithuania, was established under the nominal leadership of Blaser. He was the undisputed head of the moralists after Süssel, who again retired to Kelm, where he died. Thereupon the Talmud Torah, as the moralists' center in that town was called, began to decline.

Blaser left Kovno in 1902, and, after residing for a time in Wilna, emigrated to Palestine in 1904, the management of the affairs of the Musarnikes passing into the hands of Rabbi Yeisel (Jusel), who had been the actual leader for many years. The latter spends most of his time in seclusion in a cabin which a wealthy admirer built for him in the heart of a forest several miles from Lubts. This recluse seems, however, to be a clever administrator; and his emissaries collect large sums to defray the cost of maintenance of the perushim and the yeshibot which are controlled by the moralists. Their largest institution is still the yeshibah of Slobodka, where in 1897 a riot between the Musarnikes and their opponents brought the moralist movement to the attention of the outside world and exposed many of the abuses which had in the course of time grown up within it.

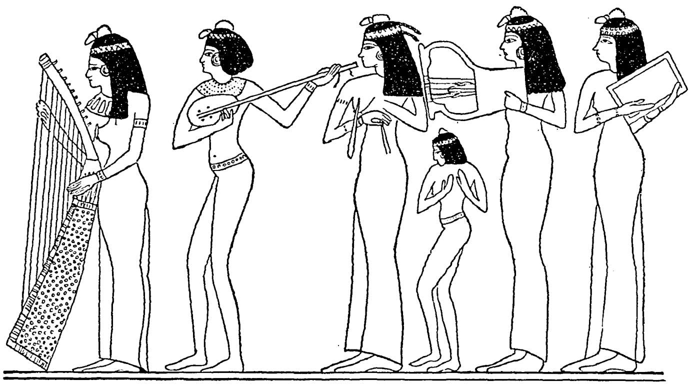
MUSEUS. See Alexander IV.

MUSIC AND MUSICAL INSTRUMENTS: The development of music among the Israelites was coincident with that of poetry, the two being equally ancient, since every poem was also sung. Although little mention is made of it, music was used in very early times in connection with divine service. Amos vi. 5 and Isa. v. 12 show that the feasts immediately following sacrifices were very often attended with music, and from Amos v. 23 it may be gathered that songs had already become a part of the regular service. Moreover, popular festivals of all kinds were celebrated with singing and music, usually accompanying dances in which, as a rule, women and maidens joined. Victorious generals were welcomed with music on their return (Judges xi. 34; I Sam. xviii. 6), and music naturally accompanied the dances at harvest festivals (Judges ix. 27, xxi. 21) and at the accession of kings or their marriages (I Kings i. 40; Ps. xlv. 9). Family festivals of different kinds were celebrated with music (Gen. xxxi. 27; Jer. xxv. 10). I Sam. xvi. 18 indicates that the shepherd cheered his loneliness with his reed-pipe, and Lam. v. 14 shows that youths coming together at the gates entertained one another with stringed instruments. David by his playing on the harp drove away the spirit of melancholy from Saul (I Sam. xvi. 16 *et seq.*); the holy ecstasy of the Prophets was stimulated by dancing and music (I Sam. x. 5, 10; xix. 20); playing on a harp awoke the inspiration that came to Elisha (II Kings iii. 15). The description in Chronicles of the embellishment by David of the Temple service with a rich musical liturgy represents in essence the order of the Second Temple, since, as is now generally admitted, the liturgical Temple Psalms belong to the post-exilic period.

Occasions for Music.



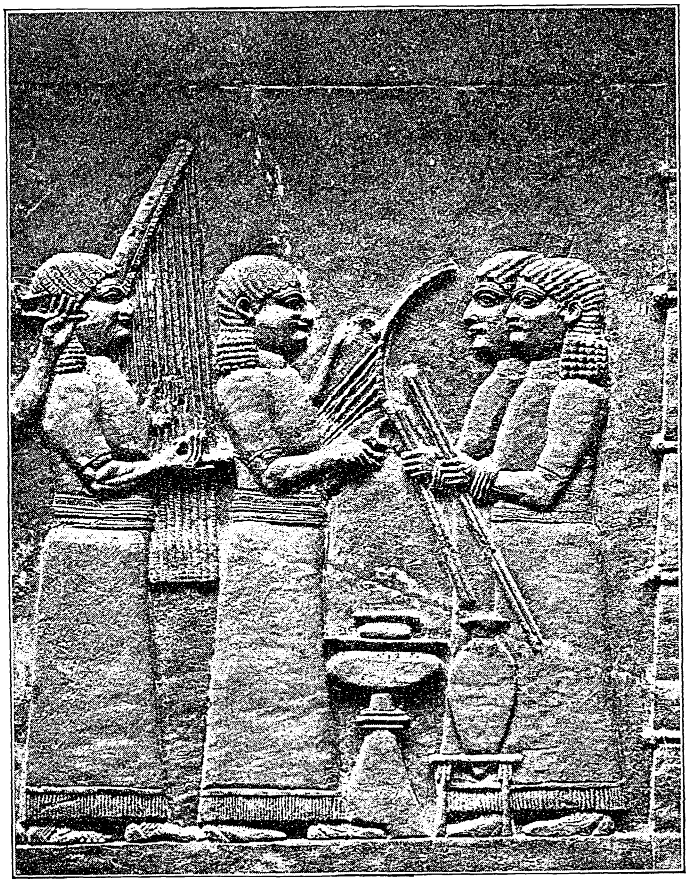
Egyptian Musicians.
(From Ball, "Light from the East.")

The importance which music attained in the later exilic period is shown by the fact that in the original writings of Ezra and Nehemiah a distinction is still drawn between the singers and the Levites (comp. Ezra ii. 41, 70; vii. 7, 24; x. 23; Neh. vii. 44, 73; x. 29, 40; etc.); whereas in the parts of the books of Ezra and Nehemiah belonging to the Chronicles singers are reckoned among the Levites (comp. Ezra iii. 10; Neh. xi. 22; xii. 8, 24, 27; I Chron. vi. 16). In later times singers even received a priestly position, since Agrippa II. gave them permission to wear the white priestly garment (comp. Josephus, "Ant." xx. 9, § 6). The detailed statements of the Talmud show that the service became ever more richly embellished.

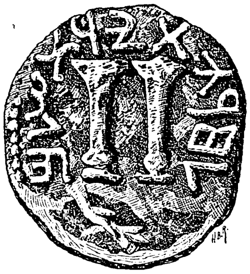
Singing in the Temple.

Unfortunately few definite statements can be made concerning the kind and the degree of the artistic development of music and psalm-singing. Only so much seems certain, that the folk-music of older times was replaced by professional music, which was learned by the families of singers who officiated in the Temple. The participation of the congregation in the Temple song was limited to certain responses, such as "Amen" or "Halleluiah," or formulas like "Since His mercy endureth forever," etc. As in the old folk-songs, antiphonal singing, or the singing of choirs in response to each other, was a feature of the Temple service. At the dedication of the walls of Jerusalem, Nehemiah formed the Levitical singers into two large choruses, which, after having marched around the city walls in different directions, stood opposite each other at the Temple and sang alternate hymns of praise to God (Neh. xii. 31). Niebuhr ("Reisen," i. 176) calls attention to the fact that in the Orient it is still the custom for a precentor to sing one strophe, which is repeated three, four, or five tones lower by the other singers. In this connection mention may be made of the alternating song of the seraphim in the Temple, when called upon by Isaiah (comp. Isa. vi.). The measure must have varied according to the character of the song; and it is not improbable that it changed even in the same song. Without doubt the striking of the cymbals marked the measure.

What Western peoples understand by harmony is still incomprehensible to the Arabs. They consider it "a wild and unpleasant noise, in which no sensible person can take pleasure." Niebuhr refers to the fact that when Arabs play on different instruments and sing at the same time, almost the same melody is heard from all, unless one of them sings or plays as bass one and the same note throughout. It was probably the same with the Israelites in olden times, who attuned the stringed instruments to the voices of the singers either on the same note or in the octave or at some other consonant interval. This explains the remark in II Chron. v. 13 that at the dedication of the Temple the playing of the instruments, the singing of the Psalms, and the blare of the trumpets sounded as one sound. Probably the unison of the singing of Psalms was the accord of two voices an octave apart. This may explain the terms "'al 'alamot" and "'al ha-sheminit." On account of the important part which women from the earliest times took in singing, it is comprehensible that the higher pitch was simply called the "maiden's key," and "ha-sheminit" would then be an octave lower.



Assyrian Representation of Harpers.
(In the British Museum.)



Coin of Second Revolt Bearing Two Trumpets.
(After Madden, "History of Jewish Coinage.")

There is no question that melodies repeated in each strophe, in the modern manner, were not sung at either the earlier or the later periods of psalm-singing; since no such thing as regular strophes occurred in Hebrew poetry. In fact, in the earlier times there were no strophes at all; and although they are found later, they are by no means so regular as in modern poetry. Melody, therefore, must then have had comparatively great freedom and elasticity and must have been like the Oriental melody of to-day. As Niebuhr points out, the melodies are earnest and simple, and the singers must make every word intelligible. A comparison has often been made with the eight notes of the Gregorian chant or with the Oriental psalmody introduced into the church of Milan by Ambrosius; the latter, however, was certainly developed under the influence of Grecian music, although in origin it may have had some connection with the ancient synagogal psalm-singing, as Delitzsch claims that it was ("Psalmen," 3d ed., p. 27).

BIBLIOGRAPHY: Saalschütz, *Gesch. und Würdigung der Musik bei den Alten Hebräern*, 1829; Delitzsch, *Physiologie und Musik*, 1868; Forkel, *Allgemeine Gesch. der Musik*, i. 173 *et seq.* and the bibliography there given.

E. G. H. W. N.

MUSIC, SYNAGOGAL: It has been shown in the article CANTILLATION (JEW. ENCYC. iii. 537b) that the desire to read the Scriptures in the manner indicated in Neh. viii. 8 has from time immemorial resulted in the use of some sort of musical declamation for the passages uttered aloud in the synagogue. For reasons very similar to those there discussed, the prayers and praises equally with the lessons have always been thus musically declaimed; and this declamation, developing in many lands under the influence of varying tonal surroundings through the long centuries, has gradually become extended into the vocal melody, solo or choral,

Temple Origins.

in which the whole of the traditional services are now presented. The earliest synagogal music was founded upon the same system and method as prevailed in the orchestra of the Temple itself. Joshua ben Hananiah, who had served in the sanctuary as a member of the Levitical choir ('Ar. 11b), told how the choristers went in a body to the synagogue from the orchestra by the altar (Suk. 53a), and so participated in both services. As the part of the instruments in the Temple musical ensemble was purely that of accompaniment, and the voices could have given an adequate rendition without accompaniment (comp. Suk. 50b *et seq.*; 'Ar. 11; Num. R. vi.), the absence of instruments from the synagogue in no way modified the system of the song itself. This presented little that to modern ears would appear worthy the name of melody, being, like the Greek melodies which have been deciphered, entirely of the character of a cantillation; that is, a recitation dependent on the rhythm and sequence of the words of the text instead of on the notes of the tune, and influenced by the syntactical structure of the sentence instead of by the metrical form of the musical phrase. Nor would the style of singing, nasal, shrill, and alternately full of intricate graces and of sudden pressures on emphatic notes, altogether commend itself to Western ears as graceful or harmonious.

The dispersal of the Temple singers and the cessation of the performances of the musicians in the sanctuary influenced but slightly the synagogal cantillation, since the desire of many authorities that song should be abstained from in lasting mourning for fallen Zion, was never generally heeded when it became a question of song in worship (comp. Giṭ. 7a; Soṭah 48a; Alfasi on Ber. 25b; Asheri on Ber. 30b; Shulḥan 'Aruk, Oraḥ Ḥayyim, 560, 3). Indeed, from the earlier centuries there had been evident a desire to enhance the importance of the singing in the synagogal ritual. The officiant was required to have a pleasant voice and a clear enunciation (Ta'an. 16a; Pesiḳ. R. 25 [ed. Friedmann, p. 127a]; comp. Meg. 24b, 32a; Yer. Sheḳ. 1; Yalḳ., Prov. 932), and the voluntary assistance of good vocalists was regarded as meritorious. Among such Ḥiyya bar Adda is prominently mentioned (comp. Pesiḳ. 97a). Women were from the first entirely silent in the synagogue (Ber. 24a). The Shema', known to all, was chanted in unison; but the "Tefillah" (Shemoneh 'Esreh) was intoned by the officiant only, the congregation responding loudly in unison, as also when Ḳaddish was read (Soṭah 49a; Shab. 119b). The Psalms were chanted originally in a responsive antiphony (Soṭah 30b; comp. Graetz in "Monatsschrift," 1879, p. 197); but soon the antiphony developed into a general unison, as became the case, too, with the other passages gradually added to the ritual (Cant. R. 27a, end; Rashi on Ber. 6a; but comp. Zunz, "S. P." p. 61).

Later Amplification.

Yet it was only with the Piyyuṭim that music found scope for development within the walls of the synagogue, as the ritual began to crystallize into definite form, and prayerful verses took the place of didactic and dogmatic texts (comp. Zunz, *l.c.* pp. 7, 8, 59, 60). The Ḥazzan now became primarily the precentor. He sang the piyyuṭim to melodies selected by their writer or by himself, thus introducing fixed melodies (see below) into synagogal music. The prayers he continued to recite as he had heard his predecessors recite them; but in moments of inspiration or emotion he would give utterance to a phrase of unusual beauty or power, which, caught up by the congregants, would be repeated and preserved as a worthy expression of the thought underlying the day's service, coming at last into the form of a definite and well-recognized musical sentence, and so forming the substance of a prayer-motive (see below). There was little need to prompt him to greater energy in this direction; from the first it became more necessary to keep his intensity in check (comp. "Sefer Ḥasidim," §§ 158, 238, 251, 768).

Ancient Elements.

The music may have preserved a few phrases in the reading of Scripture which recalled the song of the Temple (comp. Ashirah; Shema'); but generally it echoed from the first the tones which the Jew of each age and country heard around him, not merely in the actual borrowing of tunes (of which there is continuous evidence from the days of Ibn Ezra; comp. his commentary on Ps. viii.), but more especially in the prevailing tonality or description of scale on which the music was based. These elements persist side by side, rendering the traditional intonations a mass composed of details differing immensely in age and in style, and only blended by the gradual modification of each by what must be regarded as the old and constant flux of their rendition. The oldest element is the parallelism which runs through all the traditions, according to which chants divergent enough in detail of tune, and systematically so in tonality or scale-structure, are applied to corresponding passages after a similar method. This peculiarity appears to have been recognized as early as the days of Hai Gaon (d. 1038; comp. Zunz, "Ritus," p. 11). It has already been shown (see Jew. Encyc. iii. 539, *s.v.* Cantillation) to be very ancient, and possibly to date back to the method of rendition utilized for the Psalms in the Temple ritual. The underlying principle, according to the present writer's formulation, is the specific allotment in Jewish worship of a particular mode or scale-form to each sacred occasion, because of some esthetic appropriateness felt to underlie the association. In contrast to the meager modal choice of modern melody, which is fettered within the range of two modes, the minor and the major, the synagogal tradition revels in the possession of a number of scale-forms preserved from the remote past, much as are to be perceived in the plain-song of the Catholic, the Byzantine, and the Armenian churches. And it draws its supply not alone from the same sources as these Christian traditions: it finds itself enriched also from the origins from which proceeded, on either hand, the Hungarian-Wallachian Gipsy melody and the music of the Perso-Arab system. In this way the music of the synagogue enshrines elements of the theory and the practise of western Asia, which centered in Babylon, and which have left their effects in all lands

Modal Feeling.

between Moorish Spain and Dravidian India. And this modal feeling is not alone the conspicuous characteristic of the Ḥazzanut—that traditional style of free vocal recitation of a prose text, in which synagogal music differs so greatly from secular music in the Western world—but it may be traced also in those older tunes which, constructed in modern rhythmic form and thus recognizable by ordinary hearers as melodies in the modern sense, are employed in the Ḳerobot.

Another marked element, of later origin but equally wide diffusion, is that style of florid melodious intonation which requires the exercise of vocal agility. It existed, as the cantillation of Scripture shows, even before the recital of the services was entrusted to the ḥazzan as the specialist. It was introduced into Europe in the seventh century, then rapidly developed, and more than aught else led to the complaints against the ḥazzanim which are detailed in Jew. Encyc. vi. 286, *s.v.* Ḥazzan. Yet many of the influences to which this intricate vocalization was due lay in the old Jewish tradition as to what was a seemly method of expressing devotion. Similar influences had built up, upon old outlines coming from Asia Minor, the figuration which distinguishes also certain sequences in the Catholic plain-song. But the Church plain-song never developed the rapid and florid ornamentation of the synagogal ḥazzanut, because of the early development of choral participation in the church service. So, too, in the Sephardic, or Southern, use, the pronounced share of the congregation in the recital of the prayers tended to check its excessive employment.

Later Debasement.

But among the Northern Jews especially the isolation and the poverty of the worshipers shut them off from the enjoyment in secular life of those successive developments of the contrapuntal art—first in the music of the mass, then in the music of the dignitary's chamber—which culminated in the rich figuration which marks the compositions of the early eighteenth century. In the synagogue, where those worshiped who were banned from such enjoyment, it was the adulation of admiring listeners that too often prompted the officiant to forget the text-matter in the song-manner (comp. Shulḥan 'Aruk, Oraḥ Ḥayyim, 53, 11), and even more to develop the technical intricacy of synagogal music by the utilization also of florid ornamentation in which his hearers, out of touch with any music but the folk-music of their day, were not likely to detect the echoes of contemporary instrumental virtuosity. In the end, the echoes of what a ḥazzan heard of the sensual tastelessness of the "Zopf" style, which ruled musical Europe in the eighteenth century, completed that debasement of synagogal music from which the efforts of a century of work by Jews who had acquired a little of the taste of the cultured musician have only recently begun to lift it.

There is no need to present an instance of the extravagances of the later tradition; but under Ḥazzanut a specimen illustrating the traditional matter and manner and treated with taste and style, has been quoted from the Sabbath evening service of M. J. Löwenstamm (somewhile cantor in Munich).

Age of Song Elements.

The age of the various elements in synagogal song may be traced from the order in which the passages of the text were first introduced into the liturgy and were in turn regarded as so important as to demand special vocalization. This order closely agrees with that in which the successive tones and styles still preserved for these elements came into use among the Gentile neighbors of the Jews who utilized them. Earliest of all is the cantillation of the Scriptures, in which the traditions of the various rites differ only as much and in the same manner from one another as their particular interpretations according to the text and occasion differ among themselves. This indeed was to be anticipated if the differentiation itself preserves a peculiarity of the music of the Temple (see Jew. Encyc. iii. 539a, *s.v.* Cantillation). Next comes, from the first ten centuries, and probably taking shape only with the Jewish settlement in western and northern Europe, the cantillation of the "'Amidah" referred to below, which was the first portion of the liturgy dedicated to a musical rendering, all that preceded it remaining unchanted (comp. Zunz, *l.c.* p. 6). Gradually the song of the precentor commenced at ever earlier points in the service. By the tenth century the chant commenced at "Baruk She-Amar" (N. Cohen, "Sefer Yuḥasin," p. 135, Warsaw, 1876; comp. Zunz, "S. P." p. 114), the previous custom having been to commence the singing at "Nishmat," these conventions being still traceable in practise in the introit (see below) signalizing the entry of the junior and of the senior officiant (comp. Shulḥan 'Aruk, *l.c.* 51; "Orḥot Ḥayyim," p. 64). Hence, in turn, appeared cantillation, prayer-motive, fixed melody, and hymn as forms of synagogal music.

Reminiscences of Gentile Sacred Melody.

The contemporaneous musical fashion of the outer world has ever found its echo within the walls of the synagogue, so that in the superstructure added by successive generations of transmitting singers there are always discernible points of comparison, even of contact, with the style and structure of each successive era in the musical history of other religious communions. Attention has frequently been drawn to the resemblances in manner and even in some points of detail between the chants of the muezzin and of the reader of the Koran with much of the ḥazzanut (comp. the recitation of a sura given in Lane's "Modern Egyptians" [London, 1834] with the first illustration under the heading Ḥazzanut), not alone of the Sephardim, who passed so many centuries in Arab lands, but also of the Ashkenazim, equally long located far away in northern Europe. The intonations of the Sephardim even more intimately recall the plain-song of the Mozarabian Christians, which flourished in their proximity until the thirteenth century. Their chants and other set melodies largely consist of very short phrases often repeated, just as Perso-Arab melody so often does; and their congregational airs usually preserve a Morisco or other Peninsular character (comp. Adonai Beḳol Shofar; 'Et Sha'are Raẓon; Lekah Dodi).

The Cantillation reproduces the tonalities and the melodic outlines prevalent in the western world during the first ten centuries of the Diaspora; and the prayer-motives, although their method of employment recalls far more ancient and more Oriental parallels, are equally reminiscent of those characteristic of the eighth to the thirteenth century of the common era. Many of the phrases introduced in the ḥazzanut generally, closely resemble the musical expression of the sequences which developed in the Catholic Plain-Song after the example set by the school famous as that of Notker Balbulus, at St. Gall, in the early tenth century. The earlier formal melodies still more often are paralleled in the festal intonations of the monastic precentors of the eleventh to the fifteenth century, even as the later synagogal hymns everywhere approximate greatly to the secular music of their day (see below).

Allusion to this contact with the Catholic plainsong has been made in Kol Nidre as well as in several other of the articles on music in The Jewish Encyclopedia. Typical illustrations may be briefly indicated more directly. The traditional penitential intonation transcribed in the article Ne'ilah with the piyyuṭ-versicle "Darkeka" closely reproduces the music of a parallel species of medieval Latin verse, the metrical sequence "Missus Gabriel de Cœlis" by Adam of St. Victor (*c.* 1150) as given in the "Graduale Romanum" of Sarum. The mournful chant characteristic of penitential days in all the Jewish rites, is closely recalled by the Church antiphon in the second mode "Da Pacem Domine in Diebus Nostris" ("Vesperale Ratisbon," p. 42). For further points of comparison see Seliḥot. The joyous intonation of the Northern rite for morning and afternoon prayers on the Three Festivals closes with the third tone, third ending of the Gregorian psalmody; and the traditional chant for the Hallel itself, when not the one reminiscent of the "Tonus Peregrinus," closely corresponds with those for Ps. cxiii. and cxvii. ("Laudate Pueri" and "Laudate Dominum") in the "Graduale Romanum" of Ratisbon, for the vespers of June 24, the festival of John the Baptist, in which evening service the famous "Ut Queant Laxis," from which the modern scale derived the names of its degrees, also occurs.

Prayer-Motives.

Next to the passages of Scripture recited in cantillation, the most ancient and still the most important section of the Jewish liturgy is the sequence of benedictions which is known as the "'Amidah" (Shemoneh 'Esreh), being the section which in the ritual of the Dispersion more immediately takes the place of the sacrifice offered in the ritual of the Temple on the corresponding occasion. It accordingly attracts the intonation of the passages which precede and follow it into its own musical rendering. Like the lessons, it, too, is cantillated. This free intonation is not, as with the Scriptural texts, designated by any system of accents, but consists of a melodious development of certain themes or motives traditionally associated with the individual service, and therefore termed by the present writer "prayer-motives." These are each differentiated from other prayer-motives much as are the respective forms of the cantillation, the divergence being especially marked in the tonality due to the modal feeling alluded to above. Tonality depends on that particular position of the semitones or smaller intervals between two successive degrees of the scale which causes the difference in color familiar to modern ears in the contrast between major and minor melodies.

Throughout the musical history of the synagogue a particular mode or scale-form has long been traditionally associated with a particular service. It appears in its simplest form in the prayer-motive —which is best defined, to use a musical phrase, as a sort of coda—to which the benediction "Berakah" closing each paragraph of the prayers is to be chanted. This is associated with a secondary phrase, somewhat after the tendency which led to the framing of the binary form in classical music. The phrases are amplified and developed according to the length, the structure, and, above all, the sentiment of the text of the paragraph, and lead always into the coda in a manner anticipating the form of instrumental music entitled the "rondo," although in no sense an imitation of the modern form. The responses likewise follow the tonality of the prayer-motive.

This intonation is designated by the Hebrew term Niggun ("tune") when its melody is primarily in view, by the Judæo-German term "steiger" (scale) when its modal peculiarities and tonality are under consideration, and by the Romance word "gust" and the Slavonic "skarbowa" when the taste or style of the rendering especially marks it off from other music. The use of these terms, in addition to such less definite Hebraisms as "ne'imah" ("melody"), shows that the scales and intervals of such prayer-motives have long been recognized (*e.g.*, by Saadia Gaon in the tenth century; comp. end of "Emunot we-De'ot") and observed to differ characteristically from those of contemporary Gentile music, even if the principles underlying their employment have only quite recently been formulated.

Modal Difference.

The modal differences are not always so observable in the Sephardic or Southern tradition. Here the participation of the congregants has tended to a more general uniformity, and has largely reduced the intonation to a chant around the dominant, or fifth degree of the scale, as if it were a derivation from the Ashkenazic daily morning theme (see below), but ending with a descent to the major third, or, less often, to the tonic note. Even where the particular occasion—such as a fast—might call for a change of tonality, the anticipation of the congregational response brings the close of the benediction back to the usual major third. But enough differences remain, especially in the Italian rendering, to show that the principle of parallel rendering with modal difference, fully apparent in their cantillation, underlies the prayer-intonations of the Sephardim also. This principle has marked effects in the Ashkenazic or Northern tradition, where it is as clear in the rendering of the prayers as in that of the Scriptural lessons, and is also apparent in the Ḳerobot.

All the tonalities are distinct. They are formulated in the subjoined tabular statement, in which the various traditional motives of the Ashkenazic ritual have been brought to the same pitch of reciting-note in order to facilitate comparison of their modal differences (see also the table given in Jew. Encyc. iii. 539, *s.v.* Cantillation).

* The "reciting"-note throughout is G. The "final" note is designated by a capital letter.

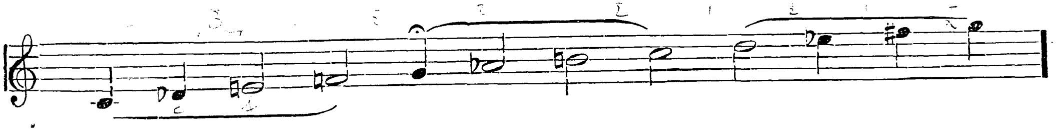
bration. The precentor will accommodate the motive to the structure of the sentence he is reciting by the judicious use of the reciting-note, varied by melismatic ornament. In the development of the subject he is bound to no definite form, rhythm, manner, or point of detail, but may treat it quite freely according to his personal capacity, inclination, and sentiment, so long only as the conclusion of the passage and the short doxology closing it, if it ends in a benediction, are chanted to the snatch of melody forming the coda, usually distinctly fixed and so furnishing the modal motive. The various sections of the melodious improvisation will thus lead smoothly back to the original subject, and so work up to a symmetrical and clear conclusion. The prayer-motives, being themselves definite in tune and well recognized in tradition, preserve the homogeneity of the service through the innumerable variations induced by impulse or intention, by energy or fatigue, by gladness or depression, and by every other mental and physical sensation of the precentor which can affect his artistic feeling.

Thus the absolute freedom and spontaneity of the development in no wise diminish a general agreement in the renderings favored in congregations far distant from one another—whether the style adopted be broad and restrained, as with the Westerns, or florid and intense, as with the Easterns—among those who follow the Ashkenazic rite. Indeed, few as are the points of contact to be observed between the definite tunes utilized in the tradition of the Ashkenazim and in that of the Sephardim, they are many and obvious between the cantillation of the "'Amidah" and the ancient benedictions preceding and following the Shema' in both rites. Grouping of notes, points where ornaments are introduced, phrasing of the text, retardations and pauses, even complete musical sentences, and several such differing in outline

Hazzanut.

By ancient tradition, from the days when the Jews who passed the Middle Ages in Teutonic lands were still under the same tonal influences as the peoples in southeastern Europe and Asia Minor yet are, chromatic scales (*i.e.*, those showing some successive intervals greater than two semitones) have been preserved. The Sabbath morning and weekday evening motives are especially affected by this survival, which also frequently induces the Polish ḥazzanim to modify similarly the diatonic intervals of the other prayer-motives. The chromatic intervals survive as a relic of the Oriental tendency to divide an ordinary interval of pitch into subintervals (comp. Hallel for Tabernacles, the "lulab" chant), as a result of the intricacy of some of the vocal embroideries in actual employment, which are not infrequently of a character to daunt an ordinary singer. Even among Western cantors, trained amid mensurate music on a contrapuntal basis, there is still a remarkable propensity to introduce the interval of the augmented second, especially between the third and second degrees of any scale in a descending cadence. Quite commonly two augmented seconds will be employed in the octave, as in the frequent form—much loved by Eastern peoples—termed by Bourgault-Ducoudray ("Mélodies Populaires de Grèce et d'Orient," p. 20, Paris, 1876) "the Oriental chromatic" (see music below).

Chromatic Intervals.



The "harmonia," or manner in which the prayer-motive will be amplified into ḥazzanut, is measured rather by the custom of the locality and the powers of the officiant than by the importance of the cele-

and in tonality from any other European music, not infrequently coincide in the two rituals, particularly where the precentor intones one of the less-elaborated services, as those of week-days, or eschews the excessive ornamentation favored by some schools on the special festival days. This agreement, it should be noted, occurs mainly in the ancient parts of the liturgy, which the two rituals inherit in common from before the eighth or the ninth century; and their differences, too, in the intonation of these ancient passages lie mainly in tonality (see above) much as their own various forms of cantillating alike the Scriptural lessons and those older sections of the prayers differ more in this respect than otherwise.

The musical illustrations which precede (see pages 124–126) present the prayer-motives of the Ashkenazic tradition in their simplest form (for an example of the development of the model into ḥazzanut, founded on the transcription of Baer, see Jew. Encyc. vi. 291, *s.v.* Ḥazzanut).

Fixed Melodies: Chants.

After the ninth century, when borrowed airs (see below) began to find their way into the synagogue, the old modal material was also utilized to construct tunes for sections of the service to which the cantillatory development of the prayer-motives had not been applied. First of these were the chants for psalms or versicles, for sentences, that is, of similar length and structure and not varying essentially in sentiment. Some were simple, approaching monotone, suited for congregational response; others were influenced by the desire for ornament and variation, and reproduced the binary tendency of the ḥazzanut with a primary and a secondary motive. Those of the first class are either founded on the cantillation (comp. Ashre; Shema‘) or echo the form of Gregorian psalmody with intonation, mediation, and ending (*e.g.*, ‘Al Ḥeṭ, Attah Hor’eta, and "Leku Nerannenah"); the others, later in origin or in shaping, take on a more definitely tuneful form (comp. Ashirah; Ashre ha-‘Am; Le-Dawid Baruk; Mizmor le-Dawid; Mizmor Shir), and reproduce their structure in settings for the metrical text of piyyuṭim (comp. ‘Et Sha‘are Raẓon). It is in these chants, and in rather later synagogal forms such as the Ḳerobot, based on similar material, that the musical figuration not infrequently presents points of contact, on the one hand, with the Gregorian music of the Catholic tradition (comp., *e.g.*, Kol Nidre) or, on the other, with the traditional intonations of the Moslems (comp., *e.g.*, "Wa-Yekullu," in Jew. Encyc. vi. 290, *s.v.* Ḥazzanut). In the condition in which the chants have been evolved from their traditional form there are obvious traces of later development, reaching, indeed, down to the actual present; but their original shaping and definite acceptance into the synagogal corpus of sacred song took place between the eighth and thirteenth centuries. It was at the latter epoch that the common people, to whose music alone the Jews would consciously have responded, broke loose from the modal restrictions of the theorists, alike of the Church and of the Perso-Arab schools, and all over western Europe anticipated the modal revolution which in formal art-music was delayed until the middle of the seventeenth century. Troubadours, trou-

Later Melodies.

vères, and minnesingers, as well as jongleurs and minstrels, had by this time laid the foundations of modern melody in their ever-extending use of the diatonic scale (comp. Naumann, "Hist. of Music," p. 235, London, 1886); and Jewish melody responded to the impulse. Where synagogal music of later birth maintains a modal difference from the music of the street outside, it is only in the utilization of material dating from before the fateful fifteenth century, when the expulsion from Spain set a seal upon the Peninsular tradition of the Sephardim, and the labors of Jacob ben Moses MÖLLN of Mayence (1365–1427) and his disciples gave a final redaction to the use of the Ashkenazim (comp. Grätz, "Gesch." vii. 146; Steinschneider, "Jewish Literature," p. 155); or else where the officiant or his teachers were residents in eastern Europe, under the influence of Slavonic and Gipsy passion in melody, or in Moslem lands, where the short, infinitely repeated phrase in the distinctive Perso-Arab scales still prevails in every-day music. Chief among such later melodies, often reproducing at least the style of older Hebraic intonations, are the settings for a text that vary with the occasion, in response to the fundamental principle of parallel form with modal variation underlying the cantillation and the ḥazzanut. Melodies of this kind have already been treated in the articles 'Al ha-Rishonim and Ḳaddish. Very characteristic of the whole class in all its features of style and handling are the settings for what may be termed the "introit"—*i.e.*, the passage where the senior precentor takes up the chanting of the morning service at the approach of its more important phases, relieving his junior, who has in simpler form intoned the earlier private prayers and introductory psalms. The music which precedes (pages 127–129) presents in contrast the settings in the Northern tradition so utilized, in ascending degree of importance on Sabbath, festival, and Penitential Day.

Fixed Melodies: Hymns.

But besides the traditional material of such actually Jewish origin and development, there has been preserved in the music of the synagogue a considerable mass of melody directly adapted from the folk-song of Gentile neighbors, or constructed on the general lines of musical development in the outer world. In the latter class falls almost the whole of the choral music of the synagogue, the work of composers who either avowedly shaped their work upon the wider, as contrasted with the purely ecclesiastical, lines of art, or were unconscious of the historic and esthetic value of the traditional material. The borrowed or adopted melodies, on the other hand, were already associated in the outer world with the secular song or dance, and were taken into the synagogue simply from the lack of available melody as the number of Neo-Hebraic hymns rapidly increased. Then their pleasing jingle often, their tender expressiveness sometimes, early (comp. Simon Duran, "Magen Abot," 52b) led to their retention and perpetuation and to their adoption as the traditional setting of the verses to which they had first been adapted, and often of others as well.

Borrowed Popular Airs.

Not all the airs which reproduce external folk-songs, however, were thus actually and directly borrowed; for a goodly number must have been the composition of the ḥazzanim. But even so, they were close imitations of the popular melody of the day; and they lack any Jewish characteristic to bring them into line with the older traditional elements. Abraham ibn Ezra (on Ps. viii.) refers to the introduction of such alien airs in the eleventh century; and according to S. Archevolti in the sixteenth century ("'Arugat ha-Bosem," p. 100), the practise was a general one in the days of Judah ha-Levi (early part of 12th cent.). Much controversy raged over this practise (comp. M. Lonzano in "Shete Yadot," p. 147); but that it became firmly fixed in synagogal life the number of such adopted melodies referred to in the rubrics of the Maḥzorim, as well as in the pages of the controversialists, conclusively proves. Indeed, Israel Najara, rabbi of Gaza (who died in 1581 and whom Delitzsch calls "the founder of the Jerusalem ritual"), published 650 Hebrew lyrics, especially written to fit the melodies of Arabic, Turkish, Greek, Spanish, and Italian songs selected by himself.

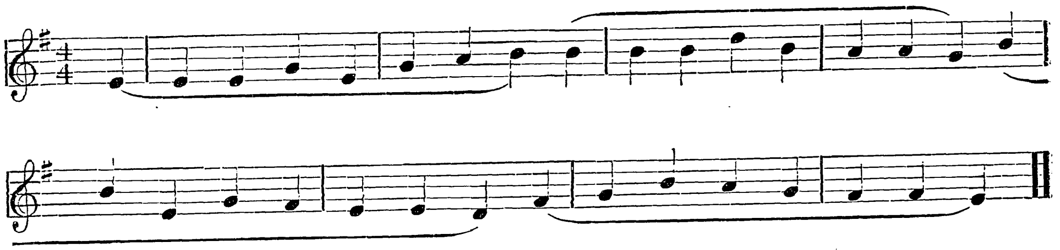
Imitations.

This procedure was not peculiar to the synagogue. Dufay, the most prominent musician of the Gallo-Belgic school about the end of the fourteenth century, had substituted a popular secular melody as the basis of the music of the mass in place of the "cantus firmus" traditional in the Church; and this practise became universal in that school of musicians and their successors. The most favored of these secular airs, "L'Homme Armé," partly appears also in the Mizmor Shir of the Sephardic tradition. The synagogal musicians, the ḥazzanim, had already, as has been seen, thus endeavored to bring the music of worship into harmony with every-day life outside the sanctuary; and they closely followed the later amplifications of the practise, such as that of the early Protestant hymns, in which a very slight change in the words of the original German produced an immense one in the meaning, as when H. Isaak's "Innsbruck, I Must Leave Thee" (1440) became "O World, I Soon Must Leave Thee" (comp. "Hymns Ancient and Modern," No. 86). So, too, in Jewish practise a slight change in sound was held to be warrant enough for the devotional utilization of an air. Thus to the tune of "En Toda la Tramontaña" was written "Shir Todah le-Elohim Tanah"; and to "Muerame mi Alma, ai! Muerame" was written "Meromi 'al Mah 'Am Rab Homah." In another direction it is found that a slight correspondence in the meaning of the initial words was considered adequate connection, as when the verses "El he-Harim Essa 'Eni" are set to the air of "A las Montañas Mi Alma! a las Montañas Me Iré," or "Mar li Mar Mar Mar" to the Turkish "Krodas Yar, Yar, Yar," where, furthermore, the word "dost" (friend) ending each line in the modal, is translated by the Hebrew "dodi" in a similar position. Such incongruities, indeed, existed as a hymn commencing "Shem nora," to the tune of "Señora"; "Guri, guri" to "Giuri, giuri"; and "Ya'alat ha-mor" to "Perdone di amor" (comp. S. Duran in "Magen Abot," p. 52b; Archevolti, *l.c.*; Menahem Lonzano in "Shete Yadot," pp. 147, 149). Few of such adaptations were adopted into the liturgy itself, although some are to be traced, as, for instance, the beautiful tune of Abraham Ḥazzan's to Gerona's fine hymn commencing Aḥot Ḳeṭannah, which was composed on the lines of a popular Levantine song, "The Little Maid" (see also Yah Ribbon 'Alam 'Almaya). In the article Leḳah Dodi (Jew. Encyc. vii. 676) are given three such melodies adopted from popular use into Jewish worship—one, Moorish, of the tenth; one, Polish, of the sixteenth; and one, German, of the seventeenth century. The well-known melody of Ma'oz Ẓur was likewise adapted from a street song, and selected by Luther for his first choral on such lines, as well as by the German Jews for their Ḥanukkah hymn. Among other secular airs of European peoples adapted by Jews to sacred use may be mentioned: "Permetid Bella Amaryllis," "Tres Colores in Una," "Temprano Naçes Almendro," "El Vaquero de la Morayña," "Fasi Abassi Silvana," "Les Trois Rois," "Les Filles de Tarascon," "Porque

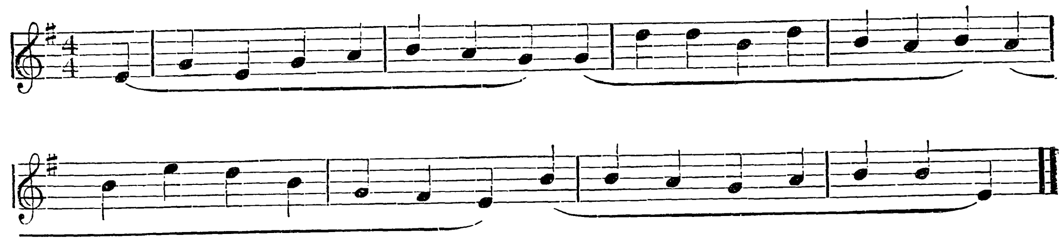
No Me Hablas," "Partistas Amiga," "Pues Vos Me Feristes," "Blümlein auf Breiter Heide," "Dietrich von Bern," "Pavierweiss," "En los Campos di Alvansa," "Un Poggio Tiene la Contessa," "Giulianita," "Doliente Estaba Alessandri," and even, in the last century, such melodies for the Ḳaddish as "La Marseillaise" or actually "The Girl I Left Behind Me," or for Adonai Melek on New-Year's Day an aria from "Traviata."

Especially has it been in the Zemirot or domestic table hymns that popular airs have been adapted and transmitted. The father would think rather of the sprightly interest of the air he sang than of its suitability or Jewish character. Thus, for instance, "Shir ha-Ma'alot" (Ps. cxxvi.) is widely sung among German Jews to a modification of a melody from "Fra Diavolo." The melodies utilized in the ceremony of the Benediction of the Priests (see Blessing, Priestly) are very frequently such echoes of contemporary popular song. One of the best may be quoted from Japhet's collection (Frankfort-on-the-Main, 1855; 3d ed. 1903, No. 60) of the synagogal melodies of southwest Germany, which are particularly replete with folk-song elements.

"SAXONY" (Old German Folk-Song, Lutheran Version)



"ABBOTSFORD" (Old German Choral)



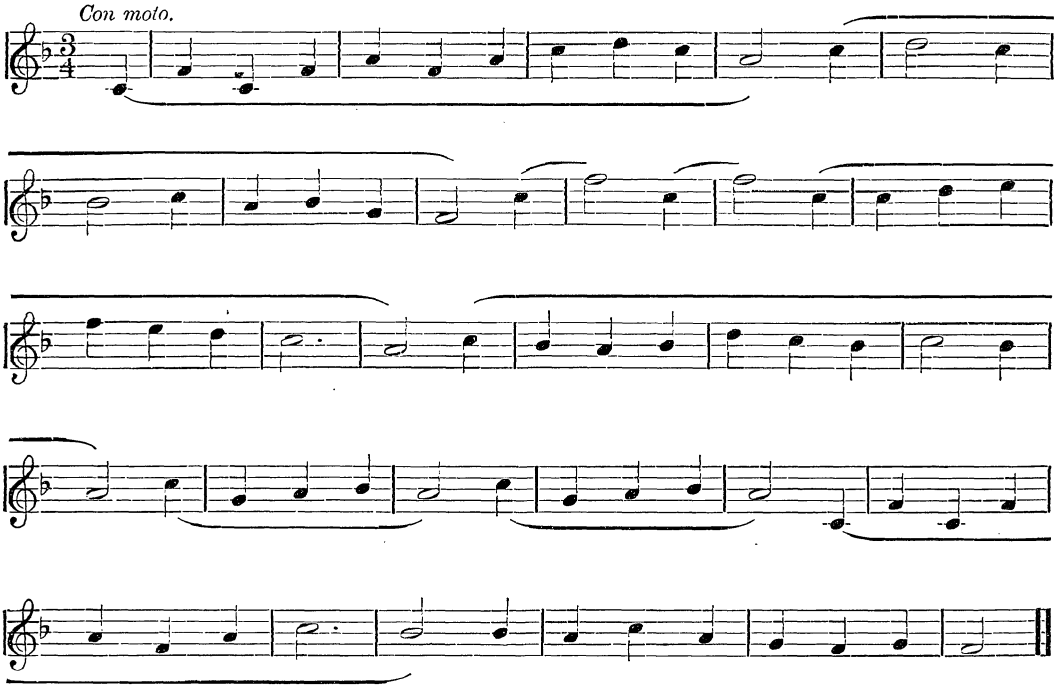
Modification in Tradition.

But very often a modification has been, in the course of tradition, introduced into the popular melody which has given it a Jewish flavor, and has served to differentiate it both from the secular original and from the Christian version, when, as in the older German melodies is often the case, the air has been utilized also in the hymnody of the Protestant Church. This feature has been alluded to in the case of Ma'oz Ẓur; and it is shown in the melody for 'En Kelohenu (Jew. Encyc. v. 155, B), where the addition of a vernacular translation is the excuse for the introduction of a strain of melody in one of the older modal tones of the synagogue, while the Hebrew is sung in the modern scale and style. The effect of the custom is well brought out in the "pizmon" (hymn) "She'eh Ne'esar," for the Fast of the 17th of Tammuz, where the modification introduced in the cadence greatly enhances the beauty and effect of the air. The fast-day and its associations have seemed to the ḥazzanim to call for the expression of emotion to which the wail of the augmented second in the cadence of the Oriental chromatic scale could alone give utterance. This wail is quite absent in the Church tradition, in either form in which it has been perpetuated (comp. "Hymns Ancient and Modern," Nos. 85, 206).

The condition in which the Jews found themselves in the sixteenth, seventeenth, and eighteenth centuries deeply affected their only form of art, their synagogal music. Where the darkness was deepest, like that which presages the dawn, the dignity of the song of the sanctuary was brought lowest. It was an âge which summed up all the faults of the past, of pilpul in the melody of the sanctuary, of intricacy, astounding ingenuity, and *ad captandum* virtuosity: the manner, not the matter, being ever considered. Emotionalism and novel effects, often of a ludicrous character, interested and even fascinated congregations whose synagogue was their only club, and whose manners at worship were almost those of schoolboys in the playground. The return stream westward from the Jewish districts of Poland had now set in. Young precentors traveled about from congregation to congregation, bringing new melodies, and also fortifying and unifying the old tradition. These wandering minstrels, journeymen of their craft, often brought with them apprentices, a vocal orchestra rather than a choir, designated "meshorerim" or song-makers. Their function was that of the youthful Levites who had stood below the platform of the singers in the Temple, to "give flavor to the song" ('Ar. 13b; comp. Yoma 38a). The ḥazzan now forced his voice to excess in a formless chant, full of repetition, all runs and turns and embroideries (comp. Güdemann, "Quellenschriften," pp. 85, 105, 118, 300)—bravura like the violin-playing of a Hungarian Gipsy rhapsodist, seeking to reenforce his tones by supporting the jaw behind the ear with his hand after the fashion of the London costermonger, or to get new effects by thrusting his thumb into his throat, an ancient practise known in the Temple (Yoma 38b) and illustrated on the Nineveh slab depicting the capture of Susa (comp. "Magen Abraham" on Oraḥ Ḥayyim, 97; Lewisohn, "Meḳore Minhagim," p. 3; "The Temple Choristers," in "Israel," v. 9, London, 1901). Meanwhile "singer" and "bass" stood at either hand: one a boy with clear treble; the other a man with deep, bourdon tones. By ear alone, improvising rather than following a prearranged harmony, they accompanied the ḥazzan, imitating the bees and the birds, simulating the tones of the flute, the bassoon, or the now obsolete serpent, and giving vent to an impetuous fancy in incoherent though melodious passages. Such a form of concerted synagogal music vigorously survives in Poland and Galicia, and is still to be heard in the ghettos of London and New York.

Early Choirs; "Singer" and "Bass."

BIRKAT KOHANIM (Rhineland Folk-Song)



Beginnings of the Modern Choir.

Men who, in advance of their brethren, sought to beautify the sanctuary with high and perfected art, dwelt in Italy at the commencement of the seventeenth century. E. Birnbaum has shown ("Jüdische Musiker am Hofe von Mantua, 1542–1628," Vienna, 1893) how many Hebrews then and there took part in artistic musical life. In 1622 Solomon de Rossi published at Venice his "Ha-Shirim Asher li-Shelomoh," being the first trained musician to labor with effect for the regeneration of the song of Zion, or to compose synagogal music on contrapuntal lines. He was thus the father of modern synagogal composers. Led by his keen and active sympathy, the artistically cultured Leon of Modena, himself the possessor of a sweet tenor voice, had already associated with other Italian rabbis in the issue of a pastoral letter (1605) advocating and authorizing the introduction of mensurate and polyphonic music into the synagogue (comp. S. Lipschütz in "Te'udat Shelomoh," p. 24; also the "She'elah u-Teshubah" prefaced to De Rossi's "Ha-Shirim").

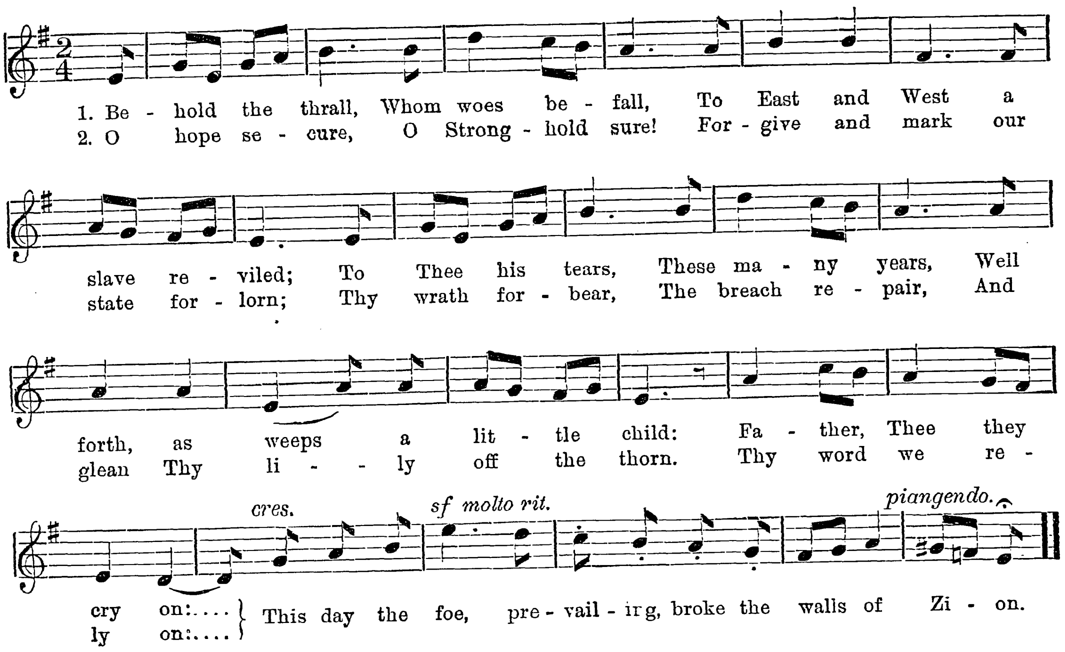
But little progress was made until the burst of the Jewish renascence in the early part of the nineteenth century. The Berlin community in 1824 saw the first establishment of the modern synagogal music (Zunz, "G. V." p. 461). The early reformers went perhaps too far in their modernization of the

Influence of Sulzer.

intonations and the choral portion alike (comp. Grätz, "Gesch." xi. 309, 412); but in due time the recoil corrected the errors of excess. Even Solomon Sulzer, the master of all modern workers in synagogal music, was a little inclined to iconoclasm in his purification and simplification of the traditional intonations. But his "Shir Ẓiyyon" (part i. produced in 1840; part ii. in 1865) set a high classical model alike for the old declamation, the old melodies, the traditional responses, and the modern settings of those sections of the service now allotted to the four-part choir. Modeling on the elaborate choral music of the Catholic Vienna of his day, he was yet so imbued with the traditional spirit, and so richly equipped with the traditional material, that he was able to create music which brought the ancient Oriental origins, the echoes of so many and so varied times, places, and manners, and the artistic outcome of the work of the great moderns into a noble homogeneity at once profoundly devotional and subtly dramatic. Maier Kohn in 1839 had already brought out for the Munich congregation the first modern handling of the old traditions; but it was the work of Sulzer which first penetrated the consciousness of Jewry and awoke the new harp of Judah. In 1843 H. Goldberg of Brunswick followed with a new effort, of great value in a fresh direction, in founding modern Jewish congregational singing, and showing how the synagogal music might attain to a refined and pure method even where the organization of a full-trained choir was impossible. The work was carried on by H. Weintraub in 1859, whose skill and judgment restored the traditional florid intonation to the importance it was well-nigh losing in face of the choral development (see the new edition of 1900). Moritz Deutsch of Breslau projected about the same time a companion to the seminary in the form of an institute for the training of cantors. His wide acquaintance with the old intonations and his extreme accuracy render his "Vorbeterschule" (1871) of particular value.

SHE'EH NE'ESAR

(Old German Folk-Song, Synagogal Version)



1. Be - hold the thrall, Whom woes be - fall, To East and West a slave re - viled; To Thee his tears, These ma - ny years, Well forth, as weeps a lit - tle child: Fa - ther, Thee they cry on:....
2. O hope se - cure, O Strong - hold sure! For - give and mark our state for - lorn; Thy wrath for - bear, The breach re - pair, And glean Thy li - - ly off the thorn. Thy word we re - ly on:....
This day the foe, pre - vail - ing, broke the walls of Zi - on.

piangendo.

A monumental exposition of the ḥazzan's art, uniting the old intensity with modern cultivated taste, was forthcoming in 1878 in the "Ba'al Tefillah, oder der Praktische Vorbeter" (revised ed. Frankfort-on-the-Main, 1883) of Abraham Baer of Gothenburg, in which he set forth the vocal expression of the entire Jewish liturgy according to the Ashkenazic use; blending Polish and German variants of the ḥazzanut with material for all passages not already consecrated by tradition. It is a collection of high historical as well as practical value.

Many, and often able, as have been the workers who have carried on in German lands the labor inaugurated by Sulzer, none was more eminent than L. Lewandowski. His fine presentation of traditional melody in his "Ḳol Rinnah u-Tefillah" (Berlin, 1870, 1883) was associated with valuable congregational material; and his "Todah we-Zimrah" (vol. i., 1876; ii., 1883) completed a noble choral presentment of the synagogal liturgy. This master did perhaps more than any other of the past generation to bring the modern renascence of synagogal music home to the ordinary congregant. His skilful utilization of traditional material in organ accompaniments is especially prized.

Transcribers and Composers.

Early work had been done in England, though not with the laborious thoroughness of the Germans. Isaac Nathan had written in 1815 and 1823 on synagogal music and had first presented "Hebrew Melodies" to the world. D. A. de Sola, in 1857, was first to utilize the hint of L. Dukes (in "Orient, Lit." x.) that synagogal music was a field to be cultivated from the historic standpoint. Together with E. Aguilar he set down the traditional airs of the Sephardim, with their rich element of Moresque and Spanish melody. In France S. Naumbourg produced in 1847 and again in 1863 his "Zemirot Yisrael," enshrining the simple but fascinating tradition of northern France and the Rheinland, leaving Provence and the Biscayan regions to more recent investigators (Crémieu, etc.). Naumbourg's work was at once valuable for the new material (upon which Meyerbeer and Halévy cooperated, as did Schubert and others of less note in Sulzer's) and for his labors in the field of the musical history of the older traditional melody. His influence secured for Paris an eclectic choir-book prepared by E. David, and so constructed as to form a musical companion to the prayer-book in the hands of choristers. This work prompted later the preparation by Cohen and Mosely in London (1887) of a handbook of synagogue music for congregants also, in which for the first time synagogal musicians appeared as editors only and not as composers. In 1899 the London handbook, revised by Cohen and Davis, on improved lines, sought to cover with wide choice the whole region of synagogal choral song in the "Voice of Prayer and Praise," invariably associating congregational responses with the traditional intonation of the ḥazzanut, and paying due regard to the tonic sol-fa notation taught in British elementary schools. A valuable presentment of the Italian traditional versions was published by F. Consolo in his "Libro dei Canti d'Israele" (Florence, 1892). Some melodies of the Turkish rite have been recorded (Löwit and Bauer, "Gottesdienstliche Gesänge," Vienna, 1889), as also some of the South-Russian tradition (Abrass and Nowakowsky, Odessa, 1893 and 1895). The field of the African and Asiatic uses remains untouched beyond their Scriptural cantillations.

A partial list of the more prominent composers and arrangers of modern synagogal music has been given in the article Ḥazzan (Jew. Encyc. vi. 287). A complete one, detailing every publication of synagogal music during the last fifty, or even thirty, years, would occupy considerable space, since the great majority of the precentors and choirmasters of the last generation have felt the impulse to compose and have prepared transcriptions of the old material or new renderings according to the ritual adopted by their congregations.

Instrumental Music.

Instrumental music is quite a modern feature in synagogal worship. Owing to the rabbinical "fence" which prohibited the use of an instrument on Sabbath and festivals because of the probability that it would require tuning or other preparation (comp. Shulḥan 'Aruk, Oraḥ Ḥayyim, 338, 339), it is still avoided by conservative congregations on those days. Much controversy has raged about this point (see Organ; Reform) in Jewish as in other communities. The earlier hesitation of the Church to adopt the organ because it was "a Jewish instrument" has been reproduced in the assumption of many Jews that it was specifically a Christian one. It is still banned by rigid adherents to old ways; but in ordinary conservative congregations it is unhesitatingly employed at weddings and other services on week-days.

An organ has been long a feature of the Alt-neu Schul at Prague. A new one was built there by a Jewish donor in 1716 (Zunz, "G. V." p. 476). Other instruments were more freely introduced in the past than was the organ. In the twelfth century Pethahiah of Regensburg saw them in use in Bagdad on the intermediate days of festivals. It was long ago deemed indispensable for players to be present at a Jewish marriage; and MaHaRIL (Jacob Mölln ha-Levi) is recorded to have led a wedding party outside the jurisdiction of magistrates who forbade their employment, before solemnizing the marriage (comp. Güdemann, "Gesch." p. 111; Abrahams, "Jewish Life in the Middle Ages," pp. 197, 255; Oraḥ Ḥayyim, 338, 2, and Isserles thereon). An orchestra or military band has frequently participated in the synagogue service. In 1837 the band of the Royal Horse Guards played during the dedication service of the New Synagogue, Great St. Helen's, London. More recently the orchestra has accompanied the singers in the prayers and praises also. The instrumental accompaniment is one of the finest features in the work of more recent synagogal musicians such as M. G. Löwenstamm (Munich, 1882).

Present Conditions.

Of the present state of synagogal music it may be said that medieval conditions still reign in the majority of synagogues. Moorish and Levantine congregations and the smaller ones of Russia, Poland, Galicia, Rumania, and even Great Britain and America, still exhibit the musical defects of the eighteenth century. But in the larger synagogues of those countries, as in central and western Europe generally, while the ḥazzan still retains his important functions, the traditional intonations have been simplified and purified through acquaintance with the classical style of the concert-room, and he is more a precentor than a solo vocalist. The four-part choir is usually composed of boys and men, more rarely of women and men, and is with more frequency relegated to a gallery as it comes rather under the direction of a technically trained musician as choirmaster than of the ḥazzan as general musical director. The choir almost everywhere now sings well-designed, harmoniously and expressively written, and adequately dignified music, the responses being more and more based on the traditional intonations. Psalms, versicles, and anthem-like pieces closely imitate the devotional music of Gentile neighbors; but the composers also frequently evince a desire to give utterance to a Jewish sentiment in the tones handed down from the past. In many of the synagogues of the United States there is no choir in the

European sense, its place being taken by a single or a double mixed quartet of selected singers, in which, strangely enough, Gentiles are permitted to be the majority of those appointed to lead Jewish worship. Yet even here the tendency is now evident to combine the fullest modern artistic resources with the essentially traditional material consecrated by ancient custom of which Lewandowski was the foremost exponent.

MUSRIM. See MUSARNIKES.

MUSSAFIA, ADOLF: Austrian Romance philologist; born at Spalato, Dalmatia, Feb. 15, 1835. At first intended for the medical profession, he became an instructor in Italian at the University of Vienna, 1855, and subsequently assistant professor of Romance philology there in 1860, and was raised to the position of ordinary professor seven years later, after he had become member of the Vienna Academy of Sciences in 1866. He has made a special study of the early Italian dialects, on which he has published "Monumenti Antichi di Dialetti Italiani," 1864, and also "Beiträge zur Kunde der Nord-Italischen Mundarten im 15. Jahrhundert," 1873. He has, besides, published a Catalan metrical version of the "Seven Wise Masters," 1876, and is the author of a very popular Italian grammar (24th ed., 1895). Mussafia, who has been converted to Christianity, is a member of the Austrian House of Lords.

S. J.

MUSSAFIA (MUSAPHIA), BENJAMIN BEN IMMANUEL: Physician and philologist of the seventeenth century, who in his Latin work on medicine calls himself **Dionysius**; born about 1606, probably in Spain; died at Amsterdam in 1675. In his earlier years he practised medicine at Hamburg, where his wife died in 1634, six years after their marriage. In memory of her he wrote his first work, "Zeker Rab" (Amsterdam, 1635; 2d ed., with Latin interlinear translation, Hamburg, 1638). In 1640 his "Sacro-Medicæ Sententiæ ex Bibliis" appeared at Hamburg, together with a letter on alchemy entitled "Me Zahab." A work on the ebb and flow of the tide, published two years later, was dedicated to King Christian IV. of Denmark (d. 1648), who appointed him his physician in ordinary, Mussafia living in this capacity at Glückstadt, Holstein. The polemic treatise of Senior Müller, a pastor of Hamburg, entitled "Judaismus oder Judenthum," published at Hamburg in 1644, alludes, although without mentioning his name, to Mussafia's attacks on representatives of the Christian religion (see Grätz, "Gesch." x. 24). Ten years later Mussafia records, as an incident of his sojourn at the Danish court, a conversation with the king and his courtiers concerning dolphins represented as sirens (see his "Musaf he-'Aruk," *s.v.* סרני, ed. Kohut, vi. 139b).

Mussafia, probably after Christian's death, went to Amsterdam, where he became a member of the college of rabbis. In the new edition of the "'Aruk" printed in that city in 1655, his supplements to Nathan b. Jehiel's work were published under the title "Musaf he-'Aruk," in which he explained the Greek and Latin words and also contributed much to the knowledge of the customs and conditions of Jewish life. In the preface to this work, to which he in great part owes his fame, he states that he had been collecting his material since his early youth.

He and his rabbinical knowledge were special objects of attack in the circular letter addressed in 1673 by Jacob Sasportas to R. Joshua de Silva of London (responsa "Ohel Ya'aḳob," No. 66). He was also one of those who shared in the enthusiasm for SHABBETHAI ẒEBI which filled all the Jews of Amsterdam; and he was the first to sign the eulogy which prominent members of the Portuguese community of that city addressed to that pseudo-Messiah in 1666, not knowing that Ẓebi had already embraced Islam.

Mussafia's first work, the "Zeker Rab," proved to be his most popular one. He recounts therein the history of the Creation in such a way that all the Hebrew roots of the Bible and most of their derivatives occur but once. This ingenious aid to a lexicographical knowledge of the Hebrew vocabulary has passed through many editions and revisions, including a Karaite adaptation (comp. the list of editions in Steinschneider, "Bibliographisches Handbuch," pp. 98 *et seq.*, and in Benjacob, "Oẓar ha-Sefarim," p. 156, to which must be added the edition by Willheimer, Prague, 1868). The additions to the "'Aruk," a large number of which are based on the lexicon of Buxtorf, although they contain much original matter, have been retained as a component part of the later editions, and they are specially indicated by Kohut in his "Aruch Completum." On the value of them see Rapoport, "Biographie des R. Nathan," p. 13 and notes 68, 69; Kohut, *l.c.* Introduction, pp. xlvi., lv.; Krauss, "Lehnwörter," i., p. xxxvii. Some sections of the "Zeker Rab" have been published in German by Fr. Delitzsch and Julius Fürst ("Orient, Lit." i., ii.). A commentary on Yerushalmi ascribed to Mussafia is mentioned by Michael.

D. W. B.

MUSSAFIA, ḤAYYIM ISAAC: Talmudist; born at Jerusalem 1760; died at Spalato, Dalmatia, June 10, 1837. He studied chiefly under David Pardo of Sarajevo, Bosnia, the author of numerous

Talmudic works; and he so rapidly progressed in his studies that he was recognized as a rabbinical authority while still a mere boy. At the age of seventeen he became rabbi of the congregation at Spalato, which position he held for sixty years, until his death.

Mussafia wrote: "Ḥayyim wa-Ḥesed" (published after his death by his children, Leghorn, 1840), discussions on Jacob ben Asher's Ṭurim; "Ḥiddushe Dinim" (*ib.* 1844), halakic discussions; "Derek Ḥayyim," sermons and ethical precepts; annotations to the commentaries of Rashi and to David Altschul's "Meẓudat Ẓiyyon" on the Pentateuch. The latter two works are still in manuscript.

His son **Jacob,** who succeeded him as rabbi of Spalato and edited the responsa of the Geonim (Lyck, 1864), died before 1864.

MYERS, ASHER ISAAC: English journalist; born in London 1848; died there May 11, 1902. After an early training in the clothing business Myers became in 1868 joint proprietor of "The Jewish Record." He left this in the following year to assist Michael Henry on "The Jewish Chronicle." On Henry's death he became business manager under Dr. Benisch, who took great interest in his training. Benisch, at his death in 1878, left Myers a part-proprietorship of the paper, and the latter became joint owner with Israel Davis and Sydney M. Samuel. From that time onward he was acting editor; and by his business ability, conservative management of the paper, and sound judgment he raised the paper to the foremost rank of Jewish journalism.

Myers was for some time assistant secretary of the board of guardians, and was also treasurer of the Jewish Workingmen's Club, which he helped to found in 1872. He belonged to several of the committees of the Anglo-Jewish Historical Exhibition, 1887, and was for some years treasurer of the Maccabæans. His house was a center of Jewish intellectual life in London.

J.

MYERS, MAURICE WILLIAM: American librarian; born in London, England, Feb. 18, 1821; died in Cincinnati, Ohio, Dec. 8, 1899. He emigrated to New York in 1833, and removed to Cincinnati in 1837. He first studied law and was admitted to the bar, but ultimately became sublibrarian of the library of the Cincinnati Law Library Association (1860), and then chief librarian (the following year). The library was burned on March 29, 1884, but chiefly through Myers' exertion the building was rebuilt, and at his death it contained 30,000 volumes, almost all selected by himself. His acquaintance with these volumes was extensive, and was much utilized by the lawyers of Cincinnati.

MYERS, WALTER: English physician and toxicologist; born 1871 at Birmingham; died Jan. 21, 1901, at Para, Brazil. He was educated at King Edward's High School, Birmingham, at Caius College, Cambridge, and at St. Thomas' Hospital, London. After taking his medical degree (1897), he studied under Ziegler at Freiburg, under Koch at Berlin, and under Ehrlich at Frankfort. He translated Ehrlich's work on the blood and its diseases, a subject to which he had especially devoted himself, having obtained the Walker scholarship at Cambridge for original pathologic research. In connection with the Liverpool School of Tropical Medicine he went to Brazil to study the causes of yellow fever, and in the course of his researches contracted the disease, from which he died, a martyr to science.

MYRTLE (*Myrtus communis* Linn.): An evergreen, aromatic shrub which flourishes in the spring and summer on hillsides and near watercourses. In the Bible it is mentioned definitely in the later books only (הדס, Isa. xli. 19, lv. 13; Zech. i. 8, 10, 11; Neh. viii. 15), although the Halakah explains the "boughs of thick trees" of Lev. xxiii. 40 as myrtle-boughs, and the "thick trees" of Neh. viii. 15 as wild myrtle (Suk. 12a; Yer. Suk. iii. 53d). The berries, which are not edible, are green at first, but when ripe become black, and are frequently closer together than the leaves (Suk. iii. 4; Babli 33a, b; Yer. Suk. 53c).

In the ritual this shrub was used in Biblical times during the Feast of Tabernacles. Two requirements were necessary in the material for the booths: (1) the wood of the boughs must be covered with leaves; (2) the leaves must look as if they were braided. The passage relating to the "branches of thick trees" (Neh. *l.c.*) was taken as requiring the boughs to resemble a hurdle-work of three strands (Sifra, Emor, 102d; Pesiḳ. 184b). R. Ishmael required the leaves to form triple verticils, while R. Akiba was satisfied with one. R. Kahana demanded two opposite leaves alternating with a single leaf, the so-called wild myrtle of Babylon. Still another variety was known in Babylon, the "miẓra'ah," either the Egyptian, although the myrtle is not indigenous in Egypt, or, less probably, the hedge-myrtle, which has seven whorls. In Babylon endeavors were made to cultivate the myrtle; for the Mishnah allowed the use of fresh shrubs only. Practical conditions later rendered this rule impossible, so that only such myrtle was forbidden as had leaves so dry as to crumble, and had changed from green to white without even a fresh green leaf at the tip.

Besides at the Feast of Tabernacles, the myrtle was used in the HABDALAH; for when incense fell into disuse the myrtle was substituted for it (Ṭur Eben ha-'Ezer, 62, end; Ṭur Oraḥ Ḥayyim, 297), although if this could not be had, sweet calamus, cinnamon, or nutmeg might be used (Coronel, "Zeker Natan," p. 28b; Abudarham, p. 57c).

The use of the myrtle is explained in several ways. At the end of the Sabbath the fire of hell, which has ceased during this day, again begins to burn; and its evil odor is dispelled by the perfume of this shrub (Tosef., Beẓah, 33b; "Or Zarua'," p. 48a; "Hekal ha-Ḳodesh," p. 46c). When the spirit of the Sabbath departs, it must be refreshed by the myrtle, in conformity with Isa. lv. 13 and lvi. 2 (comp. Zohar, ii. 204b, 208b; "Roḳeaḥ," p. 79b; Ṭur Oraḥ Ḥayyim, 297; Tosef., Pes. 102b; Tosef., Beẓah, 33b; "Manhig," p. 83b, No. 63). According to the Cabala, the oversoul vanishes; thus soul and spirit would be parted if the perfume of the myrtle did not unite them (Zohar, iii. 35a). This shrub is the one on which souls grow ("Tola'at Ya'aḳob," p. 27; "Shene Luḥot ha-Berit," p. 139b), and its three verticils symbolize the three patriarchs (Zohar, *l.c.*; "Tiḳḳunim," 3b).

At circumcision in Babylon, according to Kohen Ẓedeḳ, gaon of Sura, a decoction of myrtle and other fragrant spices was used; while at the redemption of the first-born it was a geonic custom to pronounce benedictions over wine and myrtle ("Sha'are Ẓedeḳ," iii. 11 *et seq.*, 22b; Ḳid. i. 41). At the marriage ceremony a dance with myrtle-branches was performed before the bridal pair, and the house was decked with myrtle and palm (Bacher, "Ag. Pal. Amor." iii. 36; Shab. 110a), while the groom wore a garland of roses or myrtle (Soṭah, 5b, 49b; Tosef. xv. 8). Over a coffin myrtle-boughs were spread (Rashi on Beẓah, p. 6a); and in paradise roses and myrtles bloom, so that the sanctified bear branches of the latter in their hands ("Perek Gan Eden," p. 26).

In the Haggadah the myrtle typifies God (Pesiḳ. 184a); Jacob or Leah, surrounded with children as the myrtle with leaves; the righteous of Israel; the three rows of pupils in the academy, like the triple verticil; and the eye, which is like a myrtle-leaf. Cabalistically the shrub typifies, with its three whorls, might, power, and glory. From an oven heated seven years with myrtle-wood a salamander arises (Lewysohn, "Z. T." p. 228).

R. Johanan declared that he who learns but teaches not is like a myrtle in the desert (Bacher, "Ag. Pal. Amor." i. 235). "The myrtle-trees that were in the bottom" in Zechariah's vision (Zech. i. 8–11) typify Israel in the depths of exile (Bacher, *l.c.* iii. 361), or Hananiah, Mishael, and Azariah at Babylon (*ib.* i. 307). There is a Talmudic proverb to the effect that when the myrtle strays among briers it abides in evil company (Sachs, "Stimmen," i. 229; Dukes, "Blumenlese," No. 108; Müller, "Jehudaj," p. 10).

The myrtle is represented on the coat of arms of the Abendana family; and in the Letter of Aristeas (§ 79) it is mentioned as engraved on golden bowls (Kautzsch, "Apokryphen," ii. 12).

E. C. I. Lö.

MYSH, MIKHAIL IGNATYEVICH: Russian jurist; born at Koretz, Volhynia, Jan. 2, 1846; educated at the Jewish government school of his birthplace, at the school of the nobility in Ostrog, and at the gymnasium of Jitomir, from which he graduated with a gold medal in 1867. He studied law at the University of Kiev, from which he graduated in 1871, and then settled in St. Petersburg, where he is still (1904) practising law.

After the anti-Jewish riots of 1881 Mysh interested himself in the condition of the Russian Jews, and as a result of his investigations he published a series of monographs on their legal status. His main work in this connection is "Rukovodstvo K Russkomu Zakonodatelstvu o Yevreyakh" (2d ed., St. Petersburg, 1899). Among his general works on Russian legislation the following deserve special mention: "Gorodovoye Polozhenie" (on city ordinances), which has passed through fourteen editions, and "Polozhenie Zemokikh Uchrezhdeniyakh" (on the legal status of the county assemblies), now in its seventh edition.

His son **Vladimir Mysh** is professor of surgery at the University of Tomsk. H. R.

MYSTICISM. See CABALA; SODE HA-TORAH.

N

NAAMAH (נעמה): **1.** Daughter of Lamech and Zillah and sister of Tubal-cain (Gen. iv. 22). According to Abba b. Kahana, Naamah was Noah's wife and was called "Naamah" (pleasant) because her conduct was pleasing to God. But the majority of the rabbis reject this statement, declaring that Naamah was an idolatrous woman who sang "pleasant" songs to idols (Gen. R. xxiii. 4).

2. An Ammonitess; one of Solomon's wives and mother of Rehoboam (I Kings xiv. 21, 31; II Chron. xii. 13). In the second Greek account (I Kings xii. 24) Naamah is said to have been the daughter of Hanun (Ἀνα), son of Nahash, a king of Ammon (II Sam. x. 1–4). Naamah is praised, in B. Ḳ. 38b, for her righteousness, on account of which Moses had previously been warned by God not to make war upon the Ammonites (comp. Deut. ii. 19), as Naamah was to descend from them.

3. A town of Judah, mentioned with Gederoth, Beth-dagon, and Makkedah (Josh. xv. 41). It may be that Zophar the Naamathite (Job ii. 11) was a native of this town. Naamah is identified with the modern Na'nah, a small village six miles south of Lydda ("Memoirs of the Survey of W. Palestine," ii. 408).

E. G. H. M. SEL.

NAAMAN (נעמן).—1. Biblical Data: Syrian general whose miraculous recovery from leprosy is told in II Kings v. The name, meaning "pleasantness," is held by Lagarde to represent Adonis, on the assumption that נטעי נעמנים (Isa. xvii. 10) means "the plantings of Adonis." Naaman was a distinguished general who had often led the Syrians to victory. Stricken with leprosy, he was advised by a captive Israelitish maiden that the prophet Elisha could cure him. Naaman accordingly asked the Syrian king's permission to go to him, but the king, misunderstanding the words of the captive maiden, gave Naaman a letter to the King of Israel requesting him to cure Naaman of his leprosy. The latter was troubled by the Syrian king's message, and Elisha advised him to send Naaman to him. Arrived at Elisha's door, Naaman received word from Elisha that if he would bathe seven times in the Jordan he would be cured. Naaman was greatly disappointed, as he had expected that the prophet would meet him in person and implore Yhwh to cure him, but his servants persuaded him to follow Elisha's behest, with the result that he was completely restored to health. He then returned with his retinue to Elisha, before whom he acknowledged Yhwh as his God and asked for two mules' burden of Israelitish earth that he might build an altar to Yhwh. Naaman also sought forgiveness of Yhwh for his involuntary adoration of the Syrian divinity Rimmon through the act of his master in leaning upon him during his devotions. See also Gehazi.

E. G. H. M. Sel.

——**In Rabbinical Literature:** According to the Rabbis, Naaman was the archer who drew his bow at a venture and mortally wounded Ahab, King of Israel (I Kings xxii. 34). This event is alluded to in the words "because by him the Lord had given deliverance unto Syria" (II Kings v. 1), and therefore the Syrian king, Naaman's master, was Ben-hadad (Midrash Shoḥer Ṭob to Ps. lx.; Arama, "'Aḳedat Yiẓḥaḳ," ch. lxi.). Naaman is represented as vain and haughty, on account of which he was stricken with leprosy (Num. R. vii. 5; comp. Arama, *l.c.*). Tanḥuma, Tazria' (end), however, says that Naaman was stricken with leprosy for taking an Israelitish maiden and making her his wife's servant (comp. II Kings v. 2). Naaman is understood as Moab in the expression "Moab is my washpot" (Ps. lx. 8), which the Rabbis regard as an allusion to Naaman's bathing in the Jordan; the appellation "Moab" is a play on the word "abi" (= "my father"), by which Naaman was addressed by his servants in II Kings v. 13 (Num. R. xiv. 4). Naaman was a "ger toshab," that is, he was not a perfect proselyte, having accepted only some of the commandments (Giṭ. 57b; Deut. R. ii.). The Mekilta (Yitro, 'Amaleḳ, 1), however, places Naaman's conversion above Jethro's.

W. B. M. Sel.

——**Critical View:** As the object of the narrative of Naaman's sickness and restoration to health is, apparently, to form a link in the long series of miracles performed by Elisha, the redactor of II Kings did not concern himself to indicate the time when this event occurred. The rabbinical tradition that Naaman was the archer (I Kings xxii. 34) who mortally wounded Ahab seems to have been adopted by Josephus ("Ant." viii. 15, § 5). If the tradition is correct, the Syrian king whom Naaman served must have been Ben-hadad II.; but as the interval between the death of Ahab and the curing of Naaman's leprosy is not known, it is impossible to identify the King of Israel to whom Naaman was sent with a letter. Ewald ("Gesch." iii. 552 *et seq.*) thinks the king referred to was Jehoahaz, while Schenkel ("Biblical Lexicon") suggests Jehu, but the general view is that it was Jehoram. The passage ("because by him the Lord had given deliverance unto Syria," II Kings v. 1) upon which the identification of Naaman with Ahab's slayer is based by the Rabbis is referred by G. Rawlinson, however (in the "Speaker's Commentary"), to the Syrian triumph over Shalmaneser II. (comp. Rawlinson, "Ancient Monarchies," ii. 344, 361).

The request of Naaman to be permitted to carry away two mules' burden of Israelitish earth for the purpose of erecting upon it an altar on which to offer sacrifices to Yhwh, reflects the belief of those days that the god of each land could be worshiped only on his own soil. The expression "So he departed from him a little way" (כברת ארץ; II Kings v. 19) seems to contradict the assertion of Naaman's intention to return to Syria with the two loads of earth. The word כברת is transliterated in the Septuagint (Vatican) *δεβραθα* and (Lucian) *χαβραθα*, while the Alexandrian codex has *καὶ ἀπῆλθεν ἀπ' ἀυτõν ἀπό τῆς γῆς 'Ισραηλ*, apparently reading וילך מאתו מארץ ישראל. Klostermann ("Die Bücher Samuelis und der Könige"), while supplying, with the Alexandrian codex, the word ישראל, connects this passage with Naaman's departure with the loads of earth, and renders the passage וילך מאתו ככר מארץ ישראל as "and he carried away from him about a cor of the earth of Israel."

2. Sixth son of Benjamin; he accompanied Jacob into Egypt (Gen. xlvi. 21, 26); or, according to Num. xxvi. 40 and I Chron. viii. 3–4, a son of Bela and consequently grandson of Benjamin and founder of the family of the Naamites.

E. G. H. M. Sel.

NAAR, ISAAC: Ḥakam, and, according to De Barrios, physician of the seventeenth century; born at Amsterdam; studied with Moses Zacuto and Baruch Spinoza under Saul Levi Morteira at the Talmud Torah 'Eẓ Ḥayyim, where he subsequently taught. A devoted follower of Shabbethai Ẓebi, he prepared for a journey, in company with Abraham Pereyra, to the pseudo-Messiah, and ironically announced his intention to Shabbethai's opponent, R. Jacob Sasportas. About 1666 he took charge of the rabbinate of Leghorn, which had been offered to Sasportas, but which, on the selfish advice of Naar, he had declined. According to De Barrios, who valued him highly as a man of like opinions with himself, Naar wrote the otherwise unknown "Reglas del Din."

It is doubtful whether Naar is identical with the physician **Isaac Naar,** author of "Discurso Sobre la Christiandad" (Amsterdam, 1713).

D. M. K.

NAASITES. See Ophites.

NABAL (lit. "fool"): Calebite noble who appears in one of the incidents which marked David's wanderings (I Sam. xxv.). Nabal was a man of great wealth and possessed numerous flocks; but he was of a niggardly and churlish disposition and was referred to as "a man of Belial." His great possessions were in Carmel, though he lived in Maon, and his wife Abigail is styled a Carmelitess (*ib.* xxvii. 3; in the Septuagint [xxv. 5] Nabal himself is called a Carmelite). Josephus, however, calls him ("Ant." vi. 13, § 6) a Ziphite (comp. I Sam.

xxvi. 1). David, having been informed that Nabal was shearing his sheep, sent ten of his men to Nabal with greetings, with the understood purpose of securing from the latter some payment in return for protecting his sheep while grazing. Nabal, however, not only refused to acknowledge the service, but returned an offensive answer, implying that David was a rebellious slave (*ib.* xxv. 5–11). David was on his way to punish Nabal for his conduct when he met Abigail, who pacified him and paid tribute to him. During that night Nabal drank and became intoxicated, and when on the following morning Abigail told him of the great danger he had escaped and of the gift she had given to David he was thrown into a fit and died ten days later (*ib.* xxv. 18–38).

E. G. H. M. SEL.

NABATÆANS: Semitic tribe or group of tribes which overran the ancient Edomite country and established a kingdom which extended from Damascus on the north to Hegra (Al-Hajr) on the south. Their power at one period was felt in central Arabia as far east as Al-Jauf. They also occupied the Sinaitic Peninsula. The capital of their kingdom was Petra, the Selah of the Old Testament (comp. II Kings xiv. 7). The Nabatæans were in possession of some of this country as early as 312 B.C.; for Antigonus, and afterward his son Demetrius, tried in vain to conquer them (Diodorus Siculus, ed. Dindorf, book xix., ch. xcv., xcvi., c.). At the time of the Maccabean struggle Judas and Jonathan, the sons of Mattathias, had relations with them (comp. I Macc. v. 25, ix. 35). It is probable that they had begun to overrun this country a century and a half earlier than this, and that they are alluded to in Malachi i. 2–4. Their occupation of Edom forced the Edomites up into southern Judah, causing the former inhabitants of Seir to occupy the Judean cities. It thus happened that in the Maccabean period Hebron was an Edomite city, the Judean border town on the south being Beth-zur.

Not Identical with Nebajoth.

It was formerly thought that the Nabatæans were identical with the Nebajoth of Gen. xxv. 13, and with the Na-ba-a-a-ti of the annals of Assurbanipal; but Glaser has shown ("Skizze der Gesch. und Geographie Arabiens," ii. 418 *et seq.*) that the two were distinct. The name of the Nabatæans was spelled with a ט; that of the Nebajoth, with a ח. According to R. Judah b. Hai the Nabatæans are to be identified with the Kadmonites of Gen. xv. 19 (Yer. Sheb. vi. 1).

A large number of inscriptions of the Nabatæans have been recovered (comp. "C. I. S." part 2, vol. i., pp. 183–486). They are written in the Aramaic language. The Nabatæans were, therefore, either of Aramaic extraction or Arabs who had come under Aramaic influence. Their inscriptions are for the most part funerary ones, and contain little historical material beyond the names of kings and the years of their reigns.

The commerce of the Nabatæans was very important. Caravans passed from Egypt and Gaza through Petra to central Arabia and even to Babylonia. Many other avenues of trade were opened by them. Some idea of their commercial enterprise may be gained from the fact that a colony of Nabatæans established themselves at Puteoli, an Italian port, where they existed in sufficiently large numbers to erect and maintain for more than fifty years a temple to their native deity (comp. G. A. Cooke, "North Semitic Inscriptions," pp. 256 *et seq.*). For this trade a coinage was developed as early as the second century B.C. (comp. Head, "Historia Nummorum," pp. 685 *et seq.*). These coins bear the names of the following rulers: Malchus I. (Maliku), *c.* 145 B.C.; Obodas I. (Obodath), *c.* 97–85; Aretas III. (Haretath Melek Nabaṭu), *c.* 85–62; Obodas II. (Obodath Melek Nabaṭu); Aretas IV. (Haretath), 2–50 C.E.; Malchus III., 50–70; and Rabel, 70–95. Alexander Jannæus, Hasmonean king of Judea, took some trans-Jordanic cities from Obodas I. and struck coins in them.

During the early part of the first century B.C. the Nabatæans controlled the country from the Arnon to Damascus. During the latter part of that century they lost the Hauran and Peræa to Herod, though they retained a line of fortresses, like Salchah (Salchad) on the edge of the desert, as Aramaic inscriptions show. These fortresses connected their southern dominions with the region around Damascus, over which they still held a protectorate. In the time of Augustus the Nabatæan kingdom, like the Judean, became dependent on Rome. Most of the extant dated Nabatæan inscriptions come from Aretas IV., Malchus III., and Rabel, kings of this period. It was this Aretas (Haretath) whose daughter was divorced by Herod Antipas in favor of the beautiful Herodias (Josephus, "Ant." xviii. 5, § 1; Matt. xiv. 3 *et seq.*), and during whose rule Paul made his escape from Damascus (II Cor. xi. 32). As allies of the Romans the Nabatæans furnished aid to the army of Titus during the siege of Jerusalem (Josephus, *l.c.* xvii. 10, § 9).

Under Trajan the Romans terminated the Nabatæan kingdom, erecting the nearer portions of it into the Roman province of Arabia. Teima, Hegra, Al-Jauf, and other parts of the Nabatæan dominions in the interior of Arabia were then abandoned by the Romans.

NABLUS. See SHECHEM.

NABON or **NAVON:** Turkish family which, from the seventeenth century onward, produced several rabbinical writers. It had several branches, of which one was at Jerusalem and another at Constantinople.

Benjamin Nabon: Rabbinical writer; was living in Jerusalem at the beginning of the nineteenth century. He was the author of "Pi-Shenayim" (Salonica, 1806), novellæ to Jacob ben Asher's Ṭurim, and "Bene Binyamin" (Jerusalem, 1807), responsa, published by his stepson Jacob Saul Elyashar with the latter's "Ḳereb Ish."

Ephraim ben Aaron Nabon: Rabbinical author; born at Constantinople; died there 1735. At the age of ten he was sent by his parents to study in Jerusalem. Later, when delegated to Constantinople as solicitor of alms for the poor of Jerusalem, he was honored with the title "Rab." He married the daughter of the wealthy Judah Ergas of Constantinople. Nabon was the author of "Mahaneh Efrayim" (Constantinople, 1738), a collection of responsa.

Hanun Nabon: Rabbinical writer; lived in Jerusalem in the seventeenth and eighteenth centuries. He is the earliest known member of this family. He wrote a volume of sermons which the bibliographer Azulai saw in manuscript.

Isaac Nabon: Turkish rabbinical writer; born in Constantinople 1733; died at Jerusalem 1787; son of Judah Nabon. He left a work entitled "Din 'Emet," which was published (Salonica, 1803) posthumously; it contains novellæ on Jacob ben Asher's Ṭurim and on Joseph Caro's commentary on that work.

Jonah Nabon: Rabbinical writer; born at Jerusalem 1713; died there 1760; son of Hanun Nabon. He was celebrated for his Talmudic and cabalistic learning, and was the teacher of Ḥayyim Joseph David Azulai. Nabon wrote several works, of which only two have been published, namely: "Neḥpah ba-Kesef" (vol. i., Constantinople, 1748; vol. ii., Jerusalem, 1843), responsa; and "Geṭ Meḳushshar," on divorce, in the form of a commentary on "Geṭ Pashuṭ," a work on the same subject by Moses ibn Ḥabib.

Jonah Moses Nabon: Chief rabbi of Jerusalem, succeeding Sozin in 1836; died 1840. He was a grandson of Jonah Nabon. He wrote a short work, published together with his grandfather's "Neḥpah ba-Kesef." He was the first chief rabbi of Jerusalem to be given the title "Rishon le-Ẓiyyon."

Bibliography: Hazan, *Ha-Ma'alot li-Shelomoh*, p. 47.

Judah Nabon I.: Turkish rabbinical writer; born at Constantinople; died there 1762; son of Ephraim Nabon. He was the author of "Ḳiryat Melek Rab" (vol. i., Constantinople, 1751; vol. ii., *ib.* 1765), containing notes on Maimonides' "Yad ha-Ḥazaḳah," and responsa.

Judah Nabon II.: Chief rabbi of Jerusalem from 1841 to 1842.

D. M. Fr.

NABOPOLASSAR. See Nebuchadnezzar.

NABOTH (lit. "fruits" or "height"): Jezreelite of the time of Ahab, King of Israel; owner of a small plot of ground near Jezreel (II Kings ix. 21, 25-26) and of a vineyard contiguous to Ahab's palace at Jezreel (I Kings xxi. 1); the Septuagint reads, "a vineyard hard by the thrashing-floor of Ahab, King of Samaria," without indicating its situation. Ahab desired the vineyard for a garden of herbs and proposed to buy it from Naboth or give him a better one in exchange. Naboth, however, refused to part with the vineyard on the ground that it was the inheritance of his fathers. It seems that Ahab would have abandoned his purpose, but his wife Jezebel took the matter into her own hands. Writing in Ahab's name to the elders and nobles of Naboth's city, probably Samaria, she ordered them to proclaim a solemn fast and set Naboth on high among the people; then two wicked men were to testify that Naboth had cursed God and the king, the punishment for which was stoning. Jezebel's order was executed to the letter, and Naboth having been stoned, Ahab took possession of the vineyard (I Kings xxi. 1-16). It seems from II Kings ix. 26 that Naboth's sons perished with their father, probably being killed soon afterward by order of Jezebel in order that they might not claim the vineyard as their inheritance. The execution of Naboth took place outside the city, where the dogs licked up his blood (I Kings xxi. 13, 19), according to Josephus ("Ant." viii. 15, § 6), at Jezreel (see Jezebel; Jezreel).

E. G. H. M. Sel.

NADAB (lit. "liberal"): **1.** Eldest son of Aaron and Elisheba; one of the leaders of the children of Israel who went with Moses to Sinai and "saw the God of Israel" (Ex. vi. 23; xxiv. 1, 9 *et seq.*; Num. iii. 2, xxvi. 60; I Chron. v. 29 [A. V. vi. 3], xxiv. 1). Nadab was consecrated to the priesthood with his three younger brothers, but on the very day of his consecration he and his brother Abihu perished for having offered "strange fire" (Ex. xxviii. 1; Lev. x. 12 *et seq.*; Num. iii. 4, xxvi. 61; I Chron. xxiv. 2). See Abihu in Rabbinical Literature.

2. King of Israel; son of Jeroboam; reigned over Israel two years. He was an idolater, following the cult established by his father, Jeroboam. He was assassinated by Baasha while besieging the Philistine town Gibbethon. With him terminated the dynasty of Jeroboam; for Baasha, after having slain Nadab, put to death the remainder of the royal family (I Kings xiv. 20, xv. 25-29).

3. Descendant of Jerahmeel, the son of Hezron and head of a Jerahmeelite family (I Chron. ii. 28, 30, 33).

4. Benjamite, of the family of Gibeon (I Chron. viii. 30).

E. G. H. M. Sel.

NADSON, SIMON YAKOVLEVICH: Russian poet; born at St. Petersburg Dec. 26, 1862; died at Yalta Dec. 31, 1886. His father was a Jew who had entered the Greek Orthodox Church; his mother, Antonina Stepanovna, was a poetess and a member of a noble family. He studied first at the classical, then at the military high school, his studies including music. After graduating from the military academy at St. Petersburg, he was given a commission in the regiment stationed at Cronstadt. In 1883 he was stricken with tuberculosis; he went abroad in search of health, but returned to Russia, and died at Yalta, his death being hastened by the persecution to which he was subjected on account of his Jewish origin. Among his persecutors was the editor of the "Novoe Vremya." His poems, marked by somberness of tone, and his essays were published in two volumes in 1898 at St. Petersburg.

H. R. A. S. W.

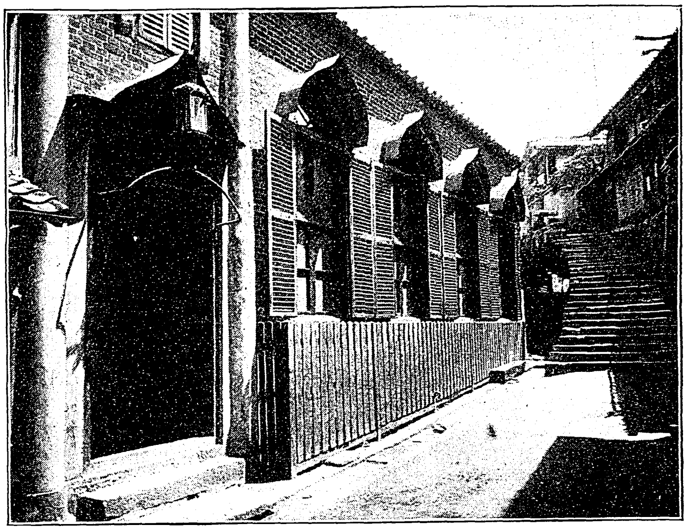
NAGAR. See Najara.

NAGARI, MOSES BEN JUDAH: Philosophical writer. According to Steinschneider, he lived at Rome about 1300, and his name should be read "Na'ar" (נער), he being of the Ne'arim family ("Adolescentoli"). He wrote "Ma'amar ba-Ma'areket," an index to Maimonides' "Moreh Nebukim," and explanations of philosophical terms, printed, together with Saul Cohen's philosophical questions on the "Moreh" addressed to Isaac Abravanel, at Venice in 1574. This being considered a fragment of a collective work on the "Moreh," it was erroneously called "Ḳeẓat Bi'ure ha-Moreh."

Steinschneider has pointed out the mistakes made concerning this author. Dukes in "Allg. Zeit. des Jud." 1840, p. 156, corrupts his name into "Nagara," and in "Orient, Lit." 1845, p. 617, into "Najara." Wolf in "Bibl. Hebr." i. 852, No. 1562, calls him "Moses ben Judah Nigdi," but *ib.* iii. 758, No. 1562, "Nagara" and "Nagari." *Ib.* iii. 795, No. 1610, he confounds him with Moses ben Levi Najara, as does Fürst in "Bibl. Jud." iii. 13; and both erroneously ascribe to him Moses ben Levi's work "Leḳaḥ Ṭob."

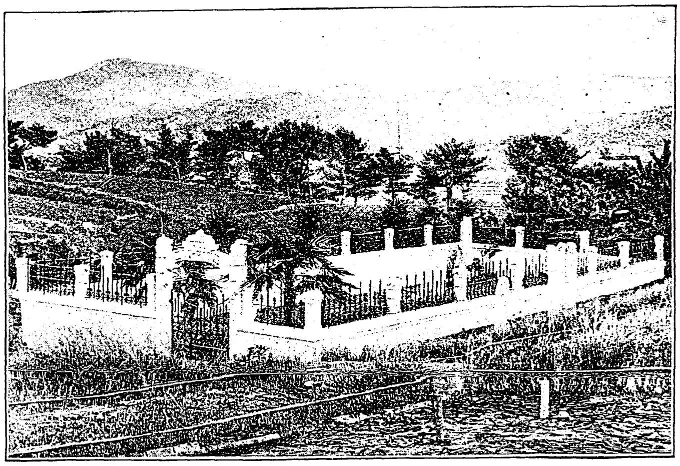
Bibliography: Benjacob, *Oẓar ha-Sefarim*, p. 282, No. 204; p. 554, No. 33; Steinschneider, *Cat. Bodl.* col. 1834.

D. S. Man.



Beth Israel Synagogue, Nagasaki, Japan.
(From a photograph.)

NAGASAKI: Commercial seaport in the ken of the same name, Japan. Of its Jewish community most of the members emigrated from Russia. In the year 1894 a synagogue (Beth Israel) was founded by R. H. Goldenberg with the cooperation of S. D. Lessner. The latter had shortly before, with the assistance of M. Ginsburg, bought a plot for a Jewish cemetery. Goldenberg, it may be incidentally mentioned, married a Japanese widow, who, together with her two sons and one daughter, has embraced Judaism. Recently (1904) two Christians embraced Judaism of their own accord.



Jewish Burial-Ground, Nagasaki, Japan.
(From a photograph.)

In 1901 a Jewish benevolent society was founded to provide aid for poor Jews at home and abroad. S. D. Lessner, the founder of the institution, is its president. About 1902 a branch of the Anglo-Jewish Association was formed in Nagasaki, Lessner being unanimously elected president and K. Eisenstark honorary treasurer. The Nagasaki Jews number about 100 in a total population of 107,422.

NAGAWKAR, BENJAMIN SHALOM: Beni-Israel soldier; born at Bombay before 1830. He enlisted in the 25th Regiment Bombay Native Light Infantry July 1, 1848; was made jemidar Jan. 1, 1868; subahdar Jan. 1, 1873; and subahdar-major April 15, 1879. Nagawkar was present at the siege and capture of the fort of Dhar, the action of Mundisur, the battle of Guraria, the siege of the fortress of Chundairee, Jhansi, the battle of the Betwa, the action at Koonch, the capture of Calpee, the action at Moorar, and the capture of Gwalior (obtaining medal and clasp). He served throughout the Abyssinian campaign (for which he gained the service medal), and retired Aug. 7, 1881.

J. J. Hy.

NAGAWKAR, SAMUEL MOSES: Beni-Israel soldier; born at Bombay about 1810. He enlisted in the 10th Regiment Native Infantry Oct. 1, 1832. He was on foreign service at Aden from 1840 to 1844, served in the southern Mahratta war in 1844 and 1845 and in the campaign in Central India, and was present at Kotah, Padoon, Chanderi, the Serai, Gwalior, Pawrie, Bijapur, Koodeye, Jhansi, and Khaira in

1858 and 1859. Nagawkar went through the Abyssinian campaign of 1867 and 1868, and retired Dec. 28, 1871.

J. J. Hy.

NAGDELA (NAGRELA), ABU ḤUSAIN JOSEPH IBN: Spanish statesman; born about 1031; died Sept. 30, 1066; son of Samuel ibn Nagdela. A highly educated and clever man, he succeeded his father as vizier and as rabbi of the community of Granada, directing at the same time an important school. Arabic chroniclers strangely relate that he believed neither in the faith of his fathers nor in any other faith. It may also be doubted that he openly declared the principles of Islam to be absurd (Dozy, "Geschichte der Mauren in Spanien," ii. 301). Devoted to learning, he aided many students, *e.g.*, Isaac ben Baruch ibn Albalia, the Talmudist, and the poet Isaac ibn Ghayyat. Arabic poets also praise his liberality.

In contrast to his father, Joseph was proud and haughty. He completely ruled King Badis, who was nearly always drunk, and surrounded him with spies, who reported every word of the king. Holding the reins of government, he appointed his coreligionists to public offices with such frequency as to attract attention. He was also accused of several acts of violence. These things combined to draw upon him the hatred of the Berbers, who were the ruling majority at Granada. The most bitter among his many enemies, Abu Isḥaḳ of Elvira, a fanatical Arabic poet whose hopes of obtaining an office at court had been frustrated by Joseph, wrote a malicious poem against him and his coreligionists. This poem made little impression upon the king, who trusted Joseph implicitly; but it created a great sensation among the Berbers. They spread a report to the effect that Joseph intended to kill Badis, and to deliver the realm into the hands of Al-Mu'taṣim of Almeria, with whom the king was at war; then, killing Al-Mu'taṣim in turn, to seize the throne himself. This calumny was made the pretext for disgracing Joseph and plundering the Jews. The mob stormed the royal palace, where Joseph had sought refuge at the beginning of the riot, hiding in a coal-pit, and having blackened his face so as to make himself unrecognizable. He was, however, discovered and killed, and his body was hanged on a cross. Most of the Jews of Granada also perished. Joseph's wife, a daughter of R. Nissim ben Jacob, fled to Lucena with her son **Azariah,** where she was supported by the community. Azariah died in early youth.

Nothing is known of Joseph's literary work. On the letter to R. Nissim ascribed to Joseph, see Kaufmann in Berliner's "Magazin," 1882, p. 8.

NAGDELA, SAMUEL IBN. See Samuel ha-Nagid.

NAGID. See Egypt.

NAGY-KANIZSA (called also **Gross Kanizsa**): Hungarian town, in the county of Szalad. The antiquity of its disused cemetery, which dates back to the end of the seventeenth century, is the only index to the period of the first settlement of the Jews in Nagy-Kanizsa. This cemetery was closed in 1784, when the one now in use was opened. The synagogue was dedicated in 1821, and the school established in 1831. The congregation was very small until about 1840, since which date it has grown considerably. The Nagy-Kanizsa community is one of the most progressive in Hungary; its services have been modernized through the influence of Leopold Löw, and a modern school has been established, which had 300 pupils in 1843 and 600 in 1863. Since 1890 it has been recognized by the government as a public high school. The charitable and social organizations maintained by the congregation are numerous and well endowed; a list of them is given in "Ben Chananja" (i. 235-237). Up to 1868 the Jews were excluded from the principal club of the city, the Casino, but they have become so influential that at present (1904) a Jew, Leopold Elek de Ujnép, is its president. During the height of the anti-Semitic movement in Hungary the town was the scene of a riot (June 18, 1887), during which a Jewish railroad conductor named Gottreich was mortally wounded.

Among the rabbis of Nagy-Kanizsa were I. Ch. Jorin (1764–1804), Meïr Szantó (father of Simon Szantó), Isaac Samuel Löwy, Leopold Löw (1840–1846), and Hirsch Bär Fassel (1852–82); the present incumbent is Edward Neumann (since 1882), the first graduate of the Budapest rabbinical seminary. Ludwig Lichtschein (later rabbi of Austerlitz and Csurgo) was assistant rabbi from 1865 to 1868, and Leon Kartschmaroff has been cantor of the congregation since 1865. Among the scholars who have lived in Nagy-Kanizsa were Dr. Moritz Horschetzky and Josef Loewy (Hebraist and contributor to Jewish periodicals, notably to "Neuzeit"; b. Frauenkirchen 1809; d. Nagy-Kanizsa Feb. 1, 1882). The names of Heinrich Guttmann de Gelse, merchant and manufacturer, and leader in Jewish communal affairs, and of the banker Leopold Elek de Ujnép (ennobled 1904) are identified with the town. Nagy-Kanizsa has a population of 23,778, about 3,653 of whom are Jews.

NAHARAIM. See Aram-naharaim.

NAHASH (נחש = "serpent"): **1.** King of the Ammonites. At the beginning of Saul's reign Nahash attacked Jabesh-gilead, and when the people of that place asked for terms of surrender he gave them the alternatives of having their right eyes thrust out or of being put to the sword. The inhabitants of Jabesh-gilead then obtained a respite of seven days and sent messengers to Saul, who assembled an army and routed the Ammonites (I Sam. xi. 1-4, 11). It appears, however, from I Sam. xii. 12, that Nahash had threatened the Israelites before Saul was made king, and that it was for this reason the Israelites insisted upon having a king. According to Josephus ("Ant." vi. 5, § 1), Nahash was in the habit of putting out the right eye of every Israelite that came into his power. Nothing more is told of Nahash until his death is mentioned; this occurred in the beginning of David's reign and was the occasion of David's message of condolence to Hanun, Nahash's son and successor (II Sam. x. 1-2). Nahash had shown kindness to David; it is not stated what that kindness was, but there is a tradition that when David entrusted his family to the King of Moab (comp. I Sam. xxii. 3–4) the latter slew the entire family, with the exception of one of David's brothers, who escaped and found asylum with Nahash (Tan., Wayera, 25). Jerome ("Quæstiones Hebraicæ," on II Chron. xix. 2) suggests that David's sympathy was due to the fact that he and Nahash were common enemies of Saul. If the statement of Josephus ("Ant." vi. 5, § 3) is true, that Nahash was slain when the Ammonites were routed by Saul, the Nahash whose death David lamented must have been a different person.

2. Father of the Ammonite Shobi who took provisions to David during the latter's flight before Absalom (II Sam. xvii. 27–29). Ewald ("Gesch." iii. 250) thinks that Shobi was a member of the royal family of Ammon whom David had spared when he captured Rabbah, the capital of Ammon, and that consequently Nahash was not a king of Ammon.

3. A name mentioned once only, in II Sam. xvii. 25, in connection with the parentage of Amasa, who was the son of Ithra and whose mother was Abigail, daughter of Nahash and sister of Zeruiah. As Abigail and Zeruiah are given in I Chron. ii. 16 as sisters of David, three assumptions are possible. According to the Rabbis, Nahash must be identified with Jesse, who was called "Nahash" because, being himself sinless, he died in fulfilment of the sentence of death upon all humanity consequent upon the temptation of the serpent (Shab. 55b). The alternatives to this are that "Nahash" was the name of Jesse's wife, or that Nahash was Jesse's wife's first husband; in the latter case Abigail and Zeruiah were David's sisters only on their mother's side.

Some modern scholars think that the same individual is referred to in all these cases. If the statement of Josephus ("Ant." vi. 14, § 9) is correct, that Saul reigned forty years, Nahash, who was reigning before Saul's accession to the throne, must have lived to be very old. Further, it is possible also that Shobi was the son of the King Nahash who had shown kindness to David, and that, unlike his brother Hanun, Shobi cherished the same sentiment toward David. This latter view is supported by some of the rabbis, who identify Shobi with Hanun (Yalḳ., II Sam. 151). Stanley ("History of the Jewish Church," ii. 50) assumes that Nahash, king of the Ammonites, was Abigail's father by a wife or a concubine who afterward became Jesse's wife. Wellhausen ("Text der Bücher Samuelis," p. 201), however, thinks that the נחש of II Sam. xvii. 25 is a copyist's mistake for ישי, introduced from בן נחש in verse 27 of the same chapter.

E. C. M. SEL.

NAHAWENDI, BENJAMIN. See BENJAMIN BEN MOSES NAHAWENDI.

NAḤMAN BEN ḤAYYIM HA-KOHEN: French tosafist; flourished toward the end of the twelfth century. As Gross concludes from "Ḳol Bo" (ed. Venice, 1562), No. 101, Naḥman was the son of Ḥayyim ben Hananeel ha-Kohen. He was the author of "Sefer Naḥmani," which Joseph Colon quotes (Responsa, ed. Lemberg, 1798, Nos. 145, 149). Gross identifies him further with the tosafist Naḥman, whose tosafot are mentioned in "Shiṭṭah Meḳubbeẓet" to B. Ḳ. 43a (Venice, 1762).

E. C. A. PE.

NAḤMAN BAR ISAAC: Babylonian amora of the fifth generation; died in 356; like Raba, a pupil of R. Naḥman b. Jacob. While he was still young his halakic knowledge was known and esteemed; and he was chosen resh kallah (see JEW. ENCYC. i. 146b, *s.v.* ACADEMIES IN BABYLONIA). He went to Sura, where R. Naḥman b. Ḥisda drew particular attention to him and frequently repeated his responsa in the bet ha-midrash (Ḥul. 88b; Shebu. 12b; Ta'an. 21b).

At Raba's death Naḥman bar Isaac became his successor as head of the school which was transferred from Maḥuza to Pumbedita. This position he held for four years. He contributed to the Halakah chiefly by collecting, arranging, and transmitting the teachings and decisions of his predecessors, which were thus saved from oblivion. He also employed mnemonic sentences to facilitate the memorization of the halakot which he had arranged, thus beginning the redaction of the Talmud (see MNEMONICS). He recognized distinctly his position as regards the Halakah, saying of himself "I am neither a sage nor a seer, nor even a scholar as contrasted with the majority. I am a transmitter and a codifier, and the bet ha-midrash follows me in its decisions" (Pes. 105b). He is frequently mentioned in the Haggadah as one who arranges and explains the words of other authorities, and he frequently cites Biblical passages in support of their teachings ('Ar. 33a). When the interpretations of others deviate from the Masoretic vocalization, Naḥman endeavors to show that reference to the consonantal basis of the word in question allows such varying explanations (Yoma 38b, 75b). He often interprets rare or ambiguous terms in the Mishnah by citing analogous passages (Beẓah 35b; Yoma 32b).

On the other hand, Naḥman has also many independent maxims of his own, of which the following may serve as examples: "Why is wisdom likened to a tree? (Prov. iii. 18). Because as a tiny piece of wood kindles a large one, so the small promotes the great in the study of the Law" (Ta'an. 7a). "Conceit is altogether reprehensible" (Soṭah 5a). So is anger (Ned. 22b). "Pride is expressly forbidden in the Torah" (Soṭah 19a; comp. Deut. viii. 14).

Naḥman affected a witty mode of expression; and he often played on the names of the scholars who brought baraitot before him (Ber. 39b, 53b; Giṭ. 41a). He also frequently employed proverbs (Yoma 86a; Shab. 54a; Soṭah 22a).

W. B. J. Z. L.

NAḤMAN BAR JACOB (generally called simply **R. Naḥman**): Babylonian amora of the third generation; died 320; pupil of Mar Samuel. He was chief justice of the Jews who were subject to the exilarch, and was also head of the school of Nehardea. On the destruction of that town, he transferred his pupils to Shekanẓib. His marriage with the daughter of the wealthy resh galuta enabled him to live in luxury and to entertain scholars and strangers lavishly. Thus R. Isaac of Palestine, who visited Babylon, stayed at Naḥman's house and enjoyed his hospitality. When the guest on leaving was asked by his host to bless him, the former answered with the beautiful parable of the tree which sheltered the weary traveler beneath its shade and fed him with its fruit, so that the grateful wanderer blessed it with the words, "May thy scions be like unto thee." "And I," added R. Isaac, "can bless thee, who art blessed with material and spiritual wealth, only with the prayer that thy scions too may be like unto thee" (Ta'an. 5b–6a). R. Naḥman had such a sense of his own worth that he said: "If some one now living were to become the Messiah, he must resemble me" (Sanh. 98b). He also permitted himself, in his capacity of justice, to decide civil cases without consulting his colleagues (*ib.* 5a). He was likewise the author of the important ruling that a defendant who absolutely denies his guilt must take the so-called rabbinical oath "shebu'at hesset" (Shebu. 40b). As a haggadist, Naḥman was less important, although he is said to have used many collections of haggadot (Ber. 23b). He was fond of collecting in one passage a number of Aramaic aphorisms (see Yoma 28b–29a), and used sturdy popular expressions in his speech (Ḥul. 12a, 172a; Ta'an. 24a). His haggadic remarks relating to Biblical personages were likewise made in this style, as the following specimens will show: "It is not seemly for women to be conceited; the two prophetesses Deborah and Huldah had hateful names, namely, 'bee' and 'weasel'" (Meg. 14b). "Shamelessness avails even in the face of Heaven; for God allowed Balaam to make the journey to Balak after He had forbidden it" (Sanh. 105a).

W. B. J. Z. L.

NAḤMAN B. SAMUEL HA-LEVI: Frankist; rabbi of Busk, Galicia; lived in the first part of the eighteenth century. When Mikulski, the administrator of the archbishopric of Lemberg, invited the representatives of Judaism to a disputation with the Frankists July 16, 1759, Naḥman was one of the Frankist delegates. On his baptism into the Christian faith he took the name of **Piotr Jacobski.**

NAḤMAN B. SIMḤAH OF BRATZLAV: Founder of the Ḥasidic sect known as "Bratzlaver Ḥasidim"; born at Miedzyboz (Medzhibozh), Podolia, Oct. 9, 1770; died at Uman 1811. His father was a grandson of Ba'al Shem-Ṭob and of R. Naḥman Horodenker. Naḥman b. Simḥah received his early education in Talmud, Cabala, and philosophy from his father. In his youth he led an ascetic life; and he is said to have followed it so rigorously as to swallow his food without masticating it in order that he might not enjoy it ("Maggid Siḥot," p. 3), and to roll naked in the snow (*ib.* p. 13). In 1798 he went to Palestine, where he was received with honor by the Ḥasidim, and where his influence brought about a reconciliation between the Lithuanian and the Volhynian Ḥasidim (*ib.* p. 30). Returning to Poland, he settled in Bratzlav, from which town he disseminated his teachings.

Naḥman was an independent and ardent thinker, as is discernible from his precepts as well as from his relation to the other Ẓaddiḳim of his time. His most important changes in the precepts and his reforms of the practises of Ḥasidism were the following: (1) he emphasized the importance of the ẓaddiḳ as a medium of communication between man and God, and as a sort of father confessor ("Liḳḳuṭe 'Eẓot," i., *s.v.* "Ẓaddiḳ" and "Teshubah"); (2) he laid stress on fasting and self-castigation as the most effective means of repentance (*ib.* ii., *s.v.* "Teshubah"); and (3) he held that the evil inclinations of man ("yeẓer ha-ra'") are necessary to the perfection of man and to his devotion to God ("Ḳorot Podolia," p. 33). Naḥman frequently recited extemporaneous prayers ("Maggid Siḥot," p. 6).

By his reforms and teachings Naḥman gained a great following among the Ḥasidim; but, unduly estimating the importance of his own mission, he assumed an attitude of superiority toward the Ẓaddiḳim of his time, and thus evoked much opposition from them. The Ẓaddiḳim, with "the Old Man of Shpola" at their head, waged war against Naḥman. They accused him of being a follower of Shabbethai Ẓebi and a Frankist, and persecuted and excommunicated his adherents. Although the number of the latter was rapidly increasing, Naḥman was compelled, on account of this opposition, to remove to Uman, where he lived for the rest of his life.

Naḥman's doctrines were published and disseminated mainly after his death, by his disciple Nathan ben Naphtali Herz of Nemirow. The latter built at Uman a synagogue in honor of his teacher, and composed a number of prayers to be recited at Naḥman's grave by his followers. Many of the latter flock there annually even to this day.

Nathan also arranged and published Naḥman's works, as follows: "Liḳḳuṭe Maharan" (vol. i., Ostrog, 1808; vol. ii., Moghilef, 1811; vol. iii., Ostrog, 1815), Ḥasidic interpretations of the Scriptures, the Midrashim, etc.; "Sefer ha-Middot" (Moghilef, 1821), treatises on morals, arranged alphabetically; "Alfa Beta" (*ib.* n.d.); "Sippure Ma'asiyyot" (n.p., 1815), fantastic tales in Hebrew and Yiddish; "Ma'gele Ẓedeḳ" (Jozefov, 1847), on good conduct. These works may be best described as a conglomeration of nonsense, philosophic truths, poetry, and masterful pictures of the life and customs of Naḥman's time. See Ḥasidim.

Bibliography: Litinsky, *Ḳorot Podolia*, i. 32 *et seq.*, Odessa, 1895; Deinard, *Le-Ḳorot Yisrael be-Russia*, pp. 6 *et seq.*, in *Ner ha-Ma'arabi*, 1896, Nos. 9-10.

H. R. A. S. W.

NAḤMANI, SAMSON ḤAYYIM BEN NAḤMAN RAPHAEL: Italian Talmudist; flourished about the latter half of the eighteenth century. He was the pupil of Ephraim Cohen of Ostrog, rabbi of Modena; of Abi'ad Sar-Shalom Basilla, rabbi of Mantua; and, in Cabala, of Benjamin Alexander ha-Kohen, rabbi of Reggio. He wrote "Toledot Shimshon," a commentary on Mishnah Abot (Leghorn, 1766), and "Zera' Shimshon," on the Pentateuch and the Five Megillot (Mantua, 1778).

NAḤMANIDES, MOSES. See MOSES BEN NAḤMAN GERONDI.

NAḤMIAS (NAAMIAS, NEHMIAS): One of the most ancient and prominent Jewish families of Toledo. The oldest member known is **Joseph Naḥmias**, son-in-law of Joshua ben Isaac ibn Saidum, who was living in 1112. In 1211 another of the same name is met with in the same city. In 1231 **Abu al-Ḥajjaj Joseph ben Isaac ibn Naḥmias** was a scribe of Arabic codices; and in the latter part of the same century lived **Todros ibn Naḥmias**, whose daughter was famed for her many excellent qualities. J. S. R.

The best-known of this family is **Joseph ben Joseph (Jose) Naḥmias** of Toledo, pupil of Rabbi Asher ben Jehiel. Between 1330 and 1350 he wrote the following works: an astronomical work in Arabic, still in manuscript, and entitled "Nur al-'Alam" (Light of the World), which was translated by an anonymous scholar of the fourteenth century into Hebrew; a commentary on the Pentateuch; a commentary on Pirḳe Abot; a commentary on Proverbs. He may be identical with Joseph b. Abraham ibn Naḥmias, mentioned below; he was a contemporary of **Joseph ben Joseph ibn Naḥmias**, who also lived at Toledo, was a colleague of Judah and Jacob ben Asher, and wrote a commentary on Esther in 1326 or 1327.

BIBLIOGRAPHY: Zunz, *Z. G.* pp. 429 *et seq.*; Steinschneider, *Hebr. Uebers.* pp. 597, 686; idem, *Hebr. Bibl.* xii. 124 *et seq.*
M. K.

Other members of the family are **David ben Joseph Naḥmias**, who, together with his three sons, died during the plague in Toledo (Tammuz, 1349); **Moses Naḥmias**, the colleague of R. Judah ben Asher, and whose son Judah also died of the plague at the age of twenty-seven (1350); and **Joseph ben Abraham Naḥmias**, who transliterated into Hebrew part of the commentary, written in Arabic characters, of Solomon ibn Ya'ish on Avicenna's "Canon."

In places other than Toledo lived the following members of the family (given in chronological order):

Isaac Naḥmias: Judge in Cordova, and later rabbi of Fez (*c.* 1420).
S. J. S. R.

Abraham b. Joseph ibn Naḥmias: Translator; lived about 1490 at Ocaña, Castile. Naḥmias studied philosophy and advised his coreligionists to learn it from the Christians. Of his Hebrew translation of Thomas Aquinas' commentaries on Aristotle's "Metaphysics" only the preface has been published ("Kerem Ḥemed," viii. 110 *et seq.*). Albertus Magnus' sketch of physical philosophy, "Ḳiẓẓur ha-Filosofia ha-Ṭib'it," was translated into Hebrew not by Naḥmias, as Zunz assumes and Fürst asserts, but by his contemporary Abraham Shalom b. Isaac of Catalonia.

BIBLIOGRAPHY: Fürst, *Bibl. Jud.* iii. 1; Steinschneider, *Hebr. Uebers.* pp. 465, 485.

David Naḥmias (d. 1511) and his son **Samuel** (d. *c.* 1522), who in 1505 established a Hebrew printing-office in Constantinople.

Abraham Naḥmias: Talmudist, died as a martyr (*c.* 1529). He, as well as **Jacob ibn Naḥmias**, is quoted by Jacob Berab and by Joseph Caro.

Abraham ibn Naḥmias: Physician; born in Lisbon; lived in Constantinople about 1530. He was the author of the medical works known as "Sifre Refu'ah," two of which, respectively, on the method of treating hematemesis and on the use of cold water in inflammatory fevers, were translated from Hebrew into Latin (Venice, 1591, 1604). Another medical work, still in manuscript, has been ascribed to him, but the authorship is doubtful.

A third **Abraham ibn Naḥmias** lived about 1600 in Salonica, being a contemporary of Aaron Shulam; while a fourth **Abraham ibn Naḥmias**, famous for his piety, was a pupil of Abraham Motal, and lived about 1640 at Constantinople, in which city he died.

BIBLIOGRAPHY: De Rossi-Hamberger, *Hist. Wörterb.* p. 240; Carmoly, *Les Médecins Juifs*, p. 163; Zunz, *Z. G.* p. 431; Fürst, *Bibl. Jud.* iii. 1; Conforte, *Ḳore ha-Dorot*, pp. 43a, 44a, 45b, 52b.
J. M. K.

Isaac Naḥmias: Burned at the stake in Ancona in 1556.

David Naḥmias, lived in Salonica (mentioned by Ḥayyim Shabbethai in "Torat Ḥayyim," Salonica, 1715), and **Eliezer ben Hadriel Naḥmias** in Constantinople; both of them prominent rabbis in 1573.

Isaac Naḥmias and his son **David**, who were prosperous merchants in Salonica in 1611. The father is perhaps identical with Isaac ben David, praised for his bounty by Lonzano ("Shete Yadot").

Joseph ibn Naḥmias: Lived in 1625. Leon of Modena dedicated to him his "'En Ya'aḳob."

Immanuel Naḥmias: Poet; was born in Amsterdam in 1632.

Between 1630 and 1660 lived **Abraham, Israel,** and **Jacob Naḥmias** (the last-named was perhaps Delmedigo's teacher in Cabala in Constantinople); **Levi Naḥmias** (of Sidon?) in Hebron; and **David Naḥmias** (of Salonica) in Jerusalem (*c.* 1652).

Solomon ben Moses ibn Naḥmias: Judge in Monastir in 1643.

Samuel ben David ibn Naḥmias: Born in Salonica; went to Venice, where, together with his son **David** and his brother **Joseph,** he turned Catholic (1649), and became known as "Giulio Morosino." He was made librarian of the Vatican and, later, lecturer in the College de Propaganda Fide. He was the author of the voluminous work (3 vols., containing 103 chapters and 1,453 pages) "Derek Emunah: Via Della Fede Demonstrata" (Rome, 1683), attacking the Jews.

The latest members of the Naḥmias family met with are **Samuel Naḥmias** of Ipsala; **R. Joseph Naḥmias** of Rhodes (1660), and the latter's son, who was living in 1695.

BIBLIOGRAPHY: Zunz, *Z. G.* i. 413, 419, 428-431, 570; Steinschneider, *Hebr. Uebers.* pp. 524, 597, 686, 723; *J. Q. R.* iv. 307; v. 290, 709-713; Fürst, *Bibl. Jud.* iii. 8; Jacobs, *Sources*, pp. 172, 179, 188.
S. J. S. R.

NAḤMOLI, JOSEPH: Talmudist and rabbi of Larissa in the eighteenth century; father-in-law of Isaac ibn Shangi (author of "Be'er Yiẓḥaḳ," on the Pentateuch), and pupil of Ḥayyim Abulafia.

He wrote: "Eshel ha-Neḥalim" (Smyrna, n.d.), containing homilies for Sabbaths and holy days; "Ashdot ha-Pisgah," published together with Ḥayyim Abulafia's "Middot ha-Mizbeaḥ" (*ib.* n.d.).

Bibliography: Fürst, *Bibl. Jud.* iii. 8.

E. C. J. S. R.

NAHOR: 1. Son of Serug; father of Terah and, consequently, grandfather of Abraham. He is said to have lived one hundred and forty-eight years (Gen. xi. 22–25; I Chron. i. 26).

2. Son of Terah and brother of Abraham and Haran. He married the latter's daughter Milcah (Gen. xi. 26–27, 29). Joseph Halévy ("Recherches Bibliques," i. 328) derives the name of Nahor from the Assyrian "Niḥaru" (= "cachalot"); a king of this name occurs in the prism inscription of Esarhaddon (col. iv., line 21). Although it is not stated that Nahor emigrated with his father and brother from Ur of the Chaldees (comp. Gen. xi. 31), yet from the fact that Haran is called "the city of Nahor" (comp. Gen. xxiv. 10, xxvii. 43) it may be inferred that Nahor took part in the emigration and settled at Haran (comp. Halévy, *l.c.* p. 303; see also Haran). Nahor was the progenitor of twelve Aramean tribes through his twelve sons, of whom eight were born to him by his wife Milcah and four by his concubine Reumah (Gen. xxii. 20–24). Nahor is mentioned on two other occasions. "The God of Abraham and the God of Nahor" (Gen. xxxi. 53) was invoked by Jacob at his meeting with Laban; and "Terah, the father of Abraham and Nahor," is referred to in Josh. xxiv. 2. Both passages show that Nahor was an idolater and that his cult was followed by his descendants, the Arameans.

E. G. H. M. Sel.

NAHSHON (נחשון).—Biblical Data: Son of Amminadab; descendant in the fifth generation from Judah and brother-in-law of Aaron (Ex. vi. 23; I Chron. ii. 4–10). Nahshon was appointed by Moses, upon God's command, as prince of the tribe of Judah, and though his tribe was fourth in the order of the Patriarchs, yet at the dedication of the Tabernacle he was the first to bring his dedicatory offering (Num. i. 7; ii. 3; vii. 12, 17; x. 14). Nahshon was, through Boaz, the ancestor of David (Ruth iv. 20–22; I Chron. ii. 10 *et seq.*).

E. G. H. M. Sel.

——**In Rabbinical Literature:** Owing to his direct descent from Judah and to his being the progenitor of so many kings, Nahshon is extolled by the Rabbis as a most noble man. Nahshon's sister Elisheba married Aaron (Ex. vi. 23), and this is especially mentioned as a hint that one should take care to select a wife whose brothers are noble (B. B. 110a). At the crossing of the Red Sea Nahshon was the first to spring into the water (whence his name נחשון = נחשול = "stormy sea-waves"), and it is in virtue of this that he was chosen to be the first to bring the dedicatory offering (Soṭah 37a; Num. R. xiii. 9). Nahshon was a model prince (Hor. 11a; Zeb. 9b, 101b), and was called "king" (Sifre, Num. 47). When the princes of the different tribes were required to bring their offerings, each on a separate day, Moses was embarrassed, not knowing who should be the first; but all Israel pointed at Nahshon, saying, "He sanctified the name of God by springing first into the Red Sea; he is worthy to bring down the Shekinah; therefore he shall be the first to bring the offering" (Num. R. xii. 26). The offering brought by Nahshon is pointed out as having been his own and not that of his tribe (Sifre, Num. 48). In the account of the offering the words וקרבנו and עתודים each have a ו, while the same words in the accounts of the other princes' offerings have no ו. This letter, the numerical value of which is six, indicates that Nahshon was the ancestor of six men—David, the Messiah, Daniel, Hananiah, Mishael, and Azariah—each of whom was distinguished for six praiseworthy qualities (Num. R. xiii. 11).

W. B. M. Sel.

NAHSHON BEN ZADOK: Gaon; head of the Academy of Sura from 874 to 882, in succession to Mar Amram ben Sheshna. He wrote explanations to difficult words in the Talmud, not in alphabetical order, as did his contemporary Gaon Ẓemaḥ ben Paltoi of Pumbedita, but in the order of the tractates. The "Re'umah," on ritual slaughtering (Constantinople, 1566), is ascribed to him, but his authorship is doubtful. He devoted much attention to the study of the Jewish calendar. He found that the order of the week-days on which any particular festival occurs in successive years repeats itself after a cycle of 247 years, and that the years with regard to their characteristic dates can be arranged in fourteen tables. This discovery is known as, and is contained in, the "'Iggul [Cycle] di R. Nahshon," which work was printed with the "She'erit Yosef" of Joseph b. Shem-Ṭob b. Joshua (1521). Nahshon and his son Hai did not approve of saying the "Kol Nidre" on the eve of Yom Kippur. Most of his responsa, contained in the collection "Sha'are Ẓedeḳ," are written in Aramaic in a curt, difficult style; but the responsa ascribed to him in "Teshubot Ge'onim Ḳadmonim" are written in mixed Hebrew in a plain, easy diction. Some of his decisions conflict with the Talmud, and in his haggadic interpretations he did not always agree with the older haggadists. He was greatly respected by his contemporaries.

NAHUM (נחום = "full of comfort," "comforter"; probably a contraction of נחומיה = "Yhwh is a comforter"): One of the so-called Minor Prophets. He is called, in the title of his book, "Nahum the Elkoshite." Where Elkosh was is not definitely known. The supposition that Nahum was a native of Judah agrees well with his keen sense of Judah's affliction under Assyrian domination and with his intense hatred of her oppressor.

E. G. H. J. F. McL.

NAHUM, BOOK OF: One of the Minor Prophetical works which centers about the overflow of Nineveh. The dispirited people of Judah are aroused and encouraged by the announcement of the downfall of the oppressive empire seated on the upper Tigris. The book consists of three chapters, of which the following is a summary:

Ch. i.: After the superscription (verse 1), the prophet describes (2–6) a superb theophany in judgment, with the awful results to nature. The apparent universality of this destruction leads the writer to point out (7) a real refuge for those who trust in Yhwh. The Assyrian power (8–12a) shall be completely overthrown, and its yoke broken from off the neck of Judah (12b–14). The prophetic eye even now (15) sees the welcome messenger heralding the good news to his hitherto oppressed people.

Contents.

Ch. ii.: In brilliant colors and in rapid succession are shown the enemies of Nineveh assaulting its battlements (1–5), the gates of the river yielding to the foe, the palace dissolving in fierce flames (6), the consternation reigning among the city's population (7–8), the abundance of booty, and the effect of Nineveh's fall upon all who considered it (9–10); the question asked about "the old lion," and answered by the desolation (11–13).

Ch. iii.: The reason for Nineveh's swift downfall is in part recited: she has been a city of blood, always cruel and rapacious (1); her streets are now full of the slain, cut down by the victors because she has been the seducer of the nations (2–6); her destruction will not be lamented (7); resistance is as fruitless as was that of the impregnable No-amon (Thebes), and the vengeance of the victors no less terrible (8–12); all attempts at resistance are futile (13–15); the multitude of merchants and scribes shall disappear as grasshoppers on a warm day (16–17); the rulers are at rest, and the people scattered upon the mountains; the destruction is complete and a cause of rejoicing among all the nations (18–19).

Time and Place of Writing.

The book furnishes few data for a settlement of the time and place of writing. It is evident from iii. 8–10 that its "terminus a quo" is the fall of No-amon (Thebes) in Upper Egypt before the successful arms of Assurbanipal (668–626 B.C.) just after 664 B.C. In i. 9 it is foretold that the destruction of Assyria will be complete. This was accomplished about 606; and it constitutes the "terminus ad quem" of Nahum. Somewhere between these two points the date of the book is to be sought for. The two prevailing dates selected are (1) about 650 and (2) about 608. The reference to the fall of Thebes does not argue for the earlier date, as that disastrous battle would long remain in the memories of the adjoining peoples. Neither, on the other hand, does the vividness of descriptive detail fix absolutely the later time as the true date. The probabilities, however, are in favor of about 608 as the time of composition.

"Nahum the Elkoshite" is the designation of the prophet. His vivid description of Nineveh and his definiteness of detail have led scholars to search for his home somewhere within reach of that city. Alḳush, a place near Mosul, contains a grave said to be that of Nahum; but the tradition of this place does not seem to be older than the sixteenth century. On the other hand, Eusebius in his "Onomasticon" (ed. Lagarde) mentions an 'Eλκεσέ of Jerome; and Jerome says, in his commentary, "Elcese usque hodie viculus in Galilæa." These statements would seem to locate an Elkosh in Galilee. In answer to the statement that the Northern Kingdom was carried into captivity, it may be said that probably, as in the Southern Kingdom (II Kings xxv. 12), the poor were left in the land. The active commercial relations between the peoples of the East and of the West, and the opportunities for acquaintance with each other's customs and habits of life, as well as the few peculiarities of language in this book, make it probable that the prophet Nahum was a Galilean, who had his home at a village called Elkosh. His prophecies were doubtless uttered at Jerusalem, in the presence of Judah.

The prophecy reads quite as if some one had tampered with its original order. It may be that this apparent mixture is due to modern logical literary strictures. But the following order, which seems to follow modern methods of thought, may be suggested: (1) ch. i. 1–14; (2) ch. iii. 1–17; (3) ch. ii. 1–5, 13, 6–12; (4) ch. iii. 18, 19; i. 15.

Historical Character.

Of all the Minor Prophets the Book of Nahum has received the greatest and strongest light from the discoveries of the last half-century. The exact location of Nineveh, its fortifications, some of its palaces, its means of defense, its invincible kings, its armies, its amusements, its libraries, and its indescribable cruelty are now known. "The den of the lions" was an appalling reality, which let loose its terrors to the sorrow of every surrounding nation. The character of the Assyrians, as depicted here, is true to the picture preserved in their own documents.

This compact, pointed, dramatic prophecy has no superior in vivid and rapid movement. Its quick succession of statement and thought give it a peculiar power over the reader. It delineates the swift and unerring execution of Yhwh's laws upon His merciless foes and those of His people, and also points to Him as the sure refuge and security of those who obey and trust Him.

E. G. H. I. M. P.

NAHUM: Liturgical poet; lived about 1300, probably in southern Spain. He possessed unusual talent. Some of his poems have been translated into German and printed by Michael Sachs, while others are preserved only in manuscript.

This Nahum must not be confounded with another liturgical poet of the same name who seems to have lived in the twelfth century and whose home was probably in Italy.

D. M. K.

NAHUM ELIEZER BEN JACOB: Rabbi of the second half of the seventeenth and the first half of the eighteenth century; born about 1660; died about 1746; pupil of R. Jacob Striemer. He was one of the leading rabbis of his time, and held the rabbinate of Adrianople, in which city he also directed a yeshibah having numerous pupils. At an advanced age he went to Jerusalem, where he was elected chief rabbi and officiated for about ten years. There he devoted himself to the study of the Law, wrote legal decisions and responsa, and disputed, even in his last days, on learned questions with Rabbis Isaac Zerahiah Azulai and Meïr Mizraḥi of Jerusalem.

Nahum was the author of the following works, of which only the first has been printed: "Ḥazon Naḥum" (Constantinople, 1745), commentary on the mishnaic orders Ḳodashim and Ṭohorot; commentaries on the order Zera'im, on Sifre, and on Sifra, the last being entitled "Midrash Eli'ezer"; "Otiyyot Eli'ezer," critical notes to many passages in the Talmud, in the works of Maimonides, and in the Ṭurim of Jacob b. Asher; "Mi-Lebad 'Olat," notes to the "'Iṭṭur," and responsa; and "Ḳab we-Naḳi."

Bibliography: Azulai, *Shem ha-Gedolim*, s.v.; Fürst, *Bibl. Jud.* iii. 11; Benjacob, *Oẓar ha-Sefarim*, p. 32, No. 625; p. 172, No. 207; Michael, *Or ha-Ḥayyim*, No. 434.

E. C. J. Z. L.

NAHUM OF GIMZO: Tanna of the second generation (first century). In the Talmud (Ta'an. 21a; Yer. Sheḳ. v. 15) he is called "ish gam zu" (the man of "gam zu"); and this name is explained as referring to Nahum's motto. It is said that on every occasion, no matter how unpleasant the circumstance, he exclaimed "Gam zu le-ṭobah" (This, too, will be for the best). The correct reading in the passages in question, however, is "ish Gimzo" (the man of Gimzo), the error being due to a confusion of the place-name with the motto. In another Talmudic passage (Pes. 22b; comp. Ḳid. 57a), owing to a confusion of ג and ע, he is called "Nehemiah the 'Imsoni" (= "Gimsoni"; comp. Grätz in "Monatsschrift," 1870, p. 527).

Nahum was the teacher of Akiba, and taught him the exegetical principles of inclusion and exclusion ("ribbui u-mi'uṭ"). Only one halakah of his has been preserved (Ber. 22a); but it is known that he interpreted the whole Torah according to the rule of "ribbui u-mi'uṭ" (Shebu. 26a). He used to explain the accusative particle את by saying that it implied the inclusion in the object of something besides that which is explicitly mentioned. In the sentence "Thou shalt fear the Lord thy God" (Deut. x. 20), however, he did not explain the word את before יהוה (= "the Lord"), since he did not wish to cause any one to share in the reverence due to God; and he justified his inconsistency with the explanation that the omission in this passage was as virtuous as was the interpretation in all the other passages (Pes. 22b).

It is related that in later years Nahum's hands and feet became paralyzed, and he was afflicted with other bodily ailments. He bore his troubles patiently, however, and even rejoiced over them. In answer to a question of his pupils as to why, since he was such a perfectly just man, he had to endure so many ills, he declared that he had brought them on himself because once when he was on the way to his father-in-law's and was carrying many things to eat and drink, he met a poor man who asked him for food. As he was about to open the bundle the man died before his eyes. In deepest grief, and reproaching himself with having perhaps caused by his delay the man's death, he cursed himself and wished himself all the troubles to which his pupils referred (Ta'an. 21a). Various other stories are told of miracles that happened to him (*ib.*).

W. B. J. Z. L.

NAHUM THE MEDE: Tanna of the first generation (first century); lived in Jerusalem. According to R. Nathan, he was one of the three most renowned "dayyane gezelot" (criminal judges) in Jerusalem (Ket. 105a; Yer. Ket. xiii. 1; Frankel, "Darke ha-Mishnah," p. 63). He was one of the seven great contemporaries of Johanan b. Zakkai who had survived the destruction of Jerusalem by the Romans (Grätz, "Gesch." iv. 20) and who probably became members of the Sanhedrin at Jabneh.

Only six halakot of Nahum's have been preserved in the Talmud, three of which were said not to have been recognized ("nishtaḳa' ha-dabor"; 'Ab. Zarah 7). Some, however, attribute to him four other and anonymous halakot (Weiss, "Dor," i. 182).

The opposition to the decisions of Nahum, according to the view of a later amora, seems to have been due to the dislike of the Palestinians to scholars of other countries.

Bibliography: Grätz, *Gesch*, iv. 22; Frankel, *Darke ha-Mishna*, p. 63, Leipsic, 1859.

E. C. A. S. W.

NAHUM, MENAHEM, OF CHERNOBYL: Ḥasidic leader in the last part of the eighteenth century. He was a pupil of Baer of Meseritz, by whom he was sent to Galicia to disseminate the teachings of Ḥasidism. In 1772, when Ḥasidism was endangered by the death of Baer of Meseritz and by the violent attacks of Elijah of Wilna, Nahum came forward with other leaders and established the dynasties of the miracle-workers, the Ẓaddiḳim. He himself was the founder of a dynasty in Little Russia, in which he was succeeded by his son Mordecai. The various Ẓaddiḳim were tributary to a chief Ẓaddiḳ, a son of Baer of Meseritz. Nahum was the author of "Me'or 'Enayim," cabalistic homilies on the Pentateuch (Slobuta, 1798; often reprinted), and of "Yismaḥ Leb," cabalistic expositions of the Talmudic haggadot (*ib.* 1798; Zolkiev, 1800; Lemberg, 1848).

Bibliography: Grätz, *Gesch.* xi. 102, 112; Fürst, *Bibl. Jud.* ii. 352; Walden, *Shem ha-Gedolim he-Ḥadash*, i. 106; Benjacob, *Oẓar ha-Sefarim*, p. 275, No. 33; p. 233, No. 476.

D. S. J. L.

NAHUM BEN SIMAI: Palestinian amora of the third century; a son of the tanna Simai. He is cited as "Menahem" in Pes. 104a and in M. Ḳ. 25b. Nahum was called "the most holy man" (Yer. Meg. i. 72b; Yer. 'Ab. Zarah iii. 42c) and "the son of the saints" (Pes. 104a), the reason given for these designations being that during his whole life he never looked at the portrait on a coin. At his funeral all the statues were covered up so that even in death he might not see the likeness of any person (Yer.

'Ab. Zarah iii. 42c, above). A few of his halakic sayings have been preserved (Yer. Ber. viii. 7; Yer. Ma'as. i. 2, 48d; Pes. 104a). He is said to have preached a sermon at Tarsus in which he gave an allegorical explanation of Ex. xii. 3 (Pesiḳ. R. 15 [ed. Friedmann, p. 78b]). Nothing further is known concerning the circumstances of his life.

W. B. J. Z. L.

NAHUM B. UZZIEL KAPLAN (Reb Nahum Grodner): Preacher and philanthropist; born 1811; died at Grodno Oct. 25, 1879. Though he was a great Talmudist, he preferred to hold the humble position of "shammash" (sexton) in the synagogue Ḥebrah Shas and to pass his life in poverty. But his untiring energy in behalf of the distressed of all classes and the implicit confidence reposed in him made him famous throughout Russian Jewry. He spent a great part of his time in going from house to house, collecting from residents of Grodno and from visitors money or articles of necessity and bestowing them wherever they were most needed. He exercised much influence also by his great piety and simplicity of life. He was a preacher of much force and was adored by the Jewish masses, to whom he spoke, usually on Sabbath afternoons, on plain moral truths in a language and manner suited to their feeling and understanding. Numberless anecdotes about his kindness and liberality, and about the esteem in which he was held by high personages, are still current in Grodno, where his memory is revered. His funeral is said to have been the most imposing ever seen in Grodno.

Bibliography: Gurvich, in *Razsvyet*, 1879, No. 7; Lipshitz, *Nekrolog Rabbi Nokhim iz Grodno* (reprinted from *Russki Yevrei*, 1879, No. 9), St. Petersburg, 1879; *Ha-Ẓefirah*, 1879, No. 42; *Ha-Meliẓ*, 1879, No. 43; Friedenstein, *'Ir Gibborim*, pp. 95-96, Wilna, 1880.

H. R. P. Wi.

NAIL: **1.** The finger nail. In Hebrew the corresponding word occurs only in the plural, צפרנים (Deut. xxi. 12), the singular of which denotes the point of a stylus (Jer. xvii. 1). In the passage in question צפרנים occurs in connection with the verb עשה (= "to make"), and the meaning of the phrase has been the subject of controversy among commentators. According to the Haggadah, Adam's entire body, before he had sinned, was covered with a horny substance like the finger nail; but after he had sinned this disappeared, remaining only on the ends of his fingers and toes (Pirḳe R. El. xiv.; Gen. R. xx. 12). The later cabalists find in this haggadah the origin of the law requiring the paring of the nails before Sabbaths and holy days. They explain that the impurity ("zuhama") of the serpent which caused the first man to sin was under the nails, and that every pious Jew must purify himself and honor the coming holy day by trimming and cleaning the nails beforehand (see "Ḥemdat Yamim," i. 23a, Leghorn, 1762). The Rabbis are not agreed as to when they should be pared; some prefer Thursday, for if cut on Friday they begin to grow on the Sabbath; others prefer Friday, as it will then appear that it is done in honor of the Sabbath. It has, however, become the practise to cut them on Friday (Shulḥan 'Aruk, Oraḥ Ḥayyim, 260, 1), and certain "posḳim" even prohibit the paring of the nails on Thursday (comp. Jacob Zausmer, "Bet Ya'aḳob," No. 48).

According to a German superstition, the nails must be pared on Friday, as otherwise they would not grow again (Krause, in "Zeitschrift für Ethnologie," xv. 84 *et seq.*). The "Keneset ha-Gedolah" asserts that one may not pare his nails even on Friday when it happens to be the first day of the month ("Be'er Heṭeb," on Shulḥan 'Aruk, *l.c.*). On Ḥol ha-Mo'ed, though it is lawful to pare the nails, it is customary to avoid doing so, except under certain circumstances (Oraḥ Ḥayyim, 532, 1; comp. "Naḥalat Shib'ah," No. 56). While mourning one is forbidden to pare the nails with any instrument; they must be either bitten off or left to grow. A woman, however, under certain circumstances may cut her nails after the first seven days of her mourning (M. Ḳ. 17b; Shulḥan 'Aruk, Yoreh De'ah, 390, 7). The ancient Persian belief that misfortune will follow the cutting of the nails in the order of the fingers (comp. Schorr in "He-Ḥaluẓ," vii. 42; Geiger, "Jüd. Zeit." ix. 259) has spread among the Jews. Cutting the nails in this order is supposed, according to French rabbis, to cause poverty, loss of memory, and loss of children. The order 4, 2, 5, 3, 1 of the Zoroastrians (comp. Anquetil du Perron's French translation of the "Zend-Avesta," ii. 117, Paris, 1771) has been accepted by all the Rabbis only for the left hand; with the right hand, according to some authorities, including Elijah de Vidas ("Reshit Ḥokmah," end) and Isaac Arama ("'Aḳedat Yiẓḥaḳ," gate xcvii.), the order should be 2, 4, 1, 3, 5, and the nails of the left hand should be cut first; but Abudarham's opinion is that one should begin with the right hand and observe the order 1, 3, 5, 2, 4 (Isserles, in Shulḥan 'Aruk, Oraḥ Ḥayyim, 260, 1).

In Habdalah.

According to one authority (quoted in the "Be'er Heṭeb" on Shulḥan 'Aruk, *l.c.*), one should not cut toe nails and finger nails on the same day. The parings must not be thrown away; the Rabbis declare that he who burns them is a pious one ("ḥasid"), he who buries them is a righteous one ("ẓaddiḳ"), and he who throws them away is a wicked one (M. Ḳ. 18a; Niddah 17a). The reason for this is that if a pregnant woman steps on them the impurity attached to them will cause a premature birth (comp. "Be'er Heṭeb," *l.c.*). The Persian custom of washing the hands after cutting the nails (comp. Schorr, *l.c.*) has been adopted by the Jews and explained cabalistically (Zohar, ii. 172b, 208b; iii. 79a, b). Saturday evening, at the Habdalah benediction, it is customary to look at the outer side of the nails, but not at the under side (Oraḥ Ḥayyim, 298, 3, quoting the Zohar).

The modern belief that white spots on the nails are a sign of good luck is found in the Zohar (ii. 76a). "Sometimes there are on the nails brilliant white spots of the size of lentils; if these spots are not concave they do not mean anything; but if they are concave they are a good omen; the person having them will be successful in his affairs, or will escape a fatal decree" (comp. also Güdemann, "Gesch." i. 208). The nails occupy a certain place in the ritual code; for instance, as the nails must not be cut on a Sabbath, there are certain regulations about a broken nail (Oraḥ Ḥayyim, 328, 31). Certain of the regulations with regard to the ritual bath likewise concern the nails (Yoreh De'ah, 198, 18–21).

2. A metal pin (in the Old Testament plural only, מסמרים or מסמרות, and once, Eccl. xii. 11, משמרות). David "prepared" iron for the nails of the Temple (I Chron. xxii. 3), but Solomon made the nails of the Temple of gold, the weight of which amounted to fifty shekels (II Chron. iii. 9). The nails mentioned in Isaiah (xli.) and Jeremiah (x. 4), and used by the artisan in making idols, are not described. The "nail" of Judges xiv. 21-22, v. 26 was a tent-peg which Jael drove through the temples of Sisera. The word "nail" is metaphorically used to denote a prince on whom the welfare of the state depends (Zech. x. 4). A proverbial application of the word is found in Eccl. xii. 11. In the Mishnah the nail (מסמר) is mentioned as having been used for various purposes: the "nail" (= "lancet") of the bleeder is spoken of; the "nail" of the weaver (that is, the "nail" by which he winds the thread upon the bobbin); the "nail" with which the money-changer secures his money-chest; the "nail" of the dial-plate; the "nail" which is used to open or lock; the "nail" that fastens the bolt in the door; and the "nail" for opening a barrel (Kelim xii. 4–5). Nails were fastened in one end of a stick to be used as a weapon, and sticks were ornamented by being studded with small nails (*ib.* xiv. 2). Nails, probably small ones, were used in making sandals; and merchants hung their wares upon nails driven into a pillar (Shab. 60a). The nail from which a man had been hanged had curative powers and was accordingly sought after and worn (*ib.* vi. 10-67a).

The word "nail" is used also figuratively by the Rabbis. Eleazar says, "My son, drive nails into it [the Halakah]" (B. B. 7b). In the story of Daniel and the dragon it is narrated that Nebuchadnezzar asked Daniel why the power of the dragon, which swallowed everything thrown before it, was so great. Daniel thereupon, with Nebuchadnezzar's permission, put nails in the straw which the dragon ate, and the nails pierced the dragon's entrails (Gen. R. lxviii. 20).

Bibliography: Lampronti, *Paḥad Yiẓḥaḳ*, s.v. צפרנים; Levy, *Neuhebr. Wörterb.* s.v. מסמר and צפורן; Löw, in *Kaufmann Gedenkbuch*, pp. 81-85.

J. M. Sel.

NAIOTH: Place in which David and Samuel took refuge when the former was pursued by Saul (I Sam. xix. 18 *et seq.*, xx. 1). The meaning of the name as well as the nature of the place is doubtful: the "ketib" is נוית, of disputed vocalization; the "ḳere" is ניות, giving "of Naioth" (A. V.). Further, this name is, except in I Sam. xix. 18, always followed by ברמה (= "in Ramah"); and the Septuagint supplies the ἐν 'Ραμά in this instance. It is evident therefore that Naioth was not a city, since it was in the city Ramah, although this objection has been refuted by Ewald ("Gesch." iii. 49), who explains ברמה as "near Ramah." It may be that the name is a plural form meaning "habitations"; this view seems to have been taken by the Targum of Jonathan, which renders it בית אולפנא (= "house of instruction"). Thus, Naioth was a kind of cenobium, containing several apartments.

E. G. H. M. Sel.

NAJARA (NAJAR, NIJAR, NAGAR, NAGARA): Oriental Jewish family, originally from Najera, a Spanish city of Navarre, on the River Najerilla. In the history of rabbinical literature Najaras are found at Algiers, Tunis, Damascus, Gaza, etc.

David Najar: Rabbinical writer of Tunis; died there at the beginning of the nineteenth century. He was the author of "Ẓemaḥ Dawid," which was published after his death, together with the "Admat Yehudah" of Judah Cohen Tanugi (Leghorn, 1828), and which contains novellæ to some tractates of the Talmud and to some parts of Maimonides' "Yad."

Bibliography: D. Cazès, *Notes Bibliographiques*, p. 260.

D. M. Fr.

Israel ben Moses Najara: Poet, liturgist, cabalist, preacher, and Biblical commentator; born at Damascus about the middle of the sixteenth century; died at Gaza, where he had officiated as rabbi. According to Franco ("Histoire des Israélites de l'Empire Ottoman," p. 79, Paris, 1897), there is another account which declares that Najara was born about 1530 and that he lived for some years at Adrianople. From his secular poems, which he wrote in the meters of various Turkish, Spanish, and modern Greek songs, it is evident that he knew well several foreign languages. As may be seen from his works, he was a versatile scholar; and he corresponded with many contemporary rabbis, among others with Bezaleel Ashkenazi, Yom-Ṭob Ẓahalon, Moses Hamon, and Menahem Ḥefeẓ. His poetic effusions were exceptionally numerous, and many of them were translated into Persian. While still young he composed many religious hymns, to Arabic and Turkish tunes, with the intention, as he says in the preface to his "Zemirot Yisrael," of turning the Jewish youth from profane songs. He wrote piyyuṭim, pizmonim, seliḥot, widduyim, and dirges for all the week-days and for Sabbaths, holy days, and occasional ceremonies, these piyyuṭim being collected in his "Zemirot Yisrael." Many of the piyyuṭim are in Aramaic.

For his hymns on the marriage of God and Israel, Najara was severely blamed by Menahem de Lonzano ("Shete Yadot," p. 142) when the latter was at Damascus. The "Shibḥe Ḥayyim Wiṭal" (p. 7b) contains a violent attack by Ḥayyim Vital upon a poet whose name is not mentioned, but who is supposed to be Israel Najara. Nevertheless, Isaac Luria, Vital's teacher, declared that Najara's hymns were listened to with delight in heaven. His piyyuṭim were praised also by Leon of Modena, who composed a song in his honor, which was printed at the beginning of the "'Olat Shabbat," the second part of the "Zemirot Yisrael."

Najara's letters, secular poems, epigrams, and rimed prose form the work entitled "Meme Yisrael" (published at the end of the second edition of the "Zemirot Yisrael"). Najara's other works are as follows: "Mesaḥeḳet ha-Tebel" (Safed, 1587), an ethical poem on the nothingness of the world:

"Shoḥaṭe ha-Yeladim" (printed with Moses Ventura's "Yemin Mosheh," Amsterdam, 1718), Hebrew verse on the laws of slaughtering and porging, composed at the request of his son Moses; "Ketubbat Yisrael" (with Joseph Jaabez's "Ma'amar ha-Aḥdut," n.p., 1794), a hymn which, in the cabalistic fashion, represents the relationship between God and Israel as one between man and wife (it was composed for the Feast of Pentecost); a collection of hymns published by M. H. Friedländer (Vienna, 1858) under the title "Pizmonim." His unpublished works are: "She'eret Yisrael," poems (see below); "Ma'arkot Yisrael," a commentary on the Pentateuch; "Miḳweh Yisrael," sermons; "Piẓ'e Oheb," a commentary on Job.

The "Zemirot Yisrael," originally entitled "Zemirot Yisrael Najara," was first published at Safed (1587) and contained 108 piyyuṭim and hymns. Many additional songs were printed in the second edition (Venice, 1599). This edition contains also the "Meme Yisrael" and the "Mesaḥeḳet ha-Tebel," and is divided into three parts: (1) "'Olot Tamid," containing 225 piyyuṭim for the week-days; (2) "'Olot Shabbot," containing 54 piyyuṭim for the Sabbaths of the whole year; (3) "'Olot Ḥodesh," containing 160 piyyuṭim and dirges for the holy days, Purim, the Ninth of Ab, and occasional ceremonies. It was published a third time at Belgrade (1837), but with the omission of many songs and of the two works just mentioned. Extracts from the "Zemirot Yisrael" were published under the title of "Tefillot Nora'ot" (Frankfort-on-the-Main, 1712).

Many of Najara's piyyuṭim and hymns have been taken into the rituals and maḥzorim in use among the Jews in different countries, especially in Italy and Palestine. Benjamin II. ("Mas'e Yisra'el," p. 15) states that the Jews of Aleppo sing on Sabbath eve many beautiful hymns and recite many prayers, most of which are by Najara. The best known of his Aramaic hymns is the one beginning "Yah Ribbon 'Olam," recited on Sabbath by the Jews of all countries and printed in all the rituals. The "She'erit Yisra'el" contains sixty poems and is, according to its heading, the second part of the "Zemirot Yisrael"; it is found in the bet ha-midrash of the German community in Amsterdam. From it Dukes published one poem in "Orient, Lit." (iv. 526; comp. 540). M. Sachs attempted to render some of Najara's piyyuṭim into German (Busch, "Jahrbücher," 1847, pp. 236-238). After the ruins of the house inhabited by R. Judah he-Ḥasid at Jerusalem were cleared away in 1836, some writings of Israel Najara of the year 1579 were found; these writings are now preserved in the archives of the synagogue of Jerusalem.

W. B. M. SEL.

Judah ben Jacob Najar: Talmudic scholar, author, dayyan, and member of the rabbinate in Tunis; died there at an advanced age in 1830; nephew of Judah Cohen Tanugi. He was the author of the following works: "Limmude Adonai" (Leghorn, 1787), containing 204 hermeneutic rules bearing on Talmudical subjects, together with some funeral orations; "Alfe Yehudah" (*ib.* 1794), commentary on Shebu'ot, with an appendix; "Shebut Yehudah" (*ib.* 1801), commentary on the Mekilta, with text; "Mo'ade Adonai" (*ib.* 1808), commentary on parts of the "SeMaG," published together with the commentaries of Elijah Mizraḥi, Solomon Luria, and Isaac Stein (to this work has been added "Ḳontres Sheni" to the work "Shewut Yehudah," with separate pagination); "Simḥat Yehudah" (Pisa, 1816), commentary on Keritot, Soferim, Semaḥot, Kallah, Derek Ereẓ, and Abot de-Rabbi Natan; "Ḥayye Yehudah" (*ib.* 1816), commentary on Gerim, 'Abodim, and Kuttim; "Ohole Yehudah" (Leghorn, 1823), commentary on Sifre, with text and some decisions.

S. S. M. K.

Levi Najara: Spanish rabbi, who emigrated in 1492 to Palestine, probably to Safed. He was the father of Moses Najara I. M. FR.

Maimun Najar: Rabbi at Constantine, Algeria, in the first half of the fifteenth century. Like his contemporaries and countrymen Isaac ben Sheshet and Simon ben Ẓemaḥ Duran, he left Spain in consequence of the persecutions and fled (1395) to Algeria. In his responsa "Tashbaẓ" (part i., No. 86, Amsterdam, 1738) Duran calls Najar "Maimun ben David"; but Conforte, in "Ḳore ha-Dorot," p. 26b, designates him as "Maimun ben Saadia." Najar's correspondence with Duran on religious questions is found in "Tashbaẓ" (part i., Nos. 94-96, 131-134, 154-157; part ii., Nos. 4, 68-73, 86, 89, 135, 164-168). See JEW. ENCYC. v. 17, *s.v.* Simon b. Ẓemaḥ Duran.

BIBLIOGRAPHY: Azulai, *Shem ha-Gedolim*, i. 88, No. 39, Warsaw, 1876; Fürst, *Bibl. Jud.* iii. 12.

Mordecai Najar: Rabbi at Majorca in the first half of the fifteenth century; a contemporary of Simon ben Ẓemaḥ Duran, who answered some of his questions in "Tashbaẓ" (part i., Nos. 119, 173-174; part ii., Nos. 141, 225-232).

S. MAN.

Moses Najara I.: Turkish rabbinical writer; son of Levi Najara; born probably at Safed; lived at Damascus, where he was rabbi, and died there in 1581. He wrote a work entitled "Leḳaḥ Ṭob" (Constantinople, 1571). He was father of the poet Israel Najara. M. FR.

Moses Najara II.: Poet; son of Israel Najara, whom he succeeded as rabbi of Gaza. His poetry is praised by his contemporaries; but none of his poems is now extant.

B. V.

Nathan Najar: Rabbi at Constantine, Algeria, in the fifteenth century; son of Maimun Najar, and a contemporary of Solomon ben Simon Duran. The latter addressed to him a letter, which, together with Najar's answer, is found in Israel Akrish's "Ḳobeẓ Wikkuḥim" (see Jew. Encyc. i. 313, *s.v.* Akrish), and is reprinted, with corrections and index of passages, in "Kerem Ḥemed," ix. 110 *et seq.* (Jew. Encyc. v. 18, *s.v.* Solomon ben Simon Duran).

D. S. Man.

NAJERA, NAGERA (Latin, **Nagara**): City in Spain, situated between Logroño and Burgos. In the tenth century it had a prosperous Jewish community. In the fuero, or municipal privileges, conferred upon the city by Don Sancho el Mayor, and confirmed by Alfonso VI. in 1076, the Jews were granted the rights of noblemen and benefit of clergy. Whoever struck a Jew had to pay a fine in proportion to the gravity of the wound, the same as if the blow had been dealt to an infanta. This equality of treatment showed itself also in the fact that the guarding of the fort was entrusted to Jews and Christians alike. Any infringement of the ancient "Fuero de Najera" was attended with a penalty of 1,000 pounds in gold.

The Jews, who engaged in commerce and industry, lived in peace with the inhabitants of the city for several centuries; in the war between Don Pedro of Castile and Henry of Trastamara in 1360, the Jews were massacred by the starving soldiers of the latter. The once flourishing community, which in 1290 had paid taxes to the amount of 24,106 maravedis, was almost completely wiped out by the year 1474, when its taxes amounted to only 300 maravedis.

Bibliography: Helfferich, *Gesch. des Westgothen-Rechts*, pp. 326 *et seq.* (contains the "Fuero de Najera" printed entire); Ayala, *Cronica del Rey D. Pedro*, 11th year, ch. vii., p. 301; Rios, *Hist.* i. 331, ii. 242 *et seq.* (where "Najera" should be read for "Navarra"); idem, *Estudios*, pp. 41 *et seq.*

NAḲDANIM: Punctuators or Masoretic annotators; the successors of the Masorites proper. Their activity consisted in collecting and conserving Masoretic material, revising the consonantal text produced by professional scribes, and furnishing them with vowel-signs and accents as well as with Masoretic glosses. For this purpose each distinguished naḳdan provided himself with a copy of the Bible, which was generally written by himself in accordance with Masoretic rules and which became a model codex. They also produced separate Masoretic compilations or Masoretic treatises designed as manuals, and wrote works on the vowel-points and accents as well as explanations of the Masorah itself, which frequently found their way into the body of the old Masorah.

The period of the naḳdanim properly begins with the introduction of Punctuation. In a narrower sense the name is applied to those naḳdanim who flourished from the twelfth century to the invention of printing. The following is a list, arranged in alphabetical order, of the naḳdanim whose names have been handed down:

1. Abraham ha-Levi (see Zunz, "Z. G." p. 114).
2. Abraham Naḳdan (*ib.* p. 115).
3. Asher Naḳdan (*ib.* p. 114).
4. Benjamin b. Joab, called in an epigraph of 1293 (Ginsburg, "Introduction," p. 574) "Degli Mansi."
5. Berechiah b. Naṭronai Krespia ha-Naḳdan.
6. Brodmark (Zunz, *l.c.* p. 121).
7. Eliakim b. Asher (*ib.* p. 120).
8. Eliezer b. Isaiah (*ib.* p. 114).
9. Elijah Naḳdan, son or grandson of No. 5 in this list (*ib.* p. 118).
10. Gershom b. Judah, in epigraph of 1396 (Ginsburg, *l.c.* p. 624).
11. Ḥayyim b. Isaac, in La Rochelle, 1215–16 (Zunz, *l.c.* p. 110).
12. Ḥayyim b. Shneor Naḳdan, 1292 (*ib.* p. p. 117).
13. Hezekiah Naḳdan, the priest, second half of thirteenth century (Ginsburg, *l.c.* p. 480).
14. Isaac b. Menahem Naḳdan, 1291 (Zunz, *l.c.* p. 117).
15. Isaac Naḳdan (*ib.* p. 113).
16. Isaac b. Solomon Naḳdan, 1281 (*ib.* p. 117).
17. Isaiah, pupil of No. 28 in this list (*ib.* p. 113).
18. Jacob ha-Levi b. Meïr (*ib.* p. 114).
19. Jacob b. Meïr Tam (Rabbenu Tam).
20. Jacob Naḳdan (*ib.* p. 113).
21. Jekuthiel b. Isaac, the priest (*ib.* p. 116).
22. Jekuthiel b. Judah ha-Kohen, the priest, or Zalman ha-Naḳdan, author of "En ha-Ḳore."
23. Joseph, 1338; son of No. 13 in this list (*ib.* p. 117; Ginsburg, *l.c.* p. 480).
24. Joseph Ḥazzan of Troyes, author of the grammatical work "Sefer Yedidut" (Zunz, *l.c.* p. 112).
25. Joseph b. Isaac of Arkiash (?) (*ib.* p. 114).
26. Joseph b. Jehozadak, author of "Ba'al ha-Lashon" (*ib.* p. 113).
27. Joseph b. Kalonymus, a German, 1238 (*ib.* p. 111).
28. Joseph Naḳdan, *c.* 1230–50 (*ib.* p. 111).
29. Joseph Naḳdan b. Menahem (*ib.* p. 114).
30. Joseph of Xanthen, son of Kalonymus of Neuss, 1294 (*ib.* p. 117).
31. Judah ben Isaac, or Sir Leon, of Paris, *c.* 1200 (Ginsburg, *l.c.* p. 615).
32. Krespia Naḳdan.
33. Liepkind Naḳdan (Zunz, *l.c.* p. 114).
34. Mordecai Naḳdan Amandanti, *c.* 1300–50 (Ginsburg, *l.c.* p. 715).
35. Moses b. Yom-Ṭob ha-Naḳdan, *c.* 1200 (comp. Zunz, *l.c.* p. 114; Frensdorff, Preface to "Kelale ha-Niḳḳud weha-Neginot"; J. Jacobs, in "J. Q. R." i. 182).
36. Naḥman Naḳdan b. Schneor, 1295 (Zunz, *l.c.* p. 118).
37. Perigoros Naḳdan b. Kalonymus (*ib.* p. 113).
38. Samson b. Naḥman (*ib.* p. 115).
39. Samson of צמיון, 1343 (*ib.* p. 120).
40. Samson Naḳdan, grandfather of No. 30 in this list; author of "Ḥibbur ha-Ḳonim" or "Shimshoni" (*ib.* p. 113).
41. Samuel b. Abraham of Muldstadt (?), 1396 (Ginsburg, *l.c.* p. 624).
42. Samuel ha-Naḳdan (Zunz, *l.c.* p. 109).
43. Shemaiah, thirteenth century (*ib.* p. 115).
44. Solomon Naḳdan (*ib.* p. 113).
45. Zadok Naḳdan (*ib.* p. 110).

Bibliography: Ginsburg, *Introduction to the Massoretico-Critical Text of the Hebrew Bible*, Index, s.v. *Naḳdan*, London, 1897; Zunz, *Z. G.* pp. 107–122, Berlin, 1845.

T. C. L.

NAMES (PERSONAL): The conferring of a name upon a person was in early Biblical times generally connected with some circumstance of birth; several of Jacob's sons are recorded as having received their names in this manner (Gen. xxx.). Generally, it was the mother who chose the name, as in the instances referred to; but here sometimes the father chose it (Gen. xvi. 15, xvii. 19, xxi. 2); while occasionally other persons than the parents were the name-givers, as in the cases of Moses (Ex. ii. 10) and Solomon (II Sam. xii. 25). In early times it appears to have been the custom to confer the name immediately upon birth, as among modern Arabs, but later on it was given to the boy at circumcision (comp. Luke i. 59, ii. 21). Before the Exile children seem never to have been named after their relatives, not even in the royal family. None of the twenty-one kings of Judah was named after a predecessor, or after David, the founder of the family. On the other hand, Jonathan's son and Saul's natural son were both named Meribaal (II Sam. xxi. 7 *et seq.*). Instead of repeating the same name, however, it seems to have been the custom to make use of one of the elements of the family name; thus Ahitub has two sons, Ahijah and Ahimelech. Three of Saul's family have the element *baʻal* (changed to "bosheth") in their names. As a consequence of this avoidance of repetition a single name was as a rule sufficient to identify a person, and it is only in the later stages of Hebrew tradition that it was found necessary to give the name of the father in order to identify the son, as, for instance, in the case of Jaazaniah ben Shaphan (Ezek. viii. 11).

Significance.

It is probable that, as among other primitive races, a certain magical importance was attributed to the name (comp. Frazer, "Golden Bough," 2d ed., i. 404 *et seq.*; E. Clodd, "Tom Tit Tot," London, 1899). A very large majority of the 2,800 personal names (referring to about 15,000 persons) contained in the Old Testament convey a special meaning, apart from their personal application, while the meanings of the remainder probably have merely been obscured by textual corruption or the insufficient resources of comparative philology. A considerable number of these names are, however, mere eponyms. There is little doubt that this applies to the names of the Israelite clans assumed to be descended from descendants of Jacob, given in Num. xxvi.

Names may be derived from the order of birth, as in the cases of Akkub and Jacob, whose names probably mean "posthumous." Jephthah implies "first-born," as does also Becher, while names like Manasseh, Naḥum, and Nehemiah refer probably to children who have come to take the place of others that have died in childhood. The idea of relationship is expressed in Ahab, probably Ahiab (Jer. xxix. 21). Personal peculiarities may give rise to a name, as Laban ("white," or "blond"), Gideon ("maimed"), or Harim ("with pierced nose"). Mental qualities may be referred to, as in the names Job ("assailant") and Barak ("lightning"). Owing to the want of specialization in Jewish social life there are no trade-names in the Bible corresponding to the Smith and Müller of England and Germany; but names taken from objects are found, especially among females. The name Rebekah seems to be derived from a sheep-rope, Peninnah from coral, and Keren-happuch from a box of face-paint. Abstract names seem to be applied especially to women, as Manoah ("rest") and Michal ("power").

Jacobs gives eighty-four names (applied to 120 different persons) derived from animals and plants ("Studies in Biblical Archeology," pp. 94–100). Leah is probably the name for gazel, Rachel for ewe (see Matriarchy). Oreb ("raven") and Zeeb ("wolf") were princes of the Midianites; and Caleb ("the dog") was the founder of the chief Judean tribe. Achbor ("mouse") and Shaphan ("cony") also occur. Jonah is the equivalent of "dove," Zipporah of "bird," and Deborah of "bee." Esther's Jewish name, Hadassah, means "myrtle." An attempt has been made by Robertson Smith and others to find in these and other names traces of totemism among the ancient Hebrews (see Totemism).

Compound Names.

A distinctive characteristic of Bible onomatology is the frequency of composite names, which form at times even complete sentences, as in the case of Isaiah's son Shear-jashub (= "the remnant shall return"). Hephzibah means "my pleasure is in her." Sometimes these composites have a preposition as their first element, as Bishlam (= "with peace"; Ezra iv. 7) and Lemuel (= "belonging to God"; Prov. xxxi. 4); but in the majority of cases these composite names are theophorous, referring to, or actually mentioning, the Deity, either by the name of Yhwh or by the name of El. The specific name of the Jewish God appears at the beginning as *Jo* and at the end as *iah*; thus, Jonathan is a doublet of Elnathan, and Joezer ("Yhwh is help") is the same as Joazar ("Yhwh has helped"). A whole theology may be deduced from the large number of Biblical names referring to acts, actions, and attributes of the deity; thus: God "gives" (Elnathan, Jonathan); "increases the family" (Eliasaph); "is gracious" (Elhanan, Hananeel); "has mercy" (Jerahmeel); "blesses" (Barachel, Berechiah); "loves" (Jedidiah, Eldad); "helps" (Eleazar, Azareel, Azariah); "benefits" (Gamaliel); "holds fast" (Jehoahaz); "is strong" (Uzziel, Azaziah); "delivers" (Elpalet, Eliphalet); "comforts" (Nehemiah); "heals" (Rephael); "conceals" (Elzaphan, Zephaniah); "establishes" (Eliakim); "knows" (Eliada); "remembers" (Zechariah); "sees" (Hazael, Jahaziel); "hears" (Elishama); "answers" (Anaiah); "speaks" (Amariah); "is praised" (Jehaleel); "is asked" (Shealtiel); "comes" (Eliathah); "lives" (Jehiel); "shoots" (Jeremiah); "thunders" (Raamiah; Neh. vii. 7); "gladdens" (Jahdiel, Jehdeiah); "judges" (Elishaphat, Jehoshaphat, Shephatiah); "is just" (Jehozadak); "is king" (Elimelech, Malchiel); "is lord" (Bealiah); "is great" (Gedaliah); "is perfect" (Jotham); "is high" (Jehoram); "is glorious" (Jochebed); "is incomparable" (Michael).

Besides these distinct names of God other divine names are used, as *Adoni* in Adoniram, and *Melech* in Nathan-melech and Ebed-melech, and *Baal* in Esh-baal (changed for special reasons to Ish-bosheth). In some cases names of relationship seem to be used as applied to the Deity (compare Abiel, Abijah, and Abimelech, signifying in each case the fatherhood of God), and in this way Abinadab would correspond to Jehonadab, Abiezer to Eliezer. The same applies to the elements *ah* (= "brother") and *amm* (= "uncle"). As, however, some of these words are applied to families, not individuals, the whole must be taken as a sentence: Ahibud means "my father is glorious" (referring to God). On the same principle it must be assumed that some verbal names are theophorous, and refer to the action of the Deity, Nathan being the abbreviation of Elnathan ("God gives"), Shaphat of Jehoshaphat ("God judges"). Thus Ahaz appears in a form corresponding to Jehoahaz in an inscription of Tiglath-pileser III. Many of the theophorous endings are contracted into *a*, *i*, or *ai*, as in Shebna, Hosa, Talti, and Shemai. A few names are adjectival, and may contain references to the Deity: Baruch ("blessed"), David ("beloved"), Amos ("strong"). Some names have grammatical endings which it is difficult to interpret, as *oth* and *ith* in Shelomoth and Shelomith; the final *i* in Omri and Barzilai probably refers to a tribal origin. Many names ending in *on* are animal-names, as Ephron ("small deer"), Nahshon ("small serpent"); compare Samson ("small sun"). Perhaps Reuben belongs to this class.

Post-Exilic Names.

After the Exile there appeared a tendency toward the use of foreign names, the literal significance of which was disregarded, and this tendency became more and more prominent. Biblical names ending in *a* (as in the books of Ezra and Nehemiah) are Aramaic. Shamsherai (I Chron. viii. 26) is even said to be Arabic, while Mordecai is derived from the name of a Babylonian god (Marduk), as are Belteshazzar (Dan. x. 1), Shenazar (I Chron. iii. 18), and Sheshbazzar (Ezra i. 8) from other deities. There is in this period a tendency also toward descriptive and adjectival names with the definite article prefixed, which easily gave rise to such surnames as Hakkaz, Hakkatan, and Hallosheth (Ezra ii. 61; viii. 12; Neh. iii. 12; comp. the form "ha-Kohelet" (Eccl. xii. 8, Hebr.). In the Hellenistic period Greek names became quite usual among the Jews, especially those of Alexander, Jason, and Antigonus. Even the name of a god like Apollo occurs (Acts xviii. 24). Other names are Apollonius, Hyrcanus, Lysimachus, Demetrius, Dosa, Nicanor, Pappus, Patroclus, Philo, Sosa, Symmachus, Tryphon, Zeno. The same occurs among women, as Alexandra and Priscilla. Roman names also occur, as Antonius, Apella, Drusus, Justinus, Justus, Marcus, Rufus, Tiberius, and Titus. It was during this period that the practice arose of giving a son the name of his grandfather, as was done in the high-priestly family, the members of which were named alternately Onias and Simon from 332 to 165 B.C. Similarly, a little later, in the family of the Hillelites, the names Gamaliel and Judah succeed each other with only an occasional occurrence of Simon and Hillel. Toward the end of the period, owing to the intermixture of foreign languages, the use of double names for the same person began to be adopted, as in the instances of Simon Peter, John Mark, Thomas Didymus, Herodes Agrippa, and Salome Alexandra.

Talmudic Period.

Among the names in the Talmud there is a considerable proportion of Greek ones. A large number also are Aramaic, ending in *a* or *ai*: Abba, Huna, and Papa are instances of the former. Even Bible names were transformed in this direction—Ḥanina instead of Hananiah, Abuya instead of Abijah; while others were shortened, as Lazar (for Eleazar). Many Biblical names received renewed popularity owing to the distinction of their bearers, as those of Gamaliel, Hillel, and Ulla. The tendency toward double names existed here, as Sarah Miriam, Johanan Joseph (Giṭ. 34b), and Mahaliel Judah (Yoma 52b). Converts to Judaism, like Aquila, Monabaz, and Helena, retained their pagan names (as was the custom also in the early Christian Church). There was some objection to foreign names among the Jews of this period (Num. R.), yet legend declares that the high priest Simon promised Alexander the Great that all the children of priestly families born in the year following his visit to Jerusalem would be named Alexander, after him ("Yosippon," folio 87).

In the adoption of double names during this early period an attempt was made to translate the Hebrew terms into corresponding Greek, as Ariston for Tobi, Boethus for Ezra, Justus for Zadok, Philo for Jedidah, Theodorus for Nethaneel, and Zosimus for Ḥayyim. It was somewhat rare for the same name to be used by both sexes. In Biblical times this occurs with regard to the names Abigail, Abijah, Athaliah, Chushan, Ephah, Micha, Nahash, Shelomith, Zibiah; in Talmudic times, with regard to Ibu, Johanan, Nehorai, Pasi, Shalom; the only later instances that may be cited are Jeroham, Mazal-Ṭob, Neḥamah, Menuḥah, Simḥah, Tamar, Bongodas, and Bien-li-Viengue. To wear a man's name seemed as objectionable as wearing men's clothes. It was already noticed in Talmudic times that the use of family names had died out (Giṭ. 88a). The name of Rabbi Meïr was said to be derived from an experience at school which was regarded as being of good omen ('Er. 13b). It is recommended not to name a child after enemies of the Jews, like Cicero and Pharaoh, but to use the names of the Patriarchs (as Abraham, Isaac, Jacob; Yoma 36b).

Post-Talmudic Period.

As the Jews spread throughout the lands bordering the Mediterranean they drew upon other languages for their personal names while still retaining Biblical ones, and they were especially prone to adopt names ending in *el*. These new names became exceptionally popular in Italy. To this source must be traced the new name Ḥushiel, composed on the same plan as the Biblical ones ending in *el*. The kings of the Chazars, so far as their names are known, wavered between pure Biblical names, like Obadiah, and local names, like Bulan. The Karaites in the same neighborhood adopted Tatar names, one of them being known as Toktamish; but elsewhere Karaite names are mostly Arabic and Persian.

The custom of calling one of the sons, generally the eldest, after the paternal (sometimes the maternal) grandfather, of which only nine instances are known during the Talmudic period, became more popular, especially in European states. Maimonides' grandfather was Joseph b. Isaac b. Joseph b. Obadiah b. Solomon b. Obadiah, and certain families seem to have confined themselves to a few chosen names. Thus, in the Kalonymus family there occurs Meshullam b. Moses b. Ithiel b. Moses b. Kalonymus b. Meshullam b. Kalonymus b. Moses b. Kalonymus b. Jekuthiel b. Moses b. Meshullam b. Ithiel b. Meshullam—only five names among fourteen persons throughout three centuries. As a consequence certain names became characteristic of certain districts: Japheth and Caleb in Greece, and hence among the Karaites; Kalonymus in south Italy; Sheshet and Joab in Rome; Sinai and Pesaḥ in Germany. Some of the older names were revived—Meïr, for example, of which only two previous instances had been known, the tanna Meïr and the Meïr mentioned by Josephus ("B. J." vi. 5, § 1). Samson was never used by Jews before the eleventh century. But the most striking tendency of the post-Talmudic period is the general choice of local names by the Jews for their civic relations. This led to the adoption of two names, one for civic purposes, known as the "kinnuy" (probably from the Arabic "kunyah"), the other ("shem ha-ḳodesh") for use in the synagogue and in all Hebrew documents. The latter, the "sacred" name, was as far as possible associated with the former, and was often a translation of a civic one, *e.g.*, Asael for Diofatto, Manoah for Tranquillo, Ḥayyim for Vita; at times the civic name was merely a contraction of the sacred one, *e.g.*, Leser for Eliezer, Sender for Alexander. In other cases mere similarity in sound was sufficient to determine the sacred name, as Mann for Menahem, Kalman for Kalonymus, and the like. Especially noteworthy was the use made of Jacob's blessing to transfer a personal name from the civic to the sacred sphere. Judah being compared to a lion's whelp in Jacob's blessing, Judah became Leo, or Löwe, in lay relationship, and Fischlin became Ephraim. Later on these name-equations became so usual that they formed doublets, which were almost invariably found together, as Dob Bär, Naphtali Hirsch, Judah or Aryeh Löb, and these again gave currency to similar correlative names, as Uri Phoebus.

Titular Abbreviations.

It was during the Middle Ages that the somewhat curious custom arose of combining the abbreviation of a title with the initials of a name to form a single personal name. This almost invariably implies frequency of mention, and, therefore, celebrity. The best-known examples are those of RaSHI and RaMBaM, who are hardly ever quoted in rabbinical texts except by these names; but there exists a large number of similar contractions, of which the following are the best known:

ADaM	Abraham Dob Michaelischker (Lebensohn).
ARI	Rabbi Isaac (Luria) Ashkenazi. Rabbi Isaac Ash.
BeSHṬ	Ba'al Shem-Ṭob.
HaGRA	Ha-Gaon R. Elijah (of Wilna).
HIDA	Ḥayyim Joseph David Azulai.
MaBIṬ	Moses b. Joseph Trani.
MaHaRaL	Morenu Ha-rab Rabbi Liwa (ben Bezaleel).
MaHaRaM	Morenu Ha-rab Rabbi Meïr.
MaHaRḤaSH	Morenu Ha-rab Rabbi Ḥayyim Shabbethai.
MaHaRIL	Morenu Ha-rab Rabbi Jacob Levi (Mölln).
MaHaRIT	Morenu Ha-rab R. Joseph Trani.
MaHaRSHA	Morenu Ha-rab Rabbi Samuel Edels.
MaHaRSHaḲ	Morenu Ha-rab Rabbi Solomon Kluger.
MaHaRSHaL	Morenu Ha-rab Solomon Luria.
MaLBIM	Meïr Löb ben Jehiel Michel.
MISHOB	Mordecai Jonah Shob.
RABaD	Rabbi Abraham ben David.
RABaN	Rabbi Eliezer ben Nathan.
RABIH	Rabbi Eleasar ben Joel ha-Levi.
RaDBaZ	Rabbi David ibn Zimra.
RaLBaG	Rabbi Levi ben Gershon.
RaMaK	Rabbi Moses Kohen.
RaMaḲ	Rabbi Moses Cordovero.
RaMBaM	Rabbi Moses ben Maimon.
RaMBaN	Rabbi Moses ben Naḥman.
RaMBeMaN	Moses ben Menachem Mendel.
RaN	Rabbi Nissim.
RaSH	Rabbi Shimshon.
RaSHBA	Rabbi Solomon ibn Adret.
RaSHBaM	Rabbi Samuel ben Meïr.
RaSHBaẒ	Rabbi Simeon ben Ẓemaḥ (Duran).
RaSHDaM	Rabbi Samuel da Medina.
RaSHI	Rabbi Solomon ben Isaac (Yiẓḥaḳi).
RaZaH	Rabbi Zalman Hanau. Rabbi Zerahiah ha-Levi.
ReDaḲ	Rabbi David Ḳimḥi.
ReDaK	Rabbi David Kohen (of Corfu).
ReMA	Rabbi Moses Isserles.
ReMaH	Rabbi Moses ha-Kohen.
RI	Rabbi Isaac (tosafist).
RI'AZ	Rabbi Isaac Or Zarua'.
RIBA	Rabbi Isaac ben Asher.
RIBaḲ	Rabbi Judah ben Kalonymus.
RIBaM	Rabbi Isaac ben Meïr (tosafist).
RIBaN	Rabbi Judah ben Nathan.
RIBaSH	Rabbi Isaac ben Sheshet.
RIF	Rabbi Isaac Alfasi.
RIḲ	Rabbi Joseph Kolon (Colon).
RIṬBA	Rabbi Yom-Ṭob ben Abraham (Ishbili).
RIẒBA	Rabbi Isaac ben Abraham.
ROSH	Rabbi Asher.
SHaK	Shabbethai ha-Kohen.
SHeDaL	Samuel David Luzzatto.
SHeReẒ	Samuel Raphael Ẓebi (-Hirsch).
Ya'ABeẒ	Jacob Emden ben Ẓebi.
YaSHaR (of Candia)	Joseph Solomon (Delmedigo).
YaSHaR (of Göritz)	Isaac Samuel Reggio.

For a fuller list see Händler's list of abbreviations in Dalman's "Talmudisches Wörterbuch."

A somewhat similar use of a title is the combination with Messer, as in the Italian Messer Leon, while in Provence the honorary prefixes *en*, for men, and *na*, for women, are combined with the name to form Engusek (En-Joseph), Nabona, etc.

Apart from these tendencies, the general trend of nomenclature among Jews in the Middle Ages was to adopt that of the countries in which they lived, the given names being often identical with those of the surrounding peoples, and other means of identification being derived mainly from localities or offices. Certain peculiarities of various countries may be taken separately.

Among the Arabic-speaking Jews the local Arabic names were adopted, such as Ḥassan, Abdallah, Sahl; or Hebrew names were translated into the corresponding Arabic, as Eleazar into Manẓur, Maẓliaḥ into Maimun. A peculiarity of the Arabic onomatology is the "kunyah," the by-name given to a father after the birth of his son, by which he is named after the latter (see Abu). It may be added here that Abu al-Walid is a "kunyah" or by-name for Jonah. Akin to this is the use of Ibn to form a family name, the first of this kind among Jews. Among the best known of this formation are Ibn Aknin, Ibn Danan (hence Abendana), Ibn Laṭif, Ibn Migas, Ibn Verga. Abu also forms family names, as in the case of Abudarham, or Aboab. The Arabic article *al* appears in quite a number of names, as in Al-Ḥarisi. Other names of interest, given by Steinschneider in a long list of eight hundred Arabic names in the "Jewish Quarterly Review" (ix.-xiii.), are Ghayyat (in Spanish "Gayet"), Ibn Danan and Ibn al-Dayyal, Al-Haruni ("the Aaronide," the same as "Cohen"), Ibn Waḳar, Ibn Zabara and Ibn Zimra, Ḥaji (applied to Karaites who had performed the pilgrimage to Jerusalem), Yaḥya (equivalent to John or Judah). Morel is said to be derived from Samuel; Molko means "royal"; Mas'ud is equivalent to Baruch; Muḳattil ("champion") would be a proper origin for the family name Mocatta; Najar and Najara refer to carpentry; Sasun is merely a transcript of Sason ("lily"). The proper names Sa'id, Sa'ad, and Sa'dan are equally popular among Jews and Arabs. 'Abbas ("lion") corresponds to Judah, as Leo and the like in Europe. Very many Judæo-Arabic names are compounded of *'abd* ("servant"), as Abdallah and 'Abd al-Walid. Al-Faraj occurs as the name of the translator at Girgenti, and it is possibly the remote origin of the curious name of Admiral Farragut, whose grandfather came from Minorca. It is considered doubtful whether the name of the Ḳimḥis is Hebrew in that form, or whether it should be pronounced as an Arabic word, Ḳamḥi ("formed of wheat").

Arabic Names.

The use of surnames thus became common among the Arabic-speaking Jews, who naturally carried the custom into Spain. Among Spanish Jews are found such names as Abeldano, corresponding to Ibn el-Danan; Abencabre, corresponding to Ibn Zabara; Avinbruch, corresponding to Ibn Baruch; and the like. Biblical names often take curious forms in the Spanish records, Isaac appearing as Acaz, Cohen as Coffen or Coffe, Yom-Ṭob as Bondia, Ẓemaḥ as Crescas or Cresquez. The Ḥen family appears to have adopted a translation of the name of their home-village, Gracia, near Barcelona (Loeb, in "R. E. J." iv. 73). Indeed, among the Spaniards the tendency to adopt family names from localities is largely developed; hence were derived such names as Spinoza, Gerondi, Cavalleria, Delmonti, Lousada, and Villa Real. The name Sasportas deserves special attention, as it is really the Balearic dialectal form of La Porta.

In Spain, France, and England.

In France the use of Biblical names appears to have been more extended, judging by the elaborate lists at the end of Gross's "Gallia Judaica." True surnames occurred, especially in the south, like Abigdor, Farissol, Bonet; but as a rule local distinctions were popular, as Samson of Sens, etc. The early Jews of England, who spoke French throughout their stay, also used Biblical names; the most popular name, in the twelfth century at least, being Isaac, next to which came Joseph. On both sides of the British Channel there was a tendency to translate Biblical names into French, as Deulesalt for Isaiah, Serfdeu for Obadiah, Deudone for Elhanan, but the ordinary popular names were adopted also, as Beleasez, Fleurdelis, and Muriel for Jewesses, or Amiot, Bonevie, Bonenfaund, Bonfil, among men. Deulacres and Crescas both occur (probably corresponding to Solomon or Gedaliah). In Germany the tendency to adopt Christian names was perhaps most marked, such names as Bernhard, Bero, Eberhard, Falk, Gumprecht, Knoblauch, Liebreich, Süsskind, Weiss, and Wolf being among those noticed in the early Middle Ages. Especially popular were compounds with *mann* or *man*, as Feldmann, Kaufmann, Lieberman, Lipman, and Seligman.

Surnames.

As has been seen, surnames were not unknown among the Jews of the Middle Ages, and as Jews began to mingle more with their fellow citizens the practise of using or adopting civic surnames in addition to the "sacred" name, used only in religious connections, grew commensurately. Of course, among the Sephardim this practise was common almost from the time of the exile from Spain, and probably became still more common as a result of the example of the Maranos, who on adopting Christianity accepted in most cases the family names of their godfathers. Among the Ashkenazim, whose isolation from their fellow citizens was more complete, the use of surnames became at all general only in the eighteenth century.

In the Austrian empire an order was issued in 1787 which compelled the Jews to adopt surnames, though their choice of given names was restricted mainly to Biblical ones; a list of permitted first names is given in Kropatschat's "Gesetzsammlung" (xiv. 539-567), the names marked in black letters being those reserved for Jews. Commissions of officers were appointed to register all the Jewish inhabitants under such names. If a Jew refused to select a name the commission was empowered to force one upon him. This led to a wholesale creation of artificial surnames, of which Jewish nomenclature bears the traces to the present day. Among the latter class are the following, mentioned by Karl Emil Franzos: Drachenblut, Ochsenschwanz, Nachtkäfer, Ladstockschwinger, Pulverbestandtheil, Temperaturwechsel, Eselskopf, Rindskopf, Gottlos, Wohlgeruch, Singmirwas, Veilchenduft, Stinker, Bettelarm, Nothleider, Geldschrank, Diamant, Smaragd, Karfunkel, Edelstein, Goldader, Galgenvogel, Galgenstrick, Todtschläger, Lumpe, Taschengreifer, Durst, Hunger, Fresser, Säuger, Trinker, Weinglas, Schnapser, Schmetterling, Elephant, Nashorn, Pferd, Maulthier, Maulwurf, Wanzenknicker, Saumagen, Küssemich, Groberklotz. Napoleon also, in a decree of July 20, 1808, insisted upon the Jews adopting fixed names ("L'Univers Israélite," lvii. 472). While various governments thus forced the Jews to adopt surnames, they were at the same time inclined to limit their freedom in the selection of given names. In Bohemia the provisions of the law which was passed in 1787 restricting them to Biblical names were not rescinded until Aug. 11, 1836. The Prussian government in the same year attempted to introduce a similar restriction in that state, which led to Zunz producing his classical monograph, "Die Namen der Juden," in which he showed, from examples taken from all periods, that the Jews had freely adopted the current and popular names of their neighbors in all parts of the globe. Owing mainly to this "tour de force" the enactment was not pressed. Similar rules have been passed by the Russian government from time to time, but without producing much effect; though even at the present day a Jewess must not bear such a name as Clara.

A recent investigation into Berlin prænomens shows that modern Jews of that city adopt the ordinary given names of their neighbors, but that they tend to keep a certain number of names, though not of Biblical origin, popular among themselves. Thus Harry is mainly Jewish, and the same may be said of Isidore, Jacques, James, and Sigbert. Almost all the Moritzes are Jewish, as well as the majority of Ludwigs, and Julius is almost equally popular among the Berlin Jews. The following popular names in most places represent the accompanying Biblical names: Isidore, Isaac; Jacques and James, Jacob; Ludwig, Levi; Moritz, Moses. Benno is used for Benjamin, and in one case Dagobert for David. Among Jewish girls Regina and Rosa are popular names (N. Pulvermacher, "Berliner Vornamen," Berlin, 1902).

But notwithstanding this permission to adopt arbitrary surnames, there was still a tendency, at any rate among German-speaking Jews, to adapt these from Biblical names in one or other of their variant forms. Thus among the 5,000 names of patrons connected with Anglo-Jewish charitable institutions in 1878 Jacobs found the most popular names to be the following:

Name.	*Proportion.*	*Name.*	*Proportion.*
Cohen	1 in 26	Abraham and Abrahams	1 in 84
Davis	1 " 32	Harris	1 " 84
Levy	1 " 35	Moses	1 " 96
Joseph	1 " 47	Nathan	1 " 107
Isaac and Isaacs	1 " 52	Woolf and Wolff	1 " 115
Myer and Myers	1 " 64	Barnet and Barnett	1 " 127
Phillips	1 " 65	Benjamin	1 " 131
Samuel	1 " 66	Emanuel	1 " 131
Solomon and Solomons	1 " 66	Hyam and Hyams	1 " 135
Jacob and Jacobs	1 " 78	Marks	1 " 135
Hart	1 " 81	Hyman and Hymans	1 " 149

It is accordingly of interest to study the different forms which Biblical names assume in various countries when used as Jewish surnames. The following is a list of the more usual forms, the original Biblical name being given first:

Aaron = Aarons, Aaronson, Aronoff, Aronson, Aronovich. Abraham = Aberke, Aberl, Aberlein, Aberlieb, Aberlin, Abers, Aberzuss, Abraham, Abrahams, Abrahamson, Abram, Abrams, Abramovitch, Abramovitz, Abreska, Abromovitch, Afroemche, Afrom, Afromle, Babrahams, Braham, Ebermann, Ebril. Alexander = Alexander, Saunders, Sender. Asher = Anschel, Ansell, Archer, Ascher, Asher, Asherson, Assur, Maschel.

Baruch = Bendit, Bendict, Benedict, Beniton, Berthold, Borach, Boruch. Benjamin = Lopes, Lopez, Seef, Seff, Wolf, Wolff, Wulf.

David = Bendavid, David, Davids, Davidson, Davies, Davis, Davison, Tewel, Tewele, Teweles.

Elchanan = Elkan, Elkin. Eleazar = Eleasser, Eleazar, Ellosor, Lasar, Lazan, Lazar, Lazarus. Eliezer = Leeser, Leser, Lewis, Leyser, Löser. Elijah = Elias, Eliasaf, Eliassof, Eliason, Elie, Elijah, Ellis, Ellison. Emanuel = Emanuel, Manuel, Mendel. Ephraim = Fischl, Fischlin, Fraime. Ezekiel = Eheskel, Ezekiel, Heskel, Kaskel.

Gabriel = Gafril, Gefril. Gedaliah = Guedalla. Gershon = Geronymus. Gideon = Gedide.

Isaac = Eisech, Eissig, Gitzok, Ickzack, Isaac, Isaacs, Itzig, Izaaks, Hickman, Hitchcock, Lachman, Sachs, Sack, Sacks, Sace, Seckel, Sichel, Zeklin. Israel = Israel, Israels, Israelson, Isril, Isserl Isserlein, Isserles. Issachar = Achsel, Bar, Baer, Barell, Barnard, Barnett, Berusch, Beer, Berlin, Bernard, Berthold, Schulter.

Jacob = Benjacob, Jackson, Jacob, Jacobi, Jacobs, Jacobson, Jacobus, Jacoby, Jacof, Jainof, Kaplan, Kaplin, Kaplowitch, Kaufman, Kaufmann, Kopinski, Koppel, Koppellmann, Koppelvitch, Leppok, Marchant, Merchant, Scobeleff, Yokelson. Joel = Jool, Jolchen, Julius. Jonah = Jonas, Jonassohn, Jones. Joseph = Jees, Jessel, Jessop, Jocelyn, Josel, Joseph, Josephi, Josephs, Josephson, Joskin, Joslin, Jossel, Josselson, Yoish, Yosl. Judah = Ben-Ari, Ben-Löb, Judah, Jewell, Judel, Judelson, Judith, Leo, Leon, Leoni, Leonte, Leontin, Leuw, Lion, Lionel, Löbel, Löblin, Leubusch, Löbusch, Löwe Löwel, Lyon, Lyons.

Levi = Aleuy, Elvy, Halevy, Ha-Levi, Lavey, Lebel, Leblin, Levay, Leib, Leopold, Leve, Levene, Levenson, Levi, Levie, Levien, Levin, Levinsky, Levinsohn, Levison, Levy, Lewey, Lewi, Lewin, Lewinsky, Lewinson, Lewis, Löb, Löbel, Loewe, Loewi, Louissohn, Lovy, Low, Löwy, Lowy.

Manasseh = Manasse, Mannes, Menasci, Mones. Marcus = Marx, Mordchen. Menahem = Man, Mandl, Manin, Mann, Mendel, Mendelson, Mendelssohn, Mendl, Menke, Menken, Menkin, Menlin, Menzel, Monitz, Monnish. Moses = Mausche, Moise, Moritz, Mosche, Mosely, Mosen, Mosessohn, Mosesson, Moskin, Moss, Mosse, Mossel.

Naphtali = Cerf, Harris, Harrison, Hart, Herschell, Hershkovitz, Hertz, Hertzen, Hertzl, Herz, Herzl, Hirsch, Hirschel, Hirschkovitsch, Huzka, Zewi.

Samson = Sampson. Samuel = Samuels, Samuelson, Sanvel, Sanville, Sanwil, Saville, Schmuel, Zangwill. Simeon = Simeon, Simmel. Simon = Schimme, Schima, Schimchen. Solomon = Salaman, Salman, Salmen, Salmon, Salmuth, Salom, Salome, Salomon, Salomone, Salomons, Schlemel, Schlome, Sloman, Slowman, Solomons, Suleiman.

Zachariah = Zacharias.

Next to Biblical surnames, local ones have the greatest popularity among Jews, as can be seen from the following list of the most popular names among Alsatian Jews in 1784:

Abraham	72	Benjamin	10
Ach	20	Bernheim or Bernheimer	43
Alexandre	22	Bicart and variants	24
Aron	50	Bloch	189
Bähr and variants	22	Blum	29
Barach and variants	31	Bolack and variants	13

Brunschwig and variants	63
Cahen and variants	15
David	54
Dreyfus	124
Elias or Elie	36
Emanuel	12
Franck	23
Geismar	13
Gerothwohl	12
Gerson or Gerschem	10
Gotschal	16
Grumbach	32
Guggenheim	17
Guntzburg and variants	16
Haas	12
Hauser	15
Hemerdinger and variants	17
Heyman	10
Hirsch or Hersch	30
Hirtz and variants	10
Hirtzel or Hertzel	48
Isaac	86
Israel	39
Jacob	63
Jonas	19
Joseph	40
Judas and variants	18
Kahn and variants	90
Katz	19
Lang	15
Lazare or Lazarus	35
Lehmann	23
Levy	618
Leyser	23
Lippmann and variants	26
Löw	28
Löwel	38
Marx	37
Mayer or Meyer	99
Moyses and variants	86
Nathan	25
Netter	40
Nordemann and variants	16
Picard	27
Picquer and variants	17
Raphael	22
Rueff	32
Salomon	50
Samson	12
Samuel and variants	81
Schnerb	10
Schwob	35
Seeligman	29
Simon	18
Ulman	34
Ulmo	15
Wahl	11
Weyl	187
Wolff	37
Woog, Wogue	16
Wormser	50

Local names form, perhaps, the larger number of surnames among modern Jews, though no one locally derived name occurs so frequently as the least common Biblical one. Besides general names like Hollander, Deutsch, Frank, Franco, Frankel, almost every European country has contributed its quota. Holland has contributed Lleuwarden, Neumegen, Limburg, Van Thal, and various other Vans, as Van Ryn (= Rhine), etc.

Local Names.

Germany, of course, has contributed the largest number. Besides such well-known cities as Posen (hence Posner), Berlin (hence Berliner and Berlinsky), Bingen, Cassel, Treves (whence, according to some authorities, originated the very popular Alsatian name of Dreyfus), Dresden, Fulda (hence Fould), and Oppenheim, less familiar towns, like Flatau, Hildesheim, Bischoffsheim, Auerbach, Behrendt, Landshuth, Sulzberg, have contributed their share. A certain number of names which might at first sight seem to be derived artificially are merely names of towns, like Birnbaum (translated into "Peartree"), Rosenberg, Sommerfeld, Grünberg (hence Greenberg), Goldberg, and Rubenstein. The English Crawcour comes from Cracow, while Van Praagah is obviously the name of a Prague family that settled in Holland before going over to England. The name Gordon is said to be from the Russian Grodno. From Poland have come various general names, as Polano, Pollock, Polack, Polak, Pollak, Poole, Pool. Sephardic surnames, as already mentioned, are almost invariably local, as Almanzi, Castro, Carvajal, Leon, Navarro, Robles (Spanish), and Almeida, Carvallo, Miranda, and Pieba (Portuguese). Many Italian names are also of this class, as Alatino, Genese (from Genoa), Meldola, Montefiore, Mortara, Pisa, and Romanelli (with its variants Romanin, Romain, Romayne, and Romanel). Even in the East there are names of these last two classes, Behar (from Bejar), Galante, Veneziani, though there are a few Arabic names like Alfandari and Ḥaggis; Greek, as Galipapa and Pappo; and a few Turkish, as Jamila, Bilbil, and Sabad (Franco, "Histoire des Israélites de l'Empire Ottoman," pp. 284-285).

Going still farther east, the curious custom which prevails among the Bene Israel may be mentioned of changing Biblical names to similar Hindu names with the addition of *jee*, thus Benjamin into Benmajee, Abraham into Abrajee, David into Dawoodjee, Jacob into Akkoobjee. Before dismissing the local names, the names Altschul or Altschuler, derived from the Altschul of Prague, should be mentioned. To the signs of the Frankfort Judengasse are due the names of some of the best known of Jewish families: Rothschild ("red shield"), Schwarzschild, Adler, Ganz or Gans ("goose"), Schiff ("ship"), Strauss ("ostrich"), and Ochs. Schudt gives a list of these signs ("Jüdische Merckwürdigkeiten," iii. 151-154).

Official Names and Nick-names.

Turning to the next great source from which have been derived the surnames used in ordinary nomenclature — trades and occupations — such names as Kaufmann and Marchant ("merchant") become prominent. Others of the same kind are: Spielmann ("player"); Steinschneider ("engraver"); Schuster, Schneider, Schneiders, and Snyders ("tailor"; in Hebrew Ḥayyat; hence Chayet); Wechsler ("money-changer"). But there are others that are more distinctively Jewish: Parnass and Gabbay, from the synagogue officials who were so called; Singer, Cantor, Voorsanger, Chazan, Cantarini, from the singers of Israel; Shochet, Schaechter, Schechter, from the ritual slaughterer; Ballin, a bath-keeper; Shadkun, a marriage-broker; Moreno, Rabe, Rabinowitz, and Rabbinovitz, rabbis; Benmohel, one who performed the sacred rite of Abraham. A number of Arabic names are of similar origin: Al-Fakhkhar, a potter; Mocatta, a mason or possibly a soldier (Al-Muḳatil). For the various forms of Cohen see Jew. Encyc. iv. 144.

Descriptive titles, again, are mainly derived from modern languages, and are sometimes translated into Hebrew: thus, Azariah dei Rossi is known as Azariah Min ha-Adummim; or sometimes the Hebrew name is translated into the current languages: thus Jafeh ("beautiful") is translated into Schön, Schöndel, Schandel, Bonfet.

Nicknames seem not to be so frequently adopted as surnames among Jews, though so usual among them in the ordinary life of the ghetto. Yom-Ṭob and Purim are possibly to be included in this class, and it is said that the various forms of Kaiser and King are derived from players of that part in the Purim plays. Instead of nicknames, modern Jews use contractions of Hebrew descriptive names; thus, Shön represents Sheliaḥ Ne'eman, and Schatz, Sheliaḥ Ẓibbur; Katz ("cat") represents Kohn Ẓedeḳ; Goetz (in English, Yates) equals Ger Ẓedeḳ; Sack is used for a member of the Zera' Ḳodesh, or "holy posterity," and it is said that when an "s" is attached this reference is to the fraternity of that name at Speyer. Bran, Braun, or Brown is said to represent Ben Rabbi Naḥman; while Bril represents Ben Rabbi Judah Löb.

A few miscellaneous names may be referred to:

Speranza, which is used as a woman's name, occurs in the form of Sprinzer in Russia; Margolious and Margolioth are variations of Margaret; and Marguerite ("pearl") finds equivalents in Perel and Perles. The Wahls claim to descend from Saul Wahl, who was king of Poland for one day. Schöntheil is supposed to be a translation of Bonaparte, and Stiebel is derived from the little room kept for the "baḥur" in rich Jews' houses.

Change of Name.

Change of name was not an unusual occurrence in Biblical times, if one may judge by the instances occurring among the Patriarchs, and it seems to have been not altogether unknown in later times. Thus, Moses Benveniste mentions a certain Obadiah who wandered from Germany to Turkey in 1654 and changed his name to Moses because the former name was unusual (Responsa, i. 40). Later in the Middle Ages a person who was dangerously sick would change his name in the hope that the Angel of Death, who summons persons by name, would be baffled thereby. This custom, known as "meshanneh shem," is given in the Talmud (R. H. 17a) and is mentioned by Judah Ḥasid ("Sefer Ḥasidim," No. 245). One of the names thus adopted was the appropriate one of Ḥayyim, for the various forms of which see Jew. Encyc. vi. 271. In order to prevent any misunderstanding at the resurrection the cabalists later recommended persons to learn a psalm the first and last verses of which began and ended with the first and last letters of their names. Particular care is to be taken in the writing of names in legal documents, the slightest error in which invalidates them. Hence there are quite a number of monographs on names, both personal and geographical, the first of which was that written by Simḥah Cohen; the best known is that of Samuel ben Phoebus and Ephraim Zalman Margulies entitled "Ṭib Giṭṭin."

Superstitions.

It was thought that Jews of the same name should not live in the same town or permit their children to marry into each others' families ("Sefer Ḥasidim," Nos. 24–34); this seems to have some reference to exogamy. It is even urged that one should not marry a woman of the same name as one's mother; or that she should be required to change it (*ib.* No. 23). Even to the present day it is considered unlucky in Russia for a father-in-law to have the same name as the bridegroom. When several children have died in a family the next that is born has no name given to it, but is referred to as "Alter," or "Alterke," the view being that the Angel of Death, not knowing the name of the child, will not be able to seize it. When such a child attains the marriageable age, a new name, generally that of one of the Patriarchs, is given to it. For a somewhat similar reason it is considered unlucky in Lithuania to call an only child by his right name. For geographical names see Place-Names.

Pen-Names.

Finally, it may perhaps be desirable to refer to the frequent practise among Jewish authors of adopting pen-names. It was, indeed, customary for well-known authors of medieval times to be known by the titles of their works rather than by their own names. Thus, Jacob ben Asher is referred to as the "Ṭur" or the "Ba'al ha-Ṭurim"; Joseph Caro is known as the "Bet Yosef"; and Ezekiel Landau as "Noda' bi-Yehudah"; while even more frequently were authors known by contracted forms of their names, with the addition of some honorary prefix, as given above. Among contemporary Hebrew writers this practise is still more widely observed, though no honorary title is prefixed. A list is given by M. Schwab in his "Repertoire" (Supplement, pp. 200–207). Most Yiddish writers, indeed, appear to prefer to write under some pen-name or pseudonym, and their example is at times followed by modern writers of Hebrew, though these, as a rule, prefer to give a name composed of their initials. Following is a list of the most prominent pen-names adopted in recent years by contemporary writers. Many of these print their Hebrew names in Latin characters, and their transliteration is followed here:

Pseudonyms.	Authors.
Adam	Andermann, D. M.
Adir	Deinard, E.
Aḥad ha-'Am	Ginzberg
Aus Kapelusmacher	Selikowitsh
Bas-Malke	Samostshin, Mrs.
Ben Dawid	Davidovich
Ben Efraim	Baranow, M.
Ben Nez	Winchevsky, M.
Ben Omi	Rabinovich, M. J.
Ben Pores	Bukanski
Ben-Tomar	Perez, J. L.
Benyemini	Katzenelson, I. B.
Bernstein, Dawid	Cahan, Abraham
Bücherfresser	Rabinowitsch, S.
Buki ben Jogli	Katzenellenbogen

Of course, other Jewish litterateurs besides the above have adopted pen-names. I. Zangwill has written under the names "J. Freeman Bell" (in collaboration), "Countess von S.," and "Marshallik"; Mrs. Frankau is known as "Frank Danby"; and so on; but there is nothing specifically Jewish about this adoption of a pen-name.

NAMES OF GOD.

—Biblical Data: Like other Hebrew proper names, the name of God is more than a mere distinguishing title. It represents the Hebrew conception of the divine nature or character and of the relation of God to His people. It represents the Deity as He is known to His worshipers, and stands for all those attributes which He bears in relation to them and which are revealed to them through His activity on their behalf. A new manifestation of His interest or care may give rise to a new name. So, also, an old name may acquire new content and significance through new and varied experience of these sacred relations.

It can readily be understood, therefore, how the divine name is often spoken of as equivalent to the divine presence or power or glory. In Ex. xxiii. 20-23 it is promised that Yhwh's angel will lead and give victory to His people, who must yield reverent obedience, for, the Lord says, "my name is in him." The devout Israelite will not take the name of a false god upon his lips (Ex. xxiii. 13; Josh. xxiii. 7; Hosea ii. 16-17; Ps. xvi. 4). To make mention of Yhwh's name is to assert confidence in His strength and present and efficient aid. The name excites emotions of love, joy, and praise (Ps. v. 11; vii. 17; ix. 2; xx. 1, 7). That name is, therefore, especially connected with the altar or sanctuary, the place where God records His name (Ex. xx. 24), or "the place which the Lord your God shall choose out of all your tribes to put His name there" (Deut. xii. 5; comp. I Kings viii. 16, 29; ix. 3; Jer. vii. 12). The Temple is "the place of the name of the Lord of hosts, the mount Zion" (Isa. xviii. 7). In one or two comparatively late passages "the Name" (השם) is used absolutely, doubtless as an equivalent for "the name of Yhwh" (Lev. xxiv. 11, 16; comp. Deut. xxviii. 58).

YHWH.

Of the names of God in the Old Testament, that which occurs most frequently (6,823 times) is the so-called Tetragrammaton, Yhwh (יהוה), the distinctive personal name of the God of Israel. This name is commonly represented in modern translations by the form "Jehovah," which, however, is a philological impossibility (see Jehovah). This form has arisen through attempting to pronounce the consonants of the name with the vowels of Adonai (אדני = "Lord"), which the Masorites have inserted in the text, indicating thereby that Adonai was to be read (as a "ḳeri perpetuum") instead of Yhwh. When the name Adonai itself precedes, to avoid repetition of this name, Yhwh is written by the Masorites with the vowels of Elohim, in which case Elohim is read instead of Yhwh. In consequence of this Masoretic reading the authorized and revised English versions (though not the American edition of the revised version) render Yhwh by the word "Lord" in the great majority of cases.

This name, according to the narrative in Ex. iii. (E), was made known to Moses in a vision at Horeb. In another, parallel narrative (Ex. vi. 2, 3, P) it is stated that the name was not known to the Patriarchs. It is used by one of the documentary sources of Genesis (J), but scarcely if at all by the others. Its use is avoided by some later writers also. It does not occur in Ecclesiastes, and in Daniel is found only in ch. ix. The writer of Chronicles shows a preference for the form Elohim, and in Ps. xlii.-lxxxiii. Elohim occurs much more frequently than Yhwh, probably having been substituted in some places for the latter name, as in Ps. liii. (comp. Ps. xiv.).

In appearance, Yhwh (יהוה) is the third person singular imperfect "ḳal" of the verb הוה ("to be"), meaning, therefore, "He is," or "He will be," or, perhaps, "He lives," the root idea of the word being, probably, "to blow," "to breathe," and hence, "to live." With this explanation agrees the meaning of the name given in Ex. iii. 14, where God is represented as speaking, and hence as using the first person—"I am" (אהיה, from היה, the later equivalent of the archaic stem הוה). The meaning would, therefore, be "He who is self-existing, self-sufficient," or, more concretely, "He who lives," the abstract conception of pure existence being foreign to Hebrew thought. There is no doubt that the idea of life was intimately connected with the name Yhwh from early times. He is the living God, as contrasted with the lifeless gods of the heathen, and He is the source and author of life (comp. I Kings xviii.; Isa. xli. 26–29, xliv. 6–20; Jer. x. 10, 14; Gen. ii. 7; etc.). So familiar is this conception of God to the Hebrew mind that it appears in the common formula of an oath, "ḥai Yhwh" (= "as Yhwh lives"; Ruth iii. 13; I Sam. xiv. 45; etc.).

If the explanation of the form above given be the true one, the original pronunciation must have been Yahweh (יַהְוֶה) or Yahaweh (יַהֲוֶה). From this the contracted form Jah or Yah (יָהּ) is most readily explained, and also the forms Jeho or Yeho (יְהוֹ = יַהְוְ = יְהוֹ), and Jo or Yo (יוֹ, contracted from יְהוֹ), which the word assumes in combination in the first part of compound proper names, and Yahu or Yah (יָהוּ = יַהְוְ) in the second part of such names. The fact may also be mentioned that in Samaritan poetry יהוה rimes with words similar in ending to Yahweh, and Theodoret ("Quæst. 15 in Exodum") states that the Samaritans pronounced the name Ἰαβέ. Epiphanius ascribes the same pronunciation to an early Christian sect. Clement of Alexandria, still more exactly, pronounces Ἰαουέ or Ἰαουαί, and Origen, Ἰαῆ. Aquila wrote the name in archaic Hebrew letters. In the Jewish-Egyptian magic-papyri it appears as Ιαωουηε. At least as early as the third century B.C. the name seems to have been regarded by the Jews as a "nomen ineffabile," on the basis of a somewhat extreme interpretation of Ex. xx. 7 and Lev. xxiv. 11 (see Philo, "De Vita Mosis," iii. 519, 529). Written only in consonants, the true pronunciation was forgotten by them. The Septuagint, and after it the New Testament, invariably render ὁκύριος ("the Lord").

Various conjectures have been made in recent times respecting a possible foreign origin of this name. Some derive it from the Kenites, with whom Moses sojourned, Sinai, the ancient dwelling-place of Yhwh, having been, according to the oldest tradition, in the Kenite country. A Canaanite, and, again, a Babylonian, origin have been proposed, but upon grounds which are still uncertain. Various explanations of the meaning of the name, differing from that given above, have been proposed: *e.g.*, (1) that it is derived from הוה ("to fall"), and originally designated some sacred object, such as a stone, possibly an aerolite, which was believed to have fallen from heaven; (2) or from הוה ("to blow"), a name for the god of wind and storm; (3) or from the "hif'il" form of הוה ("to be"), meaning, "He who causes to be," "the Creator"; (4) or from the same root, with the meaning "to fall," "He who causes to fall" the rain and the thunderbolt—"the storm-god." The first explanation, following Ex. iii. 14, is, on the whole, to be preferred.

Elohim.

The most common of the originally appellative names of God is Elohim (אלהים), plural in form though commonly construed with a singular verb or adjective. This is, most probably, to be explained as the plural of majesty or excellence, expressing high dignity or greatness: comp. the similar use of plurals of "ba'al" (master) and "adon" (lord). In Ethiopic, Amlak ("lords") is the common name for God. The singular, Eloah (אלוה), is comparatively rare, occurring only in poetry and late prose (in Job, 41 times). The same divine name is found in Arabic (ilah) and in Aramaic (elah). The singular is used in six places for heathen deities (II Chron. xxxii. 15; Dan. xi. 37, 38; etc.), and the plural also, a few times, either for gods or images (Ex. ix. 1, xii. 12, xx. 3; etc.) or for one god (Ex. xxxii. 1; Gen. xxxi. 30, 32; etc.). In the great majority of cases both are used as names of the one God of Israel.

The root-meaning of the word is unknown. The most probable theory is that it may be connected with the old Arabic verb "alih" (to be perplexed, afraid; to seek refuge because of fear). Eloah, Elohim, would, therefore, be "He who is the object of fear or reverence," or "He with whom one who is afraid takes refuge" (comp. the name "fear of Isaac" in Gen. xxxi. 42, 53; see also Isa. viii. 13; Ps. lxxvi. 12). The predominance of this name in the later writings, as compared with the more distinctively Hebrew national name Yhwh, may have been due to the broadening idea of God as the transcendent and universal Lord.

El.

The word El (אל) appears in Assyrian (ilu) and Phenician, as well as in Hebrew, as an ordinary name of God. It is found also in the South-Arabian dialects, and in Aramaic, Arabic, and Ethiopic, as also in Hebrew, as an element in proper names. It is used in both the singular and plural, both for other gods and for the God of Israel. As a name of God, however, it is used chiefly in poetry and prophetic discourse, rarely in prose, and then usually with some epithet attached, as "a jealous God." Other examples of its use with some attribute or epithet are: El 'Elyon ("most high God"), El Shaddai ("God Almighty"), El 'Olam ("everlasting God"), El Ḥai ("living God"), El Ro'i ("God of seeing"), El Elohe Israel ("God, the God of Israel"), El Gibbor ("Hero God").

The commonly accepted derivation of this name from the Hebrew root אול, "to be strong," is extremely doubtful. A similar root has been explained from the Arabic as meaning "to be in front," "to be foremost," "to lead," "to rule," which would give the meaning "leader," "lord." But the fact that the *e* in El was originally short, as seen in such proper names as Elkanah, Elihu (אֶלְקָנָה, אֱלִיהוּא), and in the Assyrian "ilu," is strong evidence against this derivation. As in the case of Elohim, it is necessary to admit that the original meaning is not certainly known.

The word Shaddai (שַׁדַּי), which occurs along with El, is also used independently as a name of God,

Shaddai and ‘Elyon.

chiefly in the Book of Job. It is commonly rendered "the Almighty" (in LXX., sometimes παντοκράτωρ). The Hebrew root "shadad," from which it has been supposed to be derived, means, however, "to overpower," "to treat with violence," "to lay waste." This would give Shaddai the meaning "devastator," or "destroyer," which can hardly be right. It is possible, however, that the original significance was that of "overmastering" or "overpowering strength," and that this meaning persists in the divine name. Another interesting suggestion is that it may be connected with the Assyrian "shadu" (mountain), an epithet sometimes attached to the names of Assyrian deities. It is conjectured also that the pointing of שַׁדַּי may be due to an improbable rabbinical explanation of the word as שֶׁ־דַּי ("He who is sufficient"), and that the word originally may have been without the doubling of the middle letter. According to Ex. vi. 2, 3, this is the name by which God was known to Abraham, Isaac, and Jacob.

The name ‘Elyon (עליון) occurs with El, with Yhwh, with Elohim, and also alone, chiefly in poetic and late passages. According to Philo Byblius (Eusebius, "Præparatio Evangelica," i. 10), the Phenicians used what appears to be the same name for God, Ἐλιοῦν.

Adonai and Ba‘al.

Adonai (אֲדֹנָי) occurs as a name of God apart from its use by the Masorites as a substituted reading for Yhwh. It was, probably, at first Adoni ("my Lord") or Adonai ("my Lord," plural of majesty), and later assumed this form, as a proper name, to distinguish it from other uses of the same word. The simple form Adon, with and without the article, also occurs as a divine name. The name Ba‘al (בעל), apparently as an equivalent for Yhwh, occurs as an element in a number of compound proper names, such as Jerubbaal, Ishbaal, Meribaal, etc. Some of these names, probably at a time when the name of Baal had fallen into disrepute (comp. Hosea ii. 16, 17), seem to have been changed by the substitution of El or Bosheth for Baal (comp. II Sam. ii. 8, iv. 4, v. 16; I Chron. viii. 33, 34; ix. 39, 40; xiv. 7).

Other titles applied to the God of Israel, but which can scarcely be called names, are the following: Abir ("Strong One" of Jacob or Israel; Gen. xlix. 24; Isa. i. 24; etc.); Ḳedosh Yisrael ("Holy One of Israel"; Isa. i. 4, xxxi. 1; etc.); Ẓur ("Rock") and Ẓur Yisrael ("Rock of Israel"; II Sam. xxiii. 3; Isa. xxx. 29; Deut. xxxii. 4, 18, 30); Eben Yisrael ("Stone of Israel"; Gen. xlix. 24 [text doubtful]).

Ẓeba'ot.

The names Yhwh and Elohim frequently occur with the word Ẓeba'ot ("hosts"), as Yhwh Elohe Ẓeba'ot ("Yhwh God of Hosts") or "God of Hosts"; or, most frequently, "Yhwh of Hosts." To this last Adonai is often prefixed, making the title "Lord Yhwh of Hosts." This compound divine name occurs chiefly in the prophetic literature and does not appear at all in the Pentateuch or in Joshua or Judges. The original meaning of Ẓeba'ot is probably to be found in I Sam. xvii. 45, where "Yhwh Ẓeba'ot" is interpreted as denoting "the God of the armies of Israel" (comp. Josh. v. 13–15; Isa. xiii. 4). The word, apart from this special use, always means armies or hosts of men, as, for example, in Ex. vi. 26, vii. 4, xii. 41, while the singular "ẓaba" is used to designate the heavenly host. It is noteworthy also that the name Yhwh Ẓeba'ot is more than once directly associated with the Ark, which was the symbol of God's presence in the midst of the hosts of His people (Num. x. 35, 36; I Sam. iv. 4; II Sam. vi. 2). Later, and especially in prophetic usage, the word was transferred to the heavenly hosts, or rather the heavenly were added to the earthly hosts. For this idea of heavenly hosts joining their forces with those of God's people, or fighting on behalf of God's servants, compare Judges v. 20; II Kings vi. 16, 17; Ps. xxxiv. 7, lxviii. 17.

E. C. J. F. McL.

——**In Rabbinical Literature:** The Rabbis as well as the cabalists steadfastly maintained their belief in monotheism. Hence they recognized only one proper name for the Deity, considering the other names as appellations or titles signifying divinity, perfection, and power, or as characterizing His acts as observed and appreciated by mankind in the various stages of their development. The cabalists illustrate this by the instance of one who looks at the sun through various-colored glasses, which change the impressions produced upon the observer, but do not affect the sun.

The Name.

The name Yhwh is considered as the Name proper; it was known in the earliest rabbinical works simply as the Name; also as Shem ha-Meyuḥad ("the Extraordinary Name"; Sifre, Num. 143); as Shem ha-Meforash ("the Distinguished Name"; Yoma vi. 2); as Shem ben Arba‘ Otiyyot ("the Tetragrammaton" or "the Quadriliteral Name"; Ḳid. 71a); and as Yod He Waw He (spelling the letters of Yhwh). The pronunciation of the written Name was used only by the priests in the Temple when blessing the people (Num. vi. 22–27); outside the Temple they used the title "Adonai" (Soṭah vii. 6; p. 38a). The high priest mentioned the Name on Yom Kippur ten times (Tosef., Yoma, ii.; 39b). R. Johanan said the sages delivered to their disciples the key to the Name once in every Sabbatical year. The sages quoted, "This is my name for ever, and this is my memorial unto all generations" (Ex. iii. 15). Here the word "le-‘olam" (forever) is written defectively, being without the "waw" for the vowel "o," which renders the reading "le-‘allem" (to conceal; Ḳid. 71a). See Shem ha-Meforash.

The restriction upon communicating the Name proper probably originated in Oriental etiquette; in the East even a teacher was not called by name. For naming his master Elisha, Gehazi was punished with leprosy (II Kings viii. 5; Sanh. 100a). After the death of the high priest Simeon the Righteous, forty years prior to the destruction of the Temple, the priests ceased to pronounce the Name (Yoma

39b). From that time the pronunciation of the Name was prohibited. "Whoever pronounces the Name forfeits his portion in the future world" (Sanh. xi. 1). Hananiah ben Ṭeradion was punished for teaching his disciples the pronunciation of the Name ('Ab. Zarah 17b). It appears that a majority of the priests in the last days of the Temple were unworthy to pronounce the Name, and a combination of the letters or of the equivalents of the letters constituting the Name was employed by the priests in the Temple. Thus the Twelve-Lettered Name was substituted, which, a baraita says, was at first taught to every priest; but with the increase of the number of licentious priests the Name was revealed only to the pious ones, who "swallowed" its pronunciation while the other priests were chanting. Another combination, the Forty-two-Lettered Name, Rab says, was taught only to whomever was known to be of good character and disposition, temperate, and in the prime of life (Ḳid. 71a; comp. Rashi to 'Ab. Zarah 17b). Maimonides, in his "Moreh," thinks that these names were perhaps composed of several other divine names.

Ehyeh-Asher-Ehyeh.

The Incommunicable Name was pronounced "Adonai," and where Adonai and YHWH occur together the latter was pronounced "Elohim." After the destruction of the Second Temple there remained no trace of knowledge as to the pronunciation of the Name (see JEHOVAH). The commentators, however, agree as to its interpretation, that it denotes the eternal and everlasting existence of God, and that it is a composition of היה הוה יהיה (meaning "a Being of the Past, the Present, and the Future"). The name Ehyeh (אהיה) denotes His potency in the immediate future, and is part of YHWH. The phrase "ehyeh-asher-ehyeh" (Ex. iii. 14) is interpreted by some authorities as "I will be because I will be," using the second part as a gloss and referring to God's promise, "Certainly I will be [ehyeh] with thee" (Ex. iii. 12). Other authorities claim that the whole phrase forms one name. The Targum Onḳelos leaves the phrase untranslated and is so quoted in the Talmud (B. B. 73a). The "I AM THAT I AM" of the Authorized Version is based on this view.

The name Yah (יה) is composed of the first letters of YHWH. There is a difference of opinion between Rab and R. Samuel as to whether or not "hallelujah" is a compound word or two separate words meaning "praise ye Yah" (Yer. Meg. i. 9; Pes. 117a). The name Ho (הו) is declared to be the middle part of YHWH and an abridged form of the Name (Shab. 104a; Suk. iv. 5).

Elohim denotes multiplied power, that is, the Almighty, and describes God as the Creator of nature. R. Jacob Asheri, the author of the "Ṭurim," in his annotations to the Pentateuch, says the numerical value of the letters in אלהים ("Elohim") equals the value (86) of those in הטבע ("nature"). Elohim represents the force of "din" (fixed laws), while YHWH is the modification of the natural laws and the elements of "raḥamim" (mercy and leniency) as reflected in the developed state of mankind. In the Zohar, R. Simeon says the Divine Name (YHWH) was mentioned only when the world was perfected, and quotes Gen. ii. 4 (Hebr.)—"in the day that YHWH made the earth and the heavens." The word "'asot" is interpreted as "perfected," after the Creation (Zohar, Yitro, 88a, ed. Wilna, 1882). El is part of Elohim, meaning simply "power" (= "mighty"). "Shaddai" is explained as "the self-sufficient" ("she-dai hu lo").

The sacredness of the divine names must be recognized by the professional scribe who writes the Scriptures, or the chapters for the phylacteries and the mezuzah. Before transcribing any of the divine names he prepares mentally to sanctify them. Once he begins a name he does not stop until it is finished, and he must not be interrupted while writing it, even to greet a king. If an error is made in writing it, it may not be erased, but a line must be drawn round it to show that it is canceled, and the whole page must be put in a genizah and a new page begun.

The Seven Names.

The number of divine names that require the scribe's special care is seven: El, Elohim, Adonai, YHWH, Ehyeh-Asher-Ehyeh, Shaddai, and Ẓeba'ot. R. Jose, however, considered Ẓeba'ot a common name (Soferim iv. 1; Yer. R. H. i. 1; Ab. R. N. xxxiv.; "Sefer Yeẓirah," ix.). R. Ishmael held that even Elohim is common (Sanh. 66a). All other names, such as Merciful, Gracious, and Faithful, merely represent attributes that are common also to human beings (Sheb. 35a). The prohibition of blasphemy, for which capital punishment is prescribed, refers only to the Name proper—YHWH (Soferim iv., end; comp. Sanh. 66a). In many of the passages in which "elohim" occurs in the Bible it refers to Gentile deities, or in some instances to powerful or learned men (comp. Gen. iii. 5; והייתם כאלהים), to judges (Ex. xxi. 6), or to Israel (Ps. lxxxi. 9, lxxxii. 6; see Tan., Ḳedoshim). Adonai sometimes refers to a distinguished person (comp. Gen. xviii. 3). Even the name YHWH, misused in the narrative of Micah (Judges xvii. 2, 3, 13; xviii. 6), is not a divine name, according to the decisive authority (Sheb. 35b). A list of all the doubtful divine names found in the Scriptures is given in Soferim and in the codes.

The Talmud says Shalom ("Peace"; Judges vi. 23) is the name of God, consequently one is not permitted to greet another with the word "shalom" in unholy places (Shab. 10b). The name Shelomoh (from shalom) refers to the God of Peace, and the Rabbis assert that the Song of Solomon is a dramatization of the love of God: "Shalom" to His people Israel = "Shulamite." "King of kings" in Dan. ii. 37 refers to God. "'Attiḳ Yamin" (*ib.* vii. 9) refers to the Ancient One of the universe (see Yalḳ., Chron. 1076). The pronoun "Ani" (I) is a name of God (Suk. iv. 5). The first verse in Ezekiel ("we-Ani") refers to God (Tos. Suk. 45a). Hillel's epigram "If I [am] here everything is here" (Suk. 53a) is interpreted as referring to God. The divine names are called in the Talmud "Azkarot," or "Adkarata" in the Aramaic form. Divine names that occur in the handwriting of minim should be excised and buried in the genizah (Shab. 116a; Cant. R. ii. 4). God is named also Ha-Geburah ("The Majesty"; Shab. 87a), but generally Ha-Maḳom ("The Omnipresence"), accompanied with Baruk-hu ("Praised be He"). For other appellations see list below.

It became the custom at an early period to use the name of God in personal greetings, as "The Lord be with thee," or "The Lord bless thee" (Ruth ii. 4; Ber. ix. 1; comp. Mak. 23a). The Greek inquisition in Judea prohibited the utterance of God's name, but when the Hasmoneans became victorious they decreed that the Name should be mentioned even in notes and documents. The formula began: "On . . . in the year of the high priest Johanan, the servant of the Most High God." The sages, however, opposed this innovation, as they thought the Name would be defiled when the notes were canceled and thrown away as useless. Consequently on the third day of Tishri following, the record says, the Rabbis forbade the mention of God's name in documents (Meg. Ta'anit; R. H. 18b).

The cabalists, in their system of cosmology, explained the significance of the names and added other divine names. The most important name is that of the En Sof ("Infinite" or "Endless"), who is above the Sefirot. The Forty-two-Lettered Name contains the combined names of ארני הויה אהיה יהוה (spelled in letters אלף דלת נון יוד הא ואו יוד הא אלף הא יוד הא ואו הא = 42 letters), which is the name of Aẓilut ("Animation"). The cabalists added the Forty-five-Lettered Name as being the equivalent in value of Yhwh (יוד הא ואו הא = 45). The name is derived from Prov. xxx. 4—"what is his name?" The numerical value of the letters מה (= "what") equals 45 (Zohar, Yitro, 79a). The Seventy-two-Lettered Name is derived from three verses in Exodus (xiv. 19–21) beginning with "Wayyissa'," "Wayyabo," "Wayyeṭ," respectively. Each of the verses contains 72 letters, and when combined they form the following names:

Cabalistic Use.

והו	ילי	סיט	עלם	מהש	ללה	אכא	כהת
הזי	אלד	לאו	ההע	יזל	מבה	הרי	הקם
לאו	כלי	לוו	פהל	נלך	ייי	מלה	חהו
נתה	האא	ירת	שאה	ריי	אום	לכב	ושר
יחו	להח	כוק	מנד	אני	חעם	רהע	ייז
ההה	מיכ	וול	ילה	סאל	ערי	עשל	מיה
והו	דני	החש	עמם	ננא	נית	מבה	פוי
נמם	ייל	הרח	מצר	ומב	יהה	ענו	מחי
דמב	מנק	איע	חבו	ראה	יבם	היי	מום

The first and third verses are to be read forward and the second verse backward, one letter of each word respectively in the above order from right to left. Rashi, also, in his comment to Suk. 45a, mentions this scheme (see Zohar, Beshallaḥ, 52a, and Appendix, 270a, ed. Wilna). A combination of the Seventy-two-Lettered Name appeared on the Urim and Thummim, consisting of the names of the Twelve Tribes (50 letters), of the Patriarchs (13 letters), and of the "Shibṭe Yisrael" (the tribes of Israel; 9 letters). When the Urim and Thummim were consulted in regard to any matter this divine name lit up the letters, which were brought into relief according to R. Johanan, or into such a combination, according to Resh Laḳish, as to make the answer intelligible (Yoma 73b). Ibn Ezra figures the Seventy-two-Lettered Name as the equivalent in value of the name Yhwh spelled with the names of the letters יוד הי ואו הי (= 72).

The divine names of God, the Haggadah says, were used to perform miracles by those who knew their combinations. King David, on making excavations for the Temple, and finding that the deep was moving upward, asked for permission to stop its rising, which threatened to destroy the world, by inscribing the name of God on a potsherd and throwing it into the deep. His minister Ahithophel, who was well versed in the Law, permitted it (Mak. 11a). The manipulation of the sacred letters forming the divine names was the means used to create the world ("Sefer Yeẓirah," ix.). By a similar method some of the Talmudists are credited with having created living animals (Sanh. 65b, 67b); in later times others succeeded by the same means in creating the golem (see Golem).

Awe at the sacredness of the names of God and eagerness to manifest respect and reverence for them made the scribes pause before copying them.

Divine Names in Print.

The text of the Scriptures was of course left unchanged; but in the Targumim the name Yhwh was replaced by two "yods" with a "waw" over them, thus: יי, which letters are equal in value to Yhwh (= 26). In their commentaries the authors substituted Elohim by Eloḳim (אלקים) and Yhwh by Ydwd (ידוד). For other changes see list below. In Ḳimḥi's commentary on the Prophets (ed. Soncino, 1485) the printer apologizes for changing the "he" of Yhwh to a "dalet" and the "he" of Elohim to a "ḳof," "in honor and reverence for His Name, for sometimes copies may be lost and become liable to misuse." In Hebrew literature generally and in Hebrew letter-writing the name of God is represented by the letter "he" or "dalet" with an accent over it, thus: ה' or ד'. Authors of Hebrew theological works begin their introductions generally with four words whose initial letters form the name Yhwh (*e.g.*, יתברך הבורא וישתבח היוצר).

The following names and transcriptions of the names of God are found in rabbinical writings (the names mentioned in the Bible also are not given):

For the Name of Yhwh.

NANCY (Hebr. נאסוא, נאנסי, ננסין): Chief town of the department of Meurthe-et-Moselle, France, and the ancient capital of Lorraine; seat of a consistory whose district comprises 4,500 souls. When Jews first settled there is unknown; but they were expelled toward the end of the fourteenth century and were authorized to return at the beginning of the seventeenth. In 1721 Duke Leopold permitted 180 Jewish families to continue to reside in Lorraine and to engage in commerce, but seven years later he issued a decree under his privy seal in which he annulled all measures and acts passed for the benefit of the Jews, excepting those with regard to bills of exchange. A Jew who was found guilty of dishonest or usurious dealings with a Christian was punished by the cancelation of the debt due and by being compelled to pay double the amount to the debtor, in addition to a fine of 500 francs to the prince. In 1736 Leopold ordered all Jews living in houses adjacent to those of Christians to remove to a special quarter which he assigned to them, under penalty of confiscation of their property in the case of such as were owners of the houses in which they lived and who did not dispose of them, or of a fine of 2,000 francs in the case of those who were merely tenants of real estate situated outside the ghetto.

King Stanislaus was more friendly toward the Jews. On Jan. 25, 1753, he suspended the edict of 1728; but he maintained all the old laws, and appointed Solomon Alcan, Isaac Berr, and Michael Goudchaux of Nancy syndics of the Jews of Lorraine. This decree was sanctioned in 1762 by the parliament of Lorraine; but the number of Jews authorized to reside in Lorraine was still limited to 180 families, and all others were ordered to leave within a month, under penalty of expulsion and the confiscation of their goods by the king.

In 1789 the Jewish community of Nancy was very prosperous, and Bishop la Fare himself, although strongly opposing their eligibility, was obliged to admit before the National Assembly (Dec. 23, 1789) that the Jews had rendered great services to the state, and especially to the city of Nancy. In 1791 the Jews of the city addressed a petition to the Legislative Assembly, requesting that they might be omitted from the list of those assessed for the liquidation of the debts of the ancient Jewish community of Metz. The petition was granted.

The congregation has several charitable societies, and it maintains a home for the aged. Among the rabbis of Nancy are to be mentioned Jacob Schweisch (at the end of the eighteenth century), Baruch Guguenheim, Marchand Ennery, D. Marx, S. Ulmann, and Liebermann (nineteenth century). Among its principal Jews special mention should be made of the physician Berr Isaac Berr of Turique, who took a prominent part in the emancipation of the Jews. On Oct. 14, 1789, he appeared on the floor of the National Assembly and delivered an eloquent discourse, in which he demanded the rights of citizens for his coreligionists. With his son Michel Berr, Moïse Levy Gumpel, and Baruch Guguenheim he took part in the Assembly of Notables and in the Great Sanhedrin.

G. S. K.

NANTES: Chief town of the department of the Loire-Inférieure, France. According to Camille Mellinet ("La Commune et la Milice de Nantes," i. 37), there were Jews in Nantes in the tenth century. Other historians, however, date the first settlement of them there as late as the thirteenth century. That Jews were there then is shown by a receipt, in Hebrew and Latin, given in 1234 to Joffri, prior of Donge in the arrondissement of Saint-Nazaire, by Phinehas ben Yom-Ṭob, called "Creisson," and by Judah ben Samuel, called "Bonotru," and signed by Jacob ben Judah of Nantes and Haranc (Aaron) ben David of Segré, chief city of the arrondissement of the department of Maine-et-Loire. After Pope Gregory IX. had preached a crusade in 1235, the crusaders, before their departure for the Holy Land, put to death several Jews of Nantes, and those who escaped the massacre were soon driven from the city. In 1239 Duke Jean of Brittany, in an edict dated at Ploërmel, declared that he would expel all the Jews from Brittany, and not suffer them to remain longer on his own lands or on those of his subjects; that all debts due them should be considered annulled; that all articles, movable or immovable, which they held in pawn should be restored to their owners; and that no one should be punished for the death of a Jew slain before the date of the edict. The duke furthermore pledged himself and his successors, under oath, to enforce this decree under penalty of excommunication for its violation.

In the sixteenth century some Spanish Jews who had made a pretense of abjuring Judaism took refuge in Nantes and were favorably received. Henry IV. protected them against the Christian merchants; but Louis XIII. expelled them in 1615. In 1744, despite the protests of Christian competitors, Israel Dalpuget and Moïse Petit, Jewish merchants of Bordeaux, were authorized by the intendant of Brittany, Pontcarré de Viarmes, to exhibit and sell their wares at the public fair. They were followed in 1766 and 1773 by other Hebrew merchants from Bordeaux, namely, Jacob Lisbonne, the Rodrigues brothers, Abraham Melendes, Abraham Cozales, Isaac Rodrigues, and Moïse Juarez Cardoza; but on the petition of the merchants of Nantes they were expelled from the city by an order of the court (Aug. 21, 1773).

The Jewish community of Nantes, which in 1808 numbered but thirty-five souls, now (1904) contains between thirty and forty families.

S. S. K.

NAOMI: Wife of Elimelech and mother-in-law of Ruth. Naomi accompanied her husband and two sons into the land of Moab; but after the death of her husband and sons she returned to Bethlehem with her daughter-in-law Ruth, whom she vainly endeavored to dissuade from following her. Naomi was so much changed by poverty and affliction that those who had known her there exclaimed, "Is this Naomi?" She answered that instead of Naomi ("pleasant") she should be called rather Mara ("bitter"), for the Almighty had dealt bitterly with her. Naomi contributed to bring about the marriage of Boaz and Ruth and became the nurse of their child (Ruth i. 1 *et seq.*; iii. 1 *et seq.*; iv. 16, 17). See Ruth.

E. G. H. M. Sel.

NAPHTALI (נפתלי; Greek, Νεφθαλειμ): Second son of Jacob and Bilhah, and younger full brother of Dan. According to Gen. xxx. 8, the name means "my wrestling," and has reference to the jealous rivalry of the sisters Rachel and Leah. According to Gen. xlvi. 24, he had four sons when Israel went down into Egypt. In the Blessing of Jacob (*ib.* xlix. 21) the passage which concerns Naphtali has reference to the qualities of the tribe, rather than to those of the individual. "Naphtali is a hind let loose: he giveth goodly words"; *i.e.*, "He is alert, nimble, free-spirited, and has poetical or oratorical gifts" (Driver, Commentary on Genesis, *ad loc.*). According to the Targums (pseudo-Jonathan and Jerusalem), Naphtali was a swift runner and came first to Jacob with the good news that Joseph was alive. This may be only an inference from the passage in the Blessing of Jacob quoted above. The Targums say also that he was one of the five brethren presented by Joseph to Pharaoh (*ib.* xlvii. 2).

E. C. J. F. McL.

NAPHTALI, TRIBE OF: According to the two enumerations of the Israelites given in the Book of Numbers (i.–iii., xxvi.), the adult males of Naphtali, when at Sinai, numbered 53,400. In the march from Sinai the place of Naphtali was with Dan and Asher on the north side of the tent of meeting, as the rear-guard of the host (*ib.* ii. 25–31).

Territory.

In the division of the land, according to Josh. xix., the lot of this tribe fell near the last, but it received, nevertheless, one of the fairest portions of Canaan. Bounded on the east by the Jordan and its lakes, on the south by Zebulun, and on the west by Asher, its country extended indefinitely northward toward the valley of Lebanon. It had nineteen fenced cities, of which only sixteen are named. The most famous of these in the early history was Hazor, chief city of that region in pre-Israelitish times (*ib.* xi. 10).

Its Fertility.

Fully justified are the words of the blessing of Moses (Deut. xxxiii.): "O Naphtali, satisfied with favor, and full with the blessing of the Lord, possess thou the west [or rather "the lake"] and the south." The last clause has reference to the parts bordering on the Lake of Gennesaret. Josephus eulogizes this region as the very "ambition of nature," an earthly paradise ("B. J." iii. 10, § 8). It is probably significant of its wealth and productiveness that the prefect of Naphtali under Solomon was the king's son-in-law (I Kings iv. 15). The district fell naturally into two main divisions: the upper or highland plateau, covering by far the larger portion and known as the "hill country of Naphtali" (Josh. xx. 7), and the lower or southern region, including the plain of Gennesaret, bordering on the lake. It would seem as if the expression "land of Naphtali" was used also in a broader sense for the whole of northern Galilee (see I Kings xv. 20; II Kings xv. 29). Through this country ran several great roads leading from Damascus and the east to Tyre and Acre, Philistia and Egypt (see G. A. Smith, "The Historical Geography of the Holy Land," 2d ed., pp. 425–431).

Historic Incidents.

The proximity of Naphtali to Phenicia led to constant intercourse with the people of that country. Hiram, the famous worker in brass whom Solomon brought from Tyre, was the son of a woman of Naphtali and a man of Tyre (I Kings vii. 13–14; comp. II Chron. ii. 14; there may have been a fusion of the northern Danites with the Naphtalites). Josephus describes the country in his time as very populous and the people as hardy, diligent, and courageous. The history of the tribe is not without thrilling and heroic incidents. Barak, son of Abinoam, of Kedesh-naphtali, was the chosen leader of Israel in the war against Jabin (apparently the second king of that name) of Hazor and his captain Sisera. Urged by the prophetess Deborah, he assembled 10,000 men of Naphtali and Zebulun at Kedesh and marched to Mount Tabor (Judges iv. 10 *et seq.*). Of their conduct in the battle that followed, the Song of Deborah says: "Zebulun was a people that jeoparded their lives unto the death, and Naphtali upon the high places of the field" (*ib.* v. 18). Equally ready were they to rally at the call of Gideon and do valiant service against the Midianites (*ib.* vi. 35, vii. 23). According to I Chron. xii. 34, Naphtali sent "a thousand captains, and with them with shield and spear thirty and seven thousand" to David at Hebron.

During the war between Asa of Judah and Baasha of Israel, Ben-hadad of Syria, at the instigation of Asa, invaded and laid waste this district. Again, in the reign of Pekah this tribe was among the first to feel the iron hand of Assyria and to suffer the deportation of many captives (I Kings xv. 20; II Kings xv. 20). In a reference to this incident (Isa. ix. 2–3) the prophet Isaiah anticipates that the same region will see the dawn of the Messianic deliverance. One of the famous battles of the Maccabean war was fought near Kedesh-naphtali about B.C. 150, when Jonathan defeated Demetrius, King of Syria (I Macc. xi. 63–73; Josephus, "Ant." xiii. 5, § 6).

NAPHTALI BEN DAVID: Hebrew author; born at Witzenhausen, Germany; lived in Amsterdam at the beginning of the eighteenth century. He belonged to the family of R. Moses Isserles. Naphtali was a distinguished Talmudical scholar and enjoyed great fame as a cabalist. He published one book, "Ben Dawid" (Amsterdam, 1729), strictures on the cabalistic work "'Omer Man" by Menahem Lonzano.

NAPHTALI HERZ BEN ISSACHAR. See Wessely.

NAPHTALI HERZ BEN JACOB ELHANAN: German cabalist; born at Frankfort-on-the-Main in the second half of the sixteenth century. He lived in Palestine and was a disciple of Isaac Luria. He was the author of: "'Emeḳ ha-Melek," an introduction to the Cabala and a commentary on parts of the Zohar and on the writings of Isaac Luria (Amsterdam, 1648). The second part of this work, under the title "Gan ha-Melek," is a commentary on passages of the Zohar; it is still in manuscript.

NAPHTALI HERZ BEN ẒEBI HIRSCH HALBERSTADT: Rabbi at Dubno, Russia, in the eighteenth century. Responsa of his in regard to the Cleve divorce case are found in Israel Lipschütz's collection "Or Israel" (1770). In the same collection are some responsa by his brother Solomon Dob Baer, rabbi of Glogau; another brother, Simḥah, was rabbi of Dessau.

NAPHTALI HIRZ BEN JACOB GOSLAR: German rabbi and philosopher of the eighteenth century. After acting as dayyan at Halberstadt for some time, he settled at Amsterdam, where he began the study of philosophy. He wrote "Merome Sadeh," novellæ on the Talmud (Amsterdam, 1762), and "Ma'amar Efsharuth ha-Ṭib'it," an apologetic work in which he attacked the belief in primeval matter and natural religion (*ib.* 1762).

NAPHTALI HIRZ TREVES. See Treves.

NAPHTALI B. ISAAC HA-KOHEN: Polish-German rabbi; born in Ostrov, Poland, 1649; died at Constantinople 1719. His father was rabbi of Ostrov. In 1663 Naphtali was taken prisoner by the Tatars when they invaded Poland, but he managed to effect his escape. Soon afterward he took the place of his father as rabbi of Ostrov, and in 1690 he was invited to the rabbinate of Posen. Here he devoted himself to the study of Cabala; he attained such wide celebrity as a cabalist that many rich communities in Germany competed with one another for the distinction of having Naphtali as their rabbi. In 1704 he entered the rabbinate of Frankfort-on-the-Main. In 1711 the entire "Judenstrasse" was destroyed by a fire which broke out in his house, and Naphtali was accused of having set it on fire himself in order to test the validity of an amulet which he was said to have made and which was supposed to have the property of rendering objects inflammable. He was consequently imprisoned, and was released only after he had resigned his rabbinate. Naphtali then went to Prague. In 1714 he returned to his native town, and in 1715 went to Dresden to the court of the Polish king Augustus II., where he remained for some time. In 1719 he started, with his wife, for Palestine, but death overtook him in Constantinople.

Naphtali wrote: "Seliḥot," with commentary (Frankfort-on-the-Main and Prague, 1702–13); "Pi Yesharim," on Biblical exposition (Frankfort-on-the-Main, 1704); "Birkat Adonai," commentary on Berakot (*ib.* 1704–6); "Ketab," a letter (1709); "Zemer," a hymn (Prague, 1713 ?); "Ẓawwa'ah," a testament (Berlin, 1729); "Tefillat Bet Raḥel," prayer-book with commentary (Amsterdam, 1741).

NAPHTALI HA-KOHEN. See Cohen, Naphtali.

NAPOLEON BONAPARTE: Emperor of the French; born in Ajaccio, Corsica, Aug. 15, 1769; died at St. Helena in 1821. Only those incidents in his career need be noticed here that have direct bearing upon the history of the Jews. His first recorded utterances on this subject were in connection with the question of the treatment of the Alsace Jews and their debtors raised in the Imperial Council on April 30, 1806. He declared it dangerous to allow so large a preponderance of the Jews, who constituted a state within a state, in a part of the French empire bordering upon the territories of its enemies. A week later, however, he had reached a milder view, and in the same assembly declared against any persecution of them. Meanwhile he determined on a moratorium of a year for all debts incurred to the Jews in the Rhine provinces of the empire. By the same decree, issued May 30, 1806, he summoned an Assembly of Notables which should consult with him as to the best means of opening up to the Jews honorable means of livelihood. This Assembly of Notables was held, and led to the establishment of the French Sanhedrin in 1807, for the proceedings of which see SANHEDRIN.

It would appear that one of Napoleon's main objects in his Jewish policy was to promote assimilation by intermarriage (see "Arch. Isr." 1841, p. 40). Napoleon throughout made a great distinction between Jews of the Rhine provinces and the "New Christians" of Bordeaux and southern France, and it was considered a special privilege to the Jews of Paris that they were declared to belong to the latter class. For the purpose of his policy he divided the Jews of the empire into consistories, each of which should have its representative (see CONSISTORY). The arrangement made by Napoleon in the celebrated Madrid decree of 1812 is still effective in the lands which at that time constituted the French empire.

But Napoleon's indirect influence on the fate of the Jews was even more powerful than any of the decrees recorded in his name. By breaking up the feudal trammels of mid-Europe and introducing the equality of the French Revolution he effected more for Jewish emancipation than had been accomplished during the three preceding centuries. The consistory of Westphalia became a model for other German provinces until after the fall of Napoleon, and the condition of the Jews in the Rhine provinces was permanently improved as a consequence of their subjection to Napoleon or his representatives. Heine and Börne both record their sense of obligation to the liberality of Napoleon's principles of action, and the German Jews in particular have always regarded Napoleon as one of the chief forerunners of emancipation in Germany. When Jews were selecting surnames, some of them are said to have expressed their gratitude by taking the name of "Schöntheil," a translation of "Bonaparte," and legends grew up about Napoleon's activity in the Jewish ghetto (see "Sippurim," ii. 193–196).

E. C. J.

NAQUET, ALFRED JOSEPH: French chemist and politician; born at Carpentras, Vaucluse, Oct. 6, 1834. After studying in Paris he graduated as M.D. in 1859, and became in 1862 assistant professor at Paris University. In 1863 he was called to Palermo as assistant professor at the polytechnic institute, which position he resigned in 1865. In the latter year he returned to Paris and took an active part in French politics. In 1867 he attended the Peace Conference at Geneva, and, showing himself to be in opposition to the French empire, he was sent to prison for fifteen months, and lost his civil rights for five years.

In 1869 appeared his "Religion, Propriété, Famille," for the publication of which he was again sentenced to imprisonment (four months) with the entire loss of his civic rights. Escaping to Spain, he became correspondent for the "Réveil" and "Rappel." In Spain he became involved in the Andalusian insurrection.

Returning to France after the promulgation of the amnesty of Sept. 4, 1870, he was employed by the republican government in Tours, later in Bordeaux. In 1871 he was elected to the Assembly, where he joined the Extreme Left. He was reelected in 1873, 1876, 1877, and 1881. In 1882 he was elected to the Senate, and was reelected in 1893. He became a follower of Boulanger, and even when the latter was overwhelmingly defeated in 1888 he still remained one of the general's adherents.

Naquet took an active part in the deliberations of the Assembly and the Senate, and fought from 1876 onward for legislation on divorce. His proposed law, after being repeatedly defeated, was adopted in 1884 and became known as the "Loi Naquet." During the following two years he proposed several amendments to it, which were accepted.

Having been denounced as a participator in the Panama scandal, he escaped in 1889 to England. Upon his return to France in 1893 he was acquitted. He did not offer himself for reelection to the Senate in 1898.

Naquet is a contributor to several chemical journals, to the "Grande Encyclopédie," the "Dictionnaire de Chimie," etc. He founded two political papers, which, however, did not exist for even a year, "La Révolution" (1876) and "L'Indépendant" (1880).

Among his numerous works may be mentioned: "De l'Allotropie et l'Isométrie," 1860; "Des Sucres," 1863; "Principes de Chimie Fondés sur les Théories Modernes," 1863; "De l'Atomicite," 1868; "La République Radicale," 1873; "Le Divorce," 1877; "Questions Constitutionnelles," 1883; "Socialisme Collectioniste et Socialisme Libéral," 1890; and "L'Humanité et la Patrie," 1901.

NARBONI, DAVID BEN JOSEPH: Rabbi; lived at Narbonne, France, in the first half of the twelfth century. He was probably the son of Joseph Gaon of Narbonne, who is mentioned by Abraham ben Nathan of Lunel in his "Sefer ha-Manhig" (p. 86). Narboni corresponded with Abraham ibn Ezra, to whom he addressed in 1139 three questions concerning chronology. These questions have been edited, with Ibn Ezra's answers, by Steinschneider (Berlin, 1847). The first question was: "How did it happen that in 1139 the difference in time between the Jewish Passover and the Christian Easter amounted to four weeks?"

NARBONNE (Hebr. נרבונה or נרבונא): Chief town in the department of Aude, France. Jews were settled here as early as the fifth century. They lived on the whole amicably with their Christian neighbors, although in 589 the council of Narbonne forbade them to sing psalms at interments, on pain of a fine of six ounces of gold. In 673 the Narbonne Jews took an active part in the revolt of Count Hilderic of Nimes and Duke Paul against King Wamba. The king was victorious, and the Jews were expelled from the town. In 768 Pope Stephen III. complained bitterly to Archbishop Aribert of the privileges granted to the Jews—among others, of the right to own real estate, to live in the same house with Christians, and to employ Christians in the cultivation of their fields and vineyards.

Legendary Siege.

It is related in the Provençal romance of "Philomena" ("Histoire Générale du Languedoc," iii., Addenda, p. 29) that after the legendary siege of Narbonne, Charlemagne, or, according to others, Charles Martel or Pepin the Short, granted numerous privileges to the Jews of the town in reward for the part they had taken in its surrender, and presented them with one-third of the city. This story is confirmed by two Hebrew writers: Meïr ben Simeon of Narbonne and Abraham ibn Daud of Toledo. Meïr, in his work entitled "Milḥemet Miẓwah," refers to the privileges which King Charles granted to the Jews of Narbonne; and Abraham ibn Daud says, in his "Sefer ha-Ḳabbalah," that the calif Harun al-Rashid, at the request of Charlemagne, sent to Narbonne Machir, a learned Jew of Babylon, to whom the emperor gave numerous prerogatives and whom he appointed head of the community. This is evidently a legend; but there is no doubt that Machir settled at Narbonne, where he soon acquired great influence over his coreligionists. It is not certain, however, whether he himself bore the title of NASI ("prince" or "king" of the Jews) as his descendants did, who continued to direct the affairs of the Jewish community.

In the twelfth century the community numbered about 2,000 souls; but in consequence of a war between the city and the Count of Toulouse, after the death of Don Emeric IV., Viscount of Narbonne, in 1137, the community dwindled so much that in 1165 Benjamin of Tudela found it to consist of only 300 Jews, the rest having emigrated to Anjou, Poitou, and other French provinces. In 1236 the lives and property of the Jews were put in jeopardy. In consequence of a quarrel between a Jew and a Christian the populace fell upon the Jews and pillaged their houses; but fortunately the governor of the city, Don Emeric, and the city authorities succeeded in establishing order and in restoring to the owners the property that had been carried off. Meïr b. Isaac, one of the victims of the riot, instituted the Purim of Narbonne in commemoration of the event.

The Archbishop of Narbonne protected the Jews so carefully that in 1241 the chapter reproached him with favoring them at the expense of the Christians. In 1245 R. Meïr ben Simeon engaged in a public religious disputation before Archbishop En Guillem de la Broa and the Jewish notables of Narbonne and Capestang. He pleaded in behalf of his coreligionists, and pointed to their fidelity to the Christian sovereigns as well as to their loyalty in the struggle with the Saracens. In 1276 the archbishop, in accordance with an agreement between him and the viscount, regulated the legal status of the Jews favorably to them; and in 1284 he granted them special privileges. When Philip the Fair expelled them in 1306 and confiscated their property, the archbishop and the viscount defended their respective interests and obliged the king to draw up an inventory of the property seized, in order to bring about a partition. For this purpose the king and the viscount made an agreement (1309) by which the viscount accepted 5,000 Tours livres and various parcels of real estate that had not yet been sold.

The Ghetto.

The Jews were under the jurisdiction of the archbishop and of the viscount, each of whom had his own Jewry. That of the archbishop was in the suburb of Belvèze, near the Mont Judaïque, where the Jewish cemetery was also situated. Some tombstones from this cemetery bearing Hebrew inscriptions are preserved in the museum of Narbonne. In the viscount's district were the Grandes Juiveries, including the Hôpital de l'Aumône, the baths, the shops, the ovens, and the stores. The "Old Schools," or synagogues, were also in this district. In 1218 Viscount Aimery and his wife Marguerite de Montmorency ceded to the Jews the territory of the Grandes Juiveries and of the Old Schools in consideration of a yearly payment of ten sous Narbonne currency. In this gift the rights of the "Jewish king" were reserved, and he continued to enjoy his prerogative as a freeholder. The Jewries were governed by consuls elected by the Jews themselves. These consuls exercised a general supervision over the Jewries, which were, however, subject to the municipal ordinances issued by the consuls of the city.

Scholars.

In the twelfth century Narbonne was one of the chief centers of Jewish science. The scholars and "great ones" of Narbonne are often mentioned in Talmudic works. According to Abraham ibn Daud of Toledo, they occupied a position similar to that of the exilarchs of Babylon. They were the highest authorities in the rendering of decisions; and they governed the Israelites justly. Benjamin of Tudela says: "This city is one of the most famous as regards the Law; it is a center from which the Law has spread throughout all these regions. Famous sages and princes are found here." The most noteworthy scholars of Narbonne were the following:

MACHIR, who became the progenitor of a family which occupied a leading position down to the fourteenth century, the principal members being: Todros, Kalonymus the Great, Kalonymus ben Todros (12th cent.); Nasi Levi, who presided in 1215 at Saint-Gilles over the reunion of the delegates of the communities of southern France; MESHULLAM B. NATHAN, who settled subsequently at Melun; MESHULLAM B. KALONYMUS B. TODROS, NATHAN of Babylon, Jacob Gaon, Moses ha-Darshan, David b. Joseph, Merwan ha-Levi, Abraham b. Isaac; the Ḳimḥi or Ḳamḥi family; Solomon Benveniste, Isaac ha-Kohen, and David b. Joseph Narboni.

NARD: A species of *Valeriana spica* Vahl = *Nardostachys Jatamansi* De Candolle, growing in eastern Asia. It was well known to the ancients as a perfume because of the pungent but pleasant odor of its root; and it formed, under the name of "spica nardi" or "nardus Indica" the chief component of spikenard oil and ointment.

In the Bible it occurs only in Cant. i. 12; iv. 13, 14. The nard does not grow in Palestine, being merely a plant of the poet's imaginary garden (see Horticulture). Costly spikenard ointment is mentioned in the New Testament also (Mark xiv. 3; John xii. 3). In the Mishnah nard, which is a constituent of the sacred incense, is called "shibbolet nerd." This is explained by Hai Gaon as the "sunbul al-nardin" of the pharmacologists. The same rendering is given by Maimonides ("Yad," Kele ha-Miḳdash, ii. 3) and by Abudarham (ed. Prague, 38b), who says, "It is so called because it consists of delicate filaments, like an ear of corn"; and Rashi likewise alludes to this resemblance (comp. Ex. xxx. 34).

In the Targum "narda" is used only in Cant. i. 12, where it is retained from the text and is used in a haggadic connection. Elsewhere (iv. 13-14) the Targum has רשק (plural רשקין), which has not yet been explained, notwithstanding the Syriac "reshaḳa de-warda" = "rose-seed" (Löw, "Aramäische Pflanzennamen," p. 21b).

J. I. Lö.

NARESH: City in Babylonia, situated near Sura (Letter of Sherira Gaon, in Neubauer, "M. J. C." i. 32) on a canal (B. M. 93b). It may be identical with the city of Nahras or Nahar Sar on the Tigris (Ritter, "Erdkunde," x. 191), and is mentioned together with Maḥuza, Safonia (B. M. 68a), and Pumbedita (Ḥul. 127a), although it must not be inferred that these cities were near one another.

The inhabitants of Naresh generally were notorious thieves and rascals (*ib.*; Yeb. 110a); but there were also some teachers who were called "Narsha'ah," Narsheans (Shab. 60a, 140a; B. Ḳ. 115a). A species of beaver is said to have been found near Naresh (Ḥul. *l.c.* Rashi's comment; but comp. Tos. *ad loc.*).

NAROL, MOSES: Rabbi of Metz; father of the physician Tobias Cohn; died at Metz in 1659. Narol was rabbi and physician at Narol, Galicia, but fled to Germany during the Cossack uprising of 1648. His father was Eleazar Kohen. Narol was the author of "Sefer Birkot Ṭob," the first part of which is entitled "Keter Torah," comprising sermons on the Pentateuch, and the second part "Keter Shem-Ṭob," sermons on the Five Megillot. He wrote also "Baḳḳashah," a prayer with reference to the misfortunes of 1643 in Poland (with a commentary, Amsterdam, 1699), and a work on medicine and another on mathematics.

H. R. I. War.

NASCHER, SINAI SIMON: Hungarian writer; born at Szent Miklos, Liptau, March 16, 1841; died at Baja July 25, 1901. He studied at Baja and Berlin, and in 1866 was chosen preacher in the latter city, but was forced to resign on account of repeated attacks of insanity. Thenceforth he lived in retirement at Baja.

Nascher's works include: "Ueber Jüdische Kanzelexegese," in "Ben Chananja," 1860; "Worte des Dankes" (Baja, 1860), sermon; "Unsere Richtung, Glauben Ist Denken" (Berlin, 1860); "Der Gaon Haja: Zur Gesch. der Semitischen Sprachforschung" (*ib.* 1867); "Die Sentenz bei Juden und Arabern" (*ib.* 1868); "Einfluss der Deutschen Philosophie auf die Volksbildung" (*ib.* 1872); "Wissenschaftliche Vorträge über Kunst und Philosophie" (*ib.* 1875); "Das Judenthum der Aufklärung: Reden für die Gebildeten Aller Confessionen" (Magdeburg, 1876); "Auswahl von Gedichten: Nach dem Ungarischen Texte des Dichters Revitzky Gyula in Metrischer Deutscher Uebertragung" (Budapest and Leipsic, 1876); "Franz Deák" (Berlin, 1877); "Die Jüdische Gemeinde in Ihrer Vergangenheit, Gegenwart und Zukunft" (*ib.* 1877); "Moses Naschér: Eine Exegetische Monographie" (*ib.* 1879).

NASHIM (= "Women"): Third order of the Talmud, treating of betrothal, marriage, divorce, and in general of all the relations of woman to man. It consists of seven "massektot" in the Mishnah, Tosefta, and Palestinian and Babylonian Gemaras, the order of which is not settled, varying with the views of codifiers and publishers. The several massektot being individually treated in The Jewish Encyclopedia under their respective titles, brief outlines will suffice here.

(1) **Yebamot** ("Levirates") legislates on the status of the widow of a man who has died childless: the different relationships and other impediments which prevent her from entering on a levirate marriage, and when Ḥaliẓah (see Deut. xxv. 5-10) substitutes such marriage; where the "yabam" (brother-in-law of the widow) is a priest, a minor, or an abnormal person, and the evidence required to prove the death of a consort.

(2) **Ketubot** ("Writs") treats of betrothals, mar-

riage pacts, and settlements, and in general of woman's civil rights and duties.

(3) **Nedarim** ("Vows") treats of the several forms of vows by which one binds himself to abstain from anything, and of the dispensation from or annulment of them, especially of the vows of a married woman or of a maiden which may be annulled respectively by the husband or by the father. The Scriptural basis of this treatise is Num. xxx.

(4) **Nazir** ("Separated") is founded on Num. vi., and treats of self-consecration as a Nazarite by abstinence, of the particular expressions that are binding, of the period of duration of such self-consecration, and how the vow may be annulled, and from what the Nazarite must abstain. Incidentally the self-consecration of women and of slaves is discussed.

(5) **Soṭah** ("Faithless Woman") discusses the rules regarding the wife suspected of infidelity to her marriage vows (see Num. v. 12–31): her summons before the Great Sanhedrin, the administration of the "bitter water," and its effects. It treats also of the functions of the war chaplain, and of the occasion of, and procedure at, breaking the neck of the calf (see Deut. xxi. 1–9). Some portents which will precede the advent of the Messiah are enumerated.

(6) **Giṭṭin** ("Documents") is based on Deut. xxiv. 1 *et seq.*, and treats of the annulment of marriages by divorce and of the forms and ceremonies incident thereto. It also legislates on the formalities attending the emancipation of slaves.

(7) **Ḳiddushin** ("Sanctifications") treats of the formalities of betrothals and marriages, of the status of the offspring of a legal and of that of an illegal marriage, of intermarriage between certain classes of people, and of the evidence sufficient to prove marriage contracted beyond the borders of Palestine. It closes with some ethical precepts affecting the general intercourse between the sexes.

Maimonides, Bertinoro, and others attempt to account for the order of sequence of the several massektot; but their reasons are not always satisfactory.

W. B. S. M.

NASHVILLE. See Tennessee.

NASI (lit. "prince"): The president of the Sanhedrin. According to the rabbinical tradition (Ḥag. ii. 2; Peah ii. 6), the Sanhedrin was presided over by a duumvirate ("zug" = "zeugos" [couple]), of which the first was the nasi, the second the ab bet din. Jose ben Joezer and Jose ben Johanan in the time of the Maccabees are mentioned in the Mishnah as the first couple; Hillel and Shammai, as the last; while the two titles were conferred upon the two chief men of the Sanhedrin during the following generations, the house of Hillel down to Judah II. in 225 retaining the title of nasi, while as ab bet din, R. Joshua under the presidency of Gamaliel II. (B. Ḳ. 74b) is occasionally mentioned, and R. Nathan under Simon ben Gamaliel (Ḥor. 13b). The historic character of this duumvirate, and in particular that of the ab bet din alongside of the nasi as head of the Sanhedrin, has been questioned and even denied by modern writers, especially by Kuenen ("Ueber die Zusammensetzung der Sanhedrin," in "Gesammelte Abhandlungen zur Biblischen Wissenschaft," pp. 56–61), Wellhausen ("Pharisäer und Sadducäer," pp. 29–43), and Schürer ("Gesch." ii. 203), but it has been defended by D. Hoffmann ("Oberster Gerichtshof," pp. 31 *et seq.*). The former point to the fact that neither Josephus nor the New Testament bears any witness to the existence of a president of the Sanhedrin other than the high priest, while Hillel and Gamaliel appear only as elders without higher rank. Hoffmann insists on the indisputable historical character of such mishnaic records as Eduy. v. 6. "We shall appoint thee ab bet din if thou wilt recant," the elders said to Akabiah ben Mehalalya (from the report concerning the election of Hillel as nasi in Tosef., Pes. iv. 2; and from the letter of the president of the Sanhedrin decreeing a leap-year, written by Gamaliel I., in Tosef., Sanh. ii. 6).

Relation to Ab Bet Din.

This contradiction between the rabbinical and the Hellenic sources, however, probably finds its solution in the meaning of the title Ab Bet Din. The title "nasi" (Lev. iv. 22; Ezek. xliv. 2–18; Ezra i. 8; comp. Hor. iii. 2), given to the political ruler of Judea, could scarcely be applied to the spiritual head of a religious body, such as the institution of the synagogue required, and a special name had to be created for it, especially at a time when the high priests had become more worldly in character and unfit to decide the religious questions of the day. The title "ab" = "father" thereupon suggested itself, it being the favorite name given in olden times to the head of a school (I Sam. x. 12; II Kings ii. 11, vi. 21) or of a gild (Gen. iv. 21), or to a spiritual adviser in general (Gen. xlviii. 8; Judges xvii. 10). It was also customary for the sage to address his hearers as sons, as is seen throughout the Proverbs and other books of wisdom. Hence the "mufla" = "the distinguished one" of the court of justice (Hor. i. 4; Tosef., Sanh. vii. 1) received the designation "ab bet din" = "father of the court of justice," also "rosh bet din" = "head of the court of justice" (R. H. ii. 7, iv. 4). The secularization of the priestly rulership embodied in the nasi made the creation of a spiritual head a simple necessity. Jose ben Joezer, leader of the Hasidæans, first mentioned as one of the duumvirate, was the man to fill this important position at the time Judas Maccabeus was the high priest; and it is none other than he, called "the father of the Jews," whose martyrdom is related in II Macc. xiv. 32, as was long ago recognized by Frankel (in "Monatsschrift," i. 406). Henceforth it became a necessity for those concerned in the religious life of the Jewish people to have at the head of the court of justice some man who had not the political, but the spiritual, welfare of the nation at heart.

The Pharisees, as the successors of the band of Hasidæans of the early Maccabean period, persisted in the maintenance of two heads, a secular and a spiritual one; and in times of peace there was hardly any interference of the one with the other. Neither the Maccabean nor the Herodian high priests, not to mention the Sadducees or Boethusians, had any interest in the regulation of the calendar or similar functions of the president of the Sanhedrin. The high priest, as nasi, had state affairs in his charge; the ab bet din, those of the Synagogue. For this reason Josephus and the New

Testament mention only the former as president of the Sanhedrin, whereas the rabbinical sources record only the doings of the latter while ignoring the high priest's claim to the office of nasi. This was all the more easy for the rabbinical schools to do, as the Pharisees formed an ecclesiastical body altogether independent of the political rulers; and in the course of time, when, owing to the destruction of state and Temple, they had no political hierarchy to contend with, they conferred the title of nasi upon a dynasty of teachers (the Hillelites) they themselves had singled out for their aristocracy of intellect or of blood (Yer. Ta‘an. iv. 2; Gen. R. xcviii.; Josephus, "Vita," § 38). The rabbinical schools felt the need of reconstructing their own history, which was the history of the synagogal institutions, in the light of these facts; and thus tradition dwelt on the duumvirate or the couples created, as was said, by John Hyrcanus (Yer. Ma‘as. Sheni v. 11).

Relation to High Priest.

That the office or rank of ab bet din, or spiritual head, did exist alongside of that of high priest during the Second Temple may be learned from a passage in Josephus which Kuenen, Wellhausen, and Schürer in their opposition to the rabbinical sources have overlooked. While referring institutions of his time to Moses, Josephus gives as one of Moses' ordinances ("Ant." iv. 8, § 14) the following: "If the judges of the various cities are unable to decide a case, let them bring it to the Holy City and there let the high priest, the prophet, and the senate [Sanhedrin] decide it as it seems good to them." This "prophet" is none other than the ab bet din or the mufla shel bet din, the one endowed with the spirit of God and the Law in an eminent degree, so that his words have divine authority. A reminiscence of this prophetic function is still preserved in the Mishnah (Yoma vii. 71b). The Urim we-Tummim are consulted on behalf of the king and the ab bet din, and, as the Talmud says, the latter "as representative of the Sanhedrin" (Yoma 73b; comp. Sanh. 16b). His presence was required at every session (Hor. 4b).

"When the nasi enters, the whole assembly rise and remain standing until he has told them to be seated; when the ab bet din enters, they form two lines for him to pass between to take his seat; when the ḥakam enters, they rise in turn, one after the other, until he has taken his seat" (Tosef., Sanh. viii.; Hor. 10b, where it is maintained that these rules were adopted under the presidency of Simon ben Gamaliel II. in 138).

In regard to signs of mourning, the same gradation is prescribed: When a nasi dies the people lay bare both shoulders; when the ab bet din, the left only; when the ḥakam, the right. In honor of the nasi all the schools throughout the land are closed; for the ab bet din, the schools of the city; for the ḥakam, his own school merely (M. Ḳ. 22b). Transferring late institutions to olden times, the Rabbis claim that while Saul was king, or nasi, his son Jonathan was ab bet din (*ib.* 26b), and when David was king (nasi), Benaiah ben Jehoiada was ab bet din (Sanh. 16b; Rashi).

NASI, DAVID. See Nasi, Joseph.

NASI GRACIA MENDESIA. See Mendesia, Gracia.

NASI, JOSEPH, DUKE OF NAXOS (as a Christian, called **João Miguez**): Turkish statesman and financier; born in Portugal at the beginning of the sixteenth century; died at Constantinople Aug. 2, 1579. His father, a younger brother of Francisco and Diogo Nasi-Mendez, and a member of the Marano family Nasi which had fled to Portugal from Spain during the persecutions at the end of the fifteenth century, died at an early age. To escape the religious intolerance in Portugal, Joseph soon emigrated to Antwerp together with his uncle Diogo. There they established, in partnership with their kinsman Abraham Benveniste, an extensive banking-house. Nasi's handsome presence and amiable character, as well as the far-reaching commercial relations of the house, soon won for him the favor of the nobility, and even that of Queen Mary, regent of the Netherlands from 1531 and sister of Charles V. Joseph, however, and his aunt Gracia, who had gone to Antwerp in 1536, felt oppressed by the pretense of Christianity, which they were obliged to feign even here; and they determined to emigrate to Turkey. With much difficulty and at great expense they succeeded in 1549 in reaching as far as Venice.

Banker at Antwerp.

All the Maranos in Venice were banished in the year 1550. It was probably at this time that Joseph asked the republic of Venice for one of the neighboring islands where the exiles might find refuge and whither the heavy emigration of Portuguese Jews might be diverted. His request, however, was refused. When Gracia, in consequence of the incautious statements of her niece (who bore the same name), was imprisoned on the charge of relapse into Judaism and her property was confiscated by the republic, Joseph appealed to Sultan Sulaiman II. (1520–66) at Constantinople, and through the influential court physician Moses Hamon he succeeded in attracting the attention of the sultan to the commercial and financial advantages which Turkey would gain if the Nasi family and other rich Jewish houses should settle in the country. The sultan thereupon sent an ambassador to Venice with the command to release Gracia and her property. Two years, however, elapsed before the negotiations with the republic were completed and Gracia was able to proceed to Constantinople. She was followed the next year (1553) by Joseph. Here at last he could openly profess Judaism. He adopted his family name, Joseph Nasi, instead of his Christian one of João Miguez, and married Reyna, the beautiful, much-courted daughter of Gracia. Through his letters of introduction Joseph soon gained influence at the court of Sultan Sulaiman. In the struggle for the throne between Sulaiman's two sons, Salim, prefect of the province of Kutaya, and Bayazid, the younger but far more talented, Joseph from the first adopted Salim's cause and succeeded in influencing the sultan in his favor. In the decisive battle at Konia between the two rivals, Bayazid was defeated. He escaped to Persia, and was there mur-

In Turkey.

dered with his four sons. After this success Salim made Joseph a member of his guard of honor, while Sulaiman gave him Tiberias in Palestine and seven smaller places in its vicinity as his property, to be used exclusively for Jewish colonization.

Lord of Tiberias.

Joseph sent to Tiberias Joseph ibn Adret, in whom he placed implicit confidence, with a royal firman and well supplied with money (derived principally from Gracia's property) to rebuild the walls. In spite of the opposition of the Arabian workmen, who, partly from envy, partly from superstitions roused by an old sheik, wished to withdraw from the work, the walls were completed in 1565 with the help of the Pasha of Damascus. During the excavations a flight of steps was found leading to an old church vault filled with marble statues; and three bells were also discovered, dating, it was said, from the time of Guido, the last king of Jerusalem. These were recast into cannon.

To promote the industries of Palestine, Joseph planted mulberry-trees for the purpose of raising silkworms, and imported cloth from Venice. At the same time he issued a proclamation to the Jews to the effect that all the persecuted who were willing to labor as farmers or artisans might find refuge in the new Jewish community. His invitation was addressed especially to the Jews of the Roman Campagna, who had much to endure under Pope Paul IV. (1555–59), and who were to be transported from Venice to Tiberias in Joseph's own ships. The little community of Cori in the Campagna, numbering about 200 souls, decided to emigrate to Tiberias in a body; and they sent envoys to their coreligionists in the larger Italian cities asking for money wherewith to defray the expenses of their journey. The longing for this new Tiberias was increased when Pius V. issued his well-known bull (Feb. 26, 1569) banishing the Jews from the Papal States. Thereupon the community of Pesaro also sent a ship from Venice with 102 Jewish emigrants; but it fell into the hands of Maltese pirates, who sold their victims into slavery. The Pesarians in this extremity wrote to Nasi for help, but whether their petition met with any success is not known.

Duke of Naxos.

When the pleasure-loving Salim ascended the throne in 1566 on the death of Sulaiman, Joseph's influence reached its zenith. On his return from Belgrade, Salim made Joseph a duke and gave him the islands of Naxos, Andros, Milo, Paros, Santorina, and the other Cyclades, which had hitherto belonged to the regent of Naxos. The latter, Giacomo Crispo, had been deposed on account of the numerous complaints of his Greek subjects. Joseph governed the islands through a Christian Spaniard, Francisco Coronello, probably to avoid any antipathy on the part of the Greek inhabitants, and levied very light taxes, as he himself had to pay to the Turks only the extremely moderate tax of 14,000 ducats per annum. Salim also granted him the tax on wines imported into Turkey by way of the Black Sea.

Despite the jealousy and intrigues of the grand vizier, Mohammed Sokolli, Nasi was so influential with Salim that the representatives of European powers sometimes found it necessary to interest Joseph in their behalf. When Maximilian II., Emperor of Germany (1564–76), desired to conclude peace with Turkey (1567), he did not fail to direct his ambassador, Verantius, to give presents to Nasi as well as to the other high court officials. Verantius did not do this, however, but borrowed money from Nasi instead. In 1571 the emperor addressed an autograph letter to him.

Political Influence.

In 1566 Nasi encouraged the Protestant council of Antwerp to hold out against the Catholic king of Spain, by pointing out Salim's hostile attitude toward the latter country. Thereupon William of Orange (1569) sent a confidential messenger to him asking him, in view of the revolt which the Dutch were planning against Spanish supremacy, to urge the sultan to declare war on Spain so that the latter would be obliged to withdraw her troops from the Netherlands. Joseph, however, did not succeed in obtaining a declaration of war. He carried on an active and friendly correspondence with Sigismund August II., King of Poland, who borrowed a large sum of money from him in 1570, granting him in return extensive commercial privileges, although the council of the city of Lemberg protested against this action.

In Sept., 1569, a great fire broke out in the arsenal at Venice. Nasi learned of this almost immediately, and at once urged Salim to carry out his long-cherished plan for the conquest of Cyprus. Salim finally allowed himself to be involved in a war with the Venetians and deprived them of Cyprus in 1571. There is a story that Salim in a fit of drunkenness promised Joseph the title of King of Cyprus, and that Joseph had already placed in his house the armorial bearings of the island, with his own name beneath them. However this may have been, Salim did not fulfil this alleged promise after the conquest of Cyprus.

Seizes French Ships.

In 1569, to punish France, which for years had been trying all possible means to escape payment of the 150,000 scudi which it owed the Nasi family, the sultan gave Joseph permission to seize all French ships sailing in Turkish waters and to hold them as security until the debt should be discharged. Joseph succeeded in capturing certain French ships in the harbor of Alexandria, and sold their cargoes to the amount of the debt, despite the protests lodged with the Porte by the French ambassador. The French government tried to take revenge for the humiliation, and the French ambassador at Constantinople, De Grandchamp, succeeded in bribing a low fellow named David to charge Nasi with high treason. The latter discovered the clumsy plot in time, however, and easily convinced the sultan of his innocence and loyalty. David and his accomplices were banished to Rhodes, and at Nasi's instance were excommunicated by the rabbis of several communities. When, however, Joseph heard of David's repentance, he tried to have the rabbinical ban removed; but most of the rabbis declined to accede to his request.

On the death of Salim (Dec. 12, 1574), Nasi lost his political influence, although he retained his offices and income; and the remainder of his life was passed in quiet seclusion in his castle of Belvedere. Nasi died childless; and his property was seized shortly after his death by the sultan Murad on the advice of Sokolli. The death of Nasi was generally lamented. The poet R. Saadia Longo composed an elegy upon him. Moses Almosnino dedicated to him his ethical work entitled "El Regimento de la Vida" (Salonica, 1564; Venice, 1604), and Eliezer Ashkenazi his commentary on Esther, "Yosif Leḳaḥ" (Cremona, 1576).

A Mæcenas.

Although Joseph accomplished nothing great or lasting for Judaism, a certain Jewish interest, both communal and literary, is associated with him. He supported Talmudic scholars and especially the yeshibah founded in Constantinople by Joseph ibn Leb at the instance of Gracia. In his house he had a considerable Hebrew library; and he allowed the public to make use of his manuscripts. He also founded a Hebrew printing-press in Constantinople, which, however, existed only a short time. As the result of conversations with certain dignitaries at his castle of Belvedere, Nasi is said to have composed a small theological work to prove to a Christian that the Torah was superior to the Greek philosophy. It has been supposed that it was written in Spanish, and that Isaac Onḳeneira translated it into Hebrew under the title "Ben Porat Yosef" (printed in Constantinople, 1577). According to Steinschneider, however, Onḳeneira was the author of the book.

S. M. Sc.

NASI, REYNA: Duchess of Naxos; born in Portugal; only daughter of the Marano Francisco Mendes-Nasi and Gracia Mendesia (Beatrice de Luna). She lived with her mother at Antwerp, then at Venice, going with her to Constantinople about 1552, where she was married to her cousin João Miguez, or Joseph Nasi, Duke of Naxos, after he had openly confessed Judaism.

After the death of her husband (Aug. 2, 1579), Reyna, who had no family, devoted her fortune of 90,000 ducats to the interests of Jewish learning. In 1593 she opened a printing-office at Belvedere, near Constantinople, which was under the direction of Joseph b. Isaac Askaloni, and which was transferred in 1597 to Kuru Chesme, a village near Constantinople on the European side of the Bosporus. Several works, now very rare, were issued from this press. Among them were: two works by Isaac Jabez, "Yafeh Ṛazon" (1593) and "Torat Ḥesed"; Menahem Egozi's "Gal shel Egozim"; Meïr Angel's allegorical drama "Ḳeshet Neḥushah"; several Bible commentaries; and the Talmudic treatise Ketubot. Reyna survived her husband two decades.

D. M. K.

NASIA, MOSES IBN. See Moses b. Isaac Hanessiah.

Earliest Mention.

NASSAU: Formerly a German dukedom; since 1866 it has formed a part of the Prussian province of Hesse-Nassau. In 1865, immediately before its union with Prussia, it had a total population of 465,636, including 6,995 Jews. Adjacent to the Rhine, upon which the oldest Jewish settlements of Germany are found, it undoubtedly had Jewish inhabitants in early medieval times. But the first positive mention of a Nassau Jew, Levi of Lorch, occurs in a document in the "Judenschreinsbuch" of Cologne, dated 1266 (Aronius, "Regesten," p. 299, No. 719). From some older documents, however, it appears very probable that Jews lived in that country before Henry of Isenburg, in 1213, transferred to two Jews to whom he owed money a claim for 230 marks due him from the Laach Abbey (Aronius, "Regesten," p. 173, No. 391). Archbishop Conrad of Cologne, in 1253, deeded to the counts Walram and Otto of Nassau the sum of 500 marks, which was in part payable from the Jew-taxes of Siegen (*ib.* p. 253, No. 591). Lambert of Lüttich (1169-83), in his life of St. Mathias, speaks of the miraculous cure of a man in Lahnstein who had in vain sought aid from Jewish physicians (*ib.* p. 143, No. 316). During the medieval persecutions the Jews of Nassau had their share of suffering. The memor-books mention Limburg (on the Lahn) as among the places where Jews were massacred during the Rindfleisch riots of 1298; Diez and Montabaur, during the Armleder persecutions in 1337; and all three places, during the persecutions at the time of the Black Death (Salfeld, "Martyrologium," Index).

Restrictions.

The German king Adolph of Nassau maintained the policy of extortion begun by his predecessor by not permitting the burial of Meïr of Rothenburg until a ransom had been paid. Another Adolph of Nassau, as Bishop of Cologne, freed the Jews of his diocese from the payment of the Leibzoll (1384), not from humanitarian motives but because he had promised as much to them in return for a special contribution. The various duchies into which Nassau was divided at the beginning of the nineteenth century abolished the Leibzoll (Sept. 1, 1806; "Zeitschrift für die Gesch. der Juden in Deutschland," v. 126-145, 335-347). It was not until June 18, 1841, that the special Jewish taxes ("Schutzgeld") paid to the state were abolished; the special Jewish communal taxes ("Beisassengeld") were abolished on Jan. 18, 1843, and the Jews were allowed to participate in all communal benefits, except the privilege in regard to free wood ("Loosholz"). The law which prohibited the cession to Christians of debts due to Jewish creditors was abolished about the same time.

In the nineteenth century, like all the smaller states of Germany Nassau endeavored to organize the Jewish communities, of which there were 77 scattered among 222 towns and villages. In 1840 was issued the law which compelled Jews to adopt family names. An edict of Oct. 18, 1842, introduced the Reform services of the Württemberg prayer-book into the synagogues and created four district rabbinates (those of Weilburg, Wiesbaden, Schwalbach, Dietz; later reduced to three, those of Ems, Weilburg, and Wiesbaden); the teachers were appointed for life. A subsidized normal school for Jewish teachers was established in Langenschwalbach by the government, and the sanitary laws in cases of circumcision were enforced (July 2, 1844). Nassau was among the first German states to introduce a constitutional government (1848). Religious freedom was proclaimed March 4, 1848, but petty reactionary measures were introduced here as elsewhere in the "fifties," and not until Sept. 26, 1861, was the oath More Judaico abolished. The annexation agreement with Prussia in 1866 recognized the rights acquired by the Jews of the duchy, including exemption from the oath More Judaico, which was still in force in Prussia, but did not agree to continue the subsidies for the normal school, nor to give state support to congregational institutions. But recently (1904) the Prussian minister of public worship decided that the law declaring that only the district rabbi could solemnize marriages was abolished.

Among the rabbis of Nassau were Abraham Geiger (at Wiesbaden, 1832-38), Benjamin Hochstadter (at Ems), and R. Silberstein (at Wiesbaden). H. Herz, as early as 1820, was appointed "Medizinalrath" (health officer) in Weilburg—one of the first cases of a Jew holding a state office in Germany.

D.

NASSAU, ADOLF, RITTER VON: Austrian journalist; born at Pohrlitz, Moravia, Dec. 25, 1834; educated at Vienna. He became stenographer to the Austrian Parliament, and later joined the staff of the "Presse" as parliamentary reporter. When the "Neue Freie Presse" was founded Nassau joined its editorial staff. In 1871 he purchased the "Presse," continuing to be chief editor and proprietor until the Länderbank bought the paper in 1877, when he retired from public life. Nassau has since lived in Vienna.

NATALITY: Proportionate number of births in a population, generally measured by the number per thousand of population. Since the writing of the article on Births a few additional details have been published which throw some further light on the question of the frequency of births among Jews as compared with the birth-rate in the non-Jewish population; the latter is generally lower, owing to fewer deaths in the Jewish population among children under five. For the Bulgarian Jews from 1893 to 1899 details have been published by Nossig ("Jüdische Statistik," p. 317, Berlin, 1903). The average number of births per thousand was as follows: Jews, 45.3; Greek Catholics, 44.09; Mohammedans, 28.82; Armenians, 50.00; total, 40.6. Still-births (per 1,000 births) are greater among the Jews in the following proportions: Jews, 1.8; Greek Catholics, 0.21; Mohammedans, 0.22; Armenians, 2.75. These proportions, however, are exceeded in the towns: Jews, 37; Greek Catholics, 13; Mohammedans, 18; Armenians, 19.

In Poland, in 1889, the births among Jews were only 31.3 per thousand as compared with 44.5 among the Christians (*ib.* p. 295).

Details of Jewish births in Vienna in 1899 are given in the "Statistisches Jahrbuch der Stadt Wien für das Jahr 1899" (Vienna, 1901), as follows: male, 1,370, female 1,343 (legitimate); the total number of illegitimate Jewish births for the year was 204 male and 178 female. In the former class there were 108 male and 60 female still-births, and in the latter class 29 male and 12 female still-births. This confirms the impression that a greater number of male children fail to reach vitality than female, and that this proportion is greater in the case of illegitimate births.

J.

NATANSON, LUDWIK: Polish physician; brother of Henryk Natanson; born 1821; died at Warsaw June 6, 1896. He studied medicine at the universities of Wilna and Dorpat, graduated from the latter in 1847, and in the same year started, with Le Brun and Helbich, the Polish medical periodical "Tygodnik Lekarski," which he edited until 1864. During the epidemic of cholera which raged at Warsaw from 1848 to 1852 Natanson was one of the most active physicians. While he was medical adviser to the great families of Warsaw—the Zamoiskis, Zaleskis, and others—he was at the same time visiting physician to many hospitals and asylums, and he always attended the poor gratuitously. In 1863 he was elected president of the Warsaw medical society. Notwithstanding his extensive practise Natanson always found time to take part in the affairs of the Jewish community, and most of the Jewish public institutions of Warsaw owe to him either their foundation or their development. The splendid synagogue established in 1878 at Warsaw owes its existence almost exclusively to the energy of Natanson, who was president of its building committee. He was concerned also in the erection of the immense Jewish hospital recently (1902) completed there, and in the establishment of a free-loan association and of an elementary and an artisan school; the income of his public lectures went to the fund of the latter school. From 1871 until his death Natanson was president of the Warsaw community, and managed its affairs with great wisdom and energy. Besides his numerous essays in the "Tygodnik," he published: "Nowe Listy Liebiga Chemji" (transl. from the German), Warsaw, 1854; "Krotki Rys Anatomji Ciala Ludzkiego," 1858; "Przyczynek do Fizjalogicznej Djagnostyki Kurczow," 1859; "Urywki w Kwestji Wychowania," 1861; "Fizjologiczne Zasady Estetyki," 1862; "Teorja Jestestw Idjodynamicznych," 1883; "Mechanika Snu," 1883; "La Circulation des Forces dans les Etres Animés," 1886; "O Uczeniu Rzemiosl."

H. R. M. R.

NATHALIE, ZAÏRE MARTEL: French actress; born at Tournon, Seine-et-Marne, Sept. 3, 1816; died Nov. 17, 1885. She made her début at the Folies Dramatiques, Paris, in 1837 as *Azurine* in the fairy ballet "La Fille de l'Air." In 1838 she appeared at the Gymnase in "Ange au Sixième Etage." She remained at this house until 1845, playing in the interim in "La Gitana," "Lucrèce à Poitiers," "Jean le Noir," "Le Cadet de Famille," and "Les Filles de Stilberg." Then followed a successful season in London, after which she appeared at the Palais-Royal as *Dorothée* in "La Pêche aux Beaux-Pères." In 1849 she joined the Comédie Française, becoming a "sociétaire" three years later. She retired from the stage in 1876.

Bibliography: Vapereau, *Dict. des Contemporains*.

S. E. Ms.

NATHAN (נָתָן = "the given one"): Prophet; lived in the reign of David. On three occasions he appears as the king's successful adviser. In connection with the building of the Temple, Nathan at first approved David's intention (II Sam. vii. 4). The same night, however, the word of Yhwh comes to the prophet saying that not David but his son shall build the Temple, but giving to David a promise of the permanency of his dynasty (*ib.* vii. 12-16). This vision and promise Nathan communicates to David, who accepts it without remonstrance. Again, it is Nathan who rebukes David because of the latter's sin with Bath-sheba. The rebuke takes the form of the parable of a rich man with numerous flocks who seizes a poor man's only lamb to prepare a feast for his guest. Nathan asks for judgment on his hypothetical case, and when David has condemned himself, Nathan hurls at him the stern "Thou art the man" (II Sam. xii. 1-7).

The final appearance of Nathan is in connection with the recognition and anointing of Solomon as David's successor. Adonijah, the son of Haggith, sought to secure the throne by winning over the populace by means of gifts and gracious conduct and many promises. David had promised the succession to Solomon, his son by Bath-sheba. Nathan advises Bath-sheba to remonstrate with the king against the pretensions of Adonijah, promising to give timely confirmation to her words. The plan succeeds, and, by order of David, Nathan and Zadok the priest proclaim and anoint Solomon the successor to the throne (I Kings i. 5-39).

In addition to these passages, Nathan is mentioned in (1) II Sam. xii. 25, as giving to Solomon the name of Jedidiah ("friend of God"); (2) Ps. li. (in the title); (3) I Chron. xvii. 2-15, which is a repetition of II Sam. vii.; (4) I Chron. xxix. 29; and (5) II Chron. ix. 29. In the last two passages Nathan is named as the historian of the reigns of David and Solomon. He is not mentioned in Chronicles in connection with the Bath-sheba episode or with the anointment of Solomon. A grave at Halhul, near Hebron, is pointed out as that of Nathan, but this is doubtful. Two sons of Nathan, Azariah and Zabud, are mentioned as princes and officers under Solomon (I Kings iv. 5).

About Nathan the Rabbis are all silent, saving in but one passage, in which R. Judah remarks that the "threefold cord that is not easily broken" was the joint effort of Bath-sheba, David, and Nathan to save the throne for Solomon against Adonijah (Eccl. R. iv. 12). An echo of Nathan's parable of the rich man with many flocks and the poor man with but one lamb is found in Mohammedan tradition (Koran, sura xxxviii. 20-25). See Bath-sheba.

E. G. H. E. N. C.

NATHAN: Palestinian tanna of the third generation (2d cent.); son of a Babylonian exilarch. For some unknown reason he left Babylonia and his bright prospects there for Palestine, where he was made chief of the school at Usha (Hor. 13b; Grätz, "Gesch." iv. 185). Later he was entrusted by the patriarch R. Simon b. Gamaliel III. to secure a reconciliation with R. Hananiah of Babylon, who had declared himself independent of the Sanhedrin of Judea and had established one in Babylon—a mission which Nathan, in company with R. Isaac, successfully executed (Grätz, *l.c.* pp. 188 *et seq.*). According to Halevy (in "Dorot ha-Rishonim," p. 185), however, both Nathan and Isaac were still residents of Babylon.

Soon afterward dissensions occurred between Nathan and R. Meïr, on the one side, and the president, R. Simon, on the other, owing to an attempt by the latter to abolish the equality hitherto existing among all members of the school, by restricting the tokens of esteem shown by the community to other members of the school lower in distinction than the president. Nathan and Meïr conspired to depose Simon and to usurp his authority themselves; but the plot came to his knowledge, and he caused the conspirators to be expelled from the school. The two knew, however, how to make their absence felt. They sent in slips on which were written puzzling halakic questions; so that a member of the school once exclaimed: "We are inside, and the learning is outside!" Both Nathan and Meïr were ultimately readmitted on condition that the name of neither should thenceforth be mentioned in connection with his halakic decisions, but that a pseudonym should be used instead. In the case of Nathan this pseudonym was "some say"; in that of Meïr, "others say" (Hor. 13b).

Nathan was a high Talmudic authority. Numerous halakic decisions and haggadic sayings of his are recorded. To him is attributed also the authorship of the treatise entitled "Abot de-Rabbi Natan," a kind of tosefta to the Pirḳe Abot. He is said also to have been the author of the baraita "Mem Ṭet Middot," no longer extant, on Haggadah and mathematics (Frankel, "Darke ha-Mishnah," p. 191, Leipsic, 1859).

Nathan's chief opponent in halakic decisions was the patriarch R. Judah I., whom, however, he is said to have assisted in the collaboration of the Mishnah (B. M. 86a, and Rashi *ad loc.*) and who held him in high esteem (B. B. 131a).

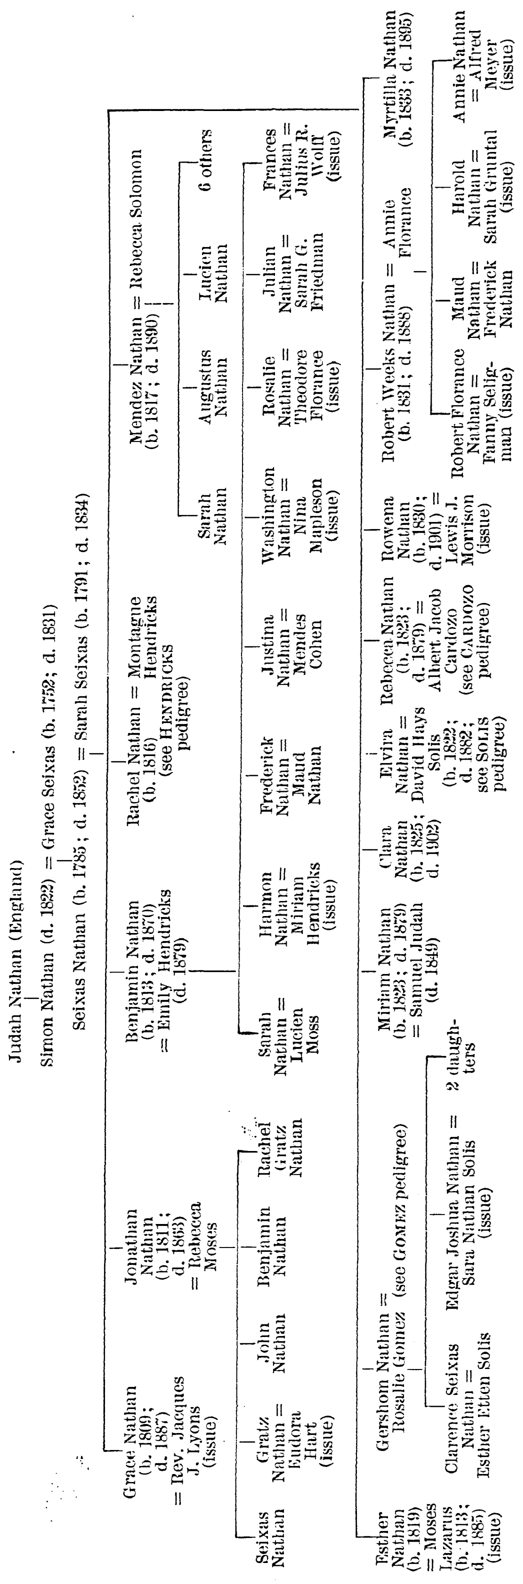
W. B. A. S. W.

NATHAN: American family that has been identified with both the general and the Jewish community of New York city since the latter half of the eighteenth century. The earliest member of the family (in America) was Simon Nathan.

Benjamin Nathan: Son of Seixas Nathan; born in New York city 1813; died 1870. He was elected a member of the New York Stock Exchange in 1836, became its vice-president in 1851, and remained an active member until his death. For a number of years he was a director of the Chicago & Northwestern Railroad and of the Ninth Avenue Street Railway of New York; he was also a member of the first board of directors of the Jews' Hospital (now Mount Sinai Hospital) in 1852, its vice-president in 1855, and president from 1856 to 1870. In 1849 Benjamin Nathan was appointed aide-de-camp, with the title of colonel, to Governor Hamilton Fish of New York. He was a member of the Union and Union League clubs, of the St. Nicholas Society, and was president of the Shearith Israel congregation. Two sons of Benjamin Nathan, **Harmon** (b. 1843) and **Frederick** (b. 1844), were members of the Seventh Regiment, New York State Militia, which volunteered, in 1863, into the Union army; they served with the regiment during the riots in New York in July, 1863. Both Harmon (since 1864) and Frederick (since 1869) are members of the New York Stock Exchange; the latter has been a director of the Home for Aged and Infirm Hebrews for twenty-one years, and honorary secretary for over seven years.

Gratz Nathan: Lawyer; son of Jonathan Nathan; born in New York city in 1843; educated at Columbia College (B.A. 1861; M.A. 1864). He was admitted to the bar of New York in 1864, became assistant corporation counsel (1866–72), and is a member of the St. Nicholas Society.

Jonathan Nathan: Lawyer; son of Seixas Nathan; born in New York city 1811; died 1863; educated at Columbia College, New York city (B.A. 1827). From 1840 to 1846 he held the position of master in chancery; he was associated for many years with Alexander W. Bradford, surrogate and lawyer in New York. Jonathan Nathan directed particular attention to equity and surrogate's practise, and was engaged in many noted cases, including the "Ross Will" case and the contest over the will of Commodore Uriah P. Levy; he was one of the commissioners of records who prepared the "Index of the Conveyances Recorded in the Office of Register of the City and County of New York" (published 1862); an active member of the Whig and later of the Republican party; one of the founders (1835) of the St. Nicholas Society; a member of the Column, Union, and Weda clubs and president of the Shearith Israel congregation.



Judah Nathan (England)
Simon Nathan (d. 1822) = Grace Seixas (b. 1752; d. 1831)

Myrtilla Nathan (b. 1833; d. 1895)
Robert Florance Nathan = Fanny Seligman (issue)
Maud Nathan = Frederick Nathan
Harold Nathan = Sarah Gruntal (issue)
Annie Nathan = Alfred Meyer (issue)

J. E. N. S.

Maud Nathan (Mrs. Frederick Nathan): Daughter of Robert Weeks Nathan; born in New York Oct. 20, 1862; president of Consumers' League, New York, since 1897, with which she has been prominently identified since its organization in 1890; she is also vice-president of the National Consumers' League. To extend the usefulness of this association Mrs. Nathan has addressed various societies in the leading cities of the United States upon educational and philanthropic subjects, and before a legislative committee at Albany (1894) she advocated a bill regulating the employment of women and children in mercantile houses. She was one of the speakers at the International Congresses of Women's Clubs held in London and Berlin in 1898 and 1904 respectively, and on several occasions she has occupied pulpits.

Mrs. Nathan has been associated with many Jewish organizations, both educational and charitable, and is active in civic affairs. She was one of the first vice-presidents of the Women's Municipal League of New York (1896), and a member of its campaign committee to uphold the Fusion ticket in 1903. She was one of a committee of ten to form the Council of Civic Cooperation in 1902; and since that year she has been honorary inspector of the board of health. Mrs. Nathan is a member of the National and New York State Woman Suffrage Associations, and has addressed the United States Senate committee in furtherance of the cause of woman's suffrage (1904). She is chairman of the Committee of Industry, General Federation of Women's Clubs; a contributor to the magazines and newspapers; a member of the Daughters of the American Revolution; and is connected with the management of various educational societies and social clubs of general and local interest.

Mendez Nathan: Son of Seixas Nathan; born in New York in 1817; died 1890. He was one of the signers of the agreement to form a public stock exchange, to be known as the "Open Board of Stock-Brokers" (Dec. 21, 1863), and of its constitution, adopted May 16, 1864; a member of the committee of the court of appeals of that organization (1868–1869), of the New York Stock Exchange (1869–90), and of the St. Nicholas Society.

Seixas Nathan: Only child of Simon Nathan; born in New York city 1785; died 1852. He married his cousin Sarah Seixas, daughter of Benjamin Seixas and Zipporah Levy. He was one of the signers of the constitution of the New York Stock Exchange in 1817, of which for a number of years he was an active member. He owned a large amount of real estate in New York city, was one of the commissioners of charities there, and during the later years of his life was an official in the United States Custom House at New York. He was president of the New York Commercial Exchange Association in 1846–47 ("The Great Metropolis, or Guide to New York," New York, 1847), a member of the St. Nicholas Society from its organization in 1835, and president of the Shearith Israel congregation.

Simon Nathan: Merchant; son of Judah Nathan; born at Frome, England; died 1822. He was the first of the family in America, but the date of his arrival is not known. He sided with the Revolutionists and was one of a number of Jews who left New York during the British occupation. He went to Philadelphia and took an active part in the affairs of the Jewish congregation of that city; was a member of the committee appointed to raise funds for the building of its first synagogue, the Mickve Israel; was a trustee at the time of its dedication in 1782; and was president in 1783. He married in Philadelphia (1780) Grace Seixas, daughter of Isaac Mendes Seixas and Rachel Levy. Simon Nathan's name appears in the first directory of New York city (published in 1786), where at one time he owned considerable real estate. He was a trustee of the Shearith Israel congregation, New York city, from 1786 to 1790.

NATHAN OF AVIGNON: Talmudist; lived in the second half of the fourteenth century. He was the author of "Hilkot Sheḥiṭah u-Bediḳah," containing laws concerning the slaughtering of animals and the examination of their carcasses with reference to their fitness as food. The author quotes in his work the rules given by the rabbis of eastern France, among whom he cites Jacob ben Yaḳar. The work is still extant on the margin of the manuscript containing the "Sefer Miẓwot" of Isaac of Corbeil (Cambridge University Library).

NATHAN, BARNETT (known as **Baron Nathan**): English dramatic and musical entrepreneur; born in 1793; died in London Dec. 6, 1856. Nathan was also a teacher of dancing from 1844 till his death. He acted for many years as master of the ceremonies and managing director at Rosherville Gardens, near Gravesend, and was a well-known personality. On his benefit night he used to perform the feat of dancing blindfold the egg-hornpipe.

NATHAN, ELIAS SALOMON: German physician and author; born at Eutin about 1806; died at Hamburg July 5, 1862; educated at Kiel (M.D. 1830). He took part in the Polish campaign, and afterward settled in Hamburg as a physician. In addition to his literary activity in medical science, he devoted himself to Jewish learning, and under the pseudonym "Essenna" he translated Joseph Salvador's "Histoire des Institutions de Moïse et du Peuple Hébreu" into German (3 vols., Hamburg, 1836 *et seq.*, with an introduction by G. Riesser). Under the same pseudonym he published "Gedanken aus dem Tagebuche eines Juden über die Drei Grossen Propheten der Europäischen Geschichte" (*ib.* 1837).

NATHAN THE EXILARCH. See NATHAN DE-ZUZITA.

NATHAN FEITEL: Rabbi at Hotzenplotz and Austerlitz in the seventeenth century. He wrote "Ḥoḳ Natan," or "Derushim le-Kol Ḥefẓehem" (Cracow, 1609; with a preface by Phinehas b. Israel ha-Levi Horowitz), and a homily on the Sabbath lesson Wayiggash (*ib.* 1613; Prague, 1623; with a preface by Samuel Levi). A book dealing with the massacre of 1648, written by his son **Samuel Feitel** under the title "Ṭiṭ ha-Yawen" (Venice, 1648), is wrongly attributed to him (comp. Benjacob, "Oẓar ha-Sefarim," p. 208, No. 72).

NATHAN B. ḤAYYIM AMRAM. See AMRAM, NATHAN BEN ḤAYYIM.

NATHAN, ISAAC: English musician and composer; born at Canterbury, England, in 1792; died at Sydney, N. S. W., Jan. 15, 1864. He was intended for the ministry and studied under Professor Lyon at Cambridge, but, owing to his love of music, he was articled to Dominico Corri, the Italian composer. Nathan made his début at Covent Garden Theatre March 12, 1816, but his voice proved too weak for the stage. He then turned dramatic and musical composer, and became instructor in music to Princess Charlotte of Wales, as well as historian of music to George IV. Nathan went to Sydney in 1841, where he frequently lectured and where he rendered great service in developing musical talent and in improving Church music and choral societies.

Nathan wrote a "History and Theory of Music" (1823); "Musurgia Vocalis" (1836); "Memoirs of Madame Malibran de Beriot" (1836); "The Southern Euphrosyne and Australian Miscellany" (1846). Among his other productions are: the music to "Sweethearts and Wives," 1823; "The Alcaid," 1824, opera; "The Illustrious Stranger," 1827, musical farce; and "The King's Fool," drama. His songs include: "Beauty's Bower"; "Come Kiss Me, Said Colin"; "Fair Haidée"; and "Lady-Bird." One of his more celebrated songs is "Why Are You Wandering Here, I Pray?"

J. G. L.

Nathan is also known as having set to music Byron's "Hebrew Melodies." Though lacking in Hebraic character, six of the "Melodies" were used in the synagogue; probably four of these were derived originally from non-Jewish sources. The remainder of the music is very poor; and it has deservedly sunk into oblivion, like other music composed by Nathan for Lord Byron's verses. John BRAHAM had a very small share in the preparation of the "Melodies." He was at the height of his fame as a singer, and probably did nothing more than lend his name to the venture. The volume is dedicated to the short-lived Princess Charlotte of Wales, to whom Nathan had given singing-lessons; and the original compositions, numbering half of Part I. and all of Part II., are in his meretricious style. On the reprint published in 1861, after Braham had died, the name of Nathan alone appears as that of the composer and arranger.

The six synagogal melodies are as follows: (1) "She Walks in Beauty" (a former LEKAH DODI of the London synagogues, and now deservedly forgotten; two variants are given); (2) "The Harp the Monarch Minstrel Swept" (the Atonement opening hymn YA'ALEH, on the foreign origin of which see Lewandowski, "Todah we-Simrah," No. 96); (3) "If That High World" (the tender melody to which the Ḳaddish after the reading of the Law, on festivals, is still chanted in London synagogues); (4) "The Wild Gazelle" (a rollicking air to which the hymn "YIGDAL" has for a century and a half been sung in the Great Synagogue, London, at the close of the evening service on the Feast of Tabernacles); (5) "Oh, Weep for Those That Wept by Babel's Stream" (a clever empirical adaptation of the chant for the Blessing of the Priests [see BLESSING, PRIESTLY], and of an old northern folk-song adopted into the Passover service); (6) "On Jordan's Banks" (the Ḥanukkah melody MA'OZ ẒUR, very lamely and clumsily arranged to words which in no way reproduce its spirit).

NATHAN B. ISAAC JACOB BONN: Rabbi at Mayence, and later at Hamburg, in the middle of the seventeenth century. He was the author of "Shikḥat Leḳeṭ," a supplement to the "Yalḳuṭ Ḥadash," with which work it was published at Prague in 1652. This supplement contains the haggadot and cabalistic references to the Pentateuch which were omitted in the "Yalḳuṭ." The "Shikḥat Leḳeṭ" was reprinted at Amsterdam in 1700, together with a preface and additions by Ẓebi Hirsch b. Abraham Wronke, as a supplement to the "Yalḳuṭ Re'ubeni."

NATHAN ISAAC BEN KALONYMUS BEN JUDAH. See ISAAC NATHAN BEN KALONYMUS.

NATHAN BEN ISAAC HA-KOHEN HA-BABLI: Babylonian historian of the tenth century. He was the author of a history of the exilarchate that gives many interesting details in regard to the exilarchs, particularly his contemporary 'Uḳba. Extracts from this history were published by Samuel Shullam in his edition of Zacuto's "Yuḥasin" (Constantinople, 1546), as well as by Neubauer ("M. J. C." ii. 83 *et seq.*). Since Nathan b. Jehiel of Rome, the author of the "'Aruk," is quoted in Zacuto's "Yuḥasin" (ed. Filipowski, p. 174, London, 1856) as "Nathan ha-Babli of Narbonne," Grätz ("Gesch." 3d ed., v. 288, 469–471) mistook the latter for Nathan ben Isaac ha-Kohen ha-Babli and ascribed to him an "'Aruk" similar to that written by Nathan b. Jehiel. Grätz even went so far as to identify Nathan ben Isaac with the fourth of the four prisoners captured by Ibn Rumaḥis (see Ḥushiel ben Elḥanan), assuming that he settled afterward at Narbonne.

E. C. M. Sel.

NATHAN JEDIDIAH BEN ELIEZER: Italian poet; born at Orvieto in 1607. In 1625, being then at Sienna, he paraphrased in Hebrew terza-rima three "widduyim": Baḥya's, beginning ברכי נפשי (following the Italian paraphrase in verse of his maternal grandfather, Johanan Judah Alatrini), that of R. Nissim, and an anonymous widdui beginning במה אקדם. He was also the author of three sonnets in Hebrew and Italian, and of a Hebrew dirge consisting of eight strophes of six verses each. All these poems were published in one volume (Venice, 1628).

Bibliography: Fürst, *Bibl. Jud.* iii. 22; Steinschneider, *Cat. Bodl.* col. 2035; Zunz, *Literaturgesch.* pp. 429-430.

E. C. M. Sel.

NATHAN BEN JEHIEL: Italian lexicographer; born in Rome not later than 1035; died in 1106. He belonged to one of the most notable Roman families of Jewish scholars. Owing to an error propagated by Azulai, he has been regarded as a scion of the house of De Pomis. Now, however, it is regarded as almost a certainty that he belonged to the 'Anaw (Degli Mansi) family. Nathan's father, R. Jehiel b. Abraham, aside from being an acknowledged authority on the ritual law, was, like the majority of the contemporary Italian rabbis, a liturgic poet. The details of Nathan's sad life must be excerpted and pieced together from several autobiographic verses appended to the first edition of his lexicon. It appears that he had begun life not as a student, but as a pedler of linen wares, a distasteful occupation. The death of his employer caused him to abandon trade for the Torah. He returned home, where his father began to bestow upon him the treasures of learning, the accumulation of which was continued under foreign masters. First, Nathan went to Sicily, whither Maẓliaḥ ibn al-Bazaḳ had just returned from a course of study under Hai, the last of the Pumbedita geonim. It was there that Nathan garnered that Babylonian learning which has led some to the erroneous belief that he had himself pilgrimed to Pumbedita.

His Travels.

Then Narbonne enticed him, where he sat under the prominent exegete and haggadist R. Moses ha-Darshan. On his way home he probably lingered for a while at the several academies flourishing in Italy, notably at Pavia, where a certain R. Moses was head master, and at Bari, where R. Moses Kalfo taught. He arrived home, however, from his scholarly travels some time before the death of his father, which occurred about the year 1070, and which gave him the opportunity of illustrating the simplicity of funeral rites which he had been advocating. The presidency of the rabbinic college was thereupon entrusted by the Roman community to Jehiel's three learned sons: Daniel, Nathan, and Abraham—"the geonim of the house of R. Jehiel," as they were styled ("Shibbole ha-Leḳeṭ," ii. 5). Daniel, the eldest, seems to have composed a commentary on the mishnaic section Zera'im, from which the "'Aruk" quotes frequently, and to have stood in friendly relations with Christian scholars. The three brothers rapidly acquired general recognition as authorities on the Law; and numerous inquiries were addressed to them. Their most frequent correspondent was R. Solomon b. Isaac (Yiẓḥaḳi), an Italian scholar who is not to be identified with Rashi.

Nathan's private life was extremely sad. All his children died very young; and the bereaved father sought solace in philanthropy and scholarly application.

The "'Aruk."

In the year 1085 he built a communal bath-house conforming to the ritual law; and about seventeen years later, Sept., 1101, he and his brothers erected a beautiful synagogue. In February of the latter year had been completed the noble structure of his studiousness—the "'Aruk."

The sources of this work are numerous. Aside from the "'Aruk" of Ẓemaḥ b. Palṭoi, which he utilized (it should be stated, however, that Rapoport and Geiger deny this), he used a very large number of additional works. Above all, he placed under contribution the information received, in both oral and written form, from R. Maẓliaḥ and R. Moses ha-Darshan, the former of whom, in particular, through his studies under Hai, had made himself the repository of Eastern learning. The entire extent of Nathan's indebtedness to his authorities can not be estimated, for the reason that of the hundreds of books cited by him many have not been preserved. But none will deny his obligation to R. Gershom of Mayence, whom he repeatedly quotes, though, as Kohut rightly maintains against Rapoport, he can not have been his personal disciple. Similarly he used the writings of R. Hananeel b. Ḥushiel and R. Nissim b. Jacob, both living at Kairwan. So frequent, in fact, were the references to R. Hananeel in the lexicon that R. Jacob Tam, for example, regarded the work as based entirely on the commentaries of that author ("Sefer ha-Yashar," p. 525), while the author of the "Or Zarua'," as a matter of course, referred to him almost all of the lexicon's anonymous statements. Hai Gaon, again, figures very frequently in its pages, sometimes simply designated as "the Gaon," while it has particularly assimilated all philologic material that is contained in his commentary on the mishnaic order Ṭohorot.

Seeing that the structure of the "'Aruk" consists, as it were, of so many bricks, it is hard to decide whether the builder really possessed all the linguistic learning stored up in it. None can gainsay the author's philologic spirit of inquiry—quite remarkable for his day, which antedated the science of linguistics; his frequent collation of "variæ lectiones" is notable, while his fine literary sense often saved him from crude etymological errancies.

Method and Scope.

But, withal, the multitude of languages marshaled in the "'Aruk" is prodigious even for a period of polyglot proclivities. The non-Jewish Aramaic dialects are encountered side by side with Arabic, Persian, Greek, Latin, and even Slavonic, while Italian seems as familiar to the author as the various rabbinic forms of style.

This multiplicity of languages, however, is at

PAGE FROM THE FIRST EDITION OF THE "'ARUK," ROME (?), BEFORE 1480.
(In the Columbia University Library, New York.)

present generally considered a mere mark of the multifarious character of the compilation; and the credit for the exegetic employment of the several languages is given to Nathan's authorities rather than to himself. While he possessed, no doubt, a superficial and empiric knowledge of Latin and Greek, of which the former already contained an admixture of contemporary Italian, and the latter, subdivided into spoken and written Greek, was still partly used in southern Italy; while he may have acquired a desultory acquaintance with Arabic, and certainly was quite familiar with Italian, yet it may be stated almost with certainty that the majority of his etymologies were compiled and copied from his various source-books. For this reason, perhaps, the various dialects appear in the "'Aruk" under several names, each originating seemingly in a different author, as Arabic, for example, which occurs under three distinct denotations, possibly without Nathan being aware of their synonymity. To the same cause may be assigned the polyonymy of the Hebrew and rabbinic dialects in the "'Aruk," as well as the presence of a great deal of geographic and ethnographic information which the author certainly did not acquire in actual travel. As regards the grammatical derivation of Hebrew words, Nathan deviated from the principle of triliteral roots discovered by Judah ben David Ḥayyuj and adopted by the Spanish grammarians as a rule; like the majority of French and German rabbis, he considered two letters, and at times one, sufficient to form a Hebrew root.

Its Importance.

The "'Aruk" is significant as a monument in the history of culture. Aside from its purely scientific value as a storehouse of old readings and interpretations as well as of titles of many lost books, it is important as the only literary production of the Italian Jews of that age. Moreover, though mainly a compilation, it is one of the most noteworthy medieval monuments of learning. Compiled at the historic juncture when Jewish scholarship was transplanted from Babylonia and northern Africa to Europe and was subject to the perils of aberration, it signally emphasized the necessity of preserving the old rabbinical treasures and traditions. Its service in this respect was equivalent to that rendered by the two great products of contemporary Spanish and French Jews—Alfasi's Talmudic code and Rashi's commentary. Together the three contributed toward the spread of rabbinic study. Besides, one has to depend upon the "'Aruk" for whatever knowledge one may have of the intellectual condition of the Italian Jews in the eleventh century. Seeing that its author, for example, uses the Italian language freely to elucidate etymologies, that he frequently offers the vernacular nomenclature for objects of natural history, that he repeatedly calls into service for purposes of illustration the customs of foreign peoples, the character of the reading public of his day can easily be inferred. The superstitions of the time are also truly mirrored, while the dawn of skepticism may be discerned in his remark that as regards conjuring and amulets neither their grounds nor their sources were known ("Aruch Completum," vii. 157, *s.v.* קף).

Influence and Editions.

The "'Aruk" rapidly achieved a wide circulation. According to Kohut, even Rashi was already in a position to utilize it in the second edition of his commentaries, having been acquainted with it by R. Kalonymus b. Shabbethai, the noted rabbi who had moved to Worms from Rome. Kalonymus, however, can at best have transported to his new home but meager information concerning the "'Aruk," as his removal occurred about thirty years prior to its completion; the first folios he may well have seen, since he was intimately acquainted with Nathan. A generation after the time of Rashi the "'Aruk" is found in general use among the Biblical commentators and the tosafists, as well as among the legalistic and the grammatical authors. Numerous manuscript copies were brought into circulation; and with the introduction of printing its spread was widely extended.

The first edition, which bears neither the date nor the place of publication, probably belongs to the year 1477, while in 1531 Daniel Bomberg of Venice issued what is no doubt the best of the early editions. In both the copying and the printing processes, however, the work suffered innumerable alterations and mutilations, which have been recently repaired to a certain extent by the scientific edition issued, on the basis of the first editions and of seven manuscripts, by Alexander Kohut ("Aruch Completum," 8 vols. and supplement, Vienna and New York, 1878–92).

A further proof of the popularity gained by the "'Aruk" lies in the numerous supplements and compendiums which soon commenced to cluster about it. Down to recent times all rabbinic lexicons have been grounded on the "'Aruk." The first supplement was written in the twelfth century by R. Samuel b. Jacob ibn Jam'i or Jama' ("J. Q. R." x. 514) of Narbonne, under the title "'Agur" (edited by Buber in "Grätz Jubelschrift," Hebr. part, pp. 1–47), a small work of little significance. In the thirteenth century R. Tanḥum b. Joseph of Jerusalem wrote a lexicon, "Al-Murshid al-Kafi," which purposed not only to replace the "'Aruk," which had grown rare, but also to complete and to correct it. Abraham Zacuto, author of the "Yuḥasin," at the beginning of the sixteenth century composed a supplement entitled "'Iḳḳere ha-Talmud," of which only a fragment of the latter part has come down. About the same time Sanctus Pagninus, a Christian, issued an "Enchiridion Expositionis Vocabulorum Haruch, Thargum, Midraschim Rabboth, et Aliorum Librorum" (Rome, 1523; Steinschneider, "Cat. Bodl." col. 2083). The general method of the "'Aruk" was also adopted by Elijah Levita, who, in his "Meturgeman" and "Tishbi," advanced a step in that he differentiated the targumic and the Talmudic words and also sought to complete his prototype. The manner and the matter of the "'Aruk" were closely followed by Johannes Buxtorf in his "Lexicon Chaldaicum Talmudicum" (Basel, 1639), and by David de Pomis in his "Ẓemaḥ Dawid." Early in the seventeenth century Menahem de Lonzano issued his small but useful supplement, "Ma'arik," concerned particularly with foreign words (in "Shete Yadot," Venice, 1618; newly

Supplements and Compendiums.

edited by Jellinek, Leipsic, 1853). "Ma'arik ha-Ma'areket," a compilation by Philippe d'Aquin, appeared in Paris in 1629. No doubt the best supplements to the "'Aruk" were written in the same century by Benjamin Mussafia, a physician at Hamburg, and by David ha-Kohen de Lara. Mussafia's "Musaf he-'Aruk" (1655), probably known also as "'Aruk he-Ḥadash," according to Immanuel Löw, devoted itself particularly to the Greek and Latin derivatives, leaning largely on Buxtorf. De Lara (d. 1674) published "Keter Kehunnah" (Hamburg, 1668), in which he had set before himself polyglot purposes, and which, though brought down to "resh," was published only as far as the letter "yod" (Steinschneider, *l.c.* col. 875). His smaller work, on the other hand, "'Ir Dawid" (Amsterdam, 1638), of which the second part was called "Meẓudat Ẓiyyon," confined itself almost exclusively to Greek derivatives.

Even the nineteenth century witnessed the publication of several works accredited to the classic lexicon. Isaiah Berlin (d. 1799) wrote "Hafla'ah Sheba-'Arakin" (Breslau, 1830; Vienna, 1859; Lublin, 1883), annotations to the "'Aruk"; similar notes were appended by I. M. Landau to his unscientific edition of the "'Aruk" (5 vols., Prague, 1819-40); while S. Lindermann has issued elucidations under the title "Sarid ba-'Arakin" (Thorn, 1870). Besides, there are several anonymous dictionaries attached to the same classic, *e.g.*, the abbreviated "'Aruk," "'Aruk ha-Ḳaẓer," known also as "Ḳiẓẓur 'Aruk," which was successively printed at Constantinople (1511), Cracow (1591), and Prague (1707), and which contains merely the explanation of words, without their etymologies. Another short "'Aruk," frequently cited by Buxtorf, and recently discovered in a manuscript at Bern, has been found to contain numerous French and German annotations. Of such epitomes there have no doubt been a multitude in manuscript form. A dictionary of still wider scope than the "'Aruk" is the "Sefer Meliẓah" of Solomon b. Samuel. Schiller-Szinessy, in fine, records the existence of a "Lexicon of the Difficult Words in the Talmud" ("Cat. Cambridge," p. 114).

W. B. H. G. E.

NATHAN BEN JOEL FALAQUERA (PALAQUERA): Spanish physician of the latter half of the thirteenth century; perhaps identical with **Nathan of Montpellier,** the teacher of the unknown author of the "Sefer ha-Yashar." He was the son of a physician, and early began the study of medicine. He was the author of "Ẓori ha-Guf" (Steinschneider, "Cat. Bodl." col. 2537; Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 2130, 1; 2131; 2132, 1), in which he collected the opinions of Hippocrates, Galen, Averroes, Avicenna, and Maimonides on therapeutics and hygiene. In this work he uses all the medical and botanical terms he could find in the Talmud; otherwise he employs technical Arabic expressions, which he afterward translates into the vernacular. He is supposed to have been the author of a work on the celestial spheres.

S. J. S. R.

NATHAN BEN JOSEPH 'OFFICIAL (אופציאל or אופיסיאל): French rabbi and controversialist; lived at Sens in the second half of the thirteenth century. He was one of the most famous rabbis of France in the Middle Ages. His son Joseph the Zealot calls him "the prince of orators," or rather "of polemists"; for Nathan had frequent debates both with the dignitaries of the Church and with baptized Jews. A strong friendship existed between him and Gauthier de Cornut, Archbishop of Sens. Among his religious controversies—in which he displayed a remarkable freedom of speech—may be mentioned those with the bishops of Mans, Vannes, Meaux, Anjou, Poitiers, Angoulême, and St. Malo, with the confessor of King Louis, and with Guillaume d'Auvergne, Bishop of Paris and confessor of Queen Blanche of Castile. He had similar relations with the members of various religious orders, especially the Franciscans or Cordeliers, and with the Abbé of Cluny, whom he met at Moulins. One of the Franciscans having found in the brazen serpent to which the Israelites owed their cure a symbol of Jesus Christ, Nathan remarked to him: "That is true; the brazen serpent does indeed represent Christ crucified; and the sight of him in this situation suffices to cure us of a desire to believe in him." He had several contests with the Dominicans, *e.g.*, with Frère Garin (את גרין), who insisted that the Jews were reprobates and enemies of God; and even with Pope Gregory X., who, on his visit to France in 1273 to open the General Council of Lyons, discussed with Nathan the meaning of the Biblical verse, "A star has risen from the midst of Jacob" (Num. xxiv. 17). Defeated at every point, the pope finally asked, "And how do you then interpret this passage? Tell me, for the sake of friendship."

No writings of Nathan are extant, but his commentaries on detached verses of the Bible are quoted in the Tosafot to Ta'anit, and in "Da'at Zeḳenim" (pp. 35c, 88a), and "Minḥat Yehudah" (pp. 39a, 52a).

S. S. K.

NATHAN JUDAH BEN SOLOMON: Provençal physician of the fourteenth century. His Provençal names were **En Bongodas** and **Bonjues,** and he was probably a native of Avignon, where lived many other members of the Nathan family. Judah, like all the other members of his family, added to his father's name the formula "of the race of Ben Jesse," which is probably an allusion to the house of David, from which several Provençal families claimed to be descended.

Nathan devoted himself chiefly to the translation of scientific works from the Arabic into Hebrew. His translations, which are still extant in manuscript, were: "Kelal Ḳazer meha-Sammim ha-Nifradim," a medical work of Ibn Abi Salt Umayya ben 'Abd al-'Aziz of Denia (Steinschneider, who is the possessor of the manuscript containing this translation, reproduced the preface of the author and that of the translator, with a short description of the work, in the "Isr. Letterbode" [viii. 189 *et seq.*]; in his preface Nathan says that he began the translation of this work in his youth at the request of his master R. Kalonymus); "Kawwenot ha-Filosofim," a treatise on philosophy by Ghazali (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2219, 8); "Marashut ha-Rosh," a medical work of Ibn Wafid (*ib.* No. 2129); "Ha-Dibbur be-Yenot," an abbreviated translation of the treatise "De Vinis" of Arnaud of Villeneuve (Paris MS. No. 1128, 5); a treatise on fevers, compiled from Bernard de Gordon and Gilbert (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2135, 10). Nathan was also the author of an original work entitled "Iggeret" (Letter), defending the study of philosophy against the attacks of the Orthodox (Vatican MS. No. 296).

J. I. BR.

NATHAN B. LABI (B. JUDAH): German liturgist; lived at the beginning of the fourteenth century. He was the author of a liturgical work entitled "Sefer Maḥkim," and sometimes quoted as "Sefer ha-Minhagim." Though it was not published, the book was often used by other writers on the liturgy. Two copies of the manuscript are extant, one in Vienna and one in Hamburg.

D. S. O.

NATHAN BEN MACHIR or **HA-MAKIRI (R. Nathan of Mayence):** French Talumdist of the eleventh century. He was the brother of the liturgical poet Menahem b. Machir, to whom he gave responsa on halakic questions ("Shibbole ha-Leḳeṭ," § 290), and a cousin of R. Isaac b. Judah. He was the pupil of Rashi, who held him in great esteem on account of his great learning in Biblical as well as in Talmudic subjects and also for his liturgical compositions ("Teshubot Rashi," in "Ḥefes Maṭmonim," 1845). He was the compiler of "Ha-Orah," containing Rashi's decisions, and the author of portions of the "Ha-Pardes." He also commentated some liturgical poems as well as some prayers; and there is extant by him an Aramaic "Reshuth," an acrostic with his name, dealing with the Talmudic legend in Jonathan's Targum of the Prophets.

E. C. A. S. W.

NATHAN, SIR MATTHEW: English soldier and administrator; born in London Jan. 3, 1862; son of Jonah Nathan. He joined the Royal Engineers on May 19, 1880, from the Royal Military Academy, Woolwich, where he received the Pollock medal as the most distinguished cadet of his term, and the sword for exemplary conduct. He was promoted captain in the engineers on May 19, 1886, and major on Oct. 22, 1898. He served in Sierra Leone (1883–84) in connection with its fortification as an imperial coaling-station, and again as commanding the Royal Engineers in 1885–86 and 1886–1887; likewise in Egypt in 1884–85 (Nile expedition), in India in 1887–91, and in the Lushai expedition of 1889, for which he received a medal with clasp. He acted as secretary to the Colonial Defense Committee from May 11, 1895, and was created a companion of the Order of St. Michael and St. George (Jan. 2, 1899) for services in this capacity. In March, 1899, Major Nathan was appointed by Queen Victoria to administer temporarily the government of Sierra Leone. In Oct., 1900, he was appointed by the queen, governor of the Gold Coast in succession to Sir F. M. Hodgson. This was the first appointment of a Jew to a distant English colonial governorship. He was appointed governor of Hongkong in 1904.

Major Nathan has been a member of the council and of the executive and building committees of the Anglo-Jewish Association.

One of Nathan's brothers is **Major F. L. Nathan,** R.A., who was appointed in 1900 superintendent of the Royal Gunpowder Factory, Waltham Abbey. Another brother, **Sir Nathaniel Nathan,** is a colonial judge at Trinidad, West Indies. He was knighted in 1903.

J. G. L.

NATHAN BEN MEÏR OF TRINQUETAILLE: French Talmudist and Biblical commentator; flourished in the twelfth and thirteenth centuries. He was the paternal grandfather of Estori ha-Parḥi and teacher of Naḥmanides and of Samuel ha-Sardi, author of "Sefer ha-Terumot." He was also in literary connection with Abraham ibn Daud (RABaD), and is quoted as a Talmudic authority by Menahem Me'iri (Beẓah 25a), who was his descendant. Nathan is quoted by his grandson as the author of a commentary on the Pentateuch, and by Naḥmanides as the author of "Sha'are Tefisah," a work on illegal seizures, which is supposed by Gross to be a part of a larger work, divided into chapters ("she'arim").

BIBLIOGRAPHY: Gross, in *Monatsschrift*, xxvii. 379–381; idem, *Gallia Judaica*, p. 247; Renan-Neubauer, *Les Rabbins Français*, pp. 516, 542.

H. R. M. SEL.

NATHAN MORDECAI: French physician; lived at Avignon in the middle of the fifteenth century. He was in correspondence with Joseph Colon, who speaks highly of Nathan's medical knowledge and who gives him the title of "mori," an expression which, according to some authorities, signifies "master," but is considered by others to be merely an epithet of respect. During the period 1450–56 he caused a complete copy of the Talmudic work "Bet ha-Beḥirah" of Menahem Me'iri to be made and added to it marginal notes. Nathan is undoubtedly identical with the mathematician R. Mordecai Nadi (Wolf, "Bibl. Hebr." iv. 904), with the astronomer Mordecai Nathan, called the "great luminary," and with Maestro Mordecai Todros of Avignon, for whom Nathanael ben Nehemiah Caspi de La Argentière copied in 1454 at Arles the works of Alfasi and other Talmudic writers. In 1470 Nathan had a copy of Moses Solomon's translation of Averroes' commentary on the "Metaphysics" of Aristotle made by Crescas Vidal Cayl (Turin MS. No. xiv.; "Cat. Peyron," 21). Nathan Mordecai has sometimes been confounded with Isaac Nathan, author of the celebrated concordance. See COLON, JOSEPH B. SOLOMON.

S. S. K.

NATHAN (NATA) BEN MOSES. See HANNOVER, NATHAN (NATA) BEN MOSES.

NATHAN, MOSES B. SOLOMON B. NATHANAEL: Provençal liturgist; his period and birthplace are unknown. He was the author of a didactic poem entitled "Ṭoẓe'ot Ḥayyim"; it comprises fifty-eight sections and was edited in Menahem di Lonzano's "Shete Yadot" (Venice, 1618). A part of it is reproduced in Dukes's "Rabbinische Blumenlese" (p. 271, Leipsic, 1844). He is supposed to be the author of the popular Sabbath hymn "Ahabah be-Ta'anugim," found in most prayer-books.

D. S. O.

NATHAN NATA OF SHKLOV. See NOTKIN, NATHAN.

NATHAN BEN SAMUEL: Spanish physician; flourished, as far as is known, at the beginning of the fourteenth century. He is designated in some manuscripts by the abbreviation נ׳ב׳ש׳ת, which some render "Nathan ben Samuel Tibbon," and others, more correctly perhaps, "May his soul rest in the shadow of the Most High" ("Nafsho be-ẓel Shaddai titlonen"). He left a commentary on the Pentateuch, entitled "Zikkaron Ṭob," which he wrote about 1307, and of which an abridged version is extant under the title "Mibḥar ha-Ma'amarim" (Leghorn, 1840). Nathan ben Samuel must not be confounded with his namesake Nathan the physician, who lived at Montpellier toward the close of the thirteenth century, and whom Steinschneider ("Hebr. Bibl." xvii. 61, xx. 17) identifies with the physician Nathan ben Joel Falaquera, author of "Ẓori ha-Guf."

E. C. S. K.

NATHAN, WOLF BEN ABRAHAM: German Biblical exegete and theologian; born at Dessau July 8, 1751; died there Sept. 6, 1784. He wrote a commentary on the Book of Job entitled "Pesher Dabar" (Berlin, 1777), which was highly praised and recommended for its clearness and lucidity by Moses Mendelssohn and Naphtali H. Wessely. But his "Grundsätze der Jüdischen Religion, aus den Heiligen Büchern, dem Talmud und den Vorzüglichsten Rabbinen" (Dessau, 1782), a reader for the young, in which he presented the divergent opinions of the Rabbis, drew upon him the anger of his coreligionists, the direct cause being his "complaints against the Jewish nation" in the preface. He therefore changed and reprinted the "unfortunate preface;" as Mendelssohn termed it, and made a formal apology. The German pedagogues Basedow and Salzmann warmly defended him, but Mendelssohn, who could do nothing for him, admonished him not to let his "praiseworthy zeal for a good cause degenerate into quarrelsomeness."

BIBLIOGRAPHY: *Ha-Measset*, 1785, pp. 43 *et seq.*: M. Mendelssohn, *Gesammelte Schriften*, v. 602 *et seq.*; Roest, *Cat. Rosenthal. Bibl.* p. 210; Supplement, p. 489.

S. M. K.

NATHAN DE-ẒUẒITA, THE EXILARCH: According to Joseph b. Ḥama (Shab. 56b), Nathan de-Ẓuẓita is to be identified with the exilarch 'Uḳban b. Nehemiah, Joseph's contemporary (first half of the 4th cent.), who was a contrite sinner. The Seder 'Olam Zuṭa, too, in the list of the exilarchs (recension A, Neubauer, "M. J. C." ii. 71), mentions an exilarch called "Nathan 'Uḳban" (Nathan de-Ẓuẓita). Rashi (*ad loc.*) gives two explanations for the surname "Ẓuẓita," which means literally either "sparks" or "hair" (comp. Ezek. viii. 3). Rashi explains that in touching the angel who received his repentance Nathan 'Uḳban either emitted sparks, or the angel took him by the hair. In Sanh. 31b Rashi explains the nature of Nathan's sin and says that after Nathan's repentance a radiance was seen about his head: hence the name "de-Ẓuẓita." According to the geonim Ẓemaḥ and Saadia, Nathan 'Uḳban, when he was young, was wont to curl his hair, his surname "de-Ẓuẓita" being derived from that habit. Another interpretation is that fire would flash out from his ẓiẓit, so that nobody could stand near him.

As to the nature of Nathan 'Uḳban's sins and repentance see Rashi to Sanh. *l.c.* R. Aḥai of Shabḥa, in his "She'eltot" (sections "Wa'era" and "Ki Tissa"), tells almost the same story as Rashi, of a man who was called "Nathan de-Ẓuẓita," but without mentioning either that he was likewise called "'Uḳban" or that he was an exilarch. Further, this story is related by Nissim b. Jacob in his "Ma'aseh Nissim," at great length, Nathan being placed in the time of Akiba—that is, not later than the first third of the second century.

It may therefore be assumed either that there were two Nathan de-Ẓuẓitas, the second being identical with the exilarch 'Uḳban b. Nehemiah, or that Joseph b. Ḥama (*l.c.*) must be understood as comparing 'Uḳban, in his repentance, to Nathan de-Ẓuẓita, who was much earlier and, perhaps, was not an exilarch. It is true that in the Seder 'Olam Zuṭa (*l.c.*) it is clearly affirmed that Nathan I. was called also "'Uḳban"; but in other details the three recensions of that work disagree with Joseph ben Hama, in that they leave it to be supposed that Nathan de-Ẓuẓita was the son of Anan and not of Nehemiah, and that they represent him as the father of Huna, the exilarch, who lived in the time of Judah ha-Nasi I. The Seder 'Olam Zuṭa has in its list three exilarchs called "Nathan," the second being the grandson of the first, and the third the son of Abba b. Huna and father of Mar Zuṭra; it is the chronology of Nathan III. that coincides with that of 'Uḳban of Shab. 56b. It may be added that Rashi (to Sanh. *l.c.*) confuses Nathan de-Ẓuẓita 'Uḳban with Mar 'Uḳba, "ab bet din" in the time of Samuel, which time coincides with that of Nathan II. Lazarus (in the list of exilarchs in Brüll's "Jahrb." vol. x.) supposes that Nathan I. reigned from about 260 to about 270, and Nathan II. from 370 to about 400. See EXILARCH.

W. B. M. SEL.

NATHANAEL OF CHINON: French tosafist; flourished about 1220. He was a disciple of Isaac ben Samuel of Dampierre. After 1224 Nathanael was director of the yeshibah in Chinon and was in correspondence with the most famous and learned of his contemporaries, including Samuel ben Sheneor of Evreux, Isaac of Evreux (author of "Sha'are Dura"), Jehiel of Paris, and Isaac ben Todros. The last, in answer to Nathanael of Chinon's request for his opinion concerning a question at issue between himself and Jehiel, wrote that he dared not speak in the presence of the "pillars of the world." Nathanael wrote tosafot to the treatises Beẓah, Ḥullin, Berakot, and 'Erubin. In one of the tosafot he is referred to as "our rabbi Nathanael" (Ta'an. 3b; Ḳid. 4a, b; "Shiṭṭah Mekubbeẓet" on Nazir 46b, 53a, 56a, Dubno, 1800). Some of his ritual decisions also have been preserved.

NATHANAEL B. NEHEMIAH CASPI. See CASPI, NATHANAEL BEN NEHEMIAH.

NATHANSON, BERNHARD: Russian-Hebrew journalist and author; born at Satanow, Podolia, April 15, 1832. He received his early Hebrew education under J. Z. Polichinetzki, author of "Ḳero Miḳra," and then under the supervision of his own father. After the death of the latter in 1853, Nathanson went to Odessa, where he devoted himself to both sacred and secular studies. There he cooperated with Jacob Israel Levinsohn, the nephew of Isaac Baer Levinsohn, in copying and revising the latter's manuscripts. Nathanson was occupied for three years on Israel Baer Levinsohn's "Aḥiyyah ha-Shiloni ha-Ḥozeh" and "Zerubbabel." In 1875 Nathanson went to Warsaw in connection with the publication of the complete works of Levinsohn. Nathanson's first article, "Le-Torah weli-Te'udah," was published in "Ha-Maggid" in 1864. The more important among his articles, contributed chiefly to "Ha-Meliẓ," are: "Tekunat Sefat 'Ibrit we-Hargashoteha" (1868); "Kerobaz" (1869); "'Al ha-Ẓaddiḳim we-'al ha-Ḥasidim" (1869); "Lefanim weha-Yom" (1870); "Zikronot le-Ḳorot Odessa" (1870). Nathanson wrote also: "Ma'areket Sifre Ḳodesh," Biblical onomasticon (Odessa, 1871); "Sefer ha-Zikronot," biography of Isaac Baer Levinsohn (Warsaw, 1875); "Sefer ha-Millim," lexicon of foreign words and technical terms found in the Talmud and midrashic literature (*ib.* 1880).

BIBLIOGRAPHY: *Sefer Zikkaron*, p. 73, Warsaw, 1889; Lippe, *Asaf ha-Mazkir*, i. 343, Vienna, 1881; Zeitlin, *Bibl. Hebr.* p. 249.

H. R. A. S. W.

NATHANSON, JACOB: Polish professor of chemistry; born at Warsaw 1832; died there Sept. 14, 1884; educated at the University of Dorpat. In 1862 he was appointed professor of chemistry at the academy Szkola Glawna at Warsaw, where he remained until it was closed, seven years later. Nathanson established several industrial schools and charitable societies and bequeathed 30,000 rubles as an endowment for the benefit of authors. He was the author of a number of works in Polish on chemistry.

NATHANSON, JOSEPH SAUL: Polish rabbi and author; born at Berzan 1808; died at Lemberg March 4, 1875; son of Aryeh Lebush Nathanson, rabbi at Berzan and author of "Bet El." He pursued his Talmudic studies at Lemberg in company with his brother-in-law R. Mordecai Zeeb Ettinger, in cooperation with whom Nathanson published: "Mefareshe ha-Yam" (Lemberg, 1828), notes by Joshua Heschel on the "Yam ha-Talmud," to which they appended their own responsa; "Me'irat 'Enayim" (Wilna, 1839), on the ritual examination of the lungs; "Magen Gibborim" (Lemberg, part i., 1832; part ii., 1837), on Shulḥan 'Aruk, Oraḥ Ḥayyim; "Ner Ma'arabi," on the Jerusalem Talmud. In 1857 Nathanson was elected rabbi of Lemberg, where he officiated for eighteen years. Nathanson was widely recognized as a rabbinical authority. He wrote also: "Yad Yosef" and "Yad Sha'ul," on the Shulḥan 'Aruk, Yoreh De'ah (Lemberg, 1851); "Haggahot ha-Shass," critical notes on the Talmud, printed in the Slavuta (1824-30) edition of the Talmud; "Ma'ase Alfas," commentary on Alfasi, printed in the Presburg (1836-40) edition of the latter; "Sho'el u-Meshib," responsa (Lemberg, 1865-79); "Dibre Sha'ul we-Yosif Da'at," responsa (*ib.* 1879).

H. R. A. S. W.

NATHANSON, MARCUS: Russian scholar; born at Wilna 1793; died at Telsh, government of Kovno, June 10, 1868. He was the son-in-law of Joshua Zeitels. Nathanson devoted himself to the study of ancient Hebrew literature, publishing the following works: "Ḳontres Ayyelet ha-Shaḥar," critical notes on certain chapters of the Midrash Tehillim (printed in "Pirḳe Ẓafon," ii. 165-180); "Miktab 'al Debar Shemot Anashim," on Jewish proper names (*ib.* pp. 181-186); and a study on the Karaites (in "Debir," Wilna, 1864).

H. R. A. S. W.

NATHANSON, MENDEL LEVIN: Danish merchant, editor, and economist; born in Altona Nov. 20, 1780; died in Copenhagen Oct. 6, 1868. When only eighteen years of age Nathanson established himself in business, and in 1806 became associated with the large Copenhagen banking firm of Meyer & Trier. When this firm failed in 1831, Nathanson devoted himself to economic questions. His first publication, entitled "Forerindring," appeared in 1813, and gave a short résumé of the preceding twenty-five years of Danish mercantile history. This drew public attention to the author, who for several years thereafter wrote the explanatory introductions to the official statistical tables. His most notable work is "Danmark's Handel, Skibsfart, Penge- og Finans-Væsen fra 1730 til 1830" (3 vols., Copenhagen, 1832–34), which he later enlarged and published under the title "Historisk-Statistisk Fremstilling af Danmark's National- og Stats-Husholdning fra Frederik IV.'s Tid til Nutiden" (*ib.* 1836, 2d ed. 1844).

Nathanson, however, is best known for his advocacy of the Jewish cause. He realized that in order to advance his coreligionists' claim to civic rights and liberties he must first help them to acquire a liberal education. With this end in view he founded (1805) the first parochial school for Jewish boys in Copenhagen (Den Mosaiske Friskole for Drenge) and (1810) a similar school for girls (Caroline-Skolen). Often, when these schools were in pecuniary difficulties, Nathanson supported them from his own purse. When the Jews of Denmark, by the royal decree of March 29, 1814, received full civic rights, it was due to a great extent to Nathanson's indefatigable efforts in their behalf (see COPENHAGEN; DENMARK).

Nathanson was editor of the "Berlingske Tidende" from 1838 to 1858 and from 1865 to 1866. A brief residence in England had developed in him a strong love for constitutional monarchy, and as the editor of the official organ of the Conservative party he fought a sharp polemical warfare against the National Liberals, who often made him the target for wit which not infrequently was poisoned with malice. His clever management of the paper, however, won him the stanch support of his party, and under him the "Berlingske Tidende" rapidly grew in importance.

Nathanson was loyal to his faith and retained to the last a lively interest in the Jewish cause, though all his children had, with his sanction, embraced Christianity.

NATIONAL FARM SCHOOL: American institution having for its object the training of Jewish lads in practical and scientific agriculture; situated at Farm School, Doylestown, Bucks County, Pa. The founding of the school was proposed in 1894 by the Rev. Dr. Joseph Krauskopf, after his return from a visit to the towns within the Pale of Settlement in Russia.

By means of lectures Dr. Krauskopf succeeded in raising funds for the purchase (1895) of the present site of the school. In the following year the main building was erected, which, with the grounds, was consecrated to its purpose in 1897; toward the close of that year the school was opened with a class of eight pupils. Since that time the number of buildings has increased to ten, and the general equipment and stock have kept pace with the development of the school. The institution has graduated twenty-two pupils, nearly all of whom are creditably following their chosen vocation, four of them being in the employ of the United States Department of Agriculture.

At the present time (1904) the National Farm School has forty-five pupils, the number of admissions being limited by the dormitory capacity. The course of instruction covers four years and is designed to give a thorough training in practical and scientific agriculture. The subjects of instruction in class-room, supplemented by field-work, are as follows: improved methods employed in the various operations of farming, use of farm machinery, treatment of soils, value of fertilizers, management of crops, feeding of and caring for stock, dairy operations (including butter- and cheese-making), poultry-keeping, breeding, diseases of plants and animals, insects in their relation to crops, gardens, and fruit-trees, greenhouse- and nursery-work, truck-gardening, fruit-growing, and landscape-gardening.

The plant, including the two adjoining **Flora Schoenfeld Memorial** farms, covers 125 acres, making it possible to carry on diversified farming. It contains also several acres of timber-land, affording three fine groves. Its dairy building is equipped with modern machinery, and is provided with model barns for cattle. The school is national; any well-recommended lad, from any part of the United States, capable of hard outdoor work and of faithful indoor study, and possessing the other necessary qualifications, is acceptable. Tuition is free.

The school is under the management of a board of trustees, and in charge of an agricultural faculty, of which John H. Washburn, Ph.D. (Göttingen), is the head. It is supported by subscription and by subvention from the state of Pennsylvania and the Federation of Jewish Charities of Philadelphia.

NATIONS AND LANGUAGES, THE SEVENTY: The haggadic assumption that there are seventy nations and languages in the world is based upon the ethnological table given in Gen. x., where seventy grandsons of Noah are enumerated, each of whom became the ancestor of a nation. The earlier Christian writers also took this table as determining the number of existing nations and languages; but reckoning with the Septuagint, which counts seventy-two grandsons of Noah, there must be seventy-two nations and languages (see Augustine, "De Civitate Dei"; Anio, in his commentary on the second book of Berosus; comp. Azariah dei Rossi, "Me'or 'Enayim, Imre Binah," xlviii.). The Haggadah seems to have followed in this case the theory of the Hellenists, who regarded the ethnological table as a scientific and complete division of mankind into three races, distributed among three separate zones. This theory is expounded in the Book of Jubilees; "and at the beginning of the thirty-third jubilee they divided the earth into three parts between Shem, Ham, and Japheth, according to their inheritance" (ch. viii.).

In the Book of Jubilees.

The majority of Palestinian and Babylonian scholars considered the ethnological table to be a simple historical narrative, enumerating, without any pretense to completeness, the descendants of Noah, and indicating the places they had chosen for their respective residences. This is clearly expressed by R. Huna of Sepphoris, who, interpreting Canticles vi. 8 as an allusion to the nations and their languages, says: "Sixty and eighty are one hundred and forty. Of these, there are seventy nations, each of which possesses a separate language but not a separate script, and seventy other nations, each of which possesses both a separate language and a separate script; as to the nations which possess neither a separate language nor a separate script, they are numberless" (Cant. R. *l.c.*). In a later midrash, the "Midrash ha-Gadol," it is inferred from Cant. vi. 8 that there were only sixty original nations, eliminating from the ethnological table the ten nations descended from Japheth, Gomer, Javan, Ham, Cush, Raamah, Shem, Mizraim, Aram, and Joktan. As to the languages, the "Midrash ha-Gadol" counts seventy-two, as do the Christian authorities. "The total number of the countries that the children of Noah divided among their descendants was 104; of islands, 99; of languages, 72; and of scripts, 16. To the share of Japheth fell 44 countries, 33 islands, 22 languages, and 5 scripts; Ham received 34 countries, 33 islands, 24 languages, and 5 scripts; Shem, 26 countries, 33 islands, 26 languages, and 6 scripts."

Attempts were made by the Rabbis to identify those nations which were not known to the average reader. The Targumim to Gen. x. and I Chron. i., both the Palestinian and the Babylonian Talmuds, and various midrashim, interpret many of the names of the Biblical nations in the light of their geographical and ethnological knowledge. The following is a list of the rabbinical identifications according to Samuel Krauss, the second column giving the countries or places with which the various "nations" are associated:

The Sons of Japheth.

Biblical.	*Rabbinical.*
Gomer.	Carthagena (אפריקא; according to some sources, Gothia).
Magog.	Germania.
Madai.	Media.
Javan.	Macedonia (according to some sources, Ephesus).
Tubal.	Bithynia.
Meshech.	Mysia.
Tiras.	Thracia.

The Sons of Gomer.

Ashkenaz.	Asia (preconsularis).
Riphath.	Adiabene.
Togarmah.	Germanicia (city in the province of Commagene).

The Sons of Javan.

Elishah.	Æolis (in Asia Minor).
Tarshish.	Tarsus (city in Asia Minor).
Kittim.	Italy (southern; according to some sources, Hellas).
Dodanim.	Dardania (a district in the southwestern part of Mœsia).

The Sons of Ham.

Cush.	Arabia.
Mizraim.	Egypt.
Phut.	Marmarica (between Egypt and Cyrenaica).
Canaan.	Canaan.

The Sons of Cush and Raamah.

Seba.	Syene (the frontier town of Egypt to the south).
Havilah.	India (in Africa, south of Egypt).
Sabtah.	Lembritæ (to the south of Meroë).
Raamah.	Libya (between Egypt and Ethiopia).
Sabtecah.	Region on the eastern coast of Africa.
Sheba.	Mons Samaragdus (along the Red Sea).
Dedan.	Mazaces (in Mauritania).

Nimrod's Kingdom and His Foundations.

Erech.	Warka (on the left bank of the Euphrates; according to some sources, Charon in Media).
Accad.	Cascara (on the Tigris; according to some sources, Nisibin).
Calneh.	Nippur (unidentified by the Midrash; according to some sources, Ctesiphon).
Rehobot.	Probably a suburb of Nineveh.
Calah.	Edessa.
Resen.	Ctesiphon.

The Sons of Mizraim.

Ludim.	Nomos Neut.
Anamim.	Mareotæ.
Lehabim.	Nomos in North Egypt.
Naphtuhim.	Pentascoimen.
Pathrusim.	Unidentified.
Casluhim.	Pentapolis (Cyrenaica).
Caphtorim.	Cappadocia.

Identifications.

The sons of Shem were not identified by the Rabbis because they were known, and of the Canaanite nations only the following places are given: Arthasia (city in Phenicia); Gebalene (in Idumea); Acra (in the Lebanon); Aradno (in Phenicia); Emesa (in Syria); Epiphania (in Syria); Callirhoe (to the east of the Dead Sea); Sidon; Tripoli (Phenicia); Cyprus.

According to the Rabbis, each of the seventy nations is placed under the protection of a special angel, except Israel, whose protector is God Himself (Gen. R. xxxvii.). On the Feast of Tabernacles, it is said in a haggadah, seventy sacrifices were offered, one for each nation. "Wo to the nations!" says R. Johanan; "they had suffered a great loss without realizing what they had lost. While the Temple existed the altar [the sacrifices] atoned for them; but now who will atone for them?" (Suk. 55a; Pesiḳ. 193b, 195b). There was a discussion between R. Eleazar and R. Johanan with regard to the languages spoken before the Dispersion. According to the former, each nation had its own language, though it understood all the others; while the latter held that only Hebrew was spoken (Gen. R. xi. 1).

An interesting appreciation of the qualities of various languages is that given by Jonathan of Bet Gubrin. "There are," he says, "four fine languages that ought to be used by the whole world: Greek for poetry; Latin for war; Aramaic for the dirge; and Hebrew for general speech." Some add that the characters of the Assyrian language should be borrowed, but not the language itself, which is not an original one (Yer. Meg. i. 71a). According to a haggadah, the angels understand all languages except the Aramaic, and therefore it is recommended not to pray in that language (Shab. 12b). Gabriel, however, is an exception to the rule, for to his teaching the haggadah attributes Joseph's knowledge of all the seventy languages. "The astrologers," it is related in the haggadah, "said to Pharaoh: 'What! Shall a slave who was bought for twenty pieces of silver rule over us?' Pharaoh replied: 'But I find him endowed with kingly attributes!' 'If that is the case,' they answered, 'he must know the seventy languages.' Then Gabriel taught him all the seventy languages" (Soṭah 36b; "Yalḳ. Re'ubeni," section "Miḳḳeẓ," p. 71b).

The word of God was pronounced on Mount Sinai in seventy languages (Shab. 88a; Ex. R. v.; comp. Acts ii. 5). The Torah was written in seventy languages in order that the nations should not be able to plead ignorance as their excuse for rejecting it (Tosef., Soṭah, viii.). Among the seventy languages the most noble is Hebrew, for in it was pronounced the creative word of God (Gen. R. xviii., xxxi.; Yalḳ., Gen. 52). The Jewish law required that every member of the Sanhedrin should have sufficient knowledge of the seventy languages to be able to do without an interpreter (Sanh. 17a; comp. Meg. 73b; Men. 65a).

Modern Views.

The ethnological table has become in modern times the object of much speculation, and various identifications have been offered. The works dealing with this subject are given in the bibliography. Without attaching any special significance to the number "seventy" (or "seventy-two"), which is often used in the Bible and in the Haggadah in an esoteric sense, as shown by Steinschneider ("Z. D. M. G." iv. 145 *et seq.*, lvii. 474 *et seq.*), most scholars regard the table as the first historical, though an imperfect, ethnological statement of the divisions of mankind at the time of Moses. According to Joseph Halévy it was intended by its author to serve a religious and moral purpose, for otherwise the neglect of the most important nations of Asia Minor—as the Lydians, the Phrygians, the Lycians—and of the Semitic nations—as the Kenites and the Horites—which are mentioned in Biblical history, would be inexplicable. The purpose is, in Halévy's opinion, clearly indicated in the preceding chapter, to which the table is a natural sequence. There the author shows how Shem and Japheth acted together to put an end to the shameless conduct of their brother Ham. They both received the blessing of their father, who expressed a desire that they should always be united against Canaan, the descendant of Ham. It was to bring about the accomplishment of Noah's desire that the author composed the table and arranged it in such a fashion as to show the encroachments made by Canaan upon the patrimony of the Semites, thereby warning the Japhethites that, unless they united with the Semites, they would certainly suffer at the hands of Ham's descendants, whose numbers were far greater than theirs.

K. I. BR.

NAṬRONAI II., B. HILAI: Gaon of the academy at Sura early in the second half of the ninth century; he succeeded Sar Shalom. His father had occupied the position about thirty years before. Although Naṭronai was of advanced age when he entered on the office, and although his official term embraced less than a decade, an unusually large number of responsa were issued by him. Questions were addressed to him from all parts of the Diaspora; and his answers, about 300 of which have been preserved in various compilations (*e.g.*, in "Sha'are Ẓedeḳ," "Teshubot ha-Ge'onim," and "Ḳebuẓat ha-Ḥakamim"), show his thorough mastery of the subjects treated as well as his ability to impart knowledge. He always employed the language with which his correspondents were most conversant. With equal ability he handled the Aramaic dialect of his predecessors and the Neo-Hebraic; and he is said to have been the first of the Geonim to use the Arabic language for scholastic correspondence.

Violently opposing the Karaites, Naṭronai endeavored to enforce the observance of every rabbinic provision emanating from or as explained by either of the two great Babylonian academies; and as the Karaites rejected the ritualistic forms of these schools, he made strenuous efforts to establish uniformity among the Rabbinites. Hence the origin of many a ritualistic formula is traced to him ("Siddur R. Amram," *passim*; see also Zunz, "Ritus," p. 220).

Naṭronai was also credited with a mastery of transcendentalism. It was said that by this means he caused himself to be mysteriously transported to France, where he instructed the people, and then was as mysteriously transported back to Babylonia. The gaon Hai, however, denied this, suggesting that some adventurer may have impersonated Naṭronai and imposed on the Jews of France ("Ṭa'am Zeḳenim," ed. Frankfort-on-the-Main, 1854, pp. 55a, 56a *et seq.*; comp. Harkavy, "Zikkaron la-Rishonim we-gam la-Aḥaronim," iv., p. xxiii.).

W. B. S. M.

NAṬRONAI B. NEHEMIAH (MAR YANḲA): Gaon of Pumbedita from 719 to 730; son-in-law of the exilarch Ḥasdai I. Vain of his family connections and secure in his position, he was so arrogant in his dealings with the students that many of them left the academy, returning only after his death (Letter of Sherira Gaon). Two responsa are ascribed to him, both relating to the return of Jews who had left their community to follow heretical leaders ("Sha'are Ẓedeḳ," iii. 7, 10). In one of these responsa Naṭronai decides that the followers of the pseudo-Messiah Serenus should again be received into their community; in the other he decides against the reception of the children of certain heretic Jews who had renounced both the Talmudic and the Biblical Judaism. Weiss, however, ascribes these two responsa to Naṭronai b. Hilai. A number of responsa in the compilation "Sha'are Ẓedeḳ" and elsewhere (comp. Mussafia, "Teshubot ha-Ge'onim," Nos. 23, 52, 63, 83-87, 90, Lyck, 1864) bear the name of Naṭronai, but it is difficult to decide whether they are the work of Naṭronai b. Nehemiah or of some other Naṭronai.

NATURAL HISTORY IN THE BIBLE. See ANIMALS OF THE BIBLE; BOTANY; METALS.

NAUMBOURG, SAMUEL: French composer; born at Dennenlohe, Bavaria, March 15, 1817; died at Saint-Mandé, near Paris, May 1, 1880. After having held the office of ḥazzan and reader at Besançon and directed the choir of the synagogue at Strasburg, he was called, in 1845, to officiate in the synagogue of the Rue Notre-Dame de Nazareth at Paris, where he became professor of liturgical music at the Séminaire Israélite. Shortly before his death he was elected Officier d'Académie. The more important of his compositions are: "Chants Liturgicals des Grandes Fêtes" (Paris, 1847); "Zemirot Yisrael," comprising psalms, hymns, and the complete liturgy, from the most remote times to the present day (*ib.* 1864); "Shire Ḳodesh," new collection of religious songs for use in Jewish worship (*ib.* 1864); "Aguddat Shirim," collection of religious and popular Hebrew songs, from the most ancient times to the present day (*ib.* 1874); "Shir ha-Shirim Asher li-Shelomoh" (*ib.* 1877), with an essay on the life and works of Solomon de Rossi. The last-mentioned work is dedicated to Baron Edmond de Rothschild, who discovered a portion of the songs of De Rossi and who encouraged Naumbourg in his efforts to revive the musical productions of the old master.

NAUMBURG, JACOB: Rabbi of Mayence and Offenbach at the end of the eighteenth century. He was the grandson of Jonah Te'omim, the author of "Ḳiḳayon de-Yonah." Naumburg wrote: "Naḥalat Ya'aḳob," commentary on the smaller tractates (Fürth, 1793); "Ḥiddushim 'al ha-Torah," notes on the Pentateuch; "Ḥiddushim 'al ha-Midrash," notes on the Midrash; and "Derushim," sermons preached in Mayence and Offenbach between 1770 and 1781; the last three works are in manuscript.

D. A. S. W.

NAUMBURG, LOUIS: Cantor; born in Treuchtlingen, Bavaria, 1813; died in New York city March 4, 1902. He was descended from a family of cantors, traceable in an unbroken line as far back as 1612, every generation having had at least one member devoted to the profession. Naumburg went to America after 1848, and was elected cantor of Reform Congregation Keneseth Israel at Philadelphia, Pa., which position he held from 1850 to 1860. In 1865 he was chosen minister of Congregation Rodeph Shalom, Pittsburg, Pa., in which city he lived until within a few years of his death.

During his earlier years in America Naumburg acted as teacher and reader in the synagogue of the Congregation Keneseth Israel of Philadelphia. He prepared a metrical version in German of the Book of Proverbs.

NAVARRA, ABRAM: Rabbi at Casale (Casale-Monferrato) in 1650. Responsa by him are found, in manuscript, in the collections of David Kaufmann of Budapest and of the Jews' College at London (Mortara, "Indice," p. 43).

G. I. E.

NAVARRE: Former kingdom in Spain, surrounded by Aragon, Castile, and the Basque Provinces; now comprised in the provinces of Navarre (Spain) and Basses-Pyrénées (France). Sometimes independent, and at other times under French suzerainty, it finally became divided into a Spanish and a French province. It is known to have had a Jewish community before the end of the tenth century, and it may have had one still earlier. To repeople the depopulated cities after the expulsion of the Saracens, D. Sancho el Mayor, the first king of Navarre, endeavored to attract the Jews to his domains. They settled in the seaport towns of Pamplona, Estella, Olite, Tafalla, Viana, Funes, and Cortes, but principally in Tudela. The first kings appointed the Jews as guardians of the fortifications, and granted them special privileges ("fueros"). The reign of D. Alonso Sanchez el Batallador (the Valiant), which lasted almost thirty years, greatly influenced the civic status of the Jews in his dominions. In the "Fuero General" or "Fuero Foral de Navarra," which is attributed to him, they received full civil rights. For the laws governing the Jews see Kayserling, "Gesch. der Juden in Spanien," i. 194 *et seq.*

Under Spanish Rule.

Very unlike this tolerant ruler was his brother and successor, D. Garcia Ramirez el Monge (the Monk), who showed himself most liberal toward the clergy and the nobility at the expense of the Jews. In 1144 he gave the synagogue of Estella to the Church and transferred to the nobility of that town an entire village that had been built, and was then inhabited, by Jews. D. Sancho el Sabio protected the Jews against the animosity of the Navarrese, confirmed them in their former privileges, and granted them additional ones. He enacted that lawsuits between Moors or Christians and Jews were to be decided only by such as professed the faith of the contending parties, and further that Jews were to pay tithes only on property acquired by purchase, and not on inheritances. Upon the death of D. Sancho el Fuerte, who had employed Jews as his financial agents, D. Theobald I. succeeded to the throne (1234). Like the other rulers of the Iberian Peninsula, he was requested by Pope Gregory IX. to force the Jews to wear a BADGE to distinguish them from the Christians, but he declined to accede to the demand. As the protector of the Jews, Theobald endeavored to guard their privileges, and to defend them not only against mob-violence, as in the outbreak at Tudela, but also against oppression by the municipal authorities.

Under French Suzerainty.

With the accession of Theobald II., son-in-law of Louis IX. (the Saint) of France, Navarre was placed under French suzerainty, and the Jews there were reduced to the same position as their French brethren; they were subjected to the same frequent decrees against usury and the same anti-Jewish outbreaks. Theobald II. was succeeded by his brother Henry, who died in 1274, after a brief reign. Civil disturbances then broke out, and those Jews who, as in Pamplona, rashly took part in the factional strife suffered greatly. A French army, which invaded the country to suppress the rebellion, pillaged the houses of the Jews and destroyed the synagogues (1276). Philip the Fair, acting as guardian of the young queen Juana, began his reign by levying a coronation-tax of 20,000 livres on the Jews of Navarre. He also relieved those inhabitants of Murillo, Cabanillas, Araciel, Corella, Buñuel, Ribaforado, Azagra, and San Adrian who owed the Jews money, from paying interest on their debts, which he canceled either in whole or in part.

Pastoureaux Uprising.

The more disturbed and critical the condition of the country became during the reigns of the feeble kings Louis Hutin and Philip the Tall the worse became the position of the Jews. In 1321 occurred the uprising of the Pastoureaux. The rapacious mob attacked the Jews in Tudela and slew many of them. The Navarrese hatred of the Jews, constantly increased by the incendiary speeches of the Franciscan monk Pedro Olligoyen and others, developed into frenzy. Immediately after the death of Charles I., who had reigned five years, the storm against the Jews burst forth throughout the country (1328). Especially horrible was the massacre in Estella (Saturday, March 5 = 23d Adar), where the ghetto was burned and its entire population slain; the Jews were slaughtered also in Tudela, Viana, Falces, Funes, Marcilla (not Moncillo, as Grätz has it), and elsewhere. More than 6,000 lost their lives during these persecutions (see Moret, "Historia de Navarra," iii. 109; Yanguas y Miranda, "Dicc. de Antiguëdades de Navarra," ii. 113; *idem*, "Historia de Navarra," p. 168; Zurita, "Anales de Aragon," ii. 84a; Zacuto, "Yuḥasin," p. 224).

Taxation.

Freed from the French yoke, Navarre received a king of its own in the Count of Evreux, who, with his consort Juana, was crowned March 5, 1329, as Philip III. The new ruler imprisoned the rebellious Franciscan Pedro Olligoyen and imposed fines on the cities of Estella and Viana, which were, however, remitted as an act of grace. On the other hand, he confiscated all property taken from the Jews and in addition imposed a coronation-tax of 15,000 livres upon them, robbed and impoverished as they were. Through the persecutions the Jews were completely separated from the Christians; their rights became more and more restricted, and they were allowed to get their corn ground only at the mills assigned to them. For trivial offenses they were hanged or buried alive. Their condition became still worse under Charles II.; the people shunned them and they were confined to their narrow streets; and the taxes imposed upon them were so high that they could no longer raise the sums demanded. These sums amounted in 1384 to 12,000 livres for the Jews in the little kingdom; they were, moreover, forced to pay subsidies, and to lend money to the impoverished king. Everything they bought or sold, even the clothes they wore, were subject to heavy taxation. To this were added the horrors of war, while pestilence often demanded its sacrifices. It became almost impossible for them to remain in Navarre, and every one emigrated who could. Three hundred of the wealthiest families left Tudela. After 1366 there were scarcely 450 Jewish families in the entire kingdom. To make emigration more difficult for them Moors and Christians were forbidden to purchase real estate from them without the king's special permission. In 1380 the Jews were forced to pay an additional tax of five sueldos per livre on the prime cost of everything sold or mortgaged to Christians during the preceding fifty years.

Under Charles III.

The condition of the Jews was ameliorated under Charles III., the son and successor of Charles II., who died in 1387. Soon after the accession of the new king the Jews presented him with 3,000 livres. In return he granted them several privileges, influenced, doubtless, by the fact that his court physician was Chief Rabbi Joseph Orabuena, whose son Judah was also a member of the royal retinue. During the king's journey to Paris in 1397 he was accompanied by four Jews—two physicians, a surgeon, and an astrologer. The Jewish residents of Navarre were so impoverished that they could no longer pay taxes; hence the king, while continuing a rigid collection from the Jews in Pamplona, who formed the richest community in the country, exempted their coreligionists of Tudela from the obligation to furnish beds, etc., during his stay in that city.

Poverty saved the Jews from the bloody persecution of 1391 as well as from the proselytizing zeal of Vicente Ferrer, but entire families fell victims to the plague in 1401, 1410-11, 1422, 1423, 1434, and 1435. By order of D. Juan de Labrit they were restricted to their ghettos, where their synagogues were situated, and in 1492 the cortes in Tafalla enacted that no Jews, except physicians, should be seen in the streets on Sundays or holidays.

On the proclamation of the edict banishing Jews from the kingdom of Spain the Jews of Aragon turned toward neighboring Navarre. A number of exiles from Saragossa and other towns applied for admission to the magistrate of Tudela, who had at an earlier period granted protection to certain Maranos, but by mutual agreement neither Tudela nor Tafalla would admit them. The Jews found an asylum with the counts of Lerin, in whose capital, of the same name, sixty-six Jewish families lived in 1495 (not 12,000 Jews, as some assert); scarcely 120 Jews entered Navarre, and from that town, also, they were banished in 1498. When this occurred some of the unfortunates emigrated to Provence, but most of them embraced Christianity and remained in the country. In Tudela alone 180 Jewish families were baptized. To these Neo-Christians the Navarrese transferred their hatred, entire districts refusing to tolerate them. They were excluded from public office, and were, even centuries later, objects of undisguised contempt as secret adherents of Judaism.

Occupations.

The Jews of Navarre early engaged in different trades; there were among them tanners, weavers, goldsmiths and silversmiths, shoemakers, and tailors. They devoted themselves chiefly, however, to mercantile pursuits, and through them Pamplona and Estella became important commercial centers, while they made Tudela the most noted slave-market. Jews visited the fairs and markets and furnished the common people as well as the court with all kinds of goods, including corn, furs, silk, and clothing, and also asses and mules. They likewise carried on extensive financial operations, and the most important business house in Navarre in the fourteenth century was that of Ezmel de Ablitas. Jews were preferred as tax-farmers, and, despite their hatred of the Jews, the Navarrese had confidence in Jewish physicians, some of whom were appointed court physicians. In Navarre, as in other Spanish kingdoms, Jews were required to take a special form of oath. The larger communities in the kingdom were the homes and birthplaces of well-known Jewish scholars. See ESTELLA; PAMPLONA; TUDELA.

NAVARRO: Portuguese family, the following members of which became well known:

Judah ben Moses Navarro: Son of Moses Navarro, body-physician of Pedro I. of Portugal; "tesoreiro é almoxarife mór" (treasurer and receiver-general of taxes) of Pedro I. and John I. of Portugal, a post which, after a few years, was taken from him and transferred to Moses Gavirol (Chavirol). In 1375 the king again appointed him receiver-general. D. Judah, who was exceedingly wealthy, made a present to the king of a large estate, enriched with orchards and vineyards, situated in Alvito, Alemtejo. From Jan. 1, 1378, he paid for five years the enormous sum of 200,000 livres yearly for the lease of taxes. In consideration of this he was granted the privilege of proceeding unhindered and with the utmost strictness against all delinquent taxpayers. This right was granted to his agents also, among whom was a relative of his by the name of **Jacob Navarro.**

Bibliography: Mendes dos Remedios, *Os Judeos em Portugal*, p. 163: Rios, *Hist.* ii. 278 *et seq.*

Moses Navarro: Body-physician to King Pedro I. of Portugal and "arrabi mór" (chief rabbi) of the Portuguese communities; died in Lisbon about 1370. By royal permission he assumed the name of his birthplace, which he left in consequence of the persecutions there. D. Moses Navarro, who held the office of receiver-general of taxes, stood high in the favor of the king, which advantage he utilized on several occasions in behalf of his coreligionists. It was probably at his suggestion that many laws concerning the inner relations of the community were modified, as those regarding the reelection of the rabbi and the officers of the congregation. He possessed a large estate in the neighborhood of Lisbon. Moses filled the office of chief rabbi for nearly thirty years.

Bibliography: Mendes dos Remedios, *Os Judeos em Portugal*, p. 157; Kayserling, *Gesch. der Juden in Portugal*, p. 25; Rios, *Hist.* ii. 266 *et seq.*, 271.

Moses Navarro: Son or (according to Rios, "Hist.") grandson of Moses Navarro (see above); Portuguese chief rabbi and "almoxarife," and body-physician of King John I.; died about 1410. Alarmed at the cruel persecution of the Jews in Spain and apprehending that it might spread to Portugal, D. Moses, in 1391, in the name of all Portuguese Jews, submitted to the king in Coimbra a bull of Pope Boniface IX., dated July 2, 1389, and based upon a bull of Pope Clement VI., in which it was most strictly forbidden to baptize a Jew by force, to beat, rob, or kill him, or to desecrate Jewish cemeteries, etc. By an enactment of July 17, 1392, the king not only ordered that this bull should be published throughout the kingdom, but he issued simultaneously a law to the same effect. At the same time D. Moses obtained the king's protection for the Spanish Jews who, in the year of terror 1391, sought refuge in Portugal. The king issued also a further order that both native-born and immigrant Jews should be protected, and prohibited under penalty their arrest. Moses' successor as chief rabbi was Judah Cohen, otherwise unknown.

NAVIGATION.—Biblical Data: That the Israelites, practically, did not engage in navigation is due to the fact that they never held the seacoast for any length of time. According to Judges v. 17, Josh. xix. 26, 28, Gen. xlix. 13, and Deut. xxxiii. 19, the territories of the tribes of Dan, Asher, and Naphtali did indeed touch the sea temporarily, but the time was too short to bring about any fruitful results. Besides, the seacoast of Palestine south of Mount Carmel is remarkably poor in natural harbors. Neither was river navigation in Palestine possible; the Jordan was not suited to it on account of its quick descent and many rapids. Only once is a ferry mentioned in connection with that river, and that was provided for David in order that he might avoid the necessity of fording the Jordan (II Sam. xix. 18). It is a remarkable fact that the Old Testament nowhere mentions ships on Lake Gennesaret. This can not be because navigation was not known there, or was unimportant; it is probably due to the fact that Galilee as a whole played too insignificant a part in Hebrew history to have given much occasion to speak of the conditions existing there. At the time of Jesus the lake must have been alive with fishing-boats.

The only Hebrew seafaring expeditions of which anything is known did not proceed from any Mediterranean harbor on the coast of Palestine, but went out from Ezion-geber and Elath on the Red Sea, and they took place possibly only because the Israelites were allied with the Phenicians, who were a maritime people at that time. Even the rafts of cedar and cypress which were necessary for Solomon's building enterprises were brought from the north along the coast, not by Israelites but by Phenicians, the Israelites transporting them overland (I Kings v. 9). Nor did the Jews engage in navigation in later times, even when they possessed harbors. The Maccabean Simon conquered the seaport town of Joppa (I Macc. xiv. 5), and Herod's extensive building operations in the harbor of Cæsarea are mentioned, but nothing is heard of any seafaring enterprise at that time on the part of Jews. Mention occurs of Jewish piracy in the time of Pompey (Josephus, "Ant." xiv. 3, § 2) and also during the time of the Judæo-Roman war, when the fugitives, who consisted in part of Jews, and who had gathered at Joppa, starting from that point for a short time, made the coasts of Phenicia, Syria, and Egypt unsafe (comp. Josephus, "B. J." iii. 9, § 2). The ships of Tarshish, mentioned in the Bible, concerning whose construction and luxurious equipment Ezek. xxvii. gives an account, were Phenician. See also Ships.

E. G. H. W. N.

——**Post-Biblical:** The Talmud gives evidence of the participation of Jews in navigation in the long list of foreign articles they are mentioned as importing into Palestine and Babylonia, many of which must have come by ships. Many legal points arose in which the purchase of ships is mentioned (B. B. v. 1). The purchase of a ship includes that of its masts, rudder, and ropes (*ib.*). Yet some of the stories told by Rabba bar bar Ḥana show a certain wonder at and unfamiliarity with the sea which precludes any wide acquaintance with seamanship. There seems even to have been current a kind of marine insurance. According to Josephus ("Contra Ap." ii., § 5), the Jews of Alexandria had the most to do with the sea-trade of the Red Sea.

After the spread of Jewish commerce in Moslem and Christian lands following upon the rise of Islam (see Commerce) there is greater evidence of Jewish participation in sea-trade. The Radanites carried on traffic in this way throughout the Mediterranean. Charles the Great once mistook a Norman vessel for a Jewish one, and there seems to have been frequent communication between Jews of Cologne and England by sea ("Recessen der Hansetage, 1256–1430," iii. 295). Jews contributed largely toward the progress of chartography in the Middle Ages (see Chartography), and the discovery of America was largely due to their charts and mathematical instruments. Several Jews accompanied Columbus, Vasco da Gama, and Albuquerque. When James Lancaster went on the first voyage of the East India Company a Jew who knew several languages accompanied him and was of considerable assistance in dealing with the Sultan of Sumatra. In 1521 Jewish pirates attempted to prevent the junction of the Spanish fleet with that of the Venetians. In Hamburg and Amsterdam several Jewish seamen followed their calling. Captain Ribeiro died in the latter place in 1623; and the family Ferro in Hamburg have an anchor for their crest. In both Glückstadt and Emden Jews were known as sailors in the seventeenth century. In the former Paulo Melão built a ship for himself in 1628, much against the will of the local ship-builders. Jews of Altona carried on trade with Greenland in the eighteenth century, and in the fight off the Dogger Bank in the North Sea Captain Almeida distinguished himself on the Dutch side (1785). At the beginning of the nineteenth century the firm of Meyer & Simon had many vessels which carried corn to England, and had branches in Hamburg and New York. One of their ships was named the "Swift Jew." Philip Ree of Hamburg had at one time no less than five ships plying between Amsterdam and Antwerp. Other firms connected with the shipping trade were those of Lyon of Emden and Hollander of Sens.

In more modern times many Jewish firms have been connected with shipping in the colonial trade, while Albert Ballin is the chief promoter of the Hamburg-American transatlantic line, which has almost revolutionized the Atlantic passenger traffic.

NAZARENES: Sect of primitive Christianity; it appears to have embraced all those Christians who had been born Jews and who neither would nor could give up their Jewish mode of life. They were probably the descendants of the Judæo-Christians who had fled to Pella before Titus destroyed Jerusalem; afterward most of them, like the Essenes in former times, with whom they had some characteristics in common, lived in the waste lands around the Dead Sea, and hence remained out of touch with the rest of Christendom.

For a long time they were regarded as irreproachable Christians, Epiphanius ("Hæres." xxix.), who did not know much about them, being the first to class them among heretics. Why they are so classed is not clear, for they are reproached on the whole with nothing more than with Judaizing. As there were many Judaizing Christians at that time, the Nazarenes can not be clearly distinguished from the other sects. The well-known Bible translator Symmachus, for example, is described variously as a Judaizing Christian and as an Ebionite; while his followers, the Symmachians, are called also "Nazarenes" (Ambrosian, "Proem in Ep. ad Gal.," quoted in Hilgenfeld, "Ketzergesch." p. 441). It is especially difficult to distinguish the Nazarenes from the Ebionites. Jerome obtained the Gospel according to the Hebrews (which, at one time regarded as canonical, was later classed among the Apocrypha) directly from the Nazarenes, yet he ascribed it not only to them but also to the Ebionites ("Comm. in Matt." xii. 13). This gospel was written in Aramaic, not in Hebrew, but it was read exclusively by those born as Jews. Jerome quotes also fragments from the Nazarenic exposition of the Prophets (*e.g.*, of Isa. viii. 23 [in the LXX. ix. 1]). These are the only literary remains of the Nazarenes; the remnants of the Gospel according to the Hebrews have recently been collated by Preuschen in "Antilegomena" (pp. 3–8, Giessen, 1901).

Jerome gives some definite information concerning the views of the Nazarenes ("Ep. lxxxix. ad Augustinum").

Jerome's Account.

"What shall I say of the Ebionites who pretend to be Christians? To-day there still exists among the Jews in all the synagogues of the East a heresy which is called that of the Minæans, and which is still condemned by the Pharisees; [its followers] are ordinarily called 'Nazarenes'; they believe that Christ, the son of God, was born of the Virgin Mary, and they hold him to be the one who suffered under Pontius Pilate and ascended to heaven, and in whom we also believe. But while they pretend to be both Jews and Christians, they are neither."

The Nazarenes, then, recognized Jesus, though it appears from occasional references to them that they considered the Mosaic law binding only for those born within Judaism, while the Ebionites considered this law binding for all men (Hippolytus, "Comm. in Jes." i. 12). The Nazarenes therefore rejected Paul, the apostle to the Gentiles. Some accordingly declared even that the Nazarenes were Jews, as, for instance, Theodoret ("Hær. Fab." ii. 2: *οἱ δὲ Ναζωραῖοι Ἰουδαῖοί εἰσι*); that they exalted Jesus as a just man, and that they read the Gospel of Peter; fragments of this Gospel of Peter have been preserved (Preuschen, *l.c.* p. 13). Aside from these references, Theodoret, however, makes the mistake of confounding the Nazarenes and Ebionites; he is the last one of the Church Fathers to refer to the Nazarenes, who probably were absorbed in the course of the fifth century partly by Judaism and partly by Christianity.

The term "Minæans," which Jerome applies to the Nazarenes, recalls the word "min," frequently used in rabbinical literature to designate heretics, chiefly the Christians still following Jewish customs; the Rabbis knew only Judæo-Christians, who were either Ebionites or Nazarenes. Hence they applied the name "Noẓri" to all Christians, this term remaining in Jewish literature down to the present time the designation for Christians. The Church

Fathers, Tertullian, for instance ("Adversus Marcion." iv. 8), knew this very well; and Epiphanius and Jerome say of a certain prayer alleged to be directed against the Christians that although the Jews say "Nazarenes" they mean "Christians" ("J. Q. R." v. 131). In the Koran also the Christians are called "Al-Naṣara." The name may be traced back to Nazareth, Jesus' birthplace. The Mandæans still designate themselves as "Nasoraya"; and they were formerly incorrectly regarded as the remnant of the Nazarenes (W. Brandt, "Die Mandäische Religion," p. 140, Leipsic, 1889).

NAZARETH (the modern **Al-Naṣira**): Town in Galilee, situated in a valley to the north of the plain of Esdraelon. It is about 1,200 feet above the level of the Mediterranean. Nazareth first appears in the New Testament as the place where Jesus passed his boyhood (Matt. ii. 23; Luke i. 26; ii. 4, 39, 51; John i. 46 *et seq.*; Acts x. 38). It is not mentioned in the Old Testament, or in Josephus or the Talmud (though Eleazar Ḳalir [8th and 9th cent.] in the elegy "Ekah Yashebah" mentions the priestly class of Nazareth [נצרת = "Mishmeret"], doubtless on the basis of some ancient authority). This has led Wellhausen ("Israelitische und Jüdische Gesch." p. 220) and Cheyne (Cheyne and Black, "Encyc. Bibl.") to conjecture that "Nazareth" is a name for Galilee. Such an inference is in the highest degree precarious. It is evident from John i. 46 that Nazareth was an obscure place. During the Biblical period Japhia was the important town of the locality and attracted to itself all the notice of historians.

Nazareth is mentioned by Eusebius and Jerome in the "Onomasticon" as 15 Roman miles eastward from Legio (Lajjun). Epiphanius ("Hæres." i. 136) says that until the time of Constantine, Nazareth was inhabited only by Jews, which statement implies that in his day some Christians lived there. Toward the close of the sixth century it became a place of pilgrimage, for Antoninus the Martyr visited it and saw there an ancient synagogue and a church. It is said to have been almost totally destroyed by the Saracens, but after the establishment of the Latin kingdom of Jerusalem it was rebuilt, and the bishopric of Scythopolis was transferred to it. The population is estimated at about 10,000—3,500 being Mohammedans, and the rest Christians.

S. G. A. B.

NAZARITE: One who lives apart; one who has made a vow of abstinence; in the former sense used as early as Sifra, Emor, iv. 3; Sifre, Num. 23.

—**Biblical Data**: Three restrictions are imposed upon the Nazarite, according to Num. vi.: he may not take wine, or anything made from grapes; he may not cut the hair of his head; he may not touch the dead, not even the body of his father or mother. If a Nazarite has become unclean by accident, he must offer a sacrifice and begin the period of his vow anew. He is "holy unto the Lord" (Num. vi. 8), and the regulations which apply to him actually agree with those for the high priest and for the priests during worship (Lev. x. 8 *et seq.*, xxi.; Ezek. xliv. 21). In ancient times the priests were persons dedicated to God (Ezek. xliv. 20; I Sam. i. 11), and it follows from the juxtaposition of prophets and Nazarites (Amos ii. 11-12) that the latter must have been regarded as in a sense priests. Young men especially, who found it difficult to abstain from wine on account of youthful desire for pleasure, took the vow. The most prominent outward mark of the Nazarite was long, flowing hair, which was cut at the expiration of the vow and offered as a sacrifice (Num. *l.c.*; Jer. vii. 29).

Nazarite Laws.

In Ancient Israel.

The history of Nazariteship in ancient Israel is obscure. Samson was a Nazarite, whose mother abstained from wine during her pregnancy. His superhuman strength lay in his long, unshorn locks (Judges xiii. *et seq.*). Samuel's mother promised to dedicate him to God during his whole life, saying, "There shall no razor come upon his head" (I Sam. i. 11); the Septuagint concludes from the latter promise (to which it adds "he shall drink no wine") that Samuel was a Nazarite. Neither the nomadic Rechabites nor their wives or children drank wine (Jer. xxxv.; II Kings x. 15 *et seq.*).

E. C. G. A. B.

——**In Rabbinical Literature**: The Nazarite law was minutely developed in post-Biblical times and became authoritative, while the popularity of Nazariteship and the influence it exercised on men's minds appear from its numerous regulations, which form a voluminous treatise of the Mishnah, and from the many expressions and phrases accompanying the taking of the vow. If one said, "May I be a Nazarite," he became a Nazarite at once (Naz. i. 1). As a consequence of the universal custom, peculiar words and phrases, some of which are now unintelligible, were formulated for the taking of the vow (Naz. i. 1, ii. 1; p. 10a; Ned. 10a, b, *et passim*). "'Let my hand, my foot be nazir,' is not valid; 'Let my liver [or some other vital part] be nazir,' is valid" (Naz. 21b; Tos. to Naz. iii. 3). When the sanctuary was defiled at the time of the wars of the Maccabees the people assembled all the Nazarites before God as persons who could not be released from their vows (I Macc. iii. 49); yet when Nazarites returned from the Diaspora and found the sanctuary destroyed they were absolved from their vows (Naz. v. 4), although at the same time others took it (*ib.* v., end).

Extent.

The expenses of the offerings of poor Nazarites were borne by the wealthy, this charitable obligation being expressed by the phrase "to have [his head] shorn"; and King Agrippa had many Nazarites "shorn" (Josephus, "Ant." xix. 6, § 1; Naz. ii. 5, 6; Acts xviii. 18; xxi. 23, 24 [Nazariteship of

Paul]). "At the time of R. Simeon b. Sheṭaḥ 300 Nazarites came to Jerusalem. In the case of 150 he found a reason for annulling their vows, but in the case of the others he found none. He went to his brother-in-law King Jannai [103–76 B.C.] and said to him: 'There are 300 Nazarites who need 900 sacrificial animals; you give one-half and I will give the other half'; so the king sent 450 animals" (Yer. Ber. 11b and parallels). Noble persons also, both men and women, took Nazarite vows. Queen Helena was a Nazarite for fourteen (or twenty-one) years (Naz. iii. 6; see JEW. ENCYC. vi. 334, *s.v.* HELENA), and Agrippa's sister Berenice was at Jerusalem on account of a Nazarite vow taken before the outbreak of the great war against the Romans (Josephus, "B. J." ii. 15, § 1).

Reasons for the Vow.

There were different reasons for taking the Nazarite vow. "It is usual with those that had been afflicted either with a distemper, or with any other distress, to make vows; and for thirty days before they are to offer their sacrifices, to abstain from wine, and to shave the hair of their heads" (Josephus, *l.c.*). The vow was taken also for the fulfilment of a wish, such as for the birth of a child (Naz. i. 7; comp. 9 and 10). "The pious in ancient times took such a vow, that they might have an opportunity to make a sin-offering" (Ned. 10b). "If one sees a woman suspected of adultery and convicted by the water of jealousy [Num. v.] let him become a Nazarite, since the law of Nazariteship follows immediately in Num. vi." (Ber. 63a). Some said: "I shall not die before I have become a Nazarite" (Ned. 3b), or, "Let me be a Nazarite on the day when the son of David [the Messiah] shall come." Such a Nazarite was allowed to drink wine only on the Sabbath and on feast-days, since the Messiah will not appear on these days ('Er. 43a). A shepherd who saw a lock of his own beautiful hair reflected in the water, and was tempted thereby to sin, took a Nazarite vow (Tosef., Naz. iv. 7; Ned. 9b). Although Nazariteship was marked by asceticism, many abstained from wine and meat even without taking the vow (B. B. 60b; Shab. 139a). Because of this some prominent rabbis who were opposed to asceticism regarded as sinners those who fasted or became Nazarites or took any vow whatsoever, and held that the person in question was an evil-doer, even if the vow was fulfilled (Ned. 9a, b, 20a, 77b; Naz. 4a; Ta'an. 11a).

Persons and Duration.

Women and slaves, who did not have full rights before the religious law, could take the Nazarite vow, but only with the consent of their husbands or owners, while the vow was not valid among the heathen (Naz. iv. 1–5, ix. 1, *et passim*). Fathers were allowed to dedicate minors, but mothers were forbidden to do so (*ib.* iv. 29b). The proper name "Nazira" may be connected with some such custom (Gen. R. lxxxii., end, *et passim*). Jesus is said to have been dedicated while still in the womb (Luke i. 15). Tradition regards not only Samson and Samuel, but also Absalom, as Nazarites, the last on account of his long hair (Naz. 4b). The duration of Nazariteship was voluntary, and ranged from one hour to a lifetime. In the former case, however, it really lasted for thirty days, which was also the period when no definite time was set (*ib.* i. 3; Sifre, Deut. 357). While the usual time was thirty days, two or more additional vows were generally taken, in which case each period was regarded as a separate Nazariteship, to be immediately followed, when duly completed, by the succeeding one (Maimonides, "Yad," Nezirut, iii. 6). The period was at times measured by the number of days of the solar or the lunar year (Naz. i., end; Yer. Naz. 54b); or one might say: "Let the number of my Nazariteships be as the hairs of my head, or as the dust-particles of the earth, or as the sands of the sea" (Naz. i. 4). A Nazarite for life might cut his too abundant hair once a year, but a Samson Nazarite might not cut his hair under any circumstances, although he might defile himself by touching a corpse (*ib.* 4a). While no comb was allowed to touch the hair, it might be cleansed and arranged by other means (*ib.* vi., end). A proverb says, "Let the Nazarite go around the vineyard, but let him not approach it" (Shab. 13a and parallels; Num. R. x.).

Outside of Palestine and in the Middle Ages.

Nazarite vows were taken also outside of Palestine (Naz. v. 4; iii. 6). Besides Helena, Queen of Adiabene, Miriam of Palmyra is mentioned as a Nazarite (Tos. to Naz. iv. 10). While the Law stated that Nazariteship was equally valid in the country and outside it, in the time of the Temple and after its destruction there was a difference of opinion between the followers of Shammai and of Hillel: the former held that one who entered Palestine after the fulfilment of a prolonged period of Nazariteship must live there thirty days longer as a Nazarite, while the latter maintained that he must begin his vow anew (Naz. iii. 6; comp. Maimonides, "Yad," Nezirut, ii. 20–21). The earlier and more universal custom agreed with the view of the school of Shammai, Josephus referring to the thirty days demanded, as above, in the passage already quoted—"B. J." ii. 15, § 1. The observance of the Nazarite vow probably continued for many centuries, but was finally lost in asceticism and mysticism. No Nazarites are known in the Middle Ages.

E. C. L. B.

——**Critical View:** The conclusion that because wine was prohibited to Samson's mother during pregnancy (Judges xiii. 4) it was prohibited to Samson also can hardly be correct, since he engaged in drinking-bouts (משתות; comp. Judges xiv. 10 *et seq.*). Budde ("Richter," in Marti's "Commentar," pp. 94 *et seq.*) has shown that the text in Judges xiii. 4 is glossed, the oldest form of it containing no reference to wine. Nor could the later Nazaritic prohibition of touching a corpse have been observed by Samson, the conditions of whose life brought him frequently into contact with the dead. Furthermore, at such feasts as that described in I Sam. ix. 19 Samuel, too, probably partook of some kind of intoxicant, and he can not have kept himself free from contact with dead bodies, for he hewed Agag in pieces (I Sam. xv. 33). Samson and Samuel, then, belonged to an early type of simple devotees to Yhwh who were distinguished by unshorn hair. This meaning of the word is preserved in Lev. xxv. 5, 11, where "nazir" is used to describe an unshorn vine.

The Nazarites of Amos must have had a different origin from those with long hair. Because the Rechabites also are said (II Kings x. 15 *et seq.*; Jer. xxxv.) to have abstained from wine it has been conjectured that the Nazarites of the time of Amos were, like the Rechabites, representatives of the pre-Canaanitish type of Yhwh worship and abstained from all the luxuries of civilization; there are no data to prove or disprove this hypothesis.

The law of Num. vi. 1–21 was made for a new class of Nazarites; for in post-exilic times the lifelong Nazarite is no longer found; instead there appears the Nazarite who has vowed himself to Yhwh for a longer or shorter period; any one may assume the Nazarite's vow. This law dates, possibly, from the sixth century B.C. It belongs to an intermediate stratum of the priestly law, neither the oldest nor the latest. In it apparently three older customs have been fused; according to one the Nazarite abstained from intoxicating drink; another prohibited to him all fruits of the vine; the third demanded unshorn hair. To the first or second, or to both, the prohibition of contact with the dead attached. Here all have not only been fused, but have been made temporary. These temporary Nazarites seem to have been very numerous. They are mentioned in the Maccabean period (I Macc. iii. 49), in the time of Herod Agrippa I. (Josephus, "Ant." xix. 6, § 1; *idem*, "B. J." ii. 15, § 1), and later in the mishnaic tractate Nazir.

The description of James the Just which Eusebius ("Hist. Eccl." ii. 23) quotes from Hegesippus indicates that James may have been a Nazarite for life, though the name is not applied to him. The general regulations concerning Nazarites in post-exilic times resemble, though with many differences, those of the Arabic "iḥram," the condition of one who has undertaken the pilgrimage to Mecca (comp. Wellhausen, "Reste des Arabischen Heidentums," 2d ed., pp. 122 *et seq.*). Parallels to the long hair of the Nazarites are found in many parts of the world (comp. W. R. Smith, "Rel. of Sem." 2d ed., pp. 332, 482; Frazer, "Golden Bough," 2d ed., i. 362–389).

E. C. G. A. B.

NAZIR ("Nazarite"): A treatise of the Mishnah and the Tosefta and in both Talmuds, devoted chiefly to a discussion of the laws laid down in Num. vi. 1–21. In the Tosefta its title is **Nezirut** ("Nazariteship"). In most of the editions of the Mishnah this treatise is the fourth in the order Nashim, and it is divided into nine chapters, containing fifty-eight paragraphs in all.

The Different Kinds of Vows.

Ch. i.: The different kinds of vows which involve compulsory Nazariteship (§§ 1–2); Nazariteship for life, Samson's Nazariteship (comp. Judges xii. 4 *et seq.*), and the difference between these two kinds (§ 2); Nazariteship is calculated by days only, not by hours, and generally lasts thirty days if no definite period is given (§ 3); different expressions which make a sort of lifelong Nazariteship compulsory, although the hair may be cut once in thirty days (§ 4); peculiar indefinite expressions used in connection with the vow (§§ 5–7).

Ch. ii.: Whether vows which are expressed in a peculiar, incorrect manner are binding (§§ 1–2); cases in which a clearly expressed vow of Nazariteship is not binding (§ 3); vows made under conditions incompatible with Nazariteship (§ 4); combination of two Nazariteships, or of one with the vow to bring an additional sacrifice for a Nazarite; conditional vows (§§ 5–9).

Ch. iii.: When a Nazarite may cut his hair in case he has vowed only one term of Nazariteship, or when he has vowed two successive terms (§§ 1–2); whether a Nazarite who has become unclean on the last day of his term must recommence his Nazariteship, and the cases in which he must do so (§§ 3–4); the case of one who vows Nazariteship while in a burial-place (§ 5); Nazariteship may be observed only in the Holy Land; Helena, Queen of Adiabene, once vowed Nazariteship for seven years, and fulfilled her vow; but when she went to Palestine at the end of the seventh year, the Bet Hillel decided that she must observe her vow for another period of seven years, since the time which she had spent outside of Palestine could not be taken into account (§ 6).

Wards and Minors.

Ch. iv.: Cases in which a person utters a vow of Nazariteship and those present say, "We too"; dispensation from such vows; concerning the nullification of a wife's vows of Nazariteship by her husband (§§ 1–5); the father may make a vow of Nazariteship for his minor son, but not the mother; and in like manner the son, but not the daughter, may, in certain cases and in certain respects, succeed to the father's term of Nazariteship (§§ 6–7).

Ch. v.: Cases in which a person dedicates or vows something by mistake; Nazarites who had made their vows before the destruction of the Temple, and, on coming to Jerusalem to offer their sacrifices, had learned that the Temple had been destroyed (§ 4); conditional Nazaritic vows (§§ 5–7).

Sacrifices of Nazarites.

Ch. vi.: Things forbidden to the Nazarite; enumeration of the different things coming from the vine; cases in which a Nazarite is guilty of trespassing against the interdiction prohibiting the drinking of wine (§§ 1–2); cases in which he is guilty of trespassing against that concerning the cutting of his hair (§ 3); in what respects the interdiction against defilement by a corpse is more rigorous than those against drinking wine and cutting the hair, and in what respects the last two interdictions are more rigorous than the first (§ 5); sacrifices and cutting of the hair if the Nazarite has become unclean (§ 6); sacrifices and cutting of the hair when the Nazariteship is fulfilled; burning of the cut hair under the pot in which the flesh of the sacrifice is cooked; other regulations regarding the sacrifices by Nazarites (§§ 7-11).

Ch. vii.: The Nazarite and the high priest may not defile themselves through contact with corpses even in the case of the death of a near relative; discussion of the question whether the Nazarite or the high priest defiles himself if both together find a corpse which must be buried and no one else is there to do it (§ 1); things which defile the Nazarite, and other regulations regarding the uncleanness of a person entering the Temple (§§ 2-3).

Ch. viii.: Regulations in cases where it is doubtful whether the Nazarite has become unclean.

Ch. ix.: Unlike slaves and women, "Kutim" may not make a Nazaritic vow; in what respects Nazaritic vows of women are more rigorous than those of slaves, and vice versa (§ 1); further details regarding the defilement of a Nazarite; the examination of burial-places, and, in connection therewith, rules for the examination of a person suffering from discharges or leprosy (§§ 2-4); discussion of the question whether Samuel was a Nazarite (§ 5).

Tosefta.

The Tosefta to this treatise is divided into six chapters. Noteworthy is the story it narrates of the high priest Simon the Just, who never partook of the sacrifice offered by a Nazarite, with the exception of that offered by a handsome youth from the south, since in this case he could assume that the young man had made his vow with the best intentions and acceptably to God. When Simon asked why he had decided to clip his hair, the youth replied that on beholding his image in a pool he had become vain of his own beauty, and had therefore taken the Nazaritic vow to avoid all temptations (iv. 7).

The Babylonian Gemara, whose introductory passage explains, by a reference to the Bible (Deut. xxiv. 1; comp. Rashi *ad loc.*, and Soṭah 2a), why the treatise Nazir belongs to the order Nashim, contains also many interesting sentences, a few of which may be quoted here: "The forty years (II Sam. xv. 7) are reckoned from the time when the Israelites first asked for a king" (5a). "The Nazarite has sinned (Num. vi. 11) by denying himself wine; and if one who denies himself wine, which is not absolutely necessary, is deemed a sinner, one who denies himself other things which are needful for the sustenance of life is a much greater sinner" (19a). "An infringement of the Law with good intentions is better than its fulfilment without good intentions. Still one must study the Torah and observe its commandments, even though he is not in the proper mood, since he will gradually acquire thereby a sympathetic frame of mind" (23b).

W. B. J. Z. L.

NAZIR, ISAAC: One of the earliest cabalists. According to an account which is not altogether trustworthy, he was the real founder of cabalistic science; its secrets are said to have been revealed to him in a vision by the prophet Elijah. These Isaac transmitted to Jacob Nazir, who taught them to Abraham b. David, the latter in turn entrusting them to his son Isaac the Blind.

NEANDER, JOHANN AUGUST WILHELM: German Church historian; born at Göttingen Jan. 17, 1789; died at Berlin July 14, 1850. Prior to his baptism his name was "David Mendel," and on his mother's side he was related to Moses Mendelssohn. He attended the gymnasium at Hamburg, where he had for his associates Varnhagen von Ense and Adelbert von Chamisso. At the age of seventeen he embraced Christianity. After studying theology at Halle under Schleiermacher, and at Göttingen, he established himself as a privat-docent at Heidelberg in 1811, and in the following year was appointed assistant professor of theology. At this time he published his monograph, "Ueber den Kaiser Julianus und Sein Zeitalter." In 1813 he was appointed professor of Church history in the newly established University of Berlin, and published his monograph on St. Bernard. This was followed by his essays on the Gnostics in 1818 and St. Chrysostom in 1822, in which latter year appeared his "Denkwürdigkeiten aus der Geschichte des Christenthums und des Christlichen Lebens," a third edition of which was issued in 1845. In 1825 his great work, "Allgemeine Geschichte der Christlichen Religion und Kirche," began to appear at Hamburg, the last volume of which, the eleventh, was not issued until 1852. An English translation by Torrey, in five volumes, was published at Boston in 1847-51. His "Gesch. der Pflanzung und Leitung der Christlichen Kirche Durch die Apostel" appeared in 1833; his "Leben Jesu" in 1837. These two works are practically introductions to his "Allgemeine Geschichte." Two other works of his were published posthumously, "Wissenschaftliche Abhandlungen" (1851) and "Christliche Dogmengeschichte" (1857).

Neander's works, most of which have been translated into English, have secured for him a lasting place among the greatest ecclesiastical historians. He has come to be regarded as the father of modern Church history. His "Leben Jesu" was written as an answer to the "Leben Jesu" of David Friedrich Strauss, which had been submitted to him by the government for his opinion as to its heretical character, and as to whether it should be prohibited. His answer to the government will be ever memorable: "Scholarly works are to be fought with the weapons of science, not by the power of the state." When the Jews of Damascus were being persecuted in 1846, and the old "blood accusation" was revived, he publicly and vigorously denounced the "medieval lie."

NEBELAH: Biblical expression for the carcass of an animal, and sometimes for a dead human body

(I Kings xiii. 24; Isa. xxvi. 19; Ps. lxxix. 2). The Mosaic law contains a prohibition against eating, carrying, or touching the carcass of an animal (Lev. xi.; Deut. xiv. 8). By touching a carcass one becomes unclean; by carrying it one's garments also become unclean. In three passages "nebelah" (carcass) and "ṭerefah" (that which is torn) are mentioned together (Lev. xvii. 15, xxii. 8; Deut. xiv. 20). According to some of the Biblical critics this prohibition was at first limited to the priests (but comp. Lev. xxii. 8; Ezek. xliv. 31 [where it is limited to the carcasses of birds]), but later on it was, like other laws of sanctification, extended to the whole people. This would explain why Ezekiel, in that he was a priest, says of himself that he had never eaten of that which had died of itself (i. 3, iv. 14).

On the other hand, it is clear that in most of the passages this prohibition is general (Lev. xi., *passim*; xvii. 15; Deut. xiv. 8), so that even critics of the advanced school see in Lev. xxii. 8 the interpolation of the priestly redactor who rearranged the Priestly Code after the Exile, while Ezek. iv. 14 is merely an emphatic statement that the prophet has always strictly observed the laws of purity, without reference to his character as a priest (see the commentaries of Dillmann, Baentsch, Bertholet). It is certain that this, like all other dietary laws, was followed strictly by the whole people, at any rate from Maccabean times (Dan. i. 8; II Macc. vi. 18-30; Acts x. 14, xi. 8); and even the old Judæo-Christian community observed the prohibition of nebelah (τοῦ πνικτοῦ = "strangled things," Acts xv. 20), while naturally the more advanced school of the nascent Christian Church was strictly opposed to this as to all other dietary laws (Col. ii. 16), or at best merely tolerated it (I Cor. viii. 8; Rom. xiv. 13 *et seq.*).

In Rabbinical Law.

Talmudic exegesis explains nebelah, in contradistinction to Ṭerefah, as that which has not been killed in accordance with the laws of Sheḥiṭah. Says R. Jeshebab in the name of R. Joshua: "Whatsoever has been rendered unfit by [improper] sheḥiṭah is considered nebelah; where the sheḥiṭah was proper, though another fact had caused the thing to become unfit for eating, it is ṭerefah"; this explanation was accepted by R. Akiba (Ḥul. iv. 2).

The opinion of R. Joshua seems to have led Maimonides to the following explanation of the principle of nebelah, which is accepted by most of the legal authorities: "The ṭerefah which is mentioned in the Torah [Ex. xxii. 30] is an animal torn by a wild beast or a bird torn by a bird of prey. Thou canst not say that it was torn and killed, for this would make it nebelah, as there would be no difference between the animal that died a natural death and one killed by the sword or by a lion; consequently Scripture speaks of an animal that was torn and is not dead. So thou seest that Scripture prohibited the dead animal, which is called 'nebelah,' and that which is fatally wounded, although it is not yet dead, which is called 'ṭerefah'" ("Yad," Ma'akalot Asurot, iv. 6-8; Ṭur Yoreh De'ah, 29; Yom-Ṭob Lipmann Heller, in "Tosefot Yom-Ṭob" to Ḥul. iii. 1).

Unclean-ness.

Maimonides gives the following presentation of the law of uncleanness: "A carcass is one of the 'fathers' [principal categories] of uncleanness." "Its flesh, if of the size of an olive, imparts uncleanness to man and to vessels by contact, and to earthen pots by being suspended within their area, although not even touching their sides" (Sifra, Lev. xi. 33). It communicates uncleanness to the garments of one who carries it. The meat of animals, both permitted and forbidden, if of the size of an olive, imparts uncleanness. The meat of clean animals that have been properly killed remains clean, although it may be unfit for eating for some other reason (*e.g.*, being "ṭerefah"), while the meat of unclean animals remains unclean, even though the animal may have been killed according to the laws of sheḥiṭah. The blood, as a liquid, can not impart uncleanness (see 'Eduy. viii. 4), although rabbinical law has extended the prohibition to touching the blood of a carcass. The fat of the carcass does not impart uncleanness, because it is written, "and the fat of the beast that dieth of itself . . . may be used in any other use: but ye shall in no wise eat of it" (Lev. vii. 24). Hide, horns, hoofs, bones, sinews, and even flesh if it be so far putrefied that it is no longer fit to be used for food, do not possess the quality of uncleanness ("Yad," She'ar Abot ha-Ṭum'ot, i.).

Other uses of nebelah, except eating, are permitted, according to the generally accepted principle of R. Abbahu. "Every prohibition of eating includes every other use, with the exception of nebelah, about which Scripture [Deut. xiv. 21] has expressly stated the contrary" (Pes. 21b). Another opinion (Sheb. vii. 3) places nebelah among those things which may not be made articles of commerce. The Talmud (Yer. Sheb. 37c) derives from this law the principle that things which are forbidden by the Mosaic law may not be made articles of commerce, while things prohibited only by the Rabbis may. This view is generally accepted in the codes ("Yad," Ma'akalot Asurot, viii. 16; Yoreh De'ah, 117, 1), and contradiction is avoided by explaining that the prohibition against dealing in forbidden things is limited to such as are exclusively used for eating and to commerce when followed as a regular vocation (*ib.*; see especially Ṭure Zahab *ad loc.*).

Handling a carcass is the most despised of all occupations; therefore Rab advises R. Kahana: "Skin a carcass on the street for hire and say not I am a great man and the work is repulsive to me" (B. B. 110a; with some slight variations also Pes. 113a). In Judæo-German parlance "nebelah" applies to anti-Semites.

E. G. H. D.

NEBICH (NEBBICH): Judæo-German term carrying the sense of "regret" and "pity." It is used as a noun, an adverb, and most often as an interjection; *e.g.*, "Nebich, the poor man"; "He is a great nebich" (object of pity). The etymological explanation is doubtful. Zunz ("G. V." p. 456) thinks it is of Polish origin; others, as M. Gruenbaum ("Judisch-Deutsche Chrestomathie," 1882, p. 394), derive it from the German "Nie bei euch," based on Lam. i. 12, which Jewish commentators (Rashi, Ibn Ezra, and others) read as "May such a calamity not come upon you." Polish Jews often use the Hebrew words of that passage, "Lo 'alekem," in the same sense.

A. D.

NEBO, MOUNT: According to Deut. xxxii. 49 and xxxiv. 1-3, it was from this mountain that Moses, just before his death, surveyed the promised land. Both these passages belong to the Priestly Code (P). This mountain is probably the same as the "Pisgah" of Deut. iii. 27 (D) and Num. xxi. 20 (J). In Num. xxxiii. 47 (P) Nebo is said to be in the "mountains of Abarim." Abarim therefore must have been a general name for the mountains of the region, while Pisgah was the mountain the top of which was called "Nebo" (comp. Deut. iii. 27).

The name "Nebo" survives in "Jabal Naba," by which name one of the mountains which form the ragged edge of Moab overlooking the Dead Sea is known. Scholars now generally identify this mountain with the Biblical Nebo. It lies five miles southwest of Heshbon, two miles northwest of Madeba, and nine miles east of the northern end of the Dead Sea. From the plain on which Madeba stands the ground slopes gently downward. At the summit of Jabal Naba it rises again slightly, and a cairn marks an ancient holy site. An extensive view is obtained from this point, but not so extensive as the one described in Deut. xxxiv. 1-3. Following the ridge somewhat more than a mile to the northwest, one comes out upon a spur now called "Jabal Ṣijagha," which, though lower, affords a still wider view because of its overhanging position. It is the prevailing opinion of modern scholars that this is the point indicated as the "top of Pisgah." The outlook from this point is beautiful, extensive, and interesting. Hermon can be seen far to the north; a great extent of the Jordan valley, the hills of the central range from Carmel to Hebron, and all of the northern end of the Dead Sea are in view. The east-Jordanic country is not visible, and projecting ridges cut off the view to the south; nor can the Mediterranean be seen.

Various explanations have been suggested to account for the inconsistency between this view and the description of Deut. xxxiv. 1-3, which leaves it to be supposed that the land of Gilead, and even the Mediterranean, could be seen. Driver ("Deuteronomy," p. 420) regards the description as hyperbolical; Chapman (Hastings, "Dict. Bible") thinks the writer gave the boundaries of the land, the greater portion of which could be seen from this point; while Peters ("Jour. Bib. Lit." xxii. 28 *et seq.*) thinks that he had in mind the view from Jabal Usha', near Al-Salṭ, but wrongly connected it with Jabal Naba. Chapman's explanation seems the most probable.

The name "Nebo" is the Hebrew form of the name of the Babylonian god Nabu, and was no doubt attached to the spot during the time prior to the reign of Thothmes III., when Babylonian civilization was dominant in Syria and Palestine.

E. C. G. A. B.

NEBRASKA: One of the central units of the United States of America; admitted into the Union in 1854. Jews traversed the state on their way to California during the gold-finding period of 1848-1849; there is, however, no record of their settling in Nebraska until 1856, when Meyer Hellman and Aaron Cahn, floating a house down the river, settled where the city of **Omaha** now stands. Not until the close of the Civil war did the Jewish settlement become noticeable, and with the advent of Max Meyer in 1866 a progressive spirit became apparent. The "seventies" and "eighties" brought a large Hungarian and German element, which was subsequently supplemented by Russian and Rumanian accretions. The present (1904) Jewish population of the state is about 3,800. The Jewish population of Omaha is about 3,200. The Temple Israel congregation there was organized in 1868. It held its first services in the old Masonic Hall. The following rabbis have served the congregation: L. Abraham, David Stern, Rosenspitz, E. H. Harfield, N. I. Benson, William Rosenau, Leo M. Franklin, and Abram Simon. The congregation maintains a Ladies' Aid and Sewing Society (organized in 1896) and the Temple Israel Sisterhood (1903). Its burial-ground, the Pleasant Hill Cemetery, was purchased in 1872.

The Midrash Haggodol congregation (Orthodox) was organized in 1886, but is now known as the "Chevra Israel" congregation. A biḳḳur ḥolim instituted as a charitable society in 1882 is now a congregation, meeting on the important holy days and known as the "Hungarian Congregation" (Orthodox); it has its own cemetery. The Congregation B'nai Adas Israel (Russian) was organized in 1886 and owns a cemetery. The Congregation Chov've Zion is now (1904) three years old and has its own cemetery. Among the Jewish charitable societies of Omaha are the Wise Memorial Hospital (incorporated 1901) and the Association of Jewish Charities.

The city of **Lincoln** has a Jewish population of about 350. The Congregation B'nai Yeshurun (Reform) holds services every other Sunday night, one of the Omaha rabbis officiating; it was organized in 1882. Connected with it are the Naomi Aid Society (organized in 1886), the Mount Lebanon Cemetery Association (1892), and the Unity Social Club (1898). The Tiffereth Israel congregation and the Congregation Talmud Tora (both Orthodox) together maintain one cemetery. Both elements meet in the Lincoln City Lodge No. 377, I. O. B. B. (organized 1888). The congregations of **Hastings** and **Nebraska City** have cemeteries of their own; they hold holy day services in conjunction with the **Grand Island** community. The legal and medical professions have strong Jewish representatives in Nebraska. The office of State Fish Commissioner has been held for many years by Robert Oberfelder of Sidney.

A. A. S.

NEBUCHADNEZZAR.—Biblical Data: The son of Nabopolassar; became king of Babylon in 604 B.C. as Assyria was on the decline; died 561.

His name, either in this spelling or in the more correct form, **Nebuchadrezzar** (from the original, "Nabu-kudurri-uṣur" = "Nebo, defend my boundary"), is found more than ninety times in the Old Testament.

Slays Jehoiakim.

Nebuchadnezzar's first notable act was the overthrow of the Egyptian army under Necho at the Euphrates in the fourth year of Jehoiakim (Jer. xlvi. 2). It is entirely reasonable to suppose that at the same time he descended upon Palestine and made Jehoiakim his subject (II Kings xxiv. 1). This campaign took place in 605. The next year Nebuchadnezzar became king of Babylon; and he ruled for forty-three years, or until 561. Jehoiakim served him for three years, and then rebelled. He doubtless incited the neighboring tribes (*ib.* verse 2) to persecute Judah and bring its king to respect his oath. In 598 Nebuchadnezzar himself came westward, took Jehoiakim (II Chron. xxxvi. 6) and probably slew him, casting out his dead body unburied (Jer. xxii. 19, xxxvi. 30), and carried captive to Babylon 3,023 Jews (Jer. lii. 28). He placed Jehoiachin, the dead king's son, on the throne. Three months were sufficient to prove Jehoiachin's character (Ezek. xix. 5-9). He was taken with 10,000 of the best of the people of Jerusalem and carried to Babylon. His uncle Mattaniah, whose name was changed to Zedekiah, was put on the throne by Nebuchadnezzar in 597.

Egypt was continually intriguing with southwestern Asia, and was now courting the friendship of Zedekiah. This became so noticeable that Judah's king made a journey to Babylon in the fourth year of his reign (Jer. li. 59), probably to assure Nebuchadnezzar of his loyalty to him. But by the ninth year of his reign Zedekiah became so friendly with the Egyptians that he made a league with them and thereupon rebelled against the King of Babylon. With due despatch Nebuchadnezzar and his army left for the Westland. He placed his base of action at Riblah in the north, and went southward and laid siege to Jerusalem. By some message the Egyptians learned of the siege and hastily marched to the relief of the beleaguered ally. The Babylonians raised the siege (Jer. xxxvii. 3-5) long enough to repulse the Egyptian arms, and came back and settled about Jerusalem. At the end of eighteen months (586) the wall yielded. Zedekiah and his retinue fled by night, but were overtaken in the plains of the Jordan. The king and his sons were brought before Nebuchadnezzar at Riblah; the sons were slain, and the king's eyes bored out; and he was carried in chains to Babylon. Nebuchadnezzar caused Jerusalem to be destroyed, and the sacred vessels of the Temple to be carried to Babylon. He placed Gedaliah in authority over the Jews who remained in the land. In the twenty-third year of his reign Nebuchadnezzar's captain of the guard carried away 745 Jews, who had been gathered from those scattered through the land. Nebuchadnezzar entered Egypt also (Jer. xlvi. 13-26; Ezek. xxix. 2-20), according to his own inscriptions about 567, and dealt a severe blow to its supremacy and power.

The representations in the Book of Daniel of Nebuchadnezzar's greatness are doubtless correct; and there is reason for believing that he was the great builder and glorifier of his capital. He was succeeded by his son Evil-merodach.

E. G. H. I. M. P.

——**In Rabbinical Literature:** Nebuchadnezzar, the "wicked one" ("ha-rasha'"; Meg. 11a; Ḥag. 13b; Pes. 118a), was a son—or descendant?—of the Queen of Sheba by her marriage with Solomon ("Alphabet Ben Sira," ed. Venice, 21b; comp. Brüll's "Jahrb." ix. 9), and a son-in-law of Sennacherib (Targ. to Isa. x. 32; Lam. R., Introduction, 23, says "a grandson"), with whom he took part in the expedition of the Assyrians against Hezekiah, being one of the few who were not destroyed by the angels before Jerusalem (Sanh. 95b). He came to the throne in the fourth year of King Jehoiakim of Judah, whom he subjugated and, seven years later, killed after that king had rebelled. Nebuchadnezzar did not on this occasion go to Jerusalem, but received the Great Sanhedrin of Jerusalem at Daphne, a suburb of Antioch, informing that body that it was not his intention to destroy the Temple, but that the rebellious Jehoiakim must be delivered to him, which in fact was done (Seder 'Olam R. xxv.; Midr. 'Eser Galuyyot, ed. Grünhut, "Sefer ha-Liḳḳuṭim," iii.; Lev. R. xix.; comp. JEHOIAKIM IN RABBINICAL LITERATURE).

Holds No Oath Sacred.

According to Josephus ("Ant." x. 6, § 3), the King of Judah voluntarily received Nebuchadnezzar and his army in the city; but Nebuchadnezzar treacherously broke the compact between them, and massacred the king together with the strongest and most beautiful inhabitants of Jerusalem. Nebuchadnezzar then carried away into captivity 5,000 Judeans and 7,000 of the other tribes, including all the nobles and scholars of the city (Josephus, *l.c.*; Seder 'Olam R. *l.c.*; Midr. 'Eser Galuyyot, *l.c.*).

When he celebrated his triumph in Babylon and told his subjects how he had made Jehoiachin king in the place of his rebellious father Jehoiakim, they reminded him of the proverb: "A poor dog has no good progeny." Nebuchadnezzar then returned to Daphne, where he received the Great Sanhedrin and told it that he desired to take King Jehoiachin to Babylon. When it delivered the king to him, Jehoiachin was cast into prison for life (Lev. R. xix. 6; comp. Seder 'Olam R. *l.c.*; Yer. Sheḳ. vi. 49a; and JEHOIACHIN IN RABBINICAL LITERATURE). The King of Babylon again showed how little sacred an oath was to him; for, although he had pledged his word that he would not harm the city, he carried captive to Babylon a large number of the inhabitants (Josephus, *l.c.* x. 7, § 1) together with the Ark of the Covenant (Seder 'Olam R. *l.c.*). Although a voice from heaven uttered for eighteen years these words in the palace of Nebuchadnezzar, "O wicked servant; go and destroy the house of your master, since his children no longer obey him," yet the king was afraid to obey the command, remembering the defeat which Sennacherib had suffered in a similar attempt. Nebuchadnezzar asked the advice of different oracles, all of which warned him not to undertake the expedition against Jerusalem (Lam. R. *l.c.*). Furthermore the Ammonites and the Moabites, Israel's "wicked neighbors," gave inducements to Nebuchadnezzar to come by saying that the Prophets announced Judah's downfall. They allayed the king's fear lest God might send the same fate upon him that He had upon Sennacherib, by saying that God had now abandoned Israel, and that there were left among the people no pious ones able to turn away God's anger (Sanh. 96b). Nebuchadnezzar decided on his expedition against Jerusalem only after God showed him how He had bound the hands of Michael, Israel's guardian angel (Midr. Ekah Zuṭa, p. 70); and even then Nebuchadnezzar did not lead the expedition himself, but gave it into the hands of Nebuzar-adan (Pesiḳ. R. 26 [ed. Friedmann, p. 130b]; Sanh. 96b, above; comp. Eccl. R. on Eccl. x. 7, to the effect that Nebuchadnezzar, seated on a horse which was led by Michael, entered the Holy of Holies.

At Daphne, from which place Nebuchadnezzar followed the operations before the walls of Jerusalem, he received the Sanhedrin of Jerusalem with great honors, asking the members to read and explain to him the Torah. Sitting on seats of honor, they began their explanations. When, however, they came to the section on the dispensation from vows (Num. xxx. 2 *et seq.*), the king cried out in anger: "I believe it was you who released King Zedekiah from his oath to me." He then commanded that the scholars leave their seats and sit on the ground (Lam. R. ii. 10; Ned. 65a; comp. Zedekiah in Rabbinical Literature; "Chronicles of Jerahmeel," x. 10: "the great Sanhedrin . . . who were slain by Nebuchadnezzar"). Zedekiah, the captive king, was also brought to Daphne, where Nebuchadnezzar took him to task, saying that, according to divine and human law, Zedekiah had merited death, since he had sworn falsely by the name of God, and had rebelled against his suzerain (Pesiḳ. R. *l.c.* [ed. Friedmann, p. 131a]).

Nebuchadnezzar's Cruelty.

Nebuchadnezzar was most merciless toward the conquered people. By his command the exiles on their way to Babylon were not allowed to stop even for a moment, as the king feared that they would pray during the respite granted them and that God would be willing to help them as soon as they repented (Lam. R. to v. 6; Pesiḳ. R. 28 [ed. Friedmann, p. 135a]). Nebuchadnezzar did not feel safe until the exiles reached the Euphrates, the boundary-line of Babylon. Then he made a great feast on board his ship, while the princes of Judah lay chained and naked by the river. In order to increase their misery he had rolls of the Torah torn and made into sacks, which, filled with sand, he gave to the captive princes to carry (Pesiḳ. R. *l.c.* [ed. Friedmann, p. 135a]; Midr. Teh. cxxxvii.; comp. Buber's remark *ad loc.* and Lam. R. v. 13).

On this occasion Nebuchadnezzar ordered the singers of the Temple to add their music to his feast; but they preferred to bite off their fingers, or even to be killed, rather than to play their sacred music in honor of the Babylonian idols (Pesiḳ. R. 31 [ed. Friedmann, p. 144a], 28 [136a]; comp. Moses, Children of). He heartlessly drove the captives before him, entirely without clothing, until the inhabitants of Bari induced him to clothe them (Pesiḳ. R. *l.c.* [ed. Friedmann, p. 135b]). But even after the heavily burdened Jews finally reached Babylonia they had no rest from the tyrant, who massacred thousands of youths whose beauty had inflamed the passion of the Babylonian women—a passion which did not subside until the corpses were stamped upon and mutilated (Sanh. 92b; comp. Ezekiel in Rabbinical Literature). Nebuchadnezzar carried to Babylon, together with the Jews, cedar-trees which he had taken from Lebanon (Lam. R. i. 4), and millstones which he made the captive youths bear (*l.c.* v. 13). Even the Jews who had sought refuge from the Babylonians in Ammon and Moab or in Egypt did not escape Nebuchadnezzar, who, on conquering Egypt, carried all the Jews in that country, including Baruch and Jeremiah, to Babylonia (Midr. 'Eser Galuyyot, ed. Grünhut, *l.c.* iii. 14; Seder 'Olam R. xxvi.). Nebuchadnezzar was equally victorious in his expedition against Tyre, whose king, Hiram, his stepfather, he dethroned and put to a painful death (Lev. R. xviii. 2; Yalḳ., Ezek. 367).

Nebuchadnezzar, moreover, not only was a cosmocrat, ruling all the earth (Meg. 11a *et passim*), but he subdued the world of animals also, his charger being a lion, on whose neck a snake hung quietly (Shab. 150a, above). His godlessness was commensurate with his power; he was given, among other vices, to pederasty, which he, as with the other kings, also tried to commit with the pious Zedekiah, but was prevented by a miracle from doing so (Shab. 149b; see also Jerome on Hab. ii. 16). He was so greatly feared that as long as he was alive no one dared laugh; and when he went down to hell the inmates trembled, asking themselves whether he would rule them also (Shab. *l.c.*). In his arrogance he considered himself to be a god, and spoke of making a cloud in order to enthrone himself like God on high (Mek., Beshallaḥ, Shirah, 6 [ed. Weiss, p. 47a, b]); but a heavenly voice cried to him: "O thou miscreant, son of a miscreant, and grandson of the miscreant Nimrod! Man lives seventy years, or at most eighty (Ps. xc. 10). The distance from the earth to heaven measures 500 years; the thickness of heaven measures as much; and not less the distance from one heaven to the other" (Pes. 94a, below; Ḥag. 13a *et passim*).

Behavior Toward Israelites.

The lot of the Jews was naturally a very sad one during Nebuchadnezzar's reign; and even Daniel, as well as his three friends Hananiah, Mishael, and Azariah, who were pages at court, were often in peril of their lives. This was especially the case when the king tried to force the three pages to worship the idol at Durah, and they, upon their refusal to do so, were thrown into the fiery furnace. However, the miracle performed in their behalf (comp. Azariah in Rabbinical Literature; Ezekiel in Rabbinical Literature) induced Nebuchadnezzar to join in praising God; and he was so carried away by his songs that had he continued he would have surpassed David, but an angel forced him to desist (Sanh. 92b). Yet this did not prevent him from massacring all the 600,000 Jews who had obeyed his command and worshiped the idol, and whom he reproached for not having followed the example of the three pious men and trusted in God (Pirḳe R. El. xxxiii.).

He finally received his well-merited punishment; for God changed him into an animal, as far as his appearance, intellect, and language were concerned. He appeared to the people with his upper half as an ox and the lower half as a lion, and as such he killed many villains. Through Daniel's prayers the seven years of punishment decreed for Nebuchadnezzar were changed to seven months; and after the king had lamented his sins for forty days, had lived in the caves for another period of forty days, and had herded for the same length of time with the beasts of the forest, God took mercy upon him and allowed him to return to his throne. He repented and did penance for the next seven years, subsisting, on the advice of Daniel, on vegetable food. The affairs of the government he gave into the hands of seven judges, who held office for one year each. At the expiration of this period he wished to make Daniel one of his heirs; but the latter refused with the words: "Far be it from me to exchange the heritage of my fathers for that of one uncircumcised" ("The Chronicles of Jerahmeel," ed. Gaster, lxvi. 1-2; see also the passage quoted in the introduction, p. 106).

Among the Animals.

According to another version, Nebuchadnezzar really spent seven years among the animals, during which time his son Evil-merodach ruled as king (see, however, Josephus, *l.c.* x. 10, § 6); but when he returned he cast this son into prison for life. Therefore after Nebuchadnezzar had died and the nobles of the realm came to the son to swear fealty to him as their king, he did not dare listen to them until they brought the corpse of his father, so that he could convince himself that the latter really was dead (Lev. R. xviii. 12). Others say that Evil-merodach himself exhumed the body of his father, because the people believed that Nebuchadnezzar was not really dead—that he had simply disappeared as he had once before, and that they would be severely punished by him if at his return he found that they had invested another king. The body of the dead monarch was therefore dragged through the city so that the people might see it (Targ. Sheni, beginning; Jerome on Isa. xiv. 19; see also "The Chronicles of Jerahmeel," lxvi. 6; a shorter version is given in Seder 'Olam R. xxviii.). This was the shameful end of Nebuchadnezzar, after a reign of forty years (Seder 'Olam R. *l.c.* 45; Pesiḳ. R., ed. Buber, xxvii. [ed. Friedmann, p. 168b, 40]; Josephus, *l.c.* x. 11, §§ 1, 43).

That Nebuchadnezzar, in spite of all his wickedness, was chosen by God to rule over Israel and all the earth, was due, according to some, to the fact that he was a descendant of Merodach-baladan, to whom God granted, as a reward for a pious deed, that three of his descendants, namely, Nebuchadnezzar, his son Evil-merodach, and Belshazzar, should become world-rulers (Pesiḳ. R., ed. Buber, ii. 14a; comp. Merodach-Baladan. According to another rabbinical legend, Nebuchadnezzar was the secretary of Baladan. The latter wrote a letter to Hezekiah (II Kings xx. 12) in Nebuchadnezzar's absence, who, on his return, was informed of its contents, which began as follows: "Greetings to the king Hezekiah, to the city of Jerusalem, and to the great God." "What!" exclaimed Nebuchadnezzar, "you call Him the great God, and yet you mention His name at the end, whereas it should be at the beginning!" Nebuchadnezzar then ran after the messenger, to take the letter and rewrite it. God, therefore, rewarded him with the rulership of the world; and if the angel Gabriel had not kept Nebuchadnezzar from overtaking the messenger, his power would have become still greater, and the Jews would in consequence have suffered still more at his hands.

Compare Ahab, Son of Kolaiah, in Rabbinical Literature.

NEBUSHASBAN: The first-named of the four chief officers sent by Nebuzar-adan to take Jeremiah out of the court of the guard (Jer. xxxix. 13) and to deliver him into safe hands. The position of this official is not known. The equivalent of the name in Babylonian-Assyrian is probably "Nabu-shuzib-anni" = "Nabu, save me." This same name is found as belonging to one of the sons of Necho I., who paid tribute to Assurbanipal (Brugsch, "Gesch. Aegyptens," pp. 720, 724). It occurs occasionally in the Babylonian-Assyrian inscriptions in lists of names, and is thus found to be given in correct form in the Old Testament.

E. C. I. M. P.

NEBUZAR-ADAN.—Biblical Data: Captain of Nebuchadnezzar's body-guard. Nebuzar-adan entered Jerusalem in 586 B.C., burned the Temple, the king's palace, and the houses of the great, razed the walls of the city, and carried many of its people into captivity. He broke up and carried away the brass pillars of the Temple and all the material of the Temple service that was of sufficient value. The chief priest Seraiah, the second priest Zephaniah, and the chief men of the city, he took to Riblah, in the land of Hamath, and there put them to death (II Kings xxv. 8-22). Five years later, "in the three and twentieth year of Nebuchadnezzar," Nebuzar-adan came again and carried 745 others into captivity (Jer. lii. 30).

E. C. S. O.

——**In Rabbinical Literature:** Nebuzar-adan, called also **Arioch** because he fought the Jews like a lion (comp. Arioch in Rabbinical Literature), was sent by Nebuchadnezzar to conquer Jerusalem because the king was afraid to conduct the war himself (comp. Nebuchadnezzar in Rabbinical Literature). Although Nebuzar-adan had witnessed Sennacherib's defeat before the walls of Jerusalem (Sanh. 95b), he did not hesitate to obey his master's commands. He went to Jerusalem with 300 mule-loads of iron axes. Although made of a kind of iron that shattered ordinary iron, they broke before a single gate of the city was pierced, and Nebuzar-adan was about to go away, fearing a fate similar to Sennacherib's, when he suddenly heard a voice from heaven saying: "Leaper and son of a leaper, O Nebuzar-adan, leap! for the time has come when the sanctuary shall be destroyed and the Temple burned." Then he pounded upon the gate with his one remaining ax, and the gate opened, so that he was able to enter Jerusalem with his army.

When Nebuzar-adan came to the hall of the Temple, he noticed at a certain spot blood which was still bubbling, being the unjustly shed blood of the prophet Zechariah, son of Jehoiada (II Chron. xxiv. 21; comp. ZECHARIAH). Asking the meaning of it, he was told that it was sacrificial blood. He, however, convinced himself at once of the falseness of this statement by ordering many sacrificial animals to be slaughtered, whose blood dried in the ordinary way. On being threatened, the Jews told him the truth, saying: "This is the blood of a priest and a prophet whom the people of Jerusalem have killed because he foretold the destruction of the city." Then Nebuzar-adan said: "I will pacify the murdered prophet." He caused the scholars to be brought in and killed them on the bloody spot. Still, however, the blood was not pacified. He then had the youths who were attending the schools massacred, but with the same result. After having killed 94 times 10,000 people in order to pacify the prophet's blood, it still continued to bubble. Finally he said: "Zechariah, Zechariah! I have killed the best among them. Do you wish that they shall all die?" Thereupon the blood was immediately quieted. This made such an impression upon Nebuzar-adan that he said: "If all these people suffered so much for having killed but one man, what will happen to me?" He then fled from Nebuchadnezzar, sent home his testament, and embraced Judaism (Giṭ. 57b; Sanh. 96b; the Jerusalem sources, Yer. Ta'an. iv. 69a, b, Pesiḳ., ed. Buber, xv. 122a, and Eccl. R. to x. 4, do not give Nebuzar-adan's conversion to Judaism).

In the Haggadah Nebuzar-adan is the type of a reliable and respectful servant; and it is said that he had fastened the image of Nebuchadnezzar, his master, to his wagon, so that he might always feel that he stood in the latter's presence (Sanh. 96b, above; Ex. R. xlvi. 4). Compare JEREMIAH IN RABBINICAL LITERATURE.

E. C. L. G.

NECHO (נכה and נכו): King of Egypt from 610 to 594 B.C.; son of Psam(m)ethik I., of the twenty-sixth Egyptian dynasty. According to Herodotus (ii. 158), he undertook to connect an arm of the Nile with the Red Sea by means of a canal; he was really opening a canal which Rameses II. had begun (comp. Budge, "History of Egypt," vi. 219). Necho did not finish the work, which was completed by Darius I. Necho also employed Phenicians to circumnavigate Africa, which they did in the space of three years (Herodotus, iv. 42).

As the Assyrian empire was tottering to its fall Necho marched (608) into Asia to share in the spoil. Josiah, King of Judah, who sought to check his progress, was defeated and killed by Necho at Megiddo (comp. II Kings xxiii. 29 *et seq.*; II Chron. xxxv. 20 *et seq.*). Three months later Necho summoned Jehoahaz, whom the Judeans had made king, to appear before him at his camp at Riblah, put Jehoahaz in chains, and took him captive to Egypt. He raised Jehoahaz's brother Eliakim to the throne, changing his name to Jehoiakim, and laid upon Judah a tribute of 100 talents of silver and a talent of gold. Whether Necho accomplished more than this in the course of this campaign the sources do not show.

Four years later Necho was again in Asia, and suffered at Carchemish a severe defeat at the hands of Nebuchadnezzar (Jer. xlvi. 2), being compelled to retreat hastily to Egypt. Had not Nebuchadnezzar been called to Babylon by the death of his father, Egypt would have been invaded by the Babylonian. It was, no doubt, Necho who induced Jehoiakim to rebel against Nebuchadnezzar in 599 (II Kings xxiv. 1). This was probably his last attempt to interfere in Palestinian affairs.

No Egyptian inscription from Necho's reign has been found beyond a stele recording the death of an Apis bull.

NECROMANCY: Divination by aid of the dead is said to have been common among the Persians (Strabo, xvi. 2, 39, *νεκυομάντεις*), and at a later time among the Greeks and Romans as well (see passages in Winer, "B. R." ii. 26). The Israelites possibly borrowed the art from the Persians, and practised it extensively, so that the Bible repeatedly forbids it (Lev. xix. 31; xx. 6, 27; Deut. xviii. 11; I Sam. xxviii.; Isa. viii. 19). There were three classes of necromancers, "ob," "yidde'oni," and "doresh el ha-metim" (questioner of the dead), the first two usually being mentioned together. While the general meaning of "ob" and "yidde'oni" is clear, their etymology and exact connotation have not yet been determined. "Ob" is said to denote the soothsaying spirit (in this sense as early as Josephus, "Ant." vi. 4, § 2) or the ghost of the dead (Baudissin, "Studien," pp. 141 *et seq.*; Davies, "Magic, Divination," etc., pp. 86 *et seq.*). The Septuagint generally translates the word by *ἐγγαστρίμυθος* = "ventriloquist," deriving this meaning from the tone of voice adopted by the necromancer. Jewish tradition says: "Ob is the python, who speaks from his armpits; yidde'oni is he who speaks with his mouth" (Sanh. vii. 7; Sifra, Lev. xx. 27). According to the Talmud (*l.c.* 65b), the yidde'oni used a bone of the animal called "yaddua'" in his mouth, which is made to speak by magic. The "possessor of the ob" stooped while speaking, to make it appear as if the spirit spoke from his joints and arms (*ib.*). Two objects are mentioned by means of which the necromancer worked, one being a human skull (but see also Levy, "Neuhebr. Wörterb." i. 537b, *s.v.* זכורו).

Paraphernalia.

Although the Bible does not mention the apparatus used in necromancy, that some sort of paraphernalia was employed is clear from the mention of teraphim, etc. (II Kings xxiii. 24), and also from the expressions which designate the employment of the oracle (*ib.* xxi. 6; II Chron. xxxiii. 6; Lev. xx. 27 *et passim*). The Bible indicates still more clearly the manner of appearance and speech. Samuel was manifested to the witch of Endor as an old man covered with a mantle, so that she immediately recognized him as a man of God. The shade invoked evidently assumed the same shape that he had had in life. The form, however, was visible only to the necromancer, while the questioner heard merely the voice (I Sam. xxviii. 13, 14). The latter sounded as if it came out of the earth, the speech of these necromancers being therefore called whispering and muttering (Isa. viii. 19, xxix. 4). The questioner prepared himself by fasting to be in a proper spiritual condition to receive the ghostly visitant (*ib.* verse 20; Sanh. 65b).

The fact that necromancy was classed with idolatry and all kinds of magic shows its connection therewith, and, probably, its foreign origin (Deut. xviii. 10, 11; II Kings xxi. 6, xxiii. 24; Isa. xix. 3 *et passim*). Necromancy, like idolatry and magic in general, was practised chiefly by women (I Sam. xxviii. 7). Saul, who applied in his distress to a female necromancer, had previously driven from the country all those who practised divination by aid of the dead (*ib.* 9). But Manasseh favored them as well as all other idolaters (II Kings xxi. 6); his elder contemporary, the prophet Isaiah, has in fact given the most explicit references to necromancers (Isa. viii. 19, xix. 3, xxix. 4). Josiah, who took for his guide the newly discovered book of the Law, destroyed them (II Kings xxiii. 24).

In Talmudic Times.

Nevertheless, even in post-Biblical times the necromancers persisted in practising their art, in spite of all measures directed against them, and notwithstanding frequent interdicts in the Torah. The principal passage of the Talmud referring to them has been given above. The teachers of the Talmud call magicians "those that dig up the dead" (B. B. 58a *et passim*) and "those who predict by means of bones of the dead." A Babylonian scholar declared the art and speech of osteomanty to be deceit and falsehood (Ber. 59a). In general, however, the veracity of the spirit was not doubted, since even the ghost of Samuel had been evoked, according to I Sam. xxviii. (see Shab. 152b). It was regarded as a rule that if the necromancer saw the ghost which he evoked, the questioner heard the voice; but if the latter saw the apparition, the necromancer heard the voice. To hear and to see at the same time was impossible (Sanh. 65; comp. Josephus, *l.c.*). When Onḳelos bar Kalonikos, nephew of the emperor Titus, was thinking of embracing Judaism, he evoked the spirits of Titus, Balaam, and Jesus in succession, and asked them for advice. The first two dissuaded him, while Jesus counseled him to carry out his intention (Giṭ. 56b–57b). Rab (d. 247), the foremost teacher of Babylon, "performed some ceremony in the cemetery, and ascertained that 99 out of 100 persons die from the evil eye and that only one dies a natural death" (B. M. 107b, above). A later Babylonian teacher says that the necromancer burned incense to the demon, and thus questioned him (Karet 3b).

A more innocent mode of necromancy was listening secretly to the conversation of the dead (Ber. *l.c.*). Some persons fasted and spent the night in a cemetery, in order that the "spirit of uncleanness" might visit them and enable them to find out the future or other hidden matters (Sanh. 65b; Ḥag. 3b), since the dead were supposed to dwell in an unclean place. This belief may be implied in Isa. lxv. 4 (comp. Acts xvi. 16). This kind of necromancy is perhaps meant in the expression "a consulter with familiar spirits" (Deut. xviii. 11). According to Jewish tradition, necromancy will be punished by God and not by man (Sanh. *l.c. et passim*).

J. L. B.

NEDARIM ("Vows"): A treatise in the Mishnah, Tosefta, and both Talmuds, devoted chiefly to a discussion of the regulations contained in Num. xxx. 2–17. The place assigned to this treatise in the mishnaic order of Seder Nashim differs in the various editions, although it is generally placed third both in the Mishnah and in the Tosefta. In the Mishnah it is divided into eleven chapters containing ninety paragraphs in all.

Ch. i.: The phrases, words, and corruptions of words (*e.g.*, "ḳonam," "ḳonah," "ḳonas," instead of "ḳorban"; "ḥereḳ," "ḥerek," "ḥerep," instead of "ḥerem"; "shebuta," "sheḳuḳa," instead of "shebu'ah") which are considered as vows, oaths, or bans (§§ 1–2); different circumlocutions for the word "ḳorban"; names of the various kinds of sacrifices and parts of the sacrifice which are considered vows (§§ 2–4). These expressions are regarded as vows when one says: "May its use be forbidden me, as the use of a dedicated ḳorban is forbidden"; and any of the expressions noted above or any circumlocution may be substituted for the word "ḳorban."

Ch. ii.: If, on the other hand, one says: "May its use be forbidden me, as the use of things forbidden in the Torah" (*e.g.*, unclean animals), this expression is not considered a vow (§ 1); for one would then be able by his own words to make things as unlawful as are the things forbidden by the Torah itself. The difference between an oath and a vow, and in what respects an oath is considered the more rigorous, and in what respects a vow is so regarded (§§ 2–3); vows with and without restrictions; the difference between the Judeans and the Galileans in regard to the ordinary "ḥerem" (§ 4); evasions which of themselves invalidate vows (§ 5).

Explanation of Terms.

Ch. iii.: Enumeration of the four kinds of vows which scholars have declared invalid in themselves (§§ 1–3); persons who may be deceived by white lies; whether a false oath is permitted in case of necessity (§ 4); interpretation of certain expressions in vows; persons meant by the terms "seafarer" and "landsman." The phrase "those who rest on the Sabbath" includes the Cutæans. but "the children of Noah" are only Gentiles, and "the children of Abraham" only the Jews. "The circumcised" denotes a Jew, even though he is uncircumcised, while "uncircumcised" is applied to pagans, even if they are circumcised; in this connection several maxims of different tannaim are quoted to show the importance and significance of circumcision (§§ 5–11).

Ch. iv.: If one is prevented by vows from enjoying another's society, he may be instructed by the latter in the Midrash, halakot, and haggadot, but not in the Scriptures, and he may also be treated by that person in illness (§§ 1-4); further regulations concerning one's relations with a person whose society he has vowed not to enjoy (§§ 5-8).

Ch. v.: How persons who have a house, bath, or the like in common, but have vowed not to associate with one another, may make use of the public parks and the communal institutions; in this connection it is stated that it was customary to deed such parks and institutions to the nasi as his private property, so that no citizen could deprive another of them.

Vows About Food.

Ch. vi.: What is forbidden to one who has vowed to refrain from boiled, roasted, salted, or preserved food (§§ 1-3); what is forbidden to one who has vowed to refrain from meat, fish, milk, wine, or other things (§§ 4-10).

Ch. vii.: Further details regarding what is understood by vegetables, grain, clothes, house, bed, or city, in connection with vows (§§ 1-5); whether one may enjoy a substitute for what he has vowed to deny himself (§§ 6-7); conditional vows of renunciation for a certain time (§§ 8-9).

Ch. viii.: Further details regarding vows of renunciation for a definite time, and ways of interpreting certain expressions in determining such a time (§§ 1-6); vows of renunciation which may be canceled without asking the opinion of a scholar (§ 7).

Ch. ix.: Remission of vows by a scholar, and circumstances to which the scholar may refer in order to find grounds for such a dispensation (§§ 1-9); the noble conduct of R. Ishmael on remitting a vow which had been made to the detriment of a girl, and how at his death the Jewish women sang a dirge beginning, "O daughters of Israel, weep for R. Ishmael" (§ 10).

Vows of a Daughter.

Ch. x.: Regarding the annulment of a daughter's vows by her father, or of a wife's by her husband (§§ 1-3); the custom of the scholars of canceling the vows of their daughters or wives (§ 4); the time after which a husband may annul the vows of his wife; whether the levir may cancel the vows of his sister-in-law (§§ 5-6); whether a husband may annul at the outset the future vows of his wife (§ 7); the aggravating or ameliorating consequences arising from the rule that the father or the husband may cancel a vow only on the day on which he learns of it (§ 8; comp. Num. xxx. 6, 13).

Ch. xi.: Vows of a wife or a daughter which may be annulled (§§ 1-4); erroneous or partial annulment is invalid (§§ 5-6); interpretation and explanation of the passage Num. xxx. 10 (§ 9); enumeration of the nine virgins whose vows may not be canceled (§ 10); the regulation laid down by the scholars which was intended to make it impossible for a wife to take such vows as would force her husband to seek a divorce, as was customary in ancient times (§ 11).

Gemara.

The Tosefta to this treatise has only seven chapters; it contains various details which serve to explain the Mishnah. Thus, Tosef. i. elucidates the regulation in Mishnah i. 1 referring to the vows of the pious. Both Gemaras discuss and explain the several mishnayot, and both, especially the Babylonian Gemara, contain numerous maxims, statements, stories, and legends. The following interesting sayings from the Babylonian Gemara may be quoted: "A modest man will not easily commit sin"; "The ancestors of the impudent never stood on Mount Sinai" (20a); "The irascible suffer the most diverse pains of hell" (22a); "If the people of Israel had not sinned, they would have had only the Pentateuch and the Book of Joshua" (22b); "Only the man devoid of understanding is poor; for a Palestinian proverb says, 'He who has understanding has all things; but he who has no understanding has nothing'" (41a); "Work is great: it honors the workman" (49b); "Whoever exalts himself will be brought low by God" (55a); "One should not study in order to be called 'scholar' or 'master,' but out of love for the Law; for then fame and recognition will come in due course" (62a); "Take care of the children of the poor, who often become scholars"; "Why have scholars very often no learned children? In order that science may not be thought transmissible by inheritance and that scholars may not pride themselves on an aristocracy of mind" (81a).

Especially noteworthy are the Masoretic remarks on the division into verses, and on ḳeri and ketib, which do not entirely agree with the present Masorah (37b-38a). The passage in the Palestinian Gemara, iii. 2, is also of interest, since in it the various conflicting statements and regulations found in the Torah, such as Lev. xviii. 16 and Deut. xxv. 5 *et seq.*, are collated, and it is explained that these apparently contradictory sentences were pronounced together; Deut. xxv. 5 is, therefore, only an exception to, but does not nullify, the prohibition contained in Lev. xviii. 16. The Palestinian Gemara is also noteworthy for its account of the letters which Judah ha-Nasi I. addressed to R. Joshua's nephew Hananiah, who would not submit to the nasi (vi. 8).

W. B. J. Z. L.

NEDERLANDSCHE ISRAELIET, HET. See Periodicals.

NEGA'IM ("Plagues," "Leprosy"): A treatise of the order Ṭohorot in the Mishnah and the Tosefta, which treats of the rules concerning leprosy and the infection of clothing and dwellings (Lev. xiii., xiv.). In most editions it is the fourth treatise of the order, and it is divided into fourteen chapters containing one hundred and fifteen paragraphs in all.

Ch. i.: Different kinds of leprosy (§§ 1-4); days on which leprosy may first be inspected; deferment of the subsequent inspection to the following day if the day set falls on a Sabbath; the aggravating or ameliorating consequences attending such a postponement (§§ 4-6).

Ch. ii.: Time of day at which leprosy may be inspected; the priests who make the inspection; the priest may not inspect leprosy on his own body, garment, or house. In this connection it is stated that a wise man may not redeem his own vows nor inspect his own firstlings.

Ch. iii.: Those who are defiled by leprosy; time after which, and signs by which, the different kinds of leprosy are declared to be unclean.

Signs of Leprosy.

Ch. iv.: The different signs which indicate that leprosy is unclean; ways in which the different signs cause defilement; concerning the simultaneous appearance of two signs in a case of leprosy.

Ch. v.: Doubtful cases of leprosy; doubtful cases of leprosy in which it is considered as unclean or as clean.

Ch. vi.: Size of the leprous spot, and how it becomes unclean by the sound flesh in it; the twenty-four extremities of limbs, which do not cause uncleanness, although they are sound flesh in a leprous spot; parts of the human body which do not become unclean through a leprous spot.

Ch. vii.: Leprous spots in general which are clean; changes in the spot; cases in which the spot becomes clean by removing the sign of uncleanness; cases in which the leprosy is entirely cut away.

Ch. viii.: The spreading of leprosy over the entire body; cases in which such a spread causes uncleanness, and those in which it causes cleanness; how the reappearance of the extremities of limbs nullifies the effect of the spreading; advantages and disadvantages arising from showing one's leprosy to the priest.

Ch. ix.: Time after which, and signs by which, boils ("sheḥin") and burnings ("miḳwah") are declared unclean.

Ch. x.: Time after which, and signs by which, scall on the head or in the beard ("neteḳ") is declared unclean; similar regulations concerning baldness and its cause.

Leprous Garments and Houses.

Ch. xi.: Garments which may become unclean through leprosy; neither garments of pagans nor garments made of the skins of marine animals or of camel's hair become unclean through leprosy; time after which, and signs by which, leprosy on garments is declared unclean; contact of a leprous garment with other garments.

Ch. xii.: Houses which may become unclean through leprosy, and the symptoms of the form of leprosy which causes this uncleanness; inspection of a house in which leprosy appears; origin of the proverb: "Wo to the wicked and wo to his neighbors!"

Ch. xiii.: Further details regarding a house defiled by leprosy; how a clean person becomes unclean by entering a defiled house, and how an unclean person defiles a house by entering it.

Ch. xiv.: Purification of a leper; concerning the pair of birds which are requisite, the shaving of the hair, and the offering which must be brought.

The Tosefta to this treatise, which has only nine chapters, contains details not found in the Mishnah, and includes other interesting passages, of which the following is the most noteworthy (vi. 1): "There never has been a house infected with leprosy [in the manner described in Lev. xiv. 34 *et seq.*], and there never will be one; the regulations regarding such a house have only a theoretical bearing."

W. B. J. Z. L.

NEGEB ("dry land"): Tract of land in southern Judah, which, though fertile in comparison with the rest of Palestine, is nevertheless regarded as an arid country. The term "Negeb" refers very often to "the south" in general, just as "yam" (lit. "the sea") denotes "the west." Later translators, among others those of the Authorized Version, uniformly render "Negeb" by "the south." Lack of accuracy in keeping the two meanings distinct is noticeable in many instances, as in Gen. xiii. 1, where the Authorized Version renders הנגבה "into the south," while Abraham is represented as traveling northward.

The Negeb was a plateau of moderate elevation (comp. Judges i. 9). Although not well supplied with water, it afforded abundant pasture for cattle (Gen. xx. 1, xxiv. 62, xxxvii. 1, xlvi. 5). The spies whom Moses sent to explore the land of Canaan reported the Negeb to be inhabited by the Amalekites (Num. xiii. 29), but at the time of the Israelitish invasion the Canaanites were located there (Judges *l.c.*). The Negeb, which included twenty-nine cities, besides villages, was assigned by Joshua to Judah; but subsequently a part of it was allotted to Simeon (Josh. xv. 21–32, xix. 1–8). The Negeb was afterward divided into five districts named after their occupants: the Negeb of Judah proper, the Negeb of the Jerahmeelites, the Negeb of the Kenites, the Negeb of the Cherethites, and the Negeb of Caleb (I Sam. xxvii. 10, xxx. 14).

The wealth of the Negeb in the time of Moses is indicated by the fact that the spies brought from it a cluster of grapes which had to be carried on a pole by two people (Num. xiii. 22–23); and later, in the time of Samuel and David, it was still famous for its fertility (I Sam. xv. 9, xxvii. 9, xxx. 16). During the period of the Kings, the Negeb is mentioned as having shared the fortunes of Judah; it suffered especially during the troubled times of Jeremiah. Its cities were among those which the Prophets promised would be restored (Jer. xiii. 19, xvii. 26, xxxii. 44, xxxiii. 13; Ob. i. 19–20).

NEHAMA, JUDAH: Turkish rabbi; born in Salonica 1825; died there 1899. He was rabbi in his native place; for many years vice-president of the local committee of the Alliance Israélite Universelle; corresponded with S. D. Luzzatto, S. L. Rapoport, L. Zunz, Israel Stern, and others; and for a short time edited the journal "El Lunar."

Nehama was the author of the following works: "Historia Universal por el Uso de los Chicos," in Ladino, translated from the English (Salonica, 1861); "Zikkaron Ṭob, ó Biografia del muy Afamado Sabido y Filantropo Dr. Albert Cohn" (*ib.* 1877); "Ḳol 'Anot" (in Hebrew, *ib.* 1888), an address in memory of his father; biography of Moses Alatini (in Hebrew, *ib.* 1888); "Discurso Pronunciado en la Asamblea Generala del 29 Septembre, 1888, por Sentir el Resultado de los Votos por el Comité Local de la Alianza Israelica Universala" (*ib.* 1889); "Miktebe Dodim," letters exchanged between Nehama and his friends, vol. i. (*ib.* 1893), containing also contributions to the history of the Jews in Salonica, of the printing establishments there, etc.

S. M. K.

NEHARDEA (NEARDA): City of Babylonia, situated at or near the junction of the Euphrates with the Nahr Malka; one of the earliest centers of Babylonian Judaism. As the seat of the exilarch it traced its origin back to King Jehoiachin. According to Sherira Gaon (Letter of Sherira Gaon, in Neubauer, "M. J. C." i. 26), Jehoiachin and his coexilarchs built a synagogue at Nehardea, for the foundation of which they used earth and stones which they had brought, in accordance with the words of Ps. cii. 17 (A. V. 16), from Jerusalem (comp. a similar statement in regard to the founding of the Jewish city of Ispahan, in "Monatsschrift," 1873, pp. 129, 181). This was the synagogue called "Shaf we-Yatib," to which there are several references dating from the third and fourth centuries (R. H. 24b; 'Ab. Zarah 43b; Niddah 13a), and which Abaye asserts (Meg. 29a) was the seat of the Shekinah in Babylonia. The Aaronic portion of the Jewish population of Nehardea was said to be descended from the slaves of Pashur ben Immer, the contemporary of King Jehoiachin (Ḳid. 70b).

There are also other allusions in the Talmud (*ib.*) casting doubt upon the purity of blood of the Nehardean Jews. The fact that Hyrcanus, the high priest, lived for a time in that city as a captive of the Parthians (Josephus, "Ant." xv. 1, § 2) may explain the circumstance that as late as the third century certain of its inhabitants traced their descent back to the Hasmoneans. The importance of the city during the last century of the existence of the Second Temple appears from the following statement made by Josephus (*ib.* xviii. 9, § 1): "The city of Nehardea is thickly populated, and among other advantages possesses an extensive and fertile territory. Moreover, it is impregnable, as it is surrounded by the Euphrates and is strongly fortified." Reference to the extent of the territory of Nehardea is made in the Talmud also (Ket. 54a). In addition to the Euphrates, the "King's Canal" (Nehar [Nahr] Malka) formed one of the natural defenses of the city (Ḳid. 70b; Shab. 108b); the ferry over the river (or perhaps over the canal) is likewise mentioned (Ḳid. 70b; Ḥul. 50b). "Nehardea and Nisibis," says Josephus further (*ib.*), "were the treasuries of the Eastern Jews; for the Temple taxes were kept there until the stated days for forwarding them to Jerusalem." Nehardea was the native city of the two brothers ANILAI and ASINAI, who in the first third of the first century C.E. founded a robber-state on the Euphrates, and caused much trouble to the Babylonian Jews. After the destruction of Jerusalem, Nehardea is first mentioned in connection with R. Akiba's sojourn there (Yeb., end). From the post-Hadrianic tannaitic period there is the anecdote referring to the debt which AḤAI B. JOSIAH had to collect at Nehardea (Giṭ. 14b; Bacher, "Ag. Tan." ii. 385).

Mention by Josephus.

Nehardea emerges clearly into the light of history at the end of the tannaitic period. Shela's school was then prominent, and served to pave the way for the activity of the Babylonian academies. Samuel, whose father, Abba b. Abba, was an authority in Nehardea, established the reputation of its academy, while Rab, who likewise taught there for a time, made Sura, situated on the Euphrates about twenty parasangs from Nehardea, the seat of an academy destined to achieve a still greater reputation. The history of Nehardea is summed up in that of Samuel's activity (see SAMUEL B. ABBA). Soon after his death (254) it was destroyed by Papa b. Neser (Odenathus), in 259; and its place as seat of the second academy was taken by Pumbedita.

Naḥman ben Jacob.

Nehardea, however, soon regained its importance; for the eminent Naḥman b. Jacob dwelt there. There are several references to his activity (see Ḳid. 70a; B. B. 153a; Ket. 97a; Meg. 27b). Raba tells of a walk which he took with Naḥman through the "Shoemaker street," or, according to another version, through the "Scholars' street" (Ḥul. 48b). Certain gates of Nehardea, which even in the time of Samuel were so far covered with earth that they could not be closed, were uncovered by Naḥman ('Er. 6b). Two sentences in which Naḥman designates Nehardea as "Babel" have been handed down (B. Ḳ. 83a; B. B. 145a). Sheshet also dwelt there temporarily (Ned. 78a). According to a statement dating from the fourth century, an amora heard in Nehardea certain tannaitic sentences which had until then been unknown to scholars (Shab. 145b; Niddah 21a). Nehardea always remained the residence of a certain number of learned men, some of whom belonged to the school of Maḥuza, which was of considerable prominence at that time, and some to that of Pumbedita. About the middle of the fourth century the famous scholar Ḥama was living at Nehardea; the maxim "By the 'amoraim of Nehardea' Ḥama is meant" (Sanh. 17a) became a canon in the Babylonian schools.

Amemar.

Toward the end of the fourth and at the beginning of the fifth century Nehardea again became a center of Babylonian Judaism through Amemar's activity, though this was overshadowed by that of Ashi, the director of the Academy of Sura. It was Ashi who had the seat of the exilarchate, which belonged as an ancient privilege to Nehardea, transferred to Sura (Letter of Sherira Gaon, *l.c.* i. 32). Amemar attempted in Nehardea to introduce the recitation of the Decalogue into the daily prayer ritual, but was dissuaded from doing so by Ashi. Another of Amemar's liturgical innovations is mentioned in Suk. 55a (on the relation of Ashi to Amemar see Halevy, "Dorot ha-Rishonim," ii. 515 *et seq.*, iii. 68 *et seq.*). Other scholars of the fourth and fifth centuries who are mentioned in the Talmud as natives of Nehardea are Dimi (Ḥul. 113a), who subsequently presided at Pumbedita as second successor to Ḥama (Letter of Sherira Gaon, *l.c.*); Zebid (M. Ḳ. 27b), Naḥman (Ḥul. 95b), Ḥanan (Ḳid. 81b; Niddah 66b), Simai (Sheb. 12b; Mak. 16a). Adda b. Minyomi was called the "judge of Nehardea" (Sanh. 17b). Aḥa of Be-Ḥatim from the vicinity of Nehardea is mentioned by Sherira Gaon (Halevy, *l.c.* i. 25) as one of the saboraic authorities of the sixth century. Mar R. Ḥanina is mentioned, among the earliest geonim of Pumbedita, as residing at Nehardea at the time of Mohammed. This is the last reference in Jewish history to Nehardea. Benjamin of Tudela, however, mentions the ruins of the synagogue Shaf-Yatib, two days' journey from Sura, and one and one-half from Pumbedita ("Itinerary," ed. Grünhut, p. 64).

A few scattered data concerning Nehardea may be added. It was an ancient liturgical custom there to read pericopes from the Hagiographa on Sabbath afternoons (Shab. 116b). The surrounding country was said to be unsafe because of Bedouin robbers (B. B. 36a). An ancient rule of procedure of the court of Nehardea is mentioned in Ket. 87a. Lydda in Palestine, and Nehardea are mentioned in the third century as cities whose inhabitants were proud and ignorant (Yer. Pes. 32a; comp. Bab. Pes. 62b; see Bacher, "Ag. Pal. Amor." i. 60). Nehardea is famous in the history of the Masorah because of an ancient tradition relating to the number of verses in the Bible; it is here said that Hamnuna (Bacher, *l.c.* i. 2) brought this tradition from Nehardea, where he had received it from Naḳḳai (see "M. J. C." i. 174; Strack, "Diḳduḳ Ṭe'amim," p. 56). Certain readings of the Biblical text are characterized by tradition—especially by the Masorah to the Pentateuch Targum (Onḳelos)—as being those of Sura, and certain others as of Nehardea (see Berliner, "Die Massorah zum Targum Onkelos," pp. xiii. *et seq.*, 61-70, Leipsic, 1877).

G. W. B.

NEHEMIAH: Son of Hachaliah; rebuilder of the walls of Jerusalem. The sole source of information about Nehemiah is the canonical book that bears his name, parts of which, at any rate, furnished Ben Sira with the matter for the short notice which he gives of Nehemiah. He was cupbearer to Artaxerxes (identified by De Saulcy with Artaxerxes II., whose reign began 404 B.C.). Owing to a painful report that had reached him of the condition of the Jews in Palestine, he, perhaps with the countenance of the queen-mother or queen, obtained permission to visit Jerusalem, and to rebuild the walls, for which purpose he was furnished with firmans and a supply of timber. Incidentally it is mentioned that he had the title "peḥah" or "tirshatha," equivalent to "viceroy," for twelve successive years (384-372), and apparently again at a later period.

Rebuilds the Walls of Jerusalem.

The rebuilding of the walls (a task which had before Nehemiah's time been repeatedly attempted) was commenced by him with caution, and excited enmity and even armed intervention, which latter, however, Nehemiah showed himself able to resist. The account of the details of the building is not, apparently, from Nehemiah's hand, and would seem to represent the work as more of a national enterprise than would be inferred from Nehemiah's own statements. The account of the inaugural ceremony after completion comes rather late in the book, and was probably written some years after the event. Nehemiah's opponents appear to have been wealthy landowners, not themselves Israelites, but allied with leading families within the city.

After the completion of the walls Nehemiah had to occupy himself with political reforms also, of which one was the restoration to their original owners of lands taken for debt by the wealthier members of the community—a scheme not unlike the "novæ tabulæ" of the classical republics, and regarded by the owners as an ultra-revolutionary measure; for it meant the abandonment without consideration of much property lawfully acquired. According to Nehemiah's account, it was effected with a minimum of friction, owing to his own disinterestedness in relinquishing his claim to the governor's allowances; and it took the form of a cheerful sacrifice on the part of the moneyed class. He tells, however, almost immediately afterward, of attempts on his own life, which he dexterously escaped, and of endeavors to represent his restoration of the walls as the prelude to a declaration of independence. In these attempts residents of Jerusalem took part, either having conspired with or being in the pay of external enemies. Among these instruments were a false prophet and a false prophetess, whom Nehemiah was able to unmask.

Nehemiah's next measure would appear to have been as aristocratic in tendency as the last was democratic. He instituted an inquiry into the pedigrees of the residents of Jerusalem with the view of degrading aliens, and for this purpose obtained a copy of the roll of the families that returned with Zerubbabel. His narrative, however, breaks off without describing the nature of the measure which he adopted or the smoothness with which it worked. It appears from other parts of the book that priestly families were connected by marriage with the aliens, and, though Nehemiah resumed his inquisition on his second visit to Jerusalem, it required the arbitrary exercise of power to carry it through. It is possible that the danger of offending the humbler classes, whom he had won over by his "novæ tabulæ," prevented him from inquiring too strictly into this matter on his first visit.

His Reforms.

The rest of his reforms appear to have been of a religious nature, although, the chapters in which they are recorded being by other hands, there is a want of clearness in the details. He appears with the aid of Ezra to have enforced or reenforced the Mosaic law, especially the provision relating to the sanctity of the Sabbath, which on his second visit he had again to emphasize. He also provided by a regular system of forced contributions for the maintenance of the Temple services and of the various castes who took part in performing them. He writes with unusual naïveté; and the accuracy of his personal narrative has rarely been questioned. It seems, however, surprising that the accredited representative of the sovereign court should, in carrying out his commission, have met with fierce opposition, leading to the imminent risk of skirmishes and battles; but the classical historians give no high idea of the administrative capacity of Artaxerxes II. Further, there appears to be some contradiction between the statements that he went to Jerusalem on a visit for a strictly limited time (ii. 6), and that he went to Judea as "peḥah" and held office for twelve years (v. 14 and xiii. 6); but this may also be due to the fragmentary nature of his memoirs.

From Nehemiah's own account of his conduct it may be gathered that he was an adroit politician, a wary leader and soldier, and a skilful organizer, though not free from pedantry and fanaticism; and it is probable that Ben Sira, in naming him after Zerubbabel as one of those to whom the Jews owed their restoration and reconstitution as a nation, only does him justice. For without walls Jerusalem could not, according to ancient ideas, have ranked as a place of importance, and the measure, of which there is an obscure mention (xi. 1), of obtaining a resident population fitted for its size, by drawing lots, would also do much toward restoring its former grandeur. His name was, however, not popular with the tradition which has come down in the Talmuds; but in that which is preserved in the Second Book of Maccabees many services are attributed to him of which the Bible knows nothing. Among these are the miraculous production of fire, celebrated by a feast called "Naphthar" (II Macc. i. 36); the compilation of a sacred library (*ib.* ii. 13); and even the building of the Temple and the altar (*ib.* verse 18). These statements are not worthy of credit; and it is evident that Nehemiah's personality was overshadowed by that of Ezra, whose services, though less brilliant, were more lasting.

E. G. H. D. S. M.

——**In Rabbinical Literature:** Nehemiah is identified in one haggadah with Zerubbabel, the latter name being considered an epithet of Nehemiah and as indicating that he was born at Babylon ("Zera'+Babel"; Sanh. 38a). With Ezra, he marks the spring-time in the national history of Judaism (Cant. R. ii. 12). A certain mishnah is declared by the Rabbis to have originated in the school of Nehemiah (Shab. 123b). Still, Nehemiah is blamed by the Rabbis for his seemingly boastful expression, "Think upon me, my God, for good" (Neh. v. 19, xiii. 31), and for his disparagement of his predecessors (*ib.* v. 15), among whom was Daniel. The Rabbis think that these two faults were the reason that this book is not mentioned under its own name, but forms part of the Book of Ezra (Sanh. 93b). According to B. B. 15a Nehemiah completed the Book of Chronicles, which was written by Ezra.

W. B. M. Sel.

NEHEMIAH, BOOK OF: A work ascribed to Nehemiah, but bearing in some canons the title **Esdras II.** or **Esdras III.**, having been attributed to Ezra on the ground that Nehemiah's self-assertion deserved some punishment (Sanh. 93b), or because, having ordinarily been written on the same scroll with the Book of Ezra, it came to be regarded as an appendix to it. The book consists ostensibly (i. 1) of the memoirs of Nehemiah, compiled, or at any rate completed, toward the close of his life, since he alludes to a second visit to Jerusalem "at the end of days" (xiii. 6, A. V. margin), which must mean a long time after the first. In xiii. 28 he speaks of a grandson (comp. xii. 10, 11) of the high priest Eliashib as being of mature years; whence it appears that the latest event mentioned in the book, the high-priesthood of Jaddua, contemporary of Alexander the Great (xii. 11, 22), may have fallen within Nehemiah's time. The redaction of his memoirs occurred probably later than 360 B.C., but how much later can not easily be determined. The first person is employed in ch. i.–vii. 5, xii. 31–42, xiii. 6 *et seq.* Sometimes, however, Nehemiah prefers to speak in the name of the community (ii. 19, iii. 33–38, x.), and in some places he himself is spoken of in the third person, either with the title "tirshatha" (viii. 9, x. 2) or "peḥah" (xii. 26, claimed by him in v. 14; A. V. "governor"), or without title (xii. 47). The style of these last passages implies somewhat that Nehemiah is not the writer, especially that of the third and fourth: "in the days of Nehemiah the governor, and of Ezra"; "in the days of Zerubbabel, and in the days of Nehemiah." The portions of the book in which the first person is used are marked by repeated prayers for recognition of the author's services, and imprecations on his enemies (iii. 36, 67; v. 19; vi. 13; xiii. 14, 22, 29, 31), which may be taken as characteristic of an individual's style; and indeed the identity of the traits of character which are manifested by the writer of the opening and closing chapters can not escape notice. Moreover, the author's enemies, Sanballat and Tobiah, figure in both parts.

Documents Inserted.

The unity of the book is marred by the insertion of a variety of documents, chiefly lists of names. These are the following: (1) Ch. iii. 1–32, a list of persons who helped to rebuild the walls of Jerusalem. This document agrees with ch. xii. in exhibiting remarkable acquaintance with the topography of Jerusalem; and it also gives some curious details about the persons who took part in the work, some of whose names figure in other contexts. It is, however, observable that Eliashib is said to have been high priest at the time of Nehemiah's first visit; and the same is suggested by xiii. 7, whereas in Ezra x. 6 it is suggested that Eliashib's grandson (Neh. xii. 11, 12) was in office thirteen years before Nehemiah came. If the list of high priests in ch. xii. be correct, it is clear that Eliashib could not have been in office in Nehemiah's time; and this fact discredits the historical character of the document, at any rate to a certain extent; for the possibility of Nehemiah, at a great distance from the scene of the events, having mistaken some of the details, can not be quite excluded. The account of the building given in this chapter represents it as more elaborate and national than would be imagined from iii. 33–38.

(2) Ch. vii. 6–73, a list of the exiles who returned with Zerubbabel. This is a document which Nehemiah says he discovered (vii. 5); and it is embodied in the narrative of Ezra also (Ezra ii.). The difference between the copies is such as can be attributed to the not overstrict ideas of accuracy current in antiquity. Some difficulty is occasioned by the fact that the narrative which deals with the days of Zerubbabel is continued without break into a

scene which ostensibly took place in Nehemiah's own time; in other words, though the document is introduced as extraneous, it is not clear at what point it ends. Indeed, the purpose for which Nehemiah says he gathered the people, namely, to discover their genealogies (vii. 5), does not appear to have been realized, but instead the reader is taken into a scene at which the Law is publicly read by Ezra. Here again resort may be had to the hypothesis of carelessness on the author's part, or to that of compilation by an unscientific collector.

(3) If the Septuagint be believed, ch. ix. contains a discourse delivered by Ezra.

Solemn League and Covenant.

(4) Ch. x., containing a solemn league and covenant, bearing eighty-four signatures of persons who undertook to observe the Law of Moses and discharge certain duties. The number of signatories is evidently a multiple of the sacred numbers 7 and 12, and the list is headed by Nehemiah himself. Of the signatories some are persons about whom something definite is learnt in either Ezra or Nehemiah (*e.g.*, Sherebiah, Ezra viii. 18; Hanan, Neh. xiii. 13; Kelita, Ezra x. 23), but those called "the heads of the people" appear all to be families, their names occurring to a great extent in the same order as that in which they occur in the list of ch. vii. This mixture of family names with names of individuals excites suspicion; but the unhistorical character of this document, if proved, would greatly mar the credit of the whole book. The framing of such a document at a time of religious revival and excitement has no a priori improbability.

Registers.

(5) Ch. xi. contains a list of persons who drew lots to reside at Jerusalem, with notices of the assignment of offices and of the residences of officials. This document agrees very closely in places with one embodied in I Chron. ix.; indeed, both would appear to be adaptations of a register originally found in a "book of the kings of Israel and Judah" (*ib.* verse 1). It might seem as if the use of the word "king's" in Neh. xi. 23, 24, having been taken over from the older document, had given rise to the charge of which Nehemiah complains in vi. 6, where his enemies accuse him of making himself king; and indeed the arbitrary character of some of his measures (xiii. 25) would in part justify such a charge. If one may judge by the analogy of Mohammedan states, there would be nothing unusual in a provincial governor taking that title. The purpose of the register must have been seriously misunderstood by either Nehemiah or the Chronicler; but it may be inferred with certainty, from the occurrence of the same document in such different forms in the two books, that the compiler of Nehemiah is not identical with the Chronicler.

(6) Ch. xii. 1-26 gives a list of priests and Levites who returned with Zerubbabel, carried down, very imperfectly, to Nehemiah's time, or perhaps later. The "book of the chronicles" (verse 23) is cited for parts of it; but this document covers some of the same ground as the last, and it might seem as if both were rough drafts, never finally worked up. It is of course open to the critic to regard the whole work as compiled by Nehemiah, who, where his memory or knowledge failed him, may have inserted these documents, or have ordered his secretaries to insert accounts of scenes. Indeed, the expression "and in all this" (xiii. 6), which reintroduces the personal narrative, implies that the author had before him some matter which he had not himself described.

It is more usual to suppose that Nehemiah's memoirs were utilized by another writer, who did not take the trouble to alter the first person where it occurred; such a supposition involves no impossibility, provided the compiler be not identified with the compiler of Ezra or the compiler of the Chronicles; for the utilization by these authors of documents also incorporated in Nehemiah involves improbabilities calculated to outweigh any arguments that can be urged on the other side. Ben Sira (Sirach [Ecclus.] xlix. 13), in describing Nehemiah's work, evidently refers to the account found in Neh. i.-vii. 1; from the short space that he devotes to each hero no inference can be drawn with regard to the existence of the whole work in his time. The fact of its being contained in his canon would, however, make it probable that it existed in its present form as early as 300 B.C., a date separated by some decades only from the last mentioned in the book, and by less than a century from Nehemiah's first visit to Jerusalem.

From the Second Book of Maccabees it is learned that various legends were current about Nehemiah when it was written, to which the Biblical book contains no allusion. Possibly those writers who reduce the credible element to the smallest amount do not sufficiently take into account the rapidity with which events succeed one another, the fragmentary character of modern knowledge of post-exilic Israel, and the general complication of political phenomena.

BIBLIOGRAPHY: Epochs are marked in the study of the book by the treatise of Hoonacker, *Zorobabel et le Second Temple*, Paris, 1892; and that of Kosters, *Het Herstel van Israel*, 1894. Skepticism is carried to its furthest by C. C. Torrey, in Stade's *Zeitschrift*, 1896, 2d Supplement. Comp. also Hoonacker, *Nouvelles Etudes sur la Restauration Juive*, Paris, 1896. Of importance also are E. Meyer, *Die Entstehung des Judenthums*, 1896, and J. Geissler, *Die Literarischen Beziehungen der Esramemoiren*, Chemnitz, 1899, in which the literature is best collected.

E. G. H. D. S. M.

NEHEMIAH OF BETH-HORON: Amora of the first generation; lived in the third century at Beth-horon, a small town northwest of Jerusalem. In the different sources he has various names, being called either "Nehunya [his correct name; Suk. 44a] from the Valley of Beth-horon" (*i.e.*, from lower Beth-horon, there being an upper town of this name), "Ḥunya of Horon" (Yer. Sheb. 38c), or "Ḥanina of Beth-horon" (Yer. 'Ab. Zarah 42c). He seems to have been highly respected, both as a scholar and as a pious man. His advice was frequently sought in the regulation of the calendar at Jerusalem; and it was said that whenever he went to the city for that purpose, the waters divided before him (*ib.*). Only a few of his halakic sentences have been preserved. R. Johanan transmits in his name some halakot said to be based on a very ancient tradition (Suk. 44a). Some haggadic sentences by him have also been preserved, *e.g.*, Gen. R. lxxiii. and Yer. Ma'as. Sh. 55d, although this latter interpretation is ascribed in the Babylonian Talmud (M. Ḳ. 5a) to R. Abbahu.

Nehemiah had a learned son named **Uzziel**, who is mentioned in Yer. Ma'as. Sh. (*l.c.*). It appears, from a comparison of this passage in Yerushalmi with that in the Babylonian Gemara (M. Ḳ. 5a), that this son was named after his grandfather, who was apparently a prominent man, being called "Uzziel Rabba" = "Uzziel the Great" (M. Ḳ. *l.c.*).

NEHEMIAH B. HASHIEL (AMMID). See Pseudo-Messiah.

NEHEMIAH HA-KOHEN: Polish cabalist and Shabbethaian preacher; died at Amsterdam shortly after 1690, or, according to another account, in Poland in 1682. Owing to Nehemiah's wide knowledge of the Cabala he was sent by the Polish communities in 1666 to the Turkish city of Gallipoli, where Shabbethai Ẓebi was at that time detained, in order that the latter's claim to being the Messiah might be investigated. Shabbethai Ẓebi was at first pleased with the arrival of Nehemiah; but after a long discussion Nehemiah frankly declared him to be nothing else than an impostor. Shabbethai and his followers thereupon decided secretly to kill Nehemiah, but the latter detected their design, and ran into the street, shouting that he wished to embrace Islam. Immediately the turban was placed on his head and he was declared to be a Moslem.

To the Jews Nehemiah stated that his conversion was only temporary, in order to enable him to expose the pseudo-Messiah to the sultan. He was indeed sent by the governor to Adrianople and received by the sultan, who rewarded him for his acceptance of Islam; and, as a result of the information given by him concerning Shabbethai, the latter was brought under guard to the same city.

When later Nehemiah returned to his native country he declared himself to be a fervent adherent of Ẓebi, relating wonders performed by the latter as the Messiah. Moreover, he pretended to be himself "Mashiaḥ ben Yosef" (the Messiah, the descendant of Joseph), the precursor of the great Messiah, the descendant of David. In consequence the Polish communities excommunicated him.

Nehemiah then went to Germany, where he changed his mode of dress and used the name of Jacob. He was, however, recognized by his countrymen, and left the place. He then wandered from town to town till 1690, when he arrived at Amsterdam, old, half blind, and covered with rags; here also, despite the name Jacob, he was recognized.

According to another account, he became again a very pious Jew, on his return to Poland passing his time in fasting; and even before going to the East he was regarded as a holy man and styled "the prophet." It is said that a certain beggar named Jacob Namirov, half mad but well versed in the Talmud, pretended or lived under the delusion that he was "Nehemiah the prophet," and wandered from one place to another under the latter's name until 1687, when he was recognized by his countrymen, who declared that the true "Nehemiah the prophet" had died in 1682.

K. M. Sel.

NEHEMIAH BEN KOHEN ẒEDEḲ: Gaon of Pumbedita from 960 to 968. While his predecessor, Aaron b. Sargado, was still in office, Nehemiah tried to have him removed; but the college insisted on retaining him, as he was in every respect superior to his opponent. After Sargado's death Nehemiah finally succeeded in seizing the office by a trick, although the majority of the college, headed by the ab bet din, R. Sherira, refused to recognize him, and he was supported by only a few members and some wealthy laymen. Nothing is known of his scholarly attainments or of his activity as gaon.

NEḤUNYA OF BETH-HORON. See Nehemiah of Beth-Horon.

NEḤUNYA BEN HA-ḲANAH (called also **Neḥunya ha-Gadol** = "the Great"): Tanna of the first and second centuries. It appears from B. B. 10b that Neḥunya was a contemporary, but not a pupil, of Johanan b. Zakkai. He was the teacher of Ishmael b. Elisha. Neḥunya was rich and had a large retinue of servants; but he was distinguished for his meekness and forgiving nature, to which he attributed his attainment of great age (Meg. 28a); two short prayers composed by him exhibit the same qualities (Ber. iv. 2; Yer. Ber. iv. 2).

According to the statement of R. Johanan (Shebu. 26a), Neḥunya interpreted the entire Torah by the hermeneutic rule known as the "general and particular" ("kelal u-feraṭ"), which rule has also been adopted by his pupil Ishmael in eight of his thirteen hermeneutic rules. Neḥunya is frequently mentioned in the Talmud; in Ḥul. 129b he is referred to as the antagonist of Eliezer and Joshua in regard to a halakah (comp., however, 'Eduy. vi. 2). He said that the Pharaoh of the Exodus was rescued from the Red Sea, that he repented, that he afterward reigned in Nineveh, and that it was he who in the time of Jonah exhorted the inhabitants of Nineveh to repentance (Pirḳe R. El. xliii.). Neḥunya is known also for his ethical saying: "Whoso receives upon him the yoke of the Torah, from him is removed the yoke of royalty and that of worldly care; and whoso throws off the yoke of the Torah, upon him is laid the yoke of royalty and that of worldly care" (Ab. iii. 6; Ab. R. N. recension B, xxxii. [ed. Schechter, p. 68]).

As Ishmael b. Elisha, Neḥunya's disciple, is regarded by the cabalists as their chief representative, Neḥunya is considered to have been Ishmael's teacher in mysticism also. He is generally supposed to have been the author of the daily prayer beginning אנא בכח, the initials of which form the forty-two-lettered name of God. He is also supposed by some to have been the author of the Bahir and of the "Sefer ha-Peli'ah" (see Ḳanah, Abigdor).

W. B. M. Sel.

NEHUSHTAN: Bronze figure of a serpent which was broken in pieces by Hezekiah at the beginning of his reign (II Kings xviii. 4). It was identified with the bronze serpent raised by Moses in the desert in order to heal the Israelites from the bites of the poisonous serpents to which they were exposed (Num. xxi. 4–10). The Rabbis regarded the word "Nehushtan" as in the dual number, and believed that sacrifice to it involved the loss both of the present and of the future life (Midr. Esfah in Yalk., Num. 764). In the baraita Ber. 10b, which was incorporated in the Mishnah (Pes. iv. 8), the additional information is given that the destruction of the bronze serpent was applauded by the people.

Modern exegesis holds two different opinions in regard to the meaning of the word "Nehushtan," which is explained either as denoting an image of bronze, and as entirely unconnected with the word "naḥash" (serpent), or as a lengthened form of "naḥash" (comp. νεεσθάν in the Septuagint), and thus as implying that the worship of serpents was of ancient date in Israel. The assumption that the tradition about "Nehushtan" is not older than the time of Hezekiah is, however, not contested.

NEIGHBORING LANDOWNERS: The legal maxim "Sic utere tuo ut alienum non lædas" (So use your own that you may not injure another's [property]) is fully recognized in the Mishnah (B. B. ii.) by the imposition of the following restraints:

(1) A man should not dig a cistern, a cellar, an irrigating-canal, or a laundry-tank so near to that of his neighbor as not to leave three palms' distance between the walls or boundaries; and he must plaster his own.

(2) One must keep his vegetable (olive) offal and dung and brine and lime and flints three palms distant from his neighbor's wall; also his plants and plow-furrows and urine. The same distance must be kept from hand-mill to hand-mill and from oven to oven. He must not erect an oven in his own house without leaving four cubits between its top and the joists above, nor in an upper story without a layer of earth of three palms under it; nor a cooking-stove without such a layer one palm in height. Even then, if fire breaks out, he must reimburse his neighbor's loss (R. Simeon to the contrary being overruled).

Objectionable Occupations.

(3) One must not open a bakery or a dye-house or a cow-stable under his neighbor's wareroom. The former two are permitted under a wine-store, the heat not injuring Palestinian wines. A man may lawfully object to the opening of shops in the same court in which he lives, because the noise of the customers disturbs his sleep; but he may not forbid any one from making commodities in the court and selling them elsewhere, nor may he object to the noise of a hammer, of a hand-mill, or of children.

(4) Windows should be placed four cubits above or below the wall of a neighbor, so that the latter can not from his wall look in; and four cubits away, so that the wall may not darken them; the builder of the wall to keep the distance.

(5) A ladder should be kept four cubits away from a neighbor's dove-cot, so that weasels may not have access to the pigeons; and a wall a similar distance from a neighbor's roof-gutter, to give him room for a ladder. A man should not set up a dove-cot in his field unless he has fifty cubits of land around it.

(6) Trees should be planted twenty-five cubits from a walled town; carob- and sycamore-trees (on account of their thick foliage) fifty cubits away. If the town was there first, the owner of the trees must cut them down without compensation; if the town was built later, with compensation. In like manner and measure trees should be kept at a distance from a neighbor's cistern.

(7) A fixed thrashing-floor should be situated at a distance of at least fifty cubits from a town; and a man should not have one on his ground unless he has fifty cubits of land around it in each direction, so that the chaff may not injure the orchards or plowed fields of his neighbors.

Tanneries.

(8) Carcasses and graves and tanneries should be kept fifty cubits from any town; and a tannery should be restricted to the east of a town.

(9) In like manner vats for decomposing flax must be kept at a distance from a neighbor's lawn, pear-trees from his onions, and mustard-plants from his beehives. (Some of these rules are evidently built on mistaken notions as to what is harmful.)

(10) A man should not plant a vine or any tree nearer than four cubits to his neighbor's field. If there is a fence between the fields, each one may plant next to the fence; but when the roots spread into the field of a neighbor, the latter may cut them out to a depth of three palms so that they may not interfere with his plow; and in digging a cistern or cellar he may cut them out to the necessary depth and keep the wood.

(11) When a tree bends over the field of a neighbor, the latter may cut it off high enough to admit the passage of a plowman's ox-goad; if the tree is a carob or a sycamore, or if the land needs irrigation, he may cut off the branches along the plumb-line.

(12) When a tree hangs over the public highway, the owner should cut the limbs off high enough for a camel with its rider to pass under.

No trace of any of these provisions can be found in the Pentateuch. In the Babylonian Talmud some of them are modified to conform to the conditions of the country between the Euphrates and the Tigris. In the later codes (*e.g.*, that of Maimonides, "Yad," Shekenim), and the Shulḥan 'Aruk also (Ḥoshen Mishpaṭ, 153–156), many of the provisions are changed or omitted for like reason, but other provisions are treated in connection with them which belong rather to communal government. Thus Maimonides adds to the rules of the Mishnah: "A hand-mill should be set at least three palms away from the neighbor's wall, not to heat it and not to annoy the neighbor's family; also a baking-oven, so as not to overheat the wall. A stone on which clothes are washed should be removed four cubits, as the water would weaken the wall. Urine should be kept three palms away from a brick wall and one palm from a stone wall."

On the other hand, Maimonides follows the dissenting opinion of Rabbi Jose in the Mishnah, and says, "the owner of a mustard-plant need not remove it from the neighbor's beehive; the bees should rather be kept away from the mustard-plant"; and he extends this reasoning to other parts of B. B. ii. 9. He teaches also that when a tree is planted at the proper distance from a neighbor's cistern, the owner of the tree is not at fault when the roots in growing spread so as to penetrate the cistern. He also recognizes the right of one who owns a wall at the edge of his lot to lateral support from the neighbor's soil. Not only should this soil not be dug up, but its owner should do nothing to prevent its being trodden down and hardened; *e.g.*, he should not build walls near together at right angles to it. The legality of this extension of the rule is, however, doubted.

Neighboring Landowners as בני המצר (= "Abutters"): The right of preemption which belongs to joint owners in general and to abutting landowners is unknown to Bible and Mishnah, and seems to have been evolved first by the Babylonian sages. Perhaps it was suggested to them by some custom of the new Persian kingdom, but they rested it wholly on the Scriptural passage: "Thou shalt do that which is right and good in the sight of the

Lord" (Deut. vi. 18), deducing therefrom the duty of keeping, in intercourse with one's fellow men, "inside the line of justice." The Talmud treats this subject in only one place (B. M. 108a, b). All the rules there given Maimonides has arranged clearly ("Yad," *l.c.* xii. 4-17) as follows:

(1) If one among brothers (coheirs) or other joint owners sells his share to a stranger, the other brothers or part owners (or any one of them) may take it from the buyer and pay him back the price paid by him, so as not to have a stranger among them.

(2) When one sells his ground to another, his neighbor owning adjoining land has the right to pay the price and to evict the buyer; and the buyer is then treated as the agent of the abutting owner; and whether the sale be made by the owner in person or through an agent or by the court, the law of preemption governs. Even though the distant buyer be a scholar, and the abutter be of "the people of the land," the latter is preferred (quoting Deut. vi. 18).

(3) When there are several abutters, they all have the right of preemption; they can buy out the purchaser, contributing the money equally. But if one anticipates the others and buys, he can hold the lot against the others; and so several abutters who are on the spot can anticipate others who are absent.

(4) When a joint owner sells his share to another joint owner, or a sole owner to one of several abutters, the other joint owners or abutters have no right of preemption.

(5) Where one sells all his property, the abutter of one field can not evict the buyer; nor does the abutter's right arise upon a sale to the former owner, nor against one who buys from a Gentile.

(6) Where one sells his field to a Gentile, he is put under the ban till he enters into an undertaking of guaranty against any trespass by the Gentile, and that the latter will deal toward Israelite abutters according to this preemption law.

(7) The abutter has no preemption in renting land.

(8) The sale can not be disturbed by the abutters where the owner sells to the mortgagee land which is under mortgage, or where he sells a distant field for means to redeem his home farm, or a poor field for the means to redeem a good one, or to find means to pay his dues to the government, or for funeral expenses, or for alimony to wife or daughters; for in all these cases the seller is pressed and might lose his sale if the buyer had to fear an eviction by the abutters. (Authorities later than the Talmud consider the case in which the abutter denies that the sale was brought about by one of these causes. If he can not prove the contrary, the buyer may clear himself by the "lesser oath." The abutter may also be required to prove that he owns the neighboring field, and is not a mere renter, metayer, or trespasser.)

(9) A sale to fatherless infants or to a woman is not liable to be set aside by the abutters.

(10) The owner of a building or of trees, if he has any interest in the ground, has the rights and lies under the duties of an abutter. When the next owner is separated from the old field by a hedge of trees, a high and solid building, or a deep ditch, if even one furrow can be run through from field to field, the abutter's rights attach; otherwise not.

So far Maimonides. In Ḥoshen Mishpaṭ, 175, the law of preemption by abutters is treated much more at large, following later authorities; *e.g.*, the abutter may complain that the seller and the distant buyer through collusion (κοινωνία) have named a higher price than was actually paid; and if this price is more than the value of the land, the purchaser must either clear himself by the "greater oath" or bring witnesses to prove the larger payment (§ 9). This code also recites that the abutter must, in order to enforce his right, be ready at once with his money; he may not say to the buyer, "Wait till I earn the money, and I will then pay" (§ 25). Nor if he is an infant, or sick, or abroad at the time when he hears of the sale, may time be asked for him to set up his right of preemption; for this would be a hardship on the buyer, and would discourage the sale of land (§ 34).

The fulness of details in the Ḥoshen Mishpaṭ, supported as they are by older codes and by the responsa of great rabbis, shows that the abutter's right of preemption was by no means a dead letter, but was exercised wherever Jews dwelt together as landowners.

W. B. L. N. D.

NE'ILAH: The last of the five services held on the Day of Atonement. The earliest mention of it is in the Mishnah (Ta'an. 26a), where it is said: "On three occasions the priests pronounce the benediction four times in the day, namely, at the morning, special [Musaf], and afternoon sacrifices and at the closing of the gates" ("Ne'ilat She'arim"). These three occasions are the Day of Atonement, other fast-days, and the days of "ma'amad" (local celebrations held in the country towns simultaneously with offerings brought in the Temple by delegates from them; see PRIESTHOOD). A baraita of unknown origin, but probably not older than the first half of the third century, mentions the five services of the Day of Atonement, beginning with the services held on the eve of the day and closing with Ne'ilah (Pes. 3a), which is here not called "Ne'ilat She'arim" as in the Mishnah. In the third century the principle of this prayer was still a subject of controversy between Rab (Abba Arika), on one side, and Samuel and R. Johanan, on the other. Rab demanded that Ne'ilah should be a special service, while Samuel considered the recitation of the formula of self-humiliation, "What are we? What is our life?" etc. (still found in the ritual), as sufficient.

Another discussion arose, on the meaning of the word itself. R. Johanan held that "Ne'ilah" meant the closing of the gates of the Temple, while Abba claimed that it meant the closing of the gates of heaven (Yer. Ta'an. 7c). Both the Sephardic and the Ashkenazic rituals express the latter idea in their anthems; the Ashkenazic saying: "Open for us the gate at the time of the closing of the gates," and the Sephardic still more clearly: "At the time of the closing of the heavenly gates forgive our iniquities."

It would seem that R. Johanan's interpretation is correct. In the Temple at Jerusalem the priests pronounced the benediction at every sacrificial service. On especially solemn occasions they pro-

History of the Service.

nounced the benediction a second time, when the gates were to be closed and the last worshipers dismissed. Such an occasion was the Day of Atonement. After the destruction of the Temple, and especially after the Bar Kokba rebellion, when the synagogal service was modeled strictly after that of the Temple, the custom of pronouncing a final benediction at the end of the service was introduced. This benediction seems to have been preceded by another confession of sin. Rab, who had a decisive influence on the crystallization of the ritual (Weiss, "Dor," iii. 157), demanded that a new Tefillah be added to the four of the other holy days; and his opinion prevailed.

Owing to the fact that the Talmud quotes prayers only by the opening words, it is difficult to decide how the present Ne'ilah prayer, which differs considerably in the various rituals, was developed. From the statement of Samuel (Yoma 67b) it would appear that the oldest portion of the Ne'ilah service is the confession of sins, beginning with the above-cited words, "What are we? What is our life?" The passage following it, beginning with the words, "Thou hast distinguished man from the beginning," and dwelling on the power of repentance, is also old, inasmuch as it is found in both rituals, the Sephardic as well as the Ashkenazic, while the introductory passage in the latter, beginning with the words, "Thou holdest out a hand to the transgressors," etc., is much later, though it is met with as early as the thirteenth century. A noteworthy feature of this passage, and to some extent of the whole Ne'ilah service, is the emphasis laid on repentance, while fasting, as well as the expectation of seeing the sacrificial cult revived, is passed over in silence. Throughout the service the word חתמנו ("seal us") takes the place of כתבנו ("inscribe us" [in the book of happy life]), which is employed from Rosh ha-Shanah in all services up to the Ne'ilah.

Extraneous Elements.

The piyyuṭim and seliḥot of the Ne'ilah service are of comparatively late origin. Evidently they merely served the purpose of prolonging the service, which had to begin before twilight, until nightfall. Thus there is found in both the German and the Polish rituals a potpourri of various hymns, different in each case. Three anthems in the Ashkenazic ritual begin with the words "Father," "Son," and "Nature." At the end of the service the reader and congregation loudly proclaim seven times "The Lord is God" (this profession of faith being called "Shemot" = "sacred names"), evidently recalling Elijah's invocation on Carmel (I Kings xviii. 39). This custom dates from the thirteenth century. Later sources mention two other passages, "Shema' Yisrael" and "Blessed be the name of His glorious kingdom for ever and aye"; the former to be recited once, the latter three times. These formulas have become invested with a special solemnity, since they are customarily employed in the chamber of the dying. The Ḳaddish and a blast on the shofar conclude the service. It is customary to have the Ne'ilah recited by the rabbi or by a prominent member of the community.

Traditional Melodies.

The traditional intonations of the Ne'ilah are well calculated to excite the emotions of the worshiper. The prevailing chants and melodies are those which characterize the Days of Penitence generally (see Kerobot; Music, Synagogal; Seliḥot); but in contrast with the other services, a cheerful and more confident note is struck at the outset. This is afforded in the Sephardic ritual by the hymn El Nora; in the Ashkenazic, by the especially characteristic melody reserved for the Ḳaddish after the introductory psalm, and by the opening passage of the "'Amidah." The form of this melody preserved in Berlin and some other localities of Germany is notably bright and inspiriting; but this modernized development dates only from the eighteenth century (see Marksohn and Wolf, "Auswahl Alter Hebräischer Synagogal-Melodien," No. 11, Leipsic, 1885). The German tradition generally has been influenced in the same direction; and this tendency has changed the tonality of the closing phrases from the earlier form, which is preserved by the Polish school of cantors. But these have, on the other hand, modified the original elsewhere in the direction of plaintiveness.

As a complete compilation, the melody took shape rather later than the other prayer-motives and melody-types, which were already definite in the medieval period (see Music, Synagogal). Its opening and closing phrases are direct quotations, the first (as far as A in the accompanying transcription) derived from the beginning of the "reshut" and versicle theme for the morning of the Day of Atonement (see Ḳerobot), and the last (commencing at D in the transcription) from the end of the prayer-motive (see Mi Kamokah; Music, Synagogal) of the evening preceding, or "Kol Nidre" service. Prefaced to this closing phrase is an ancient Oriental figure (between B and C in the transcription) occurring elsewhere in the traditional melodies (see Geshem; Mizmor Shir). The intermediate passages, of which the German version is probably the more original, are mere connecting phrases imitated from other passages in the penitential music, but successfully binding the whole in a homogeneous melody.

Several of the sections quoted from propitiatory poems are accompanied by the tunes for these hymns when forming part of the penitential prayers on the previous days (see Adonai, Adonai; Bemoẓa'e; Ḳerobot; Seliḥot; Yisrael Nosha'; Zekor Berit). The others are associated with a tender melody already heard in the Atonement services to the chief refrain-hymn "Ki Hinneh ka-Ḥomer" sung the previous evening. With its closing phrase are also associated strains previously utilized in the services of the day itself; so that the melody of the fast is, so to speak, reconcentrated in its final prayers. The last of these extracts when chanted in its proper place eleven days later, after the processions on Hosha'na Rabbah, is sung to the

Ne'ilah melody, in musical allusion to the cabalistic fancy that that day saw the final registration of the heavenly decrees sealed as the Day of Atonement came to a close.

As the service nears its climax, the melodies become severer in tone and broader in expression. This is especially marked in the antiphonal responses of Abinu Malkenu and in the solemn profession of the Shemot. Here, however, as in the earlier portion of the service, the strains characteristically

The Shemot.

associated with the season of penitence are often again utilized. The short concluding sevenfold declaration is then chanted to the intonation already given under Adonai Melek (especially version C). The Shema', with its associated sentence from the Temple service (see 'Abodah), is at least recited by the cantor if not repeated in the tumultuous response of the congregants, in the noble chant to which the Scriptural verse enshrining this declaration of the Unity is traditionally uttered when the Scroll of the Law is displayed as it is taken from the Ark in the New-Year and Atonement services. The verse was originally rendered to the tune designated by its Accents, in the form of Cantillation which was special to these days; and this derivation is still clear under the more melodic form which the rendering afterward took, developing eventually far beyond the original. The melody, by the ingenuity of the Paris cantor Naumbourg, has also been impressively adapted for the successive line of text, on the model of the strain quoted above from the evening service of Atonement.

Sephardic Order and Melodies.

In the Sephardic rite the Ne'ilah differs from the use of the Ashkenazim in the medieval hymns introduced into the public recitation. The traditional intonations lack the haunting tenderness characterizing those of the northern use; and they are much more obviously identical with those of the other Atonement services of the rite (see Seliḥot). There is only one entirely special melody, that for the hymn El Nora 'Alilah which ushers in the service. Corresponding with the quoted melodies of the Ashkenazim there is but the tune of Adonai Beḳol Shofar, from the New-Year service; and this had already been repeatedly chanted in the course of the Atonement services. Instead of a melody peculiar to the Ḳaddish and the opening

of the "'Amidah," the latter is preceded by the solemn congregational singing of the fragmentary hymn "Adanu," which is likewise prefixed, in its ancient chant, to the Musaf service of Atonement. This is followed by the singing of the penitential reshut (comp. Ḳerobot) by the ḥazzan, usually to the characteristic Morisco melody of Shofeṭ Kol ha-Areẓ.

Among the Atonement services in the southern use the Profession of Faith is not so special to the Ne'ilah as in the northern use. In the selihot of each of the other four services of the day, officiant and congregation have already reverentially sung the Shema' with its Temple response and the words "The Lord, He is God," the latter in the double form in which it originally occurs in I Kings xviii. 39.

In the preceding four services of the day, however, these utterances were associated with a short hymn of Ḳaliric form (comp. Ḳеrobot). In the Ne'ilah they are proclaimed by themselves in the midst of the closing Ḳaddish, first by the officiant and then by the congregation, the double verse being seven times reiterated, and all being immediately followed by a single complete series of the Shofar calls, instead of the weirdly solitary call which is heard in the northern ritual.

NEILSON, JULIA (Mrs. Fred Terry): English actress; born in London 1868; educated at Wiesbaden, Germany. Returning to London in 1883, she became a student at the Royal Academy of Music, and, being possessed of a fine mezzo-soprano voice, devoted herself exclusively to singing. In 1885 she won the Llewellyn Thomas gold medal and various other prizes, and appeared in public at the Royal Albert Hall and elsewhere. In 1887 she entered the dramatic profession and made her first appearance in March, 1888, at the Lyceum as *Cynisca* in "Pygmalion and Galatea." After this she filled the part of *Lady Hilda* in Gilbert's "Broken Hearts." She was then offered an engagement as leading lady at the St. James's Theatre, where she appeared in "Brantinghame Hall," an original play written expressly for her by Gilbert. Following this, she was engaged by Beerbohm Tree to play the part of *Stella Darbyshire* in "Captain Swift." Miss Neilson has since appeared under the same management in various plays, including "The Dancing Girl," "A Man's Shadow," "Hypatia" (in which she played the title rôle), "Called Back," "The Princess and the Butterfly," "King John," "A Midsummer Night's Dream," and as *Rosalind* in "As You Like It," in which rôle she has had great success.

In Aug., 1900, she entered on her own management at the Haymarket Theatre with the play "Nell Gwynn," which she has since presented in various London and provincial playhouses. She has toured with success in the United States and Canada.

J. G. L.

NEISSER, ALBERT: German dermatologist; born at Schweidnitz Jan. 22, 1855. His father, Moritz Neisser, was physician and "Geheimer Sanitätsrat" at Charlottenbrunn. Albert Neisser studied medicine in Erlangen and Breslau (M.D. 1877). In

1877 he became assistant physician at the Dermatological Clinic in Breslau, and in 1880 privat-docent in the University of Leipsic. In the summer of 1880 he went to Norway and in 1881 to Spain to study leprosy. In 1882 he was appointed assistant professor of dermatology and chief of the clinic at the University of Breslau, where he became "Geheimer Medicinal-Rat" in 1894.

Neisser is well known through his bacteriological and dermatological researches. He found the bacillus of gonorrhea, called by him "gonococcus," in 1879; and upon this discovery he based the local treatment of gonorrhea, which is now universally adopted. He demonstrated also the lepra bacilli, and proved the tubercular origin of lupus.

Neisser is a collaborator on Ziemssen's "Handbuch der Hautkrankheiten"; is one of the editors of the "Archiv für Dermatologie und Syphilis"; is also editor of the dermatological department of the "Bibliotheca Medica"; and has written many essays in the medical journals.

NEMÉNYI (NEUMANN), AMBROSIUS: Hungarian deputy; born at Peczel 1852; studied law at Vienna and Paris (LL.D., Budapest). Till 1871 he was known by the name of Neumann. He was on the staff of the "Pester Lloyd" until 1887. In 1884 he was returned by the district of Szilagy-Cseh to the Hungarian Parliament, where he has done important work on the committees on economics, communication, and finance. For several years he has been secretary of the budget committee.

Neményi has written the following works: "Rabelais és Kora" (Rabelais and His Time), Budapest, 1877; "Parlamenti Fegyelem" (Parliamentary Discipline), *ib.* 1879; "Journale und Journalisten der Französischen Revolution," Berlin, 1880; "Kortörteneti Rajzok" (Pictures of the Time), 2 vols., Budapest, 1880; "Hungaricæ Res," *ib.* 1882; "Das Moderne Ungarn," Berlin, 1883; "Az Állam és Határai" (The State and Its Boundaries), *ib.* 1889; "Die Verstaatlichung der Eisenbahnen," Leipsic, 1890; "Bureaukracia Magyarországon," Budapest, 1902.

Neményi was chief editor of the "Pesti Napló" from 1896 to 1901.

S. L. V.

NEMIROV: Town in the government of Podolia, Russian Poland. Of the period before 1648 it is only known that Nemirov was one of the great centers of Jewish learning in Podolia and that its rabbis were men of high reputation. Of these the most celebrated were R. Yom-Ṭob Lipmann Heller and Jehiel Michael ben Eliezer, who was martyred during the COSSACKS' UPRISING in 1648. In that outbreak the Jews of Nemirov suffered the most. The town being a fortified one, the Jews of the neighboring places, in dread of the Cossacks, sought refuge in it, thus swelling its Jewish population so that it exceeded 6,000. Three hundred Cossacks were sent by Chmielnicki to conquer Nemirov, and they made use of Polish flags, thus deceiving the Jewish inhabitants. The non-Jewish population, Greek Christians, were aware of this deception of the enemy, and urged the Jews to open the gates to the supposed Poles. The gates being opened, the Cossacks, assisted by the non-Jewish population, rushed upon the unsuspecting Jews and cruelly massacred 6,000 of them—men, women, and children—who chose death rather than forcible baptism (June 10, 1648). A small number saved their lives; some by temporarily changing their religion, and others by escaping to the neighboring fortified town of Tulchin (Hannover, "Yewen Mezulah," p. 5a, Venice, 1653). The massacre of Nemirov was considered the most terrible of that period. It has given rise to many legends, glorifying the heroic martyrdom of the Jews; and a requiem for the martyrs is still read on the 20th of Siwan, the anniversary of the event according to the Jewish calendar, in all the synagogues of Podolia.

Massacre in Cossacks' Uprising.

The Jewish population of Nemirov soon, however, began to increase. Wishneweczki, the great Polish general, and a friend of the Jews, on hearing of the slaughter of the latter at Nemirov, which town was his own property, marched against the place with an army of 3,000 and took revenge by massacring a great number of the inhabitants and the Cossacks (*ib.* p. 6a). The insurrection of the Cossacks was gradually quelled in Podolia; the few Jews of Nemirov who had escaped death by changing their religion returned openly to their old faith; and the Jewish community gradually regained its former importance.

Under Turkish Rule.

In 1672 Podolia came under the sway of the Turks, whose rule continued until 1699. At that time Yuri, second son of Chmielnicki, settled at Nemirov, and, in order to increase his income, imposed a tax upon every newly married couple in the district, irrespective of creed or nationality. A rich Jewish merchant of Nemirov, named Aaron, being a favorite of the Turkish authorities, thought himself secure in resisting this unjust impost, and on the marriage of his son refused to pay it. Yuri then sent his servants, who burned Aaron's house, and, not finding him at home, carried off his wife to Yuri, who caused her to be cruelly murdered. Aaron thereupon appealed to the Turkish pasha at Kamenetz-Podolsk, who summoned Yuri before him. Yuri confessed, and was executed.

At the beginning of the nineteenth century Nemirov became a center of the Bratzlaver Ḥasidim, under the leadership of Nathan ben Naphtali Hertz, who disseminated thence the precepts of his teacher, Naḥman of Bratzlav.

In 1896 the Jews of Nemirov numbered 2,874 in a total population of 7,129.

NEPI (NEPPI), GRAZIADIO (HANANEEL): Italian rabbi and physician; born in 1759 at Ferrara; died Jan. 18, 1836, at Cento. He studied at Ferrara for twelve years under Rabbi Jacob Moses and subsequently was himself the teacher of many disciples in his native city. On account of his great Talmudic learning he was sent as deputy to the Assembly of Jewish Notables convened by Napoleon I. at Paris in 1806. Upon his return he was called to the congregation at Cento, where he held the position of rabbi till his death, his pupil Isaac Reggio becoming his successor at Ferrara.

Nepi, who lived an ascetic life, was one of the highest religious authorities of his time; and all the Italian rabbis applied to him for advice on difficult problems. He left the following works: (1) "Liwyat Ḥen," a collection of the responses which he sent to different rabbis; (2) "Derushim," a collection of his sermons; (3) "Zeker Ẓaddiḳim li-Berakah," biographical and bibliographical sketches of rabbis and Jewish scholars. The last-named work was intended to complete Azulai's "Shem ha-Gedolim"; but owing to lack of time the author did not finish it. It was completed by M. S. Ghirondi under the title "Toledot Gedole Yisrael," and published by the latter's son (Triest, 1853). The material is rich, but of little scientific value, except the biographies of contemporaneous Italian scholars.

S. U. C.

NERGAL: God of the Babylonian city of Cuthah or Cuth or Kutu. In II Kings xvii. 30 it is said that the men of Cuth, whom Sargon settled in Samaria, made an image of Nergal. A Phenician funerary inscription erected by a Sidonian at Athens indicates that Nergal was also worshiped at Sidon (comp. "C. I. S." i., No. 119).

Cuthah was one of the prehistoric cities of Babylonia. Its god was probably originally agricultural in origin, and filled all the functions of the god of such a city. He became in later times, when political unity combined the gods of different cities into pantheons, the god of the underworld. Perhaps this was because Kutu was a favorite burial-place; for Kutu itself also became a name for the underworld. In this period Nergal was also regarded as the god of pestilence, of the destructive effects of war, and of the glowing heat of the sun. Perhaps as the god of death and of the underworld these phenomena naturally became associated with him.

E. C. G. A. B.

NERO: Roman emperor; born at Antium Dec. 15, 37 C.E.; died near Rome in 68. His original name was Lucius Domitius Ahenobarbus, but on being adopted by the emperor Claudius he was called **Nero Claudius Cæsar Drusus Germanicus.** After his accession to the throne (54) he showed many favors to the Herodian family: he bestowed the kingdom of Lesser Armenia upon Aristobulus, son of Herod of Chalcis, and added four important cities (among which were Tiberias and Tarichea in Galilee) with their surrounding districts to the dominions of Agrippa II. The Jews of Rome were well treated under his government. A Jewish actor, Alityros (Aliturus), lived at his court (Josephus, "Vita," § 3). A Neronian coin ("Neronit") is mentioned in B. M. 25b, and a "sela' Neronit" in Bek. 37b, 38a, and Kelim xvii. 12.

Favorably Disposed to the Jews.

When in the year 60 fierce rioting broke out between the Jews and the Greeks in Cæsarea, the seat of the Roman procurators, both parties sent representatives to Rome. Nero, influenced by his secretary Burrus, who had been bribed by the Greeks, gave a verdict against the Jews and deprived them of their civil rights. During the procuratorship of Festus a dispute arose between the population of Jerusalem and Agrippa II., who in his Hasmonean palace built a dining-hall which overlooked the courts of the Temple. In order to hide the Temple from this profaning view, the Jews erected a high wall on its western side. When they refused the order of Procurator Festus to tear down this wall, the case was brought before Nero, who, influenced by his second wife, Poppæa, decided in favor of the people. Poppæa, like many members of prominent Roman families, inclined to Judaism, and her last wish, that she might be buried according to Jewish customs, was granted by Nero.

Beginning of Great War.

Still the discontent among the Jews of Palestine continued owing to the arbitrary action of the procurators Felix, Festus, Albinus, and Gessius Florus, who by their exactions drove the Jews into open revolt. In the year 66 began that heroic war which ended with the destruction of the Second Temple and of the national existence of the Jews. In vain Cestius Gallus, the governor of Syria, informed Nero of the dangerous state of affairs in Palestine. The emperor continued his journey through Greece, where he courted public applause by appearing in the arena as singer, player, and charioteer. When, however, he received the news of the defeat of Cestius, he took immediate steps to crush the rebellion, and appointed Flavius Vespasian commander-in-chief. He did not live to enjoy the victories of his general; for, driven to despair by the uprising in Gallia, where the army had proclaimed Galba emperor, and forsaken by his Pretorian guard, he ended his life by suicide.

——**In Jewish Legend:** In Lam. R. i. 31 it is related that three days after the prediction made by Johanan ben Zakkai to Vespasian that the latter would become emperor the news of Nero's death reached the Roman army besieging Jerusalem. The following legendary account, showing the cause of the destruction of Jerusalem, is given in the Babylonian Talmud (Giṭ. 55b-56a): An inhabitant of Jerusalem sent a messenger to invite his friend Ḳamẓa to dinner. By mistake the messenger invited his enemy Bar Ḳamẓa, who took his place among the guests. When the master of the house noticed him he angrily ordered him to leave. In vain Bar Ḳamẓa requested the host not to put him to shame before so many people, and offered to pay for his meal, then a half and finally all of the expenses of the banquet. The host ejected him, and the other guests did not interfere in his behalf. Indignant at this insult, Bar Ḳamẓa told the emperor that the Jews planned a rebellion, and advised him to test their loyalty by sending a sacrifice which should be offered in the Temple in his behalf. The emperor sent a heifer, in whose lips (or, according to other reports, eyelids) Bar Ḳamẓa made an incision in order to render the animal unfit for sacrifice. After a long discussion as to whether this constituted a bodily defect, the Jews rejected the sacrifice. The emperor, insulted by this refusal, and taking it as a sign of rebellion, deputed Vespasian to wreak vengeance on the Jews.

When Nero arrived in Palestine, he shot arrows in the direction of the four principal points of the compass; but all of them flew toward Jerusalem. A boy whom he asked to recite his Biblical lesson (a usual form of oracle) quoted Ezek. xxv. 14 (Hebr.): "And I shall take my revenge on Edom through My people Israel; and they shall do unto Edom according to My anger and My wrath," on hearing which Nero said: "God wishes to wipe His hands [lay the blame] on me" (*i.e.*, "wishes to make me His tool and then to punish me"). He fled and became a convert to Judaism; and from him Rabbi Meïr was descended. This Talmudical story seems to be an echo of the legend that Nero was still alive and would return to reign. Indeed, some pretenders availed themselves of this legend and claimed to be Nero. Oracles prophesying Nero's return from beyond the Euphrates were current among the Jews; and an apocryphal book of the second century, Ascension of Isaiah, declares that in the last days "Belial shall appear in the form of a man, of the king of unrighteousness, of the matricide." In Christian legends Nero was personified as Antichrist.

D. S. MAN.

NERVOUS DISEASES: The Jews are more subject to diseases of the nervous system than the other races and peoples among which they dwell. Hysteria and neurasthenia appear to be most frequent. Some physicians of large experience among Jews have even gone so far as to state that most of them are neurasthenic and hysterical. Tobler claims that all the Jewish women in Palestine are hysterical; and Raymond says that in Warsaw, Poland, hysteria is very frequently met with among both Jewish men and Jewish women. The Jewish population of that city alone is almost exclusively the inexhaustible source for the supply of hysterical males for the clinics of the whole Continent ("L'Etude des Maladies du Système Nerveux en Russie," p. 71, Paris, 1889). As regards Austria and Germany the same neurotic taint of the Jews has been emphasized by Krafft Ebing, who states that nervous diseases, and especially neurasthenia, affect the Jews with exceptional severity ("Nervosität und Neurasthenische Zustände," p. 54, Vienna, 1895). Binswanger, Erb, Jolly, Möbius, Löwenfeld, Oppenheim Féré, Charcot, Bauveret, and most of the other specialists in nervous diseases, speak of this in their monographs on neurasthenia and hysteria, and point out that hysteria in the male, which is so rare in other races, is quite frequent among the Jews. In New York city it has been shown by Collins that, among 333 cases of neurasthenia which came under his observation, more than 40 per cent were of Jewish extraction, although his clientele was not conspicuously foreign ("Medical Record," March 25, 1899).

Frequency of Hysteria Among Jews.

The following causes are usually assigned for the nervousness of the Jews: (1) The fact that they are town-dwellers, and that diseases of this kind are most frequently observed in the populations of the modern large urban centers. (2) The peculiar occupations of the Jews: neurasthenia is seen most often among the commercial classes, bankers, and speculators. This view is not sustained by the fact that neurasthenia and hysteria are met with in the poorer classes of Jews, in laborers and artisans, just as often as in the richer classes. (3) Consanguineous marriages are also blamed by many physicians; but the modern view that such marriages, when contracted between healthy individuals, are not at all detrimental to the health of the offspring contradicts this theory. (4) The repeated persecutions and abuses to which the Jews were subjected during the two thousand years of the Diaspora are to be considered when speaking of their neurotic taint. Such massacres as occurred in Kishinef in 1903 were of frequent occurrence during the Middle Ages; and their effect on the nervous system of the Jews could not be other than an injurious one. Organic as well as functional derangements of the nervous system are transmitted hereditarily from one generation to another.

Causes.

The education of the Jewish child in the eastern European ghettos must be recalled when speaking of the nervousness of the Jews. The ḥeder, in which he begins at a quite early age to spend the greater part of the day in studying Bible and Talmud, is also an important factor in the production of nervousness among the Jews. As is well known, the intellect of the Jewish child is very precocious, and on this account the nervous system suffers severely.

Education.

Mortality.

Hysteria and neurasthenia are only rarely, if at all, fatal, and consequently their extent can not be appreciated by a study of the causes of death among the Jews. But the case is different when the degenerative organic nervous diseases are considered. Minor and others insist that these diseases are less frequently met with among the Jews than among the rest of any given population; while other physicians claim that all the diseases of the nervous system, both functional and organic, are very prevalent among

Jews. Thus from J. S. Billings' statistics of 60,630 Jews in the United States it is seen that the mortality from diseases of the nervous system was (per 1,000 deaths in which the cause was known) as follows:

	Jews.	General Population of the United States (1880).
Men	121.22	118.62
Women	120.62	108.61

These data show that, when compared with the general population of the United States, the Jews showed a much larger mortality from these diseases. The high mortality of the Jewish women, almost equaling that of the men, is striking. Similarly in Verona, Italy, Lombroso has found that the mortality of the Jews from nervous diseases is almost double that of the Catholic population of that city. In Körösi's statistics for Budapest, Hungary, however, quite the contrary is seen. The mortality from meningitis per 100,000 population during the period 1886–90 was as follows:

Catholics	114	Other Protestants	108
Lutherans	120	Jews	66

In New York.

Under meningitis Körösi includes tuberculous meningitis, epidemic cerebrospinal meningitis, and meningitis secondary to infectious diseases, new growths, etc. This may account for the lower mortality, because it is known that tuberculosis is observed less frequently among the Jews (see Consumption), as is the case with other infectious diseases (see Morbidity). Hydrocephalus also appears to be less frequently a cause of death among the Jews of Hungary than among their neighbors: only 67 per 100,000 Jewish children under five years of age, as against 145 among the Catholic children, died of this disease. Statistics obtained by the census bureau for New York city also tend to show that the mortality from nervous diseases is less among Jews than among others. Thus, during the six years ending May 31, 1890 ("Report on Vital Statistics of New York and Brooklyn," pp. 40–41, Washington, 1894), the mortality per 100,000 population was as follows, the cases being classified according to the birthplace of the subject's mother:

Bohemia	336.76	France	218.48
United States (whites)	293.48	Germany	197.39
Italy	258.73	Hungary (mostly Jews)	192.13
Ireland	242.44	Russia and Poland (mostly Jews)	117.68
England and Wales	240.71		

From these and other available statistics it appears that the Jews are less predisposed than are other races to those forms of organic diseases of the brain and spinal cord which are liable to prove fatal. This has been pointed out by Minor of Moscow, who analyzed 3,214 cases of nervous diseases in his practise, including those of 1,480 Jews and 1,734 Christians. He concludes that, so far as he could discover, the Jews are not more predisposed than Christians to all nervous diseases. On the contrary, the most serious organic diseases of the brain and spinal cord, chronic inflammation of the cerebral blood-vessels, etc., are far more often met with among Christians than among Jews. Minor is satisfied that the main, if not the exclusive, reason lies in the facts that the Jews are not alcoholics and that they only rarely suffer from syphilis. The only disease from which Minor found the Jews to suffer more often than non-Jews was hysteria, particularly hysteria in the male.

Locomotor Ataxia.

Locomotor ataxia is one of the most important organic nervous diseases, and is usually attributed to syphilis. In eastern Europe physicians state that it is only very rarely observed in Jews. Stembo reported, at the Eleventh International Medical Congress, that it is very rare among the Jews in Wilna, Russia; at least it has been until now a very rare disease, as has syphilis. Among the 200 Jewish inmates under his care in the hospital at Wilna he has met with various nervous diseases, but not one of locomotor ataxia. Of the 40 cases he has seen in Jews all had syphilis (L. Stembo, "Atti dell XI. Congresso Medico Internationale," vol. iv., "Psychiatria," p. 119, Rome, 1898). Gajkiewicz also found among 400 Jewish patients with nervous diseases only 13 with locomotor ataxia—3 per cent, which is very low ("Syphilis du Système Nerveux," p. 158, Paris, 1892). Minor found that among his patients the proportion of locomotor ataxia to the total number of cases was: among Christians, 2.9 per cent; among Jews, 0.8 per cent —*i.e.*, the disease was nearly four times as frequent in Christians as in Jews. In the Montefiore Home, New York city, on the other hand, there are many cases of locomotor ataxia. On examining the list of diseases in the reports of this institution, it will be observed that among the diseases of the nervous system locomotor ataxia appears more frequently than any other disease. This may be explained by the fact that patients affected with this disease remain in the institution for a long time, and consequently accumulate in large numbers, thus appearing on the reports annually for many years. It must be remembered also that the Jewish population of New York exceeds 500,000. Considering that every poor man affected with the disease is practically an invalid, and is likely to seek admission to the home, it may be concluded that the disease is really not very frequent, as in similar non-Jewish institutions the proportion of locomotor ataxia is much larger. At any rate this in connection with other evidence tends to show that syphilis is on the increase among the Jews of New York.

Paralysis Agitans.

Paralysis agitans or "shaking palsy" is a disease of the nervous system that is very frequent in Jews. Of 100 cases reported by Krafft-Ebing 65 were Christians and 32 Jews. He remarks that at the time when he observed these cases the Jewish population of Austria-Hungary was only 4 per cent of the total population. The morbidity of the Jews with respect to paralysis agitans was consequently eight times greater than their proper proportion (R. v. Krafft-Ebing, "Zur Aetiologie der Paralysis Agitans," in "Arbeiten aus dem Gesammtgebiet der Psychiatrie und Neuropathologie," part iii., p. 6). Minor also found that in Russia this disease is three times more frequent among Jews than among Christians.

In general it may be summarized that the Jews suffer chiefly from the functional nervous diseases, particularly from hysteria and neurasthenia, and that the organic nervous degenerations, such as locomotor ataxia, progressive paralysis of the insane (see Insanity), etc., are uncommon, commensurate with the infrequency of alcoholism and syphilis among them. Wherever the proportion of Jews affected with syphilis and alcoholism is larger, the number of persons affected with organic nervous diseases increases to a similar extent. This may be observed in the large cities of western Europe and in America. See Apoplexy; Diathesis; Idiocy; Insanity.

NESEK: Wine consecrated to use in idolatrous worship and therefore absolutely forbidden to a Jew. In a broader sense "nesek," or "yayin nesek," denotes wine made and used by Gentiles as well as wine made by and for Jews but which has been touched by a Gentile. There are, therefore, three kinds of wine which are subject to special regulations. Wine consecrated to the worship of idols, like everything else associated with idolatry, is regarded as absolutely defiling and as rendering persons and vessels unclean; if a quantity of such wine no larger than an olive be kept in the tent of an Israelite or be carried by him, it is sufficient to render him unclean. It is prohibited therefore even to carry or handle such wine in the capacity of a porter ('Ab. Zarah 30b; Shulḥan 'Aruk, Yoreh De'ah, 132-133). On mixing such wine with lawful wine, and on the consequences of such an act, see Yoreh De'ah, 134.

The ordinary wine of the heathen is generally termed "setam yenam." This also is forbidden, even when it is not known to have been consecrated to idolatry, in order to avoid even the suspicion of contact with actual nesek, although according to others it was prohibited with the purpose of preventing any social relations with Gentiles which might lead to intermarriage ('Ab. Zarah 36b; comp. Tos. Yom-Ṭob on 'Ab. Zarah ii. 3). This wine, in the quantity of a quarter of a "log," renders unclean any food or drink with which it has been brought in contact ('Ab. Zarah 31a; Yoreh De'ah, 123, 1; 133, 1). These regulations, however, have almost entirely lost their importance in countries where there is no idolatrous population, and wine made by a non-Jew who is not an idolater is prohibited only as a beverage (*ib.*). Those who are ill, even when not dangerously so, are permitted to drink wine belonging to non-Jews, and even those who while in perfect health drink such wine—as many did in the sixteenth century in France and as is now commonly done in nearly all countries—are not to be considered as neglecting any ritual requirement, and consequently are not to be suspected in regard to other commandments or invalidated as witnesses (Moses Isserles, Responsa, No. 124).

Wine made by and belonging to a Jew but kept in an idolater's house, or such wine touched by an idolater, may be used for any purpose except for drinking ('Ab. Zarah 31a; Yoreh De'ah, 124, 1, Isserles' gloss); it is true that in theory the touch of an idolater renders it unfit for any use whatever, but as customs changed and idolaters no longer offered wine to their idols, a more liberal interpretation was followed in practise (Isserles, *l.c.*). According to the stricter law, the touch of a Gentile who is not an idolater will make the wine unfit to drink if it is contained in an uncorked bottle and he touches and shakes it purposely, but if he touches the wine unintentionally it may be drunk (Yoreh De'ah, 124, 7). Christians and Mohammedans not being idolaters, every touch on their part is regarded as unintentional ("Mordekai," cited by Isserles in his gloss to Yoreh De'ah).

NESVIZH: Small town in the government of Minsk, Russia; it was in existence in the thirteenth century. The census of 1897 gives it a population of 8,446, including 4,764 Jews. Market-gardening is a common occupation among the latter. There are 650 Jewish artisans and 110 day-laborers. It has a Talmud Torah (120 pupils), and Jewish day-schools for boys (43 pupils) and girls (58 pupils). The charitable institutions include a dispensary, a gemillat ḥesed, a linat ha-ẓedeḳ, etc. There are eight synagogues. The town suffered severely from fire in 1897.

H. R. S. J.

NETHANEEL BEN ISAIAH: Yemenite commentator and poet of the fourteenth century; author of a homiletic commentary on the Pentateuch entitled "Nur al-Ẓulm wa-Maṣbaḥ al-Ḥikm." The first notice of this work was given by Jacob Saphir ("Eben Sappir," i. 67a, Lyck, 1866), who saw a manuscript of it at Ḥirbah, a small town in Yemen, in 1863. But the beginning of the manuscript was missing, and Saphir's statement that the author's name was Isaiah and that the title was "Al-Nur wal-Ẓulm" depends only upon hearsay. Two other manuscripts, one in Berlin (Steinschneider, "Verzeichnis," p. 62) and one in the Bodleian Library (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2463), bear the author's name, Nethaneel b. Isaiah, and the full title of the work, "Nur al-Ẓulm wa-Maṣbaḥ al-Ḥikm wa-Ikhraj al-Ma'ani fi al-Wujud Ba'd al-'Adm." Alexander Kohut published a monograph on this work, giving some extracts, under the title "Light of Shade and Lamp of Wisdom" (New York, 1894). This title is given by Kohut as the translation of the Arabic title, though "Light out of Darkness" would be a more fitting translation, since Nethaneel's introduction shows that his object was to comment on the obscure passages so as to make sure that their meanings should not escape the student.

Nethaneel ben Isaiah began his work on the 15th of Tammuz, 1640 of the Seleucidan era (=June 23. 1328). Its references to Al-Yemen, Sana, and Aden make it appear probable that he wrote it in Yemen, although Steinschneider doubts this ("Polemische und Apologetische Litteratur," p. 364). It is written in a mixture of Arabic and Hebrew, and the nature of the work is more midrashic than exegetical. Nethaneel quotes both Talmudim and the Targumim, but he is chiefly influenced by the Midrash Rabbah. Of the post-Talmudic authors, he mentions (besides the Geonim and Masorites) Ibn Janaḥ, Nathan b. Jehiel (under the designation of "the author of the "Aruk'"), and especially Maimonides, who was the paramount authority among the Yemenites and from whom he merely copied long passages. Finally, he mentions such Arabic and Greek sources as the Almagest, Al-Farabi, and Plato. Nethaneel's commentary comprises explanations according to the numerical value of the letters ("gemaṭria"), some philological notes, and polemical flings at both Christianity and Islam: for instance, in his commentary on Gen. xvii. 20 he designates Mohammed the "madman" ("meshugga'").

Nethaneel calls the five books of the Pentateuch (1) Sefer ha-Yashar, (2) Sefer Mekilta, (3) Torat Kohanim, (4) Ḥomesh ha-Peḳudim, and (5) Mishneh Torah, and he gives an Aramaic mnemonic formula for the weekly lessons; he is followed in both cases by Manṣur al-Dhamari in his "Siraj al-'Uḳul." Nethaneel illustrated his commentary with numerous figures and diagrams—*e.g.*, of the Cave of Machpelah, the altar, the candlestick, etc. He inserted in his work three Hebrew poems, two of which were published by Kohut in his above-mentioned "Light of Shade and Lamp of Wisdom." Nethaneel is often quoted under the designation of "Ibn Yesha'yah" by Manṣur al-Dhamari (*l.c.*) and by Daud al-Lawani in his philosophical commentary on the Pentateuch entitled "Al-Wajiz al-Mujna" (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2493).

NETHERLANDS: Country of western Europe, bounded by the North Sea, by Belgium, and by the Prussian provinces of Hanover and Westphalia, and the province of the Rhine. Since 1815 it has been a kingdom under the house of Orange. The members of this house, who, since 1581, have been almost uninterruptedly at the head of the state, have exerted an unusually great influence on the history of the Jews there. In consequence of the great dominance of the capital city, the story of the Jews of the Netherlands is chiefly concerned with the community of Amsterdam. For the colonies see Surinam and West Indies, Dutch.

Early Settlements.

Jews seem not to have lived in the province of Holland before 1593; but a few references to them are in existence which distinctly mention them as present in the other provinces at an earlier date, especially after their expulsion from France in 1321 and the persecutions in Hainaut and the Rhine provinces. Jews have been settled in Nimeguen, the oldest settlement, in Doesburg, Zutphen, and in Arnhem since 1404. In 1349 the Duke of Gelderland was authorized by the Emperor Louis IV. of Germany to receive Jews in his duchy. They paid a tax, granted services, and were protected by the law. In Arnhem, where a Jew is mentioned as physician, the magistrate defended them against the hostilities of the populace. At Nimeguen, Jews are mentioned in 1339 as paying taxes; Reinold the duke received 132 "pond" (317 dollars) in this way annually. In 1385 Zalichmann Nathanswen van Berck and his son David were allowed to live in Roermond ten years for 20 gulden (8 dollars) annually. In 1382 the Jews of Nimeguen had a cemetery, in 1426 a synagogue. When Jews settled in the diocese of Utrecht does not appear. In 1444 they were expelled from the city of Utrecht, but they were tolerated in the village of Maarsen, two hours distant, though their condition was not fortunate. Until 1789 no Jew might pass the night in Utrecht; for this reason the community of Maarsen was one of the most important in Holland. Jews were admitted to Zealand by Albert, Duke of Bavaria. There exists a letter, dated 1359, in which the duke promises Italian merchants to give no authorization to any Jew to reside in Goes for the space of four years. In 1361 is mentioned a Jew of Geertruidenberg, not far from Goes.

In 1477, by the marriage of Mary of Burgundy to the Archduke Maximilian, son of Emperor Frederick IV., the Netherlands were united to Austria and its possessions passed to the crown of Spain. In the sixteenth century, owing to the cruel persecutions of Charles V. and Philip II. of Spain, the Netherlands became involved in a series of desperate and heroic struggles. Charles V. had, in 1522, issued a proclamation against Christians who were suspected of being lax in the faith and against Jews who had not been baptized in Gelderland and Utrecht; and he repeated these edicts in 1545 and 1549. In 1571 the Duke of Alba notified the authorities of Arnhem that all Jews living there should be seized and held until the disposition to be made of them had been determined upon. In Wageningen, in 1572, there were three Jewish families which were expelled on the occasion of a papal indulgence. In 1581, however, the memorable declaration of independence issued by the deputies of the United Provinces deposed Philip from his sovereignty; religious peace was guaranteed by article 13 of the "Unie van Utrecht." As a consequence the persecuted Jews of Spain and Portugal turned toward Holland as a place of refuge.

Maranos in Holland.

In 1593 Maranos arrived in Amsterdam after having been refused admission to Middelburg and Haarlem. These Jews were important merchants and persons of great ability. They labored assiduously in the cause of the people and contributed materially to the prosperity of the country. They became strenuous supporters of the house of Orange and were in return protected by the stadholder.

At this time the commerce of Holland was increasing; a period of development had arrived, particularly for Amsterdam, to which Jews had carried their goods and from which they maintained their relations with foreign lands. Thus they had connections with the Levant (Janiçon, "Etat Présent," i. 445; Lusac, "Hollands Rijkdom," i. 340) and with Morocco. The Emperor of Morocco had an ambassador at The Hague named Samuel Palache (1591–1626), through whose mediation, in 1620, a commercial understanding was arrived at with the Barbary States.

In particular, the relations between the Dutch and South America were established by Jews; they contributed to the establishment of the Dutch West Indies Company in 1621, of the directorate of which some of them were members.

The ambitious schemes of the Dutch for the conquest of Brazil were carried into effect through Francisco Ribiero, a Portuguese captain, who is said to have had Jewish relations in Holland. As some years afterward the Dutch in Brazil appealed to Holland for craftsmen of all kinds, many Jews went to Brazil; about 600 Jews left Amsterdam in 1642, accompanied by two distinguished scholars—Isaac Aboab da Fonseca and Moses Raphael de Aguilar. In the struggle between Holland and Portugal for the possession of Brazil the Dutch were supported by the Jews.

With various countries in Europe also the Jews of Amsterdam established commercial relations. In a letter dated Nov. 25, 1622, King Christian IV. of Denmark invites Jews of Amsterdam to settle in Glückstadt, where, among other privileges, the free exercise of their religion would be assured to them.

Moses Curiel was the representative in Amsterdam of the King of Portugal, John IV.; his brother acted in a similar capacity at Hamburg. In fifty years, more than 400 Jewish families lived at Amsterdam in 300 different houses. A Jewish quarter existed in Amsterdam, though it was not a ghetto of the kind existing in Frankfort-on-the-Main or in Rome.

Relations to the State After 1648.

At the peace of Münster, 1648, it was stipulated that the inhabitants of the States of Holland, and those from Spain and Portugal, might reside and traffic in those countries, on sea and land, under protection of the law. The question was raised whether Jews also were included. The Spanish minister declared in 1650 that Jews might manage their interests in Spain only through an attorney. In 1652 the States repeated their request that Jews might be admitted to Spain, but the Spanish king refused. In 1657 a declaration was issued that Jews were subjects of the States of Holland; the Spanish king, however, persisted in his refusal, and the French reproached the Dutch minister for the indulgence shown to the Jews. At the same time Cromwell was desirous of attracting Jews to England; negotiations to this end were conducted by Manasseh ben Israel and the English ambassador, and in 1656 the question came to a practical issue.

Besides merchants, a great number of physicians were among the Spanish Jews in Amsterdam: Samuel Abravanel, David Nieto, Elijah Montalto, and the Bueno family; Joseph Bueno was consulted in the illness of Prince Maurice (April, 1623). Though great practitioners, they did little to promote medical science. Uriel Acosta and Spinoza were exceptions in the intellectual sphere; their Christian contemporaries resorted to them eagerly for a knowledge of the Hebrew language. Josephus Justus Scaliger ("Epistolæ," p. 594) relates that a Jew was his teacher in Talmudical literature. Vossius secured Manasseh ben Israel as teacher in Hebrew to his son Dionysius. Leusden published an edition of the Bible with an approbation by the rabbis of Amsterdam; and Surenhuis translated a part of the Talmud with their help (1698–1703). The attraction of their features for Rembrandt, who lived in their quarter (Joden Bolestraat 6), is known. Vondel seems to have been influenced, in some of his dramas, by their manner of speaking (Busken Nuet, "Land van Rembrandt," iii. 4, 14).

Jews were admitted as students at the university, where they studied medicine as the only branch of science which was of practical use to them, for they were not permitted to practise law, and the oath they would be compelled to take excluded them from the professorships. Neither were Jews taken into the trade-gilds: a resolution passed by the city of Amsterdam in 1632 (the cities being autonomous) excluded them. Exceptions, however, were made in the case of trades which stood in peculiar relations to their religion: printing, bookselling, the selling of meat, poultry, groceries, and drugs. In 1655 a Jew was, exceptionally, permitted to establish a sugar-refinery. It was about this time that the German Jews (Ashkenazim) arrived at Amsterdam, in a condition, mostly, of extreme poverty. For their history see Amsterdam.

Spread Through Holland.

Meanwhile Jewish congregations had been formed in various other towns. Thus Jews resided in Alkmaar in 1604; in 1602 Portuguese Jews had secured a burial-place there. In Rotterdam, Jews lived from about 1618; between 1609 and 1627 several Jews from there were buried in the cemetery of Amsterdam. In 1609 a Portuguese synagogue in De Bierstraat is mentioned; in 1647 a family named De Pinto went to Rotterdam from Antwerp, and a ḥakam named David Pardo was appointed. In 1669 the synagogue ornaments were given to the Ashkenazic congregation. In 1681 a contract was made by which the cemetery was given to this congregation, which built a large synagogue in 1725 at a cost of 30,000 gulden; it was enlarged in 1791. The names of the chief rabbis of Rotterdam are: Judah Salomon (1682); Solomon Ezekiel (1725–35; his salary was 305 gulden); Judah Ezekiel, son of the preceding (1738–55); Abraham Judah Ezekiel, son of the preceding (1755–79); Judah Akiba Eger (1779; left in 1781); Levie Hyman Breslau, author of "Pene Aryeh" (1781–1807); Elijah Casriel, from Leeuwarden (1815–33); E. J. Löwenstamm, grandson of L. H. Breslau (1834–45); Joseph Isaacson (1850–71; removed to Filehne as a result of dissensions in the community); B. Ritter (since 1884).

At The Hague ('s Gravenhage) a Jew by the name of Jacob Abenacar Veiga settled in 1698, who taught Hebrew to children there; he founded the Congregation Ḥonen Dal and built a synagogue (1703). In 1675 a German Jew, Alexander Polak, was admitted as citizen of The Hague and was sworn in on Dec. 10 of that year. He was the progenitor of the Polak Daniels family, and gave the congregation a cemetery in 1697; for his epitaph see Veegens, "Mededeelingen," p. 174.

In 1707 another congregation was founded, by the Pereira family—the Beth Jacob, of which David Nunes Torres was appointed chief rabbi in 1712. Aug. 9, 1726, a synagogue like that of the Sephardim at Amsterdam was built at the Princessegracht. After many efforts, in 1743 the two congregations united under the name Ḥonen Dal. The Jewish population at The Hague is of great importance, and includes the Teixeira, De Pinto, and Suasso families. The chief rabbis of Beth Jacob have been: David Nunes Torres (1712–27); Daniel Cohen Rodrigues (d. 1751); Solomon Saruco (1752–84); Sadik Cohen Belinfante (1784–86); David Léon (1786–1826); Jacob Ferares (1842–84); A. R. Pereira (has lived at Amsterdam since 1902). The chief rabbis of the Ashkenazim at The Hague have been: Zalman Löwenstein (1725–28); Jacob Sjalom (1735); Abarjeh Levie (1735); Jehosjoeang Oeben (1738–48); Saul Halevie (1748–85); Löb Mesrieto (1785–1807); Joseph Sofer Lehmans (1808–42); B. S. Berenstein (1848–93); T. Tal from Arnhem (1893–98); T. Leeuwenstein from Leeuwarden (1898–1903); A. van Loen from Gröningen (since 1903).

In Gröningen and Friesland.

In Gröningen and Friesland Jews lived about 1650, but from the latter they seem to have removed to Holland. Jews are not mentioned again until 1754, when a family (from which descended the painter Joseph Israels) migrated from Mappel Drenthe to Gröningen, and obtained permission to build a synagogue, a cemetery, and a mikweh. The members of this family lived in Veendam, Hoogezand, and Appingedam, and had a flourishing trade with Emden and other parts of Germany. In Friesland, especially in Leeuwarden, Jews have lived since 1645; the town council made lists of their names; in 1670 Jacob de Joode was permitted to establish a cemetery in the Boterhoek. Two rich Jews in Dokkum were brokers, and traded in East-Indian products.

In Leeuwarden the community was frequently burdened by transient coreligionists from Poland; at the community's request, therefore, the states of Friesland passed, in 1712, a resolution forbidding persons who had no fixed residence to remain there. Since 1735 the following have been chief rabbis at Leeuwarden: Jacob Emmerik (d. 1735); Naḥman b. Jacob (1749–69); Kuseiel b. Judah Löb (1770–92); Shabbethai b. Eliezer; Jehiel Aryeh Löb b. Jacob Moses Löwenstamm (1795–1802); Samuel Berenstein (1808–13); Abraham b. Isaac Deen (1821); Ḥayyim b. Aryeh Löb Löwenstamm (1822–36); B. Dusnus (1841–86); L. A. Wagenaar (1886–94; went to Arnhem); T. Leeuwenstein (1895–1900; left for The Hague); S. A. Rudelsheim (since 1900).

At this time Jews were not permitted to live in Utrecht (see above), but there was a wealthy congregation of Sephardim in Maarsen. In 1713 they were expelled because of an epidemic; they came back again in 1736. There has been a synagogue in Amersfort since 1726; L. B. Schaap, who came from Maastricht, was chief rabbi of Amersfort from 1848 to 1859. Jews have lived in 'sHertogenbosch since 1767; in Haarlem, since 1764; in Dordrecht, since 1760.

From 1672.

But to return to the general history in 1672, when, after an interval of twenty-two years (1650–72), William III. was reelected stadholder. This began a period of exceptional prosperity for the Jews; for until that time, though citizens, they had been oppressed by the clergy, who, as Koenen supposes, resented their influence, and who, in fact, were irritated by the presence of any not of their own faith. At this epoch, too, the Jewish partiality for the house of Orange displeased the Dutch. But with William III. many ameliorations were effected. The prince praised the attachment to his family shown by his subjects of Jewish faith; he commended their fairness in commerce, their religious constancy, and their industry. He clearly manifested his sentiments, and his influence affected even the Jews in South Netherlands, where the newly appointed governor, De Villa Hermosa, accorded them many privileges.

William III. employed Jews in his negotiations with foreign kings (see England), especially members of the Belmonte family, Moses Machado (who rendered important services to the army in Flanders; Koenen, "Geschiedenis," p. 207), Isaac Lopez Suasso (who lent two million gulden to William III. for his descent upon England), David Bueno de Mesquita (general agent of the Prince of Brandenburg), Moses Curiel (at whose house William stayed three days when he visited the Portuguese synagogue at Amsterdam in 1695). Jews were very rich at this time; many among them lived in palaces more magnificent than those of princes (Tallander, "Historische Reisen," v. 794). The number of Portuguese Jews who then resided in the Netherlands is estimated at 2,400 families.

Characteristics of Portuguese Jews.

After the death of William III. in 1702, a new epoch begins, the year 1713 marking the beginning of a period of decline for the Jews throughout Europe, and especially in Holland. Commerce had produced riches, riches luxury, luxury idleness; religion was undermined by French ideas; French customs and manners were propagated; trade often deteriorated into stock-jobbing. These influences affected the refined Portuguese Jews more powerfully than the German Jews, who were poorer and simpler. Portuguese Jews were attached to their old manners; their younger women were not permitted to go abroad unattended, and they seem also not always to have known the Dutch language; their daughters married in their twelfth year. There exists a resolution of the burgomaster of Amsterdam refusing (1712) to Benjamin (alias Jean) da Costa permission to marry his niece Sara Suasso because neither had reached the age of twelve years. Marriages between relatives were common among Portuguese Jews, who desired to prevent the division of family fortunes; perhaps they were moved by their aversion for the "Todescos" (the Ashkenazim); but, whatever the reason, the result of such marriages was that the ensuing generations deteriorated physically and morally (comp. Hersveld, "Nederlandsch Israelietisch Jaarboekje," 1853).

History from 1747.

At this period the German Jews attained prosperity through retail trading and by diamond-cutting, in which latter industry they retained the monopoly until about 1870. When William IV. was proclaimed stadholder (1747) the Jews found another protector like William III. He stood in very close relations with the head of the De Pinto family, at whose villa, Tulpenburg, near Ouderkerk, he and his wife paid more than one visit. In 1748, when a French army was at the frontier and the treasury was empty, De Pinto collected a large sum and presented it to the state. Van Hogendorp, the secretary of state, wrote to him: "You have saved the state." In 1750 De Pinto arranged for the conversion of the national debt from a 4 to a 3 per cent basis.

Under the government of William V. the country was troubled by internal dissensions; the Jews, however, remained loyal to him. As he entered the legislature on the day of his majority, March 8, 1766, everywhere in the synagogues services of thanksgiving were held. William V. did not forget his Jewish subjects. On June 3, 1768, he visited both the German and the Portuguese synagogue; he attended the marriage of Isaac Curiel and Abigail de Pinto, that of Moses de Pinto and his cousin Elizabeth (1768), and that of Sarah Teixeira and Jacob Franco Mendes, at The Hague (March 30, 1771); and in Oct., 1772, he visited the Pereira family at Maarsen.

The End of the Eighteenth Century.

But the opposition to William V. increased. On his flight from The Hague he stopped at Amersfort, in the house of Benjamin Cohen, a native of Nimeguen, who was grandfather of T. D. Meier. The next time the prince stayed in Cohen's house he donated a considerable sum for a new menorah, while the princess presented to the community a curtain for the Ark of the Law. During the riots incited by the patriotic party the Jews defended strongly the rights of the prince. They celebrated as holidays the dates Oct. 15, 1787 (when the Orange party took possession of the town), March 7, 1788 (the birthday of the prince), and Oct. 4, 1791 (the marriage-day of William's son, later King William I.). The relations between the Jews and the Christian population, however, were not altogether friendly. In general, Jews were citizens, and were free to perform their religious duties; but the magistrates of the towns never favored them. Marriages between Christians and Jews were forbidden under pain of banishment. Their civil rights were not respected; the proclamation of Amsterdam, dated March 29, 1632, that Jews could not be members of the gilds, was never abolished, and was continually pressed. In trade, industry, and even in study, they were restricted. The Asser family was, as a special favor, allowed to engage in navigation between the Netherlands and the colonies, but this was conceded only after a long struggle, extending from April 15, 1773, to 1794—21 years, as Moses Solomon Asser declared in the assembly of Feb. 11, 1795.

Justus van Effen, in his "Spectatorial Essays" (xii. 74), complains of the contempt with which Jews were treated. In the well-known "Spectatorial Essays" of Hoefnagel all kinds of meannesses are imputed to them. The common schools of the Netherlands were closed to them, with the result that they usually did not speak Dutch. Even the wealthiest Jews did not think of establishing schools for their coreligionists.

The year 1795 brought the results of the French Revolution to Holland, including emancipation for the Jews. The National Convention, Sept. 2, 1796, proclaimed this resolution: "No Jew shall be excluded from rights or advantages which are associated with citizenship in the Batavian Republic, and which he may desire to enjoy." Moses Moresco was appointed member of the municipality at Amsterdam; Moses Asser member of the court of justice there. The old conservatives, at whose head stood the chief rabbi Jacob Moses Löwenstamm, were not desirous of emancipation rights. Indeed, these rights were for the greater part of doubtful advantage; their culture was not so far advanced that they could frequent ordinary society; besides, this emancipation was offered to them by a party which had expelled their beloved Prince of Orange, to whose house they remained so faithful that the chief rabbi at The Hague, Saruco, was called the "Orange dominie"; the men of the old régime were even called "Orange cattle." Nevertheless, the Revolution appreciably ameliorated the condition of the Jews; in 1799 their congregations received, like the Christian congregations, grants from the treasury. In 1798 Jonas Daniel Meier interceded with the French minister of foreign affairs in behalf of the Jews of Germany; and on Aug. 22, 1802, the Dutch ambassador, Schimmelpenninck, delivered a note on the same subject to the French minister ("Journal de la Haye," Nov. 10, 1835).

From 1806 to 1820 Holland was ruled by Louis Napoleon, whose intention it was to so amend the condition of the Jews that their newly acquired rights would become of real value to them; the shortness of his reign, however, prevented him from carrying out his plans ("Lodewijk Napoleon Geschiedkundige Gedenkschriften," i. 169, ii. 48). For example, after having changed the market-day in some cities (Utrecht and Rotterdam) from Saturday to Monday, he abolished the use of the oath "More Judaico" in the courts of justice, and administered the same formula to both Christians and Jews. To accustom the latter to military services he formed two battalions of 803 men and 60 officers, all Jews, who had been until then excluded from military service, even from the town guard. In 1807, advised by Asser, Louis Napoleon issued a "reglement" entitled "Kerkbestuur der Hollandsche Hoogduitsche Gemeente Binnen Amsterdam" ("Jaarboeken," 1838, pp. 369–392). A consistory was established.

The union of Ashkenazim and Sephardim intended by Louis Napoleon did not come about. He had desired to establish schools for Jewish children, who were excluded from the public schools; even the Maatschappij tot Nut van het Algemeen, founded in

1804, did not willingly receive them or admit Jews as members. Among the distinguished Jews of this period were Meier Littwald Lehemon, Asser, Capadose, and the physicians Heilbron, Davids (who introduced vaccination), Stein van Laun (tellurium), etc.

From 1813.

On Nov. 30, 1813, William VI. arrived at Scheveningen, and on Dec. 11 he was solemnly crowned as King William I. Chief Rabbi Lehmans of The Hague organized a special thanksgiving service and implored God's protection for the allied armies on Jan. 5, 1814. Many Jews fought at Waterloo, where thirty-five Jewish officers died. William I. occupied himself with the organization of the Jewish congregations. On Feb. 26, 1814, a law was promulgated abolishing the French régime. On June 12, following, a regulation was issued providing for twelve Hoofdsynagogen, with six chief rabbis. It determined the powers of the parnassim for the Hoofdsynagogen, and of manhigim for the small ones, and settled the mode of elections, the powers of chief rabbis, marriages, the poor-relief, etc. Between 1814 and 1817 the "reglements" were revised in the communities and submitted to the ministry to be sanctioned.

The question of education, which had been neglected by the rich Jews, was taken up by William I.; teachers without diplomas and foreign rabbis were prevented from taking office, and gold and silver medals were promised for the best school-books and sermons in Dutch. The Amsterdam community received from the hands of William I. the rights which had been refused to them formerly; this concession was due perhaps to the influence of the chief rabbi, Samuel Berenstein, who did not agree with his predecessor and father-in-law and who was very much esteemed by the king ("Tal Oranjebloesems," p. 122). William I. took a personal interest in his Jewish subjects. Thus he accorded to Hersveld, the chief rabbi at Zwolle, who desired to send his sons to the university, the same privileges as other clergymen.

The Nederlandsch Israelietisch Seminarium, formerly the Sa'adat Baḥurim, founded by Aryeh Löb Löwenstamm in 1738, was reorganized in 1834. The congregation at Maastricht had no synagogue; by order of William the necessary ground was given by the magistrate, with a sum of 6,400 gulden from the treasury of the state. The following chief rabbis have officiated there: L. B. Schaap (1846–48), S. Con (1848–60), L. Landsberg (1860–1904). In 1840 William I. abdicated, William II. succeeding him. The latter also interested himself in the Jews. On Sept. 20, 1845, a resolution was passed giving to the widows of chief rabbis the same allowance as to the widows of the Protestant clergy. He bestowed upon the chief rabbis Hersveld and Ferares of Amsterdam the Order of the Netherlands Lion, in those days of high importance. In 1848 the separation of Church and State was carried through. The Hoofd-synagogen had to be reorganized, which reorganization was not accomplished until 1870. The congregation consists of a number of autonomous communities, obliged to resort for the election of chief rabbis and of deputies to the Centrale Commissie of 21 members.

Reorganization, 1849-70.

The Portuguese Jews have two communities, those of Amsterdam (chief rabbi T. J. Palache, since 1902) and The Hague (chief rabbi A. R. Pereira, living at Amsterdam, where he is dayyan), with a Hoofdcommissie of three members to maintain their interests.

Intellectual Development from 1850.

William III. (1849–90) often gave proofs of his good-will toward the Jews; on two occasions he visited the Portuguese synagogue at Amsterdam (April 2, 1844, and in April, 1882). Since 1850 the state has enjoyed the fruits of the liberty given to Jews, who have developed rapidly. In 1850 the Maatschappij tot Nut van Israelieten in Nederland was founded by De Pinto, assisted by Goodermir (later professor at Leyden), Godefroi (later minister of justice), Sarphati (an economist), A. S. van Nierop, and others. As soon as possible Jews entered the universities and studied law and medicine. Among Jewish artists the names of Israels, Verner, and Bles are prominent, and in no branch of science have Jews failed to reach the front rank. In the army, however, there have never been many Jewish officers. A great number of journalists are Jews. In Amsterdam the diamond industry and commerce are in their hands; the number of stock-brokers and tobacco-traders is considerable. The lower class lives by retail trading; it refuses obstinately to learn handicrafts. In the provinces the trade in cattle is chiefly in the hands of the Jews. Since 1860, however, nearly all the provincial towns have been deserted by Jews, who have generally removed to Amsterdam. Until recent times the older Jewish settlers of Amsterdam have held aloof from the later arrivals.

The law of 1887 declares that no one shall be molested for his religious convictions and that the followers of all creeds shall enjoy the same rights and the same claims to office. The legislature likewise gives the Jews liberty to celebrate their holy days and Sabbaths without disturbance. Thus, the law of May 5, 1889, permits them to rest on Saturday instead of on Sunday; and the law of Aug. 31, 1886, permits Jewish prisoners to work on Sunday instead of Saturday. As to the oath, the Jew must cover his head when taking it, but the formula is the same for all creeds. According to an order of the minister of war Jewish soldiers may be garrisoned only in places where Jewish congregations are established, and may not be compelled to ride by railway to the drill-hall on Saturday.

Orthodoxy.

Dutch Jews have never come under the influence of Reform. In 1859 and 1860 an effort was made by several Amsterdam Jews to found an association, to be called "Sjochre Dea." A certain Chronik went to Amsterdam to preach Reform under the disguise of Orthodoxy. But his effort, especially designed to remodel the service and abolish many unessential details, failed. At that time the Amsterdam community was torn by dissensions. There was no chief rabbi; the dayyanim A. Susan and J. Hirsch had no adequate authority. Susan died in 1861, and in 1862 Joseph Hirsch Dünner was appointed rector of the seminary. Supported by the Lehren family, he soon eliminated undesirable elements from the school. In 1874 he was nominated chief rabbi of Amsterdam, and his influence is now (1904) felt widely. All the present chief rabbis in the Netherlands, with the exception of Dr. Ritter at Rotterdam, have been trained in Dünner's seminary. His Orthodoxy is respected even by the more lax, who always act in concert with the Orthodox (see "Joodsche Courant," 1903, Nos. 18, 19).

Statistics.

The number of Jews in Amsterdam in 1780 was 22,000; in the other cities, 9,000. In 1810 the total population was 194,527, of whom 16,882 were Jews; in 1830 there were 21,998 Jews in a total of 202,175. The figures given for the kingdom of the Netherlands in 1850 and 1900 are as follows:

	In 1850.		In 1900.			
			Ashkenazim.		Sephardim.	
	Ashkenazim.	Sephardim.	Males.	Females.	Males.	Females.
North Brabant....	1,881	19	1,022	1,076	3	7
Gelderland.......	4,570	18	2,514	2,584	29	33
South Holland....	10,752	358	8,183	8,821	193	209
North Holland....	27,224	2,766	27,194	29,766	2,317	2,683
Zealand..........	657	2	195	230	......	1

Limburg..........	1,367	......	505	548	33	25
Total....	59,238	3,372	47,478	50,865	2,628	3,017

Netherlands counts 99 congregations, of which 13 have less than 50 souls, 24 less than 100, 48 under 500, 9 under 1,000, 2 under 5,000, 1 about 10,000, 2 more than 10,000. Amsterdam has 51,000 with 12,500 paupers, The Hague 5,754 with 846, Rotterdam 10,000 with 1,750, Gröningen 2,400 with 613, Arnhem 1,224 with 349 ("Joodsche Courant," 1903, No. 44). The total population of the Netherlands in 1900 was 5,104,137, about 2 per cent of whom were Jews.

NETHINIM: Temple officials. They are first heard of as returning from Babylon to Palestine, after the Exile, in two batches, one numbering 392, the second 220 (Ezra ii. 58, viii. 20). A list of the families composing the first batch is given twice—in Ezra ii. and Neh. vii.; the second batch came from a place in Persia called Casiphia and were persuaded to come by their "brother" Iddo. They were placed "in Ophel, . . . over against the water gate toward the east, and the tower that lieth out" (Neh. iii. 26), and mention is made of "the house of Nethinim" (Neh. iii. 31, R. V.). They served under the Levites in the Temple, and were accordingly freed from all tolls (Ezra vii. 24). It is said that they had been appointed by David and the princes to serve the Levites.

In Talmudic times the Nethinim were put on a level with bastards, and their descendants, male and female, were interdicted from marriage with Israelites for all time (Yeb. ii. 4, viii. 3); this is said to have been established by David (Yeb. 78b) or by Ezra (Num. R. viii.). Nethinim were allowed to marry only proselytes, freedmen, bastards, and foundlings (Ḳid. viii. 3). In tables of precedence they are reckoned very low, coming after bastards in Yer. Hor. iii. 5 and Yer. Yeb. viii. 5.

This union of sacred service and social ostracism has led to the suggestion that the Nethinim were the descendants of the Ḳedeshot, or sacred prostitutes; and it may be pointed out that in the list in Ezra ii. there is a large number of feminine forms, as well as in the extra list contained in the Book of Esdras (v. 53-58). This latter list contains a reference to the "Bene Souba," with which may be compared the "Soba'im" of Ezek. xxiii. 42 (Hebr.). Both the Septuagint and Josephus refer to the Nethinim as "Hieroduli," which seems to imply that they were Ḳedeshot.

Cheyne (*s.v.* "Solomon's Servants") suggests that the Nethinim were really Ethanites. He regards the low status given to the Nethinim in the Talmud as due to their being confused with the Gibeonites (Yeb. ii. 4; Ḳid. iv. 1).

E. C. J.

NETTER, CHARLES: French philanthropist; born at Strasburg in 1828; died at Jaffa, Palestine, Oct. 2, 1882. He studied at Strasburg and Belfort, and then engaged in business in Paris. He was one of the founders of the Alliance Israélite Universelle, and for a long time his house was its only home. The work with which his name is most closely connected is the foundation of the agricultural school at Jaffa; and he devoted several years of his life to promoting agriculture among the Jews of Palestine. It was Netter who, at the end of 1876, submitted to the conference at Constantinople the memorandum in favor of the Jews of the East, prepared by the meeting convened about that time by the Alliance Israélite at Paris. In 1878 he went to Berlin, with some other members of the central committee, to lay before the congress the memoir of the Alliance in favor of the same Jews and to support their claims, which had been formally recognized by the Treaty of Berlin. With two other members of the committee he went to Madrid in 1880 to maintain before a European conference the right of the Jews of Morocco to protection.

In 1881, when the disturbances in Russia drove thousands of unfortunate Jews from Brody and the Alliance was desirous of sending them assistance, Netter volunteered to discharge the difficult mission. He was the first to arrive there, and lived for weeks among the unhappy refugees, arranging a plan of emigration to America. On his return to Paris he was appointed secretary of the special committee established in that city for the Russian work. From morning till night his house was besieged by the Russian refugees, who found in him an untiring protector. When death overtook him he was visiting the agricultural school at Jaffa. A monument has been erected over his grave by the Alliance Israélite Universelle.

s. J. Ka.

NETTER, EUGENE: Roman Catholic archbishop at Manila; born 1840 at Bergheim, near Colmar, in Alsace. At the age of fourteen he and his brother **Gabriel** emigrated to New York. Upon the outbreak of the Civil war Gabriel joined the Union army; he died in Louisville, Ky., where a public square bears his name. Eugene, at the age of sixteen, went to Porto Rico, where he was attacked by yellow fever. In the hospital a Catholic priest endeavored to administer the sacraments to him, promising him complete restoration. Believing himself about to die, he acceded; but he recovered and was baptized. Netter was then sent by the archbishop to the University of Salamanca, where in one year he passed both baccalaureates and began the study of theology. In a short while he became "professeur directeur" in the university there. Next he was sent to Porto Rico; then to Rome, where he spent ten months and was appointed "gentilhomme" by the pope. Returning to Porto Rico, he was again sent to Spain, and finally to Manila, where he became archbishop about 1898.

G.

NETTER, JUSTIN ARNOLD: French physician; born at Strasburg Sept. 20, 1855. He studied in the hospitals of Paris between 1876 and 1884 ("externe," 1876–77; "interne," 1879–82; "interne laureate," 1883–84), and received his degree in medicine in 1883. Settling in Paris, he became in 1889 assistant professor in the faculty of medicine, and was appointed physician to the Hôpital Tenon in 1894 and to the Hôpital Trousseau in 1895. Netter was appointed by the medical faculty in 1897 to the chair of experimental and comparative anatomy, and was elected a member of the Academy of Medicine in 1904, succeeding his teacher Proust. He had been made a chevalier of the Legion of Honor in 1892 in recognition of his services during the epidemic of cholera. He held the appointments of expert on the jury of the Paris Exposition of 1889, and member of the board on admission and classification for the Paris Exposition of 1900; he is also a member of the committee on the Jewish schools of Paris, and of the central committee of the Alliance Israélite Universelle.

Netter is a prolific contributor to medical journals, having collaborated on many studies in the diseases of the lungs and pleura, epidemic cerebrospinal meningitis, pathogenic microbes of the buccal cavity and the digestive tube, diphtheria, epidemics of exanthematous typhus and cholera, the plague, and infantile scurvy. Netter is also the author of the sections on pleurisy in the "Traité de Médecine," vol. iv., and the article "Hygiene" in Bouchard's "Traité de Pathologie Générale."

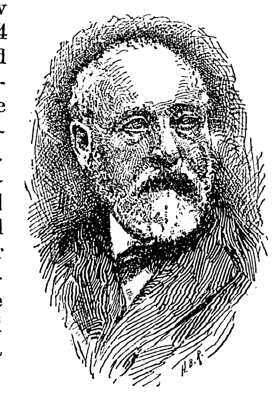
NEU-ORTHODOXIE (NEO-ORTHODOXY). See Reform.

NEUBAUER, ADOLF: Sublibrarian at the Bodleian Library and reader in Rabbinic Hebrew at Oxford University; born at Bittse, Hungary, March 11, 1831. He received a thorough education in rabbinical literature, and his earliest contributions were made to the "Allgemeine Zeitung des Judenthums" and the "Journal Asiatique" (Dec., 1861). In 1865 he published a volume entitled "Meleket ha-Shir," a collection of extracts from manuscripts relating to the principles of Hebrew versification. In 1864 Neubauer was entrusted with a mission to St. Petersburg to examine the numerous Karaite manuscripts preserved there. As a result of this investigation he published a report, in French, and subsequently "Aus der Petersburger Bibliothek" (1866). But the work which established his reputation was "La Géographie du Talmud" (1868), an account of the geographical data scattered throughout the Talmud and early Jewish writings and relating to places in Palestine.



Adolf Neubauer.

In 1868 Neubauer's services were secured by the University of Oxford for the task of cataloguing the Hebrew manuscripts in the Bodleian Library. The catalogue appeared in 1886, after eighteen years' preparation. The volume includes more than 2,500 entries, and is accompanied by a portfolio with forty facsimiles. While engaged on this work Neubauer published other works of considerable importance. In 1875 he edited the Arabic text of the Hebrew dictionary of Abu al-Walid (the "Book of Hebrew Roots"), and in 1876 published "Jewish Interpretations of the Fifty-third Chapter of Isaiah," which was edited by Neubauer and translated by Driver jointly in 1877. In the same year he contributed "Les Rabbins Français du Commencement du XIVe Siècle" to "L'Histoire Littéraire de la France," though, according to the rules of the French Academy, it appeared under the name of Renan. In 1878 Neubauer edited the Aramaic text of the Book of Tobit, in 1887 the volume entitled "Mediæval Jewish Chronicles" (vol. ii., 1895), and in 1897, with Cowley, "The Original Hebrew of a Portion of Ecclesiasticus."

In 1884 a readership in Rabbinic Hebrew was founded at Oxford, and Neubauer was appointed to the post, which he held for sixteen years, until failing eyesight compelled his resignation in May, 1900. Neubauer's chief fame has been won as a librarian, in which capacity he enriched the Bodleian with many priceless treasures, displaying great judgment in their acquisition. He was created M.A. of Oxford in 1873, and was elected an honorary fellow of Exeter College in 1890. In the latter year he received the honorary degree of Ph.D. from the University of Heidelberg and was made an honorary member of the Real Academia de la Historia at Madrid. Neubauer now lives in Vienna.

Bibliography: Canon Driver, in *Jew. Chron.* Dec., 1899; *ib.* March 8, 1901; *Jewish Year Book*, 1899.

J. G. L.

NEUBERG, JOSEPH: English litterateur; secretary to Thomas Carlyle; born at Würzburg, Bavaria, May 21, 1806; died in London March 23, 1867. At first he entered into business at Hamburg, and was afterward placed in a position of much responsibility at Nottingham, being subsequently taken into partnership. He took much interest in matters affecting the well-being of the working classes, and for some years was president of the People's College and of the literary department of the Mechanics' Institute. Neuberg was naturalized in England on June 16, 1845; he studied at the University of Bonn from 1850 to 1853. He was introduced to Carlyle by Emerson in 1848, and acted as "voluntary secretary" to the former in 1849. Three years later he was Carlyle's companion and guide over the battle-fields of Frederick the Great. In 1853 Neuberg returned to England to resume his position as "voluntary secretary" to Carlyle. In 1865 Carlyle published the last volumes of his life of Frederick the Great, in one of which is the dedication "To Joseph Neuberg, Esq., my faithful attendant and helper in this work." Neuberg, who had translated into German "On Heroes and Hero-Worship" in 1853, undertook to translate this work also, but lived only long enough to translate the first four volumes and part of the fifth.

Bibliography: *Macmillan's Magazine*, Aug., 1884, pp. 280–297; J. A. Froude, *Thomas Carlyle's Life in London*, passim.

J. G. L.

NEUBURGER, FERDINAND: German dramatist; born at Düsseldorf Aug. 28, 1839; died at Frankfort-on-the-Main Oct. 27, 1895. He began life as a tutor at the Philanthropin, Frankfort, but soon abandoned that occupation in order to devote himself entirely to literature. His "Markgräfin von Pommeraye" was his first attempt at dramatic writing. It met with success on its performance at Stuttgart in 1876 and was followed by "Laroche." The latter, being a heroic drama founded on the career of Ferdinand Lassalle, was for political reasons withdrawn after its first performance in 1882. His "Das Gastmahl des Ponteus," written in his youth, deserves mention.

Bibliography: *Jewish Chronicle*, London, Nov. 8, 1895.

S. F. S. W.

NEUBURGER, MAX: Austrian physician; born Dec. 8, 1868, at Vienna, at whose university he studied medicine (M.D. 1893). After three years of hospital service he became assistant to Professor Benedikt, and has since practised as a specialist in nervous diseases. His "Gesch. der Experimentallen Gehirn- und Rückenmarksphysiologie vor Flourens" (Stuttgart, 1897) procured him the appointment of privat-docent in the history of medicine at the University of Vienna. He has published, besides many smaller articles, the following works: "Die Anfänge der Experimental-Pathologie" (Berlin, 1898); "Das Problem der Wahlanziehung" (Vienna, 1900); "Die Vorgeschichte der Antitoxischen Therapie" (Stuttgart, 1901). He contributed to Professor Pagel's "Handbuch der Gesch. der Medizin" (3 vols., Jena, 1902). In 1902 and 1903 he edited the "Medizinische Blätter." S.

NEUDA, ABRAHAM: Austrian rabbi; born at Loschitz, Moravia, in 1812; died there Feb. 22, 1854. He was the son of R. Aaron Neuda of Loschitz, and the nephew of R. Jacob Neuda of Lomnitz, Moravia. In 1830 he entered the Talmudic school at Nikolsburg, at whose head was "Landesrabbiner" Nehemiah Trebitsch. While he was at Nikolsburg his father died (1834), and the community of Loschitz elected Abraham as his successor. Against this election, in accordance with a privilege vested in the district rabbi by law, Nehemiah Trebitsch interposed a veto. This action gave rise to legal proceedings, which were pressed by both parties with great exacerbation for six years, but which finally terminated in favor of Neuda, after he had passed an examination. He married the authoress Fanny Schmiedl.

Neuda wrote the following works: "Eine Auswahl Gottesdienstlicher Vorträge, Gehalten in der Synagoge zu Loschitz" (Vienna, 1845); "Die Nächstenliebe im Lichte der Gotteslehre," sermon preached on the first day of Passover, 1847 (*ib.* 1847); "Namen der Talmudisten" (in "Orient, Lit." 1845, Nos. 9 *et seq.*). He left in manuscript: "Die Namen der Farben in Bibel und Talmud"; "Versuch einer Psychologie nach Anschauung des Talmuds"; and "Eine Gesch. der Juden in Mähren," extracts from which appeared in "Neuzeit" (Vienna, 1867).

Bibliography: *Ungarisch-Jüdische Wochenschrift*, 1871, pp. 358 *et seq.*, 365 *et seq.*

NEUFELD, DANIEL: Polish writer; born at Praszka, government of Kalisz, 1814; died at Warsaw in 1874. His activity was confined to his birthplace and later to Chenstokhow until 1861, when he settled in Warsaw. In that same year he published his work on the Great Sanhedrin of 1806 under the title "Wielki Sanhedryn Paryski w Roku 1806." On July 5, 1861, he commenced the publication in Polish of a weekly newspaper for Jews entitled "Jutrzenka," which appeared until 1863. He published: a Polish version of the books of Genesis and Exodus, with a commentary (1863); a pamphlet entitled "Urzadzenie Konsystorza Zydowskiego w

Polsce," on the establishment of a Jewish consistory in Poland; a gnomology of the fathers of the Synagogue; and a Polish translation of the prayer-book and the Haggadah (1865). His daughter **Bronislawa Neufeld** is a Polish writer and an active collaborator on the leading Polish journals, "Gazeta Polska," "Tygodnik Illustrawany," etc.

H. R. M. R.

NEUGEBAUER, LADISLAUS: Hungarian writer; born at Budapest Feb. 22, 1845. After studying at Budapest and Vienna he entered the service of the Austro-Hungarian Bank at Vienna in 1870. His first work was a German translation of one of Jókai's novels; it appeared in 1865 in the "Pester Nachrichten," and was so skilfully done that he was encouraged by Geibel, Hamerling, and Anastasius Grün to translate Petöfi's poems into German. In recognition of this work he was elected a member of the Petöfi Society (1871) and of the Kisfaludy Society (1882). In 1887 he received the gold cross of merit, with the crown, and in 1890 the grand cross of the Order of Nishan-i-Medjidie. In 1892, with the surname "Aszódi," he was raised to the rank of the Hungarian nobility by Francis Joseph I. His chief works are: "Franz Deak" (Leipsic, 1876); "Gedichte von Petöfi" (*ib.* 1878); "Lied von der Nähmaschine" (*ib.* 1884); "Joseph Kiss Gedichte" (*ib.* 1887); "Ungarische Dorf-Geschichten von Koloman Mikszáth" (*ib.* 1890). He also translated several plays by Csiky, and poems by Arány, Gyulai, and Kolomon Tóth. He contributes to the "Frankfurter Zeitung," "Münchener Allgemeine Zeitung," "Neue Freie Presse," and "Pester Lloyd." He is now (1904) engaged in the preparation of a large anthology of Hungarian poets, prose-writers, and parliamentary speakers.

NEUILLY-SUR-SEINE: Town of France, and suburb of Paris. It has a population of 32,730. Its Jewish community, which now (1904) comprises about 250 families, is comparatively new. About 1860 a small oratory was established in a hired hall, but after 1871 the congregation increased rapidly, until, in 1875, the community was organized by a consistorial decree. On June 4, 1878, the synagogue was dedicated. Ten years later Simon Debré, at that time rabbi at Sedan, was called to Neuilly-sur-Seine, and a period of such remarkable prosperity began that the community is now one of the largest in France. The Jewish refuge for girls who have no proper home—La Maison Israélite de Refuge pour l'Enfance, founded by Coralie Cahen in 1866, and numbering 132 inmates—is situated at Neuilly, although it has no official connection with the community.

D. S. D.

NEUMANN, ABRAHAM: Russian rabbi; born at Gerolzhofen, near Würzburg, 1809; died at St. Petersburg Aug. 22, 1875. In 1822 he studied Talmud at the yeshibah of Fürth and in 1828 began the study of theology at the University of Würzburg, later removing to the University of Giessen. In 1843 he was called to succeed Lilienthal in the rabbinate of Riga (Russia), where he officiated for twenty years. There he gained the friendship of Prince Suvorov, through whose influence he effected reforms in the schools in the district of Riga; Prince Suvorov assisted him also in elaborating plans for the colonization of the Russian Jews. In 1856 Neumann was elected, by the conference of rabbis, chairman of a committee to submit to the minister of the interior a memorandum on the subject of the improvement of the condition of the Jews in Russia, which memorandum was not entirely without beneficial results. In 1863 Neumann was called to the rabbinate at St. Petersburg, where also he manifested great activity in religious and communal affairs.

NEUMANN, ANGELO: Austrian theatrical director; born at Vienna Aug. 18, 1838. Neumann went upon the stage in 1859, as a barytone, appearing at Cologne, Cracow, Oedenburg, Presburg, and Danzig. From 1862 to 1876 he was a member of the Vienna court opera. In the latter year he went to Leipsic as operatic director, and in 1882 organized a traveling Wagnerian opera company. Three years later he settled at Prague as the director of the Deutsche Landestheater. Neumann's principal service to the Austro-German stage was the production for the first time in its entirety of Wagner's "Der Ring der Nibelungen," which took place, in spite of seemingly insurmountable difficulties, at the Stadttheater, Leipsic, April 28, 1878. Another theatrical feat to the credit of Neumann was the initial production in Berlin of "Cavalleria Rusticana."

S. E. Ms.

NEUMANN, ARMIN: Hungarian deputy; born at Grosswardein Feb. 14, 1845. After having prepared for the rabbinical career at the Jewish theological seminary of Breslau he devoted himself to the study of law at the universities of Berlin and Vienna, and took his degree at Budapest in 1868. In the following year he opened a law-office at Papa, where he was notary to the Jewish community. In 1887 he was appointed privat-docent in commercial law at the University of Budapest. In the same year he was returned by the district of Bereczk to the Hungarian Parliament, where he attracted attention by the excellence of his speeches on the monetary system, on tax reform, and on various religious and political questions. In 1898 he was appointed a member of the parliamentary commission for the codification of the laws, and in recognition of his services he received from Emperor Francis Joseph I. the title of "aulic councilor." In 1889 he was appointed associate professor at the University of Budapest. His works include: "A Kereskedelmi Törvény Magyarázata," an exposition of commercial law (3 vols., Budapest, 1878–82; 2d ed. 1892–97); "Az Eletbiztosítás Lényege s Jogi Természete," natural and legal aspects of life-insurance (*ib.* 1881); "A Biztositási Ügylet," on insurance (*ib.* 1882); "A Védjegyek Oltalmáról Szóló Törvény Magyarázata," on patent law (*ib.* 1890); "Valútánk Rendezéséröl," on the monetary system (*ib.* 1891);

"A Korlátólt Felelöségre Alakult Társaságokról Szóló Német Birodalmi Törvényröl," on the German law of limited corporations (*ib.* 1893). As president of the Society for the Training of Jewish Artisans and Farmers he has rendered valuable services to his coreligionists.

NEUMANN, CARL FRIEDRICH: German Orientalist and historian; born at Reichmansdorf, near Bamberg, Dec. 22, 1798; died in Berlin March 17, 1870. His parents were named **Bamberger.** Entering first upon a business life, Neumann later studied at Heidelberg (coming under the influence of Creuzer and Hegel), Munich (where he became a Lutheran), and Göttingen. He became professor in the gymnasium at Speyer in 1822, but in 1825 was removed for certain religious utterances, after which he lived in private in Munich until 1827. Neumann then studied Armenian at the Convent of San Lazaro in Venice; visited Paris (1828) and London (1829) for the purpose of studying Oriental languages, chiefly Chinese; and in 1830 went to China, where he collected 10,000 Chinese books, purchasing over 2,400 volumes for the Royal Library at Berlin. On his return he presented his own collection to the Bavarian government, which in 1832 appointed him conservator of the collection and professor of Chinese in the Munich University. Though he had won distinction as an Orientalist he was nevertheless removed in 1852 for expressing too progressive opinions and for being active in the revolution of 1847–1848 (he had been elected a member of the Bavarian provisional parliament). In 1863 he took up his residence in Berlin.

Neumann's works include: "Rerum Criticarum Specimen" (Göttingen, 1820); "Mémoire sur la Vie et les Ouvrages de David, Philosophe Arménien" (Paris, 1829); "History of Vartan, by Elisæus" (transl. from the Armenian; London, 1830); "Vahram's Chronicle of the Armenian Kingdom in Cilicia" (*ib.* 1830); "Catechism of the Shamans" (transl. from the Chinese; *ib.* 1831; also in German, Leipsic, 1834); "History of the Pirates Who Infested the Chinese Seas from 1807 to 1810" (London, 1831); "Pilgerfahrten Buddhistischer Priester aus China nach Indien" (Leipsic, 1833); "Lehrsaal des Mittelreichs" (1836); "Asiatische Studien" (1837); Supplement to Burck's Marco Polo (Leipsic, 1846); "Die Völker des Südlichen Russlands in Ihrer Geschichtlichen Entwickelung" (*ib.* 1847, 2d ed. 1855; awarded a prize by the French Institute); "Gesch. des Englischen Reichs in Asien" (2 vols., *ib.* 1857); "Ostasiatische Gesch. vom Ersten Chinesischen Krieg bis zu den Verträgen in Peking" (*ib.* 1861); "Gesch. der Vereinigten Staaten von Amerika" (3 vols., Berlin, 1863-66); "Hoein-Schein, or the Discovery of North America by Buddhist Monks" (English transl., London, 1874). He contributed a number of articles to the "Zeitschrift der Deutschen Morgenländischen Gesellschaft" (vols. i. and ii.) and edited Gützlaff's "Geschichte des Chinesischen Reichs."

NEUMANN, ELEONORA: German violinist; born at Lissa in 1819; died at Triest in Jan., 1841. She received her musical education at Warsaw, where her father lived for several years until his expulsion for political reasons. In March, 1838, she went to Milan, where she played with great success in public concerts. During a tour through the principal cities of northern Italy she excited the admiration of all musical critics.

NEUMANN, ISIDOR: Austrian dermatologist; born at Misslitz, Moravia, March 2, 1832; educated at Vienna University (M.D. 1858). He became privat-docent in 1861; assistant professor in 1873; and was appointed professor of dermatology and director of the clinic for syphilis in 1881.

Neumann is the author of: "Lehrbuch der Hautkrankheiten," Vienna, 1868 (5th ed. 1880); "Zur Kenntniss der Lymphgefässe der Haut des Menschen und der Säugethiere," *ib.* 1873; "Atlas der Hautkrankheiten," *ib.* 1881; and "Lehrbuch der Syphilis," *ib.* 1887. He has also published many essays in the professional journals.

NEUMANN, MOSES SAMUEL: Hungarian poet; born at Ban, Hungary, in 1769; died at Budapest Nov. 29, 1831; son of a poor cantor who died prematurely. When hardly more than a child Moses Neumann went to Boskowitz, Moravia, where he became a pupil of the rabbi there, Samuel Kolin; several years later he removed to Prague, where Baruch Jeiteles exerted a lasting influence upon him. Neumann's life was full of hardships; he was tutor at Presburg; next entered into business at the neighboring town of Kittsee; then became a tutor again—at Vienna, Kittsee, and finally at Budapest, where he settled in 1822. Neumann had a master's command of the Hebrew language. His style is at times medieval, as in his drama "Bat Yiftaḥ" (Vienna, 1805) and his "Shire Musar" (*ib.* 1814). The latter consists of poems in German and Hebrew and is printed together with "Iggeret Terufah," a letter on the sin of self-defilement. Other works are: "Ma'gal Yosher," a Hebrew grammar (Prague, 1808, 1816; Vienna, 1831); "Ḥinnuḳ Lashon 'Ibrit," a theoretical and practical grammar of the Hebrew language (*ib.* 1815); a German translation of the "Millot Higgayon" of Maimonides, together with a Hebrew commentary entitled "Yeter ha-Bi'ur" (Vienna, 1822); a Hebrew-German letter-writer (4th ed., *ib.* 1834). He compiled also a geography, a Biblical history for the young, an elementary arithmetic, etc.

NEUMANN, SALOMON: German physician and statistician; born at Pyritz, Pomerania, Oct.

22, 1819; studied medicine at Berlin and Halle (M.D. 1842). He has practised as a physician in Berlin since 1845, and in 1875 received the title of "Sanitätsrat."

Neumann has contributed many essays to the medical journals. Among his works may be mentioned: "Die Oeffentliche Gesundheitspflege und das Eigenthum," Berlin, 1847; "Die Berliner Syphilisfrage," *ib.* 1852; "Die Berliner Volkszählung von 3 Dez. 1861," *ib.* 1863; "Die Fabel von der Jüdischen Masseneinwanderung," *ib.* 1880 (2d ed. 1881). He particularly devoted his attention to statistics refuting some claims of anti-Semitic writers.

NEUMANOVITZ, NAPHTALI HERZ: Russian author; born at Jozefow, government of Lublin, Feb. 12, 1843; died at Warsaw March 11, 1898. He was descended from a family distinguished for secular as well as Talmudic scholarship. When eighteen he went to Lublin, and some time afterward removed to Warsaw. At the latter place he became associated with the journal "Ha-Ẓefirah," to which he contributed weekly feuilletons under the name of **Berosh Homiyoth**; these were collected and published in one volume after his death. He contributed also articles to the Polish magazines published at Lublin, and to "Izraelita." Neumanovitz edited a Hebrew magazine for Jewish youth, and compiled a number of text-books for the study of Hebrew, Polish, and German, under the general title "Ha-Limmud me-Raḥoḳ" (Warsaw, 1898).

NEUMARK, MIRELS (Meshullam Zalman ben Jacob David): German Talmudist; father of Ẓebi Ashkenazi; died at Hamburg Nov. 28, 1706. Meshullam Zalman was one of the most respected members of the ghetto of Vienna. When the Jews were expelled from that city he went with his family to Berlin, where also he achieved prominence. As before, he devoted himself to the study of the Talmud and to philanthropic activities as well as to business. In Dec., 1678, he returned for a few weeks to Vienna on a special permit obtained from the emperor through the Brandenburg ambassador there, in order to negotiate a loan for the elector. Soon after this he gave up his business to accept the rabbinate of the sister communities of Hamburg and Altona.

NEUMEGEN, LEOPOLD: English schoolmaster; born in Posen in 1787; died at Kew, near London, April, 1875. He first taught in Göttingen, and about 1816 removed to England, where he became principal of a boarding-school at Highgate (London). His pupils were numerous, and for half a century his name was a household word in the Anglo-Jewish community. There was scarcely a family of any note whose members had not received at least a portion of their education at his school. Sir George Jessel, Sir B. S. Phillips, Professor Waley, Professor Sylvester, Sampson Lucas, and Sebag Montefiore were numbered among his students. After many years' labor he retired, but, having made some unfortunate investments, he found it necessary to reopen the school and commence a fresh career of work. On this occasion he established the school at Gloucester House, Kew.

Bibliography: *Jewish Chronicle*, April 16, 1875.

NEURATH, WILHELM: Austrian economist; born at St. Georgen May 31, 1840. After winning his doctor's degree he became privat-docent at the Technische Hochschule in Vienna, and afterward associate professor at the Hochschule für Bodenkultur. He wrote: "Volkswirthshaftliche und Socialphilosophische Essays" (1880); "Elemente der Volkswirthschaftslehre" (Vienna, 1882; 3d ed. 1896); "System der Sozialen und Politischen Oekonomie" (*ib.* 1885, 2d ed. 1889); "Das Recht auf Arbeit und das Sittliche in der Volkswirthschaft" (*ib.* 1886); "Wahre Ursachen der Ueberproduktionskrisen" (1892); "Das Sinken des Zinsfusses" (*ib.* 1893), a lecture delivered before the Vienna Merchants' Association; "Die Fundamente der Volkswirthschaftslehre: Kritik und Neugestaltung" (Leipsic, 1894), previously published in the 36th ed. of Rothschild's "Taschenbuch für Kaufleute"; "Das Hauptproblem der Modernen Volkswirthschaft" (Vienna, 1899), a lecture delivered before the Society of Austrian Engineers and Architects.

NEUSS (נושא, נוסא): City of Rhenish Prussia. Its Jewish community, which dates back to the eleventh century, is known for the series of persecutions and martyrdoms which it has experienced. When on May 30, 1096, the Crusaders made an attack on the Jews of Cologne, Archbishop Hermann III. led many of the latter to seven neighboring towns, one of which was Neuss, where they quietly remained till the end of June. On the 26th of that month, which was a holiday, the Crusaders, joined by a large mob, fell upon the Jews of Neuss (who, according to Albert of Aachen, numbered 200), massacred all of them, and plundered their houses. A certain Samuel b. Asher and his two sons were murdered on the bank of the Rhine after having been tortured, one of the sons (according to another report, both sons) being hanged on the door of his house. In spite of this massacre Jews again settled in Neuss; and just one century later they formed a flourishing community which included several eminent scholars.

On Jan. 27, 1197 (according to Aronius, "Regesten," No. 322, on Feb. 17, 1187), a mad Jew killed a Christian girl in the presence of many people. Thereupon the madman and six other Jews, among whom was the tosafist Samuel b. Naṭronai, were murdered, being broken on the wheel. This, however, did not appease the fury of the mob; and five days later the mother of the madman and her brother were seized, the former being buried alive, and the latter tortured to death. Another woman and her three daughters were taken by force to the church and baptized. After the feast of Purim, however, they returned to their former faith. The Jews of Neuss bought for a large sum of money permission to bury the victims; they were besides required by Archbishop Adolf of Altenau to pay 150 pieces of silver. Ephraim b. Jacob of Bonn, who had been living at Neuss, had gone to Cologne just three days before these events. In the thirteenth century many Jews of Neuss emigrated to Cologne.

In 1283 the Jews of Neuss, tired of oppression by Rudolph I. of Hapsburg, welcomed the usurper Frederick. They supported him with money to such an extent that he was styled "der Juden-König." He unfortunately met with a terrible end July 7, 1284, at the hand of Rudolph I. The Jewish community of Neuss was one of those that suffered in 1349 during the Black Death.

In 1890 there were 316 Jews in Neuss, but the number gradually decreased till in 1903 there were only 240 Jews in a total population of 28,484. The community possesses a synagogue and a public school for Jewish children.

NEUSTADT, PHINEHAS: German rabbi and author; born at Borek, province of Posen, Prussia, Sept. 23, 1823; died at Breslau Feb. 24, 1902. Neustadt, who lost his father before he was two years of age, was apprenticed by his mother to a bookbinder, but ill treatment on the part of his master and a desire to study drove him away from home. He visited various yeshibot, notably that of Elijah Guttmacher in Pleschen; passed, at the age of eighteen, his examination as a teacher; and occupied from 1841 to 1855 various positions in the grand duchy of Mecklenburg. In the latter year he was elected rabbi of Arnswalde, having received the rabbinical diploma and having served as administrator during the interregnum in the "Landesrabbinat" following the resignation of David Einhorn. In 1858 he became rabbi of Kolberg, but resigned in 1860 in order to enter the University of Breslau. He received the degree of doctor of philosophy from the University of Jena in 1864, his thesis being on the doctrine of immortality in the Talmud. While attending lectures at the university he opened a school for instruction in Hebrew, which in 1867 was recognized by the government, and which he conducted, in harmony with the tenets of Orthodox Judaism, until his death. At the same time he preached in various synagogues and in the bet ha-midrash. When he celebrated his sixtieth anniversary as a teacher in 1901, he was made by the King of Prussia a knight of the Order of the Royal Crown. In addition to a thesis entitled "Die Gottes- und Unsterblichkeitslehre" (Leipsic, 1872) he published a large number of sermons and addresses, a bibliography of which is given in his biography written by his son.

S. D.

NEUSTADT - SCHIRWINDT (WLADYSLAVOW): District town in the government of Suwalki, Russian Poland; built in 1643 under Ladislaus (Wladyslaw) IV., King of Poland (hence its Polish name). While under the Prussian dominion (1808–40) the town was named "Neustadt." It can not be said with certainty when Jews first settled there; it is known that in 1740 a well-organized Jewish community was there. In 1809 the Prussian government offered 1,500 "Reichsthaler" to the person who should build the first stone house in the town; the award was claimed by Isaac Abelson, son of Abba Abelson, then rabbi.

The following is a list of the rabbis of Neustadt-Schirwindt: Abba Dayyan (1740–52), ancestor of the families Abelson and Bernstein; Nahum Ḥarif (d. 1820); Löb Brauda; Nathan Stern, commonly called "R. Nathan der Eiserne Kopf," father of Joseph Zechariah Stern, rabbi of Shavli; Elijah Deiches (d. at Jerusalem); Bezaleel ha-Kohen (d. 1868); Samuel Meïr Asch (d. 1885); Israel Ḥayyim Deiches (1885–1900), author of "Imre Yosher" and other works; Ezekiel Wolpa (since 1900).

Neustadt-Schirwindt, between 1815 and 1850, contained a number of Talmudists, scholars, and writers, the most distinguished of whom were: Judah Abelson; Isaac Abelson (author of a commentary on the Mishnah entitled "Zikron Yehudah," and who was afterward rabbi in Tzaikishok); Aryeh Löb Blumenthal (Talmudist, grammarian, and mathematician); Kalonymus ha-Kohen (afterward rabbi of Zabludova; author of "Shebet Aḥim"); Dob Bär Goldblum (well-known Hebrew litterateur); Isaac Brauda (grammarian and author); Asher Radin (author of "Ha-Geografia ha-Ḳetannah," Königsberg, 1860); Judah Radin; Mordecai Radin. Many rabbis were born at Neustadt - Schirwindt: Isaiah Wohlgemuth became rabbi of Memel, Prussia; Solomon Pucher, of Mitau; Joshua Höshel Bishkowitz, son of Kalonymus ha-Kohen, died at Jerusalem; Elijah Teomim became rabbi of Manchester, England (where he died); Adolf Radin removed to New York, as did Ẓebi Hirsch Bernstein, editor of the Hebrew periodical "Ha-Ẓofeh ba-Areẓ ha-Ḥadashah (New York); Ẓebi Hirsch ha-Kohen was the author of "To'ome Ẓebiyyah," a commentary on "Pereḳ Shirah"; and Israel Iser Goldblum, a Hebraist, settled in Paris.

Neustadt-Schirwindt was the burial-place of Judah Löb, son of Elijah of Wilna. The town has a total population of 4,000, including over 3,000 Jews.

H. R. A. H. C.

NEUSTÄTTER, LOUIS: German portrait- and genre-painter; born in Munich Sept. 5, 1829; died in Tutzing, on the Starnbergersee, May 24, 1899. Neustätter studied first under the copperplate-engraver Peter Latz, then at the Munich Polytechnicum and the Munich Academy (entered 1847), and in 1850 in the atelier of the portrait-painter Bernhard. His first pictures appeared soon after this and were favorably received. He visited Paris in 1852, worked some time with Cogniet, and then went to Rome and Naples. From 1854 to 1864 he was in Vienna, where he painted a large number of portraits. It was not until 1860 that he took up genre-work, his earliest pictures in this field—"The

Orphans" (in the possession of the banker Zimmer) and "The Widow"—meeting with such great success that he duplicated them. He next resided in Munich, removing in 1879 to Tutzing, which he was largely instrumental in making a place of popular resort. He was voted the freedom of the town in recognition of his efforts to improve and beautify it; he and his brother were the only resident Jews. King Ludwig II. of Bavaria and the emperor Francis Joseph of Austria conferred on him high orders. Of Neustätter's genre-pictures the best are, besides the two mentioned above, "Rèverie," "The Breakfast," "Visit to the Foster-Parents," "A Canary-Bird's Burial," "The Hermit," and "The Shooting-Club." His last picture was "A Praying Child."

NEUTITSCHEIN: City in the province of Moravia, Austria. It had a Jewish congregation in the Middle Ages, which was expelled Aug. 30, 1563. The cemetery was deeded by the Jews to the city under the condition that it should be preserved. It has, however, entirely disappeared. The new settlement did not begin until after 1848, when the law permitted Jews to settle in all parts of the empire. In 1893 there was organized a congregation, which now comprises the Jews living in the districts of Neutitschein, Fulnek, Frankstadt, and Freiberg, and which numbers about 600 persons. It has various charitable societies, but as yet (1904) no synagogue. The first rabbi was Dr. S. Mandl, elected 1899, who still holds office. David KAUFMANN was descended on the maternal side from a Neutitschein family.

D. S. MDL.

NEUWIEDEL, ELIAS: Russian grammarian; born at Neustadt-Sugind (Alexandrowo) 1821; died at Warsaw Sept. 16, 1886. He studied Talmud at the yeshibah of Volozhin, and was teacher of Hebrew and modern languages at Rossieny, government of Kovno, and Warsaw. At the latter place he published "More Sefat 'Ibrit," a Hebrew grammar after the method of Ollendorf (1874), and "Ab le-Banim," didactic discourses for the young (1882). Neuwiedel was a grandson of Benjamin-Benish Neustädter.

NEUZEIT, DIE. See PERIODICALS.

NEVAKHOVICH, LÖB: Russian writer; born in Letichev, Volhynia, in the second half of the eighteenth century; died in St. Petersburg Aug. 1 (13), 1831. As the friend and protégé of Abram Peretz he went to St. Petersburg toward the end of the reign of Catherine II., and engaged in commercial pursuits; but he soon turned his attention to literature, in which he achieved some success. He was among the first Russian Jews to gain a mastery of the Russian language. Nevakhovich was familiar with the writings of his day, and was a linguist, a student of philosophy, and an ardent admirer of Moses Mendelssohn. He took great pride in his patriotism, and in his writings expresses his gratitude for having been permitted to see the growth of Russia. He was inclined to be optimistic in regard to the future of the Jews and assumed that they would be granted greater liberty. Later, Nevakhovich was baptized into the Greek Orthodox Church. In 1817 he lived in Warsaw and was connected with the Ministry of Finance. In 1831 he went again to St. Petersburg in order to place one of his plays on the stage, but he died before he could accomplish his purpose.

Nevakhovich, with his friends Peretz and Notkin, made a determined effort to secure recognition for the Jews of Russia. Under the title "Vopl Dcheri Yudeiskoi," he wrote an urgent appeal to the people of Russia, calling upon them to show a spirit of tolerance and justice in their dealings with the Jews. In this appeal he shows how the Jewish people have been maligned, and insists that the Jewish religion tends to produce good men and good citizens. "For centuries," he says, "the Jews have been accused by the peoples of the earth. They have been accused of witchcraft, of irreligion, of superstition. . . . All their actions were interpreted to their disadvantage, and whenever they were discovered to be innocent their accusers raised against them new accusations. . . . I swear that the Jew who preserves his religion undefiled can be neither a bad man nor a bad citizen." While it is not known to what extent this appeal influenced legislation in regard to the Jews, it undoubtedly had some effect. Moreover, this was the first public defense by a Russian Jew of his coreligionists.

In 1804 Nevakhovich published "Perepiska Dvukh Prosvyeschonnykh Druzei," and other writings by him appeared in 1805 and 1806. About this time he became intimate with Count A. A. Shakhovskoi, a dramatist. Nevakhovich's play "Sulioty ili Spartantzy XVIII. Vyeka" was successfully produced at the Imperial Theater in St. Petersburg in 1809, and was performed before the emperor in October of the same year. His "Mech Pravosudiya" was put on the stage after his death, in 1831. Nevakhovich's two sons, **Alexander** and **Michael,** both engaged in literary pursuits, Alexander being associated with Gedeonov, a well-known theatrical director. Michael was the editor of the first Russian comic paper, "Yeralash." The scientist Mechnikov was a grandson of Nevakhovich.

NEVERS (ניוירשי, נווירסה, or נבירשה): Chief city of the department of the Nièvre, France, with a population of 27,108 (1904). In the twelfth century Jews were permitted to reside at Nevers on condition of paying to the seigniors of the city a tax of five sous per family and twenty sous for each person, besides their tithes. In a letter written by Innocent III. to the Count of Nevers (Jan., 1208) the pope reproved the latter for having treated the Jews on his estates with kindness and for having allowed them, to the great injury of the Church, to hold mortgages on Christian castles, fortresses, and villages. He threatened him with the utmost displeasure of the Church if he continued to afford his protection to the Jews, saying that it was scandalous to see Christians pressing the grapes and slaying the cattle of the Jews, who were permitted to take what they desired and to leave the remainder to the Christians. "It is above all a disgrace," continued the pope, "that it is the very wine prepared by the Jews that is afterward used for the sacrament of the eucharist." When Louis X., in 1316, authorized the return of the Jews to Nevers, it was with the stipulation that they should be apportioned to the same seigniors as before their exile, and that their confiscated goods should not be restored.

On their expulsion from France in 1394 some Jews of Nevers took refuge in Provence. A descendant of one of these, Moses of Nevers, settled at Arles in 1464 with his brother, whom he calls "the good judge of Nevers"; another, Solomon of Nevers, a dealer in silks and gold, lived in 1494 at Tarascon. In the first half of the eighteenth century several Jewish merchants visited the markets and fairs at Nevers, but the council of state, on the complaint of the Christian traders, forbade their engaging in commerce at Nevers under penalty of a fine of 1,000 livres and the confiscation of their merchandise (April 19, 1740). But one scholar of Nevers is known: he is quoted in Tos. Pes. 34a under the name of "Moses of נבריש."

NEW ERA ILLUSTRATED MAGAZINE: A monthly publication founded in Boston, Mass., as the **New Era Jewish Magazine,** by Raphael Lasker, in June, 1902. Its title was changed and it became the property of the New Era Illustrated Magazine Company in Oct., 1903, when the publication office was removed to New York. It is a magazine devoted to matters of interest to Jews and not the organ of any class, nor the mouthpiece of any individual. One of its distinguishing features is a department entitled "A Review of Jewish Reviews." It is edited by Isidor Lewi, and among its contributors are Ludwig Geiger, Hermann Vogelstein, Max Nordau, M. Kayserling, Claude G. Montefiore, Isidore Singer, Henry Berkowitz, and Simon Wolf.

H. R. S.

NEW HAMPSHIRE: One of the New England states of the United States of America, and one of the thirteen original states. Record is found as early as 1693 of one Aaron Moses of New Castle; and a local historian refers to the Moses and Abrams families of Sanbornton as "Jewish descendants." Reference occurs, in a list (dated 1770) of grants to settlers, to one Joseph Levy; and in 1777 there is mentioned a William Levi who was a private in the 2d New Hampshire Continental Regiment. Beyond the references to these as "Jewish descendants" there is no proof of their Jewish origin. Abraham Isaac, who settled at Portsmouth about the close of the Revolution, was, however, known as a Jew, being, according to Brewster ("Rambles About Portsmouth," p. 230), the first Jew in that place. He is reported to have acquired considerable property and to have built himself a house. He died Feb. 15, 1803; and his gravestone is still to be seen at Portsmouth.

At present (1904) the following towns of New Hampshire have organized Jewish communities: **Manchester,** with the Congregation Anshe Sfard Russia (Russian) and the Queen City Hebrew Synagogue and Cemetery; **Portsmouth** and **Nashua,** each with a congregation. The Jewish inhabitants of the state are estimated at from 1,000 to 1,200 in a total population of 411,588.

NEW HAVEN. See Connecticut.

NEW JERSEY: One of the North Atlantic states and one of the thirteen original states of the United States of America. It contains the following Jewish communities:

Asbury Park, with a congregation, Sons of Israel.

Atlantic City, with a large summer population and a number of permanent residents, has two congregations, Beth Israel (rabbi, Henry M. Fischer) and Amonat Israel. It has also a large Jewish Seaside Home for Invalids, established under the auspices of the Jewish Maternity Association of Philadelphia in 1892, which provides accommodation for poor invalid Jewish women and children during the summer.

Bayonne owes most of its Jewish residents to recent Russian immigration, although there are a few settlers of older date. Recorder Lazarus is an influential citizen; and the Jewish community has rapidly increased to 400 families. Congregation Beth Abraham was founded in 1896; and among its institutions are a Hebrew Institute and Hebrew Sheltering and Ladies' Aid Society.

Camden has about 50 Jewish families. Congregation Sons of Israel was founded in 1894. Other congregations are Bnai Abraham and Adath Israel; and there is a Hebrew literary society.

Elizabeth traces its earliest Jewish residents, the Sontheimer and Hirschfelder families, immigrants from Posen, to 1850 and 1855. The first religious services were held in 1857, and for three years were continued on the holy days and important Sabbaths at the house of M. Sontheimer, until with the growth of the community a hall was hired and H. M. Levy was engaged as minister. In 1882, when the Jews numbered about 25 families (chiefly from Bohemia and other parts of Germany), Congregation B'nai Israel was organized, and in the following year its synagogue on East Jersey street was dedicated. There are two congregations: B'nai Israel, with 32 members, and the Rev. S. Schoenkopf as minister, and Holche Yosher, organized in 1889 by the Russians, whose new synagogue is situated on South Park street; the latter has 43 members. Connected with Congregation B'nai Israel are a Sabbath-school, ladies' charitable society, and a Young Men's Hebrew Association.

The majority of the Russians do not affiliate with either congregation, but belong to three benefit societies with a religious coloring; namely, Ahavath Achim (1891), with 125 members; Ohave Zedek (1893), with 160 members; and the Austrian Benevolent and Benefit Association (1891), with 60 members. The Ohave Zedek owns a well-equipped building on Court street, with library and free reading-room. In the same building are class-rooms for the Hebrew free school (90 pupils), supported by the three societies, and a hall wherein services are held on Sabbaths and holy days. Two of the societies have services on the holy days only.

The majority of the Russian and Austrian Jews are employed by the Singer Manufacturing Company and in other factories; and most of them are fairly prosperous. The Bohemian Jews and those from other parts of Germany, as well as those Russians who are not working men, are successful business men. There are three Jewish physicians and four Jewish lawyers. With the influx of Russian Jews, the community rapidly grew in number, until now (1904) the Jewish population reaches 550 families in a total of 52,130 inhabitants.

Englewood has a congregation, Ahbat Torah, comprising 30 members.

Hoboken has two congregations, each with its synagogue: Adath Emuno, founded in 1871 (rabbi, Nathan Wolf), and numbering about 55 members; and Moses Montefiore, established in 1892, and numbering about 60 members. It has also a Hebrew Institute, a free school, a Young Men's Hebrew Association, Ladies' Aid Society and Social Club, and a Benevolent Association.

Jersey City has a growing Jewish population, the size of which is variously estimated, but is certainly not less than 1,500 families. Its oldest congregations are Beth-El, on York street, founded in 1870, and Bnai Israel, established in 1882. Since then two other congregations have been organized. In 1900 a Young Men's Hebrew Association was founded, and there are also a Free Loan Association, and a Hebrew free school on Jersey City Heights.

Long Branch has a very extensive Jewish population in the summer and a growing permanent population as well. It has a congregation, Beth Miriam, which is largely attended and which has been addressed by many distinguished preachers during the summer season. Among its local institutions are The Helping Hand Society, Free Burial-Ground Association, Chevra Kadisha, and a Hebrew school.

Millville and **Morristown** each have a congregation; the latter has a Cemetery Association.

New Brunswick has had a marked growth in its Jewish population, its Russian residents largely outnumbering the original settlers. There are several congregations, Congregation Anshe Emeth being the most important.

Orange has about 30 Jewish families, with a small synagogue. Its congregation dates back to 1874. It has its literary circle and ladies' aid society.

Passaic has about 400 Jewish families. Congregation B'nai Jacob was founded about 1893. Attempts have been made to organize a Hebrew school, but without any permanent success. There is a Ladies' Hebrew Benevolent Society. More recently the Kal Israel Achim has been organized.

Perth Amboy has a congregation, a Young Men's Hebrew Association, and two communal societies; **Plainfield** has two congregations and two charitable associations; and **Somerville** and **Union Hill** have each a congregation.

Woodbine, with its 2,000 residents, superior educational facilities, and over $3,000 paid out weekly in wages alone, has amply fulfilled the promise of its founders. Every occupation is represented in the settlement, whose inception (in 1894) and maintenance are due to the Baron de Hirsch Fund (see HIRSCH FUND, BARON DE). The grounds of the Agricultural School contain main school building, dormitory, dining-room and kitchen annex, dairy, teachers' cottage, and barn. There are 15 instructors and 110 students, with total expense of $36,000 annually. Sixty graduates have passed from the school since 1895, and all have profitable employment. The synagogue was built by the colonists, whose farms show every sign of prosperity. In South Jersey are three more colonies, **Alliance, Carmel,** and **Rosenhayn** (see JEW. ENCYC. i. 260 *et seq.*, *s.v.* AGRICULTURAL COLONIES IN THE UNITED STATES).

New Jersey contributed 278 Jewish soldiers to the Civil war and about 30 soldiers to the Spanish-American war. At present (1904) its Jewish inhabitants are estimated at 25,000 in a total population of 1,883,669.

A. A. S. I.

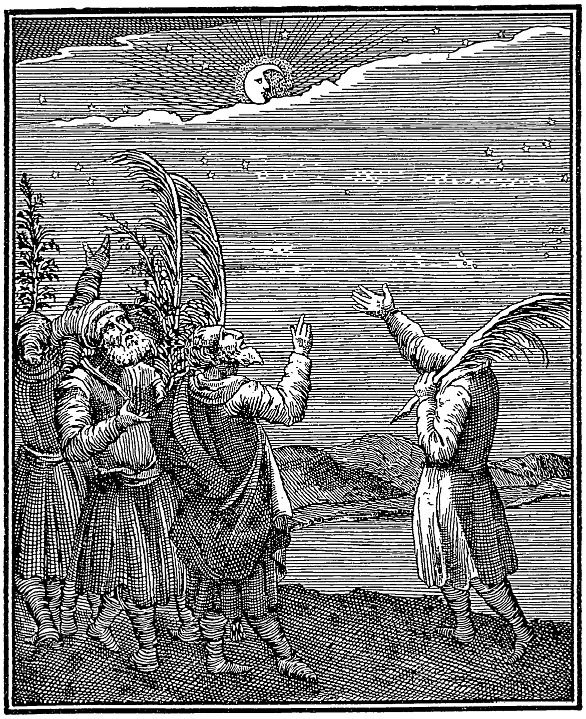
NEW MEXICO: A territory in the western division of the United States; acquired after the war with Mexico by the treaty of Guadalupe Hidalgo, ratified May 30, 1848. The earliest Jewish settler in New Mexico was Jacob Spiegelberg, who went to Santa Fé in 1846. Among the other early Jewish settlers who helped to build up the district, and of whom many are still (1904) alive, were Jacob Amberg, Col. Marcus Brunswick (served in the Civil war), Gustave Elsberg, the brothers Ilfeld, Major Arthur Morrison (served in the Civil war), the brothers Rosenwald, the brothers Seligman, the brothers Spiegelberg, Spitz, and Zadoc and A. Staab.

In addition to those mentioned above, H. N. Jaffa (first mayor of Albuquerque), Nathan Jaffa, Ernest Meyer, C. Rosenwald, and many others have filled public offices in the territory and are among the most respected citizens of New Mexico.

Albuquerque: The largest and most important city of New Mexico; has a Jewish population of 150. A B'nai B'rith lodge, formed in 1882, was the first Jewish organization in the territory. Other institutions are the B'nai B'rith Cemetery Association, Ladies' Hebrew Aid and Benevolent Society, and Congregation Albert, formed in 1897 through the efforts of H. N. Jaffa, its first president, and Sam. Neustadt, first secretary. Rabbis Greenberg, Jacobs, and Kaplan have successively occupied the pulpit.

Las Vegas: At one time the largest, and now the second, city in New Mexico; it has the most considerable Jewish population in the territory, and likewise the oldest Jewish congregation. With the arrival of several families in 1878, Jewish influence began to be felt in Las Vegas; and within a few years a regular congregation was formed (1884) and weekly services were held in a hall rented for the purpose. Two years later a temple was built, Congregation Montefiore being named in honor of the hundredth birthday of the great philanthropist. The rabbis who have successively occupied the pulpit are: J. Luck (1884–86), Schelitzer, Sig. L. Frey, L. Schreiber (1896–97), B. A. Bonheim (1897–1902), and Dr. Lefkovits, the present occupant (since 1902). Other Jewish institutions are the Cemetery Association, Ladies' Relief Society (organized 1889), Ladies' Temple Society (organized 1903), J. E. Rosenwald Lodge, No. 545, I. O. B. B. (organized 1902).

Santa Fé: Capital of New Mexico; contains about twenty-five Jews. The Jewish population at one time was much larger, but since 1880, when Santa Fé was cut off from the main line of the railroad, the population has gradually decreased and many Jews have since removed. At no time, however, was there a Jewish organization, either religious or philanthropic, although during the holy days services were sometimes conducted by laymen. But recently a congregation has been gathered together, and Rabbi Kaplan of Albuquerque now (1904) conducts services and lectures once a month.



Blessing of the New Moon.
(From Leusden, "Philologus Hebræo-Mixtus," Utrecht, 1657.)

Roswell: Although this town has a Jewish population of but 36, a congregation and Sabbath-school have been organized through the efforts of Nathan Jaffa, who conducts services every Friday evening.

Throughout New Mexico a number of Jews are scattered in almost every town, the entire Jewish population of the territory numbering between 700 and 800 in a total population of 195,310.

NEW MOON: The period of New Moon was, in pre-exilic times, celebrated by cessation of labor; it was superior even to the Sabbath-day, which formed but a part of it (see I Sam. xx. 18–34; II Kings iv. 23; Amos viii. 5; Hos. ii. 13 [A. V. 11]; Ezek. xlvi. 3); but it lost its importance during the Exile (see SABBATH) and was observed mainly as the determining factor of the calendar with its festivals. In the latter period only the women—who in pagan times were especially attached to the "queen of heaven" (Jer. xliv. 15–19)—refrained from work on New Moon, the reason given being that they were privileged to celebrate it because they had not been as willing to worship the golden calf as the men (Yer. Pes. iv. 30d; Pirḳe R. El. xlv.; Ṭur, Oraḥ Ḥayyim, 917); the men were allowed to work (Ḥag. 18a; 'Ar. 10b). In the Temple, New Moon was celebrated by special sacrifices (Num. xxviii. 11–15; II Chron. ii. 4, viii. 13; Ezra iii. 5; Neh. x. 33) and by the blowing of the trumpet (Num. x. 10). Of the greatest significance, however, was the proclamation of New Moon ("Ḳiddush ha-Ḥodesh") by the president of the Sanhedrin (R. H. ii. 7)—originally, of course, by the high priest—just as in Rome the Pontifex Maximus fixed New Moon by proclamation (whence the name CALENDAR). The Sanhedrin was assembled in the courtyard ("bet ya'azek") of Jerusalem on the 30th of each month from morning to evening, waiting for the reports of those appointed to observe the new moon; and after the examination of these reports the president of the Sanhedrin, in the presence of at least three members, called out: "The New Moon is consecrated"; whereupon the whole assembly of people twice repeated the words: "It is consecrated" (R. H. ii. 5–7; Sanh. 102). The blowing of the shofar at the time of the proclamation of New Moon was practised also in the Babylonian schools (Sanh. 41b). The proclamation of New Moon was retained in the liturgy, but was transferred to the Sabbath preceding. The following is the formula:

The Reader (probably at first the most prominent man of the community): "He who wrought miracles for our fathers and redeemed them from slavery unto freedom, may He speedily redeem us and gather our dispersed ones from the four corners of the earth. So let us say, Amen!

"[Hear ye] All Israel ["ḥaberim"="members of the ḥaburah"]: The New Moon shall be on the . . . day of the coming week! May it come to us and all Israel for good!"

The Congregation: "May the Holy One, blessed be He! renew unto us and unto all His people the House of Israel for life and peace, for gladness and joy, for [Messianic] salvation and consolation! So let us say, Amen!"

In Sephardic congregations the prayer "Yehi Raẓon" is recited, of which one paragraph reads:

"May it be the will of our Father in heaven that good tidings

> of [Messianic] salvation and consolation be heard and received by us, that He may gather our dispersed ones from the four corners of the earth. So let us say, Amen!"

The relation of New Moon to the redemption of Israel was expressed also in the benediction recited by the members of the "ḥaburah" at the New Moon banquet, and preserved in a late corrupt version in Masseket Soferim, xix. 9, from which the benediction at the sight of the new moon (see NEW MOON, BLESSING OF THE) was probably derived at a later time (see Müller, "Masechet Soferim," 1878, p. 272). It reads as follows:

> "Be blessed, O Lord, O God, King of the Universe, who hast brought up the teachers in the circle of the school and taught them the knowledge of the seasons. As Thou hast appointed the time for the circuit of the moon, so hast Thou also selected the wise who are skilled in the counting and fixing of the seasons, as it is said: 'He appointed the moon for seasons' [Ps. civ. 19]. For 'as the new heaven and the new earth which I will make shall remain before Me, saith the Lord, so shall your seed and your name remain.' Blessed be Thou, O Lord, who reneweth Israel and the moon."

This is followed by Ps. cvi. and cvii., and II Chron. xx.-xxi.; at the close occurs a special prayer for the coming of Elijah and of the Messiah. Then comes the proclamation: "The New Moon be consecrated!" which is repeated in many strains by the ḥaberim.

Occasionally the messengers who announced the proclamation of New Moon to the Jews of the various lands were given mysterious watchwords alluding to the Messianic hope. Such was the one given by Judah ha-Nasi (R. H. 25a; see APOSTLE; NEW MOON, BLESSING OF THE). The waxing and waning of the moon reminded the sages of Israel's renewal (Pirḳe R. El. li.), especially with reference to the prophecy that in the future the "light of the moon will be like the light of the sun" (Isa. xxx. 26), as well as of the Messiah, who for certain times is concealed and then again revealed (see MESSIAH). This view casts light also on the benediction prescribed at the sight of the new moon.

K.

NEW MOON, BLESSING OF THE: The periodical reappearance of the moon, like the reappearance of everything that is a benefit to mankind, such as fruits in their respective seasons, should be recognized by praise and gratitude to the Creator. The benediction in this case is recited in the open air, while facing the moon, preferably in a congregation of not less than ten persons (MINYAN). The benediction is of early origin, and is mentioned in the Baraita (Soferim xx. 1, 2; Sanh. 42a). The present text, with slight variations in the various rituals, is as follows:

> "Praised be our God Almighty, King of the Universe, who created the heavens by His word and the stars by His command. He implanted in them fixed laws and times. . . . And He ordered the moon to renew itself, as a crown of beauty over those He sustained from childhood [Israel], and as a symbol that they, likewise, will be regenerated in the future, and will worship their Maker in His glorious kingdom. Praised be the Lord who reneweth the moon!"

According to the Baraita, the ceremony should be performed on Saturday night, when the celebrant is dressed in Sabbath attire and is in a joyous frame of mind. Later authorities, while preferring Saturday night, would not in any case postpone the performance after the 10th of the month, for fear that cloudy weather might intervene up to the 16th, when the time for saying the benediction would have expired, since the moon is then no longer considered new. Maimonides fixed the period from the 1st to the 16th of the month; but later authorities make it between the 3d and the 16th, because during the first three days the moon's light is not perceptible on the earth.

Exceptions.

In the month of Ab the ceremony should not be observed till after the Fast of Ab, and in the month of Tishri, not before Yom Kippur night; neither should it take place on Friday night or on the eve of any festival (Shulḥan 'Aruk, Oraḥ Ḥayyim, 426, 2). The Baraita mentions also the former custom of expressing joyfulness by dancing and leaping toward the moon. In later times the custom has been to raise the body on the tips of the toes three times, addressing the moon with the ancient formula: "As I dance toward thee, but can not touch thee, so shall none of my evil-inclined enemies be able to touch me." Then those assembled greet one another with "Shalom 'alekem" (= "Peace be to you!") and "'Alekem shalom" (= "To you be peace"), and say: "Good luck to us and to all Israel!"

The phrase "Long live David, the King of Israel!" is a later interpolation. It was the password between Rabbi Judah ha-Nasi I. and Rabbi Ḥiyya, the latter of whom was sent on a mission to "sanctify" Rosh-Ḥodesh (= the New Moon; R. H. 25a). In connection with the ceremony it served to revive the hope in the Messiah, who was to be a descendant of David, and whose kingdom it was promised should "be established for ever as the moon" (Ps. lxxxix. 37). Baer in his "Seder 'Abodat Yisrael" (ed. Rödelheim, 1868, p. 338) assigns as the reason for adding the phrase the fact that David is credited with fixing the moon's cycle, 29 days, 12 hours, 793 (out of 1,080) parts ("ḥalaḳim") of an hour ("Cuzari," ii. 64, iv. 29). The author of "Sha'are Efrayim" thinks that it was inserted because the numerical value of דוד מלך ישראל חי וקים is equal to that of ראש חודש ("New Moon"), *i.e.*, 819. The recitation of Ps. lxvii., cxxi., cxlviii., and cl. became part of the ceremony in later times.

R. Johanan said: "One who recites the benediction of the moon at the proper time is like one who is received in audience by the Shekinah" (the revealed Divinity). Abaye holds that the ceremony "shall be performed standing" (Sanh. 42a). These quotations, perhaps originally intended as references, were subsequently injected into the ceremony.

The superstitious belief, held by some, that one who recites the benediction for the new moon will not die during that month, is probably based on the mutual greeting of "Shalom 'alekem." The custom of shaking out the corners of the garments is most likely intended to illustrate the turning away of evil-minded enemies, who will be powerless to touch the celebrant.

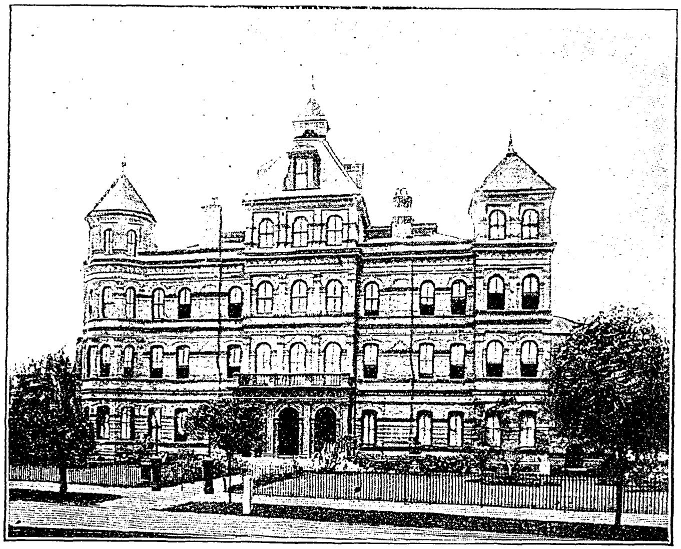
BLESSING OF THE NEW MOON.
(From Bodenschatz, "Kirchliche Verfassung," 1748.)

NEW NINEVEH. See Mosul.

NEW ORLEANS: Largest city in the state of Louisiana, which passed into the possession of the United States in 1803. Among its earliest Jewish settlers were Jacob and Judah Touro, the latter of whom fought in defense of the city, under General Jackson, in 1815. His philanthropies extended all over the United States and gave rise to some of the most important institutions in New Orleans and elsewhere. Alexander Isaac, Asher Phillips, Abraham Labatt, Bernard Cohn, Ezekiel Solomon, and Gershom B. Kursheedt also were among the earlier settlers. The first Jewish institution seems to have been a burying-ground, which was located just beyond the suburb of Lafayette and in the parish of Jefferson; it was established by the society Shaaray Chased, from which sprang the first congregation; the first interment took place on June 28, 1828. The Jewish population of New Orleans came from various regions—Germany, Holland, England, Jamaica—and was increased by migrations from Charleston, S. C., Cincinnati, Ohio, and Baltimore, Md. By 1830 the community had attained a considerable degree of prosperity. It early entered into relations with Texas, upon the development of which it exerted an appreciable influence. The more important congregations of New Orleans in addition to the one referred to above, now bearing the name of Judah Touro (present [1904] rabbi, I. L. Leucht), are the Gates of Prayer (founded in 1849) and the Temple Sinai (founded in 1870; present rabbi, Maximillian Heller). There are in addition four other congregations. Rabbi J. K. Gutheim, who filled several pulpits in the city and who died in 1886, was in his time the most important officiating rabbi in New Orleans and attained a national reputation.



Jewish Orphans' Home, New Orleans, La.
(From a photograph.)

The community has associations for the relief of Jewish widows and orphans (one founded in 1855), the Ladies' Hebrew Benevolent Association (founded in 1847), the Touro Infirmary and Hebrew Benevolent Association (founded in 1854), and a considerable number of other social and benevolent associations and lodges.

NEW SOUTH WALES. See Australia; Sydney.

NEW TESTAMENT.—Historical Books: The name of "New Testament" was given by the Christian Church, at the close of the second century, to the gospels and to other apostolic writings, inasmuch as they were composed with the purpose of showing that by the advent of Jesus of Nazareth the Messianic prophecies had been fulfilled and a new covenant (LXX., διαθήκη; Vulgate, "testamentum") or dispensation had taken the place of the old Mosaic one (Gal. iii. 15-22; Luke xxii. 20; Heb. ix. 15-22; comp. Ex. xxiv. 7; II Kings xxiii. 2, 23; Ecclus. [Sirach] xxiv. 23). The idea of the new covenant is based chiefly upon Jer. xxxi. 31-34 (comp. Heb. viii. 6-13, x. 16). That the prophet's words do not imply an abrogation of the Law is evidenced by his emphatic declaration of the immutability of the covenant with Israel (Jer. xxxi. 35-36; comp. xxxiii. 25); he obviously looked for a renewal of the Law through a regeneration of the hearts of the people. To Paul and his followers, however (see Rom. x. 4; II Cor. iii. 14), the Mosaic dispensation ended with Jesus, and consequently the Hebrew Scripture became the "Old Covenant," or "Testament," while Jesus was regarded as the mediator of the "New." But the names "Old" and "New Testament," when used by Jewish writers, serve only as terms of identification, and do not imply acceptance of the principle implied.

Contents of the New Testament.

The early Church had no other sacred books than those in use in the Synagogue, and on these were based the claims of the Messiahship of Jesus as "the fulfilment of Scripture." In the course of time, however, the custom adopted from the Synagogue of reading at the service epistles of apocalyptic or Messianic character (see Tan., Wa'era, ed. Buber, p. 4; Baruch i. 3; Apoc. Baruch lxxviii.) not merely established the regular reading of the apostolic epistles in the Church, but made the reading of the story of the advent and doings of Jesus as the good tidings or gospel ("good spell" = εὐαγγέλιον; Mark i. 1, 15; Luke iv. 18; comp. Isa. lii. 7, lxi. 1) an essential part of the service; readings from the Old Testament were selected as containing the prophecy or preparation, and those from the New as showing the fulfilment ("Apostolic Constitutions," ii. 55; Justin, "Apologia," i. 67; comp. 28; *idem*, "Dialogus cum Tryphone," §§ 18, 48, 49).

Concerning the mode of composition and the dates of the various New Testament writings a wide divergence of opinion prevails among the several schools of Christian theologians and critics. It is solely from the Jewish point of view that they are considered here, the attempt being made to indicate to what extent their contents may be called Jewish in origin and character, and to what extent they contain anti-Jewish elements.

The New Testament consists of the following books: **I.** The historical books: the Four Gospels —(1) according to Matthew; (2) according to Mark; (3) according to Luke; (4) according to John—and the Acts of the Apostles. **II.** The Pauline epistles: (1) to the Romans; (2 and 3) to the Corinthians; (4) to the Galatians; (5) to the Ephesians; (6) to the Philippians; (7) to the Colossians; (8 and 9) to the Thessalonians; (10 and 11) to Timothy; (12) to Titus; (13) to Philemon; (14) to the Hebrews. **III.** The so-called Catholic epistles: (1) the Epistle of James; (2 and 3) of Peter; (4, 5, and 6) of John; (7) of Jude; and (8) the Apocalypse of John, called also the Revelation of St. John the Divine. Of these works it is necessary here to deal with only the first section.

The Four Gospels: The gospels according to Matthew, Mark, Luke, and John, were in the main composed between 80 and 150 C.E.; each relates, with a characteristic tendency of its own, the story of Jesus from the time of the appearance of John the Baptist until the "resurrection," with the purpose of showing that he was the looked-for Messiah of the Jewish prophecies. But while the first three gospels, called the "synoptic gospels," bear the same character and agree as to the plan of the work and the conception of Jesus as the Messiah, the son of David, the fourth gospel attempts to put a metaphysical and mystical construction upon the doings and sayings of Jesus narrated in the other three, with the view of presenting him as the son of God in the cosmic sense of the word.

The gospels do not claim to have been written by any of the apostles, but only to have been transmitted orally as tradition emanating from them. Thus Luke i. 1-3 refers to the existence of many gospels resting upon the report of "eye-witnesses and disciples," and Papias, an early second-century authority, relates that Mark wrote down what he, in a rather disconnected way, heard from Peter, and that Matthew had made a collection of the sayings of Jesus in the Hebrew (Aramean) without the historical framework, which was given differently by each commentator (Eusebius, "Hist. Eccl." iii. 39, § 16).

These two facts—a collection by Matthew of the sayings of Jesus in the Aramean language, and a gospel by Mark, as the oldest connected narrative of Jesus' sayings and doings—have served modern critics as the basis of their investigations. Finding a striking similarity in the arrangement, and at times even an identity in the diction, of the larger part of the three gospels, they have arrived at the conclusion that the second gospel, which presents the whole record of Jesus in the simplest form and the best chronological order, was the original composition and was used by the other two; whereas the stories and sayings offered either by the other two gospels in common or by each separately rest on collections and traditions clustering around those of Matthew and others.

Still, there are other criteria by which the Jewish investigator is able to ascertain the origin and authenticity of the gospel stories and trace the various stages of their growth. A careful analysis corroborates the conclusion, assumed to be axiomatic by Jewish scholars, that the older and more genuine the records, written or unwritten, of the doings and teachings of Jesus, the more they betray close kinship with and friendly relations to Jews and Judaism; but that the more remote they are from the time and scene of the activity of Jesus, the more they show of hostility to the Jewish people and of antagonism to the Mosaic Law. The changing attitude and temper of the new sect influenced the records at every stage, and this accounts for the conflicting statements found beside each other in the various gospels and gospel stories.

The Different Versions.

To begin with the crucifixion story, the older version knows only that the chief priests and scribes constituting the Sanhedrin condemned Jesus to death and handed him over to the Romans, who mocked, scourged, and killed him (Mark x. 33; Matt. xx. 17-19; comp. Mark xiv. 14; also Matt. xxvi. 45, where the term "sinners" is used for "heathen"). Later on (see Mark viii. 31; Matt. xvi. 21; Luke ix. 22), the reference to the Romans as the crucifiers has been altogether omitted, while in Mark ix. 31, Matt. xvii. 22, Luke ix. 44 the general term "men" is used instead. With the older version tallies the story according to which the cause of his condemnation by the Sanhedrin was Jesus' hostility toward the Temple (Mark xiv. 58; Matt. xxvi. 61; comp. Mark xi. 15-18, xiii. 2, xv. 29, and parallels; comp. also John ii. 19; see Wellhausen, Commentary to Mark, 1903, pp. 131-133), a crime termed "pashaṭ yado ba-zebul" (he stretched out his hand against the Temple; Acts vi. 13; Tos. Sanh. xiii.; R. H. 17a; comp. Yer. Sanh. vi. 23c—"pashaṭ yado be-iḳḳar").

It was at a later time and in contradiction to facts showing their friendly attitude (Luke xiii. 31) that the Pharisees were represented as having conspired against the life of Jesus, either with the HERODIANS or high priests (Mark iii. 6, xii. 13; Matt. xvi. 6, 11; xxii. 15-16; but comp. Luke xx. 19, where the Pharisees are not mentioned, and Matt. xxvii. 62; John vii. 32, 45; xi. 47; xviii. 3) or without them (Matt. xii. 14 [comp. vi. 7], xvi. 11; Luke xi. 53, xii. 1). Accordingly, the charges singled out to account for his persecution by the Pharisees were violation of the Sabbath (Mark ii. 23-iii. 6, *et al.*) and the claim of being the son of God (Mark xiv. 61-64, *et al.*).

Again, in the original version the Jewish multitudes side with Jesus to the very last (Luke xx. 19, xxiii. 27; Mark xii. 12); later on, both Herod, the persecutor whom Jesus called "that fox" (Luke xiii. 32), and Pontius Pilate, the Roman prefect (Luke xiii. 1, xix. 1), are transformed into friends and protectors of Jesus (Luke xxiii. 8, 15; Mark xv. 14; Luke xxiii. 4; Matt. xxvii. 17–25; John xviii. 38; xix. 4, 6, 12, 16), and the Jews described as his real crucifiers (Mark xv. 13–14; Matt. xxvii. 22–23; John xix. 12; Acts iv. 10); nay, more, the Jews become synonyms for fiends and bloodthirsty tyrants (John vii. 1, 13; viii. 44; x. 31; *et al.*).

For and Against the Law.

The same irreconcilable differences are found in the sayings attributed to Jesus concerning the Jews and the Law. According to the older version (Matt. v. 17–19; Luke xvi. 17), he declared that he had not come to destroy but to fulfil—that is, to practise—the Law. In fact, he urged the sacrifice of the sin-offering for the leper (Mark i. 43, and parallels). It was the abuses of the Law and the hypocrisy of the Pharisees that he rebuked in scathing language (Matt. xxiii.; Mark vii. 11; Luke xi. 42–43; comp. similar denunciations of Pharisaic hypocrisy in Soṭah 22b, Yer. Ber. ix. 14b, Ab. R. N. xxxvii.), while demanding a higher standard of righteousness of his disciples (Matt. v. 20, 37, 48). He expressly stated that he had been "sent but unto the lost sheep of the house of Israel" and found it "not meet to take the children's bread and cast it to the dogs" (that is, to the heathen), enjoining even his disciples to go not to the Gentiles, but to the lost sheep of Israel (Matt. x. 5–6, xv. 24–27). He shows special love for a daughter of Abraham and a son of Abraham (Luke xix. 9). His name, Jesus (Joshua), is interpreted "he who shall save his people [from their sins]" (Matt. i. 21, ii. 6), and those whom he has healed "glorify the God of Israel" (Matt. xv. 31).

On the other hand, he is declared to be the hope of "the Gentiles" (Matt. xii. 21; comp. "Savior of the world" of John iv. 42), and he becomes the exponent of the Pauline ideas that the old must give way to the new (Mark ii. 21–22; Luke v. 36–38; comp. 39); that the gospel should "be preached unto all nations" (Mark xiii. 10; Matt. xxiv. 14); nay, more—that the Kingdom of God be taken away from the Jews and given to another nation (Matt. viii. 11–12; xxi. 43).

Unhistorical Character of the Gospels.

As a matter of fact, the discrepancies in the records extend over all parts of the Four Gospels and invalidate the claim of historicity advanced for Mark or for any other of the gospels. For instance, it is very singular that the only possible date for the crucifixion is found in the late fourth gospel (John xviii. 28), according to which it took place on Friday, the eve of Passover, and not on Passover, as Mark xiv. 12, Matt. xxvi. 17, and Luke xxii. 7 have it. True, a trace of the correct date has been discovered in Mark xiv. 1 (see Wellhausen on the passage); but then the Last Supper can no longer be the paschal feast, as John xiii. 2 has no reference at all to it. So Jesus is reported to have defended his claim to the Messiahship by proving (from Ps. cx. 1) that the Messiah need not be a son of David (Mark xii. 35–37), while the all-knowing demons of the possessed call him "Jesus, son of David" (Mark x. 47). Here, too, John's gospel is more consistent. It knows nothing of the Davidic descent of Jesus; on the contrary, his legitimacy of birth is disputed (John viii. 48), while stress is laid upon the view that Jesus is the son of God. The genealogies in Matthew (i. 1–17) and Luke (iii. 23–28), while conflicting with each other, are late attempts at establishing his Davidic descent, actually disproving the claim of his supernatural origin (Matt. i. 18; Luke ii. 5). The claim that Jesus was "Christ the son of God" all the gospels endeavor to establish.

Most incompatible with the Jewish mode of thinking and speaking is the story, in Matt. i. 18–23 (with which Luke i. 27, 34, ii. 5, and iii. 23 were afterward harmonized), of his conception by the virgin from the Holy Ghost ("Ruaḥ" = "Spirit," being feminine both in Hebrew and Aramaic). The older view was that Jesus became the son of God through the descent of the Holy Ghost at the moment of his rebirth by baptism, when the heavenly "bat ḳol" spoke to him, "Thou art my son, this day have I begotten thee" (Acts xiii. 33; comp. Mark i. 11; Luke iii. 22; see Justin, "Dialogus cum Tryphone," §§ 88, 103), and the Holy Ghost lifted him to the "ḥayyot" of the heavenly throne, even above the angels (comp. Mark i. 13; Matt. iv. 11).

Mythical as is this story at the beginning of Mark, it is but the reflex of the older tale of his transfiguration, representing him as having been lifted to a high mountain, where he was enveloped in a cloud, together with Moses and Elijah (comp. Targ. Yer. to Ex. xii. 42), while the heavenly voice said, "This is my beloved son" (Mark ix. 2–9, and parallels). Probably this was originally applied to the "resurrection" (comp. Acts i. 9–10; Wellhausen on Mark ix. 2–9). Not the living but the departed Jesus became the son of God. As such, he was first seen by Peter and the other apostles in Galilee, six days after his death (Mark xvi. 7; comp. *ib.* ix. 2 and John xxi. 1–29, which is the continuation of Mark xvi. 8). The story of Peter having recognized him as "Christ, the Son of the living God" (Matt. xvi. 16; Mark viii. 29; Luke ix. 20), is accordingly as mythical as is the beginning of the story, according to which he had foretold to his disciples his crucifixion and his resurrection on the third day in fulfilment of the Scripture (comp. Hosea vi. 1–2)—a story discredited by the very attitude of these disciples (Mark xvi. 8; Luke xxiv. 21; John xx. 9).

It is superfluous to say that the story of the feeding of the five thousand (Mark vi. 30–46; recorded also in John vi. 1–15) is legendary, as well as its counterpart, the story of the feeding of the four thousand recorded in Mark viii. 1–9. So is the story of Jesus' apparition on the water (Mark vi. 47–56; Matt. xiv. 24–36; John vi. 16–21)—probably originally a Galilean fishermen's tale referring to the time after the death of Jesus—given a different version in Mark iv. 35–41, and parallels. The stories of the centurion's servant (Luke vii. 1–10), of the nobleman's son (John iv. 46–50), and of the raising of Jairus' daughter (Mark v. 21–43) have many features showing their common origin in tradition (see Wellhausen, "Das Evangelium Mattheus," 1904, p. 36); but while the last-mentioned has preserved its Judæo-Christian character, the other two are anti-Jewish in conception. The story of the anointment of Jesus in the house of Simon the leper (Mark xiv. 3–9; Matt. xxvi. 6–13; recorded also in John xii. 3) is identical with the one told of the sinner (Magdalene?) in the house of Simon the Pharisee (Luke vii. 36–50), the name שמעון הצנוע = "Simon the Essene" having been misread הצרוע = "the leper" (as Chajes, "Markus-Studien," p. 74, suggests).

Altogether, the story of Jesus was built up upon Bible passages, which Mark, who writes for non-Jewish readers, omits in most cases, just as he omits the debate with Satan. Only in i. 2, xiv. 27, 49, xv. 28 does he refer to the Scripture, while in i. 11 and ix. 7 reference to Ps. ii. 7, and in viii. 31 reference to Hosea vi. 1–2, are indirectly made. In Matthew the statement "This is come to pass, that it might be fulfilled which was spoken by the Lord" is repeated in various forms (i. 22; ii. 5, 15, 17, 23; iii. 3; iv. 14; viii. 17; xii. 17; xiii. 14, 35; xxi. 4; xxii. 31; xxvi. 54, 56; xxvii. 9, 35); also in the latter but much older part of John (xii. 38; xiii. 18; xv. 25; xvii. 12; xviii. 9, 32; xix. 24, 36), as well as in Luke (i. 20; iv. 21; xx. 37; xxi. 22). In most cases the Messianic, or alleged Messianic, passages suggested the story, rather than the story suggesting the passages.

The Sayings of Jesus.

The sayings of Jesus were collected and grouped together by several writers before they were embodied in the first and third gospels; and they were circulated in many forms afterward as "Logia" ("Oracular Sayings of Christ"). This accounts for the repetition and dislocation of many of them. As they were handed down originally in the Aramaic language, traces of which are still preserved in Mark (iii. 17; v. 41; vii. 34; xv. 34), they were often misread; as, for instance, in Luke iv. 26: "armalita" (widow) for "aramaita" (heathen; see Wellhausen, "Das Evangelium Lucæ," 1904, p. 10); or Matt. vii. 6: "ḳudsha" (holy thing) for "ḳodosha" (ring, parallel to pearls); or Matt. viii. 22, where the original reading was "Sheboḳ li-bene mata de-yikberun yat metehon" (= "Let the men of the town bury their dead"; see Credner, "Einleitung ins Neue Testament," 1836, i. 75).

Misunderstood Passages.

Often the "Logia" were misunderstood by the translator, as in the case of the expressions "'ayin ṭob" and "'ayin ra'" (= "a good [friendly], unbegrudging eye" and "a malevolent, begrudging eye" (Matt. vi. 22–23; Luke xi. 34–36). Similarly, the fourfold meaning of "bar nasha" ("son of man," "man," "I," and "the Messiah") was misunderstood by the first three evangelists (see Man, Son of). So with the words (Luke xvii. 20–21), "The kingdom of God cometh not by calculation" (comp. the rabbinical "cursed be the calculators of the end" ["meḥashbe ḳiẓẓim"], Sanh. 97b), "but suddenly, imperceptibly it is with you" (comp. "The Messiah comes when the thought of him is absent" ["be-ḥesseaḥ ha-da'at"], Sanh. 97a). The "heathen" of Matt. vi. 7 (comp. Ber. 24b, xviii. 17) seems to be a mistranslation of the term "'amme ha-araẓot" (the ignorant class of men).

Misunderstanding of the term "be-ḥad le-shabba tinyana" (on the first of the second week after Passover), preserved only in Luke vi. 1, caused the confusion of the law concerning the new produce of the year (Lev. xxiii. 11–14) with the Sabbath law (see Jew. Encyc. vii. 168, *s.v.* Jesus). In the one case Jesus, referring to David, defended his disciples, who in their hunger plucked the new corn in the field and ate it without waiting for the offering upon the altar; in the other case he himself disregarded the Sabbath law in view of the "pikkuaḥ nefesh" (peril of life), a case in which the Rabbis admitted the suspension of the law, upon the principle, "The Sabbath is given over to you ["the son of man"], and not you to the Sabbath" (see Mek., Wayaḳhel, 1; Chwolson, "Das Letzte Passahmahl," 1892, pp. 59–67, 91–92).

Many of the sayings attributed to Jesus have been literally taken over from the Didache; others were Pharisaic teachings well known in the rabbinical schools, as has been shown by Lightfoot ("Horæ Hebraicæ et Talmudicæ," 1684), Shöttgen ("Horæ Hebraicæ et Talmudicæ," 1737), Nork ("Rabbinische Quellen und Parallelen zu Neutestamentlichen Schriften," 1839), Zipser ("The Sermon on the Mount," 1852), Wünsche ("Neue Beiträge zur Erläuterung der Evangelien," 1878), and others. It has been pointed out by Schreiner ("Die Jüngsten Urtheile über das Judenthum," 1902, pp. 27–29) that while Jesus' sayings are simply assertions without support of Scripture, the Rabbis show that they were derived from Scripture and thereby establish their claim to priority. Thus, the injunction to pray for the offender (Matt. v. 44) is derived (Tos. B. Ḳ. ix. 29) from the example of Abraham and Job (Gen. xx. 17; Job xlii. 8, 10); the idea of heavenly treasures (Matt. vi. 20) is derived from Deut. xxxii. 34, in connection with Isa. iii. 10 and Ps. xxxi. 20 (A. V. 19; Sifre, Deut. 324; comp. Tosef., Peah, iv. 8); the deprecation of lengthy prayers (Matt. vi. 7–8), from Ex. xv. 21 and Num. xii. 13 (Mek., Beshallaḥ, 3; Sifre, Num. 105; comp. Ber. 39a). So also with the sentence, "Let your speech be, Yea, yea; Nay, nay" (Matt. v. 37, R. V.), which is derived from Lev. xix. 36 (Sifra, Ḳedoshim, viii. 7; B. M. 49a; comp. Tos. Soṭah vii. 2; Giṭ. 35a; Num. R. xxii.); and the condemnation of the lustful look (Matt. v. 28), from Deut. xxiii. 9 ('Ab. Zarah 20a) and Job xxxi. (Midr., Yalḳuṭ, to the passage).

When in his dispute with the Sadducees concerning resurrection Jesus cites the passage, "I am the God of Abraham, Isaac, and Jacob," to prove that the Patriarchs shall come to life again, because "God is the God of the living, not of the dead," the argument fails to convince the believer in Scripture; but when Gamaliel refers the Sadducees to Deut. xi. 21, or Ex. vi. 4, ". . . the land which the Lord sware unto your fathers to give them," the argument is logical and convincing: "The dead can not receive, but they shall live again to receive the land" (Sanh. 90b). The originality, then, is with the Rabbis. In like manner the beautiful story of the widow's two mites (Mark xii. 42–44) betrays its midrashic origin in the words, "she has given all her living," which are an allusion to the Biblical phrase "we-nefesh ki taḳrib" (Lev. ii. 1), interpreted in Lev. R. iii. as signifying, "The gift of the poor who includes his or her very life in the gift counts for more before God than the hecatombs of Agrippa the king." So the strange words of Jesus in regard to the adulteress: "He that is without sin among you, let him first cast a stone at her" (John viii. 7), are possibly merely an echo of the rabbinical saying, "Only when the husband is without sin will the ordeal of the wife suspected of adultery prove effective" (Sifre, Num. 21, based upon Num. v. 31). Expressions such as "If thy right eye offend thee, pluck it out," and "if thy right hand offend thee, cut it off" (Matt. v. 29-30), are explained by similar rabbinical utterances (Niddah 13b). For other instances of New Testament sayings derived from Scripture see JEW. ENCYC. iv. 588-592, *s.v.* DIDASCALIA.

The "sayings" attributed to Jesus may be divided, according to form and contents, into (1) Ethical Teachings, (2) Parables, (3) Apocalyptic (Messianic) Utterances, (4) Essene Polemics.

The "Sayings."

1. Ethical Teachings: These were grouped together in the Sermon on the Mount as if to form the program of the new dispensation (Matt. v. 1-vii. 27; in less elaborate form in Luke vi. 20-49), but are partly found, in varying order, elsewhere (Mark ix. 43-47, x. 11, xi. 25; Matt. xviii. 8-9; Luke xi. 2-4, 9-13, 34-36; xii. 22-31, 33-34). The main characteristic of these teachings is not, as Matthew puts it, antagonism to the Law, but what the Rabbis term "li-fenim mi-shurat ha-din"—"a withdrawing within the line of the Law" (B. Ḳ. 101a) as behooves the esoteric circle of the pious; in other words, their main ethical characteristic is Hasidean (comp. B. Ḳ. 30a; B. M. 83a, with reference to Prov. ii. 20; see ESSENES). Hasidean views similar to those contained in Matt. vi. 25-34 are voiced also (Ḳid. iv. 14; Tos. Ḳid. v. 15; Mek., Beshallaḥ, Wayissa'u, 2-4).

2. Parables: The parables follow the rabbinical "meshalim," illustrative of some ethical truth, either in the form of similitudes, like the rabbinical "Mashal le-mah ha-dabar domeh" ("A similitude: To what may this be likened? To a man," etc.; see Levy, "Neuhebr. Wörterb."; PARABLES), or in the form of a longer narrative. The former kind is found in Mark iii. 23, iv. 1-9 (the parable of the sower), 26-32, and xii. 1-12; the latter is especially developed in Luke xv.-xvi. and xix. 11-28 (the parables of the lost sheep, the lost piece of silver, the prodigal son, the unrighteous steward, and the ten talents), and in Matt. xxv. 1-30 (the parables of the wise and foolish virgins, and of the unprofitable servant). Some of these parables have their parallels among the sayings of first-century rabbis, and it may, therefore, justly be claimed that they originated among these. Compare, for instance, the parable of the wise and foolish guests of the king told by R. Johanan b. Zakkai with reference to the Messianic banquet, in commenting upon Isa. lxv. 13 and Eccl. ix. 8 (Shab. 153a). The simple meaning of these parables, however, was lost later on, and they were taken to be allegories and mysteries, especially when they alluded to the Messianic expectations, about which it was not safe to speak in public, as they assumed the end of the kingdom of Satan (Rome; comp. Mark iv. 11, 34; Matt. xiii. 1-52, especially 35 and 39). Thus "the parable of the fig-tree" (Mark xiii. 28; see Wellhausen, who is at a loss to explain it) is actually a "symbol" of the Messianic advent, according to the Midrash (Cant. R. ii. 13), but was no longer understood by the evangelists, either as an allegory or as a sign of Messianic success or failure, in the story of the blasted fig-tree (Mark xi. 13-14, 20-23).

3. Apocalyptic (Messianic) Utterances: For the most part, these are taken over from Jewish apocalypses and embodied in the gospels as discourses of Jesus (Matt. xxiv.-xxv. 31-45; comp. Midr. Teh. Ps. cxviii. 17; Mark xiii. 7-23; Luke xiii. 24-30, xvii. 22-35, xxi. 7-36).

4. Essene Polemics: These are directed chiefly against (*a*) Herodian high priests (Mark xi. 27-xii. 27, xiii. 1-2; Luke xi. 47-xii. 8) and are encountered also in rabbinical records (Tos. Men. xiii. 21-22), and against (*b*) Pharisaic hypocrisy (Matt. xxiii., *et al.*); the latter also have their parallels in rabbinical writings (Ab. R. N. xxxvii.; Soṭah 22; Pesiḳ. R. xxii.: "Thou shalt not utter the name of the Lord in vain; that is, Thou shalt not wear phylacteries and long fringes [ẓiẓit] while at the same time thou art bent upon sin"). See PHARISEES.

Characteristics of the Gospels.

Matthew: The gospel of Matthew stands nearest to Jewish life and the Jewish mode of thinking. It was written for Judæo-Christians and made ample use of an Aramaic original. This is evidenced by the terms: "kingdom of heaven," found exclusively in Matthew, a translation of the Hebrew "malkut shamayim" (= "kingdom of God"); "your heavenly Father," or, "your Father in the heavens" (v. 16, vi. 14, *et al.*); "son of David" for "the Messiah" (ix. 27, *et al.*; comp. the rabbinical "ben David"); "the holy city" (iv. 5, xxvii. 53) and "the city of the great King" (v. 35) for "Jerusalem"; "God of Israel" (xv. 31); the oft-repeated phrase "that it might be fulfilled, which was spoken of the Lord by the prophet"; the retention of Judæo-Christian conceptions (v. 17, x. 6, xv. 24); the genealogy of Jesus, based upon specific haggadic views concerning Tamar, Ruth, and Bath-sheba, so drawn as to make the assumption of his Messianic character plausible (i. 1-16); and the assignment of the twelve seats of judgment on the Judgment Day to the Twelve Apostles in representation of the twelve tribes of Israel (xix. 28; Luke xxii. 30). It has embodied Jewish apocalyptic material, in ch. xxiv.-xxv., more extensively than have the other gospels; and in the Sermon on the Mount (v.-vii.) it shows a certain familiarity with rabbinical phraseology.

On the other hand, it manifests a spirit of intense hostility to the Jews in the crucifixion story, to a greater degree than do the other gospels (xxvii. 25). In fact, its late composition is shown by its artificial systematization of the whole story of Jesus: There are seven beatitudes in v. 3-10 (verse 5 is a quotation), and accordingly seven "woes" in xxiii. 13-32 (Luke vi. 21-26 has five beatitudes and four "woes"); seven parables in xiii. 1-52 (comp. the four in Mark iv. 1-34), and the twice-seven generations for each of the three periods of the genealogy of Jesus (i. 1-17). All the miraculous cures narrated in Mark are enlarged upon both as to the number of the persons cured and as to their incidents, so as to adjust them to the Messianic claim (xi. 5; comp. Luke vii. 22; Isa. xxxv. 5; Pesiḳ. R. 42). Somewhat artificial, and in contrast to such genuine legends as those in Luke, are the birth-stories in ch. ii., woven together from Num. xxiv. 17 (referred to the Messiah), Micah v. 1, Isa. lx. 6, and from Moses' childhood story, to which that of Jesus formed a parallel, just as the Law of Mount Sinai was paralleled in the Sermon on the Mount.

Significant is the reference to the established (Judæo-Christian) Church under Peter (xvi. 18; comp. "Petra" ["the rock"] Abraham as foundation of the world [Yalḳ. i. 243; Levy, *l.c.*, *s.v.* פיטרא]), to the secession of which from the Jewish state the story of Peter and the fish seems to allude (xvii. 24–27). On the other hand, the Trinitarian formula (xxviii. 19) and the way the Jews are spoken of (xxviii. 15; so throughout John) betray a very late final composition. But there are other late additions (v. 10, 11, 14; x. 16–39).

Mark: The gospel of Mark is written in the Pauline spirit, for pagans. Being, however, the oldest attempt at presenting the story of Jesus in full, it shows greater simplicity and better historical and geographical knowledge than the rest. It intentionally omits the term "the Law" ("Nomos"; comp. xii. 28 with Matt. xxii. 36), although it preserves the "Shema'" omitted in Matthew; it omits also Biblical quotations, only a few of which have been allowed to remain (i. 1, iv. 12, ix. 48), and expressions offensive to pagans. Characteristic is the addition of the words "a house of prayer for all the nations" (xi. 17; comp. Matt. xxi. 13 and Luke xix. 46). The Aramaic terms used by Jesus in his exorcisms (v. 41, vii. 34) seem to have been retained purposely.

Historical Character.

Luke: The gospel of Luke is confessedly (i. 1) a compilation from older sources. It contains genuine legends about the birth of John the Baptist and of Jesus as they were current in Essene circles. The whole picture of John the Baptist and of Jesus as bearers of good tidings to the poor (iv. 14; vi. 20, 24–26) has the stamp of greater historical truthfulness. Here more than in the other gospels is Jesus represented as the friend of sinners (vii. 37–50; xv. 11–32; xviii. 10–14; xix. 1–10; xxiii. 39–43) and of the poor (xvi. 19–31). Especial interest is shown in the women in Jesus' company (viii. 2–3; xxiii. 55; xxiv. 10).

The story of the good Samaritan (x. 25–37), possibly, was told differently in the original version (see BROTHERLY LOVE; JESUS OF NAZARETH). The compiler of Luke has, however, infused his Pauline spirit into his record (iv. 25–30, vii. 1–10); hence, instead of the twelve, the seventy apostles, for the seventy nations (x. 1; comp. xxiv. 47), and Adam in place of Abraham (iii. 38); though traces of the original Judean spirit are found in passages such as xxii. 30, where only the twelve tribes of Israel are spoken of as being judged in the future kingdom of Jesus. Luke differs from the other synoptic gospels in that it ignores Galilee as the rallying-point of the disciples of Jesus (Mark xvi. 7; Matt. xxviii. 7) and makes Jerusalem the starting-point and center of the new sect (xxiv. 52).

John: The gospel of John is the work of a Christian of the second century, who endeavors to construe a history of Jesus upon the basis of a belief in his supernatural existence. To him Jesus is no longer the expected Messiah of the Jews, but a cosmic being (viii. 23, 58), one with God his Father (x. 30; xiv. 10), through whom alone life, salvation, and resurrection are obtained (xiv. 6), while on the other hand the Jews were from the beginning his implacable enemies, with whom he had nothing in common (vii. 1, 13; viii. 41–47, 59; x. 8, 10, 31; *et al.*). All his discourses reiterate the same idea: God's fatherhood is understood only through the recognition of Jesus as His son (vi. 29, 46; xiv. 2; xv. 8–10, 26; *et al.*). The teaching of Jesus is summed up in the words, "A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another" (xiii. 34); and yet this teaching of love is combined with the most intense hatred of the kinsmen of Jesus. All the miracles performed by Jesus assume in John a symbolical character (vi. 26, and frequently). The Temple (ii. 21), the manna (vi. 32–59), the water libation on Sukkot (vii. 37), the light of Ḥanukkah (viii. 12, x. 22), the vine (xv. 1–17), "the way" (xiv. 6)—all these are turned into symbols of the Christ. In the preface, in place of the genealogies in Luke and Matthew, a heavenly pedigree is given him (i. 1–18), written by one who desired to represent his advent as a new Creation.

The Older Traditions.

On closer observation, however, there is discernible in this gospel a substratum which points to an older tradition. Not only has it, alone of all the gospels, preserved the one possible date of the crucifixion of Jesus, the 13th of Nisan (xviii. 28); but the remark of Caiaphas the high priest, expressing fear of the Romans as the motive of his action against Jesus (xi. 48–50; xviii. 14) as well as Pilate's act (xix. 1), seems to be part of the older tradition. In fact, the historic chapters in the latter part of the gospel, which represent Jesus with all the pathos of human suffering, differ altogether in character from those, in the earlier part, that represent the superhuman Jesus. The oft-repeated formula, "that the saying might be fulfilled," which occurs in the latter part only (xii. 38, xiii. 18, xv. 25, xvii. 12, xviii. 9, xix. 24, 36), as throughout the entire first gospel, also betrays an older source. A greater familiarity with Jewish rites (vii. 7), with Jewish personalities (see NICODEMUS), and with the geography of Palestine (ii. 1, iii. 23, iv. 5, v. 2, xii. 21, xix. 13) is shown than in the other gospels—another indication of an older tradition (see Güdemann in "Monatsschrift," 1893, pp. 249–257, 297–303, 345–356). There are, besides, genuine popular legends which can scarcely be the invention of an Alexandrian metaphysician (comp. ii. 1–11; v. 2–12). The last chapter certainly emanated from another source. Possibly the original gospel bore the name of John, to whom frequent allusion is made as "the disciple whom Jesus loved" (xiii. 23; xix. 26, 27; xx. 2; xxi. 7, 20), and a late compiler elaborated it into a gospel of Christian love and Jew hatred.

Güdemann thinks that the whole book was written by a born Jew.

The Acts of the Apostles: The Acts of the Apostles is a continuation of the gospel of Luke (comp. i. 1-3 with Luke i. 1-3), and relates the history of the spread of the gospel in apostolic times, taking Jerusalem as the starting-point while ignoring, like Luke xxiv. 52, the dispersion of the disciples after the crucifixion (alluded to in Mark xiv. 27 and Matt. xxvi. 31; see Weizsäker, "Das Apostolische Zeitalter," 1892, p. 1) and their first rallying in Galilee (Mark xiv. 28, xvi. 7; Matt. xxvi. 32, xxviii. 7, 10). Forty days' intercourse with the resurrected Jesus (i. 3; comp. Mark i. 13, and parallels), which preceded the transfiguration (i. 9; comp. Mark ix. 2-13), prepared the Apostles, who hitherto had looked for the establishment of a Jewish kingdom by Jesus (i. 6), for their work. The growth of the Church is given in round numbers. Beginning with 120 members under the leadership of Peter, chief of the Twelve Apostles (i. 15-26)—Matthew having taken the place of Judas, the relation of whose end here differs from that in Matt. xxvii. 3-10—the new sect is said to have increased to 3,000, as a result of the miracle of the pouring out of the Holy Spirit upon the multitude at Pentecost, which won converts from all the nations represented in Jerusalem (ii. 1-2; comp. I Cor. xv. 6, where "five hundred brethren" are referred to). This undoubtedly echoes the rabbinical Pentecost legend of the flashing forth of the Sinaitic word in seventy languages to reach the seventy nations of the world (Shab. 88b; Midr. Teh. to Ps. lxviii. 12; Philo, "De Decalogo," §§ 9-11; Spitta, "Apostelgeschichte," 1891, pp. 28 *et seq.*).

The description of the communistic life of the early Christians, their regular gathering in the Temple hall to spend the time in prayer and in works of charity, after the manner of the Essenes (ii. 42, iii. 2, iv. 32-37, v. 12, 25), seems to rest on facts. The institution of seven deacons who were elected by the laying on of hands and under the power of the Holy Spirit (vi. 3, 5) has its parallel in the Jewish community (Josephus, "Ant." iv. 8, § 14; *idem*, "B. J." ii. 20, § 5; Meg. 7a). It is interesting to note that the enemies of Jesus are correctly represented as the Sadducees (iv. 1, v. 17) and not, as in the gospels, the Pharisees, who are rather on his side (v. 17, xv. 5, xxiii. 6), though in the fictitious speeches of Peter, Stephen, and others, the Jews and not Pontius Pilate are spoken of as his crucifiers (iii. 13-15, vii. 52). Like the gospel according to Luke, the Acts of the Apostles is a compilation. The story of the death of Stephen (vi. 8-vii. 59) is, like the crucifixion story in the gospels, written in a spirit of hatred toward Jews; reference to the Romans is omitted when persecution of the new sect is mentioned (viii. 1).

Peter and Paul.

Two mythical narratives are given of the conversion through Peter of the Samaritans and of Simon the magician (viii. 4-24; comp. "Ant." xx. 7, § 2, and SIMON MAGUS), and of the eunuch of the Queen of Ethiopia through the apostle Philip (viii. 25-39). Very dramatic, but in conflict with his own account (Gal. i. 15 *et seq.*; I Cor. ix. 1, xv. 8), is the story of the conversion of Paul, which follows (ix. 1-30; comp. xxii. 6 *et seq.*, 26). By visions, and by the imparting of the Holy Spirit through Ananias, Saul, the persecutor of the Christians, is transformed into Paul, "the chosen vessel" to spread the new faith among both Jews and Gentiles. First, however, Peter is represented as having converted the heathen by miraculous cures (ix. 31-42), the proselytes being in Jewish terms called "yere shamayim" (= "God-fearing ones"; x. 2, 7, 22, 28, 35; xiii. 16, 26-50; xvi. 14; xvii. 1, 17); he succeeded in having the Holy Spirit poured out also upon uncircumcised converts (x. 45).

Finally, Peter is described as having been won over by a special vision to the Pauline view disregarding the dietary laws (xi. 1-18). The whole story is intended to reconcile the wide differences existing between Peter's and Paul's teachings and to bridge over the gulf between the Judæo-Christian sect under the leadership of James and the Pauline church. From this point of view the origin of the name of "Christian" in the community of Antioch can be explained, Barnabas being ranked above Paul, and the Antioch church being represented as an offshoot of the Jerusalem church. Peter is dismissed with a miraculous story describing his release from prison and the punishment of Herod by a sudden death (xii. 1-24); and the missionary travels of Paul are related in the latter part of the book (xiii.-xxviii.).

Spirit of Jewish Proselytism in Christianity.

However much these reports differ from Paul's own writings (see Gal. i. 21, ii. 1, *et al.*), they interest the Jewish investigator, inasmuch as they describe the progress of the Church along the lines of the synagogue and of Jewish proselytism. The apostles Barnabas and Paul engaged in the work of collecting gifts for the holy church at Jerusalem (xii. 25, xvii. 1, 10), traveled as prophets and teachers wheresoever the Holy Spirit of the Church, invoked through prayer and fasting, bade them go (xiii. 1-4), and preached the Gospel in the Jewish synagogue (xiii. 5, 14; xiv. 1; xviii. 4, 19; xix. 8), addressing Jews and proselytes (xiii. 16, 26, 43; xviii. 7). They won the heathen chiefly by miraculous cures, which even caused their own deification (xiv. 8-13; xxviii. 6), but encountered fierce opposition from the Jews (xiii., xiv.-xvii., *et al.*).

Three great journeys by Paul are reported. The first, through Cyprus and Asia Minor, culminated, according to Acts xv. 1-31, in the establishment of the fundamental rule laid down by the church of Jerusalem for the admission of proselytes. For great as was the success of Barnabas and Paul in the heathen world, the authorities in Jerusalem insisted upon circumcision as the condition of admission of members into the church, until, on the initiative of Peter, and of James, the head of the Jerusalem church, it was agreed that acceptance of the Noachian LAWS—namely, regarding avoidance of idolatry, fornication, and the eating of flesh cut from a living animal—should be demanded of the heathen desirous of entering the Church.

After the separation of Paul from Barnabas, owing to differences regarding the fitness of Mark as their companion (xv. 35-41), and after the Abrahamic rite had been performed upon his companion Timothy (xvi. 1-3; comp. Gal. ii. 3-18), Paul is represented as having undertaken his second journey at the bidding of the Holy Spirit. He went to Phrygia, Galatia, and Macedonia to preach the Gospel, but avoided Asia and Mysia (xvi. 6-xxii. 14). In Philippi he founded the first church in Europe, owing his success (according to xvi. 14-40) chiefly to miracles and winning especially women for the Gospel (xvii. 4, 12). The climax of his second trip was his address, delivered at the Areopagus, to the men of Athens. With a witty reference to the insciption, "To an unknown god" (that is, to undiscovered deities), found upon some of the Greek altars, he admonished the idolatrous people to turn to the God of heaven and earth, the Father of all men, in whom they all lived and moved and had their being, but whom they knew not; to cast aside their gods of gold and silver and stone, and prepare themselves in repentance for the great Day of Judgment, on which the crucified and arisen Christ will judge the world (xvii. 16-34). The tenor of this discourse is so thoroughly monotheistic and un-Pauline that the presumption is that, with the exception of the closing sentence, which refers to Jesus as judge of souls, it is copied from one of the many Jewish propagandist writings which circulated in Alexandria.

In Corinth, where he stayed for a year and a half, Paul won, notwithstanding the opposition of the Jews, many adherents, especially among the proselytes, Aquila of Pontus and his wife Priscilla also having been engaged there in the work of proselytism (xviii. 1-17). In Ephesus he met APOLLOS of Alexandria, a follower of John the Baptist, and he succeeded—so the story goes—in persuading him and his eleven disciples to identify their "Way of God" with his own. By the laying on of his hands he communicated the Holy Spirit to them, so that, like the converts at the Pentecost miracle, they "spake with tongues and prophesied" (xviii. 18-xix. 7). His two years' stay in Ephesus was especially productive of miraculous cures, which so eclipsed the works of the magicians who made the Ephesian scrolls famous throughout the world, that, "in the sight of all, they burned these scrolls, which were valued at 50,000 pieces of silver." The idol-traders of Diana of the Ephesians created a riot because idols were no longer bought by the people, owing to Paul's preaching, and the consequence was that he was compelled to leave the city with his companions (xix. 8-41).

Paul the Miracle-Worker.

Paul's third journey had Rome for its goal. He first traveled through Asia Minor and Greece, again warning the people against the Gnostic heresies; there were "wolves in sheep's clothing" that would do great harm to the faith. Then he went to Judea, and, in spite of the warnings he received through the Holy Ghost and the seven daughters of the evangelist Philip, who were prophetesses, and a Jewish prophet by the name of Agabas, he went to Jerusalem and appeared before James and the other authorities of the Church. Reproached for not having observed the rules regarding the admission of converts, he purified himself, went with his companions to the Temple, and offered a Nazarite's sacrifice; but when pointed out as the one who wandered through the lands preaching against the Law and the Temple, he was cast out of the Temple and almost killed by the enraged people. Summoned before the Roman captain, he related the history of his life, so stating his belief in the resurrection as to please the Pharisees but provoke the Sadducees (xxi.-xxiii. 9).

Paul before Felix.

Before the prefect Felix in Cæsarea, Paul was charged with having made insurrectionary speeches in various countries and with having profaned the Temple (xxiii. 10-xxiv. 6). In answer to this charge he points out that he had all along been collecting money for the Temple treasury and had himself brought sacrifices there, and that he is only being arraigned for his belief in the resurrection (xxiv. 10-21). The prefect, known as a Jew-hater of the worst type, is deeply impressed by Paul's plea for the Christian faith; but his greed induces him to hand Paul over as prisoner to his successor Festus (xxiv. 24-27). Paul recounts the history of his life before Agrippa, the King of Judea, who is so impressed as to exclaim, "Almost thou persuadest me to be a Christian" (xxvi. 1-28). But because Paul desired, as a Roman citizen, to be judged by the emperor himself, he was sent to Rome (xxv. 11, xxvi. 32). The voyage was the occasion of new proof of the miraculous powers of Paul; he predicted the storm that, but for him, would have wrecked the ship, was recognized as a benefactor and savior by the captain, and was treated with great consideration (xxvii.). Other miracles performed by him on the ship caused the people to regard him as a god. As in Asia Minor, he won the people of Italy by his wonderful cures. The book closes with the story of his arrival at Rome, where for the first time he met Jews without being able to win them for the new faith, though during a two years' stay he succeeded in making converts among the heathen (xxviii. 1-31).

The whole work, like the Gospel of Luke, is a compilation from several sources, among which one is a historical document written by a companion of Paul who had kept a journal of his travels, the so-called "We" source (xvi. 10-17; xx. 5-6, 13-15; xxi. 1-18; xxvii. 1-xxviii. 16). The greater part is written with the ostensible purpose of reconciling Paul's acts with the views of the Judæo-Christian Church. The miracle tales, however, appear to be drawn from popular tradition and to have been committed to writing, possibly at an early date.

For the Jewish investigator the Acts of the Apostles is of twofold interest. It shows how the propagandic work of the Jews extended over the entire Greek and Roman world, Jewish proselytism having paved the way for Paul as well as his followers to win the pagan world. In all the cities where Greek was spoken the synagogues formed the centers of instruction for Jews and the "God-fearing" proselytes, and their mention in connection with all the places visited by Paul shows how the Jewish settlements extended over the highroads of commerce under the Roman empire. The story of the Acts also indicates that the progress of Christianity in its earliest stages was due not to the learned arguments of Paul and his dogmatic views, however potent a factor they afterward became in the formation of the creed, but to the miracles thought to have been wrought by him and the rest of the apostles and other leaders of the Church. These appealed to the masses and made converts in large numbers. In this respect the Acts of the Apostles is the logical sequence of the gospels.

See, for the Pauline epistles, Saul of Tarsus; for the Petrine epistles, Simon Cephas; for the Apocalypse of John and the epistles ascribed to John, Revelation; for the gospels in the Talmud, Gilyonim. See also James, General Epistle of.

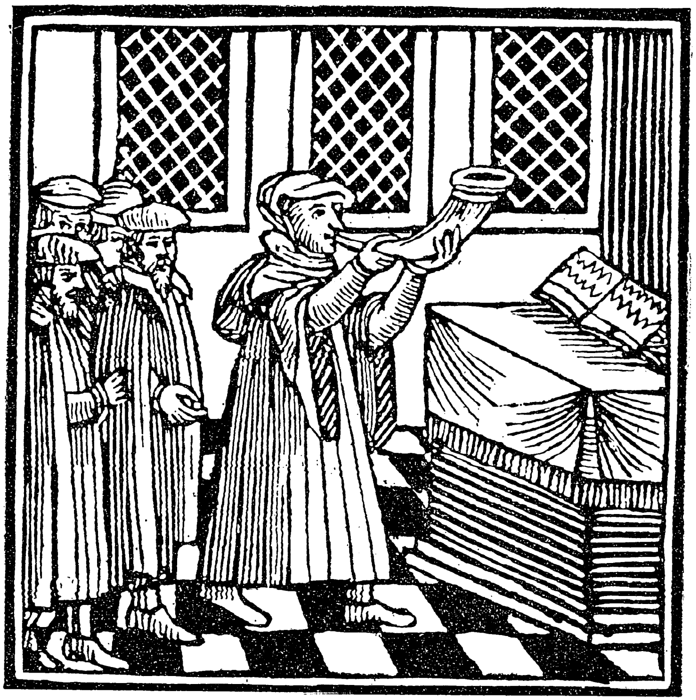
NEW-YEAR.—**Biblical Data:** In the earliest times the Hebrew year began in autumn with the opening of the economic year. There followed in regular succession the seasons of seed-sowing, growth and ripening of the corn under the influence of the former and the latter rains, harvest and ingathering of the fruits. In harmony with this was the order of the great agricultural festivals, according to the oldest legislation, namely, the feast of unleavened bread at the beginning of the barley harvest, in the month of Abib; the feast of harvest, seven weeks later; and the feast of ingathering at the going out or turn of the year (תקופת השנה, בצאת השנה; see Ex. xxiii. 14–17; xxxiv. 18, 22–23; Deut. xvi. 1–16).



Blowing the Shofar on New-Year's Day.
(From a Passover Haggadah, Amsterdam, 1695.)

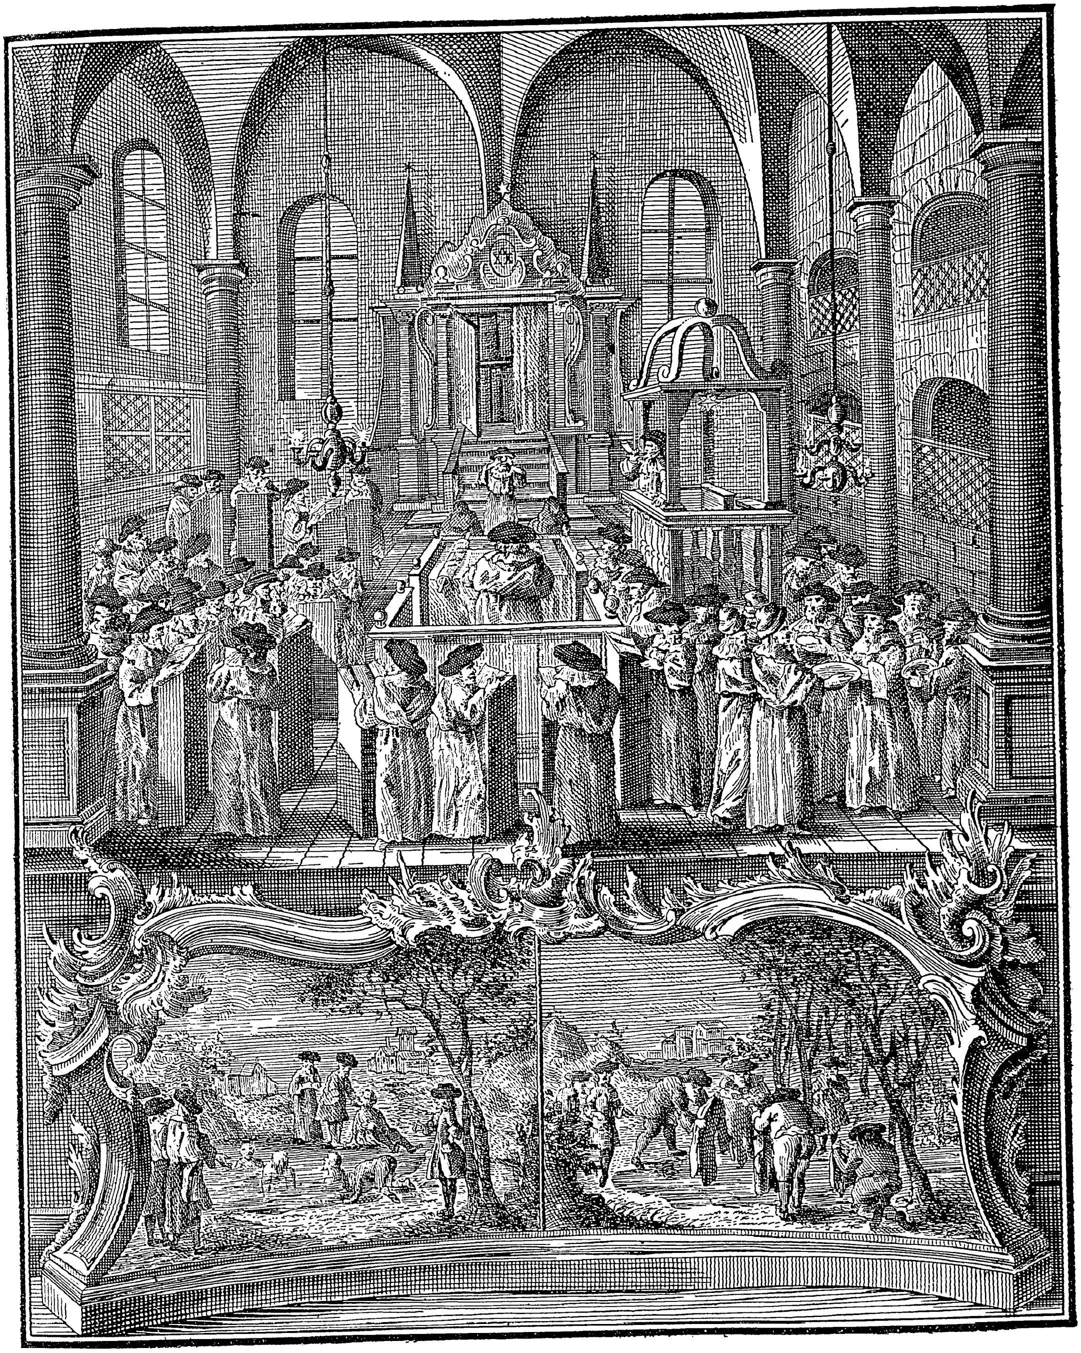
This system of dating the New-Year is that which was adopted by the Semites generally, while other peoples, as the Greeks and Persians, began the year in spring, both methods of reckoning being primarily agricultural and based on the seasons of seed-time and harvest.

The Regnal Year.

The regnal year was evidently reckoned in the same way as late as the end of the seventh century B.C. This is evident from the account of the eighteenth year of King Josiah, in which only by such a reckoning can sufficient time be allowed for the events of that year which precede the celebration of the Passover, assuming, of course, that the Passover was celebrated at the usual time in the spring (II Kings xxii. 3, xxiii. 21–23). Only in the same way can the fourth year of Jehoiakim be made to synchronize with the twenty-first year of Nabopolassar, in which the battle of Carchemish was fought, and also with the first year of Nebuchadrezzar, the Babylonian year having been reckoned from the spring (Jer. xxv. 1, xlvi. 2). The second half of the Hebrew year would thus correspond to the first half of the Babylonian year. In Ezek. xl. 1 the prophet has his vision at the beginning of the year, apparently in the month of Tishri. The Levitical law places the beginning of the Sabbatical year in the autumn, on the tenth day of the seventh month, according to the later reckoning (Lev. xxv. 9). It has been pointed out also that the story of the Flood places the beginning of the deluge on the seventeenth day of the second month, which would, on an autumn reckoning, coincide with the beginning of the rainy season (Gen. vii. 11; Josephus, "Ant." i. 3, § 3).

Possibly Two Modes of Reckoning.

There is much difference of opinion as to whether or not there was in pre-exilic times a second mode of reckoning from the vernal equinox. This inference has been drawn from such passages as II Sam. xi. 1, I Kings xx. 22, 26, and II Chron. xxxvi. 10. The expression used here, "at the return of the year," is, however, sufficiently explained as "the time when kings go out"; that is to say, the usual time for opening a military campaign. Of course if the law of the Passover (Ex. xii. 1; Lev. xxiii. 5; Num. ix. 1–5, xxviii. 16–17) is pre-exilic, the question admits of no further argument. It seems, however, to be now very generally accepted that this law in its present form is not earlier than the sixth century and that it represents post-exilic practise. According to this legislation, which henceforth prevailed, the month Abib, or Nisan (March–April), became the first of the year. It is possible that this change was due, in part at least, to the influence of the Babylonian sacred year, which likewise began with the month Nisan. It



Celebration of the New-Year in Germany in the Eighteenth Century.

(From Bodenschatz, "Kirchliche Verfassung," 1748.)

appears, however, that the festival of the New-Year continued to be observed in the autumn, perhaps originally on the tenth, and later on the first day of the seventh month, Tishri. Josephus asserts (*l.c.* i. 3, § 3) that while Moses appointed Nisan to be the first month for the sacred festivals and other solemnities, he preserved the original order of the months for buying and selling and for the transaction of other business. The Seleucidan calendar, from 312 B.C., placed the beginning of the year in the autumn; but it appears that the Palestinian Jews still reckoned from the spring and dated the Seleucidan era according to that reckoning (see Schürer, "The Jewish People in the Time of Jesus Christ," 2d ed., Eng. transl., I. i. 36-46, on the dates in the Books of Maccabees; comp. Esth. iii. 7).

How Celebrated.

It is altogether probable that the beginning of the year was celebrated from ancient times in some special way, like the New Moon festival. The earliest reference, however, to such a custom is, probably, in the account of the vision of Ezekiel (Ezek. xl. 1) which, as stated above, took place at the beginning of the year, on the tenth day of the month (Tishri ?). On the same day the beginning of the year of jubilee was to be proclaimed by the blowing of trumpets (Lev. xxv. 9). According to the Septuagint rendering of Ezek. xlv. 20, special sacrifices were to be offered on the first day of the seventh month as well as on the first day of the first month. This first day of the seventh month was appointed by the Law to be "a day of blowing of trumpets" (יום תרועה). There was to be a holy convocation; no servile work was to be done; and special sacrifices were to be offered (Lev. xxiii. 23-25; Num. xxix. 1-6; comp. *ib.* x. 1-10). This day was not expressly called New-Year's Day, but it was evidently so regarded by the Jews at a very early period (see R. H. i. 1).

S. J. F. McL.

——**In Rabbinical Literature:** The Rabbis recognize four beginnings of the year from different standpoints: (1) the 1st of Nisan for regnal dating; it was based on the Exodus (comp. I Kings vi. 1); (2) the 1st of Tishri, as, agricultural New-Year the beginning of the harvest (Ex. xxiii. 16, xxxiv. 22); (3) the 1st of Elul for reckoning tithes of cattle (R. Eleazer, however, would reckon these from the 1st of Tishri); and (4) the 1st, or, according to Bet Hillel, the 15th of Shebaṭ, the New-Year for Trees.

According to the Talmud, servants were formally freed on the 1st of Tishri, but were allowed to remain on the homesteads of their former masters and to enjoy themselves for ten days, until Yom Kippur, when the trumpet was blown (Lev. xxv. 9) as a signal for their departure, and for the restoration of the fields to their original owners (R. H. 8b). This is cited to explain the passage in Ezek. xl. 1: "the beginning of the year in the tenth day of the month," which refers to the jubilee year that occurred on the twenty-fifth anniversary of the Exile ('Ar. 12a).

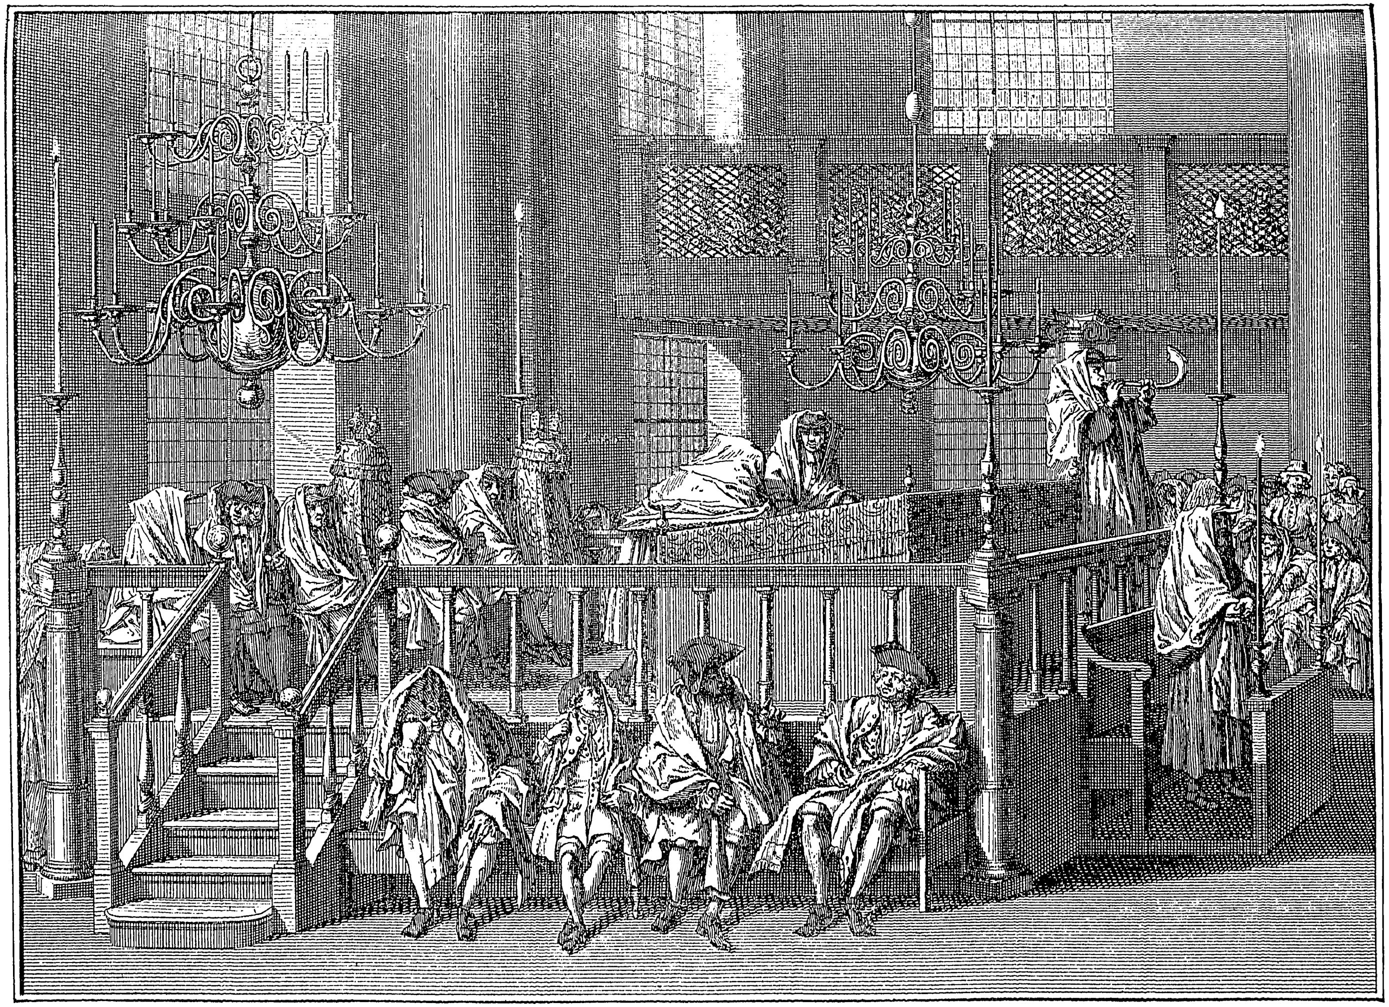
Rosh ha-Shanah.

The observance of the 1st of Tishri as Rosh ha-Shanah, the most solemn day next to Yom Kippur, is based principally on the traditional law to which the mention of "Zikkaron" (= "memorial day"; Lev. xxiii. 24) and the reference of Ezra to the day as one "holy to the Lord" (Neh. viii. 9) seem to point. The passage in Psalms (lxxxi. 5) referring to the solemn feast which is held on New Moon Day, when the shofar is sounded, as a day of "mishpaṭ" (judgment) of "the God of Jacob" is taken to indicate the character of Rosh ha-Shanah. Rosh ha-Shanah is the most important judgment-day, on which all the inhabitants of the world pass for judgment before the Creator, as sheep pass for examination before the shepherd (R. H. i. 2; see Day of Judgment). Three books of account are opened on Rosh ha-Shanah wherein the fate of the wicked, the righteous, and those of an intermediate class (not utterly wicked) are recorded. The names of the righteous are immediately inscribed, and they are sealed "to live." The middle class are allowed a respite of ten days till Yom Kippur, to repent and become righteous (R. H. 16b); the wicked are "blotted out of the book of the living" (Ps. lxix. 28).

The zodiac sign of the balance for Tishri is claimed to indicate the scales of judgment, balancing the meritorious against the wicked acts of the person judged. The taking of an annual inventory of accounts on Rosh ha-Shanah is adduced by R. Naḥman b. Isaac from the passage in Deut. xi. 12, which says that the care of God is directed from "the beginning of the year even unto the end of the year" (R. H. 8a). The 1st of Tishri was considered by the best authorities as the beginning of Creation; *e.g.*, by R. Eliezer, against the opinion of R. Joshua, however, who held the 1st of Nisan as the first day of Creation (R. H. 11a; Targ. Jonathan on Gen. vii. 11, counts the second month as Marḥeshwan). On Rosh ha-Shanah the means of sustenance of every person are apportioned for the ensuing year (B. B. 10a); so also are his destined losses. The indications of the weather prognostications, according to R. Zebid, may likewise be ascertained on Rosh ha-Shanah: If the day be warm, it indicates a warm year; if cold, it foretells generally a cold year (*ib.* 147a).

Omens of Good Luck.

As an omen of good luck for the New-Year, Abaye said one should eat on Rosh ha-Shanah pumpkins, fenugreeks, leeks, beets, and dates (Hor. 12a), because they all grow quickly and because, it is declared, their names in Aramaic mean "plentiful" or "forgiveness." Ezra told the people on Rosh ha-Shanah (the first of the seventh month) to "eat the fat, and drink the sweet" (Neh. viii. 10). The prevailing custom was to partake of some specially palatable meal on New-Year's eve. "In France in the twelfth century the custom was to supply the table with red apples; in Provence, with grapes, figs, and a calf's head, or anything new, easily digested, and tasty, as an omen of good luck to all Israel" (Maḥzor Vitry, p. 362). R. Jacob Mölln (14th cent.) in his "Maharil" mentions the custom of eating apples with honey and a deer's head in remembrance of the 'Aḳedah incident. Another reason for eating an animal's head is to presage



Blowing the Shofar on New-Year's Day.

(From Picart, 1726.)

that the consumer will be "ahead" and not backward in his undertakings during the ensuing year. But one may not eat nuts on Rosh ha-Shanah, as the numerical value of the letters in the Hebrew term for nut, אגוז, is equivalent to that of the letters חטא = "sin" ("ḥet, minus the vowel א = 17), and also for the more plausible reason that nuts stimulate saliva and consequently distract one's mind from his prayers on the solemn day.

In modern times the table is served with grapes, other fruits, and honey. After the benediction of "Ha-Moẓeh" the bread is dipped in the honey, when the following benediction is recited: "May it please the Lord our God and God of our fathers to renew for us a good and sweet year." The feasting is in anticipation that the prayers will be acceptable, and in reliance on the goodness of God. In ancient times the Jews on Rosh ha-Shanah were dressed in white. "Unlike the accused who is dressed in black before the tribunal, the Jews are dressed in white on the Day of Judgment" (Yer. R. H. i. 3).

The idea of a good omen probably introduced the custom in the Middle Ages of greeting one another on New-Year's eve with "Le shanah ṭobah tikkateb" = "Mayest thou be inscribed for a good year," with reference to the book of life of the righteous.

The Second Day.

Only the 1st of Tishri was celebrated as New-Year's Day in Palestine prior to the time of R. Johanan b. Zakkai: but ever since, Palestine, like other countries, observes Rosh ha-Shanah for two days (see PALESTINE, LAWS RELATING TO). The Zohar lays stress on the universal observance of two days, and claims that the two passages in Job (i. 6 and ii. 1), "when the sons of God came to present themselves before the Lord," refer to the first and second days of Rosh ha-Shanah, observed by the Heavenly Court before the Almighty (Zohar, Pineḥas, p. 231a).

For the services on Rosh ha-Shanah, see PRAYER; for the ceremony and significance of the shofar-calls, see SHOFAR; and for the ceremony of "tashlik" on the first day of Rosh ha-Shanah, see TASHLIK; see, also, DAY OF JUDGMENT; GREETING, FORMS OF; MONTH; SELIḤOT.

W. B. J. D. E.

NEW-YEAR FOR TREES: The anniversary of the festival of trees, which occurs on the 15th of Shebaṭ (roughly corresponding to Feb. 1), is known as "Ḥamishshah 'Asar bi-Shebaṭ," or as "Ḥamishshah 'Asar" (= "the fifteenth"), and is celebrated by eating various kinds of fruits and by a special liturgy arranged for the day. The festival, which is a semi-holy day, is observed only as a traditional custom: it is not mentioned as obligatory in the codes. Originally the New-Year's Day for Trees was set aside for settling the tithes of the fruits (see NEW-YEAR IN RABBINICAL LITERATURE); but the day was perhaps also observed as one for the plantation of new trees. Owing to climatic conditions affecting the planting, the date was not settled in the earliest periods. The Bet Shammai fixed upon the 1st of Shebaṭ as the day. Judah ha-Nasi I. planted a "plant of joy" on Purim (14th of Adar, following Shebaṭ). What this "plant of joy" was is not quite clear. The Talmud (Meg. 5b) says it was a "royal aburneḳi" (אבורנקי של מלכים) ("citron-tree"; Kohut, "Aruch Completum"; see also Rashi *ad loc.*). The custom in Jerusalem was to plant a cedar-tree for every new-born male and a cypress-tree for every female. When a marriage was about to take place the trees were cut down and used as posts for the nuptial canopy (Giṭ. 57a). The revival of the festival by eating fruits instead of planting trees dates back probably no earlier than the sixteenth century, when the cabalists settled in Palestine. Nathan Benjamin of Gaza in his "Ḥemdat Yamim" arranged a liturgical reading for the night preceding the 15th of Shebaṭ. It consists of a collection of excerpts bearing on the subject of trees and fruits, from the Bible, Talmud, and Zohar, and ends with a special prayer. This collection is also printed in a separate pamphlet entitled "Peri 'Eẓ Hadar." The following are the principal extracts from the Bible: Gen. i. 11-13; Lev. xxvi. 3-13; Deut. viii. 1-10; Ezek. xvii., xlvii. 1-12; Joel ii. 18-27; Ps. lxv., lxxii., cxxvi., cxlvii. This book is read in the yeshibot and synagogues, in the intervals between the courses of fruit. The number of courses enumerated is seventeen, and includes olives, dates, grapes, figs, pomegranates, citrons, apples, pears, quinces, berries, nuts, and carobs.

Arbor Day.

Modern Form of Festival.

The cabalist R. Ḥayyim Vital names thirty species of fruit, which he divides into three groups of ten each, representing the ten Sefirot in their respective grades of "Beriah," "Yezirah," and "Asiyah." Under the first grade are classed grapes, figs, apples, etc., which have a soft skin with small pips that may be eaten. The second grade comprises olives, dates, etc., which have soft skins but hard stones. The third grade includes different kinds of nuts which have hard shells and hard kernels. The cabalists consider the eating of the fruit of trees as a form of exculpation for the original sin of eating of the Tree of Knowledge.

In modern times the Sephardim in the Orient, particularly in Jerusalem, celebrate the day in the manner described in the manual "Peri 'Eẓ Hadar." The Ashkenazim in Jerusalem, after the morning prayer, chant the liturgical piyyuṭim belonging to the Arba' Parshiyyot (the four Sabbaths preceding Passover) of the Shaharit service. In Russia and other eastern European countries the Jews generally observe Ḥamishshah 'Asar by eating various kinds of fruit, especially fruits imported from Palestine, such as carobs. The children are granted absence from school and join in eating the fruits, the meal being preceded by a benediction and the "Sheheḥeyanu" for all new fruits.

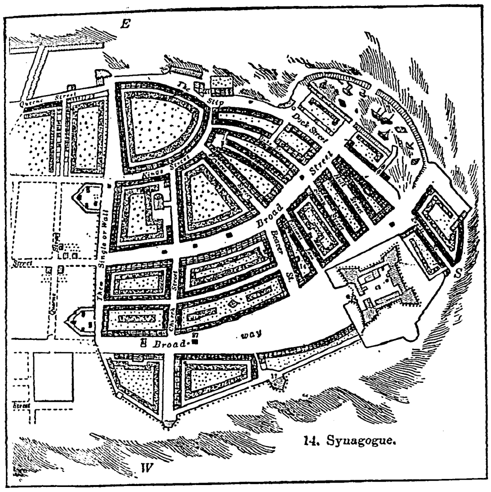
NEW YORK: Chief commercial city of the state of New York and the largest city of the United States; contains a larger Jewish population than any other city in the world.

History: When Jews settled in New York, about 1654, during the Dutch period, the Jewish population of Holland was very small, and the Jewish settlers were largely Sephardic exiles from Brazil and the West Indies, with an appreciable sprinkling of Ashkenazim from Holland and, subsequently, from England. England, to which Jews were readmitted soon after, had only a small Jewish population, and accordingly there were few Jewish immigrant settlers from that country during the period of English dominion, from 1664 to the close of the Revolution. It was only from the beginning of the nineteenth century, when the German tide of immigration to America became considerable, carrying in its wake a Polish Jewish immigration, that the Jewish population of New York was heavily augmented. A new influx began about 1881, when Russian persecution drove hundreds of thousands of Jews to America's shores, Rumanian persecution during the last five years further augmenting the number. The history of the growth of the New York Jewry falls therefore into three periods; the first runs to 1812, when it numbered approximately five hundred souls; the next, the period of German immigration, runs to about 1881; the third period, that of Russian immigration, extends from that date to the present time (1904), when the Jewish population of the city is estimated at 672,776.

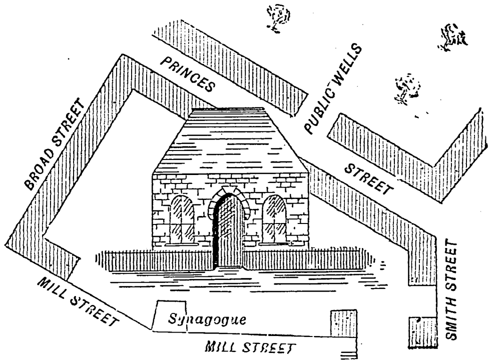


New York City in 1695, Locating the Synagogue.

The Dutch Period (1654-64): It was fortunate for American Jewry that the territory of New York, then known as New Netherlands, was a Dutch possession in 1654. This was so not merely because some of the most enterprising of the Jews who fled from Brazil in that year, upon the Dutch capitulation, were enabled to look with considerable confidence to Dutch hospitality there, but because the more liberal and modern Dutch laws continued in theory and in practise to confer greater rights and privileges upon Jewish residents in New York under the English conquerors than England herself granted for many decades after. But Jewish relations to the Dutch colony of New Netherlands considerably antedated the first settlement of Jews there. When the Dutch West Indies Company was formed in 1620, Jews became influential stockholders and began immediately to exert an important influence upon the shaping of the company's fortunes.

Settlers in New Amsterdam.

When the Dutch were finally expelled from Brazil, in 1654, several thousand Jews resident there felt compelled to take to flight, and a party of twenty-three of these fugitives arrived at New Amsterdam on the ship "Saint Catarina" in Sept., 1654, and formed the first considerable avowedly Jewish settlement within the present limits of the United States; they seem to have arrived via the West Indies. There were, doubtless, a few isolated Jewish immigrants to North America prior to this date. In fact it is known that one Jacob Barsimson arrived in New Amsterdam from Holland on the ship "Pear Tree" in July, 1654, and there are references to several Jews having left Holland for New Netherlands in 1652.



Sketch and Site of the Old Mill Street Synagogue, New York.
(From the "American Hebrew.")

In the case of the party from Brazil, their advent was at once signalized by legal proceedings against them: they had made themselves jointly responsible to the officers of the vessel for the passage-money of each, and several of the party were unable to pay their fares, most probably because they had been despoiled of their effects before arrival. The municipal authorities, on the application of the captain, found themselves compelled to direct the imprisonment of two of the number, after the sale of the effects of the party, until the money due had been paid. In these proceedings reference was made to remittances which some of the party shortly expected from Holland, while some had already paid their own passage-money and were required by agreement to pay for others; so it is not fair to infer that all these arrivals were indigent. While these cases were still pending another party of Jews, of greater means, arrived from Holland. These proceedings, and probably personal bigotry and irascibility, led Peter Stuyvesant, the Dutch governor of New Netherlands, to order them to leave the colony, in which course he was abetted by some of his associates. But before these orders could be executed instructions of a liberal character from the directors of the Dutch West Indies Company arrived, superseding local orders against the Jews. Stuyvesant's ire may have been again aroused by the report that more Jews were expected shortly from Holland, who would "then build here a synagogue." Under date of April 26, 1655, the directors of the Dutch West Indies Company instructed Stuyvesant that the prohibition of Jewish settlement recommended by him "would be unreasonable and unfair, especially because of the considerable losses sustained by the Jews in the taking of Brazil, and also because of the large amount of capital which they have invested in shares of this company. . . . They shall have permission to sail to and trade in New Netherlands and to live and remain there, provided the poor among them shall not become a burden to the company or the community, but be supported by their own nation."

Attitude of Stuyvesant.

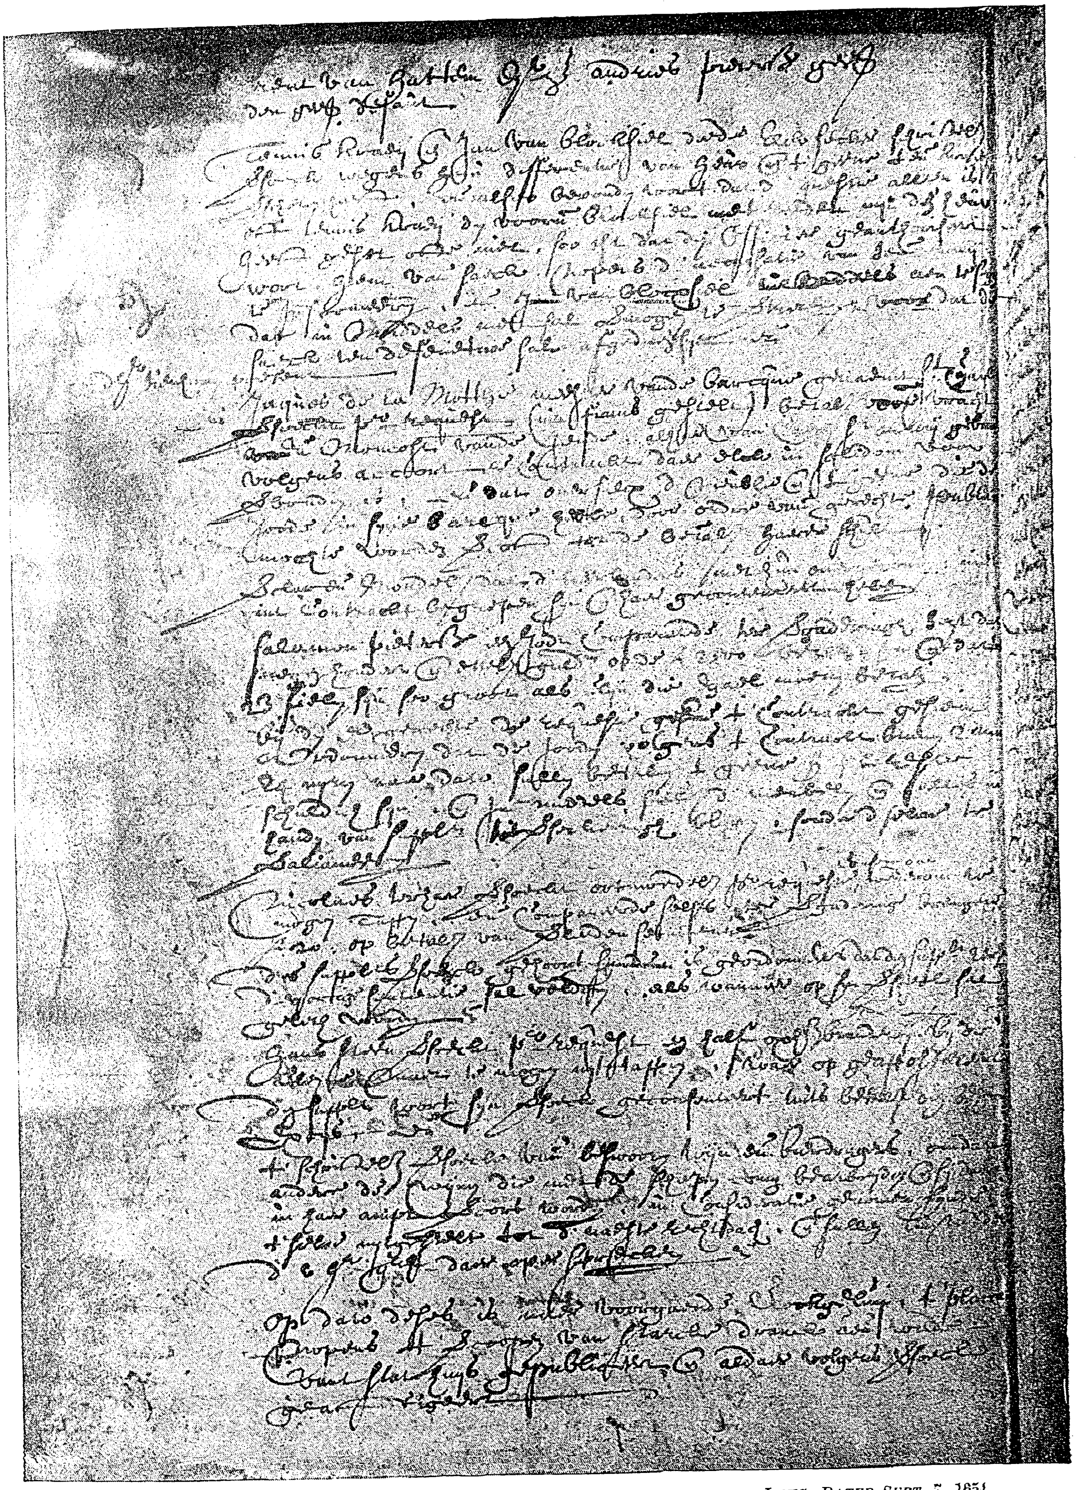
SEWARD PARK, THE CENTER OF THE NEW YORK GHETTO.
(From a photograph.)

Stuyvesant vouchsafed only a grudging assent to these instructions, and declined to permit one of these early Jewish settlers, Salvator d'Andrade, to purchase a house and lot in New Amsterdam, curtailed the right of Abraham de Lucena and others to send goods for purposes of trade to the Delaware River, and levied a special military tax on Jewish settlers, despite their protests, in Aug., 1655, Jews not being permitted to mount guard with other citizens. Further Jewish appeals to the directors at home resulted in a vigorous reproof of Stuyvesant coupled with more specific directions in favor of Jewish settlers, expressly providing that they should enjoy all the civil and political rights in New Netherlands which were accorded them in Amsterdam, and including express authorization to acquire real estate and to trade in the adjacent district. The specific limitations upon their rights contained in these instructions were fraught with important consequences, however, and should be noted:

> "Jews or Portuguese people, however, shall not be employed in any public service (to which they are neither admitted in this city), nor allowed to have open retail shops; but they may quietly and peacefully carry on their business as beforesaid and exercise in all quietness their religion within their houses, for which end they must without doubt endeavor to build their houses close together in a convenient place on one or the other side of New Amsterdam—at their choice—as they have done here."

The prohibition against engaging in retail trade compelled Jewish residents to direct their energies particularly to foreign and intercolonial trade, which resulted in pecuniary profit not merely to themselves, but also to the whole colony, for they were peculiarly well situated for opening such commercial intercourse with their brethren, scattered all over the world, having common ties of language, blood, and mutual confidence, and dealing in the most varied articles. Jews were accordingly the pioneers of this trade in New Netherlands, and continued throughout the

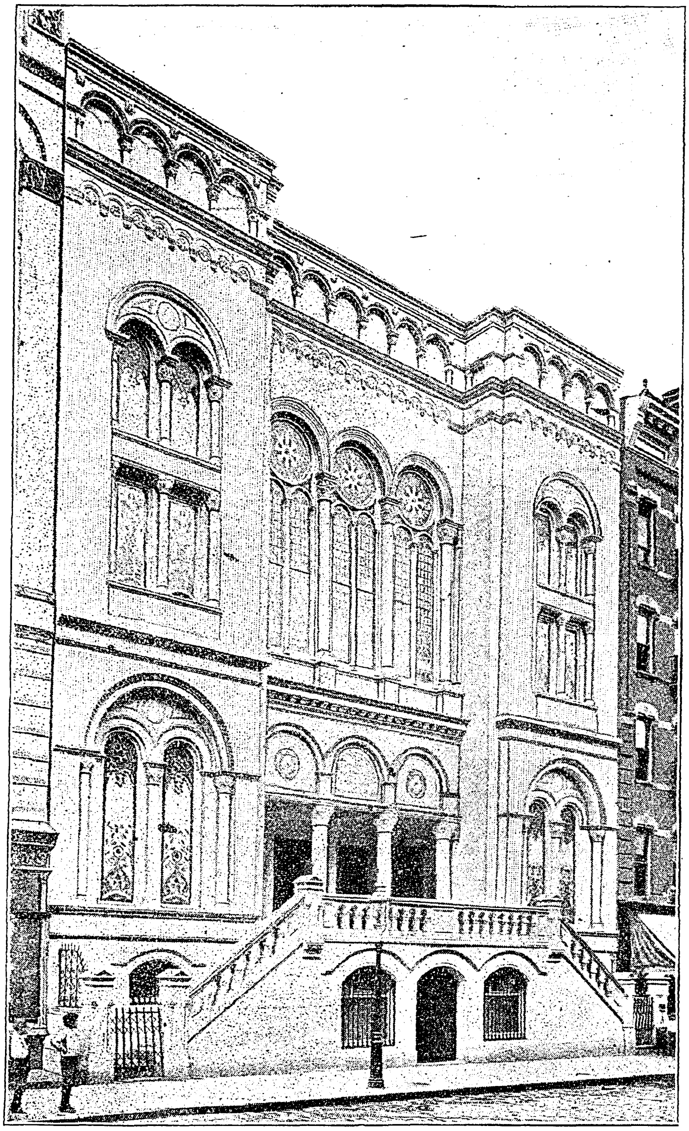
Influence on Colonial Foreign Trade.



FIRST ENTRY IN THE DUTCH RECORDS OF NEW YORK CITY RELATING TO THE JEWS, DATED SEPT. 7, 1654.

(From the original Dutch records in the City Hall Library, New York.)

whole colonial period to be among the most prominent importers and exporters. So far as the establishment of a ghetto is concerned, there is no reason to believe that this provision was ever enforced, and Jews resided at will throughout the territorial limits. The provision concerning their religious worship did not forbid the private practise of their rites, but only the public establishment of a synagogue, which had been the particular grievance of the local authorities. The consequence is that the origin of the religious gatherings of the little community is shrouded in darkness, though indications are that private religious worship began about 1654, immediately after their arrival.



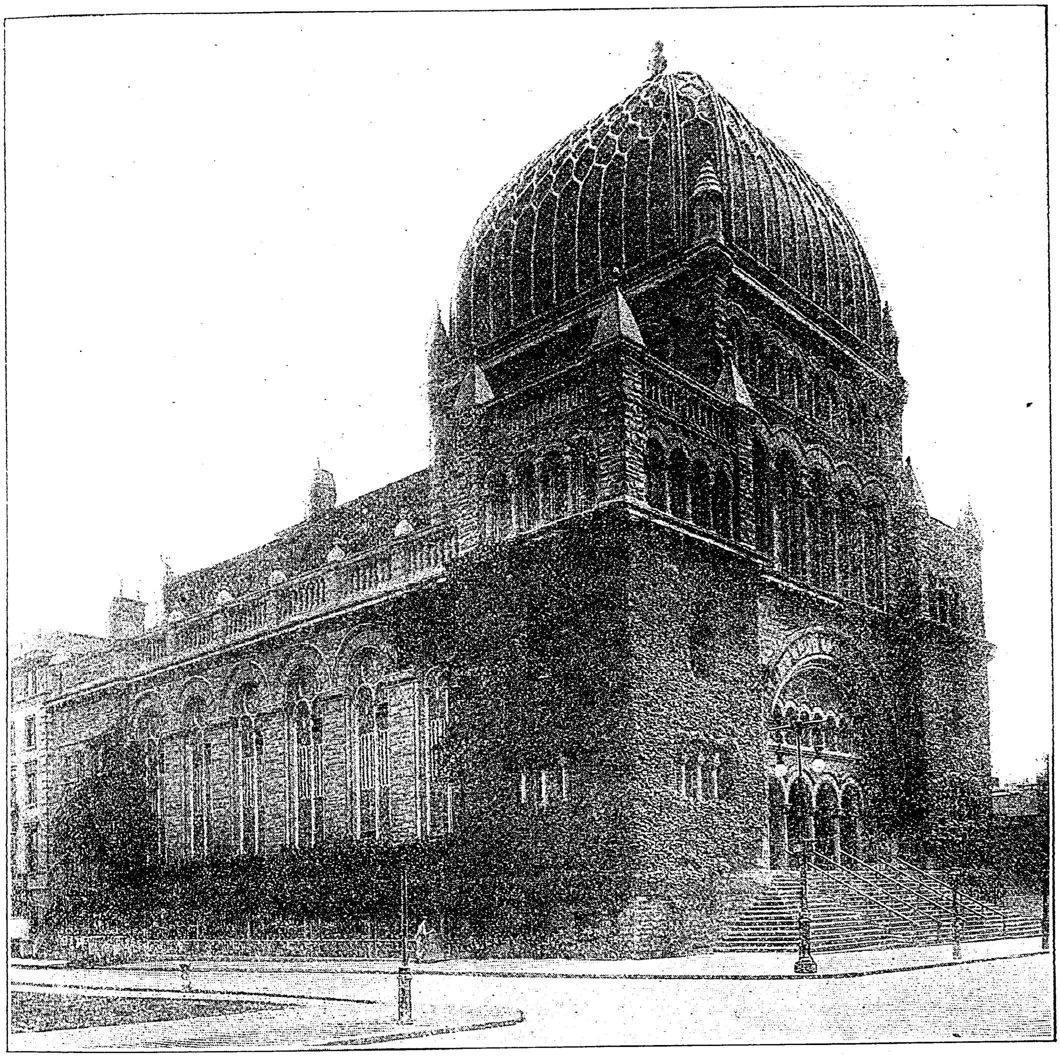
Calvarier Shul, Pike Street, New York.
(From a photograph.)

That the settlers joined in efforts to observe the ceremonies of their faith from the date of their arrival is certain, for it is known that in July, 1655, they applied to the municipal authorities for a grant of land for a burying-ground, which application was refused on the ground that there was no present need for it. The need soon arose, however, and on July 14, 1656, a lot was granted them "for a place of interment," apparently without charge, the site of which Judge Daly shows was on New Bowery, near Oliver street, and which the Jewish community augmented by the purchase of adjoining tracts in 1681, 1729, and 1755. The oldest decipherable inscription on the tombstones in this cemetery is that of Benjamin Bueno de Mesquita, dated 1683, one Joseph Bueno, presumably of the same family, having purchased the tract acquired in 1681.

In 1657 one of these early settlers, Asser Levy, applied for the burgher right, which was essential to the carrying on of certain vocations, and showed that he had exercised such right in Amsterdam, but he found that it was necessary to appeal to the director-general and council before an order (April 26, 1657) admitting Jews to citizenship was obtained, the municipal authorities having denied the application. A few days before this determination on appeal, an application of one Jacob Cohen-Hendricus, "to bake and sell bread within this city, as other bakers, but with closed doors," was denied by the Court of Burgomasters as contrary to the privileges granted to the burghers by the director-general and council, and against the orders of the lord mayors. Whether this determination was reversed by the Asser Levy decision admitting Jews to burgher rights, or was persisted in, so that the baking and selling of bread were regarded as one of the fields of retail trade closed to the Jews under the instructions from the directors of the company, can not be definitely determined.

By this time the Jews had acquired definite and valuable rights, even though somewhat restricted, and the municipal authorities began to treat them liberally. Thus, on June 3, 1658, the Court of Burgomasters, apparently on its own initiative, declined to permit judgment in civil actions to be taken against Jacob Barsimson, a Jew, holding that "though defendant is absent, yet no default is entered against him, as he was summoned on his Sabbath": an instance of religious toleration and just dealing foreshadowing a New York statute of two centuries later that made it a misdemeanor maliciously to serve any one with process on his Sabbath, or with process returnable on that day ("New York Penal Code," § 271). Similarly, the municipal authorities licensed Asser Levy and Moses Lucena, Oct., 1660, as sworn butchers, providing on their application that they might take the oath at the hands of the officer "agreeably to the oath of the Jews," and with the reservation that they should not be bound to kill any hogs.

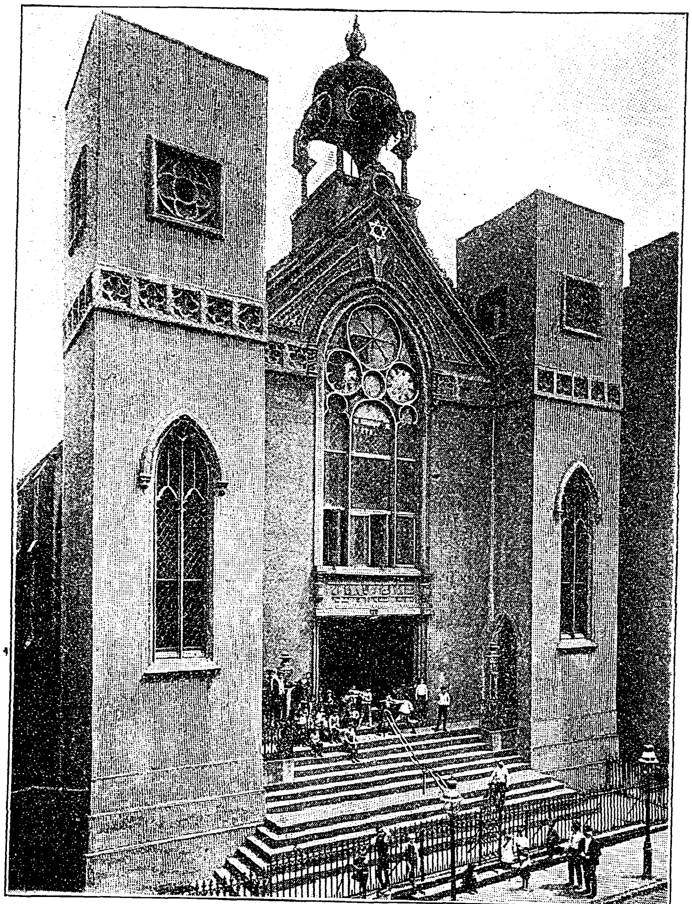
English Period (1664-1776): Charles II. having granted New York to his brother James, subsequently James II., the fleet sent out in 1664 under Colonel Nicholls succeeded in seizing the colony; the articles of capitulation guaranteed to all residents the rights of free denizens, and all their property rights, and provided that the Dutch there should enjoy liberty of conscience. It was apparently because of these terms, confirmed by the Treaty of Breda in 1667, that Jewish residents under the new order continued in their established rights, although the same effects result from the principle of English law that conquered territory continues to be governed by its former laws, except in so far as expressly changed by law. As governor, Nicholls, in 1665, promulgated the "Duke's Laws," which contained a clause safeguarding religious rights, but which, in terms, referred only to persons "who profess Christianity." Governor Andros' instructions of 1674 were not so limited, and in an official report in 1678 he refers to the presence of some Jews in the colony. Governor Dongan's first instructions again contained the limitation, and in 1683 the Colonial Assembly adopted a charter of liberties which also was limited, in its clause as to immunity from religious persecution, to persons



TEMPLE BETH-EL, FIFTH AVENUE, NEW YORK.
(From a photograph.)

“who professed faith in God by Jesus Christ,” though this clause was purely negative.

In 1685 two determinations were reached concerning the Jews, both antagonistic; one concerned the application of Saul Brown to trade at retail, which was denied, though he was permitted to engage in wholesale trade with the governor's consent; the other ruling, made by the mayor and common council on the application of the Jews for liberty to exercise their religion, was to the effect “that no public worship is tolerated by Act of Assembly but to those that profess faith in Christ, and therefore the Jews' worship is not to be allowed.” It will be observed that this ruling is limited to “public” worship, and is based upon the local act of assembly, and Judge Daly suggests that Governor Dongan, who was a liberal and enlightened man, may have taken advantage of the absence of such limitation in his second set of instructions, in 1686, and have authorized public Jewish worship. Some form of semi-private Jewish “separate meetings” already existed, and are referred to in Dominie Selyn's report to the Dutch classis in 1682; and Chaplain John Miller's map of New York in 1695 shows a Jews' synagogue on the south side of Beaver street, near Mill street, recording also that Saul Brown (a name derived from “Morenu”) was its minister, and that the congregation comprised twenty families.



Beth Hamedrash Hagodol, Norfolk Street, New York.

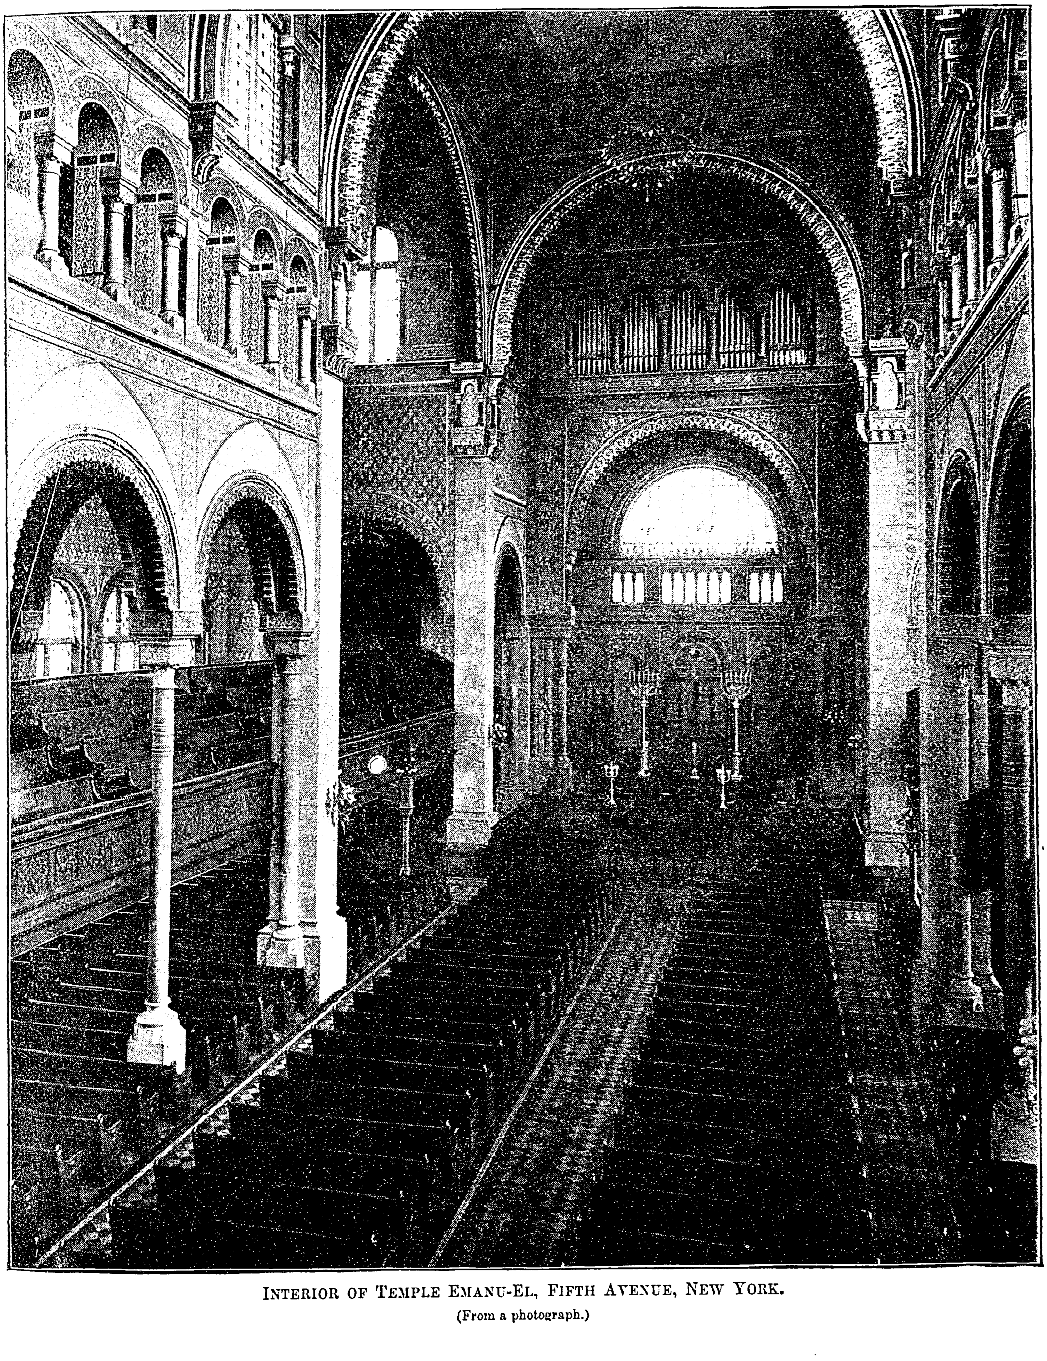
(From a photograph.)

The Synagogue.

By 1700 the site of the synagogue was so well known that in a conveyance of certain premises the latter were described as adjoining a place “now commonly known by the name of the Jews' Synagogue.” Moreover, the public authorities even extended exemption from civil and military service to the ministers of the Jewish congregation, as appears from a petition of Abraham de Lucena to Governor Hunter dated Sept. 13, 1710, praying for similar immunities in consideration of his ministerial functions and referring to the enjoyment of such privileges by his predecessors. This date, however, almost comes within the period of existing official records of the Congregation Shearith Israel, of New York, whose minutes begin in 1729 and refer to an earlier constitution of 1706. This congregation dedicated a synagogue on Mill street in 1730, on a lot purchased two years previously, and for many years thereafter its synagogue, which followed the Sephardic ritual, was the only one in the United States; the synagogue was remodeled and reconsecrated in the year 1818.

Not Allowed to Vote for Assembly.

By the commencement of the eighteenth century, therefore, the last curtailment of religious rights of the Jewish settlers in New York had disappeared; of their political rights only a single abridgment is recorded during the eighteenth century, and that is connected with a bitter political contest of the year 1737. In that year the General Assembly, at the instance of a shrewd lawyer representing one of the contestants, decided that Jews ought not to be admitted to vote for representatives in this colony, as they enjoyed no such rights in England with respect to voting for members of Parliament; and in the course of the same controversy the assembly further decided that they should not be admitted as witnesses. Even the former determination is of doubtful correctness, for the law of England concerning elections to Parliament did not control; but the ruling that Jews were incompetent as witnesses was inconsistent with colonial precedents, and would have been most serious and dangerous in its consequences had it been generally followed: the context shows, however,

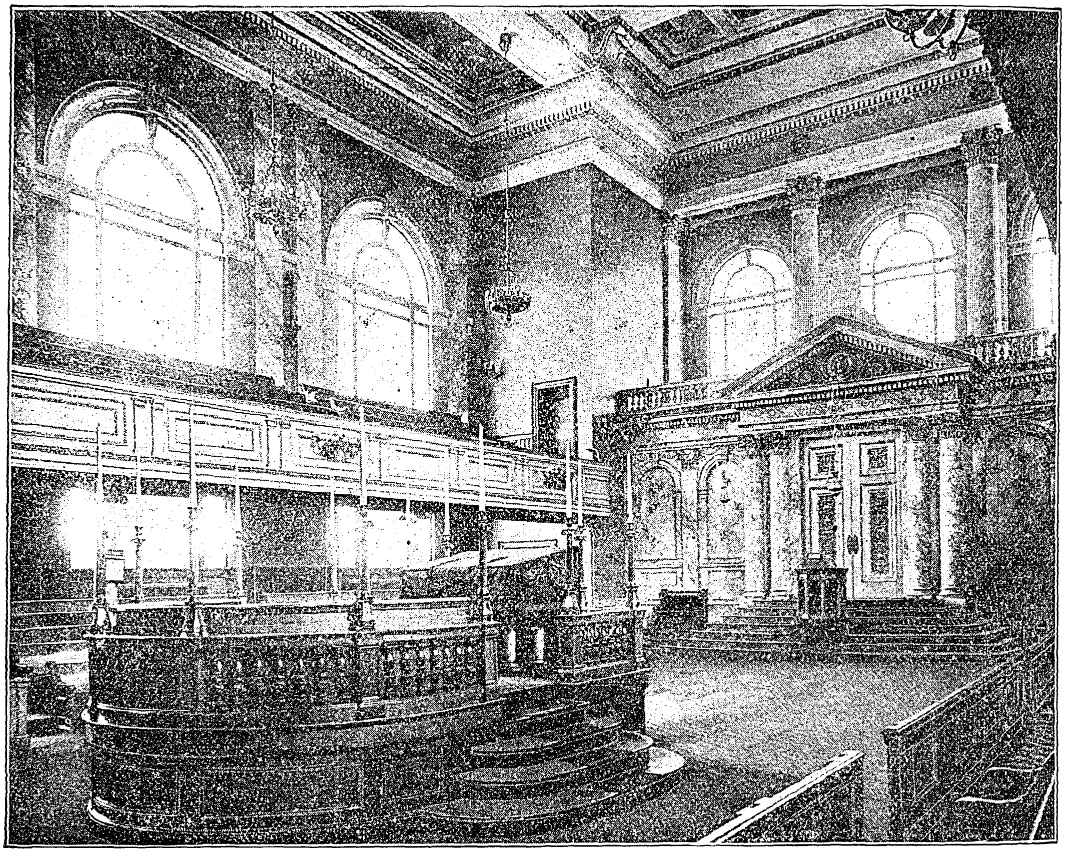


INTERIOR OF TEMPLE EMANU-EL, FIFTH AVENUE, NEW YORK.

(From a photograph.)

that the witnesses under consideration were electors testifying as to their votes in the recent election, so the ruling was, apparently, merely a corollary to the finding that they could not lawfully vote for representatives. Gov. Seward referred to the minutes recording this determination as a "spot which the friends of rational liberty would wish to see effaced."

A poll-list of the election for the General Assembly of 1761 has been handed down, and the names of several Jews are found entered as voters in that year in the city. The prohibition against Jews engaging in retail trade seems to have become obsolete by this time, and the Declaration of Independence and the religious clauses of the first state constitution of 1777, in establishing complete religious liberty, merely continued as a matter of law rights of absolute equality already enjoyed in practise by the Jews in New York, though there do not seem to have been any Jewish incumbents of public office in civil life prior to the adoption of these great charters of public liberty.



Interior of Temple Shearith Israel, Central Park West, New York.

(From a photograph.)

Commercial Activity.

The commercial activities of the Jews of New York were very varied. During the first few decades after their settlement they engaged in trade with the West Indies (particularly Curaçao, St. Thomas, and Jamaica), along the Hudson and Delaware rivers, with Rhode Island, and with Africa, England, Holland, the Madeiras, and Portugal. A bill of lading of jewelry shipped from Curaçao to New Netherlands, dated 1658, a Jew being the importer, has been preserved, as also even earlier references to Jewish importers of tobacco in New York. Under date of 1720 there is mention of the expected arrival in New York of the slave-ship of Simon the Jew, hailing from Guinea. Jews were engaged in exporting wheat from New York on a very large scale about 1710, Lewis Gomez and his family being the principal dealers, and Abraham de Lucena being associated with them in a considerable branch of this business. For several decades the Gomez family seem to have been the most influential Jewish residents. Joseph Bueno was a prominent broker in New York even before the close of the seventeenth century, and it was with particular reference to his services to the governor, Lord Bellomont, that that dignitary wrote to the Board of Trade in 1700, concerning matters of colonial finance, that "were it not for one Dutch merchant and two or three Jews that have let me have money I should have been undone." In 1705 a petition concerning the fixing of the fair standard values of foreign coins, signed by sixty-six of the most prominent merchants of New York, bore the signatures of Joseph Bueno,

The Couty Appeal.

Abraham de Lucena, and Samuel Levy. Sampson Simson was a member of a delegation of eight appointed to receive the charter of the New York Chamber of Commerce from Lieutenant-Governor Colden in 1770, and some years later (1792) Benjamin Seixas and Ephraim Hart appear among the founders of the New York Stock Exchange. In 1672 one Rabba Couty of New York, whose ship "The Trial" had been seized and declared forfeited by the courts in Jamaica on the theory that he was an alien within the meaning of the Navigation Act, though he was admittedly a Jewish burgher of New York, secured a reversal of this decree in England on appeal to the Council for Trade; this decision is of great importance, not merely as recognizing the Jews as British subjects, but because it seems to be the first case in which efficacy was allowed to colonial grants of naturalization.

Educational Alliance, East Broadway, New York.

(From a photograph.)

During the French and Indian war Jacob Franks of New York was the provision agent for the crown to the British forces in America, he having been associated with a British syndicate, consisting of Colebrook, Nesbitt, and Franks, whose dealings with the crown during this period exceeded £750,000: the Franks family was one of the leading ones in the New York Jewish community of the eighteenth century. Hayman Levy of New York, the employer of John Jacob Astor, was very largely engaged in the fur trade with the Indians shortly before the American Revolution; and the commercial dealings of Sampson and Judah Simson were also very extensive.

An incident illustrative of the generosity of the early New York Jewish community and of its friendly relations with other communions was brought to light when a subscription-list for raising funds for building a steeple for Trinity Church in 1711 was discovered; it contains a separate list, entitled "The Jews' Contributions," aggregating £5 12s. 3d. from seven subscribers, including the rabbi, De Lucena, the total amount subscribed being £312.

The cosmopolitan character of the Jewish population of New York from early times is indicated by an

Shearith Israel.

article written by a local Christian clergyman, the Rev. John Sharpe, in 1712, who refers to there being Jewish residents of New York at that day from Poland, Hungary, Germany, etc. In fact, in 1784, a majority of the electors of the Shearith Israel congregation, more commonly known as the Spanish and Portuguese synagogue, were Ashkenazim, not Sephardim. After the date of this congregation's purchase of land for its synagogue in Mill street, 1728, there are records giving the names of its successive ministers and lay officials; at the time of the consecration of the synagogue in 1730 Moses Gomez, son of Lewis Gomez, was president, his father having acted in that capacity at the time the land was purchased; Moses Lopez de Fonseca was then rabbi. The name of Joseph Jessurun Pinto, who officiated as rabbi from 1759 to 1766, is identified with the earliest New York religious publication devoted to Jewish interests handed down to us—a form of prayer for a Thanksgiving Day service appointed in 1760 to celebrate the English conquest of Canada. This was published in the same year in an English translation.

Exterior of the Jewish Theological Seminary of America, West One Hundred and Twenty-Third Street, New York.

(From a photograph.)

In 1766 a book of prayers for the holy days, according to the order of the Spanish and Portuguese Jews, and translated into English by Isaac Pinto, was published in New York; the translator of this work was a relative of the rabbi just referred to. It is of special interest not merely because it was probably the first Jewish book published in New York, but because its publication was forbidden by the synagogal authorities in London, who were opposed to anything tending to establish the reading of Jewish prayers in the vernacular. Such tendencies as these probably gave rise to the society Mezion Teza Torah, established in connection with this synagogue in 1731 for the purpose of perpetuating the old ritual. The old entries in the congregational minutes show that the elaborate system, to which were attached the penalties of fines, reprimands, and possible expulsion, employed in Amsterdam and London to secure conformity with the ceremonial laws, was continued in New York. An increase in the number of violations of the dietary laws resulted in the adoption of a by-law in 1758 providing for the expulsion of persons eating "ṭerefah" or breaking the Sabbath. In 1729 the annual expenses of the congregation aggregated only £91; by 1746 they had risen to £268, the congregation having then fifty-one members, each of whom originally undertook to contribute £2 per annum; but as this did not suffice, assessments based on individual fortunes were levied, which gave way to the present purchase and rental of pews system, supplemented by voluntary contributions. Connected with the congregation was a school, which at first held sessions every afternoon, but in 1746 held both morning and afternoon sessions. The English branches of study as well as sectarian instruction constituted the curriculum, and provision was made for the free instruction of poor children; so that this school is remarkable as at the same time one of the oldest and one of the most comprehensive in the colony. The Jewish community directed the administration of its charities exclusively through congregational channels until the commencement of the nineteenth century, its "ẓedaḳah" (charity) fund being originally under the sole administration of its president, though in 1756 the rules were amended to forbid his disbursement of over £20 for charity without the consent of the board of trustees. An interesting contemporary account of the Jewish community of New York in 1748, from the pen of the Swedish naturalist Peter Kalm, has been preserved, which includes a description of divine service in the synagogue: "There are many Jews settled in New York, who possess great privileges. They have a synagogue and houses, and great country-seats of their own property, and are allowed to keep shops in town. They have likewise several ships which they freight and send out with their own goods. In fine, they enjoy all the privileges common to the other inhabitants of this town and province."

Jews eagerly availed themselves of all possible opportunities to acquire citizenship in New York,

Beginnings of Emancipation.

as in the Dutch period, when they as eagerly sought burgher rights, after their claim to the privilege had been established. During the English period numerous arrivals secured from the governors letters of denization and licenses to trade and traffic. A number of years, however, before Parliament passed the act of 1740, permitting foreign Jews to be naturalized in the colonies, the New York Colonial Assembly freely passed special acts, first applicable to individuals only, then general in character, permitting Jews to be naturalized without including in their oath the words "upon the true faith of a Christian." A large number of Jews in New York availed themselves of this opportunity under the colonial and the parliamentary statutes, including at least one Jew from the colony of Rhode Island, to whom that privilege had been denied by the courts of his colony under a forced and unreasonable construction of the British act of 1740. Until the Revolutionary war the Jewish immigrants came principally from Spain, Portugal, and the West Indies, while there was an appreciable migration to Rhode Island and Pennsylvania shortly before the end of the English period. Further shrinkage was due to defections toward Christianity through intermarriage, and the ratio of Jewish to non-Jewish population decreased considerably during the period from 1750 to 1812, chiefly because of the immense non-Jewish immigration.

Gershom Mendez Seixas.

Revolutionary Period: As regards the Revolutionary struggle, Jewish names are found subscribed to the non-importation agreements, that of 1769 containing the names of Samuel Judah, Hayman Levy, Jacob Moses, Jacob Myers, and Jonas Phillips. Benjamin Seixas was an officer in Colonel Lasher's battalion as early as 1775, and Isaac (subsequently Colonel) Franks joined the same regiment the next year. Numerous other Jewish names from New York appear on the Revolutionary rolls, some as officers. Particularly striking was the attitude of the Jewish congregation as such; for, on the eve of the British occupancy of New York, an overwhelming majority resolved to abandon the city and the synagogue. Rabbi Gershom Mendez Seixas, whose patriotism found unmistakable expression, was in the van. Most of the members of the Jewish community took refuge in Philadelphia during the Revolution, aiding them in the erection of the synagogue of the Congregation Mickvé Israel, but a majority of its members returned to New York at the close of the war.

During the struggle the services of Isaac Moses, who, with Robert Morris, afforded material financial assistance to the colonial cause, proved particularly valuable. There was, however, a sprinkling of Tories in the New York Jewry during the Revolution, some of whom occasionally held services in the synagogue during the British occupation, under the presidency of Lyon Jonas, and subsequently of Alexander Zuntz, a Hessian officer who settled in New York. On the reorganization of the congregation at the close of the Revolution Hayman Levy succeeded Alexander Zuntz as president, and the congregation presented an address of congratulation to Governor Clinton on the outcome of the war. G. M. Seixas was one of the fourteen ministers who participated in the inaugural exercises of Washington's administration in New York on April 30, 1789, Col. David S. Franks being one of the marshals in charge of the procession. Gershom Mendez Seixas became rabbi of the Congregation Shearith Israel in New York in 1766, and remained in the rabbinate until his death in 1816. He became a trustee of Columbia College by legislative appointment under the Act of the Legislature reorganizing the college, and thus evidencing its non-sectarian character, in 1787, and continued to hold that office till he resigned in 1815. A Thanksgiving Day sermon which he preached on Nov. 26, 1789, was printed at the time, and a notice of this publication described it as "the first of the kind ever preached in English in this state." Of course, synagogal preaching in those days was very unusual, and Dr. Daniel L. M. Peixotto took part in a public discourse delivered and then printed in New York in 1830, referring to the fact that this task had been theretofore performed only at intervals, he at the same time paying tribute to his own father's services (Rev. M. L. Peixotto) as Seixas' successor, in delivering occasional discourses on moral and religious subjects. The New York congregation was one of several Jewish congregations which joined in an "Address of Congratulation" to Washington in 1790; the text of this address, as well as Washington's reply, is still extant. A list of the affluent residents of New York in 1799, showing the names of all whose residences were assessed at £2,000 or over, includes the names of Benjamin Seixas, Solomon Sampson, Alexander Zuntz, and Ephraim Hart.

Beginnings of Charity Organization.

The community was somewhat depleted by the loss of those who had settled permanently in Philadelphia, but on the other hand it received slight accessions from Newport, R. I., during and after the Revolution, as that city never recovered from the injuries it received at the hands of the British during the Revolution. But, as already stated, even at the commencement of the War of 1812 there were not more than about 500 Jews resident in New York. The close of this period marked the commencement of the movement for the organization of independent Jewish charities, at first under congregational auspices; subsequently these became more and more numerous, and were, for the most part, absolutely independent. In 1785 the Hebra Gemilut Hasadim, for burying the dead, was organized; it is still (1904) in existence. In 1801 Myer Polonies bequeathed to the congregation $900 for the foundation of a free denominational school, and with this fund, subsequently augmented, the Polonies Talmud Thora was soon after founded. In 1802 the Hebra Hased Ve' Amet, now probably the oldest Jewish charitable society in the United States, was organized, for visiting the sick and attendance at funerals. In 1805 a new cemetery in what is now 11th street was consecrated by the Shearith Israel congregation.

From 1812 to 1881: The military rolls of the War of 1812 contain the names of several Jewish soldiers from New York, but possibly more important was the subscription of $40,000 by Harmon Hendricks of New York toward the loan of $16,000,000 called for by Congress, but which was very difficult to raise. Hendricks' father and grandfather had been residents of New York; it was chiefly through his management of a large metal business that the family had become the wealthiest and most influential in the city at this date. Soon after this war the Shearith Israel congregation enlarged and rebuilt its synagogue on Mill street, the new edifice being consecrated in 1818. In the course of the address delivered on that occasion by Mordecai M. Noah the fact is referred to that increasing immigration from Europe had made this enlargement necessary; this address was printed in pamphlet form and aroused considerable attention, evoking appreciative letters concerning the American Jews from Jefferson, Madison, and John Adams. Noah, at this time and until his death in 1851, was the most prominent member of New York's Jewish community. Besides his activity in communal affairs and as editor of influential local newspapers, he held important public offices, having been appointed United States Consul to Tunis in 1816; elected Sheriff of New York in 1821; appointed Surveyor of the Port (1829-33), and judge of the Court of General Sessions in 1841. His famous "Ararat Project" of 1825, for establishing a Jewish colony for the persecuted Jews of Europe, on Grand Island, near Niagara Falls, under his direction as "Judge of Israel," attracted general attention to America throughout the Jewries of the world.

Enter the Professions.

ber of the bar was Sampson Simson, admitted in 1802; he was also the first Jewish graduate of Columbia College, and he became one of the chief leaders in Jewish charitable work in New York. Lorenzo da Ponte, by birth a Jew, was professor of Italian language and literature at Columbia College from 1826 to 1837; he introduced Italian opera into America, and as the librettist of Mozart's "Don Giovanni" and "Marriage of Figaro" and the author of numerous essays, poems, etc., deservedly occupied a leading place in American literary and art circles. John Howard Payne of New York, the author of "Home, Sweet Home," was the son of a Jewish mother. Among the actors and dramatists who became well known to the theatergoing public during the first half of the nineteenth century, besides Mordecai M. Noah, were Aaron J. Phillips, Moses S. Phillips, Emanuel Judah, Samuel B. H. Judah, and Jonas B. Phillips; the last-named was assistant district attorney for many years. Samuel B. H. Judah's "Gotham and the Gothamites," published anonymously in 1823, aroused much attention at the time.

New Influx; New Synagogues.

The increase in Jewish immigration was now becoming more and more marked. The reactionary measures following upon Napoleon's downfall were particularly potent causes of Jewish immigration, especially from Germany. The volume of this immigration as well as the nationalities represented in it can be conveniently studied in the number and the character of new Jewish congregations formed in the city. The Congregation B'nai Jeshurun was the second congregation formed; it was organized in 1825, and was composed of German, English, and Polish Jews who preferred the Polish ritual to the Spanish and Portuguese form used by the Shearith Israel congregation. Several German congregations were next formed in rapid succession: the Anshe Chesed congregation (organized about 1830), the Congregation Shaar Hashomayim (1841), and the Rodof Sholom congregation (1842). Another congregation, employing the Polish minhag, had meanwhile been constituted (1839) under the name of Shaaray Tsedek.

An interesting account of services in the Crosby Street Synagogue in 1841, which had been consecrated by the Shearith Israel congregation in 1834 and took the place of the old Mill street building, was published by L. Maria Child in her "Letters from New York," and then she adds:

> "Last week, a new synagogue was consecrated in Attorney street, making, I believe, five Jewish synagogues in this city, comprising in all about ten thousand of this ancient people. The congregation of the new synagogue are German emigrants, driven from Bavaria, the Duchy of Baden, etc., by oppressive laws. One of these laws forbade Jews to marry; and among the emigrants were many betrothed couples, who married as soon as they landed on our shores, trusting their future support to the God of Jacob. If not as 'rich as Jews,' they are now most of them doing well in the world: and one of the first proofs they gave of prosperity was the erection of a place of worship."

Beginnings of Temples Beth-El and Emanu-El.

Prosperity, however, was a relative term, for the members of the first German congregation, Anshe Chesed, which was merged in 1874 with the Congregation Adas Jeshurum (organized in 1868), forming the Congregation Temple Beth-El, now worshiping at Fifth avenue and 76th street, were so poor at the time of organization, about 1830, that they held services in a small room, each member, on wintry Friday evenings, bringing with him a piece of wood to aid in maintaining a fire. Even in 1846, when this was one of three German congregations that united to elect Max Lilienthal as chief rabbi, their combined resources enabled them to pay only a salary of $1,000 per year to their rabbi, who described this as the first Jewish "ministership" (preacher as distinguished from ḥazzan) established in America. It was his practise to preach alternately at each synagogue, the members of the other two hastening to it just before the hour of preaching. In 1845 the German Reform Congregation Temple Emanu-El, the first avowedly Reform congregation in the city and since many years the wealthiest Jewish congregation in the country, now worshiping at Fifth avenue and 43d street, was organized, Dr. L. Merzbacher becoming its rabbi-preacher at a salary of $200 per annum.

The number of congregations continued to increase with rapidity, seven more being formed subsequent to the organization of Temple Emanu-El and prior to the close of the year 1850, which date may be treated as a convenient landmark: Shaaray Tefilla, organized in 1846, with the Polish ritual, as the result of a secession from the B'nai Jeshurun congregation (Rev. S. M. Isaacs being its first preacher and John I. Hart its president) and now worshiping in West 82d street; Beth Israel, formed in 1846, with the Polish ritual; Bene Israel, a Dutch congregation organized in 1847; Ahawath Chesed, a Bohemian congregation organized in 1848, and now merged in the Congregation Ahawath Chesed Shaar Hashomayim, worshiping at Lexington avenue and 55th street; Shaare Rachamim and Bichur Cholim, both organized in 1849, with the German ritual; and Beth Abraham, organized in 1850, with the Polish ritual. Accounts of these congregations, written by Dr. Max Lilienthal, I. M. Wise, J. J. Lyons, and J. J. Benjamin II., have been preserved, the last three being of later date.

Beth Israel Hospital, Jefferson Street, New York.
(From a photograph.)

Clergy and Press.

The most prominent ministers of the New York Jewish community during this period were: Jacques J. Lyons (ḥazzan of the Shearith Israel congregation from 1839 to 1877), Samuel M. Isaacs (who became minister of the B'nai Jeshurun congregation on his arrival in America in 1839, but resigned in 1845 to accept the leadership of the Congregation Shaaray Tefillah, with which he remained until his death in 1878), M. Lilienthal (already referred to), Dr. M. J. Raphall (of the B'nai Jeshurun congregation from 1850 to 1868), and L. Merzbacher (of the Temple Emanu-El from 1845 to 1856).

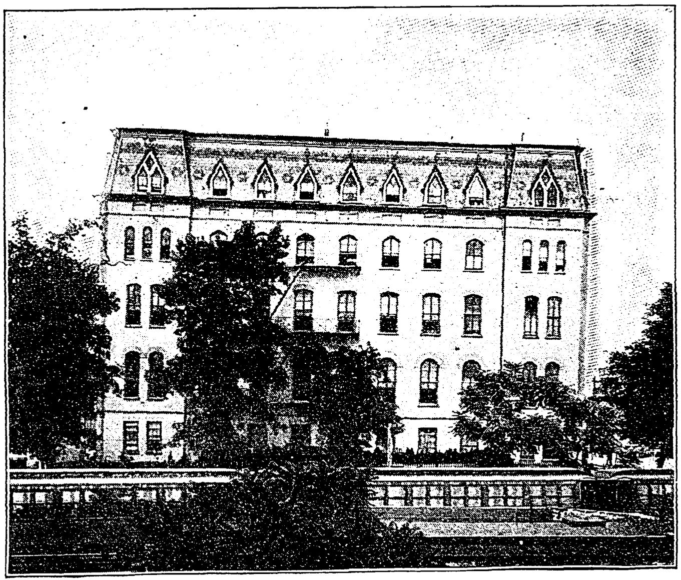
The publication of Jewish weekly newspapers began in New York during this period, the earliest being the "Asmonean," edited by Robert Lyons (published from 1849 to 1858); the "Jewish Messenger" (1857 to 1902) was edited by Samuel M. Isaacs (later assisted by his sons, Myer S., Isaac S., and Abram S. Isaacs), and "Israel's Herold" (1849), in German, by Isidor Busch. The little periodical called "The Jew" (1823-25) devoted itself to answering Christian missionary arguments, conversion societies being particularly active at this period.

Numerous small Jewish charitable societies sprang up during this period; often half a dozen different societies were identified with a single congregation. Before one of these, The Society for the Education of Orphan Children and the Relief of Indigent Persons, identified with the Spanish and Portuguese synagogue, an address was delivered in 1830 by Daniel L. M. Peixotto, the vice-president of the Medical Society of the City and County of New York, which address was printed in pamphlet form and attracted considerable attention.

Hebrew Benevolent Societies.

Most important of all these early charitable societies were two which were subsequently (1859) merged to form the Hebrew Benevolent and Orphan Asylum Society, whose asylum has been located on Amsterdam avenue, between 136th and 138th streets, since 1884. The earlier of these two societies, the Hebrew Benevolent Society, was organized in 1822, with the residue of a fund raised by private subscription two years previously for the maintenance of a poor Jewish veteran of the Revolution. Its first president was Daniel Jackson; his successors were Morland Micholl, Elias L. Phillips, Mordecai M. Noah (1842 to 1851), Harris Aaronson (1851–57), and Phillip J. Joachimson. In 1845 the other constituent society, the German Hebrew Benevolent Society, was formed, Henry Keyser being its first president. Judge Joachimson continued to serve as president of the consolidated societies under their new name; in 1861 Joseph Seligman became president; and he was in turn succeeded by Benjamin I. Hart, Samuel M. Cohen, Joseph Fatman, Myer Stern, Jesse Seligman, Emanuel Lehman, and Louis Stern. For many years both of the constituent societies celebrated the anniversaries of their founding by holding dinners, at which a large portion of their year's income was collected, after addresses, often notable, by prominent Christian and Jewish speakers, had been delivered.

The Damascus blood accusations of 1840 shocked the whole civilized world, and the Jews of America held public meetings of protest and demanded international intervention, which was promptly undertaken by the American government; the New York community was the first in America to take up the matter, its forcible appeal to President Van Buren bearing the signatures of I. B. Kursheedt, chairman, and Theodore J. Seixas, secretary.



Lebanon Hospital, Westchester Avenue, New York.
(From a photograph.)

Opening of Official Careers.

During the Mexican war the Jews of New York contributed considerably more than their quota to the American army and navy. Particular reference should be made to Uriah P. Levy, commonly known as Commodore Levy, who was ranking officer of the United States navy at the time of his death in 1862 (and whose munificent charitable bequests were lost to the country by a successful contest of his will), and to his brother, Captain Jonas P. Levy, who also was prominent in communal affairs. In 1833 Francis H. Goldsmid of London was able to point, as an argument in favor of the removal of Jewish disabilities in Great Britain, to the number of Jews who had held political office in America; the New York names antedating this period have already been enumerated.

Curiously enough, the "Beau Brummel" of New York society during this period, Henry Caroll Marks, better known as "Dandy" Marks, was the son of a Jewish father. Bernard Hart was honorary secretary of the New York Stock Exchange from 1831 to 1853, succeeding Jacob Isaacs. August Belmont, who came to New York in 1837 as the representative of the Rothschilds, was for many years consul-general for Austria and United States minister at The Hague, and was subsequently chairman of the Democratic National Committee for many years, but he did not identify himself with Jewish affairs; previously the New York firm of J. L. & S. I. Joseph had represented the Rothschilds in America.

Almost all the Jewish immigrants to America during the period under consideration arrived wholly without means, and for many of them peddling was at first their only means of livelihood. With remarkable industry, skill, and determination they set out, and the result of a few years of effort was a competency for most of them, frequently, after some years, the amassing of considerable wealth. In their efforts at self-improvement, the intellectual side was not overlooked; hence schools and lodges were freely created and patronized by them, and the results are indicated by such suggestive observations as that of Francis Lieber to Bluntschli, the publicist, in a private letter written in 1869: "The German Jews in America gain in influence daily, being rich, intelligent, and educated, or at least seeking education. They read better books than the rest of the Germans, the booksellers tell me." At the time of the organization of Temple Emanu-El, in 1845, however, in the language of a contemporary correspondent of the "Allgemeine Zeitung des Judenthums" who was identified with that body, "thirty-one thirty-seconds of the members of the New York Jewry were uncouth and illiterate." Contemporary records bear witness to the fact that the quality of the immigrants improved considerably for some years after 1848, political as distinguished from merely economic causes underlying the increasing immigration. Besides those already referred to, the following names should be added as particularly prominent in the history of New York communal affairs just before 1850: Walter, Dittenhoefer, Moses, Content, Lehmaier, Seligman, Stettheimer, and Bernheimer.

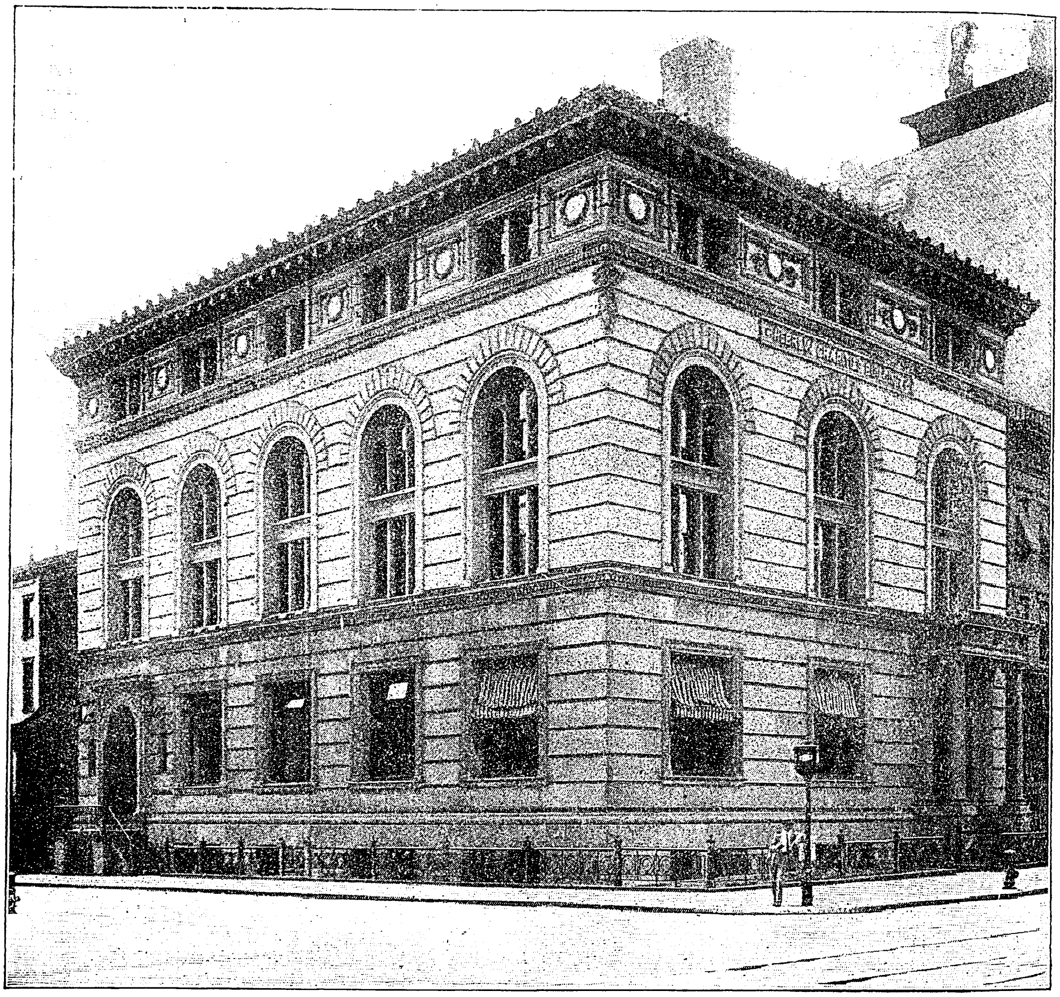
An appreciable number of the New York Jewry at this period being engaged in peddling, it had a

Social Condition About 1848.

considerable floating population, many Jews returning to town chiefly on the Jewish holy days. In 1847 Max Lilienthal estimated the Jewish population at 15,000. Efforts were made by him and Merzbacher to make the synagogue a means of intellectual as well as religious uplifting for the community. Lilienthal held confirmation exercises for the first time in America in his New York congregations in the year 1846, and projected various other reforms; but the reactionary tendencies proved too strong, and after a few years he relinquished his post and devoted himself to his educational institute, though he officiated in 1850 on the occasion of the consecration of the new synagogue erected by the Anshe Chesed congregation in Norfolk street. Merzbacher introduced confirmation at the Temple Emanu-El in 1848, and as the congregation had been formed on avowedly Reform principles, this and other innovations were received with favor by his congregation. A bet din was established in New York in 1847, consisting of Lilienthal (president), Wise of Albany, Felsenheld, and Kohlmyer of New Orleans.

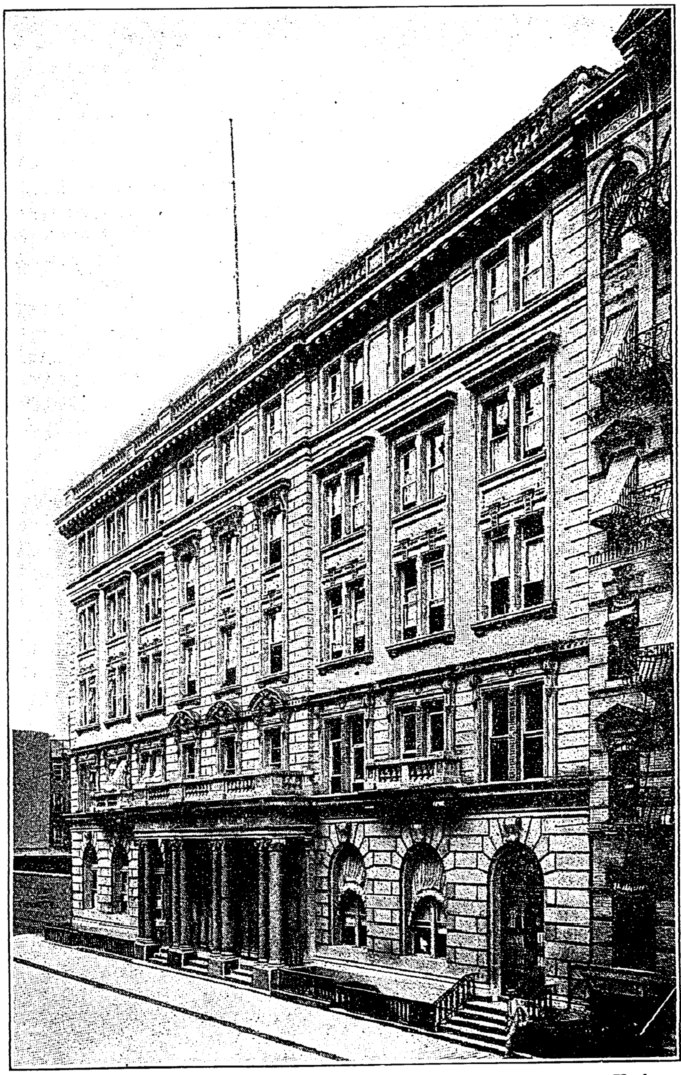
The Orders and the Schools.

Before the close of this period the Independent Order of B'nai B'rith had its beginnings, its first lodge being organized in New York in 1843; the Order of the Free Sons of Israel was established in 1849.



HEBREW CHARITIES BUILDING, SECOND AVENUE, NEW YORK.
(From a photograph.)

The agitation in favor of public education which took place before the close of this period exerted a most important influence on the community. The schools of the Public School Society were under denominational influences, and the demands, due to alien immigration, for increased state aid for schools under Catholic influences, were denied as a consequence of the prejudices due to the "Know-Nothing" period, while Jewish schools never shared in the public moneys which were appropriated. The result was that denominational schools for instruction in secular as well as religious branches were necessary, and these were organized by the various Jewish congregations. As a result of Governor Seward's agitation new unsectarian public schools were organized in New York under an act passed in 1842, and Jews before long joined non-Jews in enjoyment of the advantages of this leveling bulwark of democracy. Jewish religious schools have also been maintained in connection with the various congregations.



Clara de Hirsch Home for Working Girls, East Sixty-Third Street, New York.
(From a photograph.)

New Synagogues, 1850-80.

From 1850 on the newly organized Jewish congregations in New York became far too numerous to permit of separate enumeration here. Among those organized during the decade ending in 1860 special reference should be made to the Beth Hamedrash Hagodol, formed in 1852, which has been characterized, though with doubtful accuracy, as the first Russian Jewish congregation in New York. In 1851 the Shaare Brocho, the first and at present (1904) the only French congregation in New York, was organized; the Congregation Adath Israel was organized in 1860. During the same period the Anshe Chesed congregation added to the number of American pulpit leaders Jonas Bondi, who became its rabbi in 1858 and was for many years editor of the "Hebrew Leader" (1859-74). He was succeeded as rabbi in 1865 by Moses Mielziner, later senior professor of the Hebrew Union College in Cincinnati, Ohio. Temple Emanu-El lost the services of Merzbacher by death in 1857, when Dr. Samuel Adler entered its rabbinate. The "up-town" movement, which has so completely changed the aspect of New York during the past few decades, was particularly marked in the Jewish community. On Sept. 12, 1860, the Spanish and Portuguese Congregation Shearith Israel consecrated a new synagogue in 19th street, in the place of the old Crosby street structure, and it furthermore secured the services of an associate preacher in the person of A. Fischell (1856-61). The adoption of a municipal ordinance in 1851 prohibiting further interments within the city south of 86th street immediately led various congregations to acquire lands for cemetery purposes on Long Island. The establishment of a Jewish hospital had been discussed for a number of years before Sampson Simson succeeded, in 1852, in organizing the society which has become familiar as the Mount Sinai Hospital; its name, until 1871, was "The Jews' Hospital." A building was erected, at the cost of $36,000, on land in West 28th street donated for that purpose by Mr. Simson, and it was dedicated in 1855. After Mr. Simson's death, in 1857, the fortunes of the hospital were presided over with particular ability by Benjamin Nathan. Mr. Simson's will made generous provision also for other Jewish charities.

The first Jewish orphan asylum in the city was opened in West 29th street, in 1860, by the consolidated societies referred to above and now known as the Hebrew Benevolent and Orphan Asylum Society. Both the hospital and the orphan asylum were among the recipients of the generous benefactions of the philanthropist Judah Touro of New Orleans, who died in 1854, and whose bequests made it possible to undertake much charitable work throughout the country. The Maimonides Library, established by the Independent Order of B'nai B'rith, opened its doors Oct. 22, 1851.

Board of Delegates.

The discriminations against American Jewish citizens of which Switzerland was guilty in the early "fifties" aroused the New York Jewish community to vigorous action, Jonas P. Levy and Alexander Kursheedt being especially concerned in the movement. The community, in 1858, also adopted concerted measures to secure national intervention in connection with the Mortara affair, and this incident led the next year to the formation of the Board of Delegates of American Israelites, for securing and maintaining Jewish civil and religious rights at home and abroad, and in which New York influences were most prominent, though the organization was national in scope. Its first officers included Henry I. Hart, president; Gerson N. Hermann, treasurer (subsequently coroner); and Myer S. Isaacs, secretary—all of New York; and the activities of this body continued until it was merged in the Union of American Hebrew Congregations in 1878. The New York Jews who achieved political prominence during this decade include Emanuel B. Hart (member of Congress from 1851 to 1853, president of the Board of Aldermen of the city, and surveyor of the port during the Buchanan administration) and Isaac Phillips, who was appointed general appraiser by President Pierce and was also grand master of the masons of the state of New York.

During the Civil War.

The next decade includes the period of the Civil war, when many more New York Jews served in the field than their numerical proportion demanded, no fewer than 1,996 Jewish names from New York being in Simon Wolf's lists in his "American Jew as Patriot, Soldier, and Citizen"; several Jews attained the rank of colonel. Jewish patriotism was conspicuous also in civil life. Thus, Joseph Seligman was one of the vice-presidents of the Union Square mass-meeting called in aid of the Union on April 20, 1861, during the Civil war, and his firm, J. & W. Seligman & Co., rendered the government signal service in maintaining its credit and floating its bonds, and was its fiscal agent for a long time. Rumor has it that President Grant offered the post of secretary of the treasury to Joseph Seligman. The New York Jewry also gave material aid to the Metropolitan Fair in aid of the United States Sanitary Commission in 1864. Michael Heilprin valiantly defended Judaism, in the columns of the "New York Tribune," early in 1861, against the charge of justifying slavery, brought by M. J. Raphall.

Among the early Republican antislavery workers in New York was A. J. Dittenhoefer, an elector on the Lincoln ticket in 1864 and who became judge of the marine court in New York (1862–64). During this period Jonas N. Phillips was president of the Board of Councilmen and acting mayor (1857); Joseph Koch was appointed civil justice (1869) and became later the first Jewish state senator of New York (1882–83). Albert Cardozo was elected justice of the Supreme Court in 1867, after having served as a judge of the Court of Common Pleas, but was one of the judges whom the reform element drove out of office at the time of Tweed's downfall (1871); one of the leaders in this reform movement was Simon Sterne of New York, secretary of the famous "Committee of Seventy," who subsequently became the father of the legislation in restraint of railroad-rate discriminations and of the Federal Interstate Commerce Act. Marcus Otterbourg became United States minister to Mexico about 1867, and subsequently was a police justice.

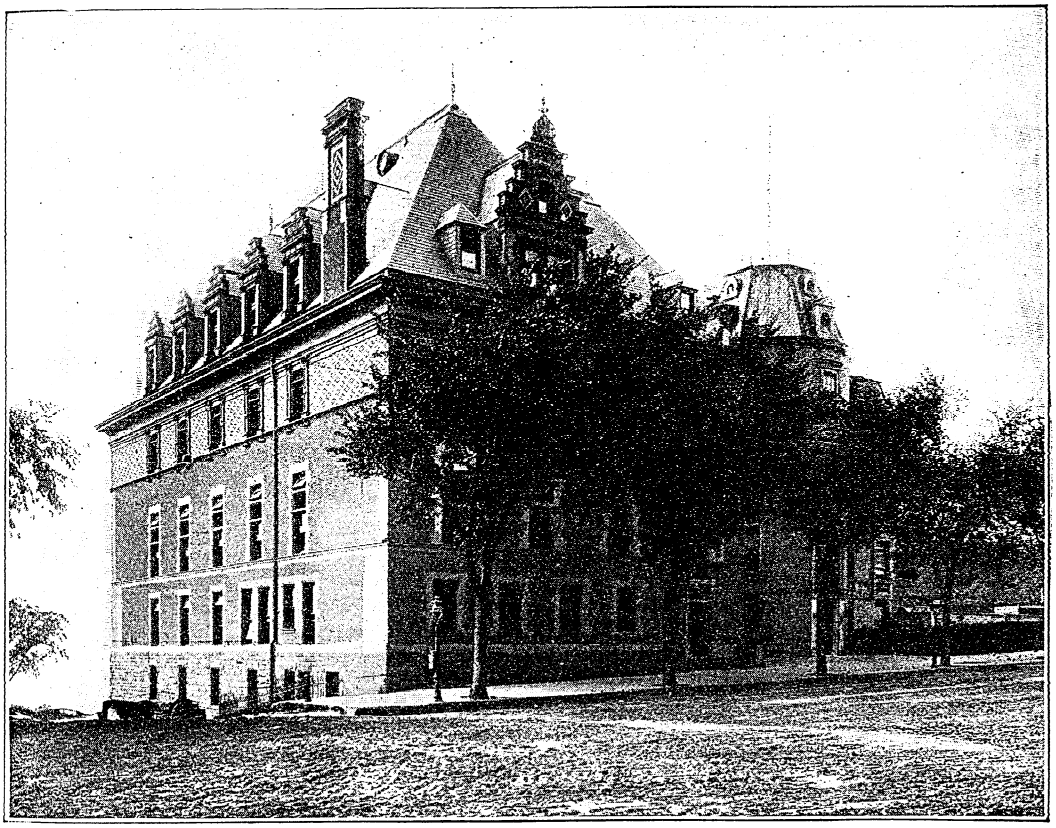
Hebrew Orphan Asylum.

On Nov. 5, 1863, the Hebrew Benevolent and Orphan Asylum Society dedicated its orphan asylum in East 77th street, Benjamin I. Hart being its president at this time and Dr. Herman Baar its superintendent. Other Jewish charities were called into existence about the same time: the Hebrew Free School Association in 1864, on the initiative of the Rev. S. M. Isaacs and Hezekiah Kohn, Barnet L. Solomon becoming the first president; and the Purim Association in 1861, which for many years raised considerable sums of money for other Jewish charities.

The best evidence of the material progress of the New York community during this period is afforded by the fact that Temple Emanu-El, on dedicating its synagogue at Fifth avenue and 43d street on Sept. 11, 1868, secured $708,575 from its members on the sale by auction of 231½ pews, leaving a surplus of over $86,000 beyond the entire cost of the land and structure—a most remarkable contrast to its balance-sheet of 1846, at the end of the first year of its history, when its total receipts were $1,520.27. In 1865 the able administration of Lewis May as president of this congregation began, and continued during several decades; James K. Gutheim was chosen its associate English preacher in 1868. In 1866 the Reform congregation Adas Jeshurun, with a synagogue in West 39th street, was organized, David Einhorn, who had become the leader of the Reform movement in America soon after his arrival in Baltimore in 1854, being called to the rabbinate. The Shaaray Tefillah congregation dedicated a new synagogue in West 44th street in May, 1869, while the ranks of the Reform ministers were strengthened by the arrival of Adolph Huebsch, who became rabbi of the Ahawath Chesed congregation in 1866. Dr. S. Abrahams, who died in 1867, left bequests of rare magnitude for those days to the local Jewish charities.

Period 1870-1881.

The year 1870 was signalized by the holding of a large Hebrew charity fair for the benefit of the Jews' Hospital and Orphan Asylum, $101,675.50 being realized—an enormous sum for that day. Owing to this addition to its funds, the Mount Sinai Hospital was enabled to erect, in 1872, a building at Lexington avenue and 66th street. Hyman Blum succeeded Emanuel B. Hart as president of this institution in 1879. The necessity for new charitable organizations made itself felt during the period under consideration. It called into existence in 1872 the institution known as the Home for Aged and Infirm Hebrews, though its beginnings can be traced farther back. The United Hebrew Charities was formed in 1874 for the purpose of administering extra-institutional relief, several other smaller societies being merged in it; for many years the name of Henry Rice has been identified with the splendid work of this organization as its president and latterly that of Dr. Lee K. Frankel as its superintendent. The Hebrew Sanitarium, having a summer home for poor Jewish children at Far Rockaway, Long Island, dates back to 1876, the Young Men's Hebrew Association to 1874, the Hebrew Sheltering Guardian Society to 1879 (Mrs. Priscilla J. Joachimsen, its founder, being its president from 1879 to 1893; succeeded by Morris Goodhart and, in 1897, by its present executive, Samuel D. Levy), and the Hebrew Technical School for Girls, under its former name, the Louis Down-Town Sabbath and Day School (in honor of its founder, Mrs. Minnie D. Louis), to 1880, Nathaniel Myers being now its president.



Building of the Hebrew Sheltering Guardian Society, Broadway, New York.
(From a photograph.)

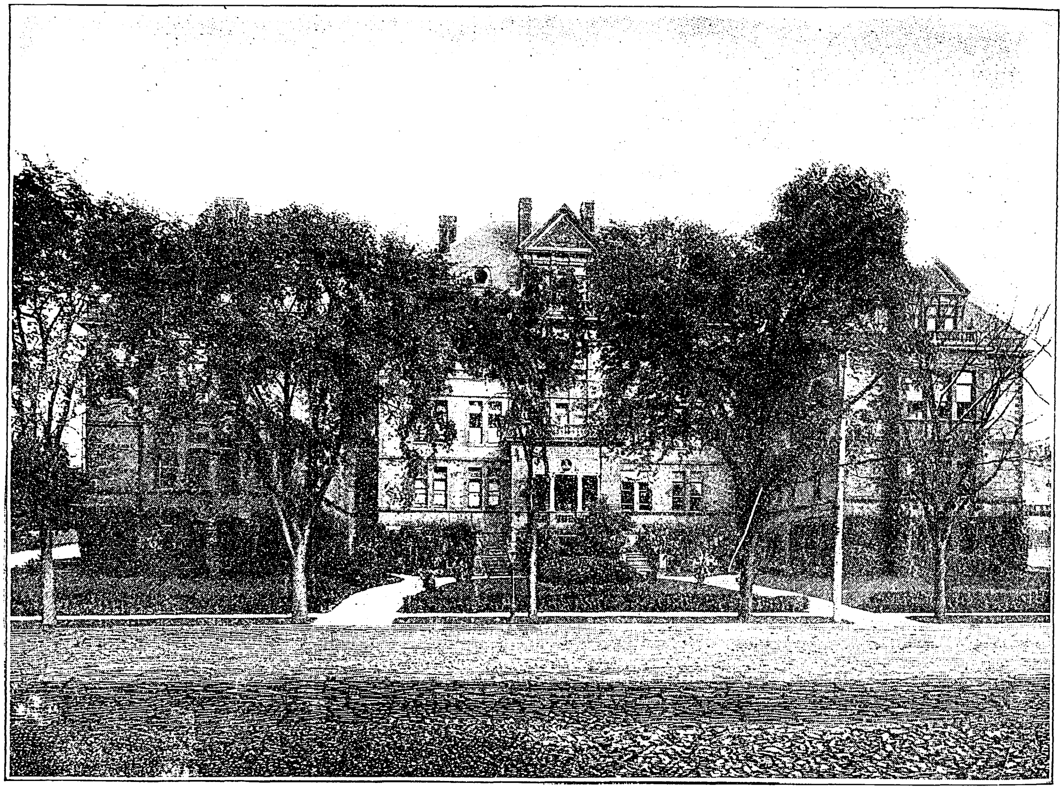
As to congregational activities, the Ahawath Chesed congregation, under Dr. Huebsch's guidance, consecrated its synagogue at Lexington avenue and 55th street in 1872. The Anshe Chesed congregation, after erecting a synagogue at Lexington avenue and 63d street (consecrated in 1873), consolidated the next year with the Adas Jeshurun congregation; the minister of the latter congregation, David Einhorn, took charge of the new organization, which took the name Congregation Temple Beth-El and worshiped in the new synagogue above referred to. Dr. Einhorn was succeeded in 1879 by his son-in-law, Kaufmann Kohler, who continued to minister to that congregation until 1903, maintaining its standing as one of the leading Reform congregations in the country; he was the first in New York to introduce Sunday services as supplementary to the Saturday services (1880). Another congregation, in 1876, assumed the name Anshe Chesed, which had been dropped in the amalgamation of the two congregations just named into Temple Beth-El; this congregation now worships in East 112th street. The Congregation Hand-in-Hand, formed about 1870, was incorporated in 1887 as Temple Israel of Harlem, of which for many years Maurice H. Harris has been rabbi and Daniel P. Hays president. The First Hungarian Congregation Ohab Zedek, now worshiping in Norfolk street, with Phillip Klein as rabbi, was founded in 1872. Gustav Gottheil was called to the pulpit of Temple Emanu-El in 1873, and Henry S. Jacobs to that of the Congregation Bnai Jeshurun in 1876. In 1871 F. de Sola Mendes became rabbi of Shaaray Tefillah, and his brother, H. Pereira Mendes, was called to the pulpit of the Spanish and Portuguese Synagogue in 1877.

In 1876 the Society for Ethical Culture was founded by Felix Adler, with the motto "Deed, not Creed," and as it has been supported principally by Jews it has detached many persons from their ancestral faith. It has organized valuable charitable and educational auxiliaries. The American Jewish Publication Society, founded in New York in 1872, ran a very brief course. In 1879 Philip Cowen, F. de Sola Mendes, and others founded the "American Hebrew," one of the leading Jewish weeklies printed in the United States.

Ethical-Culture Movement.

Several Jews held responsible public offices between 1870 and 1881; Philip J. Joachimson was a justice of the marine court from 1870 to 1876, and Myer S. Isaacs in 1880; Moritz Ellinger, who edited the "Jewish Times" in New York from 1868 to 1880, was a coroner of the city, as was Gerson N. Herrmann; Joseph Blumenthal served as a member of the New York assembly in 1874, and again for a term beginning in 1888; Leo C. Dessar and Jacob Hess served in the same assembly in 1875. After this date the list of New York Jews serving in the state legislature becomes too large to be given here, but it seems strange that forty years elapsed after Mordecai Myers' last term expired in 1834 before another Jew was elected to either branch of the legislature, and the relatively smaller activity of New York Jews in politics prior to the "eighties," as compared with those of the South, for instance, has been often commented upon. The early summer of 1877 was marked by the commencement of the form of social prejudice which makes itself felt by the attempted exclusion of Jews from summer hotels, and which has come to the surface ever since in many sections notwithstanding laws penalizing it. Its first marked exhibition was at the Grand Union Hotel at Saratoga, then managed by Judge Hilton on behalf of A. T. Stewart, and it was soon afterward taken up in various suburbs of New York, notwithstanding the indignant protests of cultured Christians and Jewish residents.

Statistics of the Jews of the United States were first carefully gathered about 1876 by the Board of Delegates of American Israelites and the Union of American Hebrew Congregations, and these represented the Jewish population of New York city in 1878 as 60,000. By the year 1881, when Russian persecutions began to drive thousands of Jews every year to America, the Jews of New York had become important factors in almost every branch of commercial and professional life and were maintaining a system of charities unequaled by those of any other communion of the city, though the percentage of those requiring charitable aid was very small.

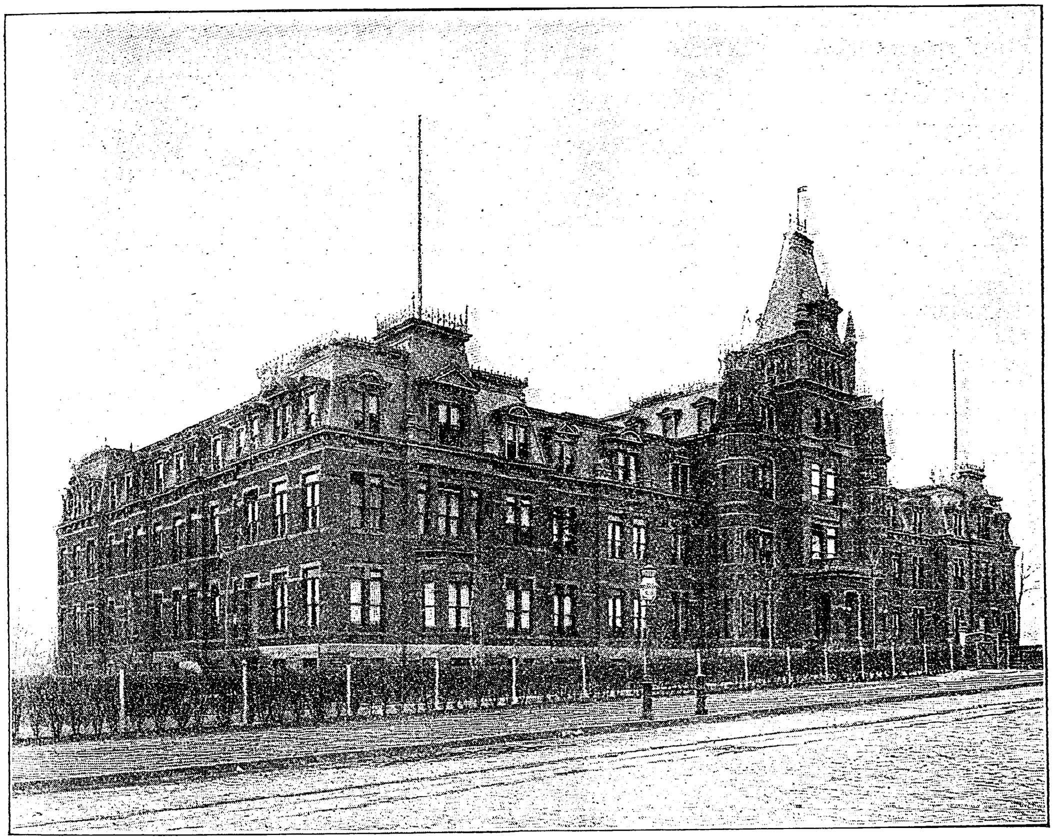


MONTEFIORE HOME FOR CHRONIC INVALIDS, BROADWAY, NEW YORK.
(From a photograph.)

From 1881 to 1904: The stream of Russian immigration, which began to assume very large proportions in 1881, has, at least numerically, entirely transformed New York Jewry. Before that year the percentage of Jews from Russia and Poland resident in New York was quite small. The enormous increase of the Jewish population of the city since that date is to be accounted for principally by emigration from those countries, and nearly all the newcomers have had to begin at the bottom of the ladder. Serious problems have thus been presented by the need of relieving the distress incident to this increase and of providing means of livelihood for the unprepared; and the problem of educating and Americanizing them has proved equally serious. These have been met with remarkable success, notwithstanding the development of congested districts in the lower east side of the city, where the Jewish population is densest, as also in other sections of the city, in Harlem and Brownsville. While some of the newcomers have already attained considerable commercial success, the large majority of them have swelled the ranks of the humblest wage-earners.

The Russian Immigration.

Early in the course of the Russian persecutions a mass-meeting of New York's most representative citizens was held at Chickering Hall Feb. 1, 1882, at the call of ex-President Grant and other prominent Christians, to express sympathy with the persecuted Jews in the Russian empire; Mayor Grace presided, and ex-Secretary of State Evarts and other distinguished speakers delivered addresses. But it was recognized that assistance at home, and not mere protests against Russia's course, was needed. The emergency called forth a princely gift to the community from Jacob H. Schiff, whose name thereafter became widely known in connection with the philanthropic activities of the New York community. In 1882 some oppressive prosecutions of New York Jews for violations of the Sunday laws, notwithstanding their observance of Saturday as their Sabbath, led to a judicial decision by Judge Arnoux to the effect that existing statutes exempting persons who observed another day as Sabbath from the operation of certain of these laws were of doubtful constitutionality (and constituted mere defenses, while not preventing prosecutions), but this narrow construction of the law has not prevailed.



Hebrew Benevolent and Orphan Asylum, Amsterdam Avenue, New York.

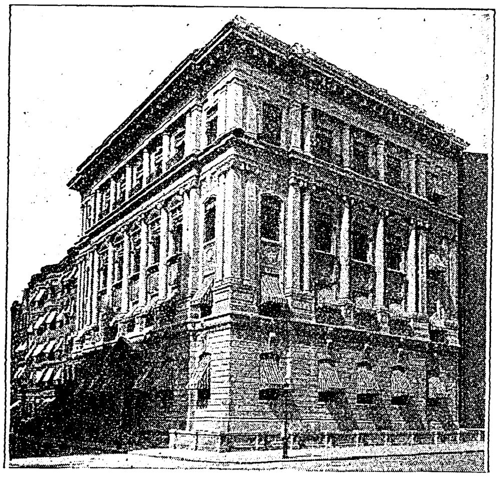
(From a photograph.)

In Nov., 1883, the Hebrew Technical Institute was organized; James H. Hoffman was the first president of this institution; he was succeeded, at his death, by Joseph B. Bloomingdale.

The Montefiore Centenary.

The New York Jewry joined in the celebration of the centenary of Sir Moses Montefiore in 1884, its principal memento of the occasion being the foundation, in that year, of the Montefiore Home for Chronic Invalids; Henry S. Allen was the first president of the society, but he was soon afterward succeeded by Jacob H. Schiff. A fair held in 1886 in aid of this institution realized $158,090.11, and this enabled the society to erect its present building (1888), which since has been enlarged. In 1884 the building of the Hebrew Benevolent and Orphan Asylum Society, referred to above, was dedicated, Jesse Seligman being its president at the time. The necessity of raising funds with which to develop the educational work required in the lower East Side led to another fair in 1889, which realized about $125,000; this was used in the erection of the Hebrew Institute building, at Jefferson street and East Broadway, which was completed in 1891. The Aguilar Library, which had branches in various sections of the city, but which was recently merged in the New York Public Library, was founded in 1886. In the same year the Jewish Theological Seminary was established in New York.

As regards congregational activity, many of the hundreds of Orthodox congregations established in the lower section of the city were founded soon after the immigration of 1882 began. Of the larger congregations, the B'nai Jeshurun consecrated its new synagogue at Madison avenue and 65th street in 1884; the Congregation Bnee Scholom, in East 5th street, was formed in Dec., 1885; and the Congregation Zichron Ephraim, worshiping in 67th street, was organized in 1889, with Dr. Bernard Drachman as rabbi. Dr. Joseph Silverman was elected associate rabbi of Temple Emanu-El in 1888, and soon afterward instituted supplementary Sunday services there; and before the end of that decade Maurice H. Harris and Rudolph Grossman became ministers of Temple Israel and Beth-El respectively, Grossman being associate minister to Kaufmann Kohler. In 1889 the Emanu-El Sisterhood was founded by Gustav Gottheil, with the idea of securing personal service in charitable fields from the ladies of that congregation, and the other congregations thereafter formed similar organizations, which together comprise the Federation of Sisterhoods (Mrs. William Eisenstein, president) and share in the work of the United Hebrew Charities.



Progress Club, Central Park West, New York.

The Russian Jewish persecutions stimulated into action the genius of Emma Lazarus, Judaism's most distinguished American writer. In 1886 Benjamin F. Peixotto, who had been United States consul-general to Rumania, founded the "Menorah" (a monthly); and in 1882 the "Hebrew Standard" was founded. In the field of politics New York Jews were more active during this decade than ever before. Adolph L. Sanger was elected president of the Board of Aldermen in 1885, Samuel A. Lewis in 1874, and Theodore W. Myers comptroller of the city in 1887. Oscar S. Straus served as United States minister to Turkey from 1887 to 1890 and from 1897 to 1900, and was thereafter appointed member of the Permanent International Board of Arbitration at The Hague, in succession to ex-President Harrison. Edwin Einstein served as a member of Congress from New York city from 1879 to 1881, and Simon M. Ehrlich, Joseph E. Newburger, Sampson Lachman, Joseph Koch, Henry M. Goldfogle, Leo C. Dessar, and Joseph H. Stiner served as judges in the minor courts of the city.

1891-1904.

A decade after the commencement of the inrush of Russian immigration the necessity of organized relief along charitable and educational lines became even more marked than previously. In 1890 the Beth Israel Hospital was founded, and three years later the Lebanon Hospital opened its doors, both of them, the former in particular, being created largely through the efforts of recent Russian immigrants in aid of their poorer fellow countrymen. The same observation applies also to the Hebrew Gemilath Chassodim (Free Loan Association), founded in 1892. The demands upon the Hebrew Institute became daily more pressing, and accordingly a fair in aid of that institution as well as of the Hebrew Technical Institute was arranged in 1895, which realized approximately $100,000. The Hebrew Institute, reorganized in 1893, with Isidor Straus as president, under the name of the Educational Alliance, became a wonderfully effective agency in the Americanization of the Russian Jews of the lower East Side. The Brightside Day Nursery was founded in 1894 to care for the infants of wage-earning women of the same vicinity during the mothers' working hours, and the Hebrew Infant Asylum was chartered in April, 1895.

Philanthropists abroad, about this time, began to realize that the problem of caring for the hundreds of thousands of needy Jews thrown upon New York's resources through bigotry and persecution was not the concern of the New York Jewry alone, and accordingly the Baron and Baroness de Hirsch came nobly forward and assumed part of the burden. In 1891 the former founded the Baron de Hirsch Fund with an initial endowment of $2,500,000, Myer S. Isaacs being the president of its trustees from that date until his death in 1904. In 1897 the widowed Baroness Clara de Hirsch erected a Home for Working Girls in New York at a cost of $200,000, attaching to it an endowment of $600,000. In May, 1900, the Young Men's Hebrew Association dedicated a building at Lexington avenue and 92d street which had been given it by Jacob H. Schiff. In celebration of his seventieth birthday Solomon Loeb (the father-in-law of Jacob H. Schiff) erected the United Hebrew Charities building at Second avenue and 21st street (May, 1899). In May, 1901, the Bedford County Sanitarium of the Montefiore Home was completed. March 13, 1904, the new buildings of the Mount Sinai Hospital in Madison avenue (between 100th and 101st streets) were dedicated; over $1,500,000 was raised for its building fund; for a number of years Isaac Wallach has been its president. April 26, 1903, the building of the Jewish Theological Seminary in West 123d street was erected, Jacob H. Schiff providing for its cost; Solomon Schechter, who had been called to that post from Cambridge, England, the year before, being the president of the seminary. The Jewish Theological Seminary is the reorganized New York Seminary, referred to above, for which an endowment fund of over $500,000 was secured by individual subscription. In the death of Leonard Lewisohn March 5, 1902, the New York community lost one of its most generous members; his brother Adolph Lewisohn, through such gifts as $125,000 to the Hebrew Technical Institute (1903), $75,000 to the Hebrew Technical School for Girls (a year earlier), and about $250,000 to Columbia University for the erection of a building for the School of Mines (1904), entered the same category. James Loeb subscribed $500,000 toward the foundation and endowment of a new conservatory of music, and Joseph Pulitzer gave $1,000,000 to endow a school of journalism in Columbia University. Meyer Guggenheim and sons, Henry L. Einstein, Abraham Steinam, the children of Meyer Lehman, and scores of others who might be mentioned if space permitted have all made munificent gifts on single occasions to charity.

Jewish Theological Seminary.

The congregational activity of the New York community during the period under review remains to be chronicled. Temple Beth-El dedicated its synagogue at Fifth avenue and 76th street in 1891; in 1899 Dr. Samuel Schulman became associate minister of that congregation, and sole officiating minister in 1903, on Kaufmann Kohler's accession to the presidency of Hebrew Union College in Cincinnati. The Congregation Shaaray Tefillah erected a new synagogue in West 82d street in 1893, and the Shearith Israel congregation consecrated its new edifice at Central Park West and 70th street on May 19, 1897. The Rodef Sholom congregation purchased the synagogue at Lexington avenue and 63d street from the Temple Beth-El in 1891, and has since worshiped there, first under Aaron Wise, then under Rudolph Grossman; the Congregation Ahawath Chesed elected Dr. Alexander Kohut as successor to Huebsch in 1884, and on his death May, 1894, D. Davidson, whose successor was Dr. Isaac S. Moses.

Ministerial Changes.

Joseph M. Asher became rabbi of the B'nai Jeshurun congregation in succession to Stephen S. Wise, who had succeeded Henry S. Jacobs. In 1894 the Congregation Agudath Jesharim, East 86th street, was organized, with A. Calman as rabbi. The persecutions of the Jews in Rumania sent a large number of Rumanian Jews to New York, beginning about 1899, though the first Rumanian-American congregation had been organized in New York in 1885. The removal "up-town" of large numbers of Jews who had formerly lived on the lower East Side led to the formation of a number of Jewish congregations in Harlem, the Congregation Chaari Zedek of Harlem, in West 118th street, for instance, being organized by former members of the Chaari Zedek congregation in Henry street; L. Zinsler became their rabbi. In 1892 the Council of Jewish Women was formed, as an outcome of the Parliament of Religions held in connection with the Chicago World's Fair; its largest section exists in New York.

It would, of course, be quite impossible, even in a large tome, to give an exhaustive enumeration of the numerous Jewish congregations and charitable societies of New York city, and the limits of an article like this make it necessary to consider only some of the most important ones. Dr. David Blaustein, the superintendent of the Educational Alliance, speaking before the National Conference of Jewish Charities at a meeting in New York in May, 1904, said of the section of the city south of Houston street and east of the Bowery that it contained 5,897 tenements, in which lived 64,268 families, having 84 different occupations; it contained 306 synagogues and only 22 churches. Besides its 48 public schools, it contained 307 ḥadarim attended by 8,616 boys and 361 girls. It maintained four Jewish theaters. He estimated that over $1,000,000 a year is spent for charitable purposes by the Jewish inhabitants of this section. Mr. Jacob A. Riis, who may well be described as one of the best-informed students of this district, says in his work entitled "A Ten Years' War," concerning the blocks of tenements inhabited by poor Jews of this section:

> "The poorer they are, the higher rent do they pay, and the more do they crowd to make it up between them. They brought nothing, neither money nor artisan skill—nothing but their consuming energy—to our land, and their one gift was their greatest offense. And yet, if ever there was material for citizenship, this Jew is such material. Alone of all our immigrants he comes to us without a past. He has no country to renounce, no ties to forget. . . . He is not always choice in method; he often offends. But he succeeds. He is the yeast of any slum if given time. If it will not let him go, it must rise with him. . . . I, for one, am a firm believer in this Jew and in his boy. Ignorant they are, but with a thirst for knowledge that surmounts any barrier. The boy takes all the prizes in the school." As to the Jew in the sweat-shop, Riis says: "He had to do something, and he took to the clothes-makers' trade as that which was most quickly learned. The increasing crowds, the tenement, and his grinding poverty made the soil, wherein the evil thing grew rank. The Jew is the victim of the mischief quite as much as he has helped it on."

Academic Positions.

In New York educational institutions many Jews are teachers and principals, while special reference should be made to Henry M. Leipziger, supervisor of public-school lectures; Julia Richman, district superintendent of schools; and Edwin R. A. Seligman, Morris Loeb, Adolph Werner, Richard Gottheil, Adolphe Cohn, A. S. Isaacs, Alice Isaacs, H. Jacoby, and Abraham Jacobi, who hold academic positions in the higher educational institutions of New York. Annie Nathan Meyer was one of the founders of Barnard College. Among leaders in university circles of a few decades previous were George J. Adler, of German dictionary fame; I. Nordheimer, the Orientalist; and Selig Newman, the Hebraist. Heinrich Conried, as executive head of the Metropolitan Opera House, may be specially referred to as one of many notable instances of Jewish activity in musical and dramatic circles in New York. Several widely read newspapers, daily and weekly, published in Yiddish, are maintained in New York.

Recent Events.

The Tenement House Commission appointed by the legislature of 1894 devoted itself very largely to the phenomena of overcrowding in Jewish tenements, and improved conditions somewhat by securing the enactment of legislation which led to the tearing down of some of the worst of these structures. The overcrowded conditions in this section gave rise to a considerable amount of vice and (on the part of a conspicuous few who enjoyed police protection) crime; as a result, in 1901 the issue of "protection for the homes" became an important one in the mayoralty campaign of that year, in which Seth Low was elected, largely because the East Side had been aroused to the need of protecting its homes; Isidor Straus, as president of the Educational Alliance, and M. Warley Platzek were particularly prominent among the Jews who were working for these reforms. The funeral of Chief Rabbi Jacob Joseph, who had become chief rabbi of a number of Russian Jewish congregations in 1886, gave rise to a riot in the streets of New York on July 30, 1902; this riot, however, was quite unpremeditated, and was chiefly an outbreak of mischievousness provoked by the unwonted spectacle of thousands of aliens participating in the funeral procession with unwonted demonstrative signs of grief. The police protection afforded had been inadequate; and the mayor promptly appointed a committee to investigate the riot; administrative changes were made, various police officers were disciplined, and the principal rioters were promptly punished by the criminal courts. Many New York Jews served as volunteers in the Spanish-American war.

Grand Theater, Grand Street, New York.
(From a photograph.)

In connection with the Kishinef massacres several huge mass-meetings were held in New York, the principal one, at Carnegie Hall (May 27, 1903), being presided over by Mayor Seth Low and addressed by ex-President Cleveland; the plan of petitioning the czar through the diplomatic officers of the United States, which was espoused by President Roosevelt, originated with Leo N. Levi of New York, president of the Independent Order B'nai B'rith.

Organized efforts have been made, with the cooperation of charitable organizations in other sections of the country, to relieve the congestion in the most crowded portions of the city, and a "removal office" has been opened to that end. Indigence and overcrowding have naturally caused an increase of crime among the Jews of New York, and a society to aid Jewish prisoners, and a Jewish Protectorate Association, have been organized, though until recent times the conspicuously clean record in this respect of the Jews of New York was frequently commented upon.

Numerous Zionist organizations have been formed in New York. Jewish social clubs of all kinds exist in New York, some having luxurious club-houses of their own.

In Public Life.

The great numerical increase of the New York Jewish community led to various efforts to form organizations of Jewish voters, but these designs have been successfully thwarted, and it has been repeatedly demonstrated that normally there is no "solid Jewish vote," and that the Jewish voters are quite fairly distributed among the various political parties. The number of Jews coming to the front in public life, however, increases with the growth of Jewish population and with longer residence in, and fuller identification with the interests of, the city. New York had among its representatives in the Constitutional Convention of 1894 Edward Lauterbach, Louis Marshall, Joseph J. Green, Jacob Marks, Aaron Herzberg, and M. Warley Platzek, the two first-named being influential in framing the important charity and judiciary articles respectively of that convention. In the same year Nathan Straus, whose activity in providing pure Pasteurized milk for the children of New York and other cities deserves mention here, refused the nomination for mayor of the city tendered by the Tammany Hall organization. His brother, Isidor Straus, was elected a member of Congress early in the same year; during the period under consideration Jefferson M. Levy, Henry M. Goldfogle, and Montague Lessler also were elected to Congress. Randolph Guggenheimer served as president of the Municipal Council of New York from 1898 to 1902, Jacob A. Cantor (previously leader of the Democratic party in the state senate) as president of the Borough of Manhattan; Nathaniel Elsberg has been one of the leaders of his party in the state Senate for the last six years; and Mitchell L. Erlanger was elected sheriff of New York county in 1903. Judicial positions on the Supreme Court bench were occupied during this period by W. N. Cohen (1897), David Leventritt (1899), Samuel Greenbaum (1901), and Alfred Steckler. J. E. Newburger is a Judge of the Court of General Sessions, while E. A. Jacob, Stiner, Hoffman, Leon Sanders, Herman Joseph, and Julius M. Mayer have sat in minor courts. The last-mentioned was elected attorney-general of the state in 1904.

While New York unquestionably contains more Jewish inhabitants than any other city in the world, this has not been the case very long, though Jewish settlements took place there, under the Dutch administration, earlier than in any other city within the present limits of the United States. Thus, while the first two hundred years in the history of New York are important, particularly in connection with the evolution of the conditions fundamental to the present New York Jewry, it was reserved for the last half-century to create the distinctive numerical and economic conditions characterizing the Jewish community of New York city at the present day.

Appreciable Jewish migration to New York began in 1654, but as late as 1826 the Jewish population was approximately only 950, out of an estimated total Jewish population in the United States of 6,000 (Gilman, quoting Isaac Harby, in the "North American Review," 1826, p. 73). This total was reached from approximately half that number in about 1812, when, according to a contemporary New York estimate, the total Jewish population of the United States was only 3,000 ("Publications Am. Jew. Hist. Soc." vi. 141, 143; ix. 96). In 1841 the New York Jewry contained a population of about 10,000, having distanced Charleston, S. C., very soon after 1826, in which year the Jewish population of that city is supposed to have slightly exceeded that of New York. It was soon after this date, largely in consequence of the European revolutionary ferments of 1848, that German Jewish migration increased in geometric progression.

Population.

——**Present Condition**: There is reason for regarding as conservative the estimate of Joseph Jacobs, giving a population of 672,000. All immigrants are recorded and examined at Ellis Island, and since Oct. 1, 1884, the United Hebrew Charities, through its representatives there, has kept complete statistics of arrivals, their intended destination, and their nationality, sex, etc. From these statistics it appears that between the date named and June 30, 1904, there arrived by steamship 694,172 Jewish immigrants, of whom 504,181 were bound for New York.

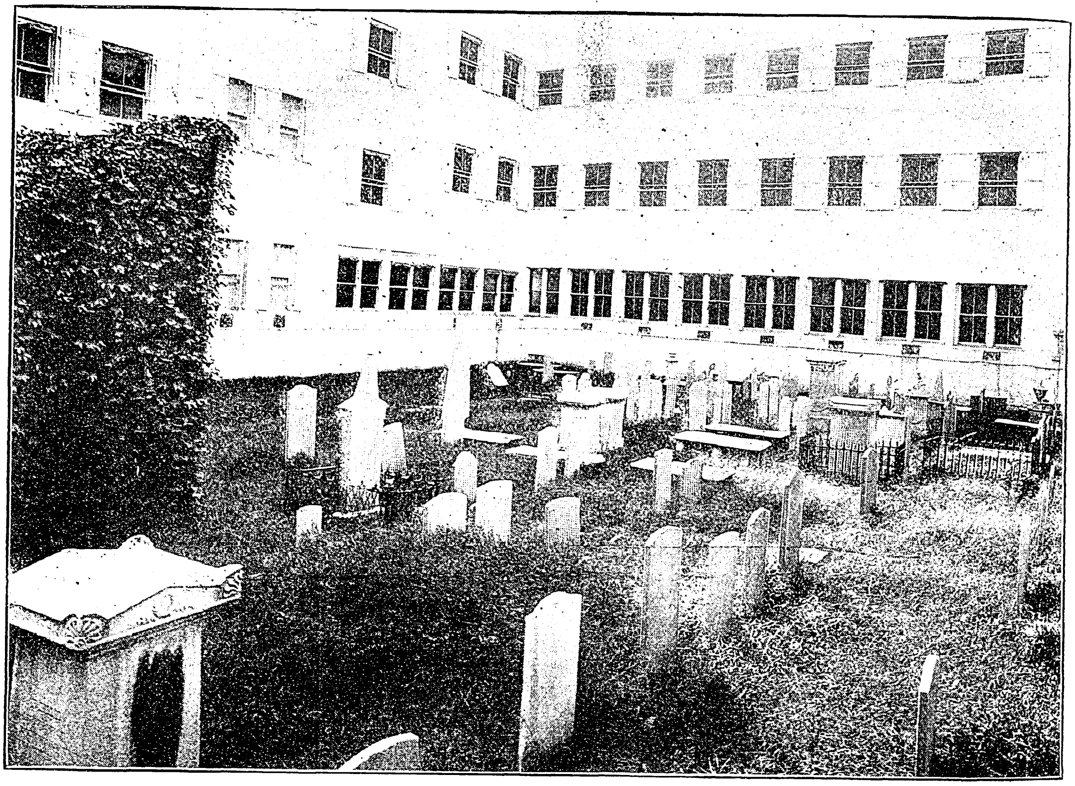
Of the number arriving at Canadian ports and reaching New York overland there is no means of forming an estimate, but that it is not inconsiderable may be inferred from the facts brought out by the British Royal Commission on Alien Immigration and the debate in the House of Commons. It transpired that the majority of aliens arriving at English ports were on their way to America, and that a large proportion of these went through Canadian ports; that half of them went to New York may fairly be assumed. In 1880 the census taken by the Union of American Hebrew Congregations disclosed a Jewish population of 60,000. These, with the 500,000 reported by the United Hebrew Charities, with the immigration by way of Canada, with the number arriving between 1880 and 1884 (which years saw the first large immigration from Russia and probably brought 60,000 Jews to New York), and with the natural increase in all these groups, leave the estimate of 672,000 under rather than over the real number. Of the five boroughs which constitute the city, Richmond and Queens have only a few thousand each; Brooklyn has about 100,000; and the boroughs of Bronx and Manhattan, forming the old city of New York, have the remainder. In the Borough of Bronx there are about 50,000, and in Manhattan something over 500,000 in a total population in that borough of about 2,000,000.

Distribution.

In Manhattan about 100,000, being the old residents with their natural increase and accretions, are scattered throughout the borough. About 50,000 are in the Harlem section bounded on the south and north respectively by 100th and 120th streets, and on the east and west by Second and Lenox avenues—in all a territory of about one-half a square mile. Most of these formerly lived on the lower East Side, but the growing congestion and their own improving material condition induced them to remove to this section. They represent a community with no wealthy members, but without an excessive number of very poor.

The section known as the lower East Side is approximately bounded by Madison street on the south, Houston street on the north, the Bowery on the west, and the East River on the east, and covers a territory about one square mile in extent. Within this square mile live 350,000 Jews—some of them under conditions of overcrowding impossible to describe. In May, 1904, David Blaustein, superintendent of the Educational Alliance, took a census of the district and found 64,268 families; at five persons per family, this would give a total of over 320,000. As many of these families keep one or more boarders, consisting of single men, or of married men whose families are still in Europe, it is evident that the total for the section must be rather more than 350,000. Necessarily, with so large a population in so small a territory, there must be an overwhelming proportion of poor. While the vast majority is normally self-supporting, the excess of income over minimum expenditure is so meager that any untoward circumstance will turn the scale: protracted sickness on the part of any member of the family, or brief sickness on the part of the breadwinner; commercial depression, or a strike or lockout, will cause temporary dependence. Hence it is that the United Hebrew Charities is so frequently called upon—in ten years it has dealt with 70,000 individual cases, each involving on an average about four persons per case. In all but an insignificant number of instances the relief required was only of a temporary nature. Of the 10,334 applicants, representing 43,938 individuals, who appeared at the United Hebrew Charities in the past fiscal year (1904) only 35 (or one-third of 1 per cent) had applied for assistance prior to 1889, while 5,525, representing 19,957 individuals, had never before applied. The expenditures of the United Hebrew Charities in the past year (1904), including cost of administration, were $228,000. Of this amount over $41,000 was granted to 570 pensioners (chiefly aged persons or women whose children have not yet reached the earning age), leaving for administration and general relief $187,000 to 44,000 persons, or about $4 per capita per annum. That the money is not expended upon permanent dependents is conclusively shown by these figures.

United Hebrew Charities.



Old Jewish Cemetery, West Twenty-first Street, New York.
(From a photograph.)

The United Hebrew Charities is housed at Second avenue and 21st street, in the Hebrew Charities Building, erected for it and for similar organizations that require office-room there, by Solomon Loeb. In addition to furnishing temporary relief in money or supplies and caring for its pensioners, the Charities maintains a workroom in which women with children to support are instructed in the use of the sewing-machine and are paid during the period of instruction. It retains a physician and nurses, who not only care for the consumptive in his home, but teach him how to live so as to endanger his family to the least possible extent; and it administers a Self-Support Fund with sufficient liberality to establish many recipients in business and make them self-supporting. The organization publishes a monthly magazine entitled "Jewish Charity," devoted to the consideration of all questions of a philanthropic nature. For several years attempts were made to secure, in the work of the United Hebrew Charities, a closer cooperation on the part of the East Side community, and in the early part of the year 1904 two subordinate organizations were established—District No. 1 in East Broadway, and District No. 2 in Ludlow street. All applicants for relief residing in these districts are referred to them, and the entire administration of the two districts is in the hands of persons residing in them, the funds being provided by the parent organization.

Allied with the Charities and aiding it in investigation and relief is the Federation of Sisterhoods, composed of fifteen organizations of women connected for the most part with the various leading congregations. The Sisterhood of Temple Emanu-El, the first organized, has its own home at 318 East 82d street, where, in addition to aiding the poor, it conducts an employment bureau. Other organizations have their own homes, and support, besides, classes of various kinds in the lower part of the city.

Asylums for Children.

The Hebrew Benevolent and Orphan Asylum Society no longer engages in general relief-work. Instead it makes an annual appropriation of $25,000 or $30,000 to the United Hebrew Charities, which becomes its almoner. It confines its own activities to the 1,003 orphans committed to or taken under its charge. For those placed in its care by the city authorities it receives from the city treasury $104 per annum per capita. In the last fiscal year it received in this way $94,500; its expenditures were $200,000. The orphanage of the society is situated in Amsterdam avenue (between 136th and 138th streets). The society administers a fund of $100,000 given it by Emanuel Lehman to enable graduates of the institution to acquire trades or professions. An institution somewhat similar to it, but not confining its work to orphans, is the Hebrew Sheltering Guardian Society, situated at Grand Boulevard and 150th street, where 650 homeless children are cared for. The amount expended by it in the last fiscal year was $106,000, to which the city of New York contributed $69,000. The care of children under five years of age is entrusted to the Hebrew Infant Asylum, situated at 909 Eagle avenue, Borough of Bronx, which has charge of 151 children. It expended in the last fiscal year $31,000, toward which the city of New York contributed $16,000.

Aged Poor and the Hospitals.

The helpless old are as well cared for as the helpless young. At 125 West 105th street the Home for Aged and Infirm Hebrews provides a refuge for 236 men and women at an expenditure, in 1903, of $42,000. Similar in character is the Home for the Aged at 40 Gouverneur street, on the East Side, maintained by the Daughters of Jacob, and having accommodations for about 20 persons. Another home for the aged is maintained at 210 Madison street by the Hachnoseth Orchim Society, which also cares for and houses friendless immigrants at the time of their arrival in New York. It will soon occupy a more commodious establishment at 229 and 231 East Broadway. Like the home of the Daughters of Jacob, this is maintained and conducted almost exclusively by residents of the East Side.

Another institution similarly maintained and conducted is Beth Israel Hospital at Jefferson and Cherry streets. This is a modern and completely equipped hospital and dispensary with 100 beds, which gave treatment last year to 867 patients at an expenditure of $25,600, of which the city of New York contributed $6,900.

Lebanon Hospital, at Westchester avenue and 150th street, Borough of The Bronx, treated in the last fiscal year 2,000 patients at an expense of $65,000, toward which the city treasury contributed $14,000. In 1903, in cooperation with the United Hebrew Charities, it established a convalescent home in which patients discharged either from its own or a sister hospital and not yet sufficiently recovered to proceed with their daily toil may remain the week or fortnight necessary to regain full strength.

The largest, most modern, and most complete of the communal institutions is Mount Sinai Hospital, covering with its dispensary and training-school for nurses an entire block (between 100th and 101st streets and Fifth and Madison avenues). These buildings were dedicated and occupied in the spring of 1904. During the past fiscal year, when the hospital had not yet taken possession of its new quarters, it treated 3,540 patients at an expenditure of $152,000, the city contributing $29,500.

Montefiore Home.

The Montefiore Home cares for those who, by reason of the protracted or incurable nature of their illness, can not be admitted to the ordinary hospitals. Its building is in Broadway, between 138th and 139th streets; one of its departments is given to a thorough system of hydropathy under the supervision of Dr. Simon Baruch. A few years ago the directors of the Montefiore Home established at Bedford, Westchester County, N. Y., a sanatorium where sufferers in the early stages of consumption are cared for. That the need for the Montefiore Home is far greater than its capacity is shown by the fact that while 466 patients were admitted during the past fiscal year, 831 applicants were refused admission for lack of room. The total number of patients treated during the year (466 being admitted during the year and 385 being carried over from the previous year) was 851, the total cost being $141,000, of which about $50,000 was expended at the country sanatorium and the remainder at the city home.

The Sanitarium for Hebrew Children maintains a summer home at Rockaway Park, L. I., and during the summer it takes parties of mothers and children from the tenement-houses to its seashore place. About 20,000 annually are so benefited at a cost of about $20,000.

The Jewish Working Girls' Vacation Society maintains two summer homes, one at Bellport, L. I., and the other at Big Indian, N. Y., where working girls are enabled to spend a fortnight each at a nominal charge, the difference between the amount so taken and the actual cost being made up by the society.

Apart from societies connected with congregations, the foregoing list practically covers the more important organizations dealing with the physical side of the problem confronting the New York community. There are, in addition, such institutions as the Nurses' Settlement, whose excellent work under the leadership of Lillian D. Wald makes it a model for settlement workers. It is not entirely Jewish in its management or support, although its work is chiefly among the Jews of the East Side. So, too, with the Maternity Hospital and with Saint Mark's Hospital; the management of these is entirely non-Jewish, but by reason of the location of the institutions their beneficiaries are largely Jews.

(From a photograph.)

Education.

Secular education is cared for both through private channels and by the great public-school system, ranging from the kindergarten to the collegiate training of the College of the City of New York (for boys) and the Normal College (for girls). To such an extent do the Jews avail themselves of the public schools that the rosters of the public high schools and the City College show a Jewish attendance vastly in excess of the ratio of Jewish population: at the latter more than 75 per cent of the students are Jews. Probably because the public schools are so well attended, the number of private schools giving both secular and Jewish training is very limited. The provisions generally for religious education are not adequate. On the East Side religious education is largely imparted through the ḥeder. There are nearly 400 ḥadarim holding daily sessions, and it is estimated that they cost about $120,000 per annum to maintain. The Talmud Torah schools, of which the Machzikei, with 1,000 pupils, at 225 East Broadway, is the most important, meet daily. The Hebrew free schools (for the past few years under the management of the Educational Alliance) insure religious education for about 2,800 children, of whom about 80 per cent are girls. In the older community religious education is mainly, though not exclusively, confined to that given in the Sunday-schools attached to the congregations. These have, with some exceptions, one session weekly.

Religious Instruction.

In addition to the Sunday-school which each congregation conducts for the children of its own members, many of the leading congregations maintain similar schools for the children of the poor. These schools are usually established away from the synagogue and in the neighborhoods which they are intended to benefit.

The lack of well-qualified religious teachers prompted the management of the Jewish Theological Seminary of America to establish a class for the training of teachers (1903). The seminary's library of Judaica—a large part of which is the gift of Mayer Sulzberger—is one of the most valuable in the world and is preserved in a fire-proof room constructed for the purpose. Here also are kept the records of the American Jewish Historical Society.

Educational Alliance.

There is, aside from religious teaching, a varied and great educational activity. The Educational Alliance, with a daily attendance of nearly 7,000, is located at East Broadway and Jefferson street, and is the active center. In addition to its Hebrew free schools, carried on partly in the main building and partly in Branch A, at 624 East 5th street, it conducts classes for immigrants (formerly carried on by the Baron de Hirsch Fund), where 450 newly arrived children and adults are taught English and prepared for entrance into the public day- and night-schools. There is also a class for "melammedim," where these foreign teachers of Hebrew are taught English. For young men and women there are innumerable clubs, classes, and dramatic and literary societies, and for young women, cooking, dressmaking, and millinery classes. A gymnasium and roof-garden also are provided; a People's Synagogue is conducted on Sabbaths and holy days (A. M. Radin being rabbi), and an afternoon service for children, at which various rabbis of the city officiate in turn. On the fourth floor of the building is a free library, part of the New York Public Library system, and in East Broadway, in an annex to the main building, are living-rooms for the superintendent and chief workers. A building in Madison street is occupied by Branch B of the Alliance, and in this classes are conducted by young men and women who were themselves in earlier days recipients of the advantages of the institution. The expenditures of the Alliance in the last fiscal year were $87,500.

The Hebrew Technical Institute, at 34 and 36 Stuyvesant place, provides technical education of a high grade to 250 young men at an annual cost of $29,000. The Louis A. Steinam School of Metal-Working, established by Abram Steinam in memory of his son, forms part of the plant of the institution. The Hebrew Technical School for Girls is situated at 267 Henry street, but has purchased a larger site at Second avenue and 15th street. It teaches girls embroidery, millinery, dressmaking, stenography, etc., and conducts a religious school. Its expenditures in the last fiscal year were $36,500.

The Hirsch Funds.

The Baron de Hirsch Fund, of which Myer S. Isaacs was president from its foundation until his death, in addition to making an allowance to the Educational Alliance, to the Hebrew Educational Society of Brooklyn, to the Jewish Agricultural and Industrial Aid Society, and to the United Hebrew Charities of various seaboard cities, administers the affairs of the town of Woodbine, N. J., through the Woodbine Land and Improvement Company, and carries on the agricultural school there and the Baron de Hirsch Trade School in New York. The latter is situated at 222 East 64th street, and is under the superintendence of J. E. G. Yalden; from it 50 young men are graduated semiannually, after receiving instruction in such callings as plumbing, machine-working, carpentry, and house- and sign-painting. The Clara de Hirsch Home for Working Girls, at 225 East 63d street, in addition to providing at moderate cost a home for working girls, qualifies others in housekeeping, millinery, and other means of self-support.

The Young Men's Hebrew Association, in the building at 92d street and Lexington avenue, given to it by Jacob H. Schiff, conducts Hebrew classes and carries on library and social work of the kind done by the Educational Alliance, with the distinction, however, that its benefits are confined to those who pay the membership fee. It has an employment bureau and a gymnasium. Religious services are held on Sabbaths and holy days. Work of the same kind for women is done by the Young Women's Hebrew Association, at 1584 Lexington avenue. This is a new organization which has hardly yet made its place in the community.

Jewish Agricultural Aid Society.

The Jewish Agricultural and Industrial Aid Society, supported by the Paris Jewish Colonization Association and the Baron de Hirsch Fund, makes loans at a low rate of interest to farmers or those about to become farmers. At the close of 1903, after an existence of four years, it had outstanding in such loans over $159,000, with very few delinquents and an insignificant proportion of losses. It makes loans also to industrial workers in the country who are desirous of building homes there, and by a system of industrial loans and subsidies establishes and retains in country places industries which would otherwise be located in the cities. Further, in conjunction with the Jewish Colonization Society of Paris, it maintains the Industrial Removal Office, which it established in 1901. Through this office residents of the congested sections of the cities are removed to places throughout the United States and Canada. Over 5,500 persons were so removed during the year 1903, and more than 15,000 have been removed since the office was established. About 60 per cent of those removed had recently come to America.

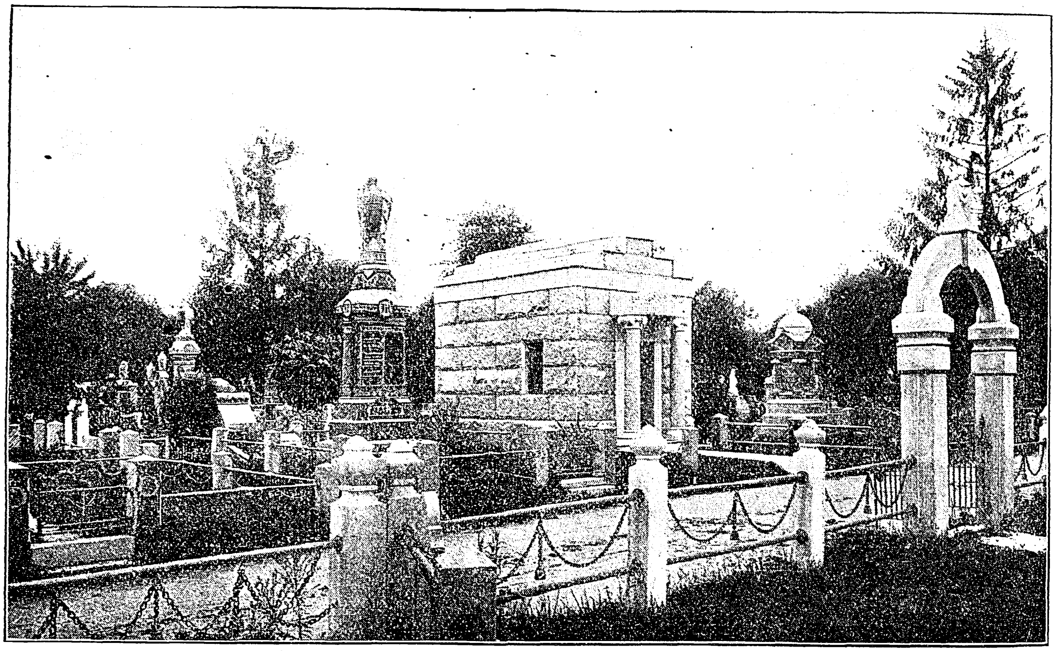
The Hebrew Immigrant Aid Society was organized a few years ago from among the older of the new immigrants for the purpose of aiding newcomers at the time of their arrival; in conjunction with the United Hebrew Charities, it maintains an agent at Ellis Island for this purpose. The Hebrew Gemillath Chasodim Society is an organization for loaning money without interest to persons having a responsible indorser. It, too, is the work of the newer community.

The local section of the Council of Jewish Women supports free religious schools in various parts of the city and sends a visitor to the wayward girls at Randalls Island and to the women committed to the Bedford Reformatory. It established the recreation-rooms at 186 Chrystie street, furnishing innocent amusement to young girls. The work which the council has felt called upon to do reveals one of the dark sides of the communal problem. Inadequate house-room has resulted in a tendency on the part of the young of both sexes to seek amusement on the streets and in pleasure-resorts whose influence is far from wholesome. The consequence is apparent in increasing misconduct and even crime. There is now in process of formation a Jewish Protectory for the care of boys and girls, who have heretofore been sent to non-Jewish reformatory institutions. The Jewish Prisoners' Aid Society gives religious ministration to the unfortunates in the state and city prisons, and upon their discharge endeavors to aid them in becoming self-respecting and law-abiding citizens.

The several Jewish orders have their local organizations; the B'nai B'rith maintains the Maimonides Library at 58th street and Lexington avenue, the B'nai B'rith Club at the same address, and down-town headquarters at 106 Forsyth street, where there are social rooms and a free employment bureau. Important work among the Jews of the East Side is carried on under non-sectarian management in the University Settlement, College Settlement, and the down-town branch of the Ethical Culture Society. Various day-nurseries, Jewish and non-sectarian, exist and care for small children while the mothers are at work.

Synagogues. The leading synagogues of New York by no means confine their activities to the holding of religious services. Mention has already been made of the sisterhoods and religious schools. There are also young people's societies for literary and social purposes, ḥebras, and many organizations for aiding the poor. The oldest congregation is the Shearith Israel, of which H. Pereira Mendes is rabbi. This is the Sephardic congregation, and its synagogue is situated at 70th street and Central Park West. Others are: Emanu-El (43d street and 5th avenue; Joseph Silverman, rabbi); Beth-El (76th street and 5th avenue; S. Schulman, rabbi); B'nai Jeshurun (65th street and Madison avenue; J. M. Asher, rabbi); Shaaray Tefillah (82d street and West End avenue; F. de S. Mendes, rabbi); Israel (125th street and 5th avenue; M. H. Harris, rabbi); Ahawath Chesed Shaar Hashomayim (55th street and Lexington avenue; I. S. Moses, rabbi).

There are about twenty additional congregations with their own places of worship, and more than three hundred meet in halls or in rooms in tenement-houses. In addition to these there are several hundred that meet in halls on the holy days only. The Jewish Endeavor Society, which meets monthly, aims to foster a religious spirit in the young; the Judæans meet at irregular intervals, usually to do honor to some distinguished visitor.



Part of Washington Cemetery, Brooklyn, New York.

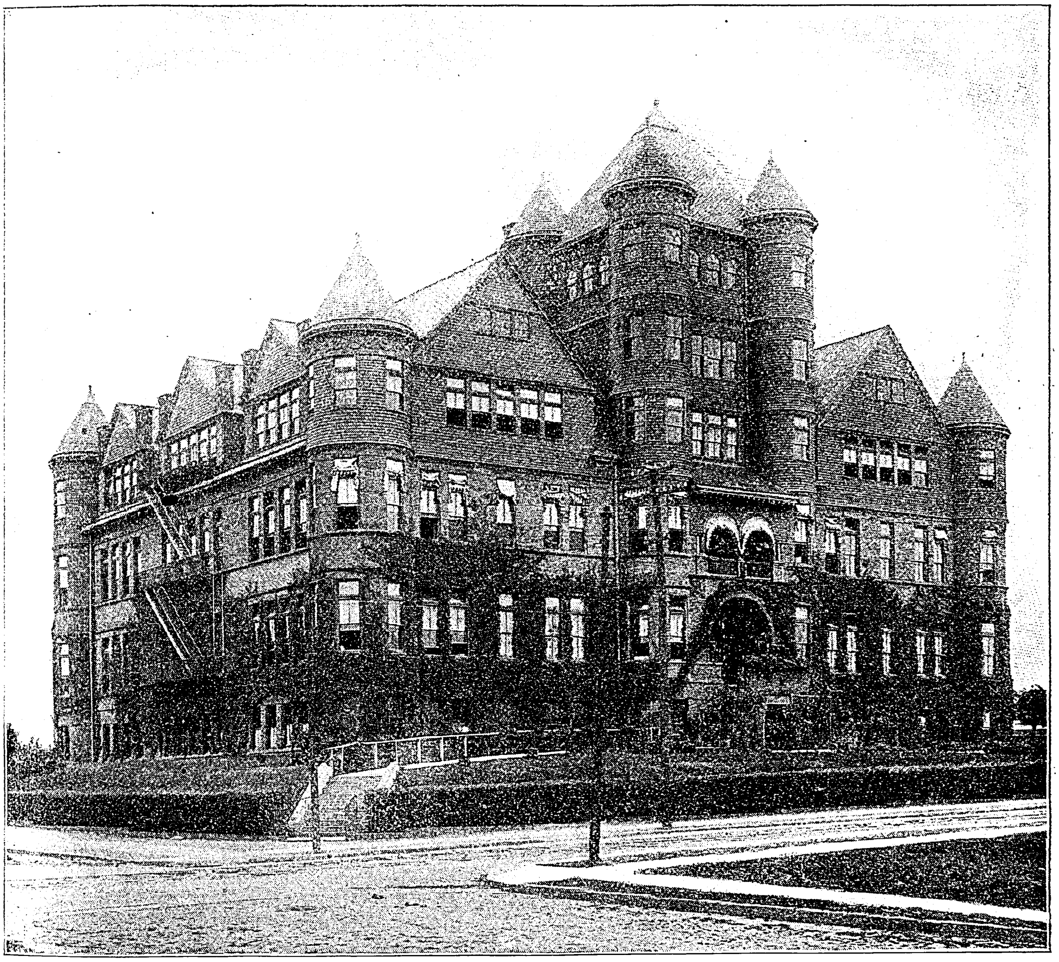
(From a photograph.)

Zionism has its quota of adherents, there being twenty-four organizations in the city, which is the headquarters of the American Federation. The membership is about 5,000. The poor in Palestine are not forgotten, and are aided through the North American Relief Society (Hezekiah Kohn, president), as well as through private sources.

Of trade-unions the Allied Hebrew Trades is the only distinctively Jewish organization, although in those trades in which many Jews are employed the labor-unions have a considerable Jewish membership. The executive officer of the United Garment Workers was until the summer of 1904 Henry White; he is likewise a member of the Civic Federation—an organization of employers, working men, and publicists which was established in order to promote industrial peace. Associated with him are Marcus M. Marks (president of the Clothing Association, an organization of employers) and Oscar S. Straus (president of the Board of Trade and Transportation), at whose initiative the Civic Federation was formed. The Chamber of Commerce has many Jewish members and one Jewish vice-president (Jacob H. Schiff).

Politically the Jews are fairly divided between the two leading parties, although many ally themselves with the Socialists. A leading Socialist journal is "Vorwärts," published in Yiddish and edited by Abraham Cahan. Other Yiddish papers, all dailies, are the "News" (weekly ed., "Gazette"), "Journal," "World," "Jewish Abend-Post," and "Herald," all but the last-named being owned or controlled by the Sarasohns. Other Jewish papers are the "American Hebrew," "Hebrew Standard," and "Arbeiter Stimme" (weekly), "New Era," "Jewish Home," "Menorah," "Zukunft," and "Maccabæan" (monthly): the "Maccabæan" is the Zionist, and the "Zukunft" the Socialist, organ.

A. C. L. S.



Hebrew Orphan Asylum, Ralph Avenue, Brooklyn, New York.
(From a photograph.)

——**Brooklyn:** It is likely that Jews settled sporadically on Long Island from their first arrival at New York, but apparently not in numbers sufficient for the organization of a community; and it is a matter of tradition that they attended the congregations in New York, the more pious rowing over on Friday afternoons to spend the Sabbath-day with their brethren on Manhattan Island. About 1850 a number of Jews, in order to lessen the inconvenience in connection with attending worship in New York, abandoned their dwellings in the remoter parts of Brooklyn and moved nearer to the river front in the west and southwestern parts of Brooklyn. This caused movements to be set on foot for the establishment of two houses of worship on Long Island.

Beth Elohim Congregation.

The first was the Beth Elohim congregation in Williamsburg, established by fifteen Jews, who hired a small place for $150 a year. But the congregation grew rapidly, and a few years later a house of worship was erected in Keap street. In 1874 the younger generation adopted the Reform ritual, and the result was the secession of a number of Orthodox members, who formed the Congregation Ahawath Achim.

The second movement for the founding of a congregation began in the neighborhood of the present Brooklyn city hall, about 1854. Only twelve members were concerned, and on each Sabbath they worshiped in the house of one of their number.

Beth Israel.

They named their congregation Beth Israel, and for the Passover and the autumnal festivals they brought a hazzan from New York. Their house of worship is now on Boerum place and State street, near the great business district of Brooklyn. Until the year 1879 the congregation was strictly Orthodox, but in that year certain reforms were adopted.

The Reform movement had its inception in 1869, when a number of Jews left the Orthodox synagogues. This resulted in the founding of Temple Israel. A charter was procured from the legislature, a hall was temporarily rented, and during the same year a church building in Greene avenue, near Adelphi street, was purchased and converted into a synagogue. In Nov., 1887, lots were purchased at Bedford and Lafayette avenues, and in April, 1891, was laid the corner-stone for the temple, which was dedicated in April, 1892. The number of synagogues in that vicinity shows where the increase of the Jewish population of Brooklyn first appeared.

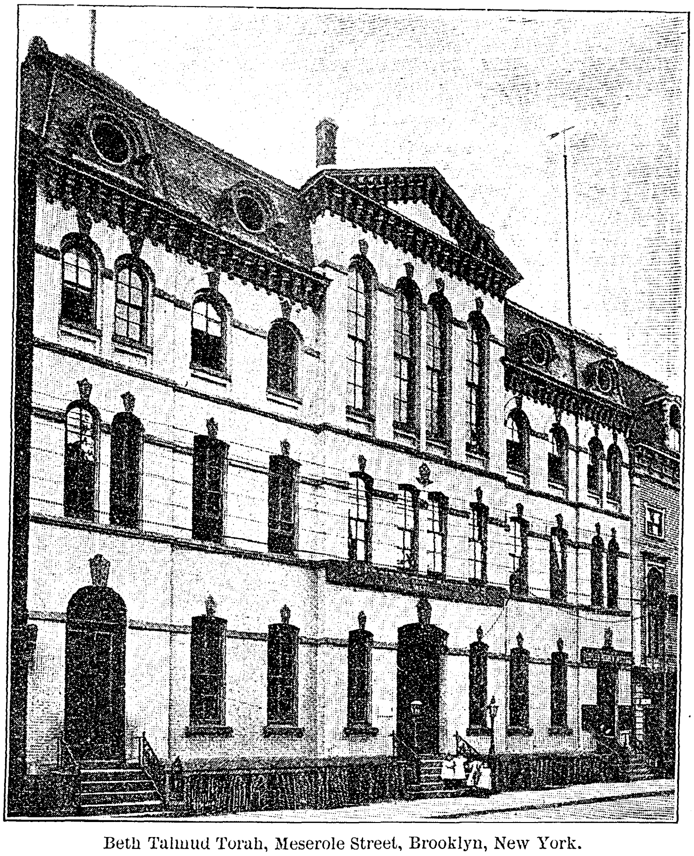
The so-called "third period" of Jewish history in Brooklyn commenced in 1882, when the influx of Russian Jewish immigrants began. Russian Jews settled among their coreligionists in the Williamsburg district.

Effect of Russo-Jewish Immigration.

The older Jewish residents of Williamsburg began to remove to other districts, and many Jewish synagogues of early establishment were left in possession of the new arrivals. Williamsburg, however, was not destined to form the living center of the fresh contingents of immigrants from Russia, Rumania, and Galicia.

At the end of 1886 some New York immigrant Jews of speculative propensities purchased a number of lots in the district known as Brownsville, which lots were offered for sale to immigrant Jewish residents of New York. In the course of three years about two hundred houses and three synagogues were erected in Brownsville. The streets were not paved and were badly lighted. In 1895 it attracted the attention of some wealthy Jewish inhabitants of Brooklyn, and they hastened to help their coreligionists. A building was soon erected at Pitkin avenue and Watkin street, and became the home of the Hebrew Educational Society, which is managed on the same lines as the Educational Alliance in East Broadway, New York. The founders of the institution appealed to the authorities in behalf of the Jewish inhabitants of Brownsville, and in the course of two years considerable improvements were made.

When entire streets of the east side of New York were altered and innumerable houses were demolished to make room for parks and for the approach to the Williamsburg bridge, thousands of Jews moved to Brownsville, and it is estimated that there are now (1904) not less than 20,000 Jewish inhabitants in that district, with fourteen synagogues. The majority of the Brownsville Jews travel daily to New York, where they either have places of business or are employed in various factories.



Beth Talmud Torah, Meserole Street, Brooklyn, New York.
(From a photograph.)

The most important Jewish benevolent institution in Brooklyn is the Hebrew Orphan Asylum Society, which was incorporated in Aug., 1878. On Jan. 1, 1879, a house at McDonough street and Stuyvesant avenue was opened for the reception of orphans. Six years later ground in McDonough street, adjoining the original building, was bought, and the corner-stone of the building was laid June 26, 1883.

In May, 1892, the corner-stone of a new asylum building on Pacific and Dean streets was laid. This building cost $235,000, and was dedicated Dec., 1892. It accommodates about 400 children.

Cemeteries.

For almost two centuries the Jewish dead of Brooklyn were taken to Manhattan Island for burial. But when, for sanitary reasons, the old burial-places were closed, the Manhattan Jews established cemeteries in Brooklyn. The oldest known is the Washington Cemetery, situated about two miles beyond the city limits and just outside the village of Parkville, Long Island. It appears that at its establishment about 1860 there were no sectarian restrictions placed upon interments. However, few persons of other communions have been buried there since the Jews took possession of it. Within the last twenty years about fifty acres have been added to it. Hebrew lodges and congregations, societies and individuals, have purchased nearly three-fourths of its acreage. Among the other Jewish places of burial are: Ahavath Chesed, thirteen acres in East Williamsburg; Shearith Israel and Temple Beth-El, both in Newtown, and six and ten acres respectively; Salem Fields, at Jamaica avenue and Market street; Mount Nebo, fifteen acres on the Fresh Pond Road in Queens county; Machpelah, forty acres in Newtown; and Maimonides, seven and one-half acres near Ridgewood.

In 1904 Brooklyn contained over thirty congregations, a Talmud Torah, a hospital and dispensary, various benevolent associations, clubs, lodges, and Zionist societies. Its oldest rabbi then was Leopold Wintner, for many years connected with the Beth Elohim congregation. Its Jewish population in that year appears to have been not less than 100,000.

Bibliography: *History of the City of Brooklyn* (published by *The Brooklyn Daily Eagle*), pp. 362, 544, 631, 655; W. W. Munsell, *History of Kings County*, p. 1088, New York.

A. D. M. H.

NEW YORK: Most populous state of the American Union, with an estimated Jewish population of 750,000. The history of the Jews of the state is practically covered by the articles New York (city), Albany, etc. Their records date back to 1654 and present a continuous history of migration and growth. Given below is a list of the places in the state of New York which contain Jewish communities, those covered by separate articles being merely named.

Albany; Amsterdam; Astoria (has a congregation); **Bath Beach** (congregation); **Binghamton** (Congregation Sons of Israel, founded in 1885; a Reform society, holding services on holy days); **Brooklyn** (see Jew. Encyc. ix. 289, *s.v.* New York [city]); **Buffalo; Coney Island** (community); **Conklin** (cemetery); **Corning** (congregation); **Elmira; Far Rockaway** (a summer resort; has a congregation); **Freeport** (congregation); **Glen Cove** (Congregation Tifereth Israel, founded in 1899); **Glens Falls** (Educational Alliance, and a congregation); **Gloversville** (congregation, founded in 1891, and the Nathan Littauer Hospital, a non-sectarian institution, memorial of Nathan Littauer); **Greenport** (congregation); **Haverstraw** (congregation, founded in 1892); **Hornellsville** (congregation); **Hudson** (congregation); **Ithaca** (religious school; cemetery; Hebrew Ladies' Aid Society); **Jamaica** (congregation); **Kingston** (Congregation Emanuel, founded in 1853, present [1904] rabbi Joseph Lieser; Congregation Agudath Achim, founded in 1887; two newer congregations; a Young Men's Hebrew Association); **Lake Placid** (congregation); **Mount Vernon** (congregation); **Newburgh** (Congregation Beth Jacob, founded in 1865, present rabbi Hyman J. Elkin; Congregation Aguadas Achim; a social club); **New Rochelle** (congregation); **New York** (city); **Niagara Falls** (a cemetery association); **Ogdensburg** (Congregation Anshe Zophar, founded in 1865); **Olean** (congregation and a relief association); **Ossining** (congregation); **Peekskill** (congregation); **Port Chester** (congregation; Ladies' Aid Society; Young Men's Hebrew Association); **Poughkeepsie** (congregation); **Rochester; Rockaway Beach** (congregation; Ladies' Benevolent Society); **Sag Harbor** (congregation and a benevolent society); **Schenectady** (Congregation Shaari Shamayim, founded in 1856, present rabbi E. M. Chapman; congregations of Hungarian, Russian, and Polish Jews; a Young Men's Hebrew Association; the United Hebrew Charities; etc.); **Spring Valley** (congregation); **Staten Island** (congregation and a Young Men's Hebrew Association); **Syracuse; Tannersville** (congregation; has a considerable Jewish population in summer); **Tarrytown** (congregation); **Tompkinsville** (congregation); **Troy; Tupper Lake** (congregation); **Utica** (several congregations; a Hebrew Free School; a Hebrew Aid Society; a Ladies' Hebrew Society; a cemetery); **Watertown** (congregation); **West Arverne** (congregation); **Whitestone** (a Hebrew library); **Yonkers** (Home for Aged and Infirm; Independent Order B'nai B'rith, opened in 1882; three congregations; a Hebrew Free-School Association; a Women's Charity Association).

A.

NEW ZEALAND: A group of islands in the South Pacific Ocean, consisting of two large islands (North Island and South Island), a small island known as Stewart Island, and numerous islets along the coast. Europeans did not settle there in appreciable numbers until after 1830, and for two or three decades thereafter there were but few Jews among them. It was not until the seventh decade of the nineteenth century, when gold was discovered in the Otago district, that Jews were drawn to New Zealand in considerable numbers. During the persecutions in Russia in 1891, the Parliament of New Zealand sent a memorial to the Russian emperor, Alexander III., praying for an abatement of the restrictions imposed upon his Jewish subjects. The New Zealand colonists, however, were seized by the same fear that disquieted that section of the English public and led to the Royal Commission on Alien Immigration. In 1893 news was received that five hundred destitute Russian Jews were being sent to New Zealand by the Jewish authorities in London. Protests were at once raised all over the colony. Resolutions from trades and

Affected by Russian Persecutions.

labor councils were forwarded to the premier of the colony, who telegraphed to the agent-general in London instructing him to assist in preventing Russian Jews from being sent to the colony. An angry correspondence passed between the premier and a prominent Jewish resident, and the feeling of disquiet was only calmed by an assurance from Dr. Adler, chief rabbi of London, to the effect that the London authorities had never contemplated such a wholesale transportation.

The Jews in New Zealand have never aggregated much more than sixteen hundred individuals; but in spite of this fact they have assisted in shaping the country's policy. In this respect the most notable was Sir Julius Vogel, who at various times held the portfolios of colonial treasurer, commissioner for stamps and customs, and postmaster-general. He served as premier from 1874 to 1876, and held the office of agent-general in London from 1876 to 1881. He is best remembered for his vigorous policy of public works, by which the North Island was opened up. To him also are due the establishment of the San Francisco and New Zealand mail service, the completion of the London and New Zealand cable, the system of government life-insurance, and the creation of the Public Trust Offices. Three other Jews have served in political life: Hallinstein sat in the House of Representatives; Samuel Edward Shrimski (1830–1902) was four times elected to that chamber and sat for seventeen years as a life member of the Upper House; C. Louisson, who is at present (1904) the only Jew in Parliament, was appointed to the Upper House in 1901.

In Municipal Life.

Jews have been very active in municipal life, and as mayors and councilors their names are recorded in many cities. The history of Auckland especially is identified with the name of a Jew. Before it became a municipality A. P. Phillips was chairman of the city board; he was its first mayor, and held that office altogether for thirty-three years. Besides holding the appointment of justice of the peace and resident magistrate, he was a member of the provincial council and of the education board. He established a free library, obtained many endowments for the city, and was one of the founders of the Municipal Association of New Zealand. Henry Isaacs also was at one time mayor of Auckland. On four occasions C. Louisson was elected to the mayoral chair of Christchurch. He was a member of the first Charitable Aid and Hospital Board of New Zealand, a deputy inspector of the Sunnyside Lunatic Asylum, and one of the New Zealand commissioners to the Melbourne Exhibition. Other towns have had Jewish mayors in the persons of Louis Ehrenfeld, Moss Jonas, and E. Shrimski.

In Commerce.

Jews have given a decided impetus to the commercial enterprise of New Zealand. The chambers of commerce have had many Jews as presidents, notably D. E. Theomim. The New Zealand Shipping Company was founded by the brothers Edward and Henry Isaacs. The first chairman of the Manawatu Railway Company was Joseph Nathan, who established the Wellington Harbor Board. When delegates were sent to England to represent New Zealand at the meetings of the British Chamber of Commerce two out of the five members were Jews—Joseph Nathan and Arthur Myers.

In Journalism and the Army.

Jews have done some enterprising work in the field of journalism in New Zealand. Vogel acquired a half proprietorship of the "Otago Witness." He started, and for many years edited, the first daily newspaper of New Zealand, "The Daily Times"; he admitted as part owner of his paper B. L. Farjeon, the novelist and playwright. Mark Cohen is president of the New Zealand Institute of Journalists and has for a considerable period edited the "Dunedin Star." "The New Zealand Referee" is managed by Phineas Selig, and another Jew, Marcus Marks, is head of the "Hansard" staff. New Zealand Jews have always shown a patriotic interest in questions of defense. During the Maori war many Jews were found in the British ranks. C. Louisson was the first to follow the volunteer movement on the West Coast. In 1894 David Ziman offered to pay half the cost of building a battle-ship to be presented by New Zealand to the British government, the colony to pay the other half. When trouble broke out in Samoa between the British bluejackets and the natives, three Auckland companies offered their services to the imperial government, two of the three captains being Jews. In the South-African war the New Zealand contingents included a number of Jews. As educators, too, Jews have gained some distinction. Several have sat on the various education boards; E. Shrimski founded the Waitaki School; Louis Cohen is a member of the senate, and Phineas Levy a law examiner, of the New Zealand University. The only woman in New Zealand who has passed, up to the present, the examinations qualifying for the practise of law is a Jewess, Ethel Benjamin.

Congregational Life.

Congregations have been formed in most of the principal cities. In Auckland, Dunedin, Wellington, and Christchurch congregations have existed for many years. In each of these cities there exists the same Jewish communal life as obtains in other British congregations. Each has its Hebrew and religious classes, its charitable institutions and social societies. Services are held on Sabbaths, holy days, and on all special occasions. The oldest congregation is that of **Auckland,** which was founded in 1859. Rev. S. A. Goldstein has been the minister for twenty-two years and was preceded by the Rev. Mr. Elkin. The synagogue is a handsome structure and stands on an elevated site presented by the government. The **Dunedin** congregation dates from 1861, in which year the first service was held on the premises of Hyam S. Nathan, who acted as its first president. The present synagogue, which replaced an older one, was built in 1881, since which time the community has had five rabbis; the Rev. B. Lichtenstein held office from 1875 till his death in 1892, and the present minister is the Rev. B. Chodowsky. The community enjoys the distinction of having founded the first ḥebra ḳaddisha in the British empire. In **Wellington** the first service was held in the house of Joseph Nathan, to whose efforts the community is largely indebted for its present synagogue, erected in 1870. The Rev. H. Van Stavern has been minister there for nearly thirty years; he is a member of the Wellington licensing bench. The **Christchurch** congregation, which has been served for more than thirty years by the Rev. I. Zachariah, has had a checkered career and has maintained a corporate existence with difficulty, owing to the paucity of Jewish residents. Synagogues have been built also in Nelson and Timaru, but at the present time no corporate congregations are attached to them. The official census for 1901 placed the Jewish population of New Zealand at 1,611; the total population is 772,719.

J. D. I. F.

NEWARK: Largest city of the state of New Jersey, U. S. A. Its first Jewish congregation was founded Aug. 20, 1848, under the name "B'nai Jeshurun." Religious services were held at various places until 1858, when the first synagogue was built, on Washington street. Isaac Schwarz was hazzan at the time, and the mode of worship was Orthodox. His successors were Sigmund Kaufman, in 1860, and S. Seligman, in 1865. In 1867 the congregation built its present temple, at the dedication of which, in 1868, the present incumbent, Rabbi Joseph Leucht, entered upon his office. Solomon Foster has been associated with him since 1902. The worship is now that of the Reform ritual; and the congregation includes the most prominent Israelites of the city.

Congregation Oheb Scholom was organized in 1860. Its pulpit has been occupied by Rabbis Zinsler, B. Drachman, and the present incumbent, Bernhard Glueck. Congregation B'nai Abraham was organized in 1857. It formerly had places of worship in Bank and Washington streets, and since 1899 has occupied its present building at the corner of High street and 13th avenue. Among its ministers have been Isidor Kalish, Meyer S. Hood, Bergman, N. G. Solomon, and Jacob Goldstein. The present incumbent is Julius Silberfeld. A few years ago a number of congregations made up of Russian immigrants, combined under the name Anshe Russia, and built a synagogue in Kinney street. H. Bradsky is the rabbi. There are nine other smaller congregations in the city.

All the Jewish orders have lodges in Newark. The Progress Club, with its own club-house in West Park street, is the leading social organization. There are a number of charitable associations, the most prominent being the Hebrew Benevolent and Orphan Asylum Society (founded 1865), which has a commodious Home for Orphans in Clinton avenue. A Hebrew free school, built by the Plaut family (1889) and bearing the name "Plaut Memorial School," gives instruction in religious branches to 800 pupils, mostly children of Russian emigrants, under the superintendency of Meyer S. Hood.

The professions of law and medicine have some very prominent Jewish members. The department stores of L. S. Plaut & Co., L. Bamberger & Co., and David Straus Company are among the principal ones in the city. Among the leading manufacturers Moses Straus & Sons, R. G. Solomon, and Weingarten Bros. are most prominent, the last-named firm having one of the largest corset factories in existence.

The Jews of Newark, of whom at least one-half are Russian immigrants, number (1904) about 20,000, in a total population of nearly 300,000.

A. J. Leu.

NEWBURGER, JOSEPH E.: American jurist; born in New York city 1853; educated in the public schools and at Columbia College (School of Law), New York (LL.B.); admitted to the bar 1874. In 1891 he was elected judge of the city court of New York, and served until 1895. In the following year he was elected judge of the Court of General Sessions, New York city, which office he still (1904) holds.

Newburger has been active in Jewish societies, and was one of the founders of the Jewish Theological Seminary of America in New York city.

Bibliography: *American Jewish Year Book*, 5665.

A. F. T. H.

NEWCASTLE-UPON-TYNE: English seaport; center of the English coal-trade. It has a population of 214,803, including about 500 Jewish families. Jews are mentioned in connection with Newcastle-upon-Tyne before the expulsion, but the present community dates not much further back than 1830, in which year seven Jewish residents entered into an agreement to defray the cost of a burial-ground. On the New-Year of 5592 (= 1832) these early settlers met at the house of David Cohen in Westgate street; the day being also the coronation day of William IV., a sermon was preached by Martain Valintine of Poland, and subsequently printed. The service was performed by Henry Harris (father of the Rev. S. H. Harris of Ramsgate), who subsequently became minister of the congregation. The congregation was formally established on Oct. 8, 1832, and David Cohen became its first president; it thereupon migrated from place to place until, in 1838, the first regular synagogue was erected in Temple street. By 1868 the synagogue had become too small for the increasing community, and another congregation was formed under the presidency of J. de Hart, a place of worship being acquired in Charlotte square. In 1873, through the efforts of the Rev. A. L. Green, an amalgamation was arranged between the two congregations. Six years later the foundation-stone of the United Synagogue was laid by De Hart, and the building, in Leazes Park Road, was consecrated in the following year (1880). At the present time (1904) the synagogue has 220 seat-holders. There are various charities, clubs, and friendly societies, besides a bet ha-midrash. The present minister is Morris Rosenbaum, who succeeded S. Friedeberg (now of Liverpool) in 1891.

J. I. H.

NEWMAN, ALFRED ALVAREZ: English metal-worker and art-collector; born in London 1851; died there 1887. He revived the blacksmith's art in its medieval phases and was the founder of the Old English smithy in Archer street, Haymarket, London. Being a craftsman of considerable talent, Newman succeeded in the course of four years, by his taste and energy, in promoting art ironwork in England, the picturesque arrangement of his smithy rendering it during the London season a place of fashionable resort. He was the author of several papers communicated to the Society of Architects and similar bodies.

Newman's interests included Anglo-Jewish history and archeology; he possessed a unique collection of Jewish prints and tracts bearing on these subjects, many of which were exhibited at the Anglo-Jewish Historical Exhibition after his death. It was due largely to Newman's efforts that the proposal to demolish the ancient synagogue of Bevis Marks was eventually defeated.

NEWMAN, LEOPOLD: American soldier. He entered in the Civil war as captain of Company B, 31st New York Infantry, and rose to the rank of lieutenant-colonel. His term of service expired a few days prior to the battle of Chancellorsville (May 2, 1863); but he elected to remain at the front, and was fatally injured, dying shortly after in Washington. President Lincoln visited him at his bedside and brought a commission promoting him to the rank of brigadier-general.

A.

NEWMAN, SELIG: German Hebraist; born at Posen, Prussian Poland, in 1788; died at Williamsburg, N. Y., Feb. 20, 1871. He was educated at Posen, but in 1814 went to England and was appointed minister to the Plymouth congregation, teaching Hebrew at the same time at the University of Oxford. His faith debarred him from a professorship, but among his pupils were numbered many distinguished Christian and Jewish scholars. While in London Newman took part in a spirited debate with some Christians on the Messianic prophecies. At an advanced age he sailed for America and settled in New York, gaining a livelihood as teacher and writer. In 1850 he published a work entitled "The Challenge Accepted," consisting of a series of dialogues between a Jew and a Christian respecting the fulfilment of the prophecies on the advent of the Messiah. He published also: "Emendations of the English Version of the Old Testament," 1839; a "Hebrew and English Lexicon," 1841; and a Hebrew grammar, which was much used for elementary instruction among English Jews.

NEWPORT: One of the capitals of the state of Rhode Island, U. S. A. Before the American Revolution, Newport excelled New York as a commercial center and port of entry; to-day, however, it is no longer of commercial importance, but has become one of the most fashionable watering-places in America.

Newport was founded by Roger Williams, whose broad religious toleration soon attracted settlers of all denominations (see RHODE ISLAND). The earliest authentic mention of Jews at Newport is in 1658, when fifteen Jewish families are said to have arrived from Holland, bringing with them the first three degrees of masonry. It has been suggested, however, that Jews from New Amsterdam (New York) and from Curaçao settled there even earlier, between 1655 and 1657. A congregation seems to have been organized in 1658 under the name "Jeshuat Israel." In 1684 the General Assembly of Rhode Island, in reply to a petition of the Jews, affirmed the right of the latter to settle in the colony, declaring that "they may expect as good protection here as any stranger being not of our nation residing among us in his Majesty's Colony ought to have, being obedient to his Majesty's laws." In view of this declaration it seems strange that Jews should have been refused naturalization in 1761 (see RHODE ISLAND).

Successive Settlements.

Additional Jewish settlers arrived from the West Indies in 1694; but the great impulse to commercial activity which raised Newport to the zenith of its prosperity was given by a number of enterprising Portuguese Jews who settled there between 1740 and 1760. Most prominent among these were Jacob Rodrigues-Rivera, who arrived in 1745, and Aaron Lopez, in 1750. The former introduced into America the manufacture of sperm-oil, which soon became one of the leading industries; Newport had seventeen manufactories of oil and candles and enjoyed a practical monopoly of this trade down to the American Revolution.

Aaron Lopez became the great merchant prince of New England. Of him Judge Daly says: "To him in a larger degree than to any one else was due the rapid commercial development which made Newport for a quarter of a century afterward the most formidable rival of New York." Ezra Stiles, the famous president of Yale College, states that "for honor and extent of commerce, he was probably surpassed by no merchant in America." Owing to Lopez, more than forty Jewish families went to Newport; and fourteen years after his arrival the town had 150 vessels engaged in the West-Indian trade alone; Lopez at the beginning of the Revolution owning thirty vessels engaged in the European and West-Indian trade and in whale-fisheries. This trade extended as far as Africa and the Falkland Islands. Among other prominent merchants of Newport in colonial times were members of the Levy, Seixas, Hart, and Pollock families. The Jewish population of the city received an important addition after the great earthquake at Lisbon (1755). Many secret Jews then left Portugal; one of the vessels, bound for Virginia, was driven into Narragansett Bay, and its Jewish passengers remained at Newport.

Socially as well as commercially the Jews of Newport were highly respected. In 1761 the town possessed a Hebrew club. The congregation prospered; and in 1760 Isaac Touro came from Jamaica to become its minister, occupying the position till the outbreak of the Revolution. During all this time worship was held in private houses. In 1762, however, there being between 60 and 70 members,

To the Hebrew Congregation in Newport
Rhode Island.

Gentlemen.

While I receive, with much satisfaction, your Addreſs replete with expreſsions of affection and esteem; I rejoice in the opportunity of aſsuring you, that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to Newport, from all claſses of Citizens.

The reflection on the days of difficulty and danger which are paſt is rendered the more sweet, from a consciousneſs that they are succeeded by days of uncommon prosperity and security. If we have wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good Government, to become a great and a happy people.

The Citizens of the United States of America have a right to applaud themselves for having given to Mankind examples of an enlarged and liberal policy: a policy worthy of imitation. All profeſs alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of, as if it was by the indulgence of one claſs of people, that another enjoyed the exercise of their inherent natural rights. For happily

the

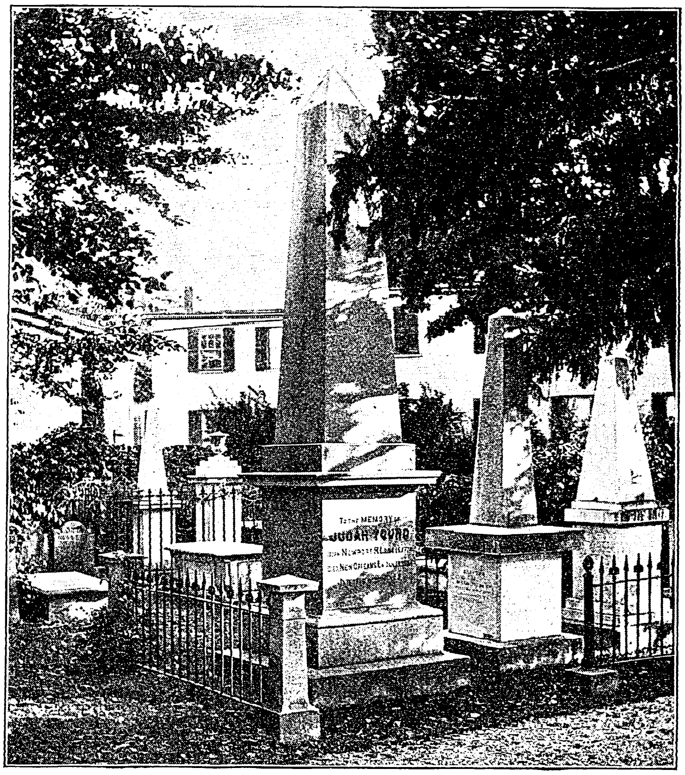
the Government of the United States, which gives to bigotry no sanction, to persecution no aſsistance requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support.

It would be inconsistent with the frankneſs of my character not to avow that I am pleased with your favorable opinion of my Administration, and fervent wishes for my felicity. May the Children of the Stock of Abraham, who dwell in this land, continue to merit and enjoy the good will of the other Inhabitants; while every one shall sit in safety under his own vine and figtree, and there shall be none to make him afraid. May the father of all mercies scatter light and not darkneſs in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy.

G. Washington

the erection of a synagogue was commenced; and the building was completed and dedicated in the following year; it is still standing. There is evidence that the Jewish population of Newport, even before the Revolution, contained considerable German and Polish elements. According to Tuckerman, the city numbered shortly before the outbreak of hostilities 1,175 Jews, while more than 300 worshipers attended the synagogue. The cemetery immortalized by Longfellow and Emma Lazarus was acquired by Mordecai Campannal and Moses Packeckoe in 1677, though it is possible that an earlier Jewish cemetery existed.

Newport in colonial times attracted many Jewish rabbis from all parts of the world. Several of the names of these are to be found in Ezra Stiles's diary. He mentions meeting one from Palestine as early as 1759, two from Poland in 1772 and 1773 respectively (the latter of whom preached in Dutch), a Rabbi Bosquila from Smyrna, a Rabbi Cohen from Jerusalem, and Rabbi Raphael Hayyim Isaac Carregal from Hebron, who preached at Newport in Spanish in 1773 and became Stiles's intimate friend.



Part of the Old Jewish Cemetery at Newport.
(From a photograph.)

Effect of the Revolution.

The Revolution ended Newport's commercial prosperity. The city was taken by the British; and the Jews (who had espoused the patriot cause) lost the greater part of their property, particularly their ships, which were at once taken by the enemy. Immediately upon the British occupation the synagogue was closed, the rabbi going to Jamaica, and the majority of its foremost members, including Lopez, removing to Leicester, Mass., where they remained until 1782. At Leicester these Newport Jews at once rose to the highest rank of the community, and a most appreciative account of their stay in that town is to be found in Emory Washburn's "History of Leicester."

When the war was practically over, many of the Leicester colony set out for their former home. Aaron Lopez was drowned on the way, but was buried in the old cemetery. The General Assembly of the State of Rhode Island when it convened for the first time after the evacuation of Newport met in the historic synagogue (Sept., 1780). The edifice was at length reopened for worship, and services continued until about 1791. In 1790 the congregation formally addressed President Washington. The reply is still preserved and is reproduced here by courtesy of the owner, Mr. Frederick Phillips of New York.

New York had now become the great commercial center; and the important Newport merchants left one by one for that city or for others which offered greater opportunities, namely, Philadelphia, Charleston, and Savannah. The number of Jews at Newport steadily decreased, until Moses Lopez, nephew of Aaron, was the only one remaining. He, too, ultimately left for New York, where he died in 1830. One of the last of this important colony was Moses Seixas, who for many years was cashier of the Bank of Rhode Island.

The synagogue was closed soon after 1791, and was not reopened for about sixty years. It can not be said that during the interval Newport had a Jewish community. The city was, it is true, repeatedly visited by Jews; and sentiment caused the descendants of many of the original families to direct their remains to be interred in the old cemetery. Jewish tombstones show interments during the entire period down to 1855. Generally speaking, only such occasions brought Jews to Newport.

The sons of the former minister did much for preserving Jewish places of interest. Abraham Touro (d. in Boston 1822) bequeathed a fund for perpetually keeping the synagogue in repair, and made provisions for the care of the burial-ground.

In 1843 Judah Touro of New Orleans replaced the old cemetery wall by a massive one of stone, with an imposing granite gateway; and, at his own request, he himself was buried in the cemetery. The street on which the synagogue is situated is known as Touro street. The city possesses also a park known as "Touro Park." In 1850 the synagogue was reopened on a single occasion, when Dr. M. J. Raphall delivered a discourse there. Though the Touro fund provided for the support of the minister also, the synagogue remained closed until 1883, when the Rev. A. P. Mendes, on appointment by the Congregation Shearith Israel of New York, became its minister. He conducted its services until his death in 1891. Both synagogue and cemetery are now the property of the New York congregation, and the courts after litigation have sustained its title thereto.

Existing Congregation.

It was only after 1880 that Jews began to resettle in Newport, most of these being of German, Polish, or Russian origin. A congregation was organized which adopted the ancient name "Jeshuat Israel" (May 28, 1893), and was incorporated by the legislature of Rhode Island in 1894, the trustees of the Shearith Israel Congregation of New York acting as its trustees. The first president was Eugene Schreier (who also represents the interests of Shearith Israel at Newport). The ritual is Sephardic. Among the ministers since 1891 have been the Rev. Henry S. Morais, who was succeeded by Rev. Jacob M. Seidel, the present (1904) incumbent. The only existing Jewish organizations are the Moses Seixas Lodge of the Independent Order Free Sons of Israel, and the Israel J. Josephson Lodge of the Independent Order Berith Abraham.

A military organization of Jewish young men, known as the "Touro Cadets," was organized in 1897, and offered its services during the Spanish-American war. The present Jewish population of Newport according to Schreier is about 200 souls.

NEXT OF KIN. See Agnates; Family and Family Life; Inheritance.

NEYAR, SEFER HA-: Anonymous compendium of laws; compiled during the first third of the fourteenth century, after 1319, probably by a Provençal. It consists mainly of extracts from the works of French scholars, although the "Halakot Gedolot" and Maimonides' "Mishneh Torah" were consulted. A work of Baruch b. Ḥayyim b. Menahem of ניאורייש (probably Niort in the department of Deux-Sèvres, France), a pupil of Isaac of Corbeil, served as the basis for the "Neyar." The collection includes many legal decisions and extracts from the tosefta which are otherwise well known, especially those of Simon of Sens. Historical narratives of real interest are also to be found in this work.

The "Neyar" was almost wholly unknown to scholars of the Middle Ages as well as to those of more recent times. Joseph b. Solomon Colon and Azulai probably are the only ones who knew the book; De Rossi owned a manuscript of the "Neyar" (De Rossi MSS., No. 400); another is in the library of the Jews' College in London. The "Neyar ha-Keneset," which Mordecai Finzi, an Italian of the fifteenth century, mentions (Steinschneider, in Michael's "Oẓerot Ḥayyim"), is to be distinguished from the "Sefer ha-Neyar"; it contained lists like those found to-day only in Russian synagogues, in which are noted the memorable days in the calendar —Jewish, Christian, and other.

NEYMARCK, ALFRED: French economist and statistician; born at Châlons-sur-Marne Jan. 3, 1848. He was editor of the "Revue Contemporaine" in 1868-69, and in 1869 founded "Le Rentier," an economic and financial paper which he still (1904) manages. In 1889 Neymarck was made laureate of the Statistical Society of Paris, and he was the first to whom the Prix Bourdin was awarded. In 1891 he was appointed laureate of the Académie des Sciences Morales et Politiques, receiving the Prix Wolowski. He became successively Officier d'Académie (1882), Chevalier (1885) and Officer of the Legion of Honor (1894), and Officier de l'Instruction Publique (1889). In 1900 he was elected vice-president of the International Congress of Societies for Lawsuits and of the International Congress for Landed Property.

The principal works of Neymarck are: "Aperçus Financiers" (2 vols., 1868-73); "Colbert et Son Temps" (2 vols., 1877); "Turgot et Ses Doctrines" (2 vols., 1885); "Un Centenaire Economique, 1789-1889" (1889); "Vocabulaire Manuel d'Economie Politique" (1898); "Finances Contemporaines" (2 vols., 1903). Neymarck is a member of the Jewish Consistory of Paris.

S. J. Ka.

NEZHIN (NYEZHIN): Russian town, in the government of Chernigov; one of the centers of the tobacco-trade. In 1648 Nezhin was taken by the Cossacks, and its Polish and Jewish inhabitants were put to the sword. On July 20, 1881, an anti-Jewish riot broke out there and continued through July 21 and 22; most of the Jewish houses were destroyed. The military, which was called to suppress the riot, twice used their arms against the mob, killing ten of the rioters. The manufacture of various tobacco-products, which formerly gave employment to many Jews who worked in small shops, is no longer carried on there on account of the new system of collecting tobacco-duties, which favors the concentration of the tobacco industry in the hands of the greater manufacturers. The Jewish artisans number (census of 1898) 980. The Talmud Torah has 98 pupils; the three Jewish private schools, 59; and the thirty ḥadarim, about 350. The general schools (boys' and girls' classical gymnasiums, etc.) give instruction to 142 Jewish pupils. The charitable institutions include a dispensary and a biḳḳur ḥolim. Since 1895 the town has had a Jewish loan and savings association. The census of 1897 gives Nezhin a population of 32,108, about one-third of whom are Jews.

H. R. S. J.

NEZIḲIN ("Injuries"): Order of the Mishnah and the Tosefta, in both the Babylonian and the Jerusalem Talmud. The name "Neziḳin," which occurs in the Talmud itself (Ber. 20a; Ta'an. 24a, b), is applied to this order because several of the treatises belonging to it deal with injuries and claims for damages. With reference to Shab. 31a it is also called "Yeshu'ot" (Num. R. xiii.; Maḥzor Vitry, ed. Hurwitz, p. 461, Berlin, 1891). The order stands fourth in the Mishnah (Shab. 31a) and is divided into ten treatises, containing seventy-three chapters in all. The ten treatises are as follows: Baba Ḳamma, Baba Meẓi'a, Baba Batra, Sanhedrin, Makkot, Shebu'ot, 'Eduyot, 'Abodah Zarah, Abot, and Horayot. On the contents and sequence of these treatises, on their original division, as well as on the variation in sequence of the mishnaic orders according to which Neziḳin stands sixth, see MISHNAH. The treatise Abot is not in the Tosefta, and there is no gemara to it nor to the treatise 'Eduyot, neither is there a Palestinian gemara to the third chapter of the treatise Makkot.

NIBHAZ: One of the deities worshiped by the Avites (II Kings xvii. 31), who had been imported into the country about Samaria after the fall of that city before Sargon II. in 722 B.C. The Avites worshiped Nibhaz and Tartak, both of which deities are unknown either in the pantheon of the West or the East. Some Hebrew manuscripts read "Nibhan"; and there are several variants in the Greek, none of which, however, gives any clue to the identification of this god.

W. B. I. M. P.

NICANOR: Son of Patroclus, and general and friend of Antiochus Epiphanes, who in 165 B.C. sent him and GORGIAS with an army against the Jews (I Macc. iii. 38; II Macc. viii. 9). In anticipation of an easy victory, he had brought 1,000 slave-dealers into the camp, to whom he intended to sell the captive Jews; but when Gorgias was defeated by Judas Maccabeus, Nicanor was obliged to flee in disguise to Antioch (II Macc. viii. 34-36). He is identical with the Nicanor whom Josephus ("Ant." xii. 5, § 5) calls governor of Samaria. He may also be the Nicanor who was master of the elephants (II Macc. xiv. 12) and who was sent four years later by King Demetrius I. against the Jews, whom he is said to have hated (I Macc. vii. 26).

The battles of this Nicanor are related differently in the three sources, I and II Maccabees and Josephus. Although there is complete agreement in the statement that Nicanor approached Judas in a friendly way, he, according to I Macc. vii. 27, sought thereby to vanquish his opponent by treachery, whereas, according to II Macc. xiv. 28, he marched against Judas unwillingly and only at the king's command. The latter passage gives a detailed account of his threat to destroy Jerusalem and to turn the sanctuary into a temple of Dionysus unless Judas were delivered to him by the priests, who declared under oath, however, that they were ignorant of his hiding-place (comp. I. Macc. vii. 33-38). According to II Macc. xiv. 17, Nicanor also joined battle with Simon, the brother of Judas, but this whole narrative (*ib.* xiv. 12-30) seems unhistorical except for the statement that he was defeated at Capharsalama by Judas (I Macc. vii. 32). The contrary assertion of Josephus ("Ant." xii. 10, § 4), that Judas was defeated at Capharsalama and fled to the castle at Jerusalem, is shown to be incorrect by the mere fact that the citadel was then in possession of the Syrians, and could not, therefore, have served as a refuge for the Jews.

With new reenforcements from Syria, Nicanor advanced from Jerusalem upon Beth-horon, while Judas encamped opposite him at Adasa. There a decisive battle was fought on the 13th of Adar, 161, in which Nicanor was totally defeated; he himself was slain and every man in his army was killed. In celebration of this complete victory the Jews instituted the 13th of Adar as a holiday (I Macc. vii. 39-50; II Macc. xv. 1-36; Josephus, *l.c.* xii. 10, § 5). With this important event the author of II Maccabees closes his book.

"Nicanor Day" is also mentioned in the rabbinical sources (Meg. Ta'an. xii.; Ta'an. 18b; Yer. Ta'an. ii. 13 *et seq.*, 66a), which give an amplified and highly colored account of the mutilation of Nicanor's body; this is likewise mentioned in both books of the Maccabees, but not in Josephus. According to II Macc. xv. 36, Nicanor Day is one day before Mordecai Day, or Purim. Since this day was the fast-day of Esther, and therefore the direct opposite of a feast-day, the Palestinian teachers effected a compromise by placing the fast-day of Esther after Purim, while Nicanor Day was celebrated as appointed (Soferim 17). There is no trace of its celebration later than the seventh century.

Later rabbinical sources are very confused in regard to Nicanor. According to the "Megillat Antiochus" (in Jellinek, "B. H." v.), he was slain by Johanan, the son of Mattathias. The Hebrew "Yosippon" (ch. xxiv.) confuses the general Nicanor with the alabarch Nicanor, after whom a gate of Jerusalem was named.

NICANOR'S GATE. See JERUSALEM.

NICARAGUA. See SOUTH AND CENTRAL AMERICA.

NICE: City of southern France. Jews settled there in the fourth century, and, as in the other Gallic cities along the coast of the Mediterranean, were the intermediaries in the commercial transactions between the Levant and Gaul. The statutes of Nice, enacted in 1341, obliged the Jews to wear a badge under penalty, in case of disobedience, of forfeiting one-half of their garments to the informer, and the other half to the city council. In 1430 Duke Amédée, while still obliging them to wear their distinctive badge, granted them permission to become money-lenders and pawnbrokers on payment of an annual tribute ("garda Judeorum") of a silver mark. In 1613 the Jews of Nice gave 2,000 ducats, and in 1614 400 additional, to Duke Emanuel I., who exempted them from all extraordinary taxation. Special privileges were decreed to foreign Jews in 1650 and 1673; they were authorized to engage in commerce without molestation in the cities of Nice and Villefranche. For twenty-five years they enjoyed entire liberty in the practise of their religion; and it was forbidden to arrest them on their Sabbath or on festival days. In 1658 the Senate placed the Jews of Nice on an equal footing with those of Turin, but without allowing them a special slaughter-house. It permitted them to own houses for their personal use, and to employ Christians provided the latter, with the exception of nurses during the eight days following childbirth, did not actually lodge with them. It forbade them, however, to devote themselves to the study of medicine or jurisprudence, at least, as far as medicine was concerned, without ecclesiastical sanction.

In the Seventeenth Century.

In 1750 Jews were permitted to discard the badge, and in 1777 a royal decree authorized David Moses, a Jew, to build a silk-factory near the harbor. Similar favors were granted to individual Jews by the Senate on various occasions in the latter half of the eighteenth century; and as a result of a series of disorders which occurred at a Jewish funeral the Senate forbade, under penalty of fine and imprisonment, the disturbance of the Jews at their religious ceremonies. In 1789 it acceded to the petition of the Jews to be released from the obligation of kneeling when taking oaths, and permitted them to remain standing with the head covered. The community of Nice was represented in the General Assembly of Notables at Paris by Isaac Samuel Avigdor, one of the secretaries of the Assembly, and in the Grand Sanhedrin by J. L. Avigdor.

Ghetto.

The ghetto of Nice was assigned to the Jews by Duke Amédée in 1430. A decree of the Senate in 1733 obliged the Jews to rent jointly all the houses in the ghetto, with the privilege of assigning them to the different families according to their requirements. In 1750 they were licensed to extend the ghetto by purchasing land for the erection of dwelling and business houses. Permission was also granted them to go out at night in order to attend to their business affairs; but from sunset to sunrise they were forbidden to follow the trade of huckster, to take articles in pawn, or in any way to traffic in gold or silver. During Holy Week, except during the hours of religious services, they were permitted to leave the ghetto on business, and to buy and sell with their shops half closed.

From 1658 the Jews of Nice maintained but one synagogue, which, with the cemetery, was situated in the quarter of Limpia, near the city walls. The present synagogue, dedicated in 1886, is in the Rue Deloye.

Among the native scholars of Nice may be cited: Mordecai ריצלן; Raphael בלין; Judah and Moses of Nice; Mordecai ben Israel Nizza; Eleazar Ḥayyim Nizza, who was rabbi of Padua about the year 1600; his son Isaiah, who settled in Venice in the seventeenth century; and Solomon ben Isaiah Nizza, author of various elegies and liturgical poems.

The Jews of Nice, who in 1808 numbered 303, now (1904) number in a total population of 93,760 about 500.

NICHOLAS I., II. See Russia.

NICHOLAS III., IV., V. See Popes.

NICHOLAS OF DAMASCUS (NICOLAUS DAMASCENUS): Greek historian and philosopher; friend of King Herod the Great; born at Damascus, where his father, Antipater, filled high offices and was greatly respected (Suidas, *s.v.* Ἀντίπατρος); died at Rome. Being the heir to his father's honors and wealth, Nicholas was not obliged to take service under any prince, and since he was a philosopher he did not attach great value to money. It is difficult, therefore, to see how he came to take up his residence at Herod's court. It was not love of Judaism, for he remained faithful to the Aristotelian philosophy; and it is evident from his works that he did not embrace the Jewish faith, although he may have been among the so-called "proselytes of the gate." He lived nearly twenty years at Jerusalem, but did not found a family there, which is a further proof that he did not become a Jew. He had a brother named Ptolemy, who may be identical with Ptolemy, the procurator and friend of Herod (Josephus, "Ant." xiv. 14, § 3, *et passim*).

Relation to Herod.

It appears from allusions in the autobiography of Nicholas that his intercourse with Herod was occasioned by the latter's amateur studies in philosophy, rhetoric, and politics, in which the philosopher of the neighboring city of Damascus was peculiarly fitted to assist him. When the king discovered his new friend's talents, he encouraged him to write a history; and the toil which Nicholas devoted to the study of antiquity was said to have surpassed even the labors of Hercules. He accompanied Herod on the latter's journey to Rome, during which they were constantly philosophizing ("Historici Græci Minores," ed. Dindorf, i. 140). Nicholas was, therefore, in a certain sense the teacher of Herod; but he was also his friend and faithful adviser. In 14 B.C. he accompanied the king to Asia Minor to visit M. Agrippa, who had been requested by the Ionians to deprive the Jews of their privileges, but the plea of Nicholas was so successful that their ancient rights were not curtailed (Josephus, *l.c.* xii. 3, § 2). His reference to the Sabbath, on this occasion, as "our" holiday (*ib.* xvi. 2, § 3), merely shows his interest in the case, and does not imply that he was a Jew. When Herod incurred the disfavor of Augustus by a campaign against the Arabians, he sent Nicholas to Rome (7 B.C.). The philosopher succeeded not only in rehabilitating Herod with the emperor, but also in having his accusers punished (*ib.* xvi. 10, §§ 8–9). Nicholas proved himself a still more valuable friend to Herod in his domestic difficulties with his children. Alexander, Aristobulus, and Antipater would not have been executed if the king had followed the advice of Nicholas, who said correctly that these executions would be the beginning of the misfortunes of the house of Herod (Autobiography in "Historici Græci Minores," i. 141).

Nicholas and Archelaus.

Nicholas was about sixty years of age at the time of Herod's death (4 B.C.), when he became the faithful adviser of Herod's son and successor, Archelaus. His statement that the disorders which then broke out were an uprising of the Jewish people against the Herodians and the "Greeks," and that Hellenism triumphed (*νικᾷ τὸ Ἑλληνικόν*, *ib.* p. 143), characterizes him as a complete pagan. He went with Archelaus to Rome to defend the latter's rights against his own brothers and against the Jewish party; and he succeeded in securing for his patron one-half of the kingdom, advising him to give up the Greek cities which were anxious to shake off Jewish control, and to be content with the rest of the country (*ib.*). It is expressly stated (*ib.*) that Emperor Augustus held him in high esteem; and there is also a story to the effect that Nicholas, knowing that the emperor was fond of fine dates, kept him supplied with a variety which grows especially well in Palestine, whence the emperor called this kind "Nicholas dates" (Athenæus, xiv. 652 A). This name has remained, the Mishnah and Talmud also referring to this variety of dates as "nikalwasin" ('Ab. Zarah i. 5). Nicholas seems to have lived in Rome after this time, dying there at about the age of seventy.

His Works.

The reputation of Nicholas rests upon his works. Neither the tragedies and comedies which he is said to have written (Suidas, *s.v.* *Νικόλαος*) nor his philosophical works have been preserved; but there are considerable fragments of his historical works, which are very important since they were used by Josephus. These works are as follows:

Nicholas and Josephus.

(1) A large historical work in 144 books (Athenæus, vi. 249), of which Suidas mentions, probably incorrectly, only eighty. The extant fragments belong to the first seven books and deal with the history of the Assyrians, Medes, Greeks, Lydians, and Persians, being important also for Biblical history. Beginning with book xcvi., there are further fragments in Athenæus and Josephus. It appears from the quotations in Josephus that books cxxiii. and cxxiv. dealt with the defense of the Jews before Agrippa. The history of Herod, which Josephus recounts in detail in his "Antiquities" (xv.–xvii.), is doubtless based on the work of Nicholas; for where Nicholas stops, during the reign of Archelaus, Josephus also curtails his narrative. Detailed proof of the dependence of Josephus on Nicholas is due especially to A. Büchler, according to whom Josephus did not himself read the works of the other authorities which he so frequently quotes, but took what he found in Nicholas; and in like manner the stereotyped formulas which Josephus uses in referring to other portions of his own work are the same as those which are employed by Nicholas for a similar purpose. Josephus took Nicholas as his source not only for the history relating to Herod, but also for his account of the Hasmoneans; he likewise quoted Nicholas in dealing with the history of antiquity (*l.c.* i. 3, §§ 6, 9; 7, § 2), though this does not imply that Nicholas wrote a history of the ancient Hebrews; the fragment relating to Abraham, for example, is taken rather from a history of Damascus, a detailed history of which Nicholas as a Damascene must certainly have written. Josephus criticizes the work of Nicholas very severely. He reproaches him for his flattery of Herod in tracing the descent of his father, Antipater, from the most noble Jewish stock, whereas, as a matter of fact, Antipater was an Idumean and Herod had become king by chance ("Ant." xiv. 1, § 3). He likewise reproaches Nicholas for having suppressed the fact that Herod pillaged the ancient royal tombs, and for having concealed everything else that might bring dishonor upon his king, while he exaggerated Herod's good deeds; indeed, he declares that the history was written solely to glorify that monarch and not to benefit others (*ib.* xvi. 7, § 1).

(2) A biography of Augustus, of which two fragments of some length are extant, dealing with the story of the youth of Octavianus and with Cæsar's assassination. (3) A kind of autobiography, the fragments of which treat for the most part of Jewish history, since Nicholas narrates the events at the court of King Herod, in which he himself played an important part. (4) An account, in disconnected sentences, of curious customs and observances of different peoples; the Jews are not referred to in the extant fragments.

Nicholas is perhaps also the author of the pseudo-Aristotelian work "De Plantis."

BIBLIOGRAPHY: The best collections of the fragments of Nicholas are those by C. Müller, *Fragmenta Historicorum Græcorum*, iii. 343–464, iv. 661–668, Paris, 1849, and by L. Dindorf, *Historici Græci Minores*, i. 1–153; some fragments are also found in Th. Reinach, *Textes d'Auteurs Grecs et Romains*, i. 78–87, Paris, 1895. Grätz, *Gesch.* 4th ed., iii. 328, and Patsch, in *Wiener Studien für Classische Philologie*, 1890, xii. 231–239, show that Nicholas was no Jew. On the relation of Josephus to Nicholas see A. Büchler in *J. Q. R.* ix. 325–339; and on the entire bibliography, Schürer, *Gesch.* 3d ed., i. 50–57; *Prosopographia Imperii Romani*, ii. 405, No. 65, and (on Ptolemy) iii. 105, No. 762.

G. S. KR.

NICODEMUS: Prominent member of the Sanhedrin, and a man of wealth; lived in Jerusalem in the first century C.E. He is mentioned in John iii. 1–21, vii. 50, xix. 39. In the first of these passages he is represented as "a ruler of the Jews" who learned from Jesus what "rebirth by baptism" meant, as if that rabbinical term had been altogether unknown to him (but see BAPTISM and BIRTH, NEW). The second passage records how he made his visit to Jesus by night, in order that he might not be known as one of the latter's disciples. In the third passage he and JOSEPH OF ARIMATHÆA are described as having taken charge of the body of Jesus in order to give it decent burial. That the man brought into such prominence in the fourth Gospel must have been a well-known figure of Jewish society at the time is evident. In all probability he is identical with the Talmudical Nicodemus ben Gorion, a popular saint noted for his miraculous powers; and this would explain also the reference to "heavenly things" in Jesus' arguments with him (John iii. 12).

The apocalyptic Gospel of Nicodemus, which gives an account of Jesus before Pilate and the Sanhedrin, as well as of his death and resurrection, belongs to the third century, while the oldest extant manuscript of it dates from the twelfth.

BIBLIOGRAPHY: Dobschütz, *Christusbilder*, in *Texte und Untersuchungen*, pp. 280-292, Berlin, 1899; Hastings, *Dict. Bible*, iii. 543-545.

S. O.—K.

NICODEMUS (NAKDIMON) BEN GORION: Lived at Jerusalem in the first century C.E.; the wealthiest and most respected member of the peace party during the revolution in the reign of Vespasian. Ta'anit 19b relates that during a pilgrimage he engaged twelve cisterns for the people and promised their owner twelve hundred talents of silver for them. It is supposed that his original name was Buna and that his name of Nicodemus was the result of a pun (*ib.* 21a). In the war against Titus he, like his two friends Kalba Sabbua' and Ben Ẓiẓit, took the part of the Romans and influenced Bar Giora against the Zealots, who therefore burned the immense quantities of provisions which the three friends had accumulated (see Giṭ. 56a).

NICOLAUS DE CUSA. See CUSA, NICOLAUS DE.

NICOPOLIS (Bulgarian, **Nikopol**): City of Bulgaria, situated on the right bank of the Danube, 160 kilometers southeast of Widdin. The settlement of Jews in Nicopolis was most likely contemporaneous with the foundation of the city by the emperor Trajan (98). In the year 811 Jews formed a portion of the 30,000 prisoners taken in Thessaly by Krum, the Czar of Bulgaria (see BULGARIA). In 967 many Byzantine Jews settled in Nicopolis (see responsa of Solomon Abr. Cohen, Leghorn, 1592), as did a large number of Jewish merchants from Ragusa, Venice, and Genoa when the two brothers Assen and Peter reestablished the empire of Bulgaria in 1189, and entered into commercial relations with those cities (Ubicini, "Provinces Danubiennes").

Early History.

In 1367 the Czar of Bulgaria, Ivan Sisman, who, according to legend, was the son of Queen Theodora, a converted Jewess, granted an asylum at Nicopolis to the Jews driven from Hungary by King Ludovic I. It is thought that at the death of Ivan Sisman, a year after the fall of the Bulgarian empire, all the Jews of Tirnova were driven thence and took refuge at Nicopolis (1368). Since that period Tirnova has not been inhabited by Jews ("Anuar Pentru Israeliti," 1888).

When Mohammed the Conqueror took Nicopolis he found there a Jewish community which was very flourishing from a commercial standpoint. It contained Byzantine, Italian, and Ashkenazic Jews, who sympathized with the conquerors, many voluntarily entering the ranks of the non-Mussulman legion called "Gharibah."

Under Mussulman Rule.

Nicopolis received a large quota of the Jews expelled from Spain in 1492 (see responsa of Joseph Caro, "Abḳat Rokel," *passim*). At this time the chief rabbi of the community was Ḥayyim ben Albalgri (or Al-Bulgari = "the Bulgarian"?). He was succeeded at his death by Ephraim Caro of Toledo, father of the well-known Joseph Caro. Later Joseph Caro himself filled the same office. One of the successors of Caro was Judah Bembassat (1547), a noted Talmudic scholar in his day.

In 1547 a rich and pious Jew of Nicopolis died at Salonica, and left by will a legacy of 30,000 aspers to be disbursed by his son for the benefit of the community of his native city.

The period from 1595 to 1598 was a stormy one for the Nicopolis Jews. The Turks, led by Sinan Pasha, and the Wallachians, with Prince Michael at their head, contended for the possession of the town, which finally fell into the hands of the Turks. Isaac Vega, a chronicler of the time and an eyewitness of these events, relates that during the bombardment and the conflagrations the dwellings of the Jews were destroyed, and that they witnessed the destruction of their valuable library ("Bayit Ne'eman," preface by Isaac Vega, Venice, 1621).

In 1559 the community of Nicopolis erected three buildings: a synagogue, a school, and an asylum for the poor. The most noted Jewish family in the city at that time was that of Ben Sanje (Sanche), over three of whose members Isaac Vega delivered funeral orations, found in "Bayit Ne'eman." Vega officiated as chief rabbi in the early part of the seventeenth century. His successor was Reuben Ḥadidah (*c.* 1660). In the nineteenth century Raphael Gabriel Almosnino was chief rabbi of Nicopolis from 1840 to 1864, having previously been chief rabbi of Sofia and Bulgaria.

Relics of Nicopolis.

But three Jewish relics in Nicopolis can be mentioned, all connected with the name of Joseph Caro, whose memory is still venerated in the city. The first of these is the bath where he performed his ablutions. Near the bath a garden now occupies the site of Caro's habitation. The second relic is a superb parchment copy of the Law, written by Caro himself, which after various fortunes was presented to the Jews of Branta, Rumania, where it is still preserved. The third of these remains is Joseph Caro's hall for prayer and study, known as "Midrash Maran." Repeatedly destroyed in the several bombardments of the city, and as often rebuilt, it was in ruins in 1888. Thanks to the munificence of the Prince of Bulgaria, Ferdinand of Saxe-Coburg-Gotha, who visited Nicopolis at that period, the hall has been rebuilt again.

The ancient Jewish community of Nicopolis has fallen from its former estate. There are now (1904) but 189 Jews in a total population of 5,238. Some are grain-merchants; others, dealers in cotton goods and calicoes. The rabbinical school has disappeared; and there is at present only a small mixed primary school containing 43 pupils. There are, however, a handsome synagogue and a ḥebra ḳaddisha.

Bibliography: Ubicini, *Provinces Danubiennes*; Isaac Vega, *Bayit Ne'eman*, Venice, 1621; Walden, *Shem ha-Gedolim he-Ḥadash*.

D. M. Fr.

NIDDAH ("Menstruous Woman"): A treatise in the Mishnah, Tosefta, and both Talmuds. In the Mishnah it stands seventh in the order Ṭohorot, but in the editions of the Talmud first, and is divided into ten chapters, containing seventy-nine paragraphs in all. The Pentateuchal code (Lev. xv. 19 *et seq.*) ordains that a menstruous woman shall be unclean for seven days from the beginning of the period, whether it lasts only one day or all seven. In either case she is unclean for seven days only, but during this time her defilement is communicated to every object with which she comes in contact.

State of Uncleanness.

These laws, however, have been extended in many ways and made more onerous, both by rabbinical traditions and interpretations and by customs which have been adopted by Jewish women themselves. According to these more rigid requirements, the woman must reckon seven days after the termination of the period. If, then, this lasts seven days, she can not become pure until the fifteenth day. Purification, furthermore, can be gained only by a ritual bath ("miḳweh"); and until the woman has taken this she remains unclean according to the interpretation of R. Akiba (Shab. 64b), which was accepted by the Rabbis generally. In addition to all this, a woman who does not menstruate regularly is unclean for a certain time before she becomes aware that the period has begun, and objects which she touches are defiled, since there is danger that the menses may have begun a short time before and that she may not have perceived the fact. The treatise Niddah is devoted chiefly to a more accurate determination of these regulations and to the rules concerning a woman in childbirth (Lev. xii.).

Ch. i.: Women whose uncleanness is reckoned only from the time of the first appearance of the menses, and the period of retroaction in ritual impurity of this beginning in the case of other women.

Ch. ii.: The examination to determine whether the period has begun, and the different colors of the discharge which are considered unclean.

Influence of Childbirth.

Ch. iii.: Concerning a woman in childbirth. The Pentateuchal code contains different regulations according to whether the woman bears a male child or a female child (Lev. xii.). In this chapter rules are given for various cases in which the sex of the child can not be determined, as in the birth of a hermaphrodite or in miscarriages and premature deliveries generally; the view of the ancients is also given regarding the time at which the sex of the embryo can be distinguished.

Ch. iv.: Rules concerning the daughters of the Cutheans, the Sadducees, and the Gentiles in regard to menstrual uncleanness; further details regarding a woman in childbirth.

Ch. v.: Concerning a child delivered by the Cæsarean section; the several periods of life, and the regulations which govern them; the signs of puberty in both sexes, and the time of their appearance.

Ch. vi.: Further details on the signs of puberty in the female; in the discussion of this subject a sentence of which the converse is not true suggests a number of other statements on the most diverse topics which are not true conversely, such as "He who can be a judge can be a witness; but many a man who is accepted as a witness is not empowered to be a judge."

Ch. vii.: Regulations concerning the impurity of menstrual blood and other impurities; matters in which the Cutheans are believed.

Ch. viii.–x.: Of spots of blood, and the method of determining whether spots are caused by blood or by other coloring matter; the symptoms of the appearance of the menses; concerning the corpse of a menstruous woman.

The Tosefta.

The Tosefta to this treatise, which is divided into nine chapters, contains much which serves to explain the Mishnah as well as many other important and interesting passages. Especially noteworthy are the sections which treat of the formation of the embryo (iv.), and those which discuss changes in manners and customs.

The Gemara to the Babylonian Talmud discusses and explains the individual sentences of the Mishnah, and also contains a mass of legends, aphorisms, and other haggadic interpretations and maxims, of which the following may serve as illustrations: "An angel appointed for the purpose takes the germ from which a human being is to be born, presents it to God, and asks: 'Lord of the world, what manner of man shall be born of this germ, strong or weak, wise or foolish, rich or poor?' but he does not ask whether he shall be righteous or unrighteous, for that depends wholly on the will of the man" (16b). "The happiest time for man is while he is in the womb, for he is instructed in the entire Torah; but when he is about to go forth into the world, the angel smites him on the mouth and causes him to forget all he has learned. He is then adjured: 'Be thou holy in thy life and not unholy; for know that God is pure, His ministers are pure, and the soul which is breathed into thee is pure. If thou keepest it in purity, it is well; but otherwise it shall be taken from thee'" (30b).

Particularly noteworthy are the ingenious explanations by R. Simeon b. Yoḥai of several laws of the Torah (31b). Only the first three chapters of the Palestinian Gemara are now extant, although the tosafists possessed it for the entire treatise.

NIDDIN. See Excommunication.

NIEBLA (originally **Ilipa, Libla**): One of the oldest towns of Spain, situated 12 miles west of Seville and to the east of Huelva. It was one of the earliest Jewish settlements in Spain, having been inhabited by Jews in the days of the Visigoths. When Alfonso VI. took Niebla from the Moors, he left it in care of the Jews who lived there. The town was conquered by Alfonso X. of Castile in 1257, after the insurrection under the emir Ibn Maḥfuẓ; but the conqueror generously presented Ibn Maḥfuẓ with a part of the taxes of the Juderia. Jews remained in Niebla and in the neighboring Mogüer until the expulsion. Between Niebla, which in medieval times had a very important slave-market, and the neighboring Mogüer lived about fifty Jewish families which belonged to the congregation of Niebla. The ancient synagogue in Niebla was transformed into a church which still (1904) exists.

NIEDERLÄNDER, ABRAHAM BEN EPHRAIM (known also as **Abraham Schreiber**): Austrian mathematician of the sixteenth century; scribe of R. Judah Löw ben Bezaleel (MaHaRaL) of Prague. He was the author of a mathematical work entitled "Berit Abraham" (Prague, 1609), which was based for the most part on Elijah Mizraḥi's works, although non-Jewish writings also were drawn upon. The book is divided into five sections and comprises a collection of problems under the title "Mozne Ẓedeḳ."

David Nieto.

NIEROP, AHASVERUS SAMUEL VAN: Dutch jurist; born at Hoorn Jan. 24, 1813; died at Amsterdam May 15, 1878. He studied law at the Amsterdam Athenæum, took the degree of doctor of laws at Leyden in 1839, established himself as a lawyer at Amsterdam, and soon became one of the most famous Dutch attorneys of his time. In 1851 he was elected member of Parliament ("Tweede Kamer der Staten Generaal"), but failed to secure reelection in 1853. In 1864 he was elected in two districts, Hoorn and Haarlem, accepted for the latter, but again failed after the dissolution of the Parliament in 1866. In 1870 he was elected member of the Municipal Council and of the States of the Province.

Nierop was president of the Centrale Commissie and of the Permanente Commissie, in which capacity he did much for the Jews in Holland. He wrote a large number of articles in the "Weekblad voor het Recht" and in "Themis" on commercial law, and was also a contributor to the "Jaarboeken voor Israelieten in Nederland," signing his articles "N."

NIEROP, FREDERIK SALOMON VAN: Dutch economist; born at Amsterdam March 6, 1844. He took his degree as doctor of law at Leyden in 1866, established himself as a lawyer at Amsterdam, and in 1871 became director of the Amsterdamsche Bank. Since 1879 he has been member of the Municipal Council of Amsterdam. He has often been elected alderman of finance, but has refused to accept office. He was member of the States of North Holland from 1883 until 1899, when he was elected member of the Parliament ("Eerste Kamer der Staten-Generaal"). Since 1898 he has been president of the Centrale and the Permanente Commissie. The decoration of the Netherland Lion was conferred upon him in 1895.

NIETO, DAVID: Haham of the Sephardic community in London; born at Venice 1654; died in London Jan. 10, 1728. He first practised as a physician and officiated as a Jewish preacher at Leghorn, Italy. There he wrote in Italian a work entitled "Paschologia" (Cologne, 1702), in which he dealt with the differences of calculation in the calendars of the Greek, Roman, and Jewish churches, and demonstrated the errors which had crept into the calendar from the Council of Nice until 1692. In 1702 Nieto succeeded Solomon Ayllon as ecclesiastical chief of the Portuguese Jews in London; and two years after his settlement in that city he published his theological treatise, "Della Divina Providencia, ó sea Naturalezza Universal, ó Natura Naturante" (London, 1704). This work provoked much opposition against him; and it was used by his opponents as ground for accusing him openly of Spinozism, which at that period was equivalent to atheism. However, Ẓebi Ashkenazi, who was called in as arbitrator, decided in his favor (Ḥakam Ẓebi, Responsa, No. 18).

Nieto was a powerful controversialist. In his "Maṭṭeh Dan," or "Kuzari Ḥeleḳ Sheni" (London, 1714), written in Hebrew and Spanish on the model of the "Cuzari" of Judah ha-Levi, he defended the oral law against the Karaites, and showed that the contradictions of the Talmud lay not in essentials but in externals. He waged war untiringly on the supporters of the Shabbethaian heresies, which he regarded as dangerous to the best interests of Judaism, and in this connection wrote his "Esh Dat" (London, 1715) against Ḥayyun.

Nieto was one of the most accomplished Jews of his time and was equally distinguished as philosopher, physician, poet, mathematician, astronomer, and theologian. A prolific writer, his intercourse with Christian scholars was extensive, especially with Ungar, the bibliographer. Nieto was the first to fix the time for the beginning of Sabbath eve for the latitude of England.

J. G. L.

NIETO, ISAAC: Haham of the Portuguese congregation Sha'are Shamaim, Bevis Marks, London; born 1702; died at London 1774; son of David NIETO. He was officially appointed as "ḥakam ha-shalem" in 1733, but gave up the post in 1741 and went abroad. He returned in 1747 and took up the profession of notary. In 1751 the congregation requested him to accept the post of ab bet din, his colleagues being Isaac de Valle and Jacob Coronel. A few years afterward a violent dispute arose with regard to the titles of the members of the bet din and as to the relation of the members to one another. Nieto wrote a letter of resignation March 17, 1757, and on July 14 following he was prohibited from exercising the functions of assessor.

Nieto preached on Feb. 6, 1756, the day of fast and penitence ordered by the king, a "Sermon Moral," published in Spanish and English in London, 1756. Better known is his translation of the prayer-book in two volumes: "Orden de las Oraciones de Ros Ashanah y Kipur" (London, 1740) and "Orden de las Oraciones Cotidianas, Ros Hodes Hanuca y Purim" (*ib.* 1771). This translation was the basis of all subsequent translations (*e.g.*, those of Pinto and of A. and D. da Sola).

NIGGUN (נגון): A Neo-Hebraic noun formed from the "pi'el" of the verb נגן = "to play strings," "make music"; hence meaning generally "tune," "melody." In the rubrics of the MAḤZOR of the northern uses "be-niggun N." heads a piyyuṭ with the signification "to the tune of N," as does "laḥn N." (לחן) in the southern liturgies. The word is also used to designate a droning, formless intonation set to a text, and, more especially, the particular melody-type or prayer-motive to which a service is traditionally rendered, *e.g.*, the Sabbath Niggun. See MUSIC, SYNAGOGAL.

A. F. L. C.

NIGHT: The period between sunset and sunrise (see CALENDAR; DAY). The older Biblical term for the whole day was "yom wa-lailah" or "yomam wa-layelah." Later "'ereb wa-boḳer" was used (Dan. viii. 14). Corresponding with it is νυχθήμερον (II Cor. xi. 25). "Boḳer" is literally the break of day, "'ereb" the decline of day.

Among the ancient Israelites, as among the Greeks, the day was reckoned from sunset to sunset. This was the custom also of the Gauls and ancient Germans, and was probably connected originally with the cult of the moon. There is, however, evidence that this was not the custom at all times; *e.g.*, the expression "day and night" in Lev. viii. 35; Num. ix. 21; Jer. viii. 23, xvi. 13, xxxiii. 25; Isa. lx. 11; Ps. i. 2; xxxii. 4; xlii. 4, 9; lv. 11; Lam. ii. 18; I Sam. xxv. 16; I Kings viii. 59. So too some claim that in Gen. i. 5 *et seq.* the day is reckoned according to the Babylonian manner, from morning till morning (see Delitzsch in Dillmann's commentary on Gen. i. 5).

Further evidence that the reckoning of the day from the evening is of later date is found in connection with the sacrificial service, in which the oldest customs were undoubtedly most rigidly preserved. While in the Talmud the day is always counted with the preceding night, as, for instance, in regard to the prohibition of killing the young with its mother on the same day (Lev. xxii. 28), with reference to sacrifices which had to be eaten on the day on which they were offered the night is counted with the day preceding it (Ḥul. 83a).

The division into day and night was originally very indefinite, and there was no accurate measurement of time. The distinctions were made according to the successive natural stages or the occupations in daily life. The early morning is "'alat ha-shaḥar," literally "rising of the morning [star]."

The morning is "boḳer," or "the sun rose" (Gen. xix. 23, xxxii. 31).

Midday is "ẓaharayim," literally "the double light," that is, the time when the sunlight is brightest; or "the heat of the day" (Gen. xviii. 1; I Sam. xi. 11); or "the perfect day" (Prov. iv. 18).

Afternoon and evening are "'ereb," the time of the day's decline (Judges xix. 8); or "the wind of the day" (Gen. iii. 8), that is, the evening breeze; or "neshef," darkness (Hi. xxiv. 15, 5; v. 11, etc.). A late designation is "the appearance of the stars" (Neh. iv. 15 [21]).

Between the Lights.

One other time of the day must be mentioned, namely, "ben ha-'arbayim," which occurs in Ex. xii. 6; xvi. 12; xxix. 39, 41; xxx. 8; Lev. xxiii. 5; Num. ix. 3, 5, 11; xxviii. 4, 8. Its meaning must have been originally "toward evening"; for it indicates the same time that in Deut. xvi. 6 is called "the time of the going down of the sun." This "ben ha-'arbayim" is the time prescribed for the offering of the Passover lamb and the daily evening sacrifice. In the first century the evening "Tamid" was offered in the afternoon between 2.30 and 3.30 (Josephus, "Ant." xiv. 4, § 3; Mishnah Pes. v. 1; comp. also Acts iii. 1 and x. 3, 30), while the Karaites and Samaritans continued their practise according to the old interpretation.

The twilight before nightfall is in the Mishnah and Talmud called "ben ha-shemashot" (between the suns), of which Yer. Ber. i. gives this explanation: "When the eastern sky becomes pale, that is 'ben ha-shemashot'; but when it becomes so black [or dark] that the upper and lower parts of the sky are of the same color, it is night."

Divisions.

The subdivision of night and day into twelve equal divisions of variable duration is of late introduction, probably adopted in the Exile from the Babylonians. Older is the division of the night into three night-watches, "ashmurah" or "ashmoret" (mishnaic, "mishmarah"). The first is mentioned in Lam. ii. 19, the middle one in Judges vii. 19, the last in Ex. xiv. 24 and I Sam. xi. 11. From the New Testament it appears that the division of the night into four night-watches was adopted from the Romans (Matt. xiv. 25; comp. Mark xiii. 35). Acts xii. 4 speaks of four Roman soldiers, each of whom had to keep guard during one watch of the night. The Mishnah retains the old division into three in accordance with the practise in the Temple. In Ber. 3b R. Nathan (second century) knows of only three night-watches; but the patriarch R. Judah I. knows four. Greeks and Romans likewise divided the night into four watches ("vigiliæ").

Of legal questions referring to night the following should be mentioned:

Court sessions could not begin at night; examination of witnesses and the signing of papers were legal only in the daytime. In civil cases begun in the daytime judgment could be pronounced after nightfall; not, however, in capital cases, in which judgment could be pronounced only in the daytime.

NIGRIN (NEGRIN), MOSES: Cabalist; lived in Safed early in the sixteenth century; a contemporary of Moses di Trani. He is chiefly known as a commentator, and was the author of notes on Jonah Gerondi's ethical work "Sefer ha-Yir'ah," and on the same scholar's "Dat ha-Nashim," addresses to women, both these works being published, together with the "Iggeret Musar" of Solomon Alami, by Shabbethai b. Isaac (Cracow, 1612). Nigrin wrote also the following works: "Dine Tefillah" (Sulzbach, 1693, 1788; Frankfort-on-the-Main, 1705, 1712; Dyhernfurth, 1732), directions for prayer; "Sefer Liwyat Ḥen" (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1010), a commentary on Prov. i.-xv. 5; "Sefer Rosh Ashmurot"; and "Sefer Seder 'Abodah," a commentary on the "Seder 'Abodah" of Moses Cordovero.

D. S. O.

NIJNI-NOVGORCD (NIZHNI-NOVGOROD): Russian city; capital of the government of the same name; famed for its fairs, which are held annually. It is without the Pale of Settlement. The regulations of 1835 permitted, for the first time, the temporary residence in Nijni-Novgorod, during the fair, of Jewish merchants of the first and second gilds and of Jewish manufacturers; but they were forbidden to sell foreign goods. The Jews, however, notwithstanding the prohibitive laws, gradually established themselves in Nijni-Novgorod. On July 7, 1884, a mob attacked the Jews in the part of Nijni-Novgorod known as Kunavina, a number of them being tortured to death. The occasion of the riot was the rumor that the Jews had killed a Christian child. After 1888 the fair administration, at the instance of prominent Christian merchants, gradually deprived Jewish merchants of the right of residence even during the fair, the reason being that Jewish competition caused much injury to the Christian merchants, who testified that the Jews sold their goods at a discount of 35 per cent below normal prices. But in spite of these restrictions numbers of Jews attend the fair, and the city has a permanent Jewish population of approximately 550 families, most of them well-to-do; the total population is 95,124, according to the census of 1897. The Zionists have organized a model ḥeder.

NIḲḲUR. See Porging.

NIKOLAIEF (NIKOLAYEV): Russian Black Sea port and naval station, in the government of Kherson; founded in 1784; now an important commercial center. Jews began to settle in Nikolaief soon after the partition of Poland, but in 1829 their residence there (and in Sebastopol) was declared "inconvenient and injurious," and they were forbidden to establish themselves in Nikolaief; the Jews already there were ordered to leave the city. The military governor of Nikolaief, Admiral Greig, protested that this measure would deprive the city of most of its artisans, and would considerably increase the burden of taxation upon the rest of the population. Notwithstanding this the removal of the Jews from Nikolaief was carried out after two short terms of grace. To replace them the government attempted to attract Christian merchants and artisans by conceding various privileges to them. It was not until 1859 that the law again permitted Jewish merchants to settle in Nikolaief and to acquire real property there, all other classes of Jews being admitted only temporarily (for commercial purposes, for the learning of handicrafts, etc.). In 1860 discharged Jewish soldiers were given permission to reside there, and in 1861 this permission was extended to Jewish artisans.

Most of the Jews in Nikolaief are engaged in trade. In 1900 the number of merchants' licenses issued to Jews amounted to 1,289, the fees for which totaled 39,952 rubles. These included 14 certificates for commercial enterprises of the first class (important commercial undertakings), while the rest were for minor undertakings. The Jews own 494 parcels of real property (houses). There are 3,000 Jewish artisans (60 per cent of the total), and most of the freight-handlers working in the harbor are Jews; in all there are 1,438 Jewish day-laborers. A very small proportion of Jews is found among the factory-workers (except in the case of the two tobacco-factories, where Jews are employed almost exclusively—180 Jewish hands). The Talmud Torah has 182 pupils; the government Jewish school, with industrial annex, 320; the girls' professional school, 90; the four private Jewish schools, 222; the thirty ḥadarim, about 1,500. The general schools give instruction to 825 Jewish pupils. The charitable institutions include a Jewish hospital, dispensary, cheap dining-hall, and an association for aiding the poor (organized in accordance with the regulation of 1901). Almost all of these institutions are supported, wholly or in part, by the income from the basket-tax (*i.e.*, the tax on meat). For the period 1900-4 the income from this tax was 47,000 rubles. Nikolaief has two synagogues and twelve houses of prayer (1901); and according to the census of 1897 it has a population of 92,060, including 30,000 Jews.

Bibliography: Levanda, *Polny Khronologicheski Sbornik Zakonov*, pp. 258, 265-267, 318, 413, 918-919, 942, 948, 1053, St. Petersburg, 1874; *Voskhod*, 1900, No. 19, and 1901, Nos. 2, 8, 24, 29, 35, 47, 48, 58. A Street in the Nikolsburg Ghetto.
(From a photograph.)

NIKOLSBURG: Town in southern Moravia. The settlement of the Jews in Nikolsburg dates probably from 1420, when, after the expulsion from the neighboring province of Lower Austria, fugitives settled in the town under the protection of the princes of Lichtenstein. The expulsions of the Jews from the cities of Brünn and Znaim (1454) may have brought additional settlers. The community first became important in 1575, when the emperor gave Nikolsburg to Adam von Dietrichstein, whose son, Cardinal Franz von Dietrichstein, was a special protector of the Jews, their taxes being necessary to the prosecution of the Thirty Years' war. The expulsion of the Jews from Vienna in 1670 brought another large group of new settlers to Nikolsburg, which is about 50 miles distant from the capital, and at the census taken under Maria Theresa 620 families were found established there, making the Jewish population of the town about 3,000, or one-half of the total population. Naturally, only a few of them could win a living in the town; most of them peddled, or frequented the fairs in Lower Austria, from which the inhabitants of the various fair towns endeavored to exclude them as late as 1794. The congregation suffered severely in the Silesian war, when the Prussians levied a contribution of 9,000 florins, and took all horses owned by Jews (1744). The Jews of Nikolsburg had further to furnish their share in the contribution of 50,000 gulden exacted by the government of Maria Theresa from the Jews of Moravia. In 1778, during the preparations for the war with Prussia, the Neu-Schul was used as a military storehouse, although the congregation offered other places. Quite a number of Nikolsburg Jews continued to earn their livelihood in Vienna, where they were permitted to stay for some time on special passports. The freedom of residence which was conceded to the Jews there in 1848 and 1860 reduced the number of resident Jews in Nikolsburg to less than one-third of the population which it contained at the time of its highest development. At the present time (1904) there are 749 Jewish residents in the city in a total population of 8,192.

Jewish Cemetery of Nikolsburg.
(From a photograph.)

Synagogues and Schools.

Up to 1868 the community had about a dozen synagogues, some named after their founders—as the Wiener Schul, founded by the Vienna exiles—and some serving as centers for the gilds (of which the community had quite a number)—as the Kazowim-Schul and Schuster Schul. Another synagogue, founded by Schmelke Horowitz, was consecrated to the propagation of the Ḥasidic doctrine and was called "Chasidim-Schul." In 1868 the synagogues were reduced to five, and at present there are only two—the Alt-Schul, the cathedral synagogue of the "Landesrabbiner" of Moravia, and the Neu-Schul.

Owing to the importance of the rabbis who officiated in Nikolsburg, the city was the seat of a very prominent yeshibah, which often had from 300 to 400 disciples. It achieved its greatest fame under Mordecai Benet (1790–1829); declining gradually, it disappeared after the death of Solomon Quetsch (1856). A modern parochial school was established in 1839, and after 1853 was under the management of Moritz Eisler. Since 1868 the school has been in the hands of the state. Owing to the removal of many Jews from the city and the settlement of Christian families in the old ghetto, the majority of the school-children now (1904) are Christians, as are the principal and some of the teachers. The area of the former ghetto, however, still continues to be administrated as a township under the name of Israelitengemeinde Nikolsburg, having its burgomaster and its board of trustees. There are quite a number of societies, including a ḥebra ḳaddisha, a Talmud Torah, and well-endowed foundations for charitable and educational purposes.

Rabbis, etc.

The first rabbi of Nikolsburg was Judah Löw ben Bezaleel, who officiated in Nikolsburg about 1553–1573. Others were: Judah Löb Eilenburg (1574–1618); Yom-Ṭob Lipmann Heller (1624); Pethahiah ben Joseph (1631); Menahem Mendel Krochmal (1648–61); Aaron Jacob ben Ezekiel (1671); Judah Löb, son of Menahem Krochmal (1672–84);

Eliezer Mendel Fanta (1690); David OPPENHEIM (1690–1705); Gabriel ESKELES (1718); Gershon Politz (1753–72); Schmelke HOROWITZ (1773–78); Gershon Chajes (1780–89); Mordecai BENET (1789–1829); Nehemias TREBITSCH (1831–42); Samson Raphael HIRSCH (1846–51); Solomon Quetsch (1855–56); Mayer Feuchtwang (1861–88), and his son David Feuchtwang (1892–1903); and Moritz Levin (since 1904).

Among the Jewish scholars and authors whose names are identified with Nikolsburg are the following: Eliezer Nin (author of "Mishnat Eliezer," Frankfort-on-the-Main, 1710); Naphtali Hirsch Spitz (author of the "Melo Razon," Frankfort-on-the-Oder, 1717); Moses ben Menahem Prager, the cabalist (wrote there his "Zera' Ḳodesh," Fürth, 1696, in which he reports an exorcism in Nikolsburg). In 1785 the story of an exorcism was reported by Abraham Trebitsch, both in Hebrew and in Yiddish, under the title "Ruaḥ Ḥayyim" (Brünn ?). Trebitsch, who was secretary to the "Landesrabbiner," wrote a meritorious chronicle of his time under the title "Ḳorot ha-'Ittim" (Brünn, 1801). To Nikolsburg belong also Moritz EISLER, the philosophical author, Joseph von SONNENFELS, Heinrich LANDESMANN, and Leopold Oser, professor of medicine at Vienna University. Hirsch Kolisch, the philanthropist, was born at Nikolsburg (end of 18th cent.; d. Vienna Dec. 11, 1866). Kolisch established there a school for deaf-mutes under the administration of Joel Deutsch (1844). The institute was transferred in 1852 to Vienna, where Kolisch took up his residence.

D.

NILE: The great river of Egypt; frequently referred to in the Bible. The Authorized Version everywhere renders the word employed, "ye'or," by "river." "Ye'or" has no Semitic etymology (as, *e.g.*, Lagarde and Fr. Delitzsch have claimed), but is a transliteration of late Egyptian "yoor," earlier "y(e?)tor" = "river." The plural is used of the branches of the Nile in the delta (seven large branches in antiquity, and many small canals), to which especially Isa. vii. 18 and Ezek. xxix. 3 (alluding to their defensive value; comp. Isa. xxxiii. 21, xxxvii. 25) refer. Only in Dan. xii. 5, 6, 7 the expression is used of the Tigris. In Job xxviii. 10 it refers apparently in some technical sense to mines.

That Egypt's existence depended exclusively on the Nile and its yearly inundations in summer (caused by the spring rains in the mountains of Abyssinia) is indicated in Gen. xli. 2; that it furnished even all the drinking-water is shown by Ex. vii. 18, 21, 24, and Ps. lxxviii. 44. Therefore the Prophets used the symbolical threat against Egypt, "I will make the rivers dry" (Ezek. xxx. 12; similarly Isa. xix. 6), to express complete annihilation. The great volume of water is referred to in Amos viii. 8 and Jer. xlvi. 8; and the abundance of fish, in Ezek. xxix. 3 (comp. Num. xi. 5).

The ancient Egyptians were acquainted with little more than one-half of the long course of the Nile; the primitive view was that its sources were in the rocks of the first cataract, and that one branch, the Nile proper, flowed north through Egypt, the other south through Ethiopia to the Indian Ocean. The tears of Isis or the blood of Osiris was the origin ascribed to it in mythology. As a god, the Nile (Ḥo'pi) was worshiped in the form of a blue or green, androgynous, fat figure, bringing water, fowl, and fish. Hymns, prayers, and statues show that Egypt was correctly considered as "a gift of the Nile." As the number of cubits required for a sufficient rise in summer, the ancient writers mostly mention sixteen (for Memphis?); always, however, dikes, canals, and irrigating-machines had to assist agriculture (comp. Deut. xi. 10 on the hard work of the Egyptian peasants in irrigating their fields).

The identification of the Nile with the River Gihon flowing out of paradise (Gen. ii. 13) is very old, being found in Ecclus. (Sirach) xxvi. 27, in Josephus, and in many later writers. By modern critics generally this identification is understood to be due to a confusion of Ethiopia and Babylonia caused by the ambiguous name CUSH.

E. C. W. M. M.

NÎMES (Hebrew, נמשי or קרית יערים = "city of woods"): Chief town of the department of Gard, France. Jews were settled here in very remote times. Hilderic, Count of Nîmes, gave a favorable reception to a certain number of Jews who were driven out of Spain in 672 by King Wamba. In the twelfth century the Jewish community of Nîmes was one of the most important in Languedoc, one of its members, named Durand, occupying toward the end of the century the high position of sub-provost ("sous-viguier"). Its academy had at its head one of the most celebrated rabbis of the Middle Ages, R. Abraham ben David (RABaD III.), the bitter and irreconcilable enemy of Maimonides (see ABRAHAM BEN DAVID OF POSQUIÈRES). "Provence," writes Moses ben Judah of Béziers to Abraham ben David, "has three prominent academies, Montpellier, Lunel, and Nîmes. The first is the Temple mount; the second is the entrance into the outer court; and the third is the Temple itself, the seat of the Sanhedrin, whence the Law is disseminated throughout Israel" ("Temim De'im," No. 7).

Early History.

The council convoked by Bishop Bertrand II. in 1284 adopted the most severe measures against the Jews. The same bishop, however, was obliged in 1295 to take the Jews under his protection in order to defend his own interests, which were threatened by Philip the Fair.

Driven out of Nîmes in 1306, the Jews returned to the town in 1359. In 1363 Marshal d'Audenham intervened in their behalf and ordered the seneschal of Beaucaire to act with justice and equity in the collection of taxes from them. They were again expelled in 1394 by order of Charles VI., and they then settled in various parts of Provence and in the Comtat-Venaissin. Some of their descendants obtained permission in 1680 to sojourn in Nîmes; but in spite of this they were soon expelled under penalty of the confiscation of their property.

Of the Jewish community of Nîmes in the Middle

Ages the only traces that remain are a tombstone with a Hebrew inscription (transcribed by J. Simon in "Inscriptions Tumulaires Hébraïques du Moyen-Age à Nîmes"), and three epitaphs, likewise in Hebrew (transcribed by Poldo d'Albenas in "Discours Historial de l'Antique et Illustre Cité de Nismes," pp. 190, 191, and reproduced by Ménard in "Histoire de la Ville de Nismes," vii. 475, 476). The municipal library, too, contains several Hebrew manuscripts which have been made the subject of a very interesting study by J. Simon (in "R. E. J." iii. 225).

The Ghetto.

The Jews' quarter was situated in the Rue de la Fabrerie, now Rue du Chapitre, as is evident from the deed of sale of a house in 1306 by Isaac de Portes to Vitalis de Boerian and to the Jewess Blanche. In 1359 there had been assigned to the Jews as their place of residence a part of the Rue Corrègerie Vieille (the present Rue de l'Etoile); but, to shield them from maltreatment at the hands of their Christian neighbors, the Rue Caguensol and Rue Fresque (formerly the Rue de la Jésutarié or Juiverie) were assigned to them at their own request as their special quarter.

Synagogue and Cemetery.

From a document dated 1089 it is learned that the synagogue was situated in the Rue du Chapitre on the spot where later was erected the Hôtel de la Prevôté, now the Maison Maroger de Rouville. In 1789 the synagogue was situated in the Rue Carreterie, the present Rue Jean Reboul. At the time of the Revolution the Israelites of Nîmes offered in support of the cause the seventeen pieces of silver-work which were used in their religious services or which ornamented the scrolls of the Law. In 1794 seven heads of families at their own expense erected a temple in the Rue Roussy with a ritual bath ("miḳweh") and an oven for the baking of unleavened bread. The municipality of Nîmes acquired this building in 1844. Improvements in it were made in 1865 and again in 1893.

The most ancient cemetery was situated on Mont-Duplan, known in the eleventh century as the "Poïum" ("Podium Judaicum") or "Puech-Jusieu." For each burial the Jews paid to the monks of the monastery of St. Baudile, to whom the land belonged, a fee of one pound of pepper or nine sols. From 1778 the Jews buried their dead in gardens situated in various parts of the city. In 1785 they acquired a cemetery on the Rue du Mail. This was closed in 1809, and the present (1904) cemetery on the St. Gilles road was then used.

In the Eighteenth Century.

Restrictive measures against the Jews were taken in 1729, 1731, 1745, and 1754 by the intendant of Languedoc. Having returned to Nîmes, they petitioned in 1784 for admission into the gild of capmakers "as apprentices and as master workmen." This request was denied, as was also a similar request which they made the same year to the gild of hose manufacturers and to the different trade syndicates. In 1787 Mordecai Carcassonne, one of the most important members of the community, addressed to the minister De Lamoignon a memorial in which he claimed the right, by virtue of the liberal edict of Nov., 1787, to be admitted into the corporation of textile merchants. The reply was not long delayed. The hour of the Revolution had struck.

Under the Reign of Terror Mordecai Mirargues, the ḥazzan, was obliged to bow before the altar of Reason. David Crémieu, after having been imprisoned at the Palais, was transferred to Nice, and José Carcassonne paid with his life for his devotion to the interests of his city (July 18, 1794).

In 1806 the Jews of Nîmes numbered 371. Five of them, Joseph Roquemartine, Mordecai Roquemartine, Abraham Muscat, Montel Abraham, Jr., and Bezaleel Milhaud, were members of the Great Sanhedrin.

The Jewish community of Nîmes has numbered among its members the following scholars: Abraham ben David (mentioned above), Judah ben Abraham, Don Vidas, Judah ben Solomon ben Jacob ben Samuel ben Menahem, and Moses ben Abraham. In modern times many Jews of Nîmes have distinguished themselves in literature, science, and art. The most illustrious of them was undoubtedly Isaac Adolphe Crémieux (see S. Kahn, "Notice sur les Israélites de Nîmes," pp. 35–37).

At the present time (1904) the Jews of Nîmes constitute a very small proportion of its population.

Besides Nîmes the following places in the department of Gard possessed Jewish communities during the Middle Ages:

Aigues-Mortes (אגי or אקווי מורטי; "Dibre Ḥayyim," p. 111a).

Aimargues (ארמאדנגיש; I. de Lattes, Responsa, No. 26; comp. "R. E. J." xxxi. 290).

Alais (אליין): In the charter of Alais, dated 1200, article 55 treats of the Jews, and article 121 treats of the oath which was imposed upon them. In the fourteenth century Jews were quite numerous in this locality. They owned houses, vineyards, and fields. Several scholars of Alais are mentioned, among them Jacob ha-Levi, Solomon Bonseigneur, and Jacob ben Judah (Bardon, "Histoire de la Ville d'Alais," pp. 149, 150, 279; "Archives Municipales," series cc., pp. 22, 24, 106; comp. Gross, "Gallia Judaica," p. 59).

Anduze (אנדושא): Home of the cabalist Jacob ben Samuel ("R. E. J." x. 101, xii. 49; comp. Steinschneider, "Cat. Bodl." col. 2819), who cites a printer Abraham of the same place.

Aramon ("Archives d'Aramon," B B. 2).

Janves (Saige, "Les Juifs du Languedoc," pp. 278, 320; comp. "R. E. J." ii. 19, 39; xii. 193).

Portes (Saige, *l.c.* p. vii.; comp. "R. E. J." ii. 46).

Roquemaure (רוקאמאברא; Maulde, "Coutumes d'Avignon," p. 290; comp. Gross, "Gallia Judaica," p. 629).

Sommières (שומיירי; I. de Lattes, *l.c.* No. 26; Renan-Neubauer, "Les Rabbins Français," pp. 517, 746; Saige, *l.c.* p. 282).

Vézenobres (Bardon, *l.c.* p. 212). See also Beaucaire; Milhaud; Posquières; Saint Gilles; Uzès.

S. S. K.

NIMROD.—Biblical Data: Son of Cush and grandson of Ham; his name has become proverbial as that of a mighty hunter. His "kingdom" comprised Babel, Erech, Accad, and Calneh, in the land of Sinar, otherwise known as the land of Nimrod (Gen. x. 8–10; I Chron. i. 10; Micah v. 5 [A. V. 6]).

E. G. H. M. Sel.

—In Rabbinical Literature: Nimrod is the prototype of a rebellious people, his name being interpreted as "he who made all the people rebellious against God" (Pes. 94b; comp. Targ. of pseudo-Jonathan and Targ. Yer. to Gen. x. 9). He is identified with Cush and with Amraphel, the name of the latter being interpreted as "he whose words are dark" (אמר אפל; Gen. R. xlii. 5; for other explanations see below). As he was the first hunter he was consequently the first who introduced the eating of meat by man. He was also the first to make war on other peoples (Midr. Agadah to Gen. x. 9).

His Feats as a Hunter.

Nimrod was not wicked in his youth. On the contrary, when a young man he used to sacrifice to Yhwh the animals which he caught while hunting ("Sefer ha-Yashar," section "Noah," pp. 9a *et seq.*, Leghorn, 1870). His great success in hunting (comp. Gen. x. 9) was due to the fact that he wore the coats of skin which God made for Adam and Eve (Gen. iii. 21). These coats were handed down from father to son, and thus came into the possession of Noah, who took them with him into the ark, whence they were stolen by Ham. The latter gave them to his son Cush, who in turn gave them to Nimrod, and when the animals saw the latter clad in them, they crouched before him so that he had no difficulty in catching them. The people, however, thought that these feats were due to his extraordinary strength, so that they made him their king (Pirke R. El. xxiv.; "Sefer ha-Yashar," *l.c.*; comp. Gen. R. lxv. 12).

Made King.

According to another account, when Nimrod was eighteen years old, war broke out between the Hamites, his kinsmen, and the Japhethites. The latter were at first victorious, but Nimrod, at the head of a small army of Cushites, attacked and defeated them, after which he was made king over all the people on earth, appointing Terah his minister. It was then, elated by so much glory, that Nimrod changed his behavior toward Yhwh and became the most flagrant idolater. When informed of Abraham's birth he requested Terah to sell him the new-born child in order that he might kill it (see Jew. Encyc. i. 86a, *s.v.* Abraham in Rabbinical Literature). Terah hid Abraham and in his stead brought to Nimrod the child of a slave, which Nimrod dashed to pieces ("Sefer ha-Yashar," *l.c.*).

Nimrod is generally considered to have been the one who suggested building the Tower of Babel and who directed its construction. God said: "I made Nimrod great; but he built a tower in order that he might rebel against Me" (Hul. 89b). The tower is called by the Rabbis "the house of Nimrod," and is considered as a house of idolatry which the owners abandoned in time of peace; consequently Jews may make use of it ('Ab. Zarah 53b). After the builders of the tower were dispersed Nimrod remained in Shinar, where he reestablished his kingdom. According to the "Sefer ha-Yashar" (*l.c.*), he at this time acquired the name "Amraphel" in allusion to the fall of his princes (אמר נפל) during the dispersion. According to the Targum of pseudo-Jonathan (to Gen. x. 11), however, Nimrod had left Babylonia before the building of the tower, and had gone to Assyria, where he built four other cities, namely, Nineveh, Rehobot, Calah, and Resen (comp. Nahmanides *ad loc.*).

Nimrod's Dream.

The punishment visited on the builders of the tower did not cause Nimrod to change his conduct; he remained an idolater. He particularly persecuted Abraham, who by his command was thrown into a heated furnace; and it was on this account, according to one opinion, that Nimrod was called "Amraphel" (אמר פול = "he said, throw in"; Targ. pseudo-Jonathan to Gen. xiv. 1; Gen. R. xlii. 5; Cant. R. viii. 8). When Nimrod was informed that Abraham had come forth from the furnace uninjured, he remitted his persecution of the worshiper of Yhwh; but on the following night he saw in a dream a man coming out of the furnace and advancing toward him with a drawn sword. Nimrod thereupon ran away, but the man threw an egg at him; this was afterward transformed into a large river in which all his troops were drowned, only he himself and three of his followers escaping. Then the river again became an egg, and from the latter came forth a small fowl, which flew at Nimrod and pecked out his eye. The dream was interpreted as forecasting Nimrod's defeat by Abraham, wherefore Nimrod sent secretly to kill Abraham; but the latter emigrated with his family to the land of Canaan. Ten years later Nimrod came to wage war with Chedorlaomer, King of Elam, who had been one of Nimrod's generals, and who after the dispersion of the builders of the tower went to Elam and formed there an independent kingdom. Nimrod at the head of an army set out with the intention of punishing his rebellious general, but the latter routed him. Nimrod then became a vassal of Chedorlaomer, who involved him in the war with the kings of Sodom and Gomorrah, with whom he was defeated by Abraham ("Sefer ha-Yashar," *l.c.*; comp. Gen. xiv. 1–17).

Nimrod was slain by Esau, between whom and himself jealousy existed owing to the fact that they were both hunters (Targ. pseudo-Jonathan to Gen. xxv. 27; "Sefer ha-Yashar," section "Toledot," p. 40b; Pirke R. El. *l.c.*; comp. Gen. R. lxv. 12).

W. B. M. Sel.

—Critical View: Two prominent theories are now held in regard to Nimrod's identity: one, adopted by G. Smith and Jeremias, is that Nimrod is to be identified with the Babylonian hero Izdubar or Gishdubar (Gilgamesh); the second, that of Sayce, Pinches, and others, identifies Nimrod with Marduk, the Babylonian Mercury. The former identification is based on the fact that Izdubar is represented in the Babylonian epos as a mighty hunter, always accompanied by four dogs, and as the founder of the first great kingdom in Asia. Moreover, instead of "Izdubar"—the correct reading of which had not yet been determined—Jeremias saw the possibility of reading "Namra Udu" (shining light), a reading which would have made the identification with Nimrod almost certain. Those who identify Nimrod with Marduk, however, object that the name of Izdubar must be read, as is now generally conceded, "Gilgamesh," and that the signs which constitute the name of Marduk, who also is represented as a hunter, are read phonetically "Amar Ud"; and ideographically they may be read "Namr Ud"—in Hebrew "Nimrod." The difficulty of reconciling the Biblical Nimrod, the son of Cush, with Marduk, the son of Ea, may be overcome by interpreting the Biblical words as meaning that Nimrod was a descendant of Cush.

Two other theories may be mentioned: one is that Nimrod represents the constellation of Orion; the other is that Nimrod stands for a tribe, not an individual (comp. Lagarde, "Armenische Studien," in "Abhandlungen der Göttinger Gesellschaft der Wissenschaften," xxii. 77; Nöldeke, in "Z. D. M. G." xxviii. 279).

E. C. M. Sel.

——**In Arabic Literature:** By the Arabs Nimrod is considered as the supreme example of the tyrant ("al-jabbar"). There is some confusion among Arabian historians as to Nimrod's genealogy. According to one authority he was the son of Mash the son of Aram, and consequently a Semite; he built the Tower of Babel and also a bridge over the Euphrates, and reigned five hundred years over the Nabatæans, his kinsmen. But the general opinion is that he was a Hamite, son of Canaan the son of Cush, or son of Cush the son of Canaan (Ṭabari gives both); that he was born at the time of Reu, and was the first to establish fire-worship. Another legend is to the effect that there were two Nimrods: the first was the son of Cush; the second was the well-known tyrant and contemporary of Abraham; he was the son of Canaan and therefore a great-grandson of the first Nimrod. According to Mas'udi ("Muruj al-Dhahab," ii. 96), Nimrod was the first Babylonian king, and during a reign of sixty years he dug many canals in 'Iraḳ.

The author of the "Ta'rikh Muntahab" (quoted by D'Herbelot in his "Bibliothèque Orientale") identifies Nimrod with Daḥḥak (the Persian Zoḥak), the first Persian king after the Flood. But Al-Kharizmi ("Mafatiḥ al-'Ulum," quoted by D'Herbelot) identifies him with Kai Kaos, the second king of the second Persian dynasty. Nimrod reigned where Bagdad is now situated, and at first he reigned with justice (see Nimrod in Rabbinical Literature); but Satan perverted him, and then he began to persecute all the worshipers of God. His chief vizier was Azar (Terah), the father of Abraham; and the midrashic legends of Abraham's birth in which Nimrod is mentioned, as well as those concerning Nimrod's persecution of Abraham—whom he cast into a furnace—are narrated also by the Mohammedans (see Abraham in Apocryphal and Rabbinical Literature and in Mohammedan Legend).

Nimrod and Abraham.

Nimrod is referred to in the Koran (xxi. 68-69). When Nimrod saw Abraham come unharmed from the furnace, he said to him: "Thou hast a powerful God; I wish to offer Him hospitality." Abraham told him that his God needed nobody's hospitality. Nevertheless Nimrod ordered thousands of horned and small cattle brought, and fowl and fish, and sacrificed them all to God; but God did not accept them. Humiliated, Nimrod shut himself in his palace and allowed no one to approach him. According to another tradition, Nimrod challenged Abraham, when the latter came out of the furnace, to fight with him. Nimrod gathered a considerable army and on the appointed day was surprised to find Abraham alone. Asked where his army was, Abraham pointed to a swarm of gnats, which routed Nimrod's troops (see, however, below). Nimrod assembled his ministers and informed them of his intention to ascend into the heavens and strike down Abraham's God. His ministers having told him that it would be difficult to accomplish such a journey, the heavens being very high, Nimrod conceived the idea of building a high tower, by means of which he might accomplish his purpose (comp. Sanh. 109a). After many years had been spent in the construction of the tower, Nimrod ascended to its top, but he was greatly surprised to find that the heavens were still as remote from him as when he was on the ground. He was still more mortified on the following day, when the tower collapsed with such a noise that the people fainted with terror, those that recovered losing their speech (an allusion to the confusion of tongues).

Undaunted by this failure, Nimrod planned another way to reach the heavens. He had a large chest made with an opening in the top and another in the bottom. At the four corners of the chest stakes were fixed, with a piece of flesh on each point. Then four large vultures, or, according to another source, four eagles, previously fed upon flesh, were attached to the stakes below the meat. Accompanied by one of his most faithful viziers, Nimrod entered the chest, and the four great birds soared up in the air carrying the chest with them (comp. Alexander's ascent into the air; Yer. 'Ab. Zarah iii. 42c; Num. R. xiii. 13). The vizier opened alternately the upper and lower doors of the chest in order that by looking in both directions he might know whether or not he was approaching heaven. When they were so high up that they could see nothing in either direction Nimrod took his bow and shot arrows into the sky. Gabriel thereupon sent the arrows back stained with blood, so that Nimrod was convinced that he had avenged himself upon Abraham's God. After wandering in the air for a certain length of time Nimrod descended, and the chest crashed upon the ground with such violence that the mountains trembled and the angels thought an order from God had descended upon the earth. This event is alluded to in the Koran (xiv. 47): "The machinations and the contrivances of the impious cause the mountains to tremble." Nimrod himself was not hurt by the fall.

After these adventures Nimrod continued to reign wickedly. Four hundred years later an angel in the form of a man appeared to him and exhorted him to repent, but Nimrod declared that he himself was sole ruler and challenged God to fight with him. Nimrod asked for a delay of three days, during which he gathered a considerable army; but this was exterminated by swarms of gnats. One of these insects is said to have entered Nimrod's nose, reached the chambers of his brain, and gnawed at it. To allay the pain Nimrod ordered some one to strike with a hammer upon an anvil, in order that the noise might cause the gnat to cease gnawing (comp. the same story in connection with Titus in Giṭ. 56b). Nimrod died after forty years' suffering.

E. G. H. M. SEL.

NINEVEH: City of Assyria. The form of its name is derived from the Masoretic text. It answers as nearly as possible to the native Assyrian form "Ninua." The origin of the name is obscure. Possibly it meant originally the seat of Ishtar, since Nina was one of the Babylonian names of that goddess. The ideogram means "house or place of fish," and was perhaps due to popular etymology (comp. Aramaic "nuna," denoting "fish"). Nineveh was the most famous of the cities which were in succession the residences of the kings of Assyria. It was also the latest capital of that kingdom, and as such was regarded by Greek writers as the permanent capital and as being virtually equivalent to the country itself.

Situation of the City.

Nineveh was the strongest of several fortress-cities which were built in the triangular territory between the Tigris and the upper Zab. The terrane of these cities was admirably adapted for defense, being protected on the northwest by the Khausar, a tributary of the Tigris, and on the northeast by the Gomel, a tributary of the Zab, as well as by a range of hills. Within these boundaries were contained Nineveh itself, at the confluence of the Choser and the Tigris, on the site of the mounds of Koyunjik and Nebi Yunus and opposite the modern city of Mosul; the fortress of Kalaḥ (Calah) twenty miles to the south, near the Tigris; and Khorsabad (Dur Sharrukin) fourteen miles to the north on the Choser; besides various smaller fortified towns.

Nineveh is mentioned as early as about 2900 B.C. in an inscription of Gudea (Nabu), King of Lagash in southern Babylonia, who there erected a temple in honor of Ishtar. This inscription is of great importance as showing that a Babylonian colony was planted in Assyria at a very early date. The city of Asshur, however, which gave its name to the kingdom of Assyria, must have been founded at a still earlier time, presumably also by colonists from Babylonia. It was also most frequently the capital of the kings of Assyria up to the middle of the eleventh century B.C., when it was finally abandoned as the seat of power, being less favorably situated for defense than the fortresses to the north of the upper Zab.

Later History.

Nineveh seems to have been made the capital of the whole of Assyria by Shalmaneser I. (*c.* 1300 B.C.) and to have retained the honor under several of the later kings. Then Tiglath-pileser I. and his immediate successors revived the glories of the city of Asshur. Thereafter Kalaḥ was made the seat of government, and it was not till the days of Sennacherib (705-681) that Nineveh attained to its historic greatness. The work which he performed in and for Nineveh is his chief title to lasting fame. He erected two magnificent palaces, each of them a fortress in itself: one in the style of Assyrian, and the other in the style of Syrian or Hittite, architecture. He also brought a splendid aqueduct into the city to furnish the inhabitants with wholesome water. From the date of these works to the fall of the empire, that is, for rather less than a century, Nineveh remained the royal residence. The next king, Esar-haddon (680-668), and above all the famous Assurbanipal (668-626), augmented the splendor of the city by new palaces and public works, until it eclipsed the fame of the contemporary Babylon. Among Oriental cities it has been surpassed only by the Babylon of Nebuchadrezzar.

Decline and Fall.

Less than twenty years elapsed between the death of the last great king and the destruction of the splendid city itself. This catastrophe has been made of late years the subject of considerable research; but much remains to be elucidated before a clear idea of the actual course of events can be obtained. The following statement summarizes the facts as far as known: With the decline of the Assyrian empire after the Scythian invasion of the regions west of the Tigris the capital itself became more open to attack. The Aryan Medes, who had attained to organized power east and northeast of Nineveh, repeatedly invaded Assyria proper, and in 607 succeeded in destroying the city. The other fortresses doubtless had been occupied some time previously. The capital was very strongly fortified. Its most vulnerable point was the River Khausar, which ran through the city, and which, while serving for defense, might be turned also to its destruction. In the time of flood its waters were stored up in reservoirs, and by breaking these a hostile army might undermine the city walls. An allusion to some such operation seems to be made in Nah. ii. 6. Such a rush of water could not of course inundate or greatly damage the city; it would be used mainly for the purpose of facilitating an entrance. The destruction was wrought by fire, and was made complete and final, so that soon the site of Nineveh proper was no longer distinguished by name from the other fortresses.

Nineveh has been diligently excavated by modern explorers. Its site was first definitely fixed by Rich

Modern Exploration.

in 1820. The work of exploration on the mound began with Layard in 1845, and was then continued by Rassam and George Smith. The city proper, Nineveh in the strict sense, was oblong in shape, running along the Tigris, and did not occupy more than about three square miles. In the prophetic allegory of Jonah the references to its extent and population apply to the several cities and villages included in the larger area from Khorsabad to Kalaḥ. The excavation of Koyunjik has yielded results of the greatest value. The library of Assurbanipal alone, which consisted largely of copies of precious Babylonian documents, must be counted as one of the most important of the literary collections of the world.

NING-PO. See China.

NIPPUR: Ancient name of a great city in central Babylonia whose ruined site is now known as Nuffar (Niffer), which is the same word in an Arabicized form. It is one of the oldest cities in the world at present identifiable by name and situation.

It is just possible, but scarcely probable, that "Calneh" in Gen. x. 10 is another name for Nippur. The city lay about thirty-five miles southeast of Babylon on the canal Shaṭṭ al-Nil, which was at one time, and perhaps at the date of the founding of Nippur, a separate branch of the Euphrates. Its ancient renown was due partly to its central position among the Semitic settlements, and especially to the fact that it was the first known great seat of the worship of Bel. The name of this chief Babylonian god, identical with the Canaanitish Ba'al, suggests that his worship at Nippur was the consolidation of that of many local Ba'als, and that Nippur obtained its religious preeminence by having gained the leadership among the Semitic communities. In any case its predominance was actually established at least as early as 5000 B.C. Nippur's time of political domination and activity was, however, so remote that its interest to moderns is as yet chiefly antiquarian. The reconstructed history of Babylonia, which begins about 4500 B.C., shows at its earliest stages that Nippur was even then a city of ancient religious renown. The kings of other city-states, such as Kish, Erech, and Ur, vied with one another in the endeavor to secure the patronage of the city of Bel. Later, about 3800, the famous Sargon of Accad presented votive offerings at the shrine of Bel and rebuilt his chief temple. The same story is repeated in varying forms down to the very end of Babylonian history. Khammurabi (2250 B.C.), who unified Babylonia and organized it throughout, wishing to gain for his capital the prestige of Bel-worship, discouraged the cult of that deity at Nippur and transferred it as far as possible to the city of Babylon. There the worship of Bel was united with that of Marduk of Babylon, who actually assumed the name of the patron god of Nippur (comp. Isa. xlvi. 1). The fiction was maintained down to the days of the great Nebuchadrezzar (604-562), who found it necessary to demolish by force the restored temple of Bel at Nippur for the aggrandizement of "Babylon the Great."

The principal colony of the Hebrew exiles of 597 B.C. was planted beside the canal Chebar (Kabar) not far from Nippur, apparently to the east of the ancient city, which was then still a place of importance and must have influenced the social and industrial life of the Jewish community.

The modern excavations of Nippur under the auspices of the University of Pennsylvania are among the most important of all that have been as yet undertaken in western Asia. The explorations, which have been carried on with some interruptions since 1888, have brought to light the ruins of several of the oldest temples of the world and have recovered many treasures of the most antique art, besides tens of thousands of inscriptions representing all phases of the life of ancient Babylonia.

NISAN (ניסן; Assyrian, **Nisannu**): First ecclesiastical and seventh civil month (Neh. ii. 1; Esth. iii. 7). In the earlier Biblical books it is designated "Ḥodesh ha-Abib" (month of the harvest). It is regarded as a sacred month because, according to a tradition, the continual burnt offering (עולת תמיד) was established in it ("Be'er Heṭeb" to Shulḥan 'Aruk, Oraḥ Ḥayyim, 429). It is, therefore, not permissible to observe public mourning and public fasts during the twenty-nine days of this month. The Taḥanun in the daily prayers and the "Ẓidḳatka Ẓedeḳ" in the Minḥah service of Sabbath are to be omitted; neither is the "Ẓidduḳ ha-Din" to be recited at a burial (Oraḥ Ḥayyim, *l.c.*). The Megillat Ta'anit gives the following fast-days in Nisan:

Nisan 1.—In commemoration of the deaths of Nadab and Abihu, the sons of Aaron. Nisan 10.—In commemoration of the death of Miriam, sister of Moses and Aaron. Nisan 26.—Anniversary of the death of Joshua.

On the evening of the 14th of Nisan the Feast of Passover begins; on the 16th, the second day of Passover, the Hebrews offered a sheaf of barley as the first-fruits of the harvest of the current year; and on the same day began the reckoning (Sefirah) of the seven weeks. From the 17th to the 20th are the "middle days," or the "ḥol ha-mo'ed." The 21st and the 22d are the last feast-days of Passover. Nisan coincides, approximately, with the month of April.

NISH (NISSA): City of Servia on the Nissava. Its Jewish community dates from the beginning of the eighteenth century, as is shown by a question put to Rabbi Moses Amarillo of Salonica by Gershon, the first chief rabbi of Nish, who had been elected in 1728 (Ḥanukkah, 5489). Gershon, while drawing up a bill of divorce, asked for information on the Hebrew spelling of the words "Nish" and "Nissava," "because this is a new community and such bills have never been written here" (comp. Amarillo, "Debar Mosheh," p. 169).

By the end of the eighteenth century Nish possessed an important rabbinical school. The local cemetery still contains the tombs of the rabbis of this period who constituted the religious tribunal, namely, Raḥamim Naphtali Gedaliah (d. 1790); Jacob Têba (1802); Abraham Ventura, son of the author Shalom Ventura (1805); and Judah Moses Heli (see below). In the nineteenth century the Meborah family produced two rabbis, Pesaḥ Meborah (d. 1829) and Jacob Meborah (d. 1831). In the last days of Turkish government the chief rabbi Ephraim Meïr Alkala'i, known as "Mercado Alkala'i" (1874), had great influence with the Ottoman empire. While Midhat Pasha, the grand vizier of the sultan 'Aziz, governed the district of the Danube, he appointed or dismissed the pashas of Nish according to the nature of the information furnished by Alkala'i, at whose house each new governor of the city spent the first few days of his appointment. In 1873 Alkala'i was decorated by the sultan 'Aziz with the Order of the Medjidie of the fourth class.

Nish produced two rabbinical authors: **Judah Moses Heli** (1807), mentioned above, author of "Kemaḥ Solet" (limited ed., Salonica, 1815), and **Abraham Moses Sid** (d. 1876), author of several works printed at Salonica, among them "Ḥippazon Pesaḥ," "Tasheb Enosh," and "Keẓir Ḥiṭṭim."

The Jews of Nish number about 700 in a total population of 21,000. They have but one synagogue and a school which accommodates eighty-two boys, who are taught Hebrew and Servian. There are, on the other hand, four Jewish philanthropic societies which undertake the care and burial of the dead, and provide aid to orphans, widows, and the sick. There is besides a woman's society.

NISHMAT: Literally, "the soul of." A part of the liturgy which on Sabbaths and festivals leads up to the short benediction ("yishtabbaḥ") after the Psalms and other Biblical poetry of the early morning service. Nishmat, together with this benediction, is called in the mishnaic account (Pes. x. 7) of the Passover night service the "Benediction of Song."

Nishmat varies somewhat in the German and the Sephardic liturgy; in the former it is made up of 340 Hebrew words. It contains near the beginning the avowal "Beside Thee we have no King, Redeemer, Savior," etc.—seemingly a protest against Christianity, and thus a later interpolation. Further on occurs the passage "If our mouth was full of song like the sea"; and the Talmud (Ber. 59b) speaks of such words as opening the form of thanks for a copious rain at its proper season, and teaches that one must thank God for each drop of rain. Hence the writer of Nishmat says that even with superhuman powers (*e.g.*, "our eyes shining like sun and moon") "we could not thank God for the one-thousandth part of the thousand millions and ten thousands of myriads of benefits He has wrought for us and for our fathers," each drop being a separate benefit.

It thus appears that Nishmat grew out of the thanksgiving for timely rain. Such a service, as well as the prayers at fasts in times of drought, was in use for hundreds of years before the fall of the Temple. While this thanksgiving is thus the oldest part of Nishmat, the part which follows it and gradually leads to the actual benediction over the recited Psalms differs greatly in the two rituals, and is undoubtedly of later growth. In the paragraph before the thanksgiving the Sephardic form has the participle מפענח ("reveals"), which indicates very late Hebrew; but the clause "He reveals secret things" is an interpolation, and the rest of the paragraph may be older. The verb קלס ("to beautify"; from the Greek *καλός*), near the end in the German ritual, shows the influence of Tiberias in Galilee. The acrostic י"צ"ח"ק, also near the end, must be a late accretion; for, though lines arranged alphabetically are very old, acrostics with names are comparatively modern.

NISIBIS (Greek, *Νίσιβις*; Hebrew, נציבין): City in northeastern Mesopotamia, in the ancient province of Migdonia. The Biblical Accad (Gen. x. 10) is rendered "Neẓibin" (Nisibis) by the Targumim of pseudo-Jonathan and Jerusalem; but the Targum of Jonathan renders Canneh (Ezek. xxvii. 23) by "Nisibis" (comp. Gen. R. xxxvii. 5). There was at Nisibis an important Jewish community in the time of the Herods; and here, as well as in Nehardea, treasure-houses were built in which were deposited the gifts sent to the Temple by the rich Jews that lived outside Palestine, and whence they were forwarded under a strong escort to Jerusalem. There was also at Nisibis a celebrated college, at the head of which was R. Judah b. Bathyra. Its fame was so great that the words "That which is altogether just shalt thou follow" (Deut. xvi. 20) were interpreted by the Rabbis to mean "Follow the school of Judah b. Bathyra at Nisibis" (Sanh. 32b).

After the accession of Trajan the Jews of Mesopotamia in general resisted that conqueror, who wished to annex their territory to the Roman empire. But the most stubborn resistance was offered by the Jews of Nisibis, which city was taken only after a lengthy siege. When Lucius Quietus, Trajan's general, in his subjugation of the Mesopotamian cities, laid waste Nisibis and Edessa, the massacre of the Jews was so great that the houses, streets, and roads were strewn with corpses.

According to Yaḳut ("Mu'jam," *s.v.* "Naṣibin"), Nisibis was rebuilt by Chosroes Nushirvan, and after the Arab conquest it became the home of Mohammedan scholars. In the time of Saadia Gaon a man of Nisibis is mentioned whom it was desired to make exilarch (Neubauer, "M. J. C." ii. 83; see also Schechter, "Saadyana," p. 134). Benjamin of Tudela found there (*c.* 1170) 1,000 Jews ("Itinerary," ed. Asher, i. 57), and Pethahiah of Regensburg states ("Sibbub," p. 6, St. Petersburg, 1881) that when he visited the place (1175-80) it contained a large community and three synagogues, one named for Judah b. Bathyra, and the other two built by Ezra. In one of the latter synagogues, he reports, there was a red stone brought from the Temple of Jerusalem.

W. B. M. SEL.

NISSEN (NISSEN-SALOMAN), HENRIETTE: Swedish singer; born in Göteborg March 12, 1819; died in Harzburg Aug. 27, 1879. She studied pianoforte under Chopin (1839), and singing under Manuel Garcia at Paris. She made her début at the Italian opera in Paris Nov. 12, 1843, as *Adalgisa*, with Grisi as *Norma*. Donizetti taught her the rôle of *Irene* in "Belisario," which was produced at the Italian opera Oct. 24, 1843. From 1845 to 1848 she was occupied with a triumphal tour of Italy, Russia, Norway, Sweden, and England. Nissen was a favorite at the Gewandhaus concerts in Leipsic and at Berlin, where her popularity rivaled that of Jenny Lind. In 1850 she married in Holland the violinist Siegfried Saloman, with whom she made a concert tour through Sweden, Finland, and Russia.

Nissen's voice was very sweet and of great compass, and it overcame the most formidable technical difficulties with remarkable ease; she excelled in acting also. Her best rôles were *La Sonnambula*, *Norma*, *Lucrezia Borgia*, *Lucia di Lammermoor*, and *Ernani*. In 1859 she became a teacher of singing at the St. Petersburg Conservatorium. She published in 1881 "Das Studium des Gesanges," embodying her vocal method; the work appeared at the same time in French and Russian also.

NISSI BEN NOAH: Karaite scholar; lived at Bassora, later at Jerusalem, in the eighth century. He is believed to have been the son of Abu Nissi Noah, who is given in the Karaite tradition as a contemporary and senior of Anan. In the introduction to Nissi's work, of which mention is made below, he relates the privations and sufferings of his life, which he dwelt upon so much that he came to be known as "Rabbi Oaḥ" (the suffering rabbi). This probably accounts for the name "R. Aḥa," by which he is sometimes designated. Nissi lost his parents while a child, and was brought up by a poor and aged grandmother. Thrown upon his own resources when he had scarcely reached adolescence, he managed to earn a poor living by teaching. Later he left his native city and traveled throughout Irak, Persia, and Syria, attended the various schools there, and acquired a knowledge of Hebrew, Aramaic, Greek, and Latin. He next devoted himself to the study of philosophy and rabbinical literature, which he recommends to his coreligionists. In the latter part of his life Nissi settled at Jerusalem, where he probably remained until his death. To Nissi is attributed the "Sefer 'Aseret ha-Debarim" (Firkovich MS. No. 610), containing an introduction to a work, no longer in existence, entitled "Bitan ha-Maskilim," or "Peles Bi'ur ha-Miẓwot," and which treats of the precepts derived from the Decalogue. In addition to biographical matter, this introduction contains Nissi ben Noah's exposition of the principles upon which his interpretation of the Law is based. This part was copied by Hadassi without mention of the name of Nissi ben Noah; Hadassi even added to his "Eshkol ha-Kofer" the additional title of "Peles," taken from the supplementary title of the "Bitan ha-Maskilim." P. F. Frankl states, however, that Nissi ben Noah did not live before the flourishing Arabic period of the Karaites, and the "Bitan ha-Maskilim" is a plagiarism from the "Eshkol ha-Kofer."

NISSIM, ḤAYYIM B. ELIJAH: Turkish rabbi; probably lived in the second half of the eighteenth century. He was the author of "Maẓa Ḥayyim," homilies and comments on the Pentateuch. It was published, together with some additions, by his son **Samuel b. Ḥayyim Nissim** at Salonica in 1816.

E. C. S. O.

NISSIM BEN JACOB BEN NISSIM IBN SHAHIN: African Talmud exegete and moralist; lived during the first half of the eleventh century in Kairwan. He received his early instruction from his father, JACOB BEN NISSIM, president of the yeshibah of Kairwan. After Ḥushiel ben Elhanan's arrival in Kairwan, Nissim continued his studies under that teacher, and at Ḥushiel's death succeeded him in the presidency of the yeshibah. Much as he gained from these teachers he seems to have gained more by his literary intercourse on halakic questions with Hai ben Sherira, gaon of Sura (comp. Harkavy, "Teshubot ha-Ge'onim," p. 361; Abraham ibn Daud, "Sefer ha-Ḳabbalah," in Neubauer, "M. J. C." i. 73). Nissim acted as an intermediary between this gaon and Samuel ha-Nagid of Granada, sending the former's halakic correspondence to Samuel. He thus deserves credit for helping to transplant Talmudical knowledge from Babylonia to Spain. Nissim, being a poor man, received considerable support from Samuel ha-Nagid, whose son Joseph married Nissim's only daughter. The bride, according to Abraham ibn Daud (*l.c.*), was very learned and pious, but physically deformed. After the unfortunate death of her husband in Granada (1066), she fled to Lucena, where the Jewish congregation provided for her most generously.

Nissim was the author of the following works:

His Writings.

(1) "Kitab Miftaḥ Maghaliḳ al-Talmud" (in Hebrew, "Sefer Mafteaḥ Man'ule ha-Talmud" = "Key to the Locks of the Talmud," in two parts). In this work Nissim aimed to meet the difficulties in the study of the Talmud, which for his contemporaries consisted chiefly in the fact that they were not so well versed therein as the ancient teachers. For the latter it was sufficient to refer by a short sentence to some passage of the Talmud, or to indicate briefly the outlines of a demonstration instead of developing it fully, because the ancient teacher was supposed to have studied the passage referred to in its proper place, and to bear it in mind all the time. For his contemporaries, however, teachers and pupils alike, Nissim found it necessary to give in extenso all the passages to which reference was made in a Talmudical treatise. This kind of "key" Nissim intended to extend to the whole Talmud, although it seems that he carried out his scheme with a few Talmudical treatises only (David of Estella, "Ḳiryat Sefer," in Neubauer, *l.c.* ii. 230). The "key" to Berakot, Shabbat, and 'Erubin has been published, according to an Italian manuscript (probably the same which Azulai said he had seen; comp. "Shem ha-Gedolim," ii. 33a), by Goldenthal (Vienna, 1847).

Talmudic Method.

Nissim did not confine himself to quoting references, but expounds them in their connection with the text; thus his work is at the same time a Talmudical commentary. He quotes from the Tosefta, Mekilta, Sifre, Sifra, from the old midrashim, and above all from the Palestinian Talmud, the explanations of which he sometimes prefers to those of the Babylonian Talmud. The second part of the "Mafteaḥ," divided by Nissim into fifty subdivisions, is intended to give a collection of halakot which in the Talmud are to be found in places where nobody would expect them. The enumeration of these fifty subdivisions is an important contribution to the methodology of the Talmud. The "Mafteaḥ" is written in a sort of mixed language, both Arabic and Hebrew being used as the character of the subject seemed to demand. It has been supposed that Nissim wrote this work about 1038 or 1040 (see "Orient, Lit." viii. 606).

(2) "Megillat Setarim" (written in the same language as the "Mafteaḥ"), a collection of notes concerning halakic decisions, explanations, and midrashim, primarily a note-book for the author's private use, and published by his pupils probably not until after his death; hence the title, which means "Secret Scroll." Only a few fragments of it have been preserved. One has been published by A. Geiger in H. L. Heilberg's "Beiträge zur Jüdischen

Literatur-Geschichte" (Hebrew part, pp. 16 *et seq.*); the last part of the published extract, however (pp. 17 *et seq.*), was taken from Abraham ibn Ezra's "Yesod Mora." Another, dealing with reward and punishment on earth and in the future world, is included in the "Sefer Ḥasidim" (ed. Wilna, Nos. 604-606; ed. Wistinetzki, Nos. 30-33). The responsum published by Harkavy in "Teshubot ha-Ge'onim" (p. 265, No. 539, Arabic; p. 339, No. 539, Hebrew) is probably a portion of the "Megillat Setarim."

Collection of Tales.

(3) A collection of comforting tales, written at the request of Nissim's father-in-law, Dunash, who had lost a son. This small book, consisting of about sixty tales, is based upon the Mishnah, Baraita, the two Talmudim, and the midrashic writings. Some tales seem to have been taken from older collections now lost. The first to ascribe this compilation to Nissim was Rapoport, who declared it to have been written originally in Arabic and translated into Hebrew. Of the same opinion were Zunz, Steinschneider, Jellinek, and others; but Nissim's authorship as well as the ancient composition of the book has been often contested, recently again by I. D. Margoliouth (in "J. Q. R." xiii. 158). Harkavy found an Arabic manuscript, the original of Nissim ben Jacob's compilation (partly published in the "Steinschneider Festschrift," Hebrew part, pp. 9-26). The Arabic title of this work probably was "Kitab Akhbar al-'Ulama wa-huwa Ta'lif Ḥasan fi al-Faraj"; in Hebrew, "Sefer Ma'asiyyot ha-Ḥakamim wehu Ḥibbur Yafeh meha-Yeshu'ah." The book is divided into thirty-four paragraphs. It seems that many of them are either wanting entirely in the Hebrew translation, or are shortened and changed. Zunz thought that the "Sefer Ma'asiyyot" was written about 1030; but, as the "Mafteaḥ" is quoted in it under the Arabic title given above, Harkavy is of the opinion that Nissim composed or wrote it about 1050, at the end of his life (see *l.c.* p. 22).

There exist two anonymous Hebrew compilations of this little work: (*a*) "Ḥibbur Yafeh meha-Yeshu'ah" (Ferrara, 1557; Amsterdam, 1746 *et seq.*, ed. Israel David Miller, Warsaw, 1886). Some parts of it are given also in the collective work "'Oseh Fele" (pp. 128, 357 *et seq.*, Leghorn, 1870), and in Jellinek ("B. H." v. 131). (*b*) "Ma'asiyyot sheba-Talmud" (Constantinople, 1519); or "Midrashot u-Ma'asiyyot sheba-Talmud" (Venice, 1544). A German translation entitled "R. Nissim's Legendenschatz," etc., has been published by A. Löwy (Vienna, 1882). It is remarkable with how much freedom Nissim treated his subject by choosing the form of dialogue (see Harkavy, *l.c.* p. 26).

His "Siddur."

(4) "Siddur ha-Tefillah," quoted by old rabbinic authorities. Both Rapoport and Zunz have no doubt as regards Nissim's authorship of this "Siddur." Steinschneider, however, doubts its genuineness. There exists a confession of sin ("widdui"), ascribed to R. Nissim, which is recited according to the Sephardic ritual in the morning prayer on the Day of Atonement, and according to the German ritual on the lesser Day of Atonement (Yom Kippur Ḳaṭan). This confession is supposed by Rapoport to have been copied from Nissim's "Siddur"; but the fact that in the "Siddur" of R. Amram (ed. Warsaw, 1865, ii. 45a) it is ascribed to "Nissim Rosh Yeshibah of Babylon" gave reason for believing that another Nissim was its author (see Weiss, "Dor," iv. 267). Harkavy, in fact, in an old Arabic commentary on Jeremiah found a quotation from the widdui of Nissim Naharwani. This man is supposed to have been the blind Babylonian "rosh kallah" whom the exilarch David ben Zakkai tried in vain to appoint gaon. The quotation from the widdui which Harkavy found in the Arabic Jeremiah commentary occurs again with slight changes in the widdui of the German ritual ascribed to Nissim. Thus it seems that Nissim ben Jacob was not the author of the widdui, but Nisi Naharwani, who may be the same as Nissim Nahoraini, a widdui by whom was discovered by E. N. Adler (see "J. Q. R." xiii. 99; comp. Steinschneider, "Introduction to Arabic Literature," *ib.* xiii. 199).

(5) Commentary on the Pentateuch, of which two quotations only have been preserved ("Pa'neaḥ Raza" on Beha'aloteka; Abraham ibn Ezra on Ex. xxxiv. 6). As these two quotations may have been taken equally well from the "Megillat Setarim," the existence of a commentary on the Pentateuch by Nissim thus appears very doubtful.

(6) A "Sefer ha-Miẓwot" of Nissim Gaon cited by Berechiah ha-Naḳdan in his "Maẓref" (ch. v. beginning; see Benjacob, "Oẓar ha-Sefarim," p. 362, No. 2032).

(7) "Hilkot Lulab," quoted in the "Sefer Ma'asiyyot" (see Harkavy in the "Steinschneider Festschrift," p. 24, No. 1), which seems to have been a polemic against the Karaites. This work and the preceding one are known only by these two quotations.

Nissim had a method of his own for the study of the Talmud, using very largely the Palestinian Talmud, which hitherto had been generally neglected. This was probably due to the teaching of Ḥushiel ben Elhanan. He followed the method of Saadia Gaon in defending the anthropomorphisms of the Haggadah against the attacks of the Karaites. While not denying the reality of the miracles recounted in the Haggadah, he by giving symbolic interpretations to them tried to justify them in the same way as the Karaites themselves did with the miraculous stories of the Bible.

Nissim had numerous pupils, some of whom came from Spain, and spread there his teaching and authority; so that he was honored with the title "gaon." There is, however, only one man of importance, the author Ibn al-Jasum, or, as Rapoport reads, Ibn al-Jasus, of whom it can be said with certainty that he was Nissim's pupil. Ibn al-Jasus wrote a work on prayers; but whether it was in Arabic, and whether, as has been suggested, it consisted of a commentary upon and of additions to his teacher's "Siddur," can not be ascertained (Rapoport, "Toledot R. Nissim," note 29; Steinschneider, "Cat. Bodl." col. 2069; *idem*, in "J. Q. R." x. 514, No. 411). It is an old error to believe that Alfasi was one of Nissim's pupils; the passage in Abraham ibn Daud's "Sefer ha-Ḳabbalah" (*l.c.*) which seems to say so is to be taken, according to Rapoport, as meaning that Alfasi used Nissim's works.

W. B. M. SC.

NISSIM BEN MOSES OF MARSEILLES: Philosopher of the thirteenth and fourteenth centuries. He was the author of a philosophical commentary on the Pentateuch, written about 1306, when the struggle between the Orthodox and the friends of philosophy was at its height. This, however, did not prevent Nissim from giving rationalistic explanations of the miracles and of the Bibical narrations. Thus he explains that the destruction of Sodom and Gomorrah was due to a volcanic eruption, like that which in 1302 had devastated the island of Ischia. Nissim's commentary is still extant in several manuscripts, in which it is variously entitled "Ma'aseh Nissim," "Sefer ha-Nissim," and "'Ikre ha-Dat." According to Schorr (in "He-Ḥaluẓ," vii. 144), Nissim wrote also a philosophicai homily on Ruth.

J. I. BR.

NISSIM B. REUBEN GERONDI (RaN, ר"ן): Physician, astronomer, and halakist; flourished at Barcelona about 1340 to 1380. He had much to suffer at the hands of certain wealthy and powerful Jews of his community, who even slandered him before the government (Isaac b. Sheshet, Responsa, Nos. 377, 447). When the Spanish Jews combined to send a petition to the king entreating his protection, Nissim was one of the committee who drafted the document (O. H. Schorr, in "He-Ḥaluẓ," 1852, i. 22 *et seq.*). The name of his teacher is not known; for although he frequently terms R. Perez "morenu" (= "our master"), this title was applied to great scholars in general, even by those who had not studied under them. Conforte's statement in "Ḳore ha-Dorot" (p. 26a) that R. Perez was Nissim's teacher, is, therefore, a mere assumption. It is much more probable that Nissim was the pupil of his father, Reuben b. Nissim, since he says in his commentary on Alfasi's "Halakot" (Shebu., end) that he had received a certain interpretation "from his father and teacher."

Attitude Toward Predecessors.

Nissim was a clear and acute thinker, and, being for the most part quite independent of his predecessors in his comments, he did not hesitate to refute the foremost earlier authorities, such as Rashi, Rabbenu Tam, Maimonides, Moses b. Naḥman, and Solomon b. Adret. He showed his reverence for these teachers, on the other hand, by adopting their opinions in practise, and, according to his pupil Isaac b. Sheshet (Responsa, No. 385), he was in general very cautious in his decisions and inclined toward conservatism. It frequently happens, therefore, that after refuting the opinion of an earlier teacher he finally says: "Yet since the ancients have decided thus, their conclusions may not be set aside."

His Commentaries on Alfasi.

In his commentaries Nissim endeavored to establish the decisions relating to practise, and he devoted himself to the explanation and defense of Alfasi's "Halakot," since that compendium had been adopted for practical decisions. The extant commentaries of Nissim on the "Halakot" cover the treatises Shabbat, Pesaḥim, Ta'anit, Rosh ha-Shanah, Beẓah, Sukkah, Megillah, Ketubot, Giṭṭin, Ḳiddushin, Shebu'ot, and 'Abodah Zarah. Commentaries on Mo'ed Ḳaṭan and Makkot are erroneously ascribed to him. According to a very improbable statement of Conforte (*l.c.*), Nissim wrote also on all the other treatises covered by Alfasi's "Halakot." He is very detailed and explicit where the subject is important from a practical point of view, but extremely brief when dealing with matters of mere theory.

Nissim wrote also commentaries on the Talmudic treatises themselves. Several of these have been lost entirely, and others are extant only in manuscript. Those which have been printed are on Shabbat (Warsaw, 1862), Rosh ha-Shanah (Jerusalem, 1871), Baba Meẓi'a (Dyhernfurth, 1822), Giṭṭin, Nedarim, Ḥullin, Sanhedrin, and Niddah (several times), while commentaries on the treatises Pesaḥim, Beẓah, Megillah, Ta'anit, Mo'ed Ḳaṭan, and Baba Batra are still in manuscript (Azulai, "Shem ha-Gedolim," *s.v.* "Nissim"; Jellinek, "Ḳontres ha-Mefaresh"). In these works also Nissim sought to determine the practical decisions, and at the end of nearly every exposition and explanation of any length he summed up whatever was of importance for practical purposes. He was the first to write a complete commentary on the treatise Nedarim; and this part of his work is the most valuable portion of the collection, since this treatise was neglected in the geonic period, and the later glosses on it left much to be desired.

As a Rabbinical Authority.

Nissim was recognized as a rabbinical authority even beyond Spain, and rabbinical questions ("she'elot") were addressed to him not only from his own country, but also from France, Italy, Africa, and Palestine. He wrote in reply about 1,000 responsa (Azulai, *l.c.*), of which seventy-seven only have been preserved. These show his insight and his rationalistic method of treating halakic material. His responsa were first published at Rome (1546), and were reprinted at Constantinople (1548) and, in an enlarged form, at Cremona (1557).

In addition to the works mentioned above, Nissim wrote a philosophical work containing twelve homilies ("derashot"), displaying in this small volume his familiarity with philosophy, especially with that of Maimonides and Ibn Ezra. He was no friend of mysticism, and even reproved Moses b. Naḥman (RaMBaN) for devoting too much time to the Cabala (Isaac b. Sheshet, Responsa, No. 167).

Nissim had two scholarly sons, **Ḥisdai** and **Reuben** (*ib.* No. 388), and many other disciples, the most prominent being Isaac b. Sheshet. The latter refers in his responsa to various details of his teacher's life, declaring that Nissim was the foremost rabbi of his time, with whom none of his contemporaries could compare (*ib.* No. 375), and that he was, moreover, highly respected and famous even in non-Jewish circles (*ib.* No. 447).

NISSIM (THE ELDER) IBN SHAHIN. See Jacob ben Nissim ibn Shahin.

NITER (Hebrew, "nether"): The niter of the ancients was a mineral alkaline salt, carbonate of soda, found in great quantities in Egypt. Natron Lake and Natron Valley derive their name from its presence in them; and they are still exploited for niter as they were in ancient times. In Egypt much niter was used of old for the embalming of bodies, and it was also known to the ancients that in smelting ore, niter quickened the process of flux. In the Old Testament niter is mentioned as a cleansing agent (Jer. ii. 22). It was also frequently employed for medicinal purposes. In Prov. xxv. 20 the effect of songs on a heavy heart is compared to the action of "vinegar upon niter." This is usually explained by the fact that niter effervesces when acids are mixed with it. Perhaps, however, the text should be emended; for the Septuagint reads: "as vinegar on a wound."

E. C. I. Be.

NITTAI OF ARBELA: Vice-president of the Sanhedrin under the nasi Joshua b. Peraḥyah at the time of John Hyrcanus. In Yer. Ḥag. ii. 76d he is called **Maṭṭai of Arbela.** Arbela was a city of Galilee not far from Tiberias. No halakot of his are extant, but some of his apothegms have been preserved which afford a glimpse of his character. They are as follows: "Withdraw thyself from an evil neighbor; join not thyself unto the wicked; and renounce not the hope of retribution" (Ab. i. 7). These bitter utterances contrast sharply with the gentle maxims of his colleague Joshua b. Peraḥyah. Nittai seems to have spoken thus after John Hyrcanus had deserted the party of the Pharisees and joined the Sadducees, persecuting his former friends. The phrase "renounce not the hope of retribution" was intended to comfort the Pharisees with the thought that Hyrcanus himself would not escape punishment, while the other two injunctions were designed to keep them from joining the Sadducees.

S. J. Z. L.

NITTEL: Judæo-German word for "Christmas"; derived from the medieval Latin "Natale Domini" (see Wetzer and Welte, "Kirchenlexikon," vii. 588); Old Latin, "Dies Natalis"; French, "Noël." Moses Isserles speaks of the custom of sending presents on the eighth day after Nittel, which is called New-Year (Shulḥan 'Aruk, Yoreh De'ah, 148, 12). It was also customary among the Jews to play cards on Nittel night, which was explained as being done in opposition to the solemn celebration of that evening by Christians, while really it was merely a survival of the old German custom of merrymaking at this festival (see Tille, "Gesch. der Deutschen Weihnacht," Leipsic, 1900). D.

NIZZA (ניצה), SOLOMON BEN ISAIAH BEN ELIEZER ḤAYYIM: Rabbi of Venice in the seventeenth and eighteenth centuries; equally prominent as sage, Talmudist, and liturgical poet. His father, **Isaiah,** whom he succeeded, was the author of "Derek Yashar" (Venice, 1633), on ethics, and of "Yesha' Yah" (*ib.* 1637), a commentary on the Zohar; and his grandfather **Eliezer Ḥayyim,** who was rabbi of Padua (*c.* 1600), wrote "Dammeseḳ Eli'ezer."

Many prominent Talmudists corresponded with Nizza and published his decisions in their works; and his approbations ("haskamot") were in great demand. He was the teacher of Moses and Gershon Ḥefeẓ, on the latter of whom he delivered a eulogy (published in "Yad Ḥaruzim," 1660). His seliḥah שבץ אחוני עצמי חרו, in eight rimed stanzas, each of which ends with נשא ידיך, was inserted in the morning service for New-Year's Day ("Shaḥarit") in the Roman ritual.

NIẒẒAḤON. See Lipmann-Mühlhausen.

NO-AMON: Name designating the city of Thebes, in Egypt, and equivalent to "No, the city of the god Amon"; found in Nah. iii. 8 (comp. Jer. xlvi. 25, where Amon is spoken of as the god of No). The current form is the later Hebrew pronunciation of the older "Na." This is nearly equivalent to the Assyrian "Nē'," which is modified from "Na'" by the influence of the guttural. The word is Egyptian and means the "city" par excellence. Thebes was the greatest of the ancient Egyptian cities (observe the repetition of the name in Ezek. xxx. 14–16). It stood at the very center of the Nile traffic, and was distant about 500 miles by the river from the Mediterranean and about 110 miles from the border of Ethiopia (Cush), of whose trade it was the emporium.

Thebes was originally the capital of the fourth nome of Upper Egypt (Pathros). Early in the third millennium B.C. it was made the seat of the eleventh dynasty. But it was not until the expulsion of the Hyksos (about 1570 B.C.) that it became the permanent capital. Under the eighteenth and nineteenth dynasties it attained the height of its splendor. The most famous kings of Egypt, Thothmes III. and Rameses II., adorned it with magnificent structures, the remains of which now form the principal ruins of Karnak and Luxor. After the establishment of the Ethiopian dynasty the city lost its prestige. Its decline was hastened by its repeated capture by Assurbanipal during the native uprisings against the Assyrian suzerainty (667–663 B.C.). Since the days of the Ptolemies it has been the great ruined city of Egypt. The Targum and Gen. R. (i, beginning), and also Judah ha-Levi, translate No-Amon by Alexandria.

NOACHIAN LAWS. See Laws, Noachian.

NOAH.—Biblical Data: Son of Lamech and the ninth in descent from Adam. In the midst of abounding corruption he alone was "righteous and blameless in his generations" and "walked with God" (Gen. vi. 9). Hence, when all his contemporaries were doomed to perish by the divine judgment in punishment for their sins, he "found grace in the eyes of the Lord" (*ib.* vi. 8). When he was about five hundred years old his three sons, Shem, Ham, and Japheth, were born (*ib.* v. 32). One hundred years after this the command came to him from God to make a great vessel or ark, three hundred cubits in length, in which he and his family were to find safety from the waters of a great flood. This deluge was to destroy all living things except such as should be brought into the ark before the coming of the waters. Hence, besides his wife, and his sons and their wives, eight persons in all, a pair of every species of living thing was taken into the ark (*ib.* vi. 13-21). Another account (*ib.* vii. 1-3) states that of the clean animals seven of each kind were thus preserved.

Noah fulfilled the command, and on the tenth day of the second month of the six hundredth year of his life he and his family and the living creatures entered into the vessel. Seven days thereafter "all the fountains of the abyss were broken up and the windows of heaven were opened" (*ib.* vii. 6-11, 13-16). For forty days the rain fell; the ark floated and drifted in fifteen cubits of water; the high mountains were covered; and every living thing not sheltered in the vessel perished from the earth. For one hundred and fifty days the waters prevailed (*ib.* vii. 17-24). At the end of that period the vessel rested upon the "mountains of Ararat" (*ib.* viii. 3, 4).

Noah Sends Forth the Dove.

Noah waited during the slow ebbing of the waters till the tenth day of the eleventh month. Then he sent forth a raven which flew from hilltop to hilltop and did not return. Next he sent forth a dove which found no resting-place and returned to the ark. After seven days more he sent forth the dove again, and at evening she returned with an olive-leaf in her beak. Soon the waters disappeared entirely, and in the six hundred and first year, in the second month, on the twenty-seventh day of the month, that is, three hundred and sixty-five days after the oncoming of the deluge, the earth was seen to be entirely dry (*ib.* viii. 5-14).

Noah's first duty, after the general disembarkation, was to erect an altar to Yhwh, whereon he offered one of every species of clean animal as a sacrifice. Yhwh, accepting the offering, promised never again to curse the ground "for man's sake," or to interfere with the regular succession of the seasons. As a pledge of this gracious covenant with man and beast the rainbow was set in the clouds (*ib.* viii. 15-22, ix. 8-17). Two injunctions were laid upon Noah: While the eating of animal food was permitted, abstinence from blood was strictly enjoined; and the shedding of the blood of man by man was made a crime punishable by death at the hands of man (*ib.* ix. 3-6).

After the Flood Noah engaged in vine-growing. He became drunk with the wine, and, uncovering himself in his tent, he was seen in his shame by his eldest son, Ham, who informed his two brothers of the exposure. They modestly covered their father with a garment, and received from him a blessing, while Ham, through his son Canaan, received a curse. Noah died at the age of nine hundred and fifty years. He was the second father of the race, since only his descendants survived the Flood. His traditional renown is attested by his being named with Job and Daniel, in the days of the Exile (Ezek. xiv. 14, 20), as a type of a righteous man.

E. C. J. F. McC.

——**In Apocryphal and Rabbinical Literature:** Apocryphal legend represents Noah at his birth as having a body white like snow, hair white as wool, and eyes like sunbeams. As soon as he opened his eyes, with the light of which the whole house was illumined, he stood upright between the midwife's hands and addressed a prayer to God. His father, Lamech, frightened at this sight, went to consult Methuselah, telling him that his grandchild resembled an angel more than a child. Lamech further informed his father that he foresaw some accident would befall the earth during the lifetime of his son; he therefore asked Methuselah to consult Enoch, who was then among the angels, and who consequently would know what was to happen. Methuselah, accordingly, went to the ends of the earth to confer with Enoch, who announced to him that a flood would destroy the world, that only the new-born son and his future sons, three in number, would survive. Enoch also told him to name the child "Noah," inasmuch as he would console the earth for its destruction (Enoch, cvi.-cvii.).

His Name.

According to Midr. Agadah on Gen. v. 29, Noah obtained his name, which means "rest," only after he had invented implements for tilling the ground, which, owing to the lack of such implements, had yielded only thorns and thistles (comp. Gen. iii. 18). In this manner Noah really brought rest to mankind and to the earth itself. Other reasons for this name are given by the Rabbis; *e.g.*, Noah restored man's rule over everything, just as it had been before Adam sinned, thus setting mankind at rest. Formerly the water used to inundate the graves so that the corpses floated out; but when Noah was born the water subsided (Gen. R. xxv. 2). The apparent discrepancy in Gen. v. 29, where it is said that Lamech "called his name Noah, saying, This shall comfort us," is explained by the "Sefer ha-Yashar" (section "Bereshit," p. 5b, Leghorn, 1870), which says that while he was called in general "Noah," his father named him "Menahem" (= "the comforter"). Noah was born circumcised (Midr. Agadah on Gen. vi. 9; Tan., Noaḥ, 6).

Although Noah is styled "a just man and perfect in his generations" (Gen. vi. 9), the degree of his righteousness is, nevertheless, much discussed by the Rabbis. Some of the latter think that Noah was a just man only in comparison with his generation, which was very wicked, but that he could not be compared with any of the other righteous men mentioned in the Bible. These same rabbis go still further and assert that Noah himself was included in the divine decree of destruction, but that he found grace in the eyes of the Lord (comp. *ib.* vi. 8) for the sake of his descendants. Other rabbis, on the contrary, extol Noah's righteousness, saying that his generation had no influence on him, and that had he lived in another generation, his righteousness would have been still more strongly marked (Sanh. 108a; Gen. R. xxx. 10). In like manner, the terms "wise" ("ḥakam") and "stupid" ("ba‘ar") are applied to Noah by different rabbis (Ex. R. l. 2; Num. R. x. 9). Still, it is generally acknowledged that before the Flood, Noah was, by comparison with his contemporaries, a really upright man and a prophet. He was considered as God's shepherd (Lev. R. i. 9; "Yalḳ. Ḥadash," "Mosheh," No. 128). Two different reasons are given why Noah begat no children until he had reached the advanced age of 500 years, while his ancestors had families at a much younger age (comp. Gen. v.). One explanation is that Noah, foreseeing that a flood would destroy the world on account of its corruption, refused to marry on the ground that his offspring would perish. God, however, ordered him to take a wife, so that after the Flood he might repeople the earth (Tan., Bereshit, 39; "Sefer ha-Yashar," section "Noaḥ"). The other explanation is that God rendered him impotent till he reached the age of 500, saying: "If his children be wicked, he will be afflicted by their destruction; and if they be upright like their father, they will be troubled with making so many arks" (Gen. R. xxvi. 2).

His Marriage.

The "Sefer ha-Yashar" (*l.c.*) and Gen. R. (xxii. 4) both agree that Noah's wife was called Naamah. According to the latter, she was the sister of Tubal-cain (Gen. iv. 21); according to the former, she was a daughter of Enoch, and Noah married her when he was 498 years old. In the Book of Jubilees (Hebr. transl. by Rubin, iv. 46–47) Noah's wife is referred to as "Emẓara, daughter of Raḳi'el." Emẓara was his niece, and two years after their marriage bore him Shem.

Noah once had a vision in which he saw the earth sinking and its destruction drawing near. Like his grandfather, Methuselah, Noah, too, went to the ends of the earth to consult Enoch. Noah cried out sadly three times: "Hear me!" Then he said: "What has happened to the earth that it is so shaken? May I not go down with it?" An earthquake took place; a voice descended from heaven; and Noah fell with his face toward the ground. Enoch appeared before him, foretelling that the end of the dwellers upon the earth was near because they had learned the secrets of the angels, the misdeeds of Satan, and all the mysteries of the world which should have been hidden from them. But as Noah was innocent of any attempt to learn these secrets, Enoch foretold his deliverance from the Flood, and the descent from him of a righteous race of men (Enoch, lxv. 1–12). On being informed of the end of the world, Noah exhorted his contemporaries to repentance, foretelling them that a flood would destroy the earth on account of the wickedness of its people. According to a tradition, Noah planted cedar-trees and felled them, continuing to do so for the space of one hundred and twenty years. When the people asked him for what purpose he prepared so many trees, he told them that he was going to make an ark to save himself from the Flood which was about to come upon the earth. But the people heeded not his words, they mocked at him, and used vile language; and Noah suffered violent persecution at their hands (Sanh. 108a, b; Pirḳe R. El. xxii.; Gen. R. xxx. 7; Lev. R. xxvii. 5; "Sefer ha-Yashar," *l.c.*; see also Flood in Rabbinical Literature). According to one legend, God showed Noah with His finger how to make the ark (Pirḳe R. El. xxiii.); but according to the "Sefer Noaḥ" (Jellinek, "B. H." iii. 155–160), Noah learned how to build it, and mastered as well the various sciences, from the "Sefer Razi'el" (the book from which the angel Raziel taught Adam all the sciences), which had been brought to him by the angel Raphael.

Making of the Ark.

The construction of the ark lasted fifty-two years; Noah purposely working slowly, in the hope that the people would take warning therefrom and would repent (Pirḳe R. El. *l.c.*). The "Sefer ha-Yashar" (*l.c.*), however, assigns only five years for the construction of the ark. Noah could distinguish between clean and unclean animals inasmuch as the ark of itself gave admittance to seven of the clean animals, while of the unclean ones it admitted two only (Sanh. 108b). The "Sefer ha-Yashar" describes another method for distinguishing them: the clean animals and fowls crouched before Noah, while the unclean ones remained standing.

An account of a vision which Noah had in the five-hundredth year of his life, on the fourteenth day of the seventh month, is given in the Book of Enoch (lx. i. 25), which probably refers to the beginning of the Flood. Noah witnessed the heaven of heavens quake so violently that all the heavenly hosts were disquieted. Noah was prostrated with fear, and Michael sent an angel to raise him and to tell him of the impending judgment. Then the angel that accompanied Noah told him of the spirits which control the thunder, lightning, snow, rain, and hail.

A difference of opinion concerning Noah prevails also with regard to his entering into the ark. According to some rabbis, Noah's faith was so small that he did not enter the ark until he stood ankle-deep in water (Gen. R. xxxii. 9); others declare, on the contrary, that Noah waited for God's directions to enter the ark, just as he awaited His permission to leave it (*ib.* xxxiv. 4; Midr. Agadat Bereshit, in Jellinek, "B. H." iv. 11).

When Noah and his family and everything that he had taken with him were inside the ark, the people left outside asked him to admit them too, promising repentance. Noah refused to admit them, objecting that he had exhorted them to repent many years before the Flood. The people then assembled in great numbers around the ark in order to break into it; but they were destroyed by the lions and other wild animals which also surrounded it (Tan., Noaḥ, 10; Gen. R. xxxii. 14; "Sefer ha-Yashar," *l.c.*).

Within the Ark.

Noah was constantly occupied in the ark; for he had to attend to all the living things which were with him and which fed at different times. One of the lions, having become enraged at Noah, attacked and injured him, so that he remained lame for the rest of his life. Noah, during the twelve months that he was in the ark, did not sleep one moment (Tan., Noaḥ, 14; Gen. R. xxx. 6). Noah had also to feed Og, who, being unable to enter the ark, sat upon it, taking hold of one of its timbers. Noah made a hole in the side of the ark through which he passed food to Og; the latter thereupon swore to be Noah's servant eternally (Pirḳe R. El. *l.c.*).

Being in great distress, Noah prayed to God to shorten the time of his suffering. God answered him that He had decreed that the Flood should last twelve months and that such decree might not be changed (Tan., Noaḥ, 17; Midr. Agadat Bereshit *l.c.* iv. 12). The mountain on which the ark rested, and on which Noah afterward settled, is called in the Book of Jubilees (v. 38) and "Sefer Noaḥ" (*l.c.*) "Lubar," which Delitzsch supposes to be the Elbruz. When Noah sent the raven to see whether the waters were abated, it refused to go, saying: "Thy Lord hateth me; for, while seven of other species were received into the ark, only two of mine were admitted. And thou also hatest me; for, instead of sending one from the sevens, thou sendest me! If I am met by the angel of heat or by the angel of cold, my species will be lost." Noah answered the raven: "The world hath no need of thee; for thou art good neither for food nor for sacrifice." God, however, ordered Noah to receive the raven into the ark, as it was destined to feed Elijah (Sanh. 108b; Gen. R. xxxiii. 6). When Noah, on leaving the ark, saw the destruction wrought on the world, he began to weep, saying: "Lord of the world, Thou art merciful; why hast Thou not pitied Thy children?" God answered him: "Foolish shepherd! Now thou implorest My clemency. Hadst thou done so when I announced to thee the Flood it would not have come to pass. Thou knewest that thou wouldest be rescued, and therefore didst not care for others; now thou prayest." Noah acknowledged his fault, and offered sacrifices in expiation of it ("Zohar Ḥadash," p. 42a, b). It was because Noah neglected to pray for his contemporaries that he was punished with lameness and that his son Ham abused him (*ib.* p. 43a).

His Lapse.

The planting of a vineyard by Noah and his drunkenness (Gen. ix. 20 *et seq.*) caused him to be regarded by the Rabbis in a new light, much to his disparagement. He lost much if not all of his former merit. He was one of the three worthless men that were eager for agricultural pursuits (Gen. R. xxxvi. 5); he was the first to plant, to become drunken, to curse, and to introduce slavery (Tan., Noaḥ, 20; comp. Gen. *l.c.*). God blamed Noah for his intemperance, saying that he ought to have been warned by Adam, upon whom so much evil came through wine (Sanh. 70a). According to Pirḳe R. El. (*l.c.*), Noah took into the ark a vine-branch which had been cast out with Adam from paradise. He had previously eaten its grapes, and their savor induced him to plant their seed, the results of which proved lamentable. When Noah was about to plant the vineyard, Satan offered him his help, for which he was to have a share in the produce. Noah consented. Satan then successively slaughtered a sheep, a lion, an ape, and a hog, fertilizing the ground with their blood. Satan thereby indicated to Noah that after drinking the first cup of wine, one is mild like a sheep; after the second, courageous like a lion; after the third, like an ape; and after the fourth, like a hog who wallows in mud (Midr. Agadah on Gen. ix. 21; Midr. Abkir, in Yalḳ., Gen. 61; comp. Gen. R. xxxvi. 7). This legend is narrated by Ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 75a, Amsterdam, 1697) thus: "Noah, seeing a he-goat eat sour grapes and become intoxicated so that it began to frisk, took the root of that vine-branch and, after having washed it with the blood of a lion, a hog, a sheep, and an ape, planted it and it bore sweet grapes."

The vineyard bore fruit the same day that it was planted, and the same day, too, Noah gathered grapes, pressed them, drank their juice, became intoxicated, and was abused by Ham (Gen. R. *l.c.*; Midr. Agadah *l.c.*; Tan., Noaḥ, 20). In Jubilees (vii. 1 *et seq.*), however, it is stated that Noah planted the vineyard in the first year of the seventh Sabbath of the twenty-sixth jubilee (see Lev. xxv. 8 *et seq.*), that is, the year 1268 of Creation, seven years after he had come out of the ark. It bore fruit in the fourth year. Noah gathered the grapes in the seventh month of that year, but conserved the wine till the new moon of the first month of the fifth year, on which day he made a festival and offered sacrifices on the altar. Being filled with joy, Noah drank of the wine so freely that he became intoxicated.

His Testament.

His Book of Medicinal Plants.

According to verses 20–39 of the same chapter, Noah began in the twenty-eighth jubilee to compose his testament, in which he prescribed that future generations should observe all natural laws as well as some of those which Moses later prescribed for the children of Israel, among others the prohibition against eating the fruit of the first three years and the laws concerning the Sabbatical year. When Noah's grandchildren increased in number, they were led astray by evil spirits, and consequently were afflicted with various diseases. According to Jubilees (x. 1), this happened on the third Sabbath of the twenty-ninth jubilee, that is to say, about seventy-five years after the Flood. Noah, having been informed of the punishment visited on his grandchildren, was greatly terrified; for he knew that his descendants were stricken on account of their sins. He consequently assembled his children and grandchildren, whom he sanctified, and they together offered sacrifices on the altar and prayed to God for deliverance from the evil. God then sent the angel Raphael, who confined the demons, leaving loose, however, the tenth part of them, under their chief Masṭemah, in order that they might punish those who committed crimes. Noah was taught by Raphael how to cure the above-mentioned diseases, and was shown the medicinal plants and herbs. He recorded in a book all the medicaments and drugs the use of which he had been taught by Raphael; and this book was transmitted from one generation to another. Later it was translated into many languages, copies of it coming into the hands of the most famous physicians of India and Greece, who derived therefrom their medical knowledge ("Sefer Noaḥ," *l.c.*; Jubilees, x. 1-14).

Noah should have lived 1,000 years; but he gave Moses fifty years, which, together with the seventy taken from Adam's life, constituted Moses' hundred and twenty years ("Yalḳuṭ Ḥadash," "Noaḥ," No. 42). There is a tradition that Noah lived to see 14,400 of his descendants (Ibn Yaḥya, *l.c.*). According to Jubilees (x. 21), Noah was buried on Mount Lubar, where he had settled after the Flood. But Ibn Yaḥya (*l.c.*) records a tradition that Noah after the Deluge emigrated to Italy, where he learned various sciences. Ibn Yaḥya further says that Noah has been identified by some with Janus, deriving the latter name from the Hebrew "yayin" (wine); Noah, it is said, was so called because he was the first to drink wine. His wife is identified with Aricia, which name is derived from the Hebrew "ereẓ" (earth), she being so called on account of her being the mother of every living thing. After her death she was called "Vesta" (= "Eshta," from "esh," which means "fire"), on account of her ascension to heaven. Others identify Noah with Melchizedek, and declare that he founded Jerusalem.

W. B. M. Sel.

——**Critical View:** The Book of Genesis contains two accounts of Noah. The first account (vi. 9-ix. 19) makes Noah the hero of the Flood and the second father of mankind, with whom God made a covenant; the second account represents Noah as a husbandman who planted a vineyard. The disparity of character between these two narratives has caused some critics to insist that the subject of the latter account was not the same as the subject of the former. As it appears from Gen. v. 29 that the name "Noah" refers to the fact that the bearer of the name was a husbandman, these critics must assume either that there were two Noahs or that the hero of the Flood was named differently. Cheyne (in "Encyc. Bibl.") suggests that the original name of the Noah of the Flood was "Enoch" (חנך), and that afterward, the final ך having become effaced, the scribe transposed the two remaining letters. The scribe may have made the transposition with the idea of identifying the central figure of the Flood with the inventor of wine. This suggestion is supported by the following considerations:

In the Ethiopic text of the Book of Enoch the vision referring to the Flood (lx. 1) is stated to have taken place in the five-hundredth year of Enoch. The expression used in Gen. vi. 9 is the same as that in Gen. v. 22, 24, and in fact, in the Babylonian account of the Flood, which may have been the source of the Biblical narrative, the translation of Ẓitnapishti or Pirnapishtim (the Babylonian Noah) to heaven follows immediately after the account of the Flood. Further, the Flood lasted a solar year, 365 days, which is the number of the years of Enoch's life (comp. Gen. v. 23). Still, Gen. v. 29 ("And he called his name Noah [נח], saying, This same shall comfort us [ינחמנו]") remains unexplained (comp. Noah in Apocryphal and Rabbinical Literature).

The Septuagint rendering, *διαναπαύσει ἡμᾶς*, induced Ball ("S. B. O. T.") to change ינחמנו into יניחנו ("he will put us at rest"). Wellhausen ("De Gentibus," p. 38, note 3), on the other hand, retains the Masoretic text, but changes the name "Noah" into "Noḥam." The two narratives, however, may well be applied to the same person and without much change in the text. Joseph Halévy remarks ("Recherches Bibliques," p. 91) that נח is not to be derived from נוח ("rest"), but from נחח, a root used in connection with sacrifices and meaning "agreeable." Noah was so called, perhaps, in allusion to the sacrifices which he offered after the Flood (comp. ריח הניחח in Gen. viii. 21). It is worth while mentioning the opinion of Hommel, who, reading the name of the Babylonian Noah as "Nuḥmapishti" instead of "Ẓitnapishti," thinks that "Noah" is the first part of the Babylonian name. It is very likely that the redactor pointed out purposely that the man who preserved the world from destruction was also the man who introduced agriculture and made possible the abandonment of the nomadic mode of living in favor of a more settled and domestic state. The redactor emphasized also the consequences of inebriety. See Flood, Critical View.

——**In Arabic Literature:** Noah is regarded by the Arabs as one of the six principal prophets sent to reclaim mankind from its wickedness; hence his cognomen "al-nabi" (prophet). He is mentioned in the Koran, often with Ad and Thammud, in connection with foreshadowings of the fate of those who would not listen to Mohammed. The fullest account is found in sura xi. 27-51, entitled "Hud."

The main points of the Arabic tradition are based on the Biblical narrative. Thus, Noah is the son of Lamech and lives to be nine hundred and fifty years old. According to some, however, he lives to be a thousand and receives the gift of prophecy in his fiftieth year (Ṭabari, "Chronique," i. 106). It is said that the people used to jeer at him for always prophesying evil, and pointed him out to their children as a madman. Finally the people become so wicked that Noah prays to God to destroy them. God directs him to plant a plane-tree which will require forty years to grow and warns him that at the end of that time a flood will destroy all living things on the earth. The sign presaging this event will be water boiling up out of his oven. This oven, mentioned in the Koran narrative, is placed by the commentators in various places. According to one tradition it was Eve's oven, which had been handed down from patriarch to patriarch (D'Herbelot, "Bibliothèque Orientale"). Others say that the tree took only twenty years to grow and that during this time no children were born, so that only adults were destroyed by the Flood (*ib.*). After the tree has grown God sends Gabriel to show Noah how to build the ark. Most of the commentators on the Koran assign the same dimensions to it as those found in the Bible, although some writers greatly exaggerate them. It took Noah two years to build the ark (Ṭabari says only forty days), during which time the unbelievers around him mocked at him for building a boat so far away from the water and for suddenly becoming a carpenter after having been a prophet (Baiḍawi, on sura xi. 40).

Building the Ark.

When the ark was completed God told Noah to put into it one pair (or, according to some renderings of the words in the Koran, two pairs) of every species of living thing and to take with him his family and those who believed. According to the Arabic story Noah had a fourth son named Canaan (or, according to some, a grandson, as in the Bible), who was an idolater and would not enter the ark when Noah called to him, declaring his intention to climb a mountain out of reach of the water. But even as he was speaking a wave came and destroyed him. Noah had also another wife, named Waila, who was likewise an infidel and who perished with her son; she and Lot's wife are symbols of unfaithfulness (sura lxvi. 10).

Noah's Companions in the Ark.

Besides Noah's family the Arabs suppose that seventy-two other persons were saved in the ark. These were persons who had been converted by Noah's preaching. However, they did not beget children after leaving the ark, and hence all mankind descended from Noah's three sons. Gabriel brought Adam's body in a coffin to be placed in the ark; it served to separate the men from the women in the middle story of the ark; the beasts were placed in the lowest story and the birds in the top (Baiḍawi). Pigs and cats were created in the ark to consume the filth and the rats (Ṭabari, *l.c.* p. 112). Noah was five or six months in the ark. He embarked at Kufa, after which the ark proceeded to Mecca and circled around the Kaaba, and finally settled on Mount Judi in Armenia, in the district of Mosul (Mas'udi, "Les Prairies d'Or," i. 74). Noah first sent out a raven to explore, and cursed it because the bird stopped to feast on a carcass; he then sent out a dove, and blessed it because it returned to him. Hence doves have always been liked by mankind. God commanded the earth to absorb the water, and certain portions which were slow in obeying received salt water in punishment and became dry and arid; the water which was not absorbed penetrated into the depths of the earth and formed the seas, so that the waters of the Flood still exist (Mas'udi, *l.c.* p. 75).

Noah left the ark on the tenth day of Muḥarram. He and his companions built at the foot of Mount Judi a town which received its name, Thamanim ("eighty"), from their number. Noah is said to have written ten books of prophetic teachings, which have been lost.

NOAH, ḤAYYIM HIRSCH. See BERLIN, NOAH ḤAYYIM ẒEBI HIRSCH B. ABRAHAM MEÏR.

NOAH, MORDECAI MANUEL: American politician, journalist, playwright, and philanthropist: born in Philadelphia, Pa., July 19, 1785; died in New York city March 22, 1851. He was of Portuguese Jewish descent; and his father took an active part in the War of Independence. George Washington is said to have been present at the wedding of his parents. Left an orphan at an early age, Noah was apprenticed to a carver. He, nevertheless, managed to attend school for a few hours every day, and it was there that he met John Decatur and his brother Stephen, who later became commodore in the United States navy. Of a studious disposition, Noah spent his evenings alternately at the theater and in the Franklin Library, at that time frequented by the most prominent scholars and statesmen of Philadelphia, which city was then the capital of the United States.

After spending some time in the auditor's office in Philadelphia, Noah in 1800 went to Harrisburg to represent a newspaper at the Pennsylvania legislature. This was his first attempt in journalism. Several years later he removed to Charleston, S. C., where he studied law, and where, his reputation as a prolific writer having preceded him, he was chosen to fill the post of editor of the local "City Gazette." The American political horizon was then clouded by the threatened war with England. Noah was among those who advocated war; and he wrote many a stirring article to this effect over the pseudonym "Muley Molack." In so doing he incurred the hatred of many of the oppositionists, and was even challenged to several duels, in one of which he killed his antagonist. The war with England broke out soon after, in the year 1812.

Consul to Tunis.

The government at Washington, recognizing Noah's activity, appointed him in 1813 consul to Tunis. Just then the Algerines committed a most piratical act against America in capturing a vessel from Salem, Mass., and in enslaving its entire crew, consisting of twelve persons. Noah was instructed to adjust the affair with the Algerines in a manner that would redound to the honor of the United States and would strengthen American prestige in the Mediterranean. Above all, he was to endeavor to liberate the captured American sailors in such wise as to lead the Algerines to believe that the relatives and friends of the captives, and not the American government, were interested in their release. Noah effected this in a very creditable manner; but he was compelled to expend a sum exceeding the amount allowed him by his government. His political opponents at home made use of this incident to effect his recall. In Noah's letter of discharge, Monroe, who was then secretary of state, clearly stated that the chief cause of the recall was the faith he professed—a reason which Noah could in no way find justifiable.

On his return to America (1816) Noah settled in the city of New York, where he resided for the rest of his life in the enjoyment of many honors and great popularity. Primarily a journalist, he nevertheless found time to engage in many different projects; and he held successively the offices of sheriff, judge, and surveyor of the port of New York. A Tammanyite in politics, he used his pungent and fluent pen in the interest of that party. He successively published and edited the "National Advocate," "New York Enquirer," "Evening Star," "Commercial Advertiser," "Union," and "Times and Messenger." He aided financially and otherwise James Gordon Bennett when the latter established the "New York Herald."

In 1819 Noah published at New York his "Travels in England, France, Spain, and the Barbary

States," in which he very lucidly describes all his experiences abroad, the services he had rendered to his government while in Tunis, and the manner in which he was requited for his unselfish acts. Other books by him are: "Gleanings from a Gathered Harvest" (New York, 1845), a collection of essays and editorials; "Discourse on the Restoration of the Jews" (*ib.* 1845), and an English translation of the "Book of Yashar" (*ib.* 1840), which he prefaced with an article on the history of the book.

Writings.

During his lifetime Noah enjoyed the reputation of being the most popular American playwright of the day. Most of his plays were based upon American life and history, which fact greatly accounted for their popularity. While yet a mere youth in Philadelphia he wrote for an amateur company his "Fortress of Sorrento." His other plays, performed with more or less success, were: "Paul and Alexis, or The Orphans of the Rhine," "She Would Be a Soldier, or The Plains of Chippewa," "Marion, or The Hero of Lake George," "The Grecian Captive," and "The Siege of Tripoli."

Mordecai Manuel Noah.
(From a painting in the possession of L. Napoleon Levy.)

Noah's place in Jewish history is due to his activity as a Jewish liberator and nationalist. His travels in Europe and his thorough acquaintance with Jewish affairs had opened his eyes to the unfortunate situation of the Jews—a homeless people lodged in the midst of other peoples with whom they could never amalgamate. Like the majority of Zionists, Noah advocated the restoration of the Jews to Palestine, their ancient heritage; and though he firmly believed in the coming of the Messiah, he nevertheless held to the view that the restoration of the Jews must come about through the Jews themselves. That he should have attempted to found a Jewish state in a land other than Palestine is but a confirmation of the view that with all his attachment to the Holy Land, he felt greatly in doubt as to the immediate feasibility of colonizing a large number of Jews in Palestine. Furthermore, he believed that the Jews must first undergo a process of training and preparation before attempting to settle in their ancient historical home under a government of their own. What country could better serve this purpose of a temporary refuge and a place of preparation than the free, prosperous, and still unpopulated United States of America?

With this purpose in view, Noah, in 1825, originated the plan of establishing a Jewish colony on Grand Island in the state of New York. With the assistance of a friend, a Christian of the name of Samuel Leggett, he purchased 2,555 acres of land for the sum of $16,985. Feeling assured of the success of his undertaking and of the readiness of his coreligionists to follow him, he issued on Sept. 1 of that year a manifesto to the Jews throughout the world, calling upon them to make ready for migrating to and settling in the new colony, which he named "Ararat," and the dedication of which took place in great state in Buffalo, Sept., 1825 (see ARARAT). But Noah was soon undeceived with regard to the attitude of his coreligionists toward his ideal scheme. The Jews of Europe and America not only declined to aid him but even opposed and ridiculed his plan, which was utterly abandoned almost immediately after the dedication ceremony had taken place.

Projected City of Ararat.

Baffled in this, he nevertheless steadfastly clung to the idea of the restoration of the Jews to Palestine; and as the years wore on, his conviction grew stronger. The political events in Europe during the fourth decade of the nineteenth century indicated many serious changes in the status of the different countries, and Noah, firmly believing that the time had come for the Jews to demand their rights, delivered his "Discourse on the Restoration of the Jews," the greatest speech ever made by him. This was an appeal to the Christians in behalf of the Jews, its key-note being that it was the greatest duty of Christians to help the Jews to regain the land of their fathers. This discourse was delivered before a large audience of Christians on Oct. 28 and Dec. 2, 1844, and was subsequently published in book form (New York, 1844).

D. S. O.

NOB: City or village of priests where David received holy bread when in pressing need of food at the beginning of his persecution by Saul (I Sam. xxi. 1-9), for which nearly the whole community was put to death. It is also referred to by Isaiah as the latest stage in the imaginary march of an Assyrian king (probably Sennacherib) moving southward against Jerusalem. In Neh. xi. 32 it is mentioned along with Anathoth (as also in Isaiah), among a number of towns of the Benjamites. There is no doubt that Isaiah and Nehemiah refer to the same locality; but it has been objected against its identification with the priestly Nob that a settlement of priests in a fixed tabernacle could hardly have been possible just outside the walls of Jerusalem, which, until the accession of David, was in the hands of the heathen Jebusites. This objection is not decisive, however, since there was frequently a treaty of peace, or at least a "modus vivendi," between surviving Canaanitish settlements and the people of Israel in the days before the complete establishment of the monarchy. The station mentioned by Isaiah was, at any rate, very close to the Jerusalem of his time, since Anathoth, to the north, is identified with Anata, not more than four miles from the capital.

Cheyne in "Encyc. Bibl." thinks that the name "Nob" rests upon false readings, and that it is Gibeon that is really meant.

E. C. J. F. McC.

NOBAH (נבח): **1.** Apparently, a Manassite warrior who, during the conquest of the territory east of the Jordan, made himself master of Kenath and the villages thereof and gave them his own name (Num. xxxii. 42). According to Seder 'Olam Rabbah (ix.), Nobah was born in Egypt, died after Moses, and was buried east of the Jordan.

2. Name of Kenath after its capture by Nobah. With Jogbehah, the town is mentioned in connection with Gideon's pursuit of the Midianite kings (Judges viii. 11). In I Chron. ii. 23 the place is called Kenath (comp. Rashi to Num. *l.c.*). Nobah-Kenath was identified by Eusebius and Jerome ("Onomasticon," *s.v.* "Canath") with Canatha; it was located by Josephus ("B. J." i. 19, § 2) in Cœle-Syria, while Pliny ("Historia Naturalis," v. 18, 74) and Ptolemy ("Geography," v. 15, 23) placed it in the Decapolis. In the Talmudic literature "Kenath" occurs among the names of towns which mark the frontiers of Palestine (Yer. Sheb. vi. 1; Tosef., Sheb. iii.; Sifre, Deut. 51).

As the inhabitants of Canatha are called, on the coins of Commodus, *Γαβεινιεῖς Καναθηνοί*, it may be concluded that the city was restored by Gabinius. Herod met there a crushing defeat during his war with the Arabians (Josephus, *l.c.*). According to inscriptions found in the neighborhood of Canatha, the town belonged to Herod and to Agrippa II., which shows that it was at one time under the control of the Herodians. The inscriptions throw some light also on the mode of government of Canatha. The "councilors" (*βουλευταί*) are often mentioned, and once a market clerk (*ἀγορανόμος*) is referred to. Canatha is identified with the modern Ḳanawat, on the western slope of Jabal Ḥauran and on the Roman road to Damascus. It is occupied now by a few families of Druses.

NOLA, ELIJAH BEN JOSEPH DI: Italian physician and rabbi of the sixteenth century. In 1563 he was living in Rome, where he occupied the position of rabbi. He enjoyed a high reputation as a Talmudical authority and was consulted on halakic decisions. A responsum of his on the abolition of levirate marriages, addressed to Eliakim of Macerata, was inserted by Isaac Lampronti in his "Paḥad Yiẓḥaḳ" (iv. 26b). Nola was also a zealous student of philosophy and translated from Latin into Hebrew the "Summa Librorum VIII. Physicorum" of Robert of Lincoln (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1352, 5). Moses Alatino mentions Nola as having aided him in his Latin translation of Themistius' "Paraphrasis" of Aristotle's "De Cœlo."

E. C. I. BR.

NOLA, MENAHEM (JOHN PAUL EUSTHATIUS): Italian convert to Christianity; born about 1540; died at Rome about 1602. Nothing is known of Nola's life before his conversion except that he was the instructor in Hebrew of Thomas Aldobrandino, brother of Pope Clement VIII., and that he had frequent discussions with his pupil on religious topics. It was probably Aldobrandino that induced Nola to embrace Christianity, and Nola accordingly was baptized in 1568, assuming the name of Eusthatius. He afterward wrote several works in Italian, mainly in defense of Christianity. "Sacro Settenario" (Naples, 1579) is a compilation of extracts from the Bible, with an explanation of the ceremony of the opening of the gates in the year of jubilee. This work was dedicated by Nola to Cardinal Aloysius d'Este. "Salutari Discorsi" (*ib.* 1582) contains nine sermons on various dogmas of Christianity, including those of the Trinity and of the necessity for the coming of the Messiah. Some of Nola's works are found in the library of the Vatican, among them being commentaries, in manuscript, on Lamentations and Ruth. He wrote also a description of the Hebrew manuscripts in that library.

S. M. SEL.

NÖLDEKE, THEODOR: German Orientalist; born March 2, 1836, at Harburg. He studied Oriental languages at Göttingen, Vienna, Leyden, and Berlin; became assistant professor of Semitic languages at Göttingen in 1864; was appointed to a professorship at Kiel in 1868, and at Strasburg University on its foundation in 1872. The last-named chair he has filled ever since.

Nöldeke's researches are spread over a large section of Oriental philology, especially Persian, Arabic, and Syriac; and he has, besides, devoted himself to several branches of Old Testament research. Among his many works those of chief interest to Jewish readers are: "Ueber die Amalekiter," Göttingen, 1864; "Die Alttestamentliche Litteratur," Leipsic, 1868; and his classic "Untersuchungen zur Kritik des Alten Testaments," Kiel, 1869. His three grammars, New Syriac (Leipsic, 1869), Mandæan (Halle, 1874), and Syriac (Leipsic, 1880), have contributed greatly to Semitic comparative philology; and his small volume, entitled "Die Semitischen Sprachen" (*ib.* 1887; 2d ed. 1899), a revised form of his article "Semitic Languages" in the "Encyclopædia Britannica," is a masterly survey of the characteristics and the development of the Semitic linguistic family. His "Orientalische Skizzen" also (1892; Eng. transl., "Sketches from Eastern History," 1892) contains valuable matter. Nöldeke has made numberless contributions to the "Zeitschrift der Deutschen Morgenländischen Gesellschaft" and other journals devoted to Orientalia, and he has contributed also to Cheyne and Black's "Encyclopædia Biblica."

T. J.

NOMISM: That religious tendency which aims at the control of both social and individual life by legalism, making the law the supreme norm. The term "nomism" or "legalism" is sometimes used to imply an externalizing tendency of religion when it degenerates into mere formalism of conduct, and ceases to be a moral conviction and ethical purpose, mere outward correctness in the fulfilment of the letter of the law being regarded as representing the highest religious ideal. In this latter sense nomism has never been regarded by the Jews as a basal principle of religion, but has been regarded as discreditable and earnestly combated; and though such nomistic views and tendencies have been manifested by Judaism at different periods, they were caused by external factors. In the first sense of the word, however, nomism has always formed a fundamental trait of Judaism, one of whose chief aims has ever been to mold life in all its varying relations according to the Law, and to make obedience to the commandments a necessity and a custom, so that any deviation therefrom becomes in itself an impossibility.

In Biblical Statements.

As early as the Biblical period the pious had the Law ever before their eyes and in their hearts, meditating day and night how they might regulate their lives according to it (Ps. i. 2; xviii. 22-24; xxv. 4-6; cxix. 11, 13, 15, 44, 55, 97, *et passim*). To fear God and keep His commandments was the whole duty of man (Eccl. xii. 13). Yet this was not mere external legalism, observed without delight and sincerity of soul. The true ideal was rather that the heart should be inclined unto the Law (Ps. lxxxvi. 11, cxix. 36); and the earnest hope was felt that in the covenant to be made with Israel the Law would be written in the hearts of the people (Jer. xxxi. 33). The basis of this enthusiasm for the Law was the invincible belief in its divine origin, as well as the firm conviction that God leads both the individual and the nation to salvation by the Law, which reveals His will, and that all mankind must trust to this guidance. Human wisdom, however, has not the power to show mankind the right way in all the vicissitudes of life or to reveal the will of God: this can be done only by the law of the Lord, which is perfect, "making wise the simple" (Ps. xix. 8). Man's knowledge is nevertheless sufficient to recognize that the divine law is a guide whose judgments "are true and righteous altogether" (*ib.* verses 9-10), and to find in the Law no fettering chain of formalism which leaves the spirit cold and untouched, but rather judgments which are sweet, "restoring the soul" and "rejoicing the heart" (*ib.* verses 8 [A. V. 7]-11); God thus showing mercy to the people of Israel by the revelation of the Law.

In Post-Biblical Times.

This conception of the Law as loving-kindness shown by the Lord to Israel formed in post-Biblical times the basal motive for the high esteem in which it was held and for the rigid observance of all its precepts. The Sabbath, with its many rules and overcautious observances, was regarded as a gift of God to Israel (Shab. 10b), while the entire Law, with all its regulations, is described as a costly jewel with which the Lord has blessed His people (*ib.* 88b). He gave them the commandments because of His love for Israel, whom He regards as His children (Ex. R. xxx. 5); and, since He would show them great benefactions, He gave them yet other commandments and precepts (Mak. 23b), each one magnifying the sanctity and the morality of Israel (Mek., Mishpaṭim, 20 [ed. Weiss, p. 103b]). The sole object of the commandments is to purify and sanctify mankind; for it is inconceivable that it should really matter to God whether a victim is slaughtered according to the Law or not, these prescriptions being commanded simply to ennoble man (Ex. R. xliv. 1; Tan., Shemini, 12 [ed. Buber, p. 15b]; Maimonides, "Moreh," iii. 27). In the Messianic kingdom, where righteousness and the knowledge of God will be spread universally, many commandments will lose their force (Niddah 61b); for sacrifice and the laws pertaining to it will be abrogated as being no longer needful (Pesiḳ. ix. [ed. Buber, p. 79a], and the citation from Abravanel, *ib.* note 98). The fast- and feast-days also will be abolished (Midr. Mishle ix. 2). That the commandments of the Law were only a means to purify and hallow even daily life, and to keep afar all error and false belief, is shown by the Bible itself, which in the case of some ceremonial laws gives a reason for them, *e.g.*, in Lev. xvii. 7, Num. xv. 39 (comp. Men. 43b), and Deut. vii. 4, xvii. 17.

Object of the Law.

The principle was retained both by Talmudic and by post-Talmudic Judaism, that the Law, with its commandments, rules, and regulations, is not a collection of meaningless forms demanding blind obedience without the approval of human reason, but is rather a body of symbols of religious or ethical concepts (Maimonides, *l.c.* iv. 36). The rabbis of many ages, therefore, sought to determine the elements which form the basis of these symbolic forms, asking continually: "Why has the Torah ordained thus and so?" (comp. Sifre, Deut. 192 [ed. Friedmann, p. 110a]; Sanh. 21a); and the reasons underlying the commandments were subjects of investigation like the individual requirements of the Law (Niddah 31b; Ḳid. 32b; B. Ḳ. 79b; Mek., Mishpaṭim, Neziḳin, 2, 12 [ed. Weiss, pp. 83b, 95a]; Mek., Yitro, Baḥodesh, 11 [ed. Weiss, p. 81a]; Maimonides, *l.c.* iii. 28-50). The 613 commandments may all be traced to a few ethical concepts; and the basal principle upon which they all rest is belief in God, who granted the Law to man as a revelation of His will (Mak. 23b-24a). He who receives even a single commandment in true faith is worthy of the spirit of God (Mek., Beshallaḥ, 6 [ed. Weiss, p. 40b]; comp. Joseph Albo, "'Iḳḳarim," iii. 29). This belief is also the moral foundation of the observance of many ceremonial laws for which human intelligence can find no sufficient reason, although such a basis must be assumed (comp. Maimonides, *l.c.* ii. 26). Those prescriptions of the Law which are unintelligible or mutually contradictory are defended by the view that God has ordained them; so that they surely have some beneficent object, because of their divine origin, and man with his limited understanding may neither despise nor transgress them (Yoma 67b; Pesiḳ. 40b; Num. R. xix. 1). The observance of all the commandments presupposes a knowledge of God and the conviction that He guides man by the Law in the way of righteousness (Ber. 63a). Before attempting their fulfilment, therefore, it is necessary that God be recognized as the revealer of them, while mankind must be subject to His will (*ib.* 13a). As a necessary consequence, this view of the Law demands true faith in its observance (comp. Albo, *l.c.* iii. 27); and all commandments must be obeyed in this spirit of piety (Pes. 114b; Ber. 13a). In case one has the earnest wish to observe a commandment, but is unable to fulfil it, the will is taken for the deed, since God requires only righteous intent (Ber. 6a, 20; Shab. 63; Sanh. 106a); and it is holy purpose and true faith rather than good works which lead to salvation (13th aphorism of David ben Yom-Ṭob Bilia of Portugal, in Eliezer Ashkenazi, "Dibre Ḥakamim," pp. 56-60, Metz, 1849; comp. Mek., Beshallaḥ, 6 [ed. Weiss, p. 40b]). The commandments must not be performed, moreover, with any secondary object in view (Sifre, Deut. 48 [ed. Friedmann, 84b]); and whosoever so obeys them, it were better for him had he never been born (Ber. 17a). On the other hand, their fulfilment with righteous intent and joy of heart is the highest nobility, so that the spirit of God may rest upon him who acts according to the Law (Shab. 30b; comp. Albo, *l.c.* iii. 33). The observance of the commandments without this ideal purpose and yet without any ignoble secondary object is merely of disciplinary value, leading mankind by the continual practise of their fulfilment to a recognition of their content and a consequent acquisition of the ideal attitude toward them (Naz. 23b). Higher than this merely disciplinary observance of the Law stands its transgression with true purpose and good intent (*ib.*); for even by the transgression of a law one may confess and recognize God (Ber. 63a). The fulfilment of the legal prescriptions is not the greatest virtue; for above it stands the study of the Law and the recognition of the ethical ideals contained in it. The corresponding moral actions are a necessary consequence of this recognition (Ḳid. 40b). All the ceremonial laws together are not worth as much as one commandment of the Torah (Yer. Peah i. 15d). On the other hand, the abrogation of many of these laws has frequently contributed to the preservation of true doctrine (Men. 99b); so that, in case such considerations demand it, the actual fulfilment of many ceremonial laws should be omitted (Ber. 63a).

The Good Will Makes the Good Act.

Transgression Permitted for Higher Object.

The life of a person of moral conduct, moreover, was regarded as superior to the Law. With the exception of the three mortal sins (which, however, were not connected with the ceremonial law), every transgression of the Law was permitted, and even commanded, in case a human life was at stake; since the maxim was current that the commandments were given to man that he might order his life in righteousness, and are not obligatory, therefore, when his life is imperiled. "The Sabbath with all its precepts is given unto you; but ye are not given unto the Sabbath," is another proverb (Mek., Ki Tissa, i. [ed. Weiss, p. 109b]).

Rewards and Punishments Not Motives.

Belief in divine recompense should, as a matter of course, have no influence on the observance of the Law; and this basal principle was expressed in the proverb of Antigonus of Soko: "Be not like slaves who serve their master for reward, but like those who perform their duties without regard to recompense" (Ab. i. 3). Ps. cxii. 1 is explained as meaning "Blessed is the man that delighteth greatly in the commandments of the Lord, but not in the reward for them" ('Ab. Zarah 19a). All the laws must be fulfilled with equal zeal without regard to recompense, since no man knows wherein the reward for keeping them now consists or will consist (Ab. ii. 1; Ex. R. xxx. 21); indeed, the real reward is only that of a good conscience (Ab. iv. 2; 12th aphorism of R. David ben Yom-Ṭob Bilia, *l.c.*). In this world no other recompense can be gained (Ḳid. 39b), while in the world to come ("'olam ha-ba") only the sight of God and the recognition of His majesty reward fidelity to the commandments (Ber. 17a). On the other hand, in the fulfilment of the Law fear of punishment for sins of omission and commission must not be considered. The ideal is obedience to the Law through love and with joy of soul (Soṭah 31a; Shab. 88b; comp. Albo, *l.c.* iii. 33, 35), while observance of it through fear is considered disgraceful (Soṭah *l.c.*; Albo, *l.c.* 31-32). With such a concept of the Law and of the object of its fulfilment, it is self-evident that there could be no rigid adherent to the letter of its commandments; and the Halakah shows many instances of deviations and even violations of its literal injunctions (see Midrash Halakah; Oral Law; Philo, and His Relation to the Halakah).

The view was held, therefore, that the Law originates from God and that it contains the most sublime truths, being based upon the noblest principles of humanity, inasmuch as it teaches man to love and treat his neighbor as himself (Shab. 31a), and to make smooth the rough places in the daily life of men (Giṭ. 57b). Such a concept, united with that which granted the right to test and to judge the Law in cases in which its letter militates against humanity or generally received truth, permitted the surrender of the exoteric sense of a commandment and the search for another meaning of the divine word. Although it was the right of the sages to abrogate a provision of the Law (Yeb. 89b–90b), this power was naturally entrusted only to the supreme court, which properly represented the opinions of the majority of teachers and the voice of popular opinion. On the other hand, it was held that individual teachers should not be allowed to abrogate in this fashion, since it was feared that such a course would produce irremediable confusion in religious life.

This idealistic conception of the commandments as being of only relative importance is a characteristic of rabbinical Judaism, and was maintained as a principle by teachers of the Law and philosophers of religion throughout the Talmudic and post-Talmudic periods. There arose, however, among the Jews at various times and under various circumstances other ideas and concepts which attributed intrinsic value to the ceremonial code and attached essential merit to the merely formal observance of the Law. Thus, when even before the present era the idealistic view of the Law which led in Alexandria to an allegorical method of exegesis resulted among the Hellenistic Jews in a tendency to regard practical observance of the Law as worthless and unimportant, Philo ("De Migratione Abrahami," § 86 [ed. Mangey, i. 449]), in combating this antinomian tendency, urged the practise of the Law and the fulfilment of its precepts. Still more urgent was the appeal by the Rabbis, which seemed the more necessary since even at that time many Jews were living outside of Palestine; and far from their native land, the powerful bond which connected them with their brethren at home was the Law, whose every precept in their native land was a national law, and whose usages were hallowed customs. At a later time Pauline Christianity combated the validity of the ceremonial law, uniting with this antinomian tendency an antinational one, so that against this influence, hostile to Judaism and imperiling its very existence, it was again held necessary to emphasize the intrinsic power of the Law, especially as it was characterized in great part by national traits.

With the fall of the Jewish state, and the Diaspora in foreign lands, came a new need to lay stress upon the external observance of the Law according to a definite form, even though inward conviction were lacking. Thus the Law became the bond which held the nation together, taking the place of territorial possessions and distinctive polity, both of which are so necessary for the existence and maintenance of a people. The value of each precept of the Law and of each established usage was now ennobled by the view that they must be regarded as a holy custom of the nation; and in their observance each Jew expressed his conviction that he belonged to his own people. That the nation might seem a unit in manners and customs, it was declared necessary that the very form in which the Law was fulfilled should be uniform, and that all legal requirements should be observed in one and the same manner. It was forbidden, therefore, to form various parties with divergent usages (Sifre, Deut. 96 [ed. Friedmann, p. 94a]); and the principle was laid down that the fulfilment of the Law was valid only in case it was carried out according to prescribed form (Yer. Peah vi.).

Nomism Versus Antinomianism.

Since Christianity asserted that through the destruction of the Temple, which resulted in the abolition of so many ceremonial laws, God Himself had shown that His law should no longer be followed (Justin Martyr, "Dial. cum Tryph." xl. 132), the Rabbis felt constrained in their anti-Christian polemics to emphasize the intrinsic validity of the Law in all its parts and for all times, so that even in the future its precepts might be binding and none of them be abolished; the laws connected with the Temple were abrogated for a time only; soon the sanctuary would be rebuilt and every commandment associated with it would again become operative. Whereas the statement had hitherto been made that Abraham had been justified by faith alone (Mek., Besḥallaḥ, 6 [ed. Weiss, p. 40b]; comp. Rom. iv. 1 *et seq.*), it was now asserted that he had observed all the precepts and regulations of the Law (Yoma 28b), thus emphasizing, in opposition to Christianity, the importance of the ceremonial law. No longer was stress laid upon the moral idea underlying the individual precepts, but they were recognized as statutes concerning whose basis no inquiry was necessary (Ber. 33b). While, moreover, the opinion had formerly been held that he who voluntarily recognizes the value of a precept and performs it without being obliged to do so stands on a higher moral plane than he who obeys a commandment of necessity (comp. Rom. ii. 14), polemic zeal now declared that he who fulfilled a commandment because of his obligation to do so was the nobler (Ḳid. 31a). Indeed, the absolute validity of the Law was so exaggerated that it was regarded as eternal and as observed by God Himself (Ex. R. xxxvi.; comp. also Ber. 6a). See ANTINOMIANISM.

As a result of the pious care with which every word of a sage is preserved in Talmudic and midrashic literature, even those statements which depended merely on temporary conditions and external relations have been transmitted to posterity. These exaggerated assertions of the importance of the Law, however, made in the heat of polemics and through zeal for the preservation of a national unity, are not elements of Judaism; they have never been so regarded, nor have they been carried to their logical end either in the Talmud or by the medieval rabbis. But in view of the many sufferings and persecutions which befell the Jews on account of their fidelity to the Law, it seemed a psychological necessity for the benefit of the masses to lay stress upon the motives of reward and punishment. In times of oppression the popular mind sought comfort and consolation in picturing the glories destined for the pious in the world to come as a reward for their observance of the Law. These fantasies were never taken literally by the educated, however, but were sanctioned as comforting the people and as a stimulus which encouraged them to keep the Law; since it was believed that, once accustomed to obey the legal code, each man would be so filled with the right spirit that he would come to observe the Law for its own sake (comp. Maimonides, Introduction to his commentary on the Mishnah Sanhedrin, x.).

Anti-Nomistic Movements—The Prophets.

At different times there have arisen various movements directed against nomism and some of its manifestations, for, as has been noted above, the tendency has often become evident to attach intrinsic value to the ceremonial code and to the prescribed forms of divine worship; and whenever this is the case there is danger lest the original purpose of the Law and the real object of worship, the elevation and purification of the soul, be not attained, and lest the finer moral sense of the people be blunted through the belief in outward compliance with the commandments as the means of winning the favor of the Deity. This was the reason the great prophets were so outspoken and bitter in their denunciation of all priestly ritualism: "This people draw near me with their mouth, and with their lips do honor me, but have removed their heart far from me, and their fear toward me is but precept taught by rote" (A. V. "taught by the precept of men"; Isa. xxix. 13); wherefore Isaiah declares Sabbaths, festivals, and sacrifices to be abominations which the Lord can not endure; instead He requires righteous conduct (i. 13-17).

So Amos castigates the people for outwardly observing Sabbath and New Moon while they wait with impatience for the close of the day in order to be able to resume their fraudulent and unjust dealings (viii. 4-7). Hosea, likewise, finding that the "many laws" lead priest and people away from God, insists on love and knowledge of God (vi. 6, viii. 12 [A. V., incorrectly, "great things of my law"]; comp. Jer. vii. 21-23). The spirit of legalism in its most obnoxious form is shown by the wife of Uriah (II Sam. xi. 4) and is denounced by the Psalmist (xl. 7 [A. V. 6]; l. 8-10). The moment priestly legislation instead of the prophetic Torah determined the character of Judaism (Hos. iv. 6; Isa. i. 10; Jer. ix. 12; Prov. iii. 1, iv. 2), the Prophets warned against the danger of legalism (see Hag. ii. 11-13; Mal. i. 6-14). The moment "religion in Judaism took the aspect of law" (Montefiore, "Hibbert Lectures," 1892, p. 469) legalism easily became the concomitant of loyalty to God as the Giver of the Law, just as dogmatism became the logical consequence of that religious attitude which in Christianity laid all the stress upon belief.

Christianity.

The great question at issue between Judaism and Christianity is whether the predominant element of religion should be law or creed, Christian theology claiming that the latter has better preserved the spirit of prophecy by rejecting the legal view of religion, whereas Judaism asserts that by strict adherence to the Law it has maintained the monotheistic truth and the high ethical standard of the prophetic and Mosaic teaching far more effectively and consistently than the Church, which, by abandoning the authority of the Law, has often encouraged and sanctioned lawlessness and crime. Legalism is the chief burden of the New Testament attacks on Judaism, both in the speeches of Jesus (see especially Matt. xxiii. 23-26; Luke xi. 39-42) and in the Pauline writings, and from this point of view Judaism is treated by all Christian writers, among whom Schürer may be mentioned as the most prominent ("Gesch." ii. 28, "Das Leben Unter dem Gesetz").

But while, as has been said, it is true that the development of the Law has had a tendency sometimes to lower the lofty standard of prophetic teaching by "fixing men's minds on ceremonial details and putting these in the same category with moral duties," on the other hand "the debasing tendency of such ritualism was counteracted," as Toy has said ("Judaism and Christianity," 1890, p. 186), "by the ethical elements of the Law itself and by the general moral progress of the community"; and "the great legal schools of the second pre-Christian century did not fail to discriminate between the outward and the inward, the ceremonial and the moral." As a matter of fact, it is a mistake to lay the blame of legalism, as is done in the New Testament, upon the Pharisees, and to date "its triumph from the time of the persecutions of Antiochus" (Montefiore, *l.c.* p. 469) or from the compilation of the Mishnah (Grätz, "Gesch." iv. 214). The determining factors of the Law as laid down in the mishnaic code were the priests, whose minute rules and statutes regarding purity and sanctity were all, in some way or other, fixed and practised in the Temple and then adopted by the Pharisean scribes as tradition, as "halakah from Moses on Sinai."

The legal view of religion carried with it the element of purity and holiness which lent to the whole life of the Jew its profoundly moral and spiritual character; it made the whole people strive for the crown of the priesthood vouchsafed to Israel the moment the Law was given to him (Ex. xix. 6); it made them fear sin rather than the punishment of sin. All the great domestic virtues of the Jew are the results of the predominance of the Law. Moreover, the emphasis laid upon the Law as the foundation and source of religion and as the means of insuring God's presence, made the Jew eager to study the Law and thus so developed his intellectual powers as to render him an independent seeker after truth. Thus while fettering the body by numerous mandatory and prohibitive statutes, religion was to him a real source of freedom for the mind; and the legalistic definitions and ramifications of the Torah sharpened his reason, so that Abraham ibn Ezra could say, "The only mediating angel between God and man is reason."

On the other hand, it can not be denied that the eagerness to conform to the letter was sometimes conducive to results which met with opposition even from within Judaism itself. It produced a certain spirit of servitude or blind submission to the letter which was not fully counterbalanced by the joy of serving God through fulfilling His commandments—the "simḥah shel miẓwah" (Ps. cxix. 162; see Joy). It created casuistry in rabbinical literature, the hair-splitting distinctions in the Law which—though by no means as harmful as Jesuitic casuistry—did nothing toward improving the moral sense or the tenderer sensibilities of the conscience: as, for instance, the use of a "Sabbath goy," in antagonism to the very spirit of the Law of rest for all employed in one's service; or as in the case of selling the "ḥameẓ" on Passover (see Passover; Sabbath).

Moreover, while the scribes of the pre-Christian centuries still claimed and exercised the power of changing, modifying, and at times abrogating a law (see Abrogation of Laws; Accommodation of the Law), the spirit of legalism at a later time crushed this spirit of independence; and the beautiful ceremonies connected with the various seasons of the year or with other incidents of life, which were intended to awaken the spirit of devotion, faith, and love, became overladen with legalistic injunctions. The counter-movement in Judaism, urged by the writers of the Psalms, was continued by the composers of the synagogue liturgy in their appeals to the emotional nature, by the haggadists, and by the class of ḥasidim who selected the hafṭarah frequently with the view of opposing the sacrificial worship and fasting enjoined by the Law; all of these manifest the tendency to replace legalism by a more spiritual view of the Torah. Then rose the Karaites in opposition to Talmudic legalism; and finally the cabalists insisted upon a profounder grasp of the Law and endeavored to spiritualize it by the help of mysticism (see Cabala).

In modern times a bold stand was taken against the legalism of the Talmud by the Reform movement. While defending Talmudism, Schechter has well said (Montefiore, *l.c.* p. 563): "The effect of evasive laws can only be pernicious in religion when people realize them as such." Reformed Judaism holds that these laws are evasive. All the legalistic definitions and decisions of religion—this is its contention—are no longer the true expression of the religious sentiment or of the will of God as manifested in the consciousness of the Jew. The legalistic forms of marriage and divorce as laid down in the rabbinical codes, Sabbatical restrictions based upon a view of the Sabbath in conflict with the idea that the day is to be one of delight and spiritual elevation, and similar ceremonies and ideas, have encountered opposition from the time of Baḥya ibn Paḳuda and Leon of Modena down to that of Abraham Geiger (see the latter's "Zeit. Jüd. Theol." 1839, iv. 1-12; *et al.*). "To the liberal Jew," says Montefiore ("Liberal Judaism," 1903, pp. 114-121), "the moral law is not and can not be contained in a book; it is an ideal whole" and must be progressively interpreted. "Conscious adherence to the ideal law of goodness and duty is the ideal of Judaism. . . . To love God is to love His Law; and the product of that love is the fulfilment of that Law for its own sake. In this conception of Law and Sanctification liberal Judaism possesses a doctrine which should help its adherents to realize the distinctiveness of its own faith. For though it has ceased to be a strictly legal religion, it does not abandon the great Jewish conception that religion is a discipline as well as faith."

The contention of M. Friedländer, speaking for the Conservative view ("The Jewish Religion," p. 234), is that the charge made against legalism "rests on prejudice; for the constant reminder of God's presence such as the precepts supply can not fail to have a beneficial influence upon man's morality." This is certainly true as long as these precepts are believed to be divine; the moment, however, their divine origin is disbelieved their beneficial influence becomes, as has been stated above, a matter of dispute and doubt.

K.

NONES: American family, tracing its descent from Benjamin Nones of Philadelphia, who lived at the end of the eighteenth century.

Benjamin Nones: American soldier. A native of Bordeaux, he emigrated to Philadelphia about 1777, and at once took up arms on behalf of the colonies, serving throughout the Revolutionary war with bravery and distinction. He served as a volunteer in Captain Verdier's regiment under Count Pulaski during the siege of Savannah, and on Dec. 15, 1779, he received a certificate for gallant conduct on the field of battle. After the war he engaged in the brokerage business with Haym Solomon. He was naturalized Oct. 9, 1784. In 1791 Nones was elected president (parnas) of the Congregation Mickvé Israel, and held the position for many years. In 1800 he wrote a warm defense of Judaism and of republican principles, which was printed in the "Gazette of the United States" (Philadelphia).

A. A. S. W. R.

NOPH: City of ancient Egypt, mentioned in Isa. xix. 13, Jer. ii. 16, xliv. 1, xlvi. 14, and Ezek. xxx. 13, 16. All the ancient versions render it "Memphis," so that, evidently, the name has been disfigured from the more correct form "Mof," found in Hos. ix. 6 (see Memphis). Some scholars (De Rougé, Lenormant, E. Meyer) have endeavored to maintain the consonants of "Nof" and to explain it as "Napata" in Ethiopia, but Ezek. xxx. 13 shows it to have been an Egyptian city, and the formation of Jewish colonies in so remote a place as Napata (comp. Jer. xliv. 1, xlvi. 14) is not probable.

NORDAU, MAX (SIMON): Austrian litterateur and philosopher; born in Budapest July 29, 1849.

Settles in Paris.

His parents were very poor. His father, Gabriel Südfeld, had been a rabbi in Prussia, but went to Budapest as a private teacher. Max received his elementary education, including that in Latin, Greek, and Hebrew, from his father in his native city, and attended the university there. He devoted himself to the study of medicine, but pursued in addition literary-historical studies, which had a great influence on his future career. While yet a student, as early as 1863, Nordau began his literary activity; and in that year some of his poems, essays, and tales were published. In 1865 Nordau was the principal contributor to a paper called "Der Zwischenact," with which he remained associated until he entered the university. He then became a regular contributor to the columns of the "Pester Lloyd," and for six years was connected with that journal in an editorial capacity. In 1873 he had completed his course, received his degree of M.D., and passed his state examinations. He then went to Vienna to discharge his conscription duties as military surgeon, and spent about six years in travels, visiting Berlin, Russia, Scandinavia, England, Iceland, France, Spain, and Italy. In 1878 he returned to Budapest, where he practised medicine, and in 1880 he settled permanently as a physician in Paris.

Pedigree of the Nones Family.

Literature still attracted Nordau and absorbed much of his time and attention. During his travels he had been correspondent of the "Frankfurter Zeitung," the "Vossische Zeitung," the "Pester Lloyd," and the "Wiener Medicinische Wochenschrift." Much of the material furnished by him in this capacity formed the basis of several of his early publications. In the very year of his return to Budapest there appeared "Aus dem Wahren Milliardenlande. Pariser Studien und Bilder," 2 vols., Leipsic, 1878 (2d ed., 1881). This work was vigorously attacked in France, as it was thought to be a criticism of Tissot's "Pays des Milliards." "Vom Kreml zur Alhambra," 2 vols., *ib.* 1879 (3d ed., 1888), was another result of his tour. In the same year appeared his "Seifenblasen. Federzeichnungen und Geschichten." During his first year in Paris he wrote "Paris Unter der Dritten Republik. Neue Bilder," *ib.* 1880 (4th ed., 1890), and "Ausgewählte Pariser Briefe," 1887 (2d ed., 1888). In 1880 he produced also, in collaboration with Ferdinand Gross, his first dramatic work, the comedy "Die Journalisten," which was afterward known also as "Aus der Zeitungswelt." The drama "Der Krieg der Millionen" followed in 1881. His degree of M.D. was confirmed by the University of Paris in 1882.

His "Conventionelle Lügen."

The first of the series of works with which his name has been identified and which have secured for him the international fame that he enjoys, the "Conventionelle Lügen der Kulturmenschheit," was published at Leipsic in 1883 (19th ed., Leipsic, 1903). An English translation, from the seventh edition of the German work, was published under the title "Conventional Lies of Our Civilization," London, 1895. In Russia and Austria the sale of the work was prohibited, and all the copies that could be found were confiscated. The Austrian official decree condemned the work for the crimes "of insulting members of the imperial family; of disturbing the public peace by attempting to arouse contempt or hatred for the person of the emperor; of denouncing religion; and of inciting to hostility against religious communities."

Nordau's next contribution to this remarkable series of studies in the mental and moral pathology of modern civilization was his "Paradoxe," Leipsic, 1885 (8th ed., 1903; Eng. transl. by Louis Schick, Chicago, 1895, and by J. R. McIlraith, London, 1896). Of his other publications the following may be mentioned: "Die Krankheit des Jahrhunderts," a novel, Leipsic, 1887 (6th ed., 1902; Eng. transl., New York, 1895, under the title "The Ailment of the Century," and London, 1896, under that of "The Malady of the Century"); "Gefühlskomödie," a novel, Breslau, 1891 (Eng. version, New York, 1895, and London, 1896); "Seelenanalysen," Berlin, 1892 (Eng. version, New York, 1896, under the title "How Women Love, and Other Tales"); his four-act drama, "Das Recht zu Lieben" (Eng. version, "The Right to Love," New York, 1894; French version by Albert Bloch in "La Revue d'Art Dramatique," new series, iv.-v.; English transl., New York and Chicago, 1895), produced at the Lessing Theater, Berlin, and on a great many stages in Russia, Italy, etc., 1892.

His "Entartung" (Degeneration).

His "Entartung" (2 vols., 1893; Eng. transl. under the title "Degeneration") soon provoked a very vehement literary controversy. In this work Nordau strives to demonstrate that many authors and artists manifest the same mental characteristics as insane criminals; and that they exhibit traces of "degeneration," which he defines as "a morbid deviation from an original type, and satisfy their unhealthy impulses with pen and pencil."

His drama "Die Kugel" was presented at the Lessing Theater, Berlin, on Oct. 31, 1894; and in 1897 his novel "Drohnenschlacht" was published in that city.

In the following year appeared another play from Nordau's pen, "Doktor Kohn" (3d ed., 1900). This tragedy has for its motive the intermarriage problem. The hero, a young Jewish scholar of high standing in the learned world, is in love with and is beloved by a beautiful, wealthy, and cultured young Christian woman. Nothing can be urged against the marriage except their religious differences. The question presented to *Dr. Kohn* is whether it is right for him to accept Christianity without faith in its teachings. As aids to the solution of the problem he is brought in contact with three typical anti-Semites: an Orthodox ecclesiastic, a corps student, and a pompous military officer.

When Herzl started the Zionistic movement Nordau was one of those who most quickly and ardently responded; and these two at once came to be looked upon as the natural leaders of the movement. Consequently, when the congress was held at Basel in 1897 Herzl was elected president and Nordau first vice-president without question. After the completion of organization Nordau delivered an address on "Die Allgemeine Lage der Juden" ("Officielles Protocoll," pp. 9-20), which thrilled the world.

Three of Nordau's speeches are particularly noteworthy: one delivered in Berlin April 26, 1898, on "Die Gegner des Zionismus"; one in Vienna on "Strömungen im Judenthum"; and one in Paris on "Der Zionismus und die Christen." All of them were published in the Zionistic organ "Die Welt" (Vienna).

NORDEN, JOSHUA D.: English soldier and adventurer; died at Graham's Town, Cape Colony, April 26, 1846. He was field commandant in the Kaffir war and a captain of yeomanry, and commanded the mounted force that was sent against the Kaffirs in 1846. He met his death in the chain of hills skirting Graham's Town, where, accompanied by six of his men, he was moving against a body of Kaffirs. The Kaffirs were in ambush, and a ball from a Kaffir rifle pierced Norden's head. The burghers were obliged to retire, but on the following day they recovered the body of their commandant, which was found in a shockingly mutilated state.

NORDHAUSEN: Prussian manufacturing town, in the province of Saxony. The earliest mention of Jews at Nordhausen occurs in a document signed by Rudolph I. of Habsburg and dated Oct. 30, 1290. In the oldest extant statutes of the city, belonging to the year 1300, the Jews are mentioned only in connection with money-lending; the city council tolerated them only because they could not do without them. Still the "Liber Privilegiorum" mentions several Jews who became residents of Nordhausen; as, for instance, the Jew Joseph, 1318; another Jew Joseph, with his son-in-law Abraham, and the Jew Jacob of Elrich, in 1320. In 1323 King Louis the Bavarian declared the Jews of Nordhausen to be his special "Kammerknechte." They had a cemetery outside of the town, on the Frauenberg, but the existing tombstones are not older than the first half of the fifteenth century. During the time of the Black Death (1349) the Jews of Nordhausen shared the fate of their brethren elsewhere. Margrave Frederick of Meissen, eager for Jewish money, wrote to the city council of Nordhausen (May 2, 1349) that he had ordered all the Jews on his estates to be burned, and that the citizens of Nordhausen might follow his example. It can not be said with certainty how far this terrible hint was acted upon, although the German documents speak of the Jews as having been "destroyed," and Salfeld's "Martyrologium" indicates that some of them were burned at the stake, their rabbi, Jacob b. Meïr, being among the number. There is also a legend that the martyrs went to the pyre dancing. At any rate, the people of Nordhausen at that time came into possession of much plunder, which was wrested from them partly by the neighboring counts and partly by King Charles IV. In 1350 Charles IV. transferred all the property of the Jews of Nordhausen to Count Henry of Honstein, with the understanding that the citizens of Nordhausen might purchase from the count anything they desired. The king also quashed the proceedings brought against the citizens for the murder of the Jews. On March 9, 1391, King Louis the Bavarian issued an order that the inhabitants of Nordhausen might, by paying a certain sum into the royal treasury, be released from their debts to the Jews. Half of any money which they borrowed from them after that date must be paid into the royal treasury. Further, every Jew or Jewess over twelve years of age was required to pay an annual tax of one gulden pfennig (see Opferpfennig).

The Black Death.

In the fifteenth century several Jews of Nordhausen appeared before the vehmgericht, though its authority was not recognized by the citizens of Nordhausen. In 1439 Abraham of Magdeburg summoned the council and citizens of Nordhausen before the vehmgericht presided over by Judge Manegolt

Regulations Against Jews.

at Frauenhagen, Hesse. In 1538 the authorities of Nordhausen decreed that: (1) no Jew may appear before the court without an attorney; (2) strange Jews must have an escort and must pay the capitation tax; (3) Jews on the council, who, with their children, are under the protection of the country, shall enjoy the rights granted every citizen, but nothing further. A later decree, of July 14, 1539, orders that the Jews must wear a badge (a brass ring) on the sleeve, that they may stay only in Jewish houses (that is, in the Judengasse), that they may not carry on any commerce without the permission of the burgomaster, and that they may not deal in drugs. A decree of the Collegium Seniorum March 19, 1546, forbids strange Jews the exercise of any trade at Nordhausen. They were subject to arrest and a fine of 12 marks if they came to the city without an escort and without showing their badges. It is narrated that a rich Jew of Nordhausen, named Färber (according to another account, Jochem), in the presence of the deacon of St. Nicolai spoke unseemly words concerning Jesus. The deacon thereupon reported the matter to the chancery, with the result that Färber, with his family, was ordered to leave the city immediately and forever. Still later accounts state that he was required only to pay a fine.

Soon afterward the council of Nordhausen, having complained to Charles V. that the usurious dealings of the Jews ruined the citizens, the king granted May 21, 1551, permission to the council to refuse at will to any Jew permanent residence at Nordhausen. This privilege was confirmed later by Emperor Ferdinand Aug. 14, 1559, at Augsburg, with the addition that Jews were forbidden to lend money on any property, whether inside or outside Nordhausen. Thus, Nordhausen Jews were compelled to remove to the neighboring towns, and were permitted only occasionally in Nordhausen, where they were subjected to the vexatious laws against strange Jews. In the same year the council of Nordhausen decreed that its citizens should have no dealings with the Jews and that those of the latter who came into town, whether on foot or on horseback, must wear a circular yellow badge. From that time onward the residence of Jews at Nordhausen depended on the caprice of the council; on very rare occasions some Jewish family was allowed to settle there, but even then their stay was of short duration. Indeed, the town did not admit any Jews to permanent residence as long as it was a free city, and even for some years thereafter Prussia, which annexed the city in 1802, respected its privilege in this regard. Thus it was not until 1807, when Nordhausen became part of the kingdom of Westphalia, that Jews were allowed to settle there. When in 1813 Nordhausen was ceded to Prussia, the Jews resident there became subject to the provisions of the edict of March 11, 1812, which granted the Prussian Jews freedom of residence.

In 1903 the total population of Nordhausen was 28,500, of whom 489 were Jews. The latter have a religious school, a synagogue, a charity society, a poor-aid society (in connection with a literary society), a ḥebra ḳaddisha, and a synagogal singing society.

NORDHEIMER, ISAAC: American Orientalist; born 1809 at Memelsdorf, near Erlangen, in Bavaria; died 1842. A very promising Talmudic student, he was educated successively at the rabbinical school at Presburg, then under the personal direction of the famous rabbi Moses Sofer, the gymnasium of Würzburg, the university of the same city, and the University of Munich (Ph.D. 1834).

In 1835 Nordheimer went to New York and was appointed professor of Arabic and other Oriental languages, and acting professor of Hebrew in the university of that city. Soon afterward he became instructor in the Union Theological Seminary. On his way to America he had begun the preparation of a Hebrew grammar on a philosophical basis, the first volume of which he published in 1838, and the second in 1841. The work had great repute. Nordheimer published also "A Grammatical Analysis of Select Portions of Scripture, or a Chrestomathy" (New York, 1838), and contributed valuable articles to the "Biblical Repository"; and a Hebrew concordance (1842; incomplete).

A. A. R.

NÖRDLINGEN: City in the district of Swabia, Bavaria; till 1803 a free city of the German empire. Like Augsburg, Nuremberg, Würzburg, and other cities of the district, Nördlingen probably had a Jewish population in the twelfth century, although documentary evidence dates only from the thirteenth. A report of a massacre of the Jews in 1290, accepted by Joseph ha-Kohen ("'Emeḳ ha-Baka") and Salfeld ("Martyrologium," p. 181), and entered in the memor-book of the present congregation of Nördlingen, is undoubtedly fictitious, having been invented by the city clerk, Wolfgang Vogelmann, about 1549 in order to free the city from an onerous obligation to the emperor by pretending that their indebtedness was a fine imposed upon the citizens for excesses committed against the Jews 250 years previously (Müller, "Aus Fünf Jahrhunderten," etc., pp. 6-7). The Jewish community, however, suffered terribly from the persecutions under Rindfleisch (1298), and at the time of the Black Death (1349). In 1348 Emperor Charles IV. charged Count Albert of Öttingen with the punishment of the rioters, who, in pillaging and murdering the Jewish inhabitants, had destroyed the king's property ("Kammerknechte"; see Kammerknechtschaft), while the count was to retain the plunder that had been taken from the Jews. Albert and the other members of his family compromised with the city. They declared a debt of 2,000 pounds of hellers which the latter owed to the Jews to be canceled, allowing the city to retain 600 pounds realized from the sale of the plunder, while the counts themselves received the houses owned by the Jews, the notes due to such of the latter as were not residents of the city, besides some valuable jewelry,

History of the Community.

among which was a diadem once the property of the Duchess of Bavaria.

More serious was the action taken by the Union of Swabian Cities (Schwäbischer Städtebund) against Nördlingen for the riots of July 29, 1384, during which the Jewish community was wiped out of existence. The banishment of twelve ringleaders from the city was demanded; and as the council would not comply with this order, Nördlingen was expelled from the Union. The city thereupon appealed to King Wenceslaus, who compromised with it upon receiving the sum of 3,500 florins. The city was to retain all property taken from the Jews, and the Union was compelled to restore Nördlingen to membership (May 5, 1385).

Expulsion.

Religious fanaticism, stirred up by the Hussite war, and the growing hostility of all the free cities toward the Jews, which characterize the history of the fifteenth century, were likewise felt in Nördlingen. In 1452 they were given one year's notice to leave the city. The order seems to have been complied with; for during the subsequent five years there is no mention of Jews in Nördlingen. Afterward the hostile agitation of the clergy continued, and decrees of expulsion were repeatedly issued and suspensions of the same granted until finally the edict of Oct. 27, 1506, decreed that all Jews should leave Nördlingen by March 14, 1507. This edict was carried out strictly; and except in times of war, as in 1637, 1645, 1646–51, 1672, 1688, 1704, and 1796, when Jews living in the vicinity were permitted to seek temporary shelter in the city, or in similar exigencies, as in 1783, when a fire had rendered the Jews of Kleinerdlingen homeless, no Jew was permitted to reside in Nördlingen until 1860, when Eduard Hochstädter of Deggingen received permission to establish a leather business in the city. In 1870 a congregation was formed, with which those of the neighboring towns of Ederheim (1874) and Deggingen (1879) amalgamated, being reduced in membership by the law of 1861, which granted freedom of residence.

Legal Condition.

As everywhere else in Germany, in Nördlingen the Jews were the king's property; but owing to the ineffectiveness of the royal protection they had to make their own arrangements for protection with the city and with the lords of the neighboring estates. Very often the emperor would pawn them; that is to say, he would assign their taxes to certain of his vassals who had rendered him services or had advanced him money. This was repeatedly done by Louis IV. (1314–47), Charles IV. (1347–78), Wenceslaus (1378–1419), and others. In spite of this fact, which involved the abandonment of the king's rights of taxation, the latter made renewed attempts to exact large sums from the Jews on every emergency. Thus Louis IV., who had pawned the Jews in 1324 to Ludwig von Öttingen, assigned to that count in 1345 an additional sum of 500 pounds from Jewish taxes in recognition of services rendered by him to the king. Charles IV., who in 1349 had granted quitclaims to the citizens for robbing and murdering the Jews, demanded 3,600 pounds from the successors of the latter in 1373, when he needed money to buy the margravate of Brandenburg, assuring them that during the next ten years they should not be burdened with new taxes. Such promises, however, were hardly ever kept. King Wenceslaus, who had granted the city quitclaims for the murder of the Jews in 1384, eight years later, when in need of money, granted the council the right to keep Jews, provided the latter paid one-half of their taxes, in addition to the personal tax (Opferpfennig), into the royal treasury. To King Rupert the Jews of Nördlingen paid as "Ehrung" upon his coronation (1401) 50 gulden. His successor, Sigismund, demanded (1414) the sum of 800 gulden for his expenses. To the latter's successor, Albert (1437–39), they had to pay 600 florins as a subsidy for the war with the Hussites. Frederick IV. (1440–93), while kindly disposed toward the Jews, constantly demanded special taxes for the wars which he had to wage against Bavaria (1463), Burgundy (1475), and Turkey (1482). His son Maximilian demanded upon his coronation (1495) an "Ehrung" and one-third of the Jews' property in addition.

Organization.

The Jews had autonomous jurisdiction over members of their own community; but in 1414 they voluntarily resigned this right, probably because of internal quarrels. It was restored to them in 1433. The lending of money was strictly regulated. In 1433 the Jews were allowed one pfennig a week on every gulden lent (34⅔ per cent); but in 1447 this rate of interest was reduced to a half-pfennig (17⅓ per cent). When the clerical agitation grew fiercer various vexatious measures were passed. Thus in 1492 it was decreed that pledges should be received only in the presence of two witnesses; in 1437 the ordinance compelling the Jews to wear yellow badges was strictly reenforced; in 1488 they were fined for holding a dance two days before the festival of the birth of the Holy Virgin, and one Jew was threatened with imprisonment for drawing water from the city well; while in 1495 the notes held by them would not be considered legal in the courts.

Later Restrictions.

In the edict of expulsion of 1506, which was confirmed by the emperor as the overlord of the Jews, it was expressly stipulated that no lord should allow the Jews to settle on his estates within 2 (= 10 English) miles from the city; but the counts of Öttingen and the Teutonic knights who owned estates near the city nevertheless received Jews there, without heeding either the city's protest or the imperial edicts. The city thereupon prohibited its citizens from dealing with Jews (1509); but neither this edict, frequently repeated, nor the combined efforts at the Reichstag (1530) of all the free cities to prohibit or to restrict money-lending by Jews were effective. A regulation issued Feb. 18, 1669, which prescribed that all business connected with loans should be transacted in the city hall, where the cash was to be paid, the transactions recorded, and the pledges kept, and that the rate of interest should not exceed 8 per cent for loans above 25 florins and 10 per cent for smaller sums, was frequently renewed (1682, 1706, 1712, 1732). It had, however, hardly more practical effect than the frequent prohibitions of peddling or of dealing in certain articles (1712, 1721, 1725, 1729, and 1732). While visiting the fairs could not be prohibited, as this right of the Jews rested on a general law for the whole empire, the city of Nördlingen placed various obstacles in the way of the Jews, as, for instance, the prohibition against selling in a booth. An exception was made in favor of the imperial body-physician Löw (Winkler ?), who was permitted to sell his remedies (1664), and of a Dutch jeweler (1786). As a matter of course, Jews visiting the city during the fairs, or on business even for a day only, as well as those who were permitted to reside there temporarily in times of war, had to pay a poll-tax (Leibzoll).

In 1900 the Jews of Nördlingen numbered 408 in a total population of 8,299.

NORK, FRIEDRICH N. See Korn, Selig.

NORMANDY. See France.

NORTH CAROLINA: One of the South Atlantic states of the American Union, and one of the thirteen original states. In 1826 Isaac Harby estimated that there were 400 Jews in the state. Its principal town is **Wilmington,** the first Jewish settlers of which were Aaron Lazarus and Aaron Riviera. The former was born in Charleston, S. C., in 1777, and went to Wilmington in early manhood; he was interested in railroad projects. The latter was cashier of the Bank of Fear. In 1852 an organization was effected for burial services, but it was not until 1867 that a congregation was formed, with E. C. Myers as rabbi. This was permanently organized in 1873 under the name of "Temple of Israel." The synagogue was dedicated in 1876, and S. Mendelsohn was elected rabbi. In 1904 he was still discharging the duties of that office. Wilmington has, in addition, a club and a charitable society. Other communities exist at the following places: **Asheville** (two congregations and a cemetery; Philip S. Henry has a large estate, Zealandia, there); **Charlotte** (a ladies' aid society); **Durham** (a congregation); **Goldsboro** (Congregation Oheb Sholom, founded in 1883, and three charitable societies); **Monroe** (a small community, holding holy-day services); **Newbern** (a congregation); **Raleigh** (a cemetery, founded in 1870); **Statesville** (Congregation Emanuel, founded in 1883); **Tarboro** (Congregation Bnai Israel, founded in 1872); **Windsor** (holy-day services).

A.

NORTHAMPTON: Capital of Northamptonshire, England. Jews were living there as early as 1180, when it is recorded that Samuel of Northampton, for obtaining a divorce from his wife, owed the king 5 marks. Four years later he made arrangements for the marriage of his son to the daughter of Margaret, a Jewess of London. When Richard I. returned from Germany, in 1194, he issued at Northampton a rescript to the Jews of England for a donum of 5,000 marks to be paid by them, probably toward the expenses of his ransom. Altogether £1,803 7s. 7d. was collected, of which the Jews of Northampton (thirty-six of whom are mentioned) contributed £163 13s. 11d. They were thus second in point of numbers and fourth in point of contributions of all the Jews of England at that time. The community included Jews who had come from Bungay, Colchester, Nottingham, Stamford, and Warwick.

Northampton was one of the English towns in which an Archa was established; and the Jews had, therefore, the right of residence there down to their expulsion. During the Barons' war (1264) an outbreak against them occurred in the town, in which they suffered severely. In 1279, a boy having been found murdered at Northampton, some Jews of that town were taken to London, dragged at the tails of horses, and hanged (Reiley, "Memorials of London," p. 15). In 1286 a lawsuit occurred in Northampton with regard to the disposition of a house belonging to Leo fil Mag Elie Baggard ("Jew. Chron." Nov. 22, 1889). When the Jews were expelled from England four years later, only five names were given as of Jews holding landed property at Northampton which escheated to the king. The community itself held five cottages, a synagogue, and a cemetery, the rental of which was paid to the prior of St. Andrew's. The cemetery was surrounded by a stone wall, probably to protect the bodies from desecration. After the expulsion no Jews returned to Northampton till about 1890, when a small congregation was formed by Russian Jews, with a synagogue in Overstone road.

J.

NORTHEIM: Town in the province of Hanover, Prussia. It has a population of 6,695, of whom over 100 are Jews. Jews lived there as early as the fourteenth or fifteenth century, and paid to the council of Hildesheim a semiannual tax ranging from $\frac{1}{2}$ f. (= "Verding" = $\frac{1}{4}$ mark) to 3 g. Although the dukes of Brunswick had expelled all the Jews from their territory, the municipal council of Northeim in the sixteenth century granted the Jew Abraham protection for three years, beginning with 1556. In return Abraham paid 10 gulden a year. In 1568 Abraham was appointed to furnish silver for the ducal mint, and the duke even granted him the privilege of free trade outside of Northeim. In 1570 the council granted to Abraham's wife, Vögelken, in case her husband died, the right of residence at Northeim for life under the same conditions as were imposed upon him; and in the event of Abraham's death and her remarriage her second husband was to be given the same protection. The following year, 1571, Abraham was expelled from the city on suspicion of being in league with a band of robbers.

In 1576 one Moses, called "Münzner," with his wife Anna and his children, was granted the right of residence for six years, at first under the same conditions as Abraham, then in consideration of 15 gulden protection money. In 1589 he was granted protection and the right of residence for life for himself and for any one of his children who should marry. In return he was required to pay 50 marks, 12 gulden a year, and his share of the city's taxes; his child, on being granted protection, was to pay 17 gulden and a certain annual sum as protection money. Two other instances in which Jews were received at Northeim in that period are known; but in 1591 Duke Heinrich Julius expelled them all from the city, although their periods of protection had not expired. No Jews were found at Northeim between this date and 1607. Then, at the instance of Duchess Elizabeth, three Jews were admitted for ten years, in consideration of an immediate and an annual payment. They were commissioned to furnish the necessary silver for the municipal mint, and the rate of interest they were to charge on loans to individuals was fixed.

On March 20, 1608, Duke Heinrich Julius issued a letter of convoy good for ten years to four Jews who wished to settle in the cities of Northeim and Göttingen, the consideration being 7 gold gulden to be paid annually to the ducal treasury. A resolution which was passed by the Hanoverian diet on April 3, 1639, put an end to the residence on the part of Jews at Northeim, and no Jews are found in the town until the time of the Westphalian rule (1809), when two Jewish families settled there. The community is under the rabbinate of Hildesheim, and formerly had its cemetery at Sudheim; now (1904) it has a cemetery of its own and purposes building a synagogue.

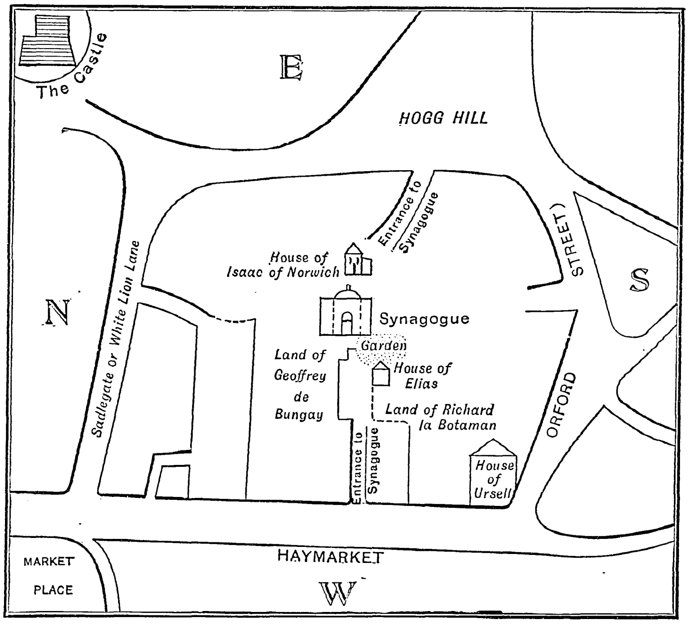
D. A. Lew.

NORWAY: Northwestern division of the Scandinavian peninsula. It has a total population of 2,240,032. The census of 1897 counted over 300 Jews there, but their number has since doubled. In conformity with a law which became operative when Norway was united with Sweden in 1814, Jews were forbidden to settle in the country. This medieval law was finally repealed in 1851 through the efforts of a group, headed by the poet Wergeland, although only a small number of Jews availed themselves of the privilege of settling in Norway. Most of these come from Russian Poland, and they enjoy full civic equality. They are engaged exclusively in industrial pursuits and are generally prosperous. The majority live in the capital, Christiania, while a smaller number are in Trondhjem and a few in Bergen. The Jews of Christiania formed originally three minyanim, but the largest and most important two united, under the name "Mosaiske Trossamfund." This congregation, which is supported by voluntary contributions, owns a cemetery and worships in a rented chapel.

D. J. Wo.

NORWICH: Capital town of the county of Norfolk, England. After London, Oxford, and Cambridge, it is the earliest English town mentioned as being inhabited by Jews. The so-called martyrdom of William of Norwich—the first case of blood accusation in Europe—occurred there in 1144. It must have possessed an important congregation very early, as the sheriff of Norfolk paid £44 6s. 8d. for the Jews of Norwich in 1159. The most important person in the community in the twelfth century was **Jurnet of Norwich,** who is said to have married a Christian, Miryld, daughter of Humphrey de Havile. Jurnet was fined 6,000 marks, an enormous sum, while his wife's lands were escheated (Blomefield, "History of Norfolk," iv. 510). This occurred in 1186; but three years later he is found continuing to conduct business, one of the earliest "feet of fine" (title deed) in existence being with regard to a messuage at Norwich which he had purchased from William of Curzon. He paid 1,800 marks for the privilege of having residence in England (Jacobs, "Jews of Angevin England," pp. 90, 94, 97).



Plan of the Jewish Quarter of Norwich.
(From "Transactions of the Jewish Historical Society of England.")

During the massacres of 1190 all the Norwich Jews who were found in their own houses were slain (Feb. 6); the remainder had sought refuge in the castle. On the return of Richard I. from Germany, the Jews of Norwich contributed for his ransom to the Northampton donum of March 20, 1194, thirteen of them contributing £88 9s. 4d. The comparative smallness of their number and contribution was doubtless due to the massacre of 1190.

In 1200 an affray took place in Norwich in which a priest assaulted and wounded Abraham of Norwich, who appealed to the court for redress. The great Jewish financier of Norwich, and indeed of all England, in the early part of the thirteenth century was Isaac of Norwich, who in 1218 was fined the enormous sum of 10,000 marks. There is still extant a sort of day-book of his transactions for the three years 1225–27. He is represented in contemporary caricature as king of the money-lenders or demons, with a triple head, showing the wide extent of his influence (see illustration, Jew. Encyc. vi. 628).

In 1234 thirteen Jews were accused of having forcibly circumcised the five-year-old son of a Christian physician (possibly a convert). They paid a fine for respite of judgment; but four years later four of them were hanged at Norwich after having been dragged to the gallows at the tails of horses. In 1237, possibly in connection with this affair, the houses of the Jews of Norwich were twice broken into and burned.

Norwich remained the seat of an Archa down to the expulsion in 1290, on which occasion the king came into possession of bonds to the extent of £20 in money and of corn and wool to the value of £314 13s. 4d. and £311 13s. 4d. respectively. Furthermore, sixteen Jews of Norwich held messuages, which fell into the hands of the king. The community possessed a synagogue of the annual value of 5s., for which it paid 4d. as a land tax.

An unusually large number of deeds relating to the Jews of Norwich exists in the public records, especially at Westminster Abbey, where there are no less than ninety-four Latin deeds and ninety-four Hebrew "starrs" (the latter were published by M. D. Davis; "Shetarot," London, 1888). From these and other documents it is possible to determine the position of the Jewry at Norwich. It extended from Hogg Hill to the Haymarket, and from Sadle Gate to Little Orford street. The synagogue was in the center, and had a cemetery near it and a school at the south end of it. This shows that the English Jews had a separate school system.

A small congregation seems to have existed in Norwich in the middle of the nineteenth century, a synagogue having been erected there in 1848. The present congregation is a small one, numbering (1904) only 158 souls.

J.

NORZI: Italian family, many members of which were distinguished as scholars and rabbis. Probably the family name is derived from the town of Norcia. According to Mortara, there were two distinct families of the name at Mantua—one from Tizzana and the other from Torazzo.

Benjamin ben Emanuel Norzi: Wrote, in 1477, a work on the calendar entitled "Sod la-'Asot Luaḥ"; it is still extant in manuscript (Michael, "Ozrot Ḥayyim," No. 353; see Wolf, "Bibl. Hebr." i. 252; Benjacob, "Oẓar ha-Sefarim," p. 417).

Eliezer ben David Norzi: Scholar of the sixteenth century; mentioned in the responsa of Moses Provençal. Eliezer's name is connected with the "Perush ha-Temunot," which contains explanations of the geometrical figures of the sixth chapter of the "Sefer ha-Shem" of Abraham ibn Ezra (see Steinschneider, "Hebr. Bibl." viii. 28).

Ḥayyim ben Jehiel Norzi: Lived at Mantua in the sixteenth century. Together with the rabbis of Mantua he signed a halakic decision (responsum No. 8) of Moses Zacuto. Ḥayyim's authority is invoked by Mattithiah Terni in his "Sefat Emet" (p. 87b) and by Samuel Aboab in his "Debar Shemuel" (§ 181; see Nepi-Ghirondi, "Toledot Gedole Yisrael," p. 11).

Isaac ben Moses Norzi: Talmudist; lived at Ferrara in the eighteenth century. He was the author of "'Iṭṭur Bikkure Ḳaẓir" (Venice, 1715), on a dispute in a case of sheḥiṭah brought before the Talmud Torah of Ferrara during the presidency of Isaac Lampronti (Nepi-Ghirondi, "Toledot Gedole Yisrael," p. 133; Steinschneider, "Cat. Bodl." col. 1140).

Jedidiah Solomon ben Abraham Norzi: Rabbi and exegete; born at Mantua about 1560; died there after 1626. He studied under Moses Cases, and received his rabbinical diploma in 1585. Toward the beginning of the seventeenth century he was elected corabbi of Mantua, a position which he held until his death. Jedidiah Solomon consecrated the greater part of his life to a critical and Masoretic commentary on the Bible, which was considered a standard work. The author spared no pains to render his critical labors as complete as possible, and to leave the Biblical text in as perfect a condition as thorough learning and conscientious industry could make it. He noted all the various readings which are scattered through Talmudic and midrashic literatures, and consulted all the Masoretic works, both published and unpublished.

To collate all the manuscripts to which he could gain access, and to find the Masoretic work "Massoret Seyag la-Torah" of Meïr ben Todros Abulafia, Jedidiah Solomon undertook extended voyages and lived for a long time abroad. Among the manuscripts consulted by him was that of Toledo of the year 1277 (now known as the Codex De Rossi, No. 782). He compared all the texts of the printed editions and availed himself of his friend Menahem Lonzano's critical labors in connection with the Pentateuch. The work was completed in 1626 and was entitled by its author "Goder Pereẓ." It was divided into two volumes, the first embracing the Pentateuch and the Five Megillot, and the second comprising the Hagiographa and the Prophets, with two small treatises at the end—"Ma'amar ha-Ma'arik," on the "Meteg," and "Kelale BeGaD-KaFaT," on the six letters and the "Ḳameẓ ḥaṭuf." The work was first published under the title "Minḥat Shai" by Raphael Ḥayyim Basila, who added to it some notes and appended a list of 900 variations (Mantua, 1742–44). A second edition, without the grammatical treatises, appeared at Vienna in 1816; the commentary on the Pentateuch alone, with the Hebrew text, was published at Dubrovna in 1804; the commentary on the Hagiographa and the

Prophets, at Wilna in 1820. Jedidiah Solomon's introduction was published by Samuel Vita della Volta in 1819, and republished by Jellinek at Vienna in 1876. A commentary on the "Minḥat Shai" was published by Ḥayyim Zeeb Bender of Babruisk under the title "Or Ḥayyim" (Wilna, 1867).

Bibliography: De Rossi, *Dizionario*, p. 250; Eichhorn, *Einleitung in das Alte Testament*; Rosenmüller, *Handbuch für die Literatur der Biblischen Exegesis*; Steinschneider, *Cat. Bodl.* col. 2377; Fürst, *Bibl. Jud.* iii. 39; Michael, *Or ha-Ḥayyim*, p. 432, No. 951; Fuenn, *Keneset Yisrael*, p. 382.

Jehiel Vidal Norzi: Rabbi at Mantua in the first half of the seventeenth century. Appointed first as overseer of the "shoḥeṭim," he was in 1628 elected a member of the rabbinate, at a time when the community was undergoing many and severe trials (Mortara, in "Corriere Israelitico," 1863, pp. 56 *et seq.*).

Moses ben Jedidiah Norzi: Probably grandson of Moses ben Jedidiah Solomon; lived at Mantua in the seventeenth century. Several consultations of his are found in the "Debar Shemuel" (§§ 328, 329, 341) of Samuel Aboab (Nepi-Ghirondi, "Toledot Gedole Yisrael," p. 247).

Moses ben Jedidiah Solomon Norzi: Rabbi at Mantua; died in 1590. He was the author of a commentary on Middot and of novellæ on Ḥullin, none of which has been published. Abraham Portaleone, in his "Shilṭe ha-Gibborim" (p. 94b), invokes his authority in regard to the weight of a dinar. A letter of consolation, entitled "Iggeret Tanḥumin," was written by Hananiah ben Solomon Finzi to Moses' children at the death of their father (Steinschneider, "Hebr. Bibl." v. 132; see Nepi-Ghirondi, "Toledot Gedole Yisrael," p. 247, where Moses ben Jedidiah Solomon is confounded with Moses ben Jedidiah, who was probably grandson of the former).

Raphael ben Gabirol Norzi: Ethical writer; lived at Ferrara, later at Mantua, in the sixteenth century. He wrote the following ethical works: "Se'ah Solet," in six chapters (Mantua, 1561); "Marpe la-Nefesh" (Mantua, *c.* 1561; Venice, 1571); "Oraḥ Ḥayyim" (Venice, 1579; Amsterdam, 1757; see Steinschneider, "Cat. Bodl." col. 2138; Zunz, "Z. G." p. 254; Fürst, "Bibl. Jud." iii. 40).

Solomon ben Samuel Norzi: Scholar of the sixteenth century. His responsa were published at Mantua in 1588 (see Benjacob, "Oẓar ha-Sefarim," p. 561).

J. I. Br.

NOSE: Anthropologists who consider the nose an important racial index (Topinard, Bertillon, Deniker, and others) in their classifications of varieties of noses have one class which they call "Jewish," or "Semitic"—prominent, arched, and "hooked" noses. It has been pointed out that this Semitic nose appears in ancient Egyptian monuments, in figures representing Semites. On the other hand, some authors show that this form of nose is not characteristically Semitic, because the modern non-Jewish Semites, particularly such as are supposed to have maintained themselves in a pure state, as the Bedouin Arabs, do not possess this characteristic nose at all. Their noses are as a rule short, straight, and often "snub," or concave. Luschan holds that the hook-nose is by no means characteristic of the Semites, and contends that the small number of arched noses that are found among the Jews is due to ancient intermixture with the Hittites in Asia Minor. He shows that other races also, as the Armenian, for instance, who have a good portion of Hittite blood in their veins, have hook-noses.

Among the modern Jews the hook-nose is not as frequently encountered as popular belief and caricaturists would lead one to believe. In the appended table are given figures of the percentage of four varieties of noses—straight ("Greek"), aquiline, or arched ("Jewish," "Semitic"), flat and broad, and "snub," or retroussé:

Country.	Straight.	Aquiline, or Arched.	Flat and Broad.	"Snub."	Number Observed.	Observer.
Jews.						
Galicia	60.1	28.4	4.9	6.6	842	Majer and Kopernicki.
Russia	84.0	2.0	10.0	4.0	100	Blechman.
Little Russia.	57.5	26.3	11.4	4.7	438	
Lithuania....	55.0	21.7	18.8	4.3	69	Talko-Hryncewicz.
Jewesses.						
Galicia.......	84.0	4.0	8.0	4.0	25	Kopernicki.
Little Russia.	70.9	18.9	6.4	3.4	206	Talko-Hryncewicz.

From these figures it can be seen that the majority of noses in Jews are straight, or what is popularly known as "Greek." Over 60 per cent of the noses of Jews in the table above are of this variety, in some groups exceeding even 80 per cent. "Jewish" or arched noses are in the minority, less than 25 per cent being of this kind; in Poland, Elkind found only 6.5 per cent of Semitic noses among the Jews in Warsaw; Weissenberg, in South Russia, only 10 per cent; Yakowenko, in Lithuania, 9.79 per cent. The proportion of "snub" noses—from 3 to 6 per cent—is of interest.

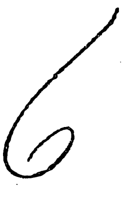

Fig. 1.

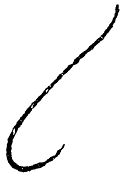

Fig. 2.

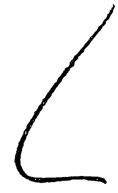

Fig. 3.

A comparison of the statistics of noses in Jews and non-Jews in Russia and Galicia shows that the percentage of straight noses is about the same in both; aquiline and hook-noses are somewhat more frequently met with among the Jews, while "snub" noses are oftener encountered on non-Jewish faces. The "Jewish" nose is thus seen by statistical evidence to be not the one which is prominent, hooked, or arched. The question why artists and scientists have always considered a certain nose characteristic of the Jew has been variously explained. Beddoe claims that it is due to a characteristic tucking up of the wings. Joseph Jacobs concludes that "the

Jewish "Nostrility."

nose does contribute much toward producing the Jewish expression, but it is not so much the shape of its profile as the accentuation and flexibility of the nostrils." From his composite photographs of Jewish faces he shows that when the nose is covered the Jewish expression disappears entirely, and that it is the "nostrility" which makes these composites "Jewish." "A curious experiment illustrates this importance of the nostril toward making the Jewish expression. Artists tell us that the best way to make a caricature of the Jewish nose is to write a figure 6 with a long tail (Fig. 1); now remove the turn of the twist as in Figure 2, and much of the Jewishness disappears; and it vanishes entirely when we draw the continuation horizontally as in Figure 3. We may conclude, then, as regards the Jewish nose, that it is more the Jewish nostril than the nose itself which goes to form the characteristic Jewish expression." Ripley agrees with Jacobs on this point, and concludes that next to dark hair and eyes and a swarthy skin the nostrils are the most distinctive feature among the Jews ("Races of Europe," p. 395).

The relation of the breadth of the nose to its length, known as the "nasal index," has been considered one of the best means of distinguishing the various races of mankind. Those in whom the breadth of the nose exceeds 85 per cent of its height are considered as platyrhine; those in whom the width of the nose is less than 70 per cent of its height are leptorhine; and lastly those races in which the width of the nose varies between 70 and 85 per cent of its height are classed as mesorhine. Measurements of Jewish noses show that they are mostly leptorhine, or narrow-nosed, as can be seen from the following table:

Country.	Nasal Index.	Observer.
Jews.		
Russia	70.00	Blechman.
Poland	62.05	Elkind.
White Russia	59.89	Yakowenko.
South Russia	62.38	Ivanowski.
South Russia	63.00	Weissenberg.
Caucasia	62.72	Pantukhof.
Jewesses.		
Poland	60.71	Elkind.
White Russia	68.28	Yakowenko.
South Russia	62.00	Weissenberg.

J. M. Fi.

NOSE-RING: The Hebrew word נזם (plural, נזמים) is used for both earrings and nose-rings, but where the latter is referred to the word אף is added (Isa. iii. 21); or it is indicated in another way that the ring is intended for the nose (as in Gen. xxiv. 30, 47, *et al.*). Nose-rings were worn only by women, and the first mention of them occurs in the narrative of Eliezer and Rebekah, where the former gave the latter a golden nose-ring of half a shekel's weight (Gen. xxiv. 47, R. V.; comp. A. V.). That in certain instances golden nose-rings are specifically referred to suggests that nose-rings sometimes were made of baser metals. The nose-ring is mentioned in the proverb, "A fair woman without discretion is like a golden nose-ring in a swine's snout" (Prov. xi. 22, Hebr.). That nose-rings were still worn by Jewish women in the time of the Talmudists is evidenced by the regulation forbidding women to wear them on Sabbath in public (Shab. vi. 1). Nose-rings are mentioned in the Mishnah (Kelim xi. 8) as ornaments that are capable of becoming unclean.

E. G. H. M. Sel.

NOSSIG, ALFRED: Austrian author and sculptor; born at Lemberg, Galicia, April 18, 1864. He studied law, philosophy, and natural science at the universities of Lemberg and Zurich (Ph.D.), and then studied medicine for several years at the University of Vienna. After living for some time at Paris he took up his residence at Berlin. He began his literary career with some poetical works in Polish, including "The Tragedy of Thought," a drama (1884); "The King of Zion," a drama (produced at the National Theater at Lemberg, 1887); and "John the Prophet," an epic poem (1892). In German he published the dramas "Göttliche Liebe" (1901); "Die Hochstapler" (produced at the Neue Bühne of Berlin, 1902); and the libretto to Paderewski's opera "Manru."

Nossig's scientific works, written in German and chiefly sociological, are as follows: "Ueber die Bevölkerung" (1885); "Einführung in das Studium der Sozialen Hygiene" (1894); "Revision des Sozialismus" (1900); "Die Politik des Weltfriedens" (1901); "Die Moderne Agrarfrage" (1902). To the literature of art he has contributed "Aesthetische Skizzen" (1895), "Die Kunst Oesterreich-Ungarns im Neunzehnten Jahrhundert" (1903), and many essays on the regeneration of the drama. He is recognized in Vienna and Berlin as an authoritative critic on art and the drama. His "Praktische Kritik der Lehre Spinoza's" appeared in 1895.

Nossig's work as a sculptor was exhibited at Paris (1899) and Berlin (1900), and attracted much attention. His chief works in this field are "Der Ewige Jude," "Juda der Makkabäer," "König Salomo," and the mask of the Empress Elizabeth of Austria.

Nossig has devoted especial attention to the Jewish question. In this direction he has written: "Versuch zur Lösung der Jüdischen Frage" (1887); "Matieralien zur Statistik des Jüdischen Stammes" (1887); "Sozialhygiene der Juden und des Altorientalischen Völkerkreises" (1894); "Jüdische Statistik," vol. i. (a collection edited by Nossig, 1903); "Die Bilanz des Zionismus" (1903); and "Das Jüdische Kolonisationsprogramm" (1904). S.

NOTARIES AND SCRIBES. See Soferim.

NOṬARIḲON (*νοταρικόν*; Latin, "notaricum," from "notarius" = "a shorthand-writer"): A system of shorthand consisting in either simply abbreviating the words or in writing only one letter of each word. This system, used by the Romans in their courts of justice for recording the proceedings of the court (comp. Benjamin Mussafia in his additions to the "'Aruk," *s.v.*), was said by the Talmudists to have existed as early as the time of Moses; and they held that the latter used it in the composition of the Pentateuch. The law concerning noṭarikon is the thirtieth of the thirty-two hermeneutic rules laid down by Eliezer b. Jose ha-Gelili for the interpretation of the Bible. Still, as Samson of Chinon remarks ("Sefer Keritut," Preface), it was used in haggadic interpretation only, not in halakic matters.

Examples.

Interpretation by means of noṭarikon is general in the pre-Talmudic literature, in both Talmuds, in the Midrashim, and in the later commentaries. But the term itself, while frequently met with elsewhere, occurs but once in the Jerusalem Talmud ('Orlah i. 61c), which apparently includes noṭarikon in GEMAṬRIA (comp. Frankel in "Monatsschrift," xix. 144). In most of the haggadic interpretations by means of noṭarikon, this system is referred to as consisting in writing the initials of words. Thus the word פחז (Gen. xlix. 4) is interpreted as being composed of the initial letters of פחזת חטאת זנית = "thou hast been wanton; thou hast sinned; thou hast committed adultery" (Midr. Aggadat Bereshit lxxxii.). The word אנכי, the first word of the Decalogue, is declared to be composed of אנא נפשי כתבית יהבית = "I myself have written [the Torah] and delivered it," or אמירה נעימה כתיבה יהיבה = "a pleasant saying, written and delivered" (Shab. 105a). On Moses' rod were engraved the letters דצך עדש באחב, which are the initials of the Hebrew terms for the ten plagues (Tan., Wa'era, 8). According to R. Joshua (Shab. 104b) if one writes on a Sabbath even a single letter in noṭarikon—that is to say, indicating by a dot above the letter that it is an abbreviation (comp. Rashi *ad loc.*)—he is guilty of violating the Sabbath just as though he had written a whole word.

In other instances noṭarikon designates the mere abbreviation of words; thus the word ויחלש (Ex. xvii. 13) is interpreted as the noṭarikon of ויחל וישבר = "he [Joshua] made him [Amalek] sick and broke him" (Mek., Beshallaḥ, 'Amaleḳ, 1). There is also an instance in which noṭarikon is taken to designate a system of rapid writing in which a whole sentence is omitted when it may be inferred from a sentence which is written. Thus in the commandment "Honor thy father and thy mother, that thou mayest live long" (Ex. xx. 12, Hebr.), where the omission of the sentence "But if thou dost not honor thy father and mother, thou shalt not live long," as it is perfectly understood, is called noṭarikon (Mek., Yitro, Baḥodesh, 8).

Certain rabbis consider it to be a historical fact that the two priests sent by command of the Assyrian king to teach the Torah to the Samaritans had the whole Pentateuch written in noṭarikon, thus accounting for the variants of the Samaritan text (Pirḳe R. El. xxxviii.). The heathen also are said to have learned the Torah through their notarii or shorthand-writers, who copied the Pentateuch from the stones on which it was engraved by Joshua after the passage of the Jordan (Soṭah 35b; comp. Deut. xxvii. 3-4, comp. "J. Q. R." vii. 361, 564; ix. 520).

In the Cabala.

Noṭarikon is one of the elements of the Cabala, although the term itself does not frequently occur, it being generally included, as in the Jerusalem Talmud, in gemaṭria. Its use in the Cabala is more extended; for it serves the double purpose of cabalistic exegesis, in the same manner as in haggadic interpretation, and of forming the names of God. The application to the Cabala of the word חן as an abbreviation of חכמה נסתרה, and the frequent use of פרדס as designating פשט רמז דרוש סוד (= "the literal, the intimated, the homiletic, and the mystic interpretations") are well known. As an example of cabalistic interpretation by noṭarikon may be given that of the word בראשית as referring to the cosmogonic order ברא רקיע ארץ שמים ים תהום (= "He created the firmament, the earth, the heavens, the sea, and the abyss"); this word is resolved into other sentences also.

The use of noṭarikon in forming the names of God is equally important. Here the initial letters, or the middle letters, or the last letters of words are employed. Thus initial letters of the individual words in the sentence אל מלך נאמן form אמן, the middle letters מלא, and the final letters לכן. Another method is to take the alternate letters of the words in a sentence; for instance, the alternate letters of הנסתרות ליהוה אלהינו (Deut. xxix. 28) form the name הסר תיו אהן (Moses Cordovero, "Pardes Rimmonim," gate xxx., ch. viii.). The best known of such combinations is the prayer of Neḥunya b. ha-Ḳanah beginning אנא בכח, the initials of which constitute the forty-two-lettered name of God.

E. C. M. SEL.

NOTHHANDEL: Technical term used in the laws referring to the petty trading of the Jews, which laws aimed to exclude the Jews from such occupations. "Nothhandel" (emergency trade) is defined as the itinerant trade of villages—pawnbroking, dealing in cast-off goods, and cattle brokerage. The Bavarian edict of June 10, 1813 (§ 29), refuses marriage licenses and freedom of residence to Jews engaged in such occupations ("Regierungsblatt," 1813, p. 921; Heimberger, "Die Staatskirchenrechtliche Stellung der Juden in Bayern," p. 183, Freiburg and Leipsic, 1893). The law of the electorate of Hesse of Oct. 29, 1833, which gave to the Jews equal rights with other citizens, exempted (§ 6) those engaged in "Nothhandel" from the benefits of this law. D.

NOTKIN (NOTE), NATHAN: Russian army-contractor and financier; born at Shklov about the middle of the eighteenth century; died at St. Petersburg 1804. He was one of a number of Jews who, notwithstanding a law to the contrary, lived permanently in St. Petersburg. Catherine II. in a letter speaks of them as having lived there for a long time, and as lodging in the house of a minister who had formerly been her spiritual adviser.

Notkin was well thought of by Potemkin, and he had many dealings with Derzhavin, whose celebrated "Opinion" (see Derzhavin) exerted an important influence on the life of the Jews of Russia. It was probably Notkin's plans for the improvement of the condition of his coreligionists that brought him and Derzhavin together.

Speaking, in his "Opinion," of the necessity of educating the younger generation of Jews, Derzhavin says, "He who suggested this thought to me belongs to the same society." In another place he says, "Only one Jew, Note, Hofrath at the Polish court, presented his project, which I append together with the original reports of the various communities."

Even before his acquaintance with Derzhavin, Notkin had conceived a project for improving the condition of the Jews in Russia; and this project he had communicated to Emperor Paul I. through Count Kurakin. In it he proposed the establishment of agricultural and industrial colonies in the government of Yekaterinoslav and elsewhere. The plan was laid before Derzhavin in 1800, and in 1803 Notkin submitted another scheme either to the emperor or to some member of the Commission on Jewish Affairs. Comparing the projects of 1803 and 1797, it appears that Notkin dealt with the same features of Jewish life in both, but that in his later project he went into greater detail and emphasized the urgent need of raising the intellectual level of the Jewish masses, of which he remained the stanch champion to the end of his life.

By making the government acquainted with the real condition of the Russian Jews Notkin contributed to the reforms of 1804. So identified was he with the interests of his coreligionists that Derzhavin invariably mentioned his name when speaking of the Jews, and Nevachovich called him "the champion of his people." When in 1803 the inhabitants of Kovno petitioned the emperor to expel the Jews from their city, and when, in the same year, the expulsion of the Jews from Smolensk was begun, Notkin again came to the front and wrote to Count Kotschubei in their behalf.

The agitation and discouragement existing among the Jews became known to the emperor, and on Jan. 21, 1803, the minister of the interior, Count Kotschubei, issued a circular letter to the governors of several states urging them to take remedial measures. This was undoubtedly due to Notkin's untiring efforts. The work of the Commission on Jewish Affairs resulted in an enactment which received the imperial sanction on Dec. 9, 1804. Though this enactment was favorable to the Jews, the report made by Derzhavin had been couched in terms distinctly unfair to them, and, as a result, an estrangement between him and Notkin followed (see Derzhavin).

H. R. J. G. L.

NOTOVICH, OSIP KONSTANTINOVICH: Russian journalist; born in 1849 at Kertch, where his father was rabbi. Notovich studied law at the University of St. Petersburg. During 1873–74 he was publisher and editor of the Russian daily "Novoe Vremya"; after surrendering the editorship he took charge of its feuilleton department and occasionally wrote its leading articles. In 1876 he acquired the "Novosti," a small daily; in his hands this paper acquired great political influence and stanchly defended the Jews against anti-Semitic attacks. The articles written by him in this paper have been published under the title "Osnovy Reform." Notovich edited a Russian translation of Buckle's "History of Civilization in England" (St. Petersburg, 1874) and has written: "Ystoricheskii Ocherk Russkavo Zakonodatelstva o Pechati" (*ib.* 1873), a review of the Russian censorship and printing regulations; "Nemnozhko Filosofii"; "Yeshcho Nemnozhko Filosofii" (*ib.* 1886); "Lyubov i Krasota" (*ib.* 1887), esthetic-philosophic essays; and a number of plays—"Brak i Razvod," "Temnoe Dyelo," "Doch," "Bez Vykhoda," "Syurpriz," "Otverzhenny," several of which were produced at the imperial theaters of Moscow and St. Petersburg.

Early in life Notovich became a member of the Greek Church.

NOVEIRA, MENAHEM: Italian rabbi of Verona and poet of the eighteenth century. He was a grandson of Hezekiah Mordecai Basan. His three responsa are appended to his grandfather's "Pene Yiẓḥaḳ," which he published in Mantua in 1744. He was also the author of "Yeme Temimim" (Venice, 1753), funeral sermons preached in connection with the obsequies of two rabbis of Verona named Pincherle, with some poetical compositions for the same occasions. A copy of his "Derek Haskel" (*ib.* 1756), rules and regulations for the establishment of a free school, with a preface, is preserved in the British Museum, with his "Ḥanukkat ha-Bayit" (*ib.* 1759), on the dedication of a new Spanish synagogue in Verona. He died suddenly in the synagogue of Verona on a Friday evening while chanting "Lekah Dodi."

E. C. P. Wi.

NOVGOROD: One of the oldest of Russian cities, on the River Volkhoff; it has been in existence since the ninth century. In the first half of the eleventh century the Bishop of Novgorod was Luka Zhidyata (= "the Jew"), whose name is accepted by some scholars as evidence of a Jewish origin. Novgorod carried on an important trade with the Hanseatic League and early attracted the attention of Jewish merchants, who visited Novgorod (and perhaps lived there) as early as the first half of the fifteenth century. During the famine in Novgorod in 1445 some of its inhabitants escaped starvation by selling themselves to Eastern merchants (Besermans) and Jews. The comparatively high degree of culture among the inhabitants of Novgorod, due to intercourse with foreign countries and an early acquaintance with Jews, created there a negative attitude toward Christianity and an atmosphere favorable to the spread of the teachings of Judaism. The religious movement, known as the Judaizing Heresy, originated in Novgorod in 1471, when there arrived in the suite of Prince

Michael Olelkovich the learned Jew Skhariyah of Kiev (according to some scholars this movement had its origin in Kiev). Skhariyah was aided in the dissemination of the "heresy" by several Jews from Lithuania (Joseph, Moses, etc.). The entire government of Novgorod, according to the census of 1897, contains only 4,740 Jews; the total population of the city is 26,095, but few of whom are Jews. See Aleksei; Judaizing Heresy.

H. R. S. J.

NOVGOROD-SYEVERSK: Russian town in the government of Chernigov. The town dates its origin as far back as the eleventh century. Jews lived there in the sixteenth century, contributed toward the repairs of the streets, and paid taxes on an equal footing with the burghers. The Jewish butchers, however, were forbidden to compete with the Christians in the sale of meat, and hence sold it only in the yard of the synagogue. In 1648 the town was taken by the Cossacks, and the Jews and Poles were put to the sword. The city has a total population of 9,185, of whom 2,700 are Jews (1897). There are 318 Jewish artisans (1898) and 40 Jewish day-laborers. The general educational institutions afford instruction to 147 Jewish pupils. The charitable institutions include a bikḳur ḥolim and a leḥem ebyonim.

H. R. S. J.

NOVGOROD-VOLHYNSK: Russian town in the government of Volhynia. It has a total population of 16,873, of whom about 9,000 are Jews (1897). The latter are prominent in the commercial affairs of the town, being largely engaged in the export trade. The most important articles of export are butter (valued at 100,000 rubles yearly), skins, eggs, and furniture. The Jews carry on also an important trade in salt and dried fish with Astrakhan and Tzaritzyn. In 1899 there were in Novgorod-Volhynsk 102 Jewish merchants, 412 petty traders, about 1,000 agents and peddlers, 1,158 artisans, 116 day-laborers, and 157 factory employees. The Talmud Torah affords instruction to 130 pupils, and 120 Jewish children attend the city school, which has a total of 420 pupils. The charitable institutions include a Jewish hospital, a dispensary, etc. According to the handbook of the government of Volhynia for 1904, Novgorod-Volhynsk has one synagogue and twenty-two houses of prayer.

H. R. S. J.

NOVOALEKSANDROVSK: Russian city in the government of Kovno. It has (1897) a total population of 6,370, of whom 4,277 are Jews. Among the latter are 445 artisans and 48 day-laborers; 60 pupils receive instruction in the Talmud Torah, 240 in the thirty ḥadarim, and 18 in the private Jewish school (opened 1897). Among the charitable institutions are a bikḳur ḥolim and a loan association for aiding poor Jews. There are in the town one synagogue and five houses of prayer.

H. R. S. J.

NOVOGRUDOK: Russian town in the government of Minsk. The first mention of Jews in connection with Novogrudok dates back to 1484, when King Casimir Jagellon leased the customs duties of the place to Ilia Moiseyevich, Rubim Sakovich, Avram Danilovich, and Eska Shelemovich, Jews of Troki. Novogrudok is next mentioned in two documents of the year 1529. On Jan. 21 of that year the Jews there were made subject, with those of other Lithuanian towns, to the payment of a special military tax. On March 4, in the same year, King Sigismund ordered the waywode of Novogrudok to render all necessary aid to the farmer of taxes Michael Jesofovich in the collection of customs duties throughout the waywodeship. In a document of Nov. 27, 1551, Novogrudok is mentioned among the cities which were exempted from the payment of the special tax called the "serebschizna." In 1559 the city authorities of Novogrudok were ordered by the king to place no obstacles in the way of the Jewish leaseholders Jacob Ikhelovich of Brest-Litovsk and Nissan Khaimovich of Grodno in their work of collecting customs duties. By an edict dated Sept. 24, 1563, King Sigismund ordered the Jews of Novogrudok to settle in the lower part of the town on the streets Wilna and Trumko on the farther side of the castle, and to cease erecting new buildings on the street Podlyaskaya. The Jews were not prompt to comply with the new regulations, for in the following year the burghers of Novogrudok complained to the king that the Jews had failed to remove from houses on the street Podlyaskaya. In response to this complaint the Jews were ordered to pay a fine of 1,600 ducats, and to remove from buildings on that street. In 1565 the customs duties were farmed out to David Shmerlovich and his partners, all Jews of Brest-Litovsk. On July 20, 1576, King Stephen Bathori renewed the charter of privileges of the Novogrudok Jews. Among the prominent merchants of the town at that time was Lazar Shmoilovich.

The Jewish sources give but little information on the history of the Novogrudok community. The gravestones in the old cemetery have been weathered until the inscriptions are no longer legible. Of the older cemetery, on the north side of the city, all traces have disappeared. Novogrudok is mentioned in one of the responsa of Solomon Luria (d. 1575). The prosperity of the community has decreased since the last Polish revolution. Albert Harkavy, the Orientalist, besides other members of that family, was born at Novogrudok. The following rabbis, among others, officiated there during the nineteenth century: David ben Moses (1794-1837; author of "Galya Massekta," responsa, halakic notes, and sermons, Wilna, 1848); Alexander Süsskind; Baruch Mordecai Lipschütz (author of "Berit Ya'akob," etc.; d. Shedlitz 1885). Novogrudok has a total population of 13,656, of whom 8,137 are Jews (1897).

NOVOKONSTANTINOV: Russian town in the government of Podolia; it has a population of

2,855, including 1,825 Jews. There are 245 Jewish artisans and 22 Jewish day-laborers. The nineteen ḥadarim give instruction to 310 pupils. There are three houses of prayer there. In the second Cossack war with Poland (1649) the Cossacks and Tatars, on their way to Zborov, burned a number of towns, among them Novokonstantinov, the Jews and Poles there being put to the sword.

H. R. S. J.

NOVOMOSKOVSK: Russian city in the government of Yekaterinoslav; it has a total population of 12,862, including 1,147 Jews. Among the latter are more than 900 Jewish artisans and day-laborers, but Jews form a very slight proportion of the factory employees. The city has eight ḥadarim (70 pupils), a Jewish private school (20 pupils), and general schools (95 Jewish pupils). An anti-Jewish riot occurred in Novomoskovsk in 1883, its immediate cause being a rumor that the Jews were responsible for a burglary in the local church. On Sept. 4 a mob destroyed almost all the Jewish houses; only three of them and the synagogue escaped destruction. After the rioters had been allowed to do all the mischief possible, Cossack troops appeared and arrested them.

H. R. S. J.

NOVY-DVOR: Village in the district of Grodno. In the sixteenth century Novy-Dvor had a well-organized Jewish community, some of whose members owned farms. There are several documents to show that the Jews of Novy-Dvor came in conflict, at times, with the local priests, particularly in connection with the administration of the oath which the Jews were required to take in legal suits. Thus in 1540 the Jew Khatzka appealed from the decision of the priest Clement, who desired him to take the solemn oath in the synagogue, instead of the common oath, which, in the opinion of Khatzka, the case called for. From the course of the proceedings it appears that Khatzka's son Simon was able to read the Russian documents, and that the case was referred to Queen Bona because of the inability of the common courts to reach a decision in the matter. A census of the inhabitants of Novy-Dvor taken in 1558 shows that the Jews held considerable property on the streets Bazarnaya, Dvortzovaya, and Zhidovskaya, much of the land being devoted to gardening. The Jewish population of Novy-Dvor in 1897 was 500 in a total population of 1,282.

NOVY ISRAEL: Name of a Jewish reformed religious party or sect, with tendencies toward Christianity, which arose in Odessa at the end of 1881, and which was originated by Jacob Prelooker, a Russian Jewish school-teacher there. Prelooker's ostensible purpose was "a reformed synagogue, a mitigation of the cleavage between Jew and Christian, and a recognition of a common brotherhood in religion." But he confessed that his secret inspiration was a desire to "unite a reformed synagogue with the dissenters from the Greek Orthodox Church—the Molokans, Stundists, and Dukhobortzy." His writings indicate that his aspirations were more political than religious and that at best he merely represented the vague radicalism which is a characteristic of the half-educated Russian mind. Prelooker did not possess the learning and the depth of conviction which are indispensable to a successful leader of religious reformation. The "New Israel" movement had but few adherents, even at the time when it was to some extent encouraged by the Russian press and by the government, and before its true nature was discovered. But all traces of the new sect were lost long before Prelooker left Russia and settled in England (1890), where he occasionally lectured on such topics as women's rights, religious philosophy, etc.

Joseph Rabinovich sided with Prelooker in the controversy which the new sect aroused. The former, who stood at the head of a similar movement in Kishinef about the same time, went to Germany later and joined the Protestant Christian Church. This act, according to Prelooker, was characterized by Pobiedonostzeff, the procurator of the Holy Synod, as "ungrateful," because Rabinovich was expected to become a member of the Greek Orthodox Church as a result of the encouragement which he had received from the Russian government. Compare Bibleitzy; Gordin, Jacob; Rabinovich, Joseph; Sects.

NUMBERS, BOOK OF: Fourth book of the Pentateuch. In the Septuagint version it bears the title *'Αριθμοί*; in the Vulgate, "Numeri," from the command given by God, contained in the first chapter, to number the children of Israel. In Jewish literature it is known as "Be-Midbar"; the earlier rabbis called it "Sefer Wa-Yedabber"; in the Talmud its designation is "Ḥomesh ha-Peḳudim," "the one-fifth part, which is called 'Numbers'" (Soṭah 36b; comp. Rashi *ad loc.*).—**Biblical Data:** The Masoretic text contains 1,288 verses in 158 sections, of which 92 end at the end of a line ("petuḥot" = "open") and 66 in the middle of a line ("setumot" = "closed"). It is further divided into ten weekly lessons ("parashiyyot") for the annual cycle, and into thirty-two weekly lessons ("sedarim") for the triennial cycle.

The subject-matter of the book falls into three main groups. Ch. i.–x. 10 recount the things done and the laws given in the wilderness of Sinai; ch. x. 11–xxvii. (with the exception of ch. xv. and xix.) are historical, recording the events that occurred during the wanderings of the children of Israel in the desert; ch. xxviii.–xxxvi. contain laws and ordinances promulgated in the plains of Moab. The book covers a period of more than thirty-eight years, namely, from the first day of the second month of the second year after the Exodus (i. 1) to the latter part of the fortieth year (xxxiii. 38).

Ch. i.: God orders Moses, in the wilderness of

Sinai, to take the number of those able to bear arms—of all the men "from twenty years old and upward," the tribe of Levi being excepted, and to appoint princes over each tribe. The result of the numbering is that 603,550 Israelites are found to be fit for military service. Moses is ordered to assign to the Levites exclusively the service of the Tabernacle.

Ch. ii.: God prescribes the formation of the camp around the Tabernacle, each tribe being distinguished by its chosen banner. Judah, Issachar, and Zebulun encamp to the east of the Tabernacle; Reuben, Simeon, and Gad to the south; Ephraim and Manasseh to the west; and Dan, Asher, and Naphtali to the north. The same order is to be preserved on the march.

Ch. iii.: Of Aaron's sons and of the death of Nadab and Abihu. Moses is ordered to consecrate the Levites for the service of the Tabernacle in the place of the first-born sons, who hitherto had performed that service. The Levites are divided into three families, the Gershonites, the Kohathites, and the Merarites, each under a chief, and all headed by one prince, Eleazar, son of Aaron. The Levites number 22,000, counting every male a month old or upward. The Gershonites are placed to the west of the Tabernacle, in charge of its woven articles; the Kohathites are placed to the south, in charge of the furniture and of the Ark of the Covenant; the Merarites, to the north, in charge of the heavier material; the number of the first-born males is 22,273, which number exceeds that of the Levites by 273; the excess are ransomed for five shekels each.

Ch. iv.: The numbering of those Levites who are suited for the service of the Tabernacle—those from thirty to fifty years of age—shows: Kohathites, 2,750; Gershonites, 2,630; Merarites, 3,200; altogether, 8,580. How the Levites shall dispose of the material of the Tabernacle when preparing for a journey.

Ch. v.-vi.: Ordinances and laws concerning lepers and other unclean persons who are excluded from the camp; concerning reparation for common sins; concerning an unfaithful wife, her trial by the priest, and her atonement; concerning the Nazarite, and the ceremony performed at the expiration of his vow; the formal blessing of the people.

Ch. vii.: The offerings of the princes of the twelve tribes at the dedication of the altar.

Ch. viii.: The lighting of the candlestick: the separation of the Levites and the ceremony of their consecration; their term of service—from twenty-five to fifty years of age.

Ch. ix.: Deferred Passover sacrifices; the cloud which directed the halts and journeys of the Israelites.

Ch. x.: Moses is ordered to make two silver trumpets for convoking the congregation and announcing the recommencement of a journey; the various occasions for the use of the trumpets; the first journey of the Israelites after the Tabernacle had been constructed; Moses requests Hobab to be their leader.

Ch. xi.: The people murmur against God and are punished by fire; Moses complains of the stubbornness of the Israelites and is ordered to choose seventy elders to assist him in the government of the people; account of Eldad and Medad, of the shower of quails, and of the epidemic at Kibroth-hattaavah.

Ch. xii.: Miriam and Aaron slander Moses at Hazeroth, and Miriam is punished with leprosy for seven days, at the end of which the Israelites proceed to the wilderness of Paran.

Ch. xiii.-xiv.: The spies and the outcome of their mission.

Ch. xv.-xvi.: Ordinances to be observed in Canaan; different kinds of offerings; "ḥallah," or the priest's share of the dough; the atonement for involuntary sins; concerning the man found gathering sticks on the Sabbath-day; the law of fringes (see Fringes); the rebellion and punishment of Korah and his 250 adherents.

Ch. xvii.: Moses ordered to make plates to cover the altar with the two hundred and fifty censers left after the destruction of Korah's band. The children of Israel murmur against Moses and Aaron on account of the death of Korah's men, and are stricken with the plague, 14,700 perishing; Aaron's rod.

Ch. xviii.-xix.: Aaron and his family are declared by God to be responsible for any iniquity committed in connection with the sanctuary. The Levites are again appointed to help him in the keeping of the Tabernacle. Concerning the priestly portions and the tithes given the Levites. The Levites are ordered to surrender to the priests a part of the tithes taken by them. The law of the red heifer.

Ch. xx.: After Miriam's death at Kadesh, the Israelites blame Moses for the lack of water. Moses, ordered by God to speak to the rock, disobeys by striking it, and is punished by the announcement that he shall not enter Canaan. The King of Edom refuses permission to the Israelites to pass through his land. Aaron's death on Mount Hor.

Ch. xxi.: Defeat of King Arad the Canaanite by the Israelites. The Israelites bitten by serpents for speaking against God and Moses. The brazen serpent. The wanderings of the Israelites prior to reaching the valley of Moab. Battles with and defeat of Sihon and Og.

Ch. xxii.-xxiv.: Episode of Balak and Balaam.

Ch. xxv.: The Israelites encamped at Shittim commit abominations with the daughters of Moab and join Baal-peor. A plague carries off 24,000 Israelites. Phinehas slays Zimri.

Ch. xxvi.: The new census, taken just before the entry into the land of Canaan, gives the total number of males from twenty years and upward as 601,730, the number of the Levites from a month old and upward as 23,000. The land shall be divided by lot.

Ch. xxvii.: The daughters of Zelophehad, their father having no sons, share in the allotment. Moses is ordered to appoint Joshua as his successor.

Ch. xxviii.-xxix.: Prescriptions for the observance of the feasts, and the offerings for different occasions: every day; the Sabbath; the first day of the month; the seven days of the Feast of Unleavened Bread; the day of first-fruits; the day of the trumpets; the Day of Atonement; the seven days of the Feast of Tabernacles; the day of solemn assembly.

Ch. xxx.: Laws concerning vows of men and of married and unmarried women.

Ch. xxxi.: The conquest of Midian by the Israelites.

Ch. xxxii.: The Reubenites and the Gadites request Moses to assign them the land east of the Jordan. After their promise to go before the army to help in the conquest of the land west of the Jordan, Moses grants their request. The land east of the Jordan is divided among the tribes of Reuben, Gad, and the half-tribe of Manasseh. The cities built by these tribes.

Ch. xxxiii.: Enumeration of the stations at which the Israelites halted during their forty years' wanderings in the wilderness. While in the plains of Moab the Israelites are told that, after crossing the Jordan, they should expel the Canaanites and destroy their idols.

Ch. xxxiv.: The boundaries of the land of which the Israelites are about to take possession. The land is to be divided among the tribes under the superintendence of Eleazar, Joshua, and twelve princes, one of each tribe.

Ch. xxxv.-xxxvi.: The forty-eight cities assigned to the Levites, and the six cities of refuge. Laws concerning murder and the cities of refuge, and female inheritance.

E. G. H. M. Sel.

——**Critical View:** There is abundant evidence that the Book of Numbers was not written by Moses, and that it was not contemporary with the events which it describes. Throughout Moses is referred to in the third person, and in one passage (xii. 3) in terms which have long been felt to preclude Mosaic authorship. One passage only, namely, xxxiii. 2, lays claim to the authorship of Moses; but this is so closely related to others which are clearly later than Moses, and, indeed, the latest in the Pentateuch, that it is evident he did not write it. It has been abundantly demonstrated that the same great sources, J, E, and P, which furnished material for the other books of the Hexateuch, furnished the material for Numbers also. Even D appears in one passage.

There is no unity of thought or of material in Numbers. Its material may be most conveniently grouped geographically, under which arrangement the following three divisions are obtained: (1) ch. i.-x. 10, which treat of the camp at Sinai; (2) ch. x. 11-xix., which contain accounts of wanderings; and (3) ch. xx.-xxxvi., the scene of which is the plains of Moab.

Ch. i.-x. 10: The first section of the book covers the last nineteen days of the encampment at Sinai. The material all comes from P; but it is not all from one hand. Ch. i. 1, 16, 54 is from P^g, the author of the priestly "Grundschrift," who recorded the command to number Israel, and briefly told how it was accomplished. Verses 17 to 53 give the tribes in a different order from the preceding, and are from the hand of a priestly expander or supplementer, P^s. Ch. ii., which gives the plan of encampment, has still a different order for the tribes, so that Judah assumes the first place. It is generally agreed that this comes from the hand of a still later priestly supplementer. Ch. iii. contains the account of the choice of the tribe of Levi instead of all the first-born of the Israelites. This main narrative from P^g (verses 5-22, 27, 28, 33, 34, 39, 44, 45) has been supplemented by P^s (verses 1-4, 23-26, 29-32, 35-38, 40-43, 46-51), with the position of their encampment and some other matters. Ch. iv., a fresh census of adult Levites with a statement of their duties, contains (verse 11) a reference to the golden altar, of which there is an account in Ex. xxx., a supplementary chapter. This is, therefore, from P^s. In all these passages from P^s there are seen great elaboration of style and much repetition.

Amplification of Older Laws.

Ch. v., concerning the ordeal provided for a wife suspected of infidelity, comes from a priestly writer possibly older than P^g, whom Carpenter and Harford-Battersby, because he writes as a teacher, designate as P^t. The law in its present form combines two older laws, according to one of which the proof of the woman's guilt is presupposed, while the other regarded it as indeterminate and provided an ordeal to ascertain the truth. For details compare Stade in his "Zeitschrift," 1895, pp. 166 *et seq.*; Carpenter and Harford-Battersby, "Hexateuch," ii. 192; and Baentsch in Nowack's "Hand-Kommentar," *ad loc.* Ch. vi., on the law of vows, is from the same source as ch. v., namely, P^t. The benediction at the end (verses 22 to 27) is from a supplementary source. Ch. vii., relating to the gifts of the princes of the different tribes, is dated the day Moses finished setting up the Tabernacle, and accordingly follows immediately on Ex. xl. It is regarded as one of the latest amplifications of P^s. One verse (89) is from P^g. Ch. viii., the ceremonial cleansing of the Levites, is from P^s, but it consists of two strata, 1-15a and 15b-26. These cover much the same ground, 15b-26 being later than the other. Ch. ix., on the regulations of the delayed Passover, is likewise from P^s. Ch. x. 1-8 recounts the signals for journeying. It is from P^g. Verses 9 and 10 contain regulations concerning the blowing of trumpets in war and as a memorial. It bears the characteristic marks of the Holiness Code, P^h.

Ch. x. 11-xix.: In the second division of Numbers the sources are more complex, J, E, and P being each represented. It is by no means possible to separate the three strands with certainty. Ch. x. 11-26, describing the departure from Sinai, contains first (verses 11-12) P^g's statement of the departure. This has been amplified (verses 13-28, 34) by P^s. In verses 29-33, 35, and 36 the J narrative, which was interrupted at Ex. xxxiv. 28, is resumed. As in the J narratives elsewhere, Moses' father-in-law, who accompanies the Israelites on their way, is called Hobab. Ch. xi. 1-3, narrating the Taberah incident, is plausibly attributed to E because marks of J are wanting and because E elsewhere ascribes a similar function to prayer (xxi. 7 and Gen. xx. 7, 17). The story of the quails (xi. 4-15, 18-24a, 31-35; xii. 16) is clearly from J: the style, language, and point of view are his. On the other hand, xi. 16, 17, 24b-30, and xii. 1-15 are, by their conception of the tent of meeting as apart from the camp, shown to be from E.

Ch. xiii.-xiv., describing the sending out of the

Complexity of Sources.

spies, is very complex. J, E, and P are all represented in the story. The following analysis is tentative only: To P belong xiii. 1–17a, 21b, 25, 26a, 32; xiv. 1a, 2, 5–7, 9a, 10, 26–30, 32–39a. According to P, Caleb, Joshua, and ten others went through the land to Rehob in the neighborhood of Lebanon; they reported the people to be of great stature; the congregation murmured; and forty years of wandering were announced. From J come xiii. 17b, 18b, 19, 22, 27a, 28, 30, 31; xiv. 1c, 3, 8, 9b, 11–17, 19–24, 31, 41–45. According to J, Caleb and other spies go up to the "negeb" (A. V. "south"), and reach Hebron; they report that the children of Anak are there; the people weep with fear; only Caleb and the little ones are, accordingly, to see the promised land; the presumptuous attempt of the people to go up is defeated. To E belong xiii. 17c, 18a, 18c, 20, 21a, 23, 24, 26b, 27b, 29, 33; xiv. 1b, 4, 25, 39b, 40. The beginning of E's account may be found underlying Deut. i. 22–25. He describes the despatch of twelve men, who reach the valley of Eshcol, cut down some fruit, and take it back to Kadesh, with a report that numerous Nephilim are in the country; the people cry unto the Lord and are directed to march by way of the Red Sea, but they propose to enter the land direct instead.

Ch. xv., on the general law of oblation and on a law concerning fringes on garments, is from P^t, though P^s has interpolated verses 32 to 36, which refer to the man found gathering sticks on the Sabbath. Ch. xvi. is composite: an account by J of how a Judean headed a rebellion against Moses, an E account of the rebellion of two sons of Reuben, and a P^g account of how a number of Israelites murmured against Moses and Aaron have been combined and transformed by P^s into the attempt of Levites headed by Korah to obtain the priesthood. To J belong verses 1d, 13, 14a, 15, 26b, 27c–31, 33a; to E, 1c, 12, 14b, 25, 27b, 32a, 33b, 34; to P^g, 1a, 2b–7, 18–24, 26a, 27a, 35, 41–50; and to P^s, 1b, 8–11, 16, 17, 32b, 33c, and 36–40. Ch. xvii., on the budding of Aaron's rod, and ch. xviii., on the responsibilities and perquisites of the priests, are from the main priestly narrative, P^g. Ch. xix. contains regulations for the purification of those who have touched the dead. Verses 1 to 13, on the ceremonial of the red heifer, is tentatively assigned to P^s; the parallel law in verses 14 to 22 is connected by its title with P^t.

Ch. xx.-xxxvi.: In the third section of the book, ch. xx. 1–13, narrating the strife at Meribah, is mainly derived from P^g, but the reference to Miriam (1b) seems to be taken from E, while 3a, 5, and 8b are fragments of a J account in which Aaron was not mentioned. Verses 14 to 22a, the refusal of Edom to allow Israel to pass through his territory, is combined from J and E. E furnished verses 14–18, 21a, and 22a; J, 19, 20, and 21b. Verses 22b to 29, describing the death of Aaron, is clearly from P^g.

Ch. xxi. is a JE narrative. J supplied verses 1–3 (the devotion of Hormah), 16–20 (the journey from Hormah to Pisgah), and 24b–32 (the conquest of Heshbon and Jazer); E supplied 4b–9 (the origin of the brazen serpent), 11b–15 (the journey to the Arnon), 21–24a (the conquest of Heshbon). Verses 4a, 10, and 11a are a part of P's itinerary, as is xxii. 1.

Antiquity of Poems in Ch. xxiii., xxiv.

The story of Balaam (xxii. 2–xxiv.) has been woven together from J and E. The J sections are xxii. 3b–5a, 5c–7, 11, 17, 18, 22–36a, 37b, 39; xxiii. 28; xxiv. 1–25. These sections describe Moab's distress, and the sending of elders of Midian to Balaam, apparently in the land of Ammon (emended text עמון instead of עמו in xxii. 5c). Yhwh appears to him by the way, and the ass speaks; Balaam does not practise enchantment, but speaks under the influence of the spirit of God. To E belong xxii. 2, 5b, 8–10, 12–16, 19–21, 36b, 37a, 38, 40, 41; xxiii. 1–27, 29. This narrative describes Moab's fear, and the sending of her princes to Pethor in the east to summon Balaam. Elohim bids Balaam go with them, and he speaks the word that Elohim puts in his mouth. The poems in xxiii. and xxiv. are probably still older than J and E.

In ch. xxv. it is thought that 1b, 2, 3b, and 4, which narrate whoredom with the daughters of Moab, are from J; verses 1a, 3a, and 5 are an E account of Israel's worship of Baal-peor and its punishment; verses 6 to 15 preserve a kindred account by P^g of a Hebrew's marriage with a Midianitish woman and its punishment. P^s has supplemented this (verses 16, 17) by a command to vex the Midianites. Ch. xxvi., a second census of the Hebrews, is so repetitious that it is clearly from a priestly supplementer. Ch. xxvii. 1–11, concerning the inheritance of daughters when male issue is wanting, is from a similar source. This is also true of verses 12 to 14, which once introduced at this point the P account of the death of Moses that is now found at Deut. xxxiv. 1. Ch. xxvii. 15–23, on the selection of Joshua to lead Israel, is a part of the original priestly narrative of P^g. Ch. xxviii.-xxxvi. are, with the exception of xxxii. 39–42 (a part of J's itinerary), from the various priestly supplementers, P^s. Ch. xxviii. and xxix. contain late regulations for the feasts, differing materially from the P regulations in Lev. xxiii. The reasons which lead critics to assign the treatment of vows in ch. xxx., the itinerary in xxxiii. 1 *et seq.*, and other parts of this material to P^s are the elaborate and repetitious style, and various modifications of earlier priestly material. For details the reader is referred to such works as those mentioned in the bibliography below.

It is clear from a careful examination of the material, when it is grouped as in the above analysis, that the Book of Numbers is a part of the same literary process which produced the Pentateuch. A trace of D (R^d) appears in ch. xiv. 18; so that all four strata of the Pentateuch are present.

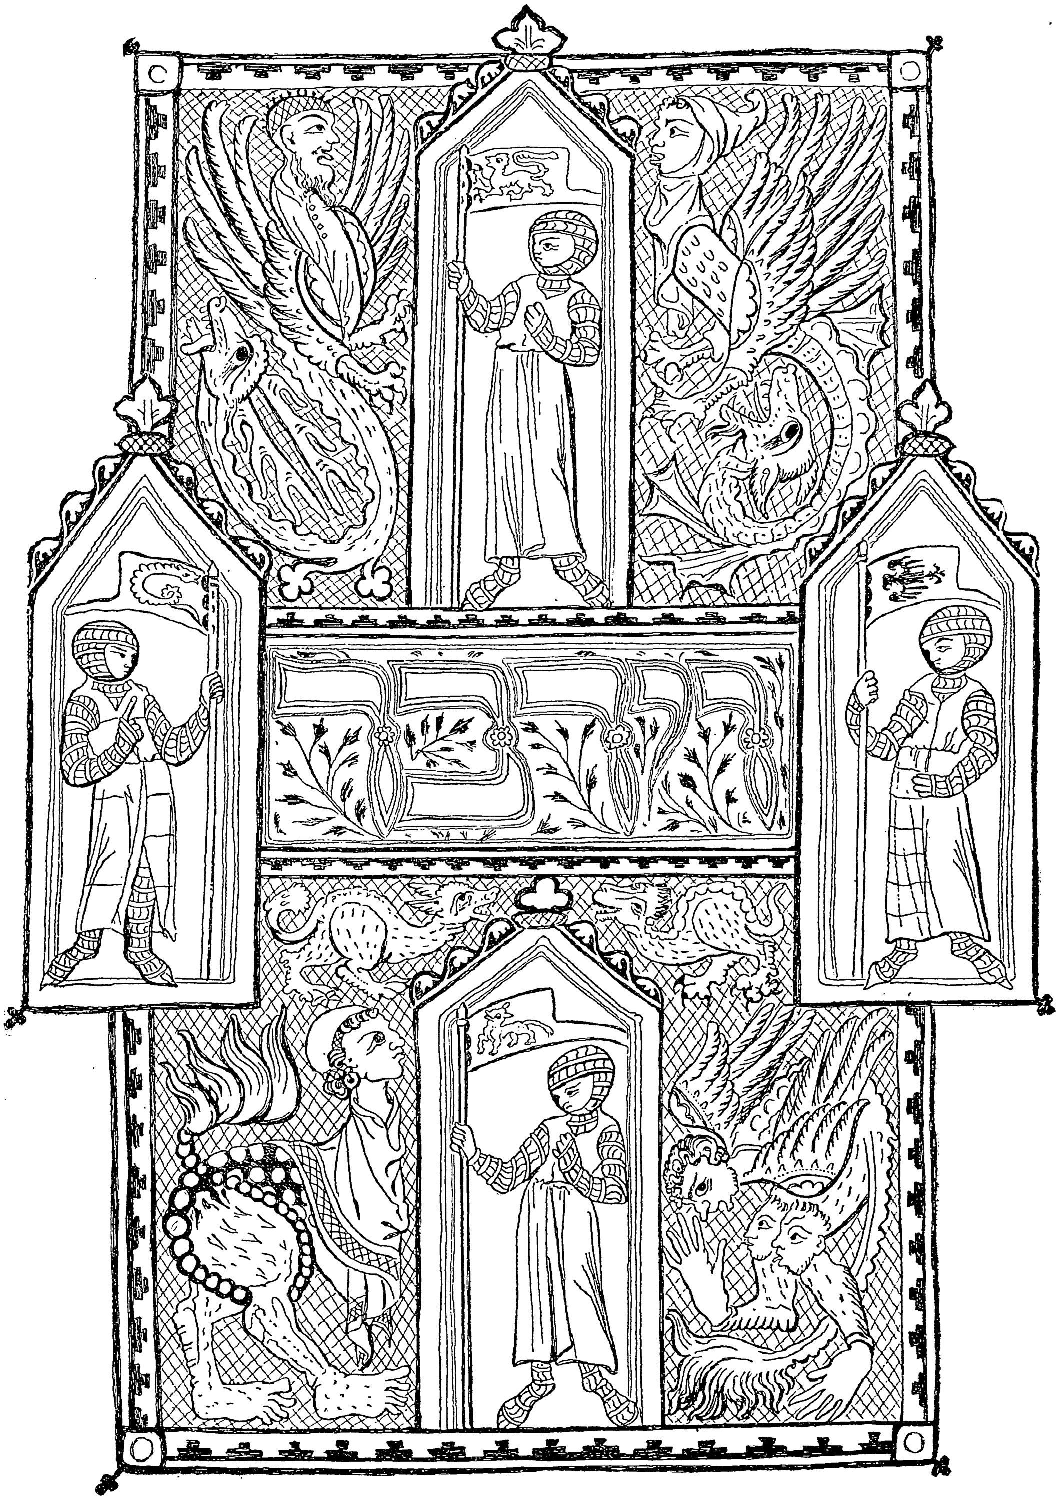
NUMBERS RABBAH. See Bemidbar Rabbah.



Illuminated Page of the Book of Numbers.
(From a manuscript formerly in the possession of the Duke of Sussex.)

Numerical Notation.

NUMBERS AND NUMERALS: The letters of the alphabet were used as numerical symbols as early as the Maccabean period (comp. Numismatics). Whether such a usage was known in earlier times also, whether there existed in Israel, as among kindred nations, special signs for figures, or whether numerical notation was entirely unknown, can not be decided by direct proof. That there were no numerical signs at all is hardly possible. The necessities of daily life require such signs, and the example of surrounding nations could not but have suggested their introduction. For an assumption that there were special signs there is no basis. It must, therefore, be assumed that the numerical value of the alphabet was known in earlier times. The fact that figures are not found in the Bible nor in the Siloam inscription, nor on the Moabite Stone, would not militate against such an assumption. In monumental inscriptions the use of figures might have been avoided for various reasons, while the earlier use of figures in the Bible is rather probable, since the discrepancies in numbers which now exist can thus be best explained. Other considerations strengthen such a hypothesis (comp. Gemaṭria).

The use of alphabetical signs was doubtlessly practically the same as in the Talmud, where numbers higher than 400 are formed by composition, as ת״ק (for 500), תת״ק (for 900), etc. Such a way of forming higher numbers could not in the end be found other than clumsy, and, therefore, the Masorites introduced the use of the final letters for indicating 500, 600, 700, 800, and 900 respectively; to indicate the thousands the letters representing the corresponding number of units was used. In writing any numerical combination, since the thousands were written before and the units were written after the hundreds and tens (the latter letters of the alphabet), they were easily distinguishable. About 800 C.E. the Jewish scholar Mashallah introduced into the Mohammedan world the use of the so-called Arabic figures (see Harkavy's note to the Hebrew transl. of Grätz's "Gesch." iii. 213), which since then have occasionally been used in Hebrew literature also (Oppenheim, in "Monatsschrift," xiii. 231, 462; xv. 254, 376).

System of Numbers.

The Hebrew system of counting is, like that of all the Semites and like the Egyptian hieroglyphic system, the decimal, which is a later development of a more original quintal system based on the fingers of one hand (L. Reinisch, "Das Zalwort Vier und Neun in den Chamitischen-Semitischen Sprachen"). The blending of the Semitic decimal system with the Sumerian sexagesimal is found in earliest Babylonian times. But in course of time the decimal system prevailed. A trace of the sexagesimal system may still be found in the use of the number sixty (see below). The use of the fingers for numbering occurs in traditional literature (see Yoma 22a, b). In Talmud and Midrash numbers are sometimes formed by subtraction, as in Latin, French, etc.—for example 100 − 2 = 98 (Lam. R. iii. 12), 50 − 1 = 49 (Levias, "Aramaic Grammar," § 141)—the reason for which is not clear.

Symbolism of Numbers.

At an early time in the history of man certain numbers were regarded as having a sacred significance or were used with symbolical force, the origin of their symbolism lying in their connection with primitive ideas about nature and God. Such a use of numbers is found also in the Bible, although the Biblical authors were hardly conscious of their origin. In later Jewish literature, however, with Pythagorean doctrines was introduced the use of numbers as symbols, based on their mathematical qualities. The most prominent exponent of the latter custom is R. Abraham ibn Ezra. In cabalistic literature both systems are used. The rhetorical or stylistic use of numbers is largely due to an obsolete symbolism. Even numbers were thought to be unlucky (Pes. 110a). Attempts to find in Biblical numbers references to ideas were made by Aristobulus and Philo, and since their time by many allegorists. Nevertheless, a distinct connection between any given number and a certain idea can not be proved. Among the "thirty-two rules" of the son of R. Jose the Galilean, two refer to numbers—one to gemaṭria, the other, the twenty-seventh, to the symbolism of numbers (see Bacher, "Tannaitische Terminologie," *s.v.* נגד). According to this hermeneutic canon, any number may be explained as corresponding to (כנגד, *i.e.*, "symbolizing") another equal number or sum of numbers. Thus, the "40 days" in Num. xiii. 25 correspond to the "40 years" in *ib.* xiv. 34; and the number 36 in II Chron. xvi. 1 corresponds to three things in connection with which the same number of years is mentioned (Bacher, *l.c.*).

The following numbers occur in Hebrew literature either as symbols or as round numbers:

Two: Used in the sense of "a few" in Num. ix. 22; I Sam. xi. 11; Hos. vi. 2; Ned. 66b (comp. the Talmudic rule, מעוט רבים שנים).

Three: The sacredness of this number is probably due to the fact that primitive man divided the universe into three regions—heaven, earth, and water, respectively represented in Babylonian mythology by the divinities Anu, Bel, and Ea. Its sacred or symbolical use may be illustrated by such passages as I Kings xvii. 21; I Chron. xxi. 12; Dan. vi. 10. Its rhetorical use for a small total is illustrated in Gen. xxx. 36; xl. 10, 12; xlii. 17; Ex. ii. 2, iii. 18, and in Pes. 62b and Yer. Ta'an. iv. 8. Multiples of three are similarly used: **nine,** in Yer. Ta'an. iv. 8; **twenty-one,** in Ethiopic Enoch, lxix. 2; **thirty,** in Slavonic Enoch, xxxvi. 1; **thirty-six,** in Ethiopic Enoch, xc. 1; **three hundred,** in Soṭah 34a; Pes. 62b; Ḥul. 59b, 90b; Yer. Sanh. vii. 19; Yer. Ta'an. iv. 8; **nine hundred,** in Yer. Sanh. vii. 19.

Three and one-half: Represents, according to Gunkel ("Schöpfung und Chaos," pp. 309 *et seq.*), the three and one-half months from the middle of Kislew to the end of Adar—from the winter solstice to the festival of Marduk, the period of the supremacy of Tiamat. The number occurs in Dan. vii. 25, ix. 27, and xii. 7 (Hebr.). In traditional literature three and one-half as a half of seven is frequently used as a round number; see Midrash to Proverbs (ed. Buber, p. 48, note ק״ה).

Four: Sacred as the number of the four cardinal points of the compass; denotes completeness and sufficiency. In cabalistic literature its sacredness is enhanced by the fact that the Tetragrammaton contains four letters. The number is found in Gen. ii. 10; Judges xi. 40; Jer. xv. 3; Ezek. xiv. 21; Zech. i. 18; Neh. vi. 4; etc. The multiples of four used are **twenty-eight** (in the measurement of the curtains of the Tabernacle) and **forty** and its multiples.

Seven: The most sacred number. The origin of its sacredness is found by some in its factors three and four; by others, in its correspondence to the number of the planets; while others assert that it arose from a sacred six by the addition of one. In Judaism its sacredness was enhanced by the institution of the Sabbath. The number occurs in the seven days of Creation, the institution of the seventh year of release, the forty-nine years between the jubilees, the seven altars, the seven lamps, the sprinkling of the blood seven times, etc. (Gen. vii. 2 *et seq.*, xxi. 28-30; I Kings xviii. 43; Deut. xvi. 9; Ezek. xl. 22, xli. 3; *et al.*). Quite frequently it is met with in Apocryphal literature (Ethiopic Enoch, xxi. 3-6, lxxiii. 5-8; Slavonic Enoch, iii.-xx., xxvii. 3, xli. 1; *et al.*); in Talmud and Midrash (Pes. 54a; Soṭah 10b; *et al.*; comp. Lampronti, "Paḥad Yiẓḥaḳ," *s.v.* שבעה). The multiple **fourteen** occurs in Proverbs Rabbah (ed. Buber, p. 92).

Ten: Had a symbolical character in part because it is the basis of the decimal system, and in part because it is the sum of three and seven. Its simplest use is as a round number (Gen. xxiv. 10, 22; Josh. xxii. 14; Judges xvii. 10; *et al.*; comp. Lampronti, *l.c.* *s.v.* עשרה). A more sacred use is found in the ritual (Ex. xxvi. 1, 16; Num. vii., xxviii., xxix.; I Kings vi., vii.; Ezek. xlv.; II Chron. iv.). Because of this sacred character "ten" is used in apocalyptic symbolism (Dan. vii. 7, 20, 24).

Multiples of ten are used as round numbers: **one hundred** and **two hundred,** in Pes. 64b; *et al.*; **one thousand,** in Ḥul. 97b; Ned. 50b; Yer. Ta'an. iv. 8; **ten thousand** and **two hundred thousand,** in Yer. Ta'an. iv. 8; **one million,** in Yoma 33b.

Twelve: Derived its sacred character from the fact that it is the product of three and four and is the number of the months of the year. There are twelve tribes of Israel and the same number of tribes of Ishmael (Gen. xvii. 20, xxv. 16). The number of many representative men and things was made twelve to accord with the number of the tribes (Ex. xxiv. 4; Num. xvii. 2, 6; Josh. iv.; *et al.*). The number twelve for these reasons entered into Hebrew ritual (comp. Ex. xv. 27; Num. xxxiii. 9; Lev. xxiv. 5; Jer. lii. 20 *et seq.*; Ezek. xliii. 16). As a round number, twelve occurs both in Biblical (II Sam. ii. 15; I Kings x. 20) and in post-Biblical literature (see the list of references given by Zunz, "Literaturgesch." p. 601; comp. also Yoma 75b, 77b; Ta'an. 25a; M. Ḳ. 24a; Ḥul. 95).

The multiple **twenty-four** occurs in Lam. R. i. 2; **twenty-four millions,** in Ned. 50b.

Twenty-two: Used as a round number in later literature (Gen. R. lxxiii.; Midr. Shemuel xx.), deriving its significance from the fact that it is the number of the letters in the alphabet (comp. Bacher, "Ag. Pal. Amor." ii. 297).

Forty: Stands in the Bible for a generation (*e.g.*, the forty years of wandering in the desert), hence for any period of time the exact duration of which is unknown (comp. Gen. vii. 4, 12, 17; viii. 6; Ex. xxiv. 18, xxxiv. 28; Deut. ix. 9, 11, 18; x. 10; I Sam. xvii. 16; I Kings xix. 8; Jonah iii. 4). In later literature forty is commonly used as a round number (comp. Giṭ. 39b, 40a; Soṭah 34a; Yer. Ta'an. iv. 8; *et al.*). The multiple **eighty** is found in Yer. Ta'an. iv. 8; **four hundred,** in Ḥul. 59b and Bek. 31a; **four hundred and eighty,** in I Kings vi. 1 and Yer. Meg. iii. 1; **eighty thousand,** in Yer. Ta'an. iv. 8.

Sixty: The larger unit of the sexagesimal system; used to express an indefinitely larger number (comp. Cant. iii. 7, vi. 8). In Talmudic literature it is frequently used as a round number (comp. Ber. 57b; Pes. 94a; B. Ḳ. 92a; B. M. 30b, 107b; Ta'an. 10a; Ned. 39b; Midr. Teh. xli.; Lev. R. xxxiv.; etc.). In the Halakah a thing ritually unfit becomes fit when mixed with something sixty times its own amount.

Seventy: Has a sacred or symbolical significance because it is made up of the factors seven and ten (comp. Ex. xv. 27; xxiv. 1, 9; Num. xi. 24 *et seq.*; Gen. xlvi. 27; Ex. i. 1; Deut. x. 22; Jer. xii. 11; Dan. ix. 24 *et seq.*). For later Jewish usage compare S. Krauss in Stade's "Zeitschrift," xix. 1-14, xx. 38-43, and Steinschneider in "Z. D. M. G." iv. 145-170; lvii. 474-507, where he deals also with the number **seventy-two.**

Sixty Myriads: Used in later literature to express a very large but indefinite number. It derives its significance from the number of Israelites that went out from Egypt (comp. Lam. R. ii. 13; Deut. R. i. 17; etc.). The multiple **one hundred and twenty myriads** occurs in Lam. R. *l.c.*

The tendency to indicate somewhat more exactly an undetermined number of objects led to the use of two definite numbers instead of one indefinite expression. The smaller numbers are paired in this way in the following passages: **one** or **two:** Deut. xxxii. 30; Jer. iii. 14; Ps. lxii. 11; Job xxxiii. 14, xl. 5; **two** or **three:** II Kings ix. 32; Isa. xvii. 6; Amos iv. 8; Job xxxiii. 29; Ecclus. (Sirach) xxiii. 16, xxvi. 19, l. 25; **three** or **four:** Jer. xxvi. 3; Amos i. 3, ii. 6; Prov. xxx. 15, 18, 21, 29; Ecclus. (Sirach) xxvi. 5; **four** or **five:** Isa. xvii. 6; **five** or **six:** II Kings xiii. 19; **six** or **seven:** Prov. vi. 16; Job v. 19; **seven** or **eight:** Micah v. 5; Eccl. xi. 2. In all these instances the use of a second number calls attention to the fact that the first number is merely approximate; hence such an arrangement of numbers is employed in the so-called "middah," a kind of riddle (Prov. vi. 16-19, xxx. 15 *et seq.*; Ecclus. [Sirach] xxiii. 16; xxv.; xxvi. 5 *et seq.*, 19; l. 25 *et seq.*).

Ascending Enumeration.

As an aid to the memory, the ancients frequently grouped themes of traditional law or of haggadah according to numbers; see, for instance, Abot v., where various subjects in which the number ten is prominent are grouped together. Such groups are found frequently in Talmud and Midrash. The entire contents of some books were at times arranged in numerical groups, as in the "Pirḳe de Rabbenu ha-Ḳadosh" and, probably, in the "Forty-nine Middot de-R. Nathan," a work now lost.

Numerical Grouping.

E. C. C. L.

NUMENIUS: Son of Antiochus. Together with Antipater, son of Jason, he was sent to Sparta and Rome, first by Jonathan Maccabeus (I Macc. xii. 16; Josephus, "Ant." xiii. 5, § 8), and then by Simon (I Macc. xv. 15–24), returning with decrees the text of which is still preserved. A similar senatus consultum, likewise obtained by Numenius, is dated by Josephus (*l.c.* xiv. 8, § 5) under Hyrcanus II.; it doubtless refers to the same events. The historical accuracy of these accounts and the authenticity of the pro-Jewish decrees depend upon the value assigned to the original documents quoted by Josephus.

It is important to note that in 139 B.C., when Numenius went on his second journey to Rome, a Jewish propaganda was, according to Valerius Maximus (i. 3, § 2), begun in that city, for Jewish proselytizers were expelled from Rome at that time.
